

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## PREFACE TO FIRST EDITION

FOR many years a need has been felt by chemists for a book which shall collect into convenient form for ready reference the various data concerning the solubility of chemical substances that have been published from time to time in chemical periodicals and elsewhere.

The first mention that can be found of such a plan was made in 1731, when Peter Shaw delivered Chemical Lectures in London, as may be seen from the following:—

EXTRACTS from PETER SHAW's Chemical Lectures, publicly read at London in 1731 and 1732. London. Second Edition, London 1755. 8vo.

Page 97. Experiment I.—That Water as a Menstruum dissolves more of one body and less of another.

[He shows that two ounces of water dissolve two ounces of Epsom salt, five drachms of common salt, and eight grains of cream of tartar. Only in the latter case much remained undissolved until boiled.]

"It might be proper for the further Improvement of Chemistry and Natural Philosophy to form a Table of the Time and Quantity wherein all the known Salts are dissolvable in Water. . . . Such a Table regularly formed might ease the Trouble of refining Salts, by shewing at once without future Trial or Loss of Time how much Water each Salt required to dissolve it for Clarification, Filtration, or Crystallization. It would likewise supply us with a ready and commodious Way of separating any Mixture of Salts, by shewing which would first shoot out of the Mixture upon Crystallization. . . . The same Table might also direct us to a ready and commodious Method of separating two Salts without waiting for Crystallization. . . ."

It was many years, however, before the scheme suggested by Peter Shaw was put into execution. Professor F. H. Storer published the first work that undertook to carry out the idea in its entirety, in 1864, in a book, which he entitled "First Outlines of a Dictionary of Solubilities of Chemical Substances," and which contained a compilation of nearly all the data on the subject published before 1860. It was at once recognized as a most valuable contribution to chemical literature; but for many years it has been difficult to obtain this work, as the limited edition which was published was soon wholly exhausted. Since then nothing has appeared on the subject except the brief tabulations found in various reference books, and no attempt has been made to cover the whole subject.

It is needless to state that the growth of chemical science since the publication of Professor Storer's book has been so enormous that that work has lost, at least to a great extent, the practical value it possessed thirty years ago. This growth has been indeed so great, and the data which have accumulated since 1860 so far surpass the earlier in volume, that a simple revision of Professor Storer's book was impracticable, and it therefore seemed best to start afresh.

49829

With the facilities offered by the various scientific libraries at Harvard University, the Massachusetts Institute of Technology, and other libraries in Boston, it has been possible to collect nearly all the data relating to the subject. For the work before 1860 Professor Storer's work has been found invaluable.

The method pursued has been to form a preliminary list of compounds with more or less data by consulting the two most complete works on inorganic chemistry—Gmelin-Kraut's "Handbuch der anorganischen Chemie" and Graham-Otto-Michaelis's "Lehrbuch." These statements have been verified and elaborated by consulting the original memoirs in all the periodicals devoted to chemical literature which were obtainable. The "Jahresbericht der Chemie" also has been used extensively in tracing references, but the original memoirs have always been consulted and references given to them when possible.

It has been found impracticable to draw any distinction as to reliability between the various data given by different observers. It was manifestly impossible to attempt to verify experimentally the statements of those who have carried on the researches, for the most assiduous labor of many could only cover a small portion of the attested facts. Therefore, even when two statements are directly contradictory, both have been given with the authority for each. The only exception to this has been made when more recent discoveries have shown beyond any reasonable doubt the falsity of previous work. In this way some of the older manifestly inaccurate work has been omitted. In a majority of cases the more recent work may be considered to be the more accurate, but this is not the invariable rule. A Synchronistic Table of the more common periodicals is given in the Appendix, whereby it is easy to determine the date of the publication of a research to which reference is made.

It may be objected by the practical chemist that most of the work previous to 1850 might well have been omitted, but a great deal of this work possesses at least a historical value, and often furnishes facts which have not since been verified. Much of the earlier work, when obviously of less importance, has been printed in smaller type.

The aim has been to include in this volume all analyzed inorganic substances, that is, all substances which do not contain carbon, but exception has been made in the case of  $\text{CO}_2$ ,  $\text{CO}$ ,  $\text{CS}_2$ , the carbonates, cyanides, ferro-cyanides, etc., which are here included.

The work has been brought up to March, 1894, when this volume went to press, and the results of researches published since that time are not included in the present edition.

It is hoped that this book will fill to some extent the want that has been felt by chemists for a compilation of this nature. While it has been attempted to make the book as free from errors as possible, nevertheless it is naturally impossible to avoid many mistakes, and the compiler will be very grateful to those who may call his attention to any errors or omissions.

A. M. C.

<sup>1</sup>*CAMBRIDGE, MASS., Aug., 1895.*

## PREFACE TO SECOND EDITION

DURING the twenty-five years which have elapsed since the publication of the first edition of this dictionary, a very large amount of work has been published in chemical periodicals, containing data concerning the solubility of inorganic chemical compounds. As it was impossible for the compiler of the first edition to devote the time necessary for the collecting of the published data, it was necessary to employ assistance, and Dr. Dorothy A. Hahn, Professor of Chemistry, Mt. Holyoke College, was engaged for this work. Dr. Hahn has collected the larger part of the material in this book, which work in spite of its arduous and tedious nature, she has performed in a most painstaking manner.

The compilation and arrangement of the data collected by Dr. Hahn, which devolved upon the original author, took much time. This, together with difficulties in printing, caused by the general conditions after the war, has delayed the publication until the present year, although the work was begun in 1916, and it has only been brought up to January 1st of that year.

Since the publication of the first edition of this work, Dr. Atherton Seidell has brought out two editions of his book, entitled "Solubilities of Inorganic and Organic Substances," which covers quite a different field, as he considers only quantitative data and those only for the commoner substances. Dr. Seidell has followed the plan in most cases where there are several available solubility determinations of a substance, of selecting and averaging the more reliable results, and embodying them in tables. Although this undoubtedly facilitates ready reference, it has seemed better to adhere to the original plan of the first edition, and to publish all the data in the form of the original authorities with references and dates, so that the user may be at liberty to use his own judgment in selection. Some few of the tables arranged by Dr. Seidell, however, have seemed to possess decided advantages over any other published data and they have been incorporated in the present volume. It is desired also to acknowledge indebtedness to Dr. Seidell's work for certain other tables where the original sources were not available to the present compilers.

The same plan and arrangement used in the first edition has been followed with certain elaboration, however, of the arrangement of data on the solubility of two or more salts in a solvent, which is explained in the Explanatory Preface.

Data published since the first edition on the cobalt and chromium ammonia compounds and those of the platinum group have been omitted, as it seemed that solubility data on those compounds possessed very little general interest.

As stated in the preface of the first edition, while every possible attempt has been made to avoid errors, it is manifestly impossible to avoid many mistakes in a work of this nature, and the compiler will be glad to have his attention called to any errors or omissions.

WILMINGTON, Del., Jan., 1921.

A. M. C.

## EXPLANATORY PREFACE

IN order to reduce this volume to a convenient size the subject-matter has been abbreviated and condensed as far as seemed compatible with clearness; but it has been the aim not to use any abbreviations which are not at once intelligible without consulting the explanatory table. The more common chemical formulæ have been universally used, thereby saving a large amount of space without detracting from ready intelligibility to chemists.

The solubility of the substance in water is first given, the data being arranged chronologically in the longer articles. Then follow the specific gravities of the aqueous solutions, and also any data obtainable regarding their boiling-points; other physical data concerning solutions are not included. Following this is the solubility of the substance in other solvents—first the inorganic acids, then alkali and salt solutions, and finally organic substances.

Owing to the great increase of data, published during the last twenty years, on the simultaneous solubility of two or more salts in a given solvent, it has been found necessary to plan some arrangement, whereby such data can easily be found, and the plan adopted is as follows: The data for the solubility of two salts in a solvent is placed under the salt which comes first according to the alphabetical arrangement in this dictionary, and the order of the data on various salts under the same heading follows the alphabetical order of the salts considered. Thus the data on the solubility of  $\text{NH}_4\text{Cl} + \text{BaCl}_2$ ,  $\text{NH}_4\text{Cl} + \text{CuCl}_2$ , and  $\text{NH}_4\text{Cl} + \text{PbCl}_2$ , and  $\text{NH}_4\text{Cl} + (\text{NH}_4)_2\text{SO}_4$  are placed under Ammonium Chloride and arranged in the given order. Certain exceptions have been made to this rule, where the data directly concerns the solubility of a salt in a solution of another salt, in which case, it is placed under the former. Numerous cross references, however, are given, which it is hoped will avoid confusion.

In many cases no definite distinction can be drawn between the phenomena of solution and decomposition. At present the theory of solution is in a confused state, and until what really takes place when a substance dissolves is thoroughly understood no distinct line can be drawn. The whole subject is unsettled at the present time; for while many chemists believe in the so-called "dissociation" theory, yet the "hydrate" theory is not without its supporters. It is not my intention to discuss the theoretical side of the question, which has been so well treated in many recent works. It is, however, obvious that the phenomena are essentially different, when, for example, sodium carbonate is dissolved in water, in which case the original salt is deposited on evaporation, and when iron is dissolved in sulphuric acid, and the solution deposits a sulphate of iron. Yet it is still the custom to speak of iron as soluble in sulphuric acid, although it would be much more accurate to say that the sulphuric acid was decomposed by the iron. It has thus been found impracticable to draw a sharp line between solu-

tion and decomposition, and the term "soluble" has in general been used where a solution of some sort is formed by the action of the solvent.

The matter of alphabetical arrangement of chemical compounds, in the present somewhat confused state of chemical nomenclature, has been a difficult question to decide. The plan followed has been practically that of the standard Dictionaries of Chemistry, whereby the compounds of metals with one of the non-metallic elements have been classified under the metals, while the salts of the other acids (the oxygen acids so called and some few others) have been arranged alphabetically under the acids. Thus barium chloride is found under barium, while barium chlorate is found under chloric acid. No exception has been made in the case of the rare metals, as is usually the custom in Dictionaries of Chemistry. Double salts are to be found under the word which comes first alphabetically; thus, "common alum," potassium aluminum sulphate, is found under aluminum sulphate as aluminum potassium sulphate (under sulphuric acid), but ammonia chrome alum is found under ammonium sulphate as ammonium chromium sulphate. In the same way the double sulphate and chromate of potassium is found under potassium chromate (chromic acid), and not under potassium sulphate (sulphuric acid). The double chloride of ammonium and magnesium is found under ammonium chloride (ammonium), while the double chloride of potassium and magnesium is found under magnesium chloride (magnesium). An exception is made, however, in the case of double compounds of salts of oxygen acids with salts containing a single non-metallic element, in which case they are always found under the oxygen acid. Thus the double sulphate and chloride of lead,  $\text{PbSO}_4$ ,  $\text{PbCl}_2$ , is found under lead sulphate (sulphuric acid), and not under lead chloride (lead).

The above method in some cases widely separates analogous compounds, but it was found to be the only practical way to a strictly alphabetical arrangement, which is no necessary in a book containing so many very short articles.

The ammonia addition-products furnished another difficulty. While their nature is more or less definitely understood in the cobalt, platinum, etc., compounds, and a definite nomenclature is in general use, there is an absolute lack of anything of the kind in the less definite compounds. It is good usage to speak of cuprammonium compounds, but how shall we designate the analogous cadmium compounds? "Cadmammonium" has not yet received the sanction of chemists, and  $\text{AlCl}_3$ ,  $\text{NH}_3$  is a still worse case for naming. I have, therefore, not attempted to name these compounds, but classified them all under the salts to which the ammonia is added, affixing the word ammonia, thus: aluminum chloride ammonia, cadmium chloride ammonia, and also cupric chloride ammonia for the salt now almost universally known as cuprammonium chloride.

The ammonia compounds of cobalt, chromium, mercury, and the platinum metals are arranged alphabetically according to their universally accepted names, a list of which is given under each of those elements.

It has further been necessary to settle arbitrarily the question whether a substance should be considered as a double salt or a salt of a compound acid con-

taining one of the metals. For example, "fluosilicates" (or silicofluorides, as some may prefer) is the general name for the double fluorides of  $\text{SiF}_4$  and a metal, but this unanimity in usage gradually disappears as the basic elements become more nearly alike, so that it is impossible to draw a line between such compounds and a compound such as the double chloride of magnesium and potassium, for which indeed the name "potassium chloromagnesate" has been proposed. The aim has been in all these cases to follow the best usage rather than make an absolutely homogeneous system of nomenclature out of the existing confusion.

In the matter of formulæ no attempt at uniformity has been made. Thus in the case above some chemists write the formula of the double chloride of magnesium and potassium as  $\text{KMgCl}_2$ , others as  $\text{KCl, MgCl}_2$ . The form here used has been in most cases that of the author from whom the data are taken.

The prefixes mono, di, tri, ortho, pyro, etc., have in general been disregarded in the alphabetical arrangement, and have been printed in italics. Exceptions to this have been made, however, in the cobalt, chromium, etc., ammonium compounds, and in a few others, as dithionic, perchloric, etc., acids. Cross references have been used, so as to prevent any confusion arising from lack of uniformity in this respect.

In the Appendix will be found formulæ and tables for the conversion of the degrees of various hydrometer scales into specific gravity, and a Synchronistic Table of the Periodicals to which references are most frequently made.

Herz (Z. anorg. 25, 155) found that aluminum hydroxide which has been dried in a vacuum desiccator requires for solution in  $\text{NaOH} + \text{Aq.}$  3 atoms Na to 1 atom Al. Slade (Z. Elektrochem. 1911, 17, 261) was unable to obtain this result. Herz says Slade's error is due to insufficient shaking of the solution. (Herz, Z. Elektrochem. 1911, 17, 403.)

New solubility determinations verify the statement of Herz (Z. anorg. 25, 155) that the solubility of  $\text{Al}(\text{OH})_3$  in  $\text{NaOH} + \text{Aq.}$  is proportional to the concentration of  $\text{NaOH}$ . They do not, however, verify his statement that the ratio Na : Al in the solutions is always 3 : 1, for the author finds that the ratio Na : Al varies from 2 : 1 to 10 : 1 depending on the conditions of precipitation and the method and duration of drying of the  $\text{Al}(\text{OH})_3$ . (Slade, Z. Elektrochem. 1912, 18, 1.)

Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  when freshly pptd., but presence of  $\text{NH}_4$  salts diminish its solubility, and it separates out completely after long standing. (Fresenius.)

Somewhat sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  the more readily the larger the vol. of  $\text{H}_2\text{O}$ . Somewhat sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  but less than in  $\text{NH}_4\text{OH} + \text{Aq.}$  Sl. sol. in dil.  $\text{NH}_4\text{Cl} + \text{Aq.}$  unless that salt be in large excess. It is finally wholly pptd. if allowed to stand several days.

18752 pts.  $\text{NH}_4\text{OH} + \text{Aq.}$  (4 %  $\text{NH}_4\text{OH}$ ) dissolve an amt. of  $\text{Al}(\text{OH})_3$  corresponding to one pt.  $\text{Al}_2\text{O}_3$ ;  $\text{NH}_4\text{Cl}$  prevents this solubility almost completely. (Hanamann, Pharm. Viertelj. 12, 527.)

$\text{Al}(\text{OH})_3$ , prepared by ppt. of a solution of  $\text{Al}(\text{NO}_3)_3$  with  $\text{NH}_4\text{OH}$ , filtered and washed, is insol. in  $\text{NH}_4\text{OH} + \text{Aq.}$

$\text{Al}(\text{OH})_3$  prepared by pptn. of a solution of potassium aluminate with  $\text{NH}_4\text{Cl}$ , is sol. in a large excess of  $\text{NH}_4\text{OH}$  if this is added to the ppt. at once. This modification which is sol. in  $\text{NH}_4\text{OH}$  is unstable and easily goes over into the modification which is insol. in  $\text{NH}_4\text{OH}$ . (Renz, B. 1903, 36, 2751.)

Conc.  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  does not dissolve  $\text{Al}(\text{OH})_3$ , and not a trace is dissolved by boiling conc.  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Weeren, Pogg. 92, 97.)

With  $\text{NH}_4\text{F} + \text{Aq.}$  it forms a double salt,  $\text{AlF}_3 \cdot 3\text{NH}_4\text{F}$ , which is sol. in  $\text{H}_2\text{O}$ , but not in  $\text{NH}_4\text{F} + \text{Aq.}$  (Helmholtz, Z. anorg. 3, 127.)

Insol. in  $(\text{NH}_4)_2\text{S} + \text{Aq.}$  (Malaguti and Durocher, A. ch. (3) 17, 421.) Fuchs found, on the contrary, that it is not wholly insol. in  $(\text{NH}_4)_2\text{S} + \text{Aq.}$  (Fresenius, Quant.)

Insol. in  $\text{FeCl}_3 + \text{Aq.}$  (Béchamp.)

Determinations of the solubility of aluminum hydroxide in  $\text{AlCl}_3 + \text{Aq.}$  show that part goes into solution to form a compound, while the greater part is in the colloidal form. (Fischer, Z. anorg. 1904, 40, 46.)

Only sl. sol. in conc.  $\text{Al}_2(\text{SO}_4)_3 + \text{Aq.}$  but solubility increases with decrease in concentration of  $\text{Al}_2(\text{SO}_4)_3$ , until it reaches a maximum at a concentration of 32 %  $\text{Al}_2(\text{SO}_4)_3$ , at 20°, 28 % at 40°, and 38 % at 60°. With further decrease in concentration of  $\text{Al}_2(\text{SO}_4)_3$ ,

the solubility of  $\text{Al}(\text{OH})_3$  in  $\text{Al}_2(\text{SO}_4)_3$  diminishes. (Kremann, C. A. 1909, 2422.)

Sol. in  $\text{Ba}(\text{OH})_2 + \text{Aq.}$  (Rose.)

Sol. in boiling  $\text{Fe}(\text{NO}_3)_3$ ,  $\text{Cr}(\text{NO}_3)_3$ ,  $\text{Bi}(\text{NO}_3)_3$ ,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{HgNO}_3$ ,  $\text{SnCl}_4$ , and  $\text{SbCl}_3 + \text{Aq.}$  (Persoz.)

Insol. in  $\text{HCN}$  or cold  $\text{KCN} + \text{Aq.}$ ; but sl. sol. in hot  $\text{KCN} + \text{Aq.}$  (Rose.)

Insol. in  $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq.}$  (Osann, 1821.)

When moist, sol. in  $\text{H}_2\text{SO}_4 + \text{Aq.}$  from which it is reprecipitated on boiling. (Berthier, A. ch. (3) 7, 76.)

Somewhat sol. in  $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq.}$  (Mercer.)

Not pptd. by  $\text{NH}_4\text{OH} + \text{Aq.}$  in presence of Na citrate. (Spiller.)

Sol. in ethyl amine, amyl amine, sinkaline, ethyl picoline hydroxide, stibethylum hydroxide, triethyltoluyl ammonium hydroxide +  $\text{Aq.}$  (Friedländer.)

Sol. in alkyl amines. (Renz, B. 1903, 36, 2751.)

Insol. in acetone. (Naumann, B. 1904, 37, 4328.)

Sol. to a considerable extent in  $\text{K}_2\text{C}_2\text{H}_4\text{O}_4 + \text{Aq.}$

Very sl. sol. in cane sugar +  $\text{Aq.}$  (Ramsey.)

Solubility in glycerine +  $\text{Aq.}$  containing about 60 % by vol. of glycerine. 100 cc. of the solution contain 0.25 g.  $\text{Al}_2\text{O}_3$ . (Müller, Z. anorg. 1905, 43, 322.)

$\text{Al}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq.}$  and alcohol. Sol. in  $\text{HCl}$  and  $\text{HNO}_3 + \text{Aq.}$  (Zunino, Gazz. ch. it. 1900, 30 (1), 194.)

$\text{Al}_2\text{O}_3 \cdot \text{H}_2\text{O}$ , "Trialuminum hydroxide."

Not sol. in conc. acids in the cold; not sol. in  $\text{KOH}$  (cold) and only sl. sol. in hot  $\text{KOH}$ . Characterized by its solubility in exactly one mol. dil.  $\text{HCl}$ . Dil. solutions do not gelatinize even on long standing. Conc. solution of  $\text{NH}_4\text{Cl}$  and other salts cause ppt. which redissolves on addition of  $\text{H}_2\text{O}$ .

Alkalies and alkali carbonates decompose the salt with  $\text{HCl}$  and ppt. trialuminium hydroxide.  $\text{H}_2\text{SO}_4$  and sol. sulphates give insol. compds. with the hydrate.  $\text{HNO}_3$ , like  $\text{HCl}$  gives soluble compds. with the hydrate. (Structural formula given.) (Schlumberger, Bull. Soc. 1895, (5) 13, 41-65; C. C. 1895, I, 421.)

#### Aluminum iodide, $\text{AlI}_3$ .

Anhydrous. Fumes on air and deliquesces. Sol. in  $\text{H}_2\text{O}$  with evolution of much heat. Sol. in  $\text{CS}_2$  and crystallizes from the hot sat. solution on cooling. (Weber.) Sol. in alcohol (Weber); ether and tetrachlormethane. (Gustavson.)

Sol. in  $\text{AlBr}_3$ . (Isbekow, Z. anorg. 1913, 84, 26.)

+  $6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ .

#### Aluminum mercuric iodide, $\text{AlI}_3 \cdot \text{HgI}_2 \cdot 8\text{H}_2\text{O}$ .

Very deliquescent; sol. in  $\text{H}_2\text{O}$  without decomposition. (Duboin, C. R. 1908, 146, 1028.)

amidophosphate and in  $\text{NH}_4\text{OH} + \text{Aq.}$  Insol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$

*Acid.* As the neutral salt.

**Hydroxylamine amidophosphate,**  $(\text{NH}_2\text{O})\text{HPO}_2(\text{NH}_2).$

Sl. sol. in  $\text{H}_2\text{O}$ . (Stokes.)

**Lithium amidophosphate,**  $\text{LiHPO}_2(\text{NH}_2).$

Sl. sol. in  $\text{H}_2\text{O}$ . (Stokes.)

**Magnesium amidophosphate,**  $\text{MgPO}_2(\text{NH}_2) + 7\text{H}_2\text{O}.$

Very sl. sol. in  $\text{H}_2\text{O}$ ; quite easily sol. in dil.  $\text{NH}_4\text{Cl} + \text{Aq.}$  Sol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$  (Stokes.)  $\text{MgH}_2(\text{PO}_2\text{NH}_2)_2 + 3\frac{1}{2}\text{H}_2\text{O}.$  Insol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Stokes.)

**Manganese amidophosphate.**

*Neutral.* Ppt.

*Acid.* Sl. sol. in  $\text{H}_2\text{O}$ .

**Nickel amidophosphate.**

*Neutral.* Ppt. Sol. in  $\text{HC}_2\text{H}_3\text{O}_2$  or  $\text{NH}_4\text{OH} + \text{Aq.}$

*Acid.* Sl. sol. in  $\text{H}_2\text{O}$ .

**Potassium amidophosphate,**  $\text{K}_2\text{PO}_2(\text{NH}_2).$

Very sol. in  $\text{H}_2\text{O}$  and not decomp. by boiling. (Stokes.)

$\text{KHPO}_2(\text{NH}_2).$  Easily sol. in cold  $\text{H}_2\text{O}$ ; insol. in alcohol. (Stokes.)

**Silver amidophosphate,**  $\text{Ag}_2\text{PO}_2(\text{NH}_2).$

Almost insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  or  $\text{NH}_4\text{OH} + \text{Aq.}$

$\text{AgHPO}_2(\text{NH}_2).$  Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in dil.  $\text{HNO}_3$  or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$  also in  $\text{NH}_4\text{OH} + \text{Aq.}$

**Sodium amidophosphate,**  $\text{Na}_2\text{PO}_2(\text{NH}_2).$

Not deliquescent; very sol. in  $\text{H}_2\text{O}$ ; pptd. from aqueous solution by alcohol. (Stokes.)

$\text{NaHPO}_2(\text{NH}_2) + \frac{1}{4}(\text{?})\text{H}_2\text{O}.$  Nearly insol. in cold, and decomp. by hot  $\text{H}_2\text{O}$ . Insol. in alcohol.

**Zinc amidophosphate.**

*Neutral.* Perceptibly sol. in  $\text{H}_2\text{O}$ .

*Acid.* Sl. sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH}$  or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$

**Diamidophosphoric acid,**  $\text{PO}(\text{NH}_2)_2\text{OH}.$

Sol. in cold  $\text{H}_2\text{O}$ ; almost insol. in alcohol; stable in the air but decomp. when heated and by boiling in aq. solution. (Stokes, Am. Ch. J. 1894, 16. 130.)

**Barium diamidophosphate,**  $[\text{PO}(\text{NH}_2)_2\text{O}]_2\text{Ba}.$

Very sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol; aq. solution decomp. slowly. (Stokes, Am. Ch. J. 1894, 16. 134.)

**Magnesium diamidophosphate,**  $[\text{PO}(\text{NH}_2)_2\text{O}]_2\text{Mg}.$

Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Stokes.)

**Potassium diamidophosphate,**  $\text{PO}(\text{NH}_2)_2\text{OK}.$

Sol. in  $\text{H}_2\text{O}$ ; not deliquescent; insol. in alcohol. (Stokes.)

**Silver diamidophosphate,**  $\text{PO}(\text{NH}_2)_2\text{OAg}.$

Very stable; insol. in  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Stokes.)

**Sodium diamidophosphate,**  $\text{PO}(\text{NH}_2)_2\text{ONa}.$

Sol. in  $\text{H}_2\text{O}$ ; not deliquescent; insol. in alcohol. (Stokes.)

**Diamidotrihydroxyphosphoric acid.**

**Silver diamidotrihydroxyphosphate,**  $(\text{AgO})_3\text{P}(\text{NHAg})_3.$

(Stokes, Am. Ch. J. 1894, 16. 147.)

$(\text{AgO})_3\text{P}(\text{NH}_2)(\text{NHAg}).$  Insol. in cold  $\text{H}_2\text{O}$ . (Stokes.)

$(\text{AgO})_3\text{P}(\text{NH}_2)_3.$  Decomp. by cold  $\text{H}_2\text{O}$ . (Stokes.)

$+ 2\text{H}_2\text{O}.$  Decomp. by boiling  $\text{H}_2\text{O}$ . (Stokes.)

**Amidoimidophosphoric acid.**

**Amidohezimidoheptaphosphoric acid,**  $\text{OH}.$   
 $\text{PO}(\text{NH}_2)[\text{NH}.\text{PO}(\text{OH})]_5.\text{NH}.\text{PO}(\text{OH})_2$   
 $= \text{P}_7\text{N}_7\text{O}_{15}\text{H}_{16}.$

Known only in solution in  $\text{H}_2\text{O}$ . (Stokes, Am. Ch. J. 1898, 20. 758.)

**Silver diamidopyrimidophosphate,**  $\text{NH}(\text{PO}.\text{NH}_2.\text{OAg})_2.$

Almost insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Stokes, Am. Ch. J. 1894, 16. 136.)

**Silver amidoletrimido pentaphosphate,**  $\text{P}_5\text{N}_4\text{O}_{11}\text{H}_2\text{Ag}_5.$

Ppt. (Stokes, Am. Ch. J. 1898, 20. 752.)

**Silver amidohezimidoheptaphosphate,**  $\text{P}_7\text{N}_7\text{O}_{15}\text{H}_2\text{Ag}_7.$

Ppt.; decomp. by acetic acid. (Stokes, Am. Ch. J. 1898, 20. 759.)

**Sodium amidoimidotriphosphate,**

$\text{NH}.\text{PO}(\text{ONa})_2.$   
 $\text{PO}.\text{ONa} < \text{NHPO}(\text{ONa})\text{NH}_2.$

$= \text{P}_2\text{N}_2\text{O}_7\text{H}_4\text{Na}_4 + \text{H}_2\text{O}.$

Unstable; sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Stokes, Am. Ch. J. 1896, 18. 643.)

**Sodium amidohezimidoheptaphosphate,**  $\text{P}_7\text{N}_7\text{O}_{15}\text{H}_2\text{Na}_7.$

Sol. in  $\text{H}_2\text{O}$ ; pptd. by alcohol. (Stokes, Am. Ch. J. 1898, 20. 758.)

**Amidophosphimic acid.****Silver amidophosphimate**,  $P(NH)NH_2(OAg)_2$ .Decomp. by heat; decomp. in contact with  $H_2O$ . (Stokes, Am. Ch. J. 1894, 16. 139.) $(AgO)_2P(NAg)(NHAg)(?)$  Sl. sol. in  $NH_4OH + Aq.$  (Stokes, Am. Ch. J. 1894, 16. 149.)**Amidosulphonic acid**,  $HOSO_2NH_2$ .Easily sol. in  $H_2O$ , less easily in alcohol. (Berglund, B. 9. 252 and 1896.)Very stable; less easily sol. in  $H_2O$  than its K salt. (Raschig, A. 241. 177.)Stable in air. Non-deliquescent when cold. Sol. in 5 pts.  $H_2O$  at  $0^\circ$  and in  $2\frac{1}{2}$  pts.  $H_2O$  at  $70^\circ$ . Solution in  $H_2O$  can be boiled several minutes without decomp. Solubility is decreased by addition of  $H_2SO_4$ , so that if  $1\frac{1}{5}$ – $1\frac{1}{4}$  pt.  $H_2SO_4$  is added to  $H_2O$ , 100 pts. of the liquid dissolve only 3 pts.  $HOSO_2NH_2$  in the cold. Pptd. from solution by  $HNO_3$  or glacial acetic acid, but not by  $HCl$ . Solubility is decreased by presence of  $NaHSO_4$ . (Divers and Haga, Chem. Soc. 1896, 69. 1641.)**Amidosulphonates.**Easily sol. in  $H_2O$ ; sl. sol. in alcohol.**Aluminum amidosulphonate.**Very sol. in  $H_2O$ . (Berglund, Bull. Soc. (2) 29. 422.)**Ammonium amidosulphonate**,  $(NH_4)_2NH_2SO_3$ .Deliquescent. Sol. in  $H_2O$ ; insol. in alcohol.**Ammonium silver amidosulphonate**, $NH_4SO_3(NH_2)$ ,  $AgSO_3(NH_2)$ .

(Ephraim &amp; Gurewitsch, B. 1910, 43. 148.)

**Barium amidosulphonate**,  $Ba(NH_2SO_3)_2$ .Sol. in 3 pts.  $H_2O$ . (Berglund, l.c.)**Cadmium amidosulphonate**,  $Cd(NH_2SO_3)_2 + 5H_2O$ .Very sol. in  $H_2O$ . (B.)**Calcium amidosulphonate**,  $Ca(NH_2SO_3)_2 + 4H_2O$ .Very sol. in  $H_2O$ . (B.)**Cobalt amidosulphonate**,  $Co(NH_2SO_3)_2 + 3H_2O$ .Sol. in  $H_2O$ . (B.)**Copper amidosulphonate**,  $Cu(NH_2SO_3)_2 + 2H_2O$ .Sol. in  $H_2O$ . (B.)**Gold (auric) potassium amidosulphonate**,  $K_2Au_2(NSO_3)_2$ .

Very sl. sol. in cold, more easily sol. in hot

 $H_2O$ . Sol. in dil.  $HCl + Aq.$  (Hofmann, B. 1912, 45. 1735.)**Lead amidosulphonate**,  $Pb(NH_2SO_3)_2 + H_2O$ .

The most sol. of all amidosulphonates. (B.)

**Lithium amidosulphonate**,  $LiNH_2SO_3$ .

Deliquescent. (B.)

**Magnesium amidosulphonate.**Very sol. in  $H_2O$ .**Manganese amidosulphonate**,  $Mn(NH_2SO_3)_2 + 3H_2O$ .Very sol. in  $H_2O$ . (B.)**Mercuric amidosulphonate, basic**,  $Hg(HgOSO_2NH_2)_2$ .Insol. in 3.5 %  $HNO_3 + Aq.$  Very sol. in 3 %  $HCl + Aq.$  (Hofmann, B. 1912, 45. 1733. +  $2H_2O$ . Insol. in hot  $H_2O$ . Sol. in  $KOH + Aq.$  (Divers and Haga, Chem. Soc. 1896, 69. 1649.)**Mercuric potassium amidosulphonate**,  $KHgNSO_3$ .Very sl. sol. in cold  $H_2O$  and cold dil.  $KOH + Aq.$  Sol. in 3 %  $HCl + Aq.$  (Hofmann, B. 1912, 45. 1732.)**Mercuric sodium amidosulphonate**,  $NaHgNSO_3$ .Nearly completely sol. in hot  $H_2O$ . (Hofmann, B. 1912, 45. 1734.)**Nickel amidosulphonate**,  $Ni(NH_2SO_3)_2 + 3H_2O$ .Sol. in  $H_2O$ . (B.)**Potassium amidosulphonate**,  $KNH_2SO_3$ .Sol. in  $H_2O$ . (Berglund.)**Potassium silver amidosulphonate**,  $NHAgSO_3K + H_2O$ .Decomp. by  $H_2O$ ; sol. in  $NH_4OH + Aq.$  (Hofmann, B. 1912, 45. 1734.)**Silver amidosulphonate**,  $AgNH_2SO_3$ .Sol. in 15 pts.  $H_2O$  at  $19^\circ$  (B.)**Sodium amidosulphonate**,  $NaNH_2SO_3$ .Sol. in  $H_2O$ .**Strontium amidosulphonate**,  $Sr(NH_2SO_3)_2 + 4H_2O$ .Sol. in  $H_2O$ .**Thallium amidosulphonate**,  $TlNH_2SO_3$ .Sol. in  $H_2O$ .**Uranyl amidosulphonate.**Sol. in  $H_2O$ .**Zinc amidosulphonate**,  $Zn(NH_2SO_3)_2 + 4H_2O$ .Sol. in  $H_2O$ .

**Amidosulphurous acid.****Ammonium amidosulphite,  $\text{NH}_4 \cdot \text{SO}_2 \cdot \text{NH}_4$ .**

Very deliquescent. Decomp. in the air with loss of  $\text{NH}_3$ . Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in anhydrous alcohol. Sl. sol. in dry ether. (Divers, Chem. Soc. 1900, 77. 330.)

**Ammonia,  $\text{NH}_3$ ,**

Very sol. in  $\text{H}_2\text{O}$ , with evolution of much heat.

1 vol.  $\text{H}_2\text{O}$  absorbs 670 vols. ( $\frac{1}{2}$  pt. by weight)  $\text{NH}_3$  at  $+10^\circ$  and 29.8 in. pressure; sp. gr. of solution = 0.875. (Davy.)

At low temperatures  $\text{H}_2\text{O}$  absorbs more than  $\frac{1}{2}$  its weight of  $\text{NH}_3$ , and sp. gr. of solution = 0.850. (Dalton.)

100 pts.  $\text{H}_2\text{O}$  absorb 8.41 pts.  $\text{NH}_3$  at  $24^\circ$ ; 5.96 pts. at  $55^\circ$ . (Osann.)

1 vol.  $\text{H}_2\text{O}$  absorbs 780 vols.  $\text{NH}_3$ , 6 vols.  $\text{H}_2\text{O}$  increasing to 40 vols. sat.  $\text{NH}_4\text{OH} + \text{Aq}$ ; 1 vol. sat.  $\text{NH}_4\text{OH} + \text{Aq}$  contains 468 vols.  $\text{NH}_3$ . (Thomson.)

1 vol.  $\text{H}_2\text{O}$  absorbs 450 vols.  $\text{NH}_3$  at  $15^\circ$ . (Dumas.)

1 vol.  $\text{H}_2\text{O}$  absorbs 700 vols.  $\text{NH}_3$  at ordinary temperature. (Otto.)

100 pts.  $\text{H}_2\text{O}$  absorb in  $\text{NH}_3$  gas 47.7 pts.  $\text{NH}_3$  by weight. (Berzelius.)

1 vol.  $\text{H}_2\text{O}$  absorbs 505 vols.  $\text{NH}_3$  and vol. is increased to 1.5 vol., and sp. gr. becomes 0.900. (Ure.)

1 vol.  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm. absorbs 1177.3 vols.  $\text{NH}_3$ . (Sims.)

1 vol.  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm. absorbs 1146 vols.  $\text{NH}_3$ . (Roscoe and Dittmar.)

1 vol.  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm. absorbs 1049.6 vols.  $\text{NH}_3$ . (Carius.)

1 vol.  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm. absorbs 1270 vols.  $\text{NH}_3$ . (Berthelot.)

1 vol.  $\text{H}_2\text{O}$  at  $0^\circ$  and 760 mm. absorbs 1050 vols.  $\text{NH}_3$ . (Bunsen.)

100 cc.  $\text{H}_2\text{O}$  absorb 64.50 g.  $\text{NH}_3$ . (Raoult.)

**Solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  at 760 mm. and  $t^\circ$ :**

1 g.  $\text{H}_2\text{O}$  absorbs g.  $\text{NH}_3$ , according to Roscoe and Dittmar (A. 112. 347) (RD); and according to Sims (A. 118. 345) (S).

(Roscoe and Dittmar, A. 112. 349.)

In proportion as the temperature is higher, so much the more nearly does the solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  conform to the law of Henry and Dalton, but only obeys it completely when the temperature is  $100^\circ$ , as is seen in the following table.

Solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  at various pressures and temperatures: P=partial pressure, i. e. total pressure minus the tension of aqueous vapour at the given temperature; G=grams  $\text{NH}_3$  dissolved in 1 g.  $\text{H}_2\text{O}$  at the given pressure; G at 760=grams  $\text{NH}_3$  that would be contained in 1 g.  $\text{H}_2\text{O}$  if the solubility was proportional to the pressure.

(Sims, A. 118. 346.)

Solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  at temps. below  $0^\circ$ . One gram  $\text{H}_2\text{O}$  dissolves

grams $\text{NH}_3$	Temp.
0.947	$-3.9^\circ$
1.115	$-10^\circ$
1.768	$-20^\circ$
2.781	$-30^\circ$
2.946	$-40^\circ$

(Mallet, *Am. Ch. J.* 1897, **19**, 807.)

The solubility of  $\text{NH}_3$  in  $\text{H}_2\text{O}$  does not follow Dalton's law at ord. temp., but does at temp. near  $100^\circ$ . (Konowaloff, *J. Russ. Phys. Chem. Soc.* 1894, **26**, 48; *Chem. Soc.* 1896, **70** (2), 351.)

22	10.9	12.2
28.4	9.2	10.1

(de Bruyn, *R. t. c.* 11. 112.)

1 vol. abs. alcohol at  $20^\circ$  and 760 mm. pressure absorbs 340 vols.  $\text{NH}_3$  gas. (Müller, *W. Ann.* 1891, 43. 567.)

1 l. methyl alcohol sat. with  $\text{NH}_3$  contains 218 g.  $\text{NH}_3$  at  $0^\circ$ ; sp. gr. of solution = 0.770; coefficient of solubility = 425.0. (Delépine.)

1 vol. oil of rosemary absorbs 9.75 vols.  $\text{NH}_3$  at  $29^\circ$ .

1 vol. oil of lavender absorbs 47 vols.  $\text{NH}_3$  at  $20^\circ$ . (Saussure.)

1 vol. caoutchine absorbs 3 vols.  $\text{NH}_3$ . (Himly.)

Valerol absorbs much  $\text{NH}_3$ . (Gerhardt, *A. ch.* (3) 7. 278.)

1 vol. ether at 760 mm. pressure absorbs 17.13 vols.  $\text{NH}_3$  at  $0^\circ$ ; 12.35 vols. at  $10^\circ$  and 10.27 vols. at  $15^\circ$ . (Christoff, *Z. phys. Ch.* 1912, 79. 459.)

+  $\text{H}_2\text{O}$ . Colorless crystals.

+  $\frac{1}{2}\text{H}_2\text{O}$ . Large transparent crystals. (Rupert, *J. Am. Chem. Soc.* 1909, 31. 868.)

Ammonia, with metal salts.

For the ammonia addition-products of metal salts, see under the respective metal salts, except in the case of Co, Cr, Hg, and the Pt metals, for which see cobalt ammonium, chromium ammonium, etc., compounds, for

urther reference. New data on Co and Cr ammonium compounds and those of the Pt metals, published since the first edition, has not been included in the present edition.

**ammonium amalgam**,  $\text{NH}_4, 2\text{Hg}$ .

Decomp. by  $\text{H}_2\text{O}$ , but more easily in presence of naphtha, alcohol, or ether.

**ammonium azoimide**,  $\text{N}_4\text{H}_4 = \text{NH}_4\text{N}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ ; sl. sol. in absolute alcohol, easily in 80% alcohol. Insol. in ether or benzene. (Curtius, B. 24. 3344.)

**ammonium cobalt azoimide**,  $\text{NH}_4\text{N}_3, \text{CoN}_3$ .

Rather sol. in  $\text{H}_2\text{O}$ . (Curtius and Rissom, pr. 1898, (2) 58. 302.)

**ammonium bromide**,  $\text{NH}_4\text{Br}$ .

Easily sol. in  $\text{H}_2\text{O}$  with absorption of much heat.

1 pt.  $\text{NH}_4\text{Br}$  dissolves in pts.  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts. $\text{H}_2\text{O}$	$t^\circ$	Pts. $\text{H}_2\text{O}$	$t^\circ$	Pts. $\text{H}_2\text{O}$

100.00	0.983	0.8605

(Herz, Z. anorg. 1908, 60. 156.)

Solubility in mixtures of methyl and propyl alcohol at  $25^\circ$ .

P = % propyl alcohol in the solvent.

G = g.  $\text{NH}_4\text{Br}$  in 10 cc. of the solution.

S = Sp. gr. of the sat. solution at  $25^\circ/4^\circ$ .

100	0.095	0.8059

(Herz, l.c.)

Sol. in 809 pts. ether (0.729 sp. gr.). (Eder, l.c.)

Sol. in acetone. (Eidmann, C. C. 1899. II, 1014); (Naumann, B. 1904, 37. 4328.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethylacetate. (Naumann, B. 1910, 43. 314.)

#### Ammonium tribromide, $\text{NH}_4\text{Br}_3$ .

Gives off Br in air. Sol. in  $\text{H}_2\text{O}$ . (Rooseboom, B. 14. 2398.)

Decomp. in the air. Very sol. in  $\text{H}_2\text{O}$ . (Chattaway, Chem. Soc. 1915, 107. 106.)

#### Ammonium antimony bromide, $3\text{NH}_4\text{Br}$ , $2\text{SbBr}_3$ .

Easily sol. in abs. alcohol. (Caven, C. C. 1905. II, 293.)

$7\text{NH}_4\text{Br}$ ,  $3\text{SbBr}_3$ . Easily sol. in abs. alcohol. (Caven, C. C. 1905. II, 293.)

See also Bromantimonate, ammonium.

#### Ammonium bismuth bromide, $\text{NH}_4\text{Br}$ , $\text{BiBr}_3$ , $+\text{H}_2\text{O}$ .

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol. (Nicklès, C. R. 51. 1097.)

#### Ammonium cadmium bromide, $\text{NH}_4\text{Br}$ , $\text{CdBr}_2$ , $+\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in 0.73 pt.  $\text{H}_2\text{O}$ , 5.3 pts. abs. alcohol, 280 pts. ether (sp. gr. 0.729), and 24 pts. alcohol ether (1:1). (Eder, Dingl. 221. 89.)

Sol. in  $\text{H}_2\text{O}$  without decomp. between  $1^\circ$  and  $110.1^\circ$ .

100 pts. of the solution contain at:

$1^\circ$  14.8° 52.2° 110.1°  
53.82 58.01 65.32 75.83 pts. of the salt.  
(Rimbach, B. 1905, 38. 1555.)

$4\text{NH}_4\text{Br}$ ,  $\text{CdBr}_2$ . Sol. in 0.96 pt.  $\text{H}_2\text{O}$ , from which it is pptd. by alcohol or ether. (Eder.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

Below  $160^\circ$  the salt is decomp. by  $\text{H}_2\text{O}$ ; at  $160^\circ$  it is sol. in  $\text{H}_2\text{O}$  without decomp.

$t^\circ$	100 pts. of the solution contain			Solid phase
	Pts. Cd	Pts. Br	Pts. $\text{NH}_4$	
0.8	14.72	50.46	6.67	Double salt + $\text{NH}_4\text{Br}$
13.0	14.94	51.48	6.85	"
44.5	15.01	53.85	7.35	"
76.4	14.60	55.28	7.80	"
123.5	15.50	59.50	8.45	"
160.0	14.70	62.67	9.43	Double salt

(Rimbach, B. 1905, 38. 1558.)

Not sol. in  $\text{HBr} + \text{Aq}$  without decomp. (Rimbach.)

Not sol. without decomp. in  $\text{LiBr} + \text{Aq}$ ,  $\text{CaBr}_2 + \text{Aq}$ ,  $\text{MgBr}_2 + \text{Aq}$ ,  $\text{NiBr}_2 + \text{Aq}$ , or

$\text{CoBr}_2 + \text{Aq}$ , even though very conc. solutions are used. Sol. without decomp. in  $\text{ZnBr}_2 + \text{Aq}$ . (Rimbach, B. 1905, 38. 1571.)

#### Ammonium chloromolybdenum bromide, $2\text{NH}_4\text{Br}$ , $\text{Cl}_2\text{Mo}_2\text{Br}_2$ .

Decomp. by pure  $\text{H}_2\text{O}$ . Can be crystallized from  $\text{HBr} + \text{Aq}$ . Apparently sol. without decomp. in alcohol. (Blomstrand.)

#### Ammonium cuprous bromide.

$4\text{NH}_4\text{Br}$ ,  $\text{Cu}_2\text{Br}_2$ . Fairly stable in air.

$2\text{NH}_4\text{Br}$ ,  $\text{Cu}_2\text{Br}_2 + \text{H}_2\text{O}$ . Fairly stable in air. (Wells, Z. anorg. 1895, 10. 159.)

#### Ammonium cuprous bromide ammonia, $\text{NH}_4\text{Br}$ , $\text{Cu}_2\text{Br}_2$ , $3\text{NH}_3$ .

(Fleurent, C. R. 1891, 113. 1047.)

#### Ammonium cupric bromide, $2\text{NH}_4\text{Br}$ , $\text{CuBr}_2$ , $+2\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (de Koninck, B. 21. 777 R.)

#### Ammonium iridium bromide.

See Bromiridate, ammonium.

#### Ammonium iron (ferric) bromide, $(\text{NH}_4)\text{FeBr}_4 + 2\text{H}_2\text{O}$ .

Very deliquescent; sol. in  $\text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 7. 332.)

#### Ammonium lead bromide, $12\text{NH}_4\text{Br}$ , $7\text{PbBr}_2$ , $+7\text{H}_2\text{O}$ .

Decomp. on air, or with cold  $\text{H}_2\text{O}$ . (André, C. R. 96. 1502.)

$6\text{NH}_4\text{Br}$ ,  $\text{PbBr}_2 + \text{H}_2\text{O}$ . Decomp. by cold  $\text{H}_2\text{O}$ . (A.)

$7\text{NH}_4\text{Br}$ ,  $\text{PbBr}_2 + 1\frac{1}{2}\text{H}_2\text{O}$ . Stable on air; decomp. by cold  $\text{H}_2\text{O}$ . (A.)

None of the above compounds exist. (Wells, Sill. Am. J. 146. 25.)

$2\text{NH}_4\text{Br}$ ,  $\text{PbBr}_2$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{KOH} + \text{Aq}$  and in strong acids.

(Fonze-Diacon, Bull. Soc. 1897, (3) 17.351.)  
 $\text{NH}_4\text{Br}$ ,  $3\text{PbBr}_2$ . (Wells.)

#### Ammonium magnesium bromide, $\text{NH}_4\text{Br}$ , $\text{MgBr}_2$ , $+6\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Lerch, J. pr. (2) 28. 338.)

#### Ammonium mercuric bromide, $2\text{HgBr}_2$ , $\text{NH}_4\text{Br}$ .

Decomp. by  $\text{H}_2\text{O}$  into its constituent salts. (Ray, Chem. Soc. 1902, 81. 648.)

#### Ammonium molybdenum bromide, $2\text{NH}_4\text{Br}$ , $\text{MoBr}_2$ , $+\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1905, 46. 322.)

#### Ammonium molybdenum bromide chloride.

See Ammonium chloromolybdenum bromide.

**Ammonium osmium bromide.**

See Bromosmate, ammonium.

**Ammonium osmyl bromide,  $(\text{NH}_4)_2\text{OsO}_2\text{Br}_4$ .**

Sol. in  $\text{H}_2\text{O}$ . (Wintrebert, A. ch. 1903, (7) 28. 95.)

**Ammonium osmyl oxybromide,  $(\text{NH}_4)_2\text{OsO}_2\text{Br}_2$ .**

(Wintrebert, A. ch. 1903 (7) 28. 117.)

**Ammonium palladium bromide.**

See Bromopalladate, ammonium, and Bromopalladite, ammonium.

**Ammonium platinum bromide.**

See Bromoplatinate, ammonium.

**Ammonium rhodium bromide.**

See Bromorhodite, ammonium.

**Ammonium selenium bromide.**

See Bromoselenate, ammonium.

**Ammonium tellurium bromide.**

See Bromotellurate, ammonium.

**Ammonium thallic bromide,  $\text{NH}_4\text{Br}$ ,  $\text{TlBr}_3$  +  $2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Willm.)  
+  $4\text{H}_2\text{O}$ . Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Nicklès.)  
+  $5\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Nicklès.)

**Ammonium stannous bromide (ammonium bromostannite),  $\text{NH}_4\text{Br}$ ,  $\text{SnBr}_2$  +  $\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Benas, C. C. 1884. 958.)  
 $2\text{NH}_4\text{Br}$ ,  $\text{SnBr}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Raymann and Preis, A. 223. 323.)  
+  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Benas, l.c.)  
+  $2\text{H}_2\text{O}$ . (Richardson, Am. Ch. J. 14. 96.)  
 $\text{NH}_4\text{Br}$ ,  $2\text{SnBr}_2$ (?). (Benas.)

**Ammonium stannic bromide,  $2\text{NH}_4\text{Br}$ ,  $\text{SnBr}_4$ .**

See Bromostannate, ammonium.

**Ammonium uranyl bromide,  $2\text{NH}_4\text{Br}$ ,  $\text{UO}_2\text{Br}_2$  +  $2\text{H}_2\text{O}$ .**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Sendtner.)

**Ammonium zinc bromide,  $2\text{NH}_4\text{Br}$ ,  $\text{ZnBr}_2$ .**

Deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Bödeker, J. B. 1860. 17.)

+  $\text{H}_2\text{O}$ . Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (André, A. ch. (6) 3. 104.)

+  $x\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1908, 59. 66.)  
 $3\text{NH}_4\text{Br}$ ,  $\text{ZnBr}_2$ . Sol. in  $\text{H}_2\text{O}$ . Decomp. only by great dilution. (Jones & Knight, Am. Ch. J. 1899, 22. 136.)

+  $\text{H}_2\text{O}$ . Not hygroscopic. (Ephraim, Z. anorg. 1908, 59. 66.)

**Ammonium bromide arsenic trioxide.**

See Arsenite bromide, ammonium.

**Ammonium bromide mercuric chloride,  $\text{NH}_4\text{Br}$ ,  $2\text{HgCl}_2$ .**

Ppt. (Ray, Chem. Soc. 1902, 81. 649.)

**Ammonium bromide mercuric iodide,  $2\text{NH}_4\text{Br}$ ,  $\text{HgI}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol without decomp. (Grossmann, B. 1903, 36. 1602.)  
 $3\text{NH}_4\text{Br}$ ,  $2\text{HgI}_2$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol without decomp. (Grossmann, B. 1903, 36. 1602.)

**Ammonium lead bromochloride,  $\text{NH}_4\text{Pb}_2\text{Br}_2\text{Cl}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Fonsses-Diacon, Bull. Soc. 1897, (3) 17. 350.)  
 $\text{NH}_4\text{Pb}_2\text{Cl}_2\text{Br}$ . Decomp. by  $\text{H}_2\text{O}$ . (Fonsses-Diacon, Bull. Soc. 1897, (3) 17. 349.)

**Ammonium bromochloroiodide,  $\text{NH}_4\text{ClBrI}$ .**

Very stable; sol. in  $\text{H}_2\text{O}$ . (Chattaway, Chem. Soc. 1915, 107. 108.)

**Ammonium lead bromoiodide,  $\text{NH}_4\text{PbBrI}_2$  +  $2\text{H}_2\text{O}$  and  $\text{NH}_4\text{Pb}_2\text{BrI}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{KOH}$  +  $\text{Aq}$  and in strong acids. (Fonsses-Diacon, Bull. Soc. 1897, (3) 17. 352.)

**Ammonium bromiodobromide,  $\text{NH}_4\text{BrIBr}$ .**

Decomp. in the air. Sol. in ether. (Jackson, Am. Ch. J. 1900, 24. 28.)

**Ammonium chloride,  $\text{NH}_4\text{Cl}$ .**

(Sal-ammoniac.) Not deliquescent. Sol. in  $\text{H}_2\text{O}$  with reduction of temp.

Sol. in 2.24 pts.  $\text{H}_2\text{O}$ . (Wensel.)  
 $\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. at  $10^\circ$  has sp. gr. = 1.072. (T.)  
Sol. in 2.72 pts. cold, and 1 pt. boiling  $\text{H}_2\text{O}$ . (M. R., and P.)  
Sol. in 3 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$ . (Abl.)  
Sol. in 6 pts. cold, and 1 pt. boiling  $\text{H}_2\text{O}$ . (Fourcroy.)  
100 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$  dissolve 36.75 pts.  $\text{NH}_4\text{Cl}$ .  
 $\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. at its b.-pt. ( $114.2^\circ$ ) contains 88.9 pts.  $\text{NH}_4\text{Cl}$  in 100 pts. of the solution. (Bernselius.)  
100 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  dissolve 33-36 pts.; and at  $100^\circ$ , 100 pts.  $\text{NH}_4\text{Cl}$ . (Ure's Dict.)  
 $\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. at  $15^\circ$  has sp. gr. = 1.075209, and contains at least 31.88 pts.  $\text{NH}_4\text{Cl}$  dissolved in every 100 pts.  $\text{H}_2\text{O}$ . (Michel and Kraft, A. ch. (3) 41. 478.)  
 $\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. at  $10^\circ$  contains 23.8%  $\text{NH}_4\text{Cl}$ . (Eller.)  
 $\text{NH}_4\text{Cl}$  +  $\text{Aq}$  sat. in the cold contains 14.3%  $\text{NH}_4\text{Cl}$ . (Fourcroy.)  
Sol. in 1 pt.  $\text{H}_2\text{O}$  at  $113.5^\circ$ , b.-pt. of sat. solution. (Griffiths.)  
Sol. in 2.7 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$ , forming a liquid of 1.08 sp. gr. (Karsten, 1840.)  
Sol. in 2.727 pts.  $\text{H}_2\text{O}$  at  $10^\circ$ . (Gren's Handbuch.)

100 pts.  $\text{H}_2\text{O}$  at 718 mm. pressure and  $t^\circ$  dissolve pts.  $\text{NH}_4\text{Cl}$ .

$t^\circ$	Pts. $\text{NH}_4\text{Cl}$	$t^\circ$	Pts. $\text{NH}_4\text{Cl}$	$t^\circ$	Pts. $\text{NH}_4\text{Cl}$	$t^\circ$	Pts. $\text{NH}_4\text{Cl}$

For older determinations, see Storer's Dict.

Sp. gr. of NH <sub>4</sub> Cl + Aq at 18°.			
% NH <sub>4</sub> Cl	Sp. gr.	% NH <sub>4</sub> Cl	Sp. gr.
5	1.0142	20	1.0571
10	1.0289	25	1.0710
15	1.0430	.....	.....

(Kohlrausch, W. Ann. 1879. 1.)

Sp. gr. at 20°/4° of a normal solution of  $\text{NH}_4\text{Cl}$  = 1.01454. (Haigh, J. Am. Chem. Soc. 1912, **34**, 1151.)

$\text{NH}_4\text{Cl}$  + Aq containing 6.52%  $\text{NH}_4\text{Cl}$  has sp. gr. 20°/20° = 1.0195. (Le Blanc & Rohland, Z. phys. Ch. 1896, **19**, 272.)

Temp. of maximum density of $\text{NH}_4\text{Cl}$ + Aq	g. mol. $\text{NH}_4\text{Cl}$ in 1000 g. $\text{H}_2\text{O}$
2.640°	0.1899
0.055°	0.5407

(de Coppet, C. R. 1900, **131**, 178.)

Sp. gr. of dil.  $\text{NH}_4\text{Cl}$  + Aq at 20.004° and 731 mm. (corr.)

Conc. = g. equiv.  $\text{NH}_4\text{Cl}$  per l. at 20.004°.

Conc.	Sp. gr.
0.0000	1.000,000,0
0.0001	1.000,001,8
0.0002	1.000,003,7
0.0005	1.000,009,3
0.0010	1.000,018,5
0.0020	1.000,036,9
0.0050	1.000,091,3
0.0100	1.000,180,3

(Lamb and Lee, J. Am. Chem. Soc. 1913, **35**, 1688.)

Sp. gr. of dil.  $\text{NH}_4\text{Cl}$  + Aq.

$\text{NH}_4\text{Cl}$ g. in 1000 g. of solution	Sp. gr. 16°/16°
0	1.000000

0.9061	1.000304
1.8085	1.000606
3.5947	1.001196
7.7845	1.002562
15.3425	1.004994
31.2364	1.010018

(Dijken, Z. phys. Ch. 1897, **24**, 107.)

B.-pt. of  $\text{NH}_4\text{Cl}$  + Aq, containing pts.  $\text{NH}_4\text{Cl}$  to 100 pts.  $\text{H}_2\text{O}$ . G = according to Gerlach (Z. anal. **26**, 439); L = according to Legrand (A. ch. (2) **59**, 436).

B.-pt.	G	L	B.-pt.	G	L
101°	6.5	7.8	109°	50.6	53.5
102	12.8	13.9	110	56.2	59.9
103	19.0	19.7	111	61.9	66.4
104	24.7	25.2	112	67.8	73.3
105	29.7	30.5	113	74.2	80.5
106	34.6	35.7	114	81.3	88.1
107	39.6	41.3	114.2	...	88.9
108	45.0	47.3	114.8	87.1	...

Sat.  $\text{NH}_4\text{Cl}$  + Aq boils at 115.8° at 718 mm. pressure. (Alluard, C. R. **59**, 500.)

$\text{NH}_4\text{Cl}$  + Aq containing 74.2 pts.  $\text{NH}_4\text{Cl}$  to 100 pts.  $\text{H}_2\text{O}$  forms a crust at 113°; highest temperature observed, 114.8°. (Gerlach, Z. anal. **26**, 426.)

$\text{NH}_4\text{Cl}$  + Aq containing 10%  $\text{NH}_4\text{Cl}$  boils at 101.7°; 20%  $\text{NH}_4\text{Cl}$ , at 104.4°. (Gerlach.)

$\text{NH}_4\text{Cl}$  + Aq containing 10.6%  $\text{NH}_4\text{Cl}$  gives off  $\text{NH}_3$  at 37°. (Leeds, Am. J. Sci. (3) **7**, 197.)

When  $\text{NH}_4\text{Cl}$  + Aq is boiled, or even evap. on water bath, a little  $\text{NH}_3$  is expelled. (Fresenius.)

30 pts.  $\text{NH}_4\text{Cl}$  mixed with 100 pts.  $\text{H}_2\text{O}$  lower the temp. from 13.3° to -5.1°, that is 18.4°. (Rüdorff, B. **2**, 68.)

Freezing-point of sat. solution is -15.4°; the same temp. which is caused by mixing 25 pts.  $\text{NH}_4\text{Cl}$  with 100 pts. snow. (Rüdorff, Pogg. **122**, 337.)

Conc.  $\text{HCl}$  + Aq precipitates part of  $\text{NH}_4\text{Cl}$  from sat.  $\text{NH}_4\text{Cl}$  + Aq. (Vogel, J. pr. **2**, 199.)

Solubility of  $\text{NH}_4\text{Cl}$  in  $\text{HCl}$  + Aq at 0°.  $\text{NH}_4\text{Cl}$  = mols.  $\text{NH}_4\text{Cl}$  (in milligrammes) dissolved in 10 cc. of the liquid;  $\text{HCl}$  = mols.  $\text{HCl}$  (in milligrammes) dissolved in 10 cc. of the liquid.

$\text{NH}_4\text{Cl}$	$\text{HCl}$	Sum of mols.	Sp. gr.
46.125	0.0	46.125	1.076
43.6	2.9	46.5	1.0695

3.5°	0.5	99.5	$\text{MgCl}_2 \cdot 6\text{H}_2\text{O} + \text{NH}_4\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$
25°	0.5	103.8	
50°	0.8	111.2	

(Biltz and Marcus, Z. anorg. 1911, 71. 170.)

$\text{NH}_4\text{Cl} + \text{NH}_4\text{NO}_3$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 29.1 pts.  $\text{NH}_4\text{Cl}$  + 173.8 pts.  $\text{NH}_4\text{NO}_3$  at 19.5°. (Rüdorff, B. 6. 482.)

$\text{NH}_4\text{Cl} + \text{Ba}(\text{NO}_3)_2$ . 100 pts.  $\text{H}_2\text{O}$  dissolve at 18.5°—

	1	2	3	4	5
$\text{NH}_4\text{Cl}$	36.7	38.6	38.06	39.18	...
$\text{Ba}(\text{NO}_3)_2$	....	8.6	16.73	17.02	8.9

2, sat.  $\text{Ba}(\text{NO}_3)_2 + \text{Aq}$  treated with  $\text{NH}_4\text{Cl}$ ; 3, sat.  $\text{NH}_4\text{Cl} + \text{Aq}$  treated with  $\text{Ba}(\text{NO}_3)_2$ ; 4, simultaneous treatment of both salts with  $\text{H}_2\text{O}$ . (Karsten.)

$\text{NH}_4\text{Cl} + \text{KNO}_3$ . 100 pts.  $\text{H}_2\text{O}$  dissolve at 18.5°—

	1	2	3	4	5	6
$\text{KNO}_3$	29.9	30.56	37.68	38.62	....	34.2
$\text{NH}_4\text{Cl}$	....	44.33	37.98	39.84	36.7	38.8
		74.89	75.66	78.46		73.0

1 and 5, according to Mulder; 2, sat.  $\text{KNO}_3 + \text{Aq}$  treated with  $\text{NH}_4\text{Cl}$ ; 3, sat.  $\text{NH}_4\text{Cl} + \text{Aq}$  treated with  $\text{KNO}_3$ ; 4, simultaneous treatment of  $\text{NH}_4\text{Cl}$  and  $\text{KNO}_3$  (Karsten); 6, by warming solution with excess of both salts, and cooling to 14.8°. The amount of excess of one or the other salt has no influence. (Rüdorff.)

$\text{NH}_4\text{Cl} + \text{NaNO}_3$ . Slowly sol. in sat.  $\text{NaNO}_3 + \text{Aq}$ , at first to a clear solution, but afterwards  $\text{NaCl}$  separates out. (Karsten.)

$\text{NH}_4\text{Cl} + \text{KCl}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve—

	(Rüdorff) 15°	(Karsten) 18.75°
$\text{KCl}$	16.97	34.4
$\text{NH}_4\text{Cl}$	28.90	16.27
		29.83
		37.02

	(Rüdorff) 22°	(Mulder) At b.-pt.
$\text{KCl}$	19.1	58.5
$\text{NH}_4\text{Cl}$	30.4	21.9
		67.7
		87.3

100 pts. sat. solution of  $\text{NH}_4\text{Cl} + \text{KCl}$  contain 30.61 pts. of the two salts at 13–16°. (v. Hauer, J. pr. 103. 114.)

$\text{NH}_4\text{Cl} + \text{NaCl}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve—

	(Mulder) 10°		(v. Hauer) 13–16°
	10–20°	10°	10°
$\text{NH}_4\text{Cl}$	....	19.50	33.3
$\text{NaCl}$	35.8	30.00	....
		49.50	43.4–46.4

	(Karsten) 18.75°	(Rüdorff) 18.7°	(Mulder) At b.-pt.
$\text{NH}_4\text{Cl}$	22.06	37.02	22.9
$\text{NaCl}$	26.38	....	23.9
	48.44	46.8	100.8

Sp. gr. of sat. solution of  $\text{NH}_4\text{Cl} + \text{NaCl}$  is 1.179. (Karsten.)

$\text{NH}_4\text{Cl} + (\text{NH}_4)_2\text{SO}_4$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 26.8 pts.  $\text{NH}_4\text{Cl}$  + 46.5 pts.  $(\text{NH}_4)_2\text{SO}_4$  at 21.5°. (Rüdorff, B. 6. 484.)

Solubility in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  at 30°.

Composition of the solution		Solid phase
% by wt. $\text{NH}_4\text{Cl}$	% by wt. $(\text{NH}_4)_2\text{SO}_4$	
0	44	$(\text{NH}_4)_2\text{SO}_4$
6.86	36.15	"
14.62	28.6	"
17.60	25.69	$(\text{NH}_4)_2\text{SO}_4 + \text{NH}_4\text{Cl}$
17.93	25.81	"

19.97	21.3	"
22.3	16.33	"
24.06	12.72	"
29.5	0	"

(Schreinemakers, Z. phys. Ch. 1909, 69. 562.)

$\text{NH}_4\text{Cl} + \text{CuSO}_4$ . Sol. in sat.  $\text{CuSO}_4 + \text{Aq}$ , at first to a clear solution, but a double sulphate of  $\text{NH}_4$  and  $\text{Cu}$  soon separates. (Karsten.)

$\text{NH}_4\text{Cl} + \text{MgSO}_4$ . Slowly and difficultly sol. in sat.  $\text{MgSO}_4 + \text{Aq}$  with subsequent separation of double sulphate. (Karsten.)

$\text{NH}_4\text{Cl} + \text{K}_2\text{SO}_4$ . 100 pts.  $\text{H}_2\text{O}$  dissolve, at 18.75°—

		a	b	c	
$\text{K}_2\text{SO}_4$	10.8	11.1	13.26	13.28	....
$\text{NH}_4\text{Cl}$	....	38.2	37.94	37.92	36.7
		49.3	51.20	51.20	

In (a)  $\text{NH}_4\text{Cl}$  was added to sat.  $\text{K}_2\text{SO}_4 + \text{Aq}$ .

In (b)  $\text{K}_2\text{SO}_4$  was added to sat.  $\text{NH}_4\text{Cl} + \text{Aq}$ .

In (c)  $\text{NH}_4\text{Cl}$  and  $\text{K}_2\text{SO}_4$  were treated together with  $\text{H}_2\text{O}$ . (Karsten.)

100 pts. H<sub>2</sub>O at 14° dissolve 14.1 pts. K<sub>2</sub>SO<sub>4</sub> + 36.8 pts. NH<sub>4</sub>Cl = 50.9 pts. K<sub>2</sub>SO<sub>4</sub> + NH<sub>4</sub>Cl, under all conditions. (Rüdorff, Pogg. 148. 565.)

100 pts. H<sub>2</sub>O dissolve at b.-pt.—

K <sub>2</sub> SO <sub>4</sub> . . .	26.75	33.3—33.9	....
NH <sub>4</sub> Cl . . .	.....	90.4—111.8	87.3
		123.7—145.7	

(Mulder.)

NH<sub>4</sub>Cl + Na<sub>2</sub>SO<sub>4</sub>. 100 pts. H<sub>2</sub>O dissolve 28.9 pts. NH<sub>4</sub>Cl + 24.7 pts. Na<sub>2</sub>SO<sub>4</sub>, if NH<sub>4</sub>Cl + Aq sat. at 10° is sat. with Na<sub>2</sub>SO<sub>4</sub> at 11°.

100 pts. H<sub>2</sub>O dissolve 31.8 pts. NH<sub>4</sub>Cl + 9.0 pts. Na<sub>2</sub>SO<sub>4</sub>, if Na<sub>2</sub>SO<sub>4</sub> + Aq sat. at 10° is sat. with NH<sub>4</sub>Cl at 11°. (Mulder, J. B. 1866. 68.)

Sol. in sat. Na<sub>2</sub>SO<sub>4</sub> + Aq. (Karsten.)

Sol. in sat. ZnSO<sub>4</sub> + Aq. (Karsten.)

Sl. sol. in liquid NH<sub>3</sub> at —50°. (Moissan, C. R. 1901, 133. 713.)

Very sol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 826.)

Very sl. sol. in absolute alcohol.

100 pts. alcohol of 0.939 sp. gr. dissolve—  
at 4° 8° 27° 38° 56°

11.2 12.6 19.4 23.6 30.1 pts. NH<sub>4</sub>Cl.  
(Gerardin, A. ch. (4) 5. 129.)

14 pts. boiling highest rectified spirit dissolve 1 pt. NH<sub>4</sub>Cl. (Wenzel.)

100 pts. alcohol of—

0.900 sp. gr. dissolve 6.5 pts. NH<sub>4</sub>Cl.

0.872 " " " 4.75 " "

0.834 " " " 1.5 " "

(Kirwan.)

Though somewhat sol. in pure absolute alcohol, NH<sub>4</sub>Cl is absolutely insol. in alcohol in presence of methyl amine chlorides. (Winkles, A. 93. 324.)

100 pts. absolute methyl alcohol dissolve 3.35 pts. at 19°.

100 pts. absolute ethyl alcohol dissolve 0.62 pt. at 19°. (de Bruyn, Z. phys. Ch. 10. 783.)

Solubility of NH<sub>4</sub>Cl in methyl alcohol.

t°	Alcohol concentration, mol. g. alcohol for 1000 g. H <sub>2</sub> O	Solubility in 1000 g. H <sub>2</sub> O	Molecular solubility

(Herz, l.c.)

Insol. in acetone. (Naumann, B. 1904, 37. 4323.); (Eidmann, C. C. 1899. II, 1014.)

Insol. in anhydrous pyridine. Sol. in 97% pyridine + Aq, 95% pyridine + Aq and in 93% pyridine + Aq. (Kahlenberg, J. Am. Chem. Soc. 1908, 30. 1107.)

Insol. in  $\text{CS}_2$ . (Arcetowski, Z. anorg. 1894, 6. 257.)

Very sol. in ethyl amine. (Shinn, J. phys. Chem. 1907, 11. 538.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Sol. in formic acid. (Zanninovich-Tessarini, Z. phys. Ch. 1896, 19. 251.)

**Ammonium antimony chloride**,  $\text{SbCl}_3(\text{NH}_4)_2$ ,  $\text{SbCl}_4(\text{NH}_4)_2$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1905, 38. 1085.)

$\text{SbCl}_3(\text{NH}_4)_2$ ,  $\text{SbCl}_4(\text{NH}_4)_2$ . Very deliquescent; al. sol. in  $\text{H}_2\text{O}$  with decomp. (Weinland, B. 1901, 34. 2635.)

**Ammonium antimonous chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{SbCl}_3$ .

Deliquescent. (Dehérain, C. R. 52. 734.)

$2\text{NH}_4\text{Cl}$ ,  $\text{SbCl}_3 + 2\text{H}_2\text{O}$ . Permanent in dry air; decomp. by much  $\text{H}_2\text{O}$ . (Poggiale.)

$3\text{NH}_4\text{Cl}$ ,  $\text{SbCl}_3 + 3\text{H}_2\text{O}$ . As above.

**Ammonium antimonic chloride**,  $3\text{NH}_4\text{Cl}$ ,  $\text{SbCl}_5$ .

Decomp. by  $\text{H}_2\text{O}$ . (Dehérain, C. R. 52. 734.)

$4\text{NH}_4\text{Cl}$ ,  $\text{SbCl}_5$ . Decomp. by  $\text{H}_2\text{O}$ . (D.)

See also Chlorantimonate, ammonium.

**Ammonium antimony platinum chloride**,  $(\text{Sb}, \text{Pt})\text{Cl}_4(\text{NH}_4)_2$ .

Ppt. (Weinland, B. 1905, 38. 1084.)

**Ammonium antimony tin chloride**,  $(\text{Sb}, \text{Sn})\text{Cl}_4(\text{NH}_4)_2$ .

Ppt. (Weinland, B. 1905, 38. 1085.)

**Ammonium arsenyl chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{AsOCl}_2 + \frac{1}{2}\text{H}_2\text{O}$ .

(Wallace, Phil. Mag. (4) 16. 358.)

**Ammonium bismuth chloride**,  $\text{NH}_4\text{Cl}$ ,  $2\text{BiCl}_3$ .

Deliquescent. (Dehérain, C. R. 54. 724.)

$2\text{NH}_4\text{Cl}$ ,  $\text{BiCl}_3$ . Decomp. by  $\text{H}_2\text{O}$ . (Arppe.) Pogg. 64. 237.)

$+ 2\frac{1}{2}\text{H}_2\text{O}$ . (Rammelsberg.)

$3\text{NH}_4\text{Cl}$ ,  $\text{BiCl}_3$ . Decomp. by  $\text{H}_2\text{O}$ . (Arppe.)

$5\text{NH}_4\text{Cl}$ ,  $2\text{BiCl}_3$ . (Rammelsberg.)

**Ammonium bismuth potassium chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{BiCl}_3$ ,  $\text{KCl}$ .

(Dehérain, C. R. 54. 724.)

**Ammonium cadmium chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{CdCl}_2$ .

Solubility of  $\text{NH}_4\text{Cl}$ ,  $\text{CdCl}_2$  in  $\text{H}_2\text{O}$  at t°.

t°	Pts. by weight in 100 pts. of solution			g. in 100 g. solution	Grams in 100 $\text{H}_2\text{O}$	Mols. $\text{H}_2\text{O}$ free salt dissolved by 100 mols. $\text{H}_2\text{O}$

40.7	10.24	23.82	8.85	77.0	23.0
58.5	12.50	26.53	9.35	....	....

(Rimbach, B. 1902, 35. 1300.)

Sol. without decomp. in 50% LiCl + Aq, 33.3% CaCl<sub>2</sub> + Aq and 50% MgCl<sub>2</sub> + Aq. (Rimbach, B. 1905, 38. 1569.)

**Ammonium chloromolybdenum chloride,**  
2NH<sub>4</sub>Cl, Cl<sub>2</sub>Mo<sub>2</sub>Cl<sub>2</sub> + 2H<sub>2</sub>O.

Decomp. by pure H<sub>2</sub>O; can be crystallized from HCl + Aq. (Blomstrand.)

**Ammonium chromium chloride,** 2NH<sub>4</sub>Cl, CrCl<sub>3</sub> + H<sub>2</sub>O.

Sol. in H<sub>2</sub>O with decomp. (Neumann, A. 244. 229.)

+ 6H<sub>2</sub>O = 2NH<sub>4</sub>Cl, [CrCl<sub>3</sub>.4H<sub>2</sub>O]Cl + 2H<sub>2</sub>O.

Hygroscopic. Decomp. by H<sub>2</sub>O and by alcohol. (Weinland, B. 1907, 40. 3770.)

**Ammonium cobaltous chloride,** NH<sub>4</sub>Cl, CoCl<sub>2</sub> + 6H<sub>2</sub>O.

Deliquescent in moist air. Very easily sol. in H<sub>2</sub>O. (Hautz, A. 66. 284.)

**Ammonium cobaltous chloride ammonia,** NH<sub>4</sub>Cl, CoCl<sub>2</sub>, NH<sub>3</sub>. (F. Rose.)

**Ammonium cuprous chloride,** 4NH<sub>4</sub>Cl, Cu<sub>2</sub>Cl<sub>2</sub>.

Decomp. in the air.  
4NH<sub>4</sub>Cl, 3Cu<sub>2</sub>Cl<sub>2</sub>. Decomp. by H<sub>2</sub>O, not by alcohol. (Ritthausen, J. pr. 59. 369.)

Fairly stable in air. (Wells, Z. anorg. 1895, 10. 158.)

**Ammonium cupric chloride,**  
NH<sub>4</sub>Cl, CuCl<sub>2</sub>.

Solubility of NH<sub>4</sub>Cl, CuCl<sub>2</sub> in absolute alcohol at 25°.

g. CuCl <sub>2</sub> %	Solid phase	g. CuCl <sub>2</sub> %	Solid phase
4.65	NH <sub>4</sub> Cl + NH <sub>4</sub> Cl, CuCl <sub>2</sub>	12.90	NH <sub>4</sub> Cl, CuCl <sub>2</sub>
4.74	NH <sub>4</sub> Cl + NH <sub>4</sub> Cl, CuCl <sub>2</sub>	34.92	NH <sub>4</sub> Cl, CuCl <sub>2</sub> + CuCl <sub>2</sub> , C <sub>2</sub> H <sub>5</sub> OH
6.45	NH <sub>4</sub> Cl, CuCl <sub>2</sub>	34.50	"

(Foote and Walden, J. Am. Ch. Soc. 1911, 33. 1032.)

+ 2H<sub>2</sub>O. Sol. in 2 pts. H<sub>2</sub>O. (Hautz, A. 66. 280.)

Does not exist, (Meerburg, C. C. 1904. II, 1362.)

2NH<sub>4</sub>Cl, CuCl<sub>2</sub> + 2H<sub>2</sub>O. Easily sol. in H<sub>2</sub>O, also in alcohol, even when absolute. (Cap and Henry, J. pr. 13. 184.)

Solubility of 2NH<sub>4</sub>Cl, CuCl<sub>2</sub> in H<sub>2</sub>O at t°.

g. 2NH <sub>4</sub> Cl, CuCl <sub>2</sub> in 100 g. of the solution	t°	Solid phase

(Meerburg, Z. anorg. 1905, 45. 8.)

Somewhat sol. in liquid  $\text{NH}_3$ . (Franklin and Kraus, Am. Ch. J. 1898, 20, 827.)

Is the only hydrate of  $2\text{NH}_4\text{Cl}$ ,  $\text{CuCl}_2$  existing between  $-11^\circ$  and  $+80^\circ$ . (Meerburg, C. C. 1904, II, 1362.)

$+3\text{H}_2\text{O}$ . (Bourgeois, Bull. Soc. 1898, (3) 19, 786.)

**Ammonium cupric chloride ammonia**,  
 $2\text{NH}_4\text{Cl}$ ,  $\text{CuCl}_2$ ,  $2\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ , less easily by alcohol. Decomp. by acids. (Ritthausen.)

**Ammonium indium chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{InCl}_3$ ,  $+ \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Meyer.)

**Ammonium iodine chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{ICl}_3$ .

More sol. in  $\text{H}_2\text{O}$  than  $\text{KCl}$ ,  $\text{ICl}_3$ . (Filhol, J. Pharm. 25, 441; Berz. J. B. 20, (2) 110.)

**Ammonium iridium trichloride**.

See Chloriridite, ammonium.

**Ammonium iridium tetrachloride**.

See Chloriridate, ammonium.

**Ammonium iron (ferrous) chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{FeCl}_2$ .

Easily sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Winkler.)

**Ammonium iron (ferric) chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{FeCl}_3 + \text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$  without decomp. (Fritzsche); sol. in 3 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$ . (Abf.) Sol. in  $\text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 1, 332.)

**Ammonium iron (ferric) potassium chloride**,  
 $\text{NH}_4\text{Cl}$ ,  $\text{FeCl}_3$ ,  $\text{KCl} + 1\frac{1}{2}\text{H}_2\text{O}$ .

Min. *Kremersite*. Deliquescent.

**Ammonium lead chloride**,  $\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2 + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  without decomp. (?). (André, C. R. 96, 1502.)

$6\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + \text{H}_2\text{O}$ .

$9\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + 1\frac{1}{2}\text{H}_2\text{O}$ .

$9\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2 + 2\frac{1}{2}\text{H}_2\text{O}$ .

$10\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + \text{H}_2\text{O}$ .

$11\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2 + 3\frac{1}{2}\text{H}_2\text{O}$ .

$18\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + 4\text{H}_2\text{O}$ .

All these salts are decomp. by  $\text{H}_2\text{O}$ . (André A. ch. (6) 3, 104.)

Of the salts prepared by André, only one  $\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$  exists. (Wells, Sill. Am. J. 146, 25.)

Solubility determinations show that  $\text{NH}_4\text{Cl}$ ,  $2\text{PbCl}_2$  is the only double salt formed at  $25^\circ$ . (Foote, Am. Ch. J. 1907, 37, 121.)

$\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_2 + \frac{1}{2}\text{H}_2\text{O}$ . (Wells, l.c.)

**Ammonium lead tetrachloride**.

See Chloroplumbate, ammonium.

**Ammonium magnesium chloride**,  $\text{NH}_4\text{MgCl}_2 + 6\text{H}_2\text{O} = \text{NH}_4\text{Cl}$ ,  $\text{MgCl}_2 + 6\text{H}_2\text{O}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ .

Sol. in 6 pts. cold  $\text{H}_2\text{O}$ . (Fourcroy.)

Solubility in  $\text{NH}_4\text{Cl} + \text{Aq}$  at  $t^\circ$ .

$t^\circ$	Per 1000 Mol. $\text{H}_2\text{O}$	
	Mol. $\text{NH}_4\text{Cl}$	Mol. $\text{MgCl}_2$
3.5°	27.5	55.7
25 0	42.1	56.4
50.0	62.9	59.1

(Biltz, Z. anorg. 1911, 71, 170.)

$4\text{NH}_4\text{Cl}$ ,  $5\text{MgCl}_2 + 33\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Berthelot and André, A. ch. (6) 11, 294.)

**Ammonium manganous chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{MnCl}_2 + \frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $1\frac{1}{2}$  pts.  $\text{H}_2\text{O}$  at ordinary temp. (Hautz, A. 66, 280); does not exist. (Saunders, Am. Ch. J. 14, 134.)

$2\text{NH}_4\text{Cl}$ ,  $\text{MnCl}_2 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Rammelsberg); does not exist. (Saunders.)

$+2\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ , but with decomp. into  $\text{NH}_4\text{Cl}$  and  $\text{MnCl}_2$ . (Saunders.)

**Ammonium manganic chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{MnCl}_3$ .

Sol. in  $\text{H}_2\text{O}$ ; less sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . Unstable. (Neuman, M. 1894, 15, 490.)

$+ \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$  apparently without decomp. (Rice, Chem. Soc. 1898, 73, 260.)

**Ammonium mercuric chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{HgCl}_2 + \text{H}_2\text{O}$  (sal alembroth).

Sol. in 0.66 pt.  $\text{H}_2\text{O}$  at  $10^\circ$ , and in nearly every proportion of hot  $\text{H}_2\text{O}$ .

$\text{NH}_4\text{Cl}$ ,  $\text{HgCl}_2$ . Easily sol. in  $\text{H}_2\text{O}$ .

$+ \frac{1}{2}\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Kane.)

$2\text{NH}_4\text{Cl}$ ,  $3\text{HgCl}_2 + 4\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Holmes, C. N. 5, 351.)

$\text{NH}_4\text{Cl}$ ,  $2\text{HgCl}_2$ . Very sol. in  $\text{H}_2\text{O}$ . (Ray, Chem. Soc. 1902, 81, 648.)

$\text{NH}_4\text{Cl}$ ,  $5\text{HgCl}_2$ . (Strömholm, J. pr. 1902, (2) 66, 441.)

**Ammonium mercuric sodium chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{HgCl}_2$ ,  $4\text{NaCl}$  (?).

Sol. in  $\text{H}_2\text{O}$ . (Kossmann, A. ch. (3) 27, 243.)

**Ammonium molybdenum chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{MoCl}_2 + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Nearly insol. in alcohol and ether. (Chilesotti, C. C. 1903, II, 652.)

See also Ammonium chloromolybdenum chloride.

**Ammonium molybdenum chloride iodide**.

See Ammonium chloromolybdenum iodide.

**Ammonium molybdenyl chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{MoO}_2\text{Cl}_2 + 2\text{H}_2\text{O}$ .

(Weinland, Z. anorg. 1905, 44. 98.)

$2\text{NH}_4\text{Cl}$ ,  $\text{MoOCl}_2$ . Sol. in  $\text{H}_2\text{O}$ ; insol. in  $\text{H}_2\text{O}$  sat. with  $\text{HCl}$ . (Klason, B. 1901, 34. 149.)

**Ammonium nickel chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{NiCl}_2 + 6\text{H}_2\text{O}$ .

Deliquescent in moist air. Easily sol. in  $\text{H}_2\text{O}$ . (Hautz.)

$4\text{NH}_4\text{Cl}$ ,  $\text{NiCl}_2 + 7\text{H}_2\text{O}$  (?).

**Ammonium osmium tetrachloride.**

See Chlorosmate, ammonium.

**Ammonium osmium sesquichloride.**

See Chlorosmite, ammonium.

**Ammonium osmyl chloride**,  $(\text{NH}_4)_2\text{OsO}_2\text{Cl}_4$ .

Sol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{HCl}$ . (Wintrebert, A. ch. 1903, (7) 28. 92.)

**Ammonium osmyl oxychloride**,  $(\text{NH}_4)_2\text{OsO}_3\text{Cl}_2$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{KOH} + \text{Aq}$  with decomp. (Wintrebert, A. ch. 1903, (7) 28. 116.)

**Ammonium palladium chlorides.**

See Chloropalladate, ammonium and chloropalladite, ammonium.

**Ammonium rhodium dichloride**,  $4\text{NH}_4\text{Cl}$ ,  $\text{RhCl}_2 + 3\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ , but decomp. slowly. (Willm. B. 16. 3033.)

Does not exist. (Leidié, A. ch. (6) 17. 277.)

**Ammonium rhodium trichloride.**

See Chlororhodite, ammonium.

**Ammonium rhodium chloride ammonium nitrate**,  $\text{Rh}_2\text{Cl}_6$ ,  $6\text{NH}_4\text{Cl}$ ,  $2\text{NH}_4\text{NO}_3$ .

See Chlororhodite nitrate, ammonium.

**Ammonium ruthenium trichloride.**

See Chlororuthenite, ammonium.

**Ammonium ruthenium tetrachloride.**

See Chlororuthenate, ammonium.

**Ammonium tellurium chloride.**

See Chlorotellurate, ammonium.

**Ammonium thallic chloride**,  $3\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Willm.)

$+2\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  and alcohol. (Nicklès, J. Pharm. (4) 1. 28.)

**Ammonium thorium chloride**,  $8\text{NH}_4\text{Cl}$ ,  $\text{ThCl}_4 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Chydenius.)

**Ammonium tin (stannous) chloride (ammonium chlorostannite)**,  $\text{NH}_4\text{Cl}$ ,  $\text{SnCl}_2 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Resembles K salt. (Richardson, Am. Ch. J. 14. 93.)

$2\text{NH}_4\text{Cl}$ ,  $\text{SnCl}_2 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , but decomp. by boiling. (Rammelsberg.)

Contains  $2\text{H}_2\text{O}$ . (Richardson.)

$4\text{NH}_4\text{Cl}$ ,  $\text{SnCl}_2 + 3\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Poggiale, C. R. 20. 1182.)

Does not exist. (Richardson.)

**Ammonium tin (stannic) chloride.**

See Chlorostannate, ammonium.

**Ammonium titanium chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_4 + 2\text{H}_2\text{O}$ .

Ppt.; decomp. in moist air; sol. in fuming  $\text{HCl}$ ; insol. in ether. (Rosenheim, Z. anorg. 1901, 26. 242.)

**Ammonium titanium chloride**,  $3\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_4$ . Sol. in  $\text{H}_2\text{O}$ .

$6\text{NH}_4\text{Cl}$ ,  $\text{TiCl}_4$ . Sol. in  $\text{H}_2\text{O}$ . (Rose.)

**Ammonium tungsten chloride**,  $(\text{NH}_4)_3\text{W}_2\text{Cl}_9 = 3\text{NH}_4\text{Cl}$ ,  $2\text{WCl}_6$ .

Easily sol. in  $\text{H}_2\text{O}$ . Nearly insol. in most organic solvents. (Olsson, B. 1913, 46. 577.)

**Ammonium uranyl chloride.**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Peligot.)

$2\text{NH}_4\text{Cl}$ ,  $(\text{UO}_2)\text{Cl}_2 + 2\text{H}_2\text{O}$ . Solution at  $15^\circ$  contains in 100 g. 3.51 g.,  $\text{NH}_4$ , 40.67 g.  $\text{UO}_2$  and 19.15 g.  $\text{Cl}$ , hence there is considerable decomp. (Rimbach, B. 1904, 37. 466.)

**Ammonium vanadium chloride**,  $2\text{NH}_4\text{Cl}$ ,  $\text{VCl}_3 + \text{H}_2\text{O}$ .

Difficulty sol. in  $\text{H}_2\text{O}$  and alcohol. (Stähler, B. 1904, 37. 4412.)

**Ammonium zinc chloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2 + 2\text{H}_2\text{O}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (Hautz, A. 66. 287.)

$2\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 94. 507.)

$+ \text{H}_2\text{O}$ . Deliquescent in moist air. Sol. in  $\frac{2}{3}$  pt. cold  $\text{H}_2\text{O}$  with absorption of heat. Sol. in 0.28 pt. hot  $\text{H}_2\text{O}$  (Golfier-Bassayre, A. ch. 70. 344); sol. in  $\frac{1}{2}$  pt. cold  $\text{H}_2\text{O}$ . (Hautz, A. 66. 287.)

$3\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

$+ \text{H}_2\text{O}$ . (Berthelot, A. ch. (6) 11. 294.)

$4\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2$ . (Dehéraïn.)

$6\text{NH}_4\text{Cl}$ ,  $\text{ZnCl}_2 + \frac{2}{3}\text{H}_2\text{O}$ . (Berthelot, l.c.)

**Ammonium chloride zinc oxychloride**,  $2\text{ZnCl}_2$ ,  $8\text{NH}_4\text{Cl}$ ,  $\text{ZnO}$ .

Sol. in a little  $\text{H}_2\text{O}$ , but decomp. by excess.

(André.)

$3\text{ZnCl}_2$ ,  $10\text{NH}_4\text{Cl}$ ,  $\text{ZnO}$ . As above. (André, A. ch. (6) 3. 88.)

**Ammonium chloride antimony fluoride**,  $\text{NH}_4\text{Cl}$ ,  $\text{SbF}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ . (de Haen, B. 21. 901 R.)

**Ammonium chloride arsenic trioxide.**

See Arsenite chloride, ammonium.

- Ammonium chloride bismuth bromide**,  $\text{NH}_4\text{Cl}$ ,  $\text{BiBr}_3 + \text{H}_2\text{O}$ .  
 Deliquescent; decomp. by  $\text{H}_2\text{O}$ . (Muir, Soc. **31**, 148.)  
 $\text{NH}_4\text{Cl}$ ,  $\text{BiBr}_3 + 3\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ .  
 $\text{NH}_4\text{Cl}$ ,  $2\text{BiBr}_3 + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ .
- Ammonium chloride chromic oxychloride**,  $\text{NH}_4\text{Cl}$ ,  $\text{CrOCl}_2$ .  
 Decomp. in the air. Sol. in conc.  $\text{HCl}$ .  
 Decomp. (Weinland, B. 1906, **39**).
- Ammonium chloride cuprocupric thiosulphate**,  $\text{NH}_4\text{Cl}$ ,  $\text{Cu}_2\text{O}$ ,  $\text{CuO}$ ,  $3\text{S}_2\text{O}_3$ .  
 Thiosulphate ammonium chloride, cupric.
- Ammonium chloride lead iodide**,  $3\text{NH}_4\text{Cl}$ ,  $\text{PbI}_2$ .  
 Decomp. with  $\text{H}_2\text{O}$ . (Behrens, Pogg. **62**.  
 $\text{NH}_4\text{Cl}$ ,  $\text{PbI}_2 + 2\text{H}_2\text{O}$ . Decomp. with  $\text{H}_2\text{O}$ .  
 Ale, C. R. **20**, 1180.)
- Ammonium chloride mercuric bromide**,  $\text{NH}_4\text{Cl}$ ,  $\text{HgBr}_2$ .  
 Rem-Bey, Dissert. 1885.)
- Ammonium chloride platinum sulphite**.  
 Chloroplatosulphite, ammonium.
- Ammonium chloride tin (stannous) bromide**,  $\text{NH}_4\text{Cl}$ ,  $\text{SnBr}_2 + \text{H}_2\text{O}$ .  
 in  $\text{H}_2\text{O}$ . (Raymann and Preis, A. **223**).
- Ammonium dichloriodide**,  $\text{NH}_4\text{Cl}_2\text{I}$ .  
 Slightly decomp. when exposed to dry air  
 temp. Very sol. in  $\text{H}_2\text{O}$ . (Chattaway,  
 Soc. 1915, **107**, 107.)
- Ammonium tetrachloriodide**,  $\text{NH}_4\text{Cl}_4\text{I}$ .  
 Decomp. in the air. (Chattaway, Chem.  
 Soc. 1915, **107**, 107.)
- Ammonium lead chloriodide**,  $\text{NH}_4\text{PbClI}_2 + \text{I}_2\text{O}$  and  $(\text{NH}_4)_2\text{PbCl}_2\text{I}_2 + 2\text{H}_2\text{O}$ .  
 in  $\text{KOH} + \text{Aq}$  and in strong acids; de-  
 comp. by  $\text{H}_2\text{O}$ . (Fonzes-Diacon, Bull. Soc.  
**3**) **17**, 348.)
- Ammonium fluoride**,  $\text{NH}_4\text{F}$ .  
 Readily sol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol.  
 (Gnac, Ann. Min. (5) **15**, 221.)  
 Sl. in liquid  $\text{NH}_3$ . (Ruff and Geisel, B.  
**36**, 820.)  
 Most insol. in liquid  $\text{NH}_3$  at  $50^\circ$ . (Mois-  
 son, R. 1901, **133**, 713.)  
 in methyl alcohol. (Carrara, Gazz.  
 1896, **26**, 119.)
- Ammonium hydrogen fluoride**,  $\text{NH}_4\text{F}$ ,  $\text{HF}$ .  
 Deliquescent in moist air. Sol. in  $\text{H}_2\text{O}$ .
- Ammonium antimony fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{SbF}_3$ .  
 Deliquescent; sol. in 0.9 pt. cold  $\text{H}_2\text{O}$ .  
 Insol. in alcohol or ether. (Flückinger, A.  
**84**, 248.)  
 $\text{NH}_4\text{F}$ ,  $4\text{SbF}_3$ . 3 pts. sol. in 2 pts.  $\text{H}_2\text{O}$ .  
 (Raad and Hauser, B. 1890, **23**, R. 125.)  
 $\text{NH}_4\text{F}$ ,  $\text{SbF}_3$ . Easily sol. in  $\text{H}_2\text{O}$ . (Marig-  
 nac, A. **146**, 239.)
- Ammonium bismuth fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{BiF}_3$ .  
 Insol. in  $\text{H}_2\text{O}$ . Rather difficultly sol. in  
 acids. (Helmholtz, Z. anorg. **3**, 115.)
- Ammonium cadmium fluoride**,  $\text{NH}_4\text{F}$ ,  $\text{CdF}_2$ .  
 Insol. in  $\text{H}_2\text{O}$ . Sol. in acids on boiling.  
 (Helmholtz, Z. anorg. **3**, 115.)
- Ammonium chromium fluoride**,  $3\text{NH}_4\text{F}$ ,  
 $\text{CrF}_3$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{NH}_4\text{F} + \text{Aq}$ .  
 (Petersen, J. pr. (2) **40**, 52.)  
 $2\text{NH}_4\text{F}$ ,  $\text{CrF}_3 + \text{H}_2\text{O}$ . (Wagner, B. **19**, 896.)
- Ammonium cobaltous fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{CoF}_2 + 2\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . (Wagner, B. **19**, 896.)  
 Easily sol. in  $\text{H}_2\text{O}$ . (Helmholtz, Z. anorg.  
**3**, 132.)
- Ammonium columbyl fluoride**.  
 See Fluoxycolumbate, ammonium.
- Ammonium columbium fluoride oxyfluoride**,  
 $3\text{NH}_4\text{F}$ ,  $\text{CbF}_4$ ,  $\text{CbOF}_3$ .  
 See Fluoxycolumbate columbium fluoride,  
 ammonium.
- Ammonium copper fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{CuF}_2 + 2\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Helmholtz, Z. anorg. **3**,  
 115.)  
 Nearly insol. in  $\text{H}_2\text{O}$  but decomp. thereby.  
 (Haas, Ch. Z. 1908, **32**, 8.)
- Ammonium glucinum fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{GlF}_3$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (4) **30**, 51.)  
 Very sol. in  $\text{H}_2\text{O}$ . (Helmholtz, Z. anorg. **3**,  
 130.)
- Ammonium iron (ferrous) fluoride**,  $2\text{NH}_4\text{F}$ ,  
 $\text{FeF}_2$ . (Wagner, B. **19**, 896.)  
 $\text{NH}_4\text{F}$ ,  $\text{FeF}_2 + 2\text{H}_2\text{O}$ . (W.)
- Ammonium iron (ferric) fluoride**,  $2\text{NH}_4\text{F}$ ,  
 $\text{FeF}_3$ .  
 More sol. in  $\text{H}_2\text{O}$  than the corresponding K  
 compound. Decomp. by boiling. (Nicklès,  
 J. Pharm. (4) **7**, 15.)  
 $3\text{NH}_4\text{F}$ ,  $\text{FeF}_3$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Marignac,  
 A. ch. (3) **60**, 306.)  
 Easily sol. in acids. (Helmholtz, Z. anorg.  
**3**, 124.)
- Ammonium manganic fluoride**,  $2\text{NH}_4\text{F}$ ,  
 $\text{MnF}_4$ .  
 More sol. than the K salt. (Nicklès, C. R.  
**65**, 107.)

True composition is  $4\text{NH}_4\text{F}$ ,  $\text{Mn}_2\text{F}_6$ . (Christensen, J. pr. (2) 34. 41.)

See also Fluomanganate, ammonium.

**Ammonium manganyl fluoride.**

See Fluoxymanganate, ammonium.

**Ammonium molybdenum fluoride.**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . (Berzelius.)

See also Fluomolybdate, ammonium.

**Ammonium molybdenyl fluoride.**

See Fluoxymolybdate, ammonium.

**Ammonium nickel fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{NiF}_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wagner, B. 19. 896.)

Easily sol. in  $\text{H}_2\text{O}$ . (Helmholtz, Z. anorg. 3. 143.)

**Ammonium scandium fluoride**,  $(\text{NH}_4)_2\text{ScF}_6$ .

Easily sol. in  $\text{H}_2\text{O}$ . Aqueous solution is not decomp. by boiling. Decomp. by acids. (R. I. Meyer, Z. anorg. 1914, 86. 275.)

**Ammonium silicon fluoride.**

See Fluosilicate, ammonium.

**Ammonium silver fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{AgF} + \text{H}_2\text{O}$ .

Not hygroscopic. Sol. in  $\text{H}_2\text{O}$ ; sol. in conc.  $\text{NH}_4\text{F} + \text{Aq}$ . Sol. in alcohol. (Grützner, Arch. Pharm. 1900, 238. 3.)

$15\text{NH}_4\text{F}$ ,  $\text{AgF} + 4\text{H}_2\text{O}$ . More deliquescent than  $\text{NH}_4\text{F}$ . (Böhm, Dissert. 1906.)

**Ammonium tantalum fluoride.**

See Fluotantalate, ammonium.

**Ammonium tantalyli fluoride.**

See Fluoxytantalate, ammonium.

**Ammonium tellurium fluoride**,  $\text{NH}_4\text{F}$ ,  $\text{TeF}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . (Högbom, Bull. Soc. (2) 35. 60.)

**Ammonium tin (stannous) fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{SnF}_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wagner, B. 19. 896.)

**Ammonium tin (stannic) fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{SnF}_4$ .

See Fluostannate, ammonium.

**Ammonium titanium sesquifluoride.**

See Fluotitanate, ammonium.

**Ammonium titanyl fluoride.**

See Fluoxypertitanate, ammonium.

**Ammonium tungstyl fluoride.**

See Fluoxytungstate, ammonium.

**Ammonium uranyl fluoride.**

See Fluoxyuranate, ammonium.

**Ammonium vanadium sesquifluoride.**

See Fluovanadate, ammonium.

**Ammonium vanadyl fluoride.**

See Fluoxyvanadate, ammonium.

**Ammonium zinc fluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{ZnF}_2$ .

Sol. in  $\text{H}_2\text{O}$ . (R. Wagner.)

+  $2\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Helmholtz.)

**Ammonium zirconium fluoride.**

See Fluozirconate, ammonium.

**Ammonium fluoride manganic oxyfluoride**,  $2\text{NH}_4\text{F}$ ,  $\text{MnOF}_2$ .

Precipitate. (Nicklès.)

See also Fluoxymanganate, ammonium.

**Ammonium fluoride molybdenum trioxide**,  $2\text{NH}_4\text{F}$ ,  $\text{MoO}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Mauro, Gazz. ch. it. 18. 120.)

**Ammonium fluoride tungsten oxyfluoride.**

See Fluoxytungstate, ammonium.

**Ammonium fluoride tungsten oxyfluoride ammonium tungstate**,  $4\text{NH}_4\text{F}$ ,  $\text{WO}_3\text{F}_2$ ,  $(\text{NH}_4)_2\text{WO}_4$ .

See Fluoxytungstate tungstate, ammonium.

**Ammonium fluoride vanadium oxyfluoride.**

See Fluoxyvanadate, and fluoxyhypovanadate, ammonium.

**Ammonium hydroselenide**,  $\text{NH}_4\text{HSe}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Bineau, A. ch. (2) 67. 229.)

**Ammonium hydrosulphide**,  $\text{NH}_4\text{SH}$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. Solutions decomp. on air.

**Ammonium hydroxide**,  $\text{NH}_4\text{OH}$ .

See Ammonia,

**Ammonium imidosulphamide**,

$(\text{S}_2\text{O}_4\text{N}_2\text{H}_4)\text{NH}_4$ .

(Hantzsch, B. 1905, 38. 1033.)

**Ammonium iodide**,  $\text{NH}_4\text{I}$ .

Very deliquescent. Sol. in 0.60 pt.  $\text{H}_2\text{O}$ . (Eder, Dingl. 221. 89.)

Sp. gr. of aqueous solution of  $\text{NH}_4\text{I}$  at 18° containing—

	10	20	30	40	50% $\text{NH}_4\text{I}$
	1.0652	1.1397	1.2260	1.3260	1.4415

(Kohlrausch, W. Ann. 1879. 1.)

$\text{NH}_4\text{I} + \text{Aq}$  containing 12.51%  $\text{NH}_4\text{I}$  has sp. gr.  $20^\circ/20^\circ = 1.0846$ .

$\text{NH}_4\text{I} + \text{Aq}$  containing 19.19%  $\text{NH}_4\text{I}$  has sp. gr.  $20^\circ/20^\circ = 1.1359$ .

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 279.)

Very easily sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 826.)

Very sol. in liquid  $\text{NH}_3$  at  $-50^\circ$ . (Moissan, C. R. 1901, 133. 713.)

Sol. in  $\text{SOCl}_2$ . (Walden, Z. anorg. 1900, 25. 216.)

Sol. in liquid  $\text{SO}_2$ . (Walden, Z. anorg. 1902, 30. 160.)

Sol. in 4.0 pts. abs. alcohol. (Eder, *l.c.*)

" 210 " ether. (Eder, *l.c.*)

" 20 " alcohol-ether (1 : 1). (Eder, *l.c.*)

Sol. in acetone. (Eidmann, C.C. 1899, II. 1014.); (Naumann, B. 1904, 37. 4328.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

#### Ammonium diiodide, $\text{NH}_4\text{I}_2$ .

Sol. in alcohol, ether,  $\text{CS}_2$ , and  $\text{KI} + \text{Aq}$ ; less sol. in chloroform. (Guthrie, Chem. Soc. (2) 1. 239.)

#### Ammonium triiodide, $\text{NH}_4\text{I}_3$ .

Sl. deliquescent. Sol. in little  $\text{H}_2\text{O}$ , but decomp. by much  $\text{H}_2\text{O}$ . (Johnson, Chem. Soc. 33. 397.)

#### Ammonium antimony iodide, $\text{NH}_4\text{I}$ , $\text{SbI}_3 + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Nicklès, C. R. 51. 1097.)

$3\text{NH}_4\text{I}$ ,  $4\text{SbI}_3 + 9\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ , with separation of  $\text{SbOI}$ . Sol. in  $\text{HC}_2\text{H}_3\text{O}_2$ ,  $\text{HCl}$ , and  $\text{H}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ . Decomp. by  $\text{CS}_2$ . (Schäffer, Pogg. 109. 611.)

$3\text{NH}_4\text{I}$ ,  $\text{SbI}_3 + 3\text{H}_2\text{O}$ . As above.

$4\text{NH}_4\text{I}$ ,  $\text{SbI}_3 + 3\text{H}_2\text{O}$ . As above.

#### Ammonium bismuth iodide, $\text{NH}_4\text{I}$ , $\text{BiI}_3 + \text{H}_2\text{O}$ .

Deliquescent; decomp. by  $\text{H}_2\text{O}$ . (Nicklès, C. R. 51. 1097.)

$4\text{NH}_4\text{I}$ ,  $\text{BiI}_3 + 3\text{H}_2\text{O}$ . As above. (Linau, Pogg. 111. 240.)

$2\text{NH}_4\text{I}$ ,  $\text{BiI}_3 + 2\frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ , or  $\text{MCl}$ ,  $\text{MBr}$ , or  $\text{MI} + \text{Aq}$ . (Nicklès, J. pr. (2) 39. 116.)

#### Ammonium cadmium iodide, $2\text{NH}_4\text{I}$ , $\text{CdI}_2 + 2\text{H}_2\text{O}$ .

Deliquescent. (Croft.)

Sol. at  $15^\circ$  in 0.58 pt.  $\text{H}_2\text{O}$ , 0.70 pt. abs. alcohol, 8.9 pts. ether (sp. gr. 0.729), and 1.8 pts. alcohol-ether (1 : 1). (Eder, Dingl. 221. 89.)

100 pts. of the solution in  $\text{H}_2\text{O}$  contain 85.97 pts. of the salt at  $14.5^\circ$ . (Rimbach, B. 1905, 38. 1563.)

$\text{NH}_4\text{I}$ ,  $\text{CdI}_2 + \frac{1}{2}\text{H}_2\text{O}$ . Sol. at  $15^\circ$  in 0.90 pt.  $\text{H}_2\text{O}$ , 0.88 pt. abs. alcohol, and 2.4 pts. ether (sp. gr. 0.729). (Eder, *l.c.*)

$+ \text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1902, 33. 154.)

#### Ammonium chloromolybdenum iodide, $2\text{NH}_4\text{I}$ , $\text{Cl}_2\text{Mo}_2\text{I}_2 + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Cryst. from  $\text{HI} + \text{Aq}$ . (Blomstrand.)

#### Ammonium cuprous iodide, $2\text{NH}_4\text{I}$ , $\text{Cu}_2\text{I}_2 + \text{H}_2\text{O}$ .

Decomp. on the air, or by  $\text{H}_2\text{O}$ , or alcohol. (Saglier, C. R. 104. 1440.)

$+ \frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  with separation of  $\text{Cu}_2\text{I}_2$ . (Gossner, Zeit. Kryst. 1903, 38. 501.)

#### Ammonium cupric iodide ammonia, $2\text{NH}_4\text{I}$ , $\text{CuI}_2$ , $2\text{NH}_3 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or alcohol; sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

$+ 6\text{H}_2\text{O}$ . Unstable. (Saglier, C. R. 104. 1440.)

$\text{NH}_4\text{I}$ ,  $2\text{CuI}_2$ ,  $3\text{NH}_3$ . (Fleurent, C. R. 1891, 113. 1047.)

#### Ammonium iridium diiodide, $2\text{NH}_4\text{I}$ , $\text{IrI}_2$ .

Insol. in cold or hot  $\text{H}_2\text{O}$ , and in alcohol. Sol. in warm dil. acids. (Oppler.)

#### Ammonium iridium sesquiodide.

See Iodiridite, ammonium.

#### Ammonium iridium tetraiodide.

See Iodiridate, ammonium.

#### Ammonium lead iodide, $\text{NH}_4\text{I}$ , $\text{PbI}_2 + 2\text{H}_2\text{O}$ .

Decomp. by much  $\text{H}_2\text{O}$ . (Wells, Sill. Am. J. 146. 25.)

$4\text{NH}_4\text{I}$ ,  $3\text{PbI}_2 + 6\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Mosnier, C. R. 1895, 120. 444.)

Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in strong  $\text{KOH} + \text{Aq}$  and in strong acids. (Fonze-Diacon, Bull. Soc. 1897, (3) 17. 347.)

#### Ammonium magnesium iodide, $\text{NH}_4\text{I}$ , $\text{MgI}_2 + 6\text{H}_2\text{O}$ .

Very deliquescent. (Lerch, J. pr. (2) 28. 338.)

#### Ammonium mercuric iodide, $\text{NH}_4\text{I}$ , $\text{HgI}_2 + \text{H}_2\text{O}$ .

Decomp. into its constituents by  $\text{H}_2\text{O}$ . (Boullay, A. ch. (2) 34. 345.)

Sol. without decomp. in alcohol and ether.  $\text{NH}_4\text{I}$ ,  $2\text{HgI}_2$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{KI} + \text{Aq}$ . Very sol. in alcohol, ether and nitrobenzol. (Löw, Zeit. Kryst. 51. 138.)

#### Ammonium silver iodide, $2\text{NH}_4\text{I}$ , $\text{AgI}$ .

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Poggiale.)

#### Ammonium thallic iodide, $\text{NH}_4\text{I}$ , $\text{TlI}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Nicklès, J. Pharm. (4) 1. 32.)

#### Ammonium tin (stannous) iodide, $\text{NH}_4\text{I}$ , $\text{SnI}_2$ .

Decomp. by small amt.  $\text{H}_2\text{O}$  but completely sol. in a large amt. (Boullay, A. ch. (2) 34. 376.)

$+ 1\frac{1}{2}\text{H}_2\text{O}$ . (Personne.)

#### Ammonium zinc iodide, $2\text{NH}_4\text{I}$ , $\text{ZnI}_2$ .

Extremely deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 43. 665.)

$\text{NH}_4\text{I}$ ,  $\text{ZnI}_2 + 4\frac{1}{2}\text{H}_2\text{O}$ . Hydrosopic. (Ephraim, Z. anorg. 1910, **67**. 384.)

**Ammonium iodide arsenic trioxide.**

See **Arsenite iodide, ammonium.**

**Ammonium cobalt nitride.**

See **Ammonium cobalt azoimide.**

**Ammonium ruthenium dihydronitrosobromide**,  $\text{NO.Ru}_2\text{H}_2(\text{NH}_3)_2\text{Br}_2.2\text{HBr}$ .

Ppt. (Brizard, A. ch. 1900, (7) **21**. 363.)

**Ammonium ruthenium nitroschloride**,  $3\text{NH}_4\text{Cl}.2\text{HCl.NO.Ru}_2\text{H}_2\text{Cl}_2$ .

Ppt. (Brizard, A. ch. 1900, (7) **21**. 354.)

**Ammonium ruthenium dihydronitroschloride**,  $\text{NO.Ru}_2\text{H}_2(\text{NH}_3)_2\text{Cl}_2.2\text{HCl}$ .

Ppt. (Brizard, A. ch. 1900, (7) **21**. 358.)

**Ammonium peroxide**,  $(\text{NH}_4)_2\text{O}_2$ .

M.-pt.  $-2^\circ$ . Sl. sol. in ether without decomp. (D'Ans, B. 1913, **46**. 3076.)

Sol. in alcohol; insol. in ether; decomp. slowly in aq. solution. (Melikoff, B. 1897, **30**. 3145.)

**Ammonium hydrogen peroxide**,  $(\text{NH}_4)_2\text{O}_2$ ,  $\text{H}_2\text{O}_2$ .

Decomp. at ordinary temp. (Melikoff, B. 1898, **31**. 447.)

+  $\text{H}_2\text{O}$ . Unstable; deliquesces at ordinary temp.; sol. in alcohol; insol. in light petroleum. (Melikoff, B. 1898, **31**. 152.)

**Ammonium selenide**,  $(\text{NH}_4)_2\text{Se}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Bineau, A. ch. (2) **67**. 229.)

Stable in the air. Sol. in  $\text{H}_2\text{O}$ ; aq. solution decomp. slowly. (Lenher and Smith, J. Am. Chem. Soc. 1898, **20**. 277.)

**Ammonium hydrogen selenide**,  $\text{NH}_4\text{HSe}$ .

Sol. in  $\text{H}_2\text{O}$ . (Fabre, C. R. **103**. 269.)

**Ammonium monosulphide**,  $(\text{NH}_4)_2\text{S}$ .

Decomp. on air. Sol. in  $\text{H}_2\text{O}$ , but solution decomposes rapidly.

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, **20**. 826.)

**Ammonium disulphide**,  $(\text{NH}_4)_2\text{S}_2$ .

Sol. in  $\text{H}_2\text{O}$  with decomp.

Does not exist. (Bloxam, Chem. Soc. 1895, **67**. 293.)

**Ammonium tetrasulphide**,  $(\text{NH}_4)_2\text{S}_4$ .

Easily sol. in  $\text{H}_2\text{O}$ . Conc. solution is stable, dil. solution decomp. on air. Easily sol. in alcohol without decomp., but solution decomp. on the air more rapidly than the aqueous solution. (Fritzsche, J. pr. **32**. 313.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . When dissolved in  $\text{H}_2\text{O}$ , it is at once dissociated with deposition of S. (Bloxam, Chem. Soc. 1895, **67**. 303.)

**Ammonium pentasulphide**,  $(\text{NH}_4)_2\text{S}_5$ .

Decomp. on air. Sol. in  $\text{H}_2\text{O}$  with separation of S. Sol. in alcohol without decomp., but solution decomposes quickly on standing. (Fritzsche, J. pr. **32**. 313.)

Rapidly decomp. by  $\text{H}_2\text{O}$  with separation of S. (Bloxam, Chem. Soc. 1895, **67**. 298.)

+  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  with separation of S. (Bloxam, Chem. Soc. 1895, **67**. 298.)

**Ammonium heptasulphide**,  $(\text{NH}_4)_2\text{S}_7$ .

More stable on air, and less easily decomposed by  $\text{H}_2\text{O}$  than  $(\text{NH}_4)_2\text{S}_5$ .

+  $\frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  with separation of S. Slowly attacked by dil.  $\text{HCl}$  + Aq. (Bloxam, Chem. Soc. 1895, **67**. 307.)

**Tetrammonium heptasulphide**,  $(\text{NH}_4)_2\text{S}_7 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Solution can be kept for a long time without depositing S. (Bloxam, Chem. Soc. 1895, **67**. 298.)

**Diammonium enneasulphide**,  $(\text{NH}_4)_2\text{S}_9 + \frac{1}{2}\text{H}_2\text{O}$ .

Decomposed by  $\text{H}_2\text{O}$  with separation of S. Not attacked by boiling dil.  $\text{HCl}$  + Aq. on account of formation of a hard crust of S on the crystals. (Bloxam, Chem. Soc. 1895, **67**. 306.)

**Tetrammonium enneasulphide**,  $(\text{NH}_4)_2\text{S}_9$ .

Solution in  $\text{H}_2\text{O}$  deposits crystals of  $(\text{NH}_4)_2\text{S}_9$  on standing. (Bloxam, Chem. Soc. 1895, **67**. 302.)

+  $3\frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  with separation of S. (Bloxam, Chem. Soc. 1895, **67**. 299.)

**Ammonium polysulphides.**

Conc.  $\text{NH}_3$  + Aq. dissolves  $\text{H}_2\text{S}$  to form  $(\text{NH}_4)_2\text{S}.2\text{NH}_4\text{SH}$ . On dilution more  $\text{H}_2\text{S}$  is absorbed to form  $(\text{NH}_4)_2\text{S}.4\text{NH}_4\text{SH}$ , then  $(\text{NH}_4)_2\text{S}.8\text{NH}_4\text{SH}$ , then  $(\text{NH}_4)_2\text{S}.18\text{NH}_4\text{SH}$  and finally  $\text{NH}_4\text{SH}$ . (Bloxam, Chem. Soc. 1895, **67**. 284.)

**Ammonium copper sulphide**,  $(\text{NH}_4)_2\text{S}_2.2\text{CuS}_2$  (?).

Sol. in warm  $\text{H}_2\text{O}$ , but decomp. on standing. Warm  $\text{KOH}$  + Aq. acts similarly; sl. sol. in  $\text{NH}_4\text{OH}$  + Aq,  $\text{Na}_2\text{CO}_3$  + Aq, or absolute alcohol. Insol. in ether. Decomp. by dil. acids. (Priwoznik, B. **6**. 1291.)

Correct formula is  $\text{NH}_4\text{CuS}_4$ . Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by conc. and dil. acids. Easily sol. in  $\text{NaOH}$ . Sl. sol. in alcohol. (Biltz, B. 1907, **40**. 976.)

**Ammonium gold polysulphide**,  $\text{AuS}_2.\text{NH}_4$ .

Ppt. (Hofmann, B. 1903, **36**. 3092; B. 1904, **37**. 245.)

**Ammonium iridium pentadecasulphide**,  $\text{IrS}_{15}(\text{NH}_4)_3$ .

Ppt. (Hofmann, B. 1904, **37**. 247.)

**Ammonium palladium undecasuiphide,**  
 $\text{PdS}_{11}(\text{NH}_4)_2 + \frac{1}{2}\text{H}_2\text{O}$ .

Ppt. (Hofmann, B. 1904, 37. 248.)

**Ammonium platinum pentadecasuiphide,**  
 $\text{PtS}_{15}(\text{NH}_4)_2 + 2\text{H}_2\text{O}$ .

Can be washed with  $\text{CS}_2$  without decomp. Sol. in alcohol. Insol. in ether. (Hofmann, B. 1903, 36. 3091.)

**Ammonium stannic sulphide.**

See Sulphostannate, ammonium.

**Ammonium telluride,  $\text{NH}_4\text{HTe}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Bineau, A. ch. (2) 87. 229.)

**Ammonium sulphide ammonia,  $(\text{NH}_4)_2\text{S}$ ,  $2\text{NH}_3$ .**

Very unstable. (Bloxam, Chem. Soc. 1895, 67. 294.)

**Ammonium acisulphomelid,  $(\text{NSO.ONH}_4)_2$  (?)**

(Hantzsch and Stuer, B. 1905, 38. 1039.)

**Ammonplatindiamine comps.**

See Platintriamine comps.

**Ammondisulphonic acid,  $\text{NH}_2(\text{SO}_3\text{H})_2$ .**

Known only in its salts. (Claus, A. 158. 52 and 194.)

Contains 2 at. H less, and is identical with imidosulphonic acid  $\text{NH}(\text{SO}_3\text{H})_2$ , which see. (Raschig, A. 241. 161.)

**Ammontrisulphonic acid,  $\text{NH}_2(\text{SO}_3\text{H})_3$ .**

Known only in its salts. (Claus, A. 158. 52 and 194.)

Contains 2 at. H less, and is nitrilosulphonic acid  $\text{N}(\text{SO}_3\text{H})_3$ , which see. (Raschig, A. 241. 161.)

**Ammontetrasulphonic acid,  $\text{NH}(\text{SO}_3\text{H})_4$ .**

Known only in its salts. (Claus, A. 158. 52 and 194.)

Does not exist, but was impure nitrilosulphonic acid, which see. (Raschig, A. 241. 161.)

**Anhydroarseniotungstic acid,  $\text{H}_2\text{As}_2\text{W}_6\text{O}_{22}$ .**

See under Arseniotungstic acid.

**Anhydrooxycobaltamine chloride,**

Easily sol. in  $\text{H}_2\text{O}$ , but decomposes after a few minutes; can be recrystallized from dil.  $\text{HCl} + \text{Aq}$ . Precipitated from sat.  $\text{H}_2\text{O}$  solution by conc.  $\text{HCl} + \text{Aq}$ , or alcohol. (Vortmann, M. Ch. 6. 404.)

$\text{Co}_2(\text{NH}_3)_{10} \left( \begin{array}{c} \text{Cl} \\ \text{OH} \end{array} \right) \text{Cl}_4$ . Sol. in  $\text{H}_2\text{O}$ . (Vortmann.)

**Anhydrooxycobaltamine chloride mercuric chloride,  $\text{Co}_2(\text{NH}_3)_{10}(\text{ClO}_2\text{H})\text{Cl}_4, 3\text{HgCl}_2$ .**  
 Can be recryst. from very dil. hot  $\text{HCl} + \text{Aq}$ .

— **chloroplatinate,  $\text{Co}_2(\text{NH}_3)_{10}(\text{ClO}_2\text{H})\text{Cl}_4, 2\text{PtCl}_4$ .**

Can be recrystallized from  $\text{H}_2\text{O}$  containing  $\text{HCl}$ .

— **chloronitrate,  $\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O.OH})(\text{NO}_2)_4 + \text{H}_2\text{O}$ .**

Can be recrystallized from dil.  $\text{HCl} + \text{Aq}$ .

$\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O.OH})\text{Cl}_2(\text{NO}_2)_2 + \text{H}_2\text{O}$ .

More easily sol. in  $\text{H}_2\text{O}$  than the preceding comp.

— **chlorosulphate,  $\text{Co}_2(\text{NH}_3)_{10}\text{Cl}(\text{O.OH})(\text{SO}_4)_2$ .**

— **dichromate,  $[\text{Co}_2(\text{NH}_3)_{10}\text{O.OH}]_2(\text{Cr}_2\text{O}_7)_2 + 8\text{H}_2\text{O}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ .

— **nitrate,  $\text{Co}_2(\text{NH}_3)_{10}(\text{NO}_2)(\text{O.OH})(\text{NO}_2)_4 + \text{H}_2\text{O}$ .**

Sl. sol. in pure  $\text{H}_2\text{O}$  with immediate decomp.

Can be recrystallized from  $\text{H}_2\text{O}$  containing  $\text{HNO}_3$ .

— **sulphate,  $[\text{Co}_2(\text{NH}_3)_{10}\text{O.OH}]_2(\text{SO}_4)_2, 2\text{H}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .**

Sl. sol. in cold  $\text{H}_2\text{O}$ . When crystallized from dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , is converted into—

$[\text{Co}_2(\text{NH}_3)_{10}\text{O.OH}]_2(\text{SO}_4)_2, \text{H}_2\text{SO}_4 + 3\text{H}_2\text{O}$ , which by further recrystallization from very dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  becomes—

$[\text{Co}_2(\text{NH}_3)_{10}\text{O.OH}]_2(\text{SO}_4)_2 + 8\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . (Vortmann.)

**Anhydrophospholuteotungstic acid,  $\text{H}_3\text{PW}_6\text{O}_{21}$ .**

See under Phosphotungstic acid.

**Antimonic Acid.**

**Metantimonic acid,  $\text{HSbO}_3$ .**

Very sl. sol. in  $\text{H}_2\text{O}$ ; sol. in conc.  $\text{HCl} + \text{Aq}$ ; sl. sol. in dil.  $\text{HNO}_3 + \text{Aq}$ ; easily sol. in tartaric acid +  $\text{Aq}$ ; easily sol. in hot  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ ; completely insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Freymy, A. ch. (3) 23. 407.)

Sl. sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{KOH}$  and  $\text{K}_2\text{CO}_3 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in  $\text{HNO}_3 + \text{H}_2\text{SO}_4$ . Slowly sol. in cold, quickly in hot  $\text{HCl} + \text{Aq}$ . Sl. sol. in tartaric and oxalic acid and in  $\text{KHC}_2\text{O}_4 + \text{Aq}$ . (Senderens, Bull. Soc. 1899, (3) 21. 48.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

**Pyroantimonic acid,  $\text{H}_2\text{Sb}_2\text{O}_7$ .**

More sol. in  $\text{H}_2\text{O}$  and acids than  $\text{H}_2\text{SbO}_4$ . Sol. in cold  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Freymy.)

Slowly sol. in cold  $\text{H}_2\text{O}$ .

5.88 g.  $\text{Sb}_2\text{O}_5$  in 1 l.  $\text{H}_2\text{O}$  at 15°

8.55 " " " 1 l. " " 25°

21.30 " " " 1 l. " " 60°

(Delacroix, J. Pharm. 1897, 6. 337–41.)

Sl. sol. in  $H_2O$ . Very sl. sol. in KOH and  $K_2CO_3 + Aq.$  Insol. in  $NH_4OH + Aq.$  and in  $HNO_3 + H_2SO_4$ . Slowly sol. in cold, quickly in hot  $HCl + Aq.$  Sl. sol. in tartaric acid, oxalic acid and  $KHC_2O_4 + Aq.$  (Senderens, Bull. Soc. 1899, (3) 21. 48.)

**Orthoantimonic acid,  $H_3SbO_4$ .**

Sl. sol. in  $H_2O$ . Insol. in  $NH_4OH + Aq.$  Easily sol. in  $KOH + Aq.$  (Fremy.)

Does not exist. (Raschig, B. 18. 2745.)

Has, however, been prepared by Daubrawa (A. 186. 110), Conrad (C. N. 40. 198), and Beilstein and Blaesé (Bull. Ac. St. Petersb. 33. 97).

Very sol. in  $H_2O$ . (Delacroix, Bull. Soc. 1899 (3) 21. 1049.)

Very sl. sol. in  $H_2O$ , in KOH and  $K_2CO_3 + Aq.$  Slowly sol. in cold, quickly in hot  $HCl + Aq.$  Insol. in  $NH_4OH + Aq.$  and in  $HNO_3 + H_2SO_4$ . Sl. sol. in tartaric acid, oxalic acid and  $KHC_2O_4 + Aq.$  (Senderens, Bull. Soc. 1899, (3) 21. 52.)

$+ \frac{1}{2}H_2O$ . (Beilstein and Blaesé.)

According to Beilstein and Blaesé only one antimonic acid,  $H_3SbO_4$ , exists.

**Tetramimonic acid,  $Sb_2O_5 + 4H_2O = H_4Sb_2O_9$ .**

Slowly sol. in cold  $H_2O$ .

Solution sat. at  $t^\circ$  contains g.  $Sb_2O_5$  per litre—

$t^\circ$	15°	25°	60°	70°
g. $Sb_2O_5$	5.88	8.3–8.75	21.30	53.89

Decomp. in solution by heating to  $100^\circ$  or long standing in the cold to  $Sb_2O_5$ ,  $3H_2O$ . (Delacroix, Bull. Soc. 1899, (3) 21. 1049.)

Insol. in  $H_2O$ . Very sl. sol. in KOH and  $K_2CO_3 + Aq.$  Slowly sol. in cold, quickly in hot  $HCl + Aq.$  Insol. in  $NH_4OH + Aq.$  Insol. in  $HNO_3 + H_2SO_4$ . Sl. sol. in tartaric acid, oxalic acid and in  $KHC_2O_4 + Aq.$  (Senderens, Bull. Soc. 1899, (3) 21. 51.)

**Hexantimonic acid,  $Sb_2O_5 + 6H_2O =$**

Sol. in  $H_2O$  to the extent of 22 g.  $Sb_2O_5$  per l. but on standing becomes turbid and a white powder is pptd. until finally only 3 g.  $Sb_2O_5$  are dissolved per l. (Senderens, Bull. Soc. 1899, (3) 21. 48–49.)

**Antimonates.**

**a. Antimonates.** From  $HSbO_3$ . Some of the K and  $NH_4$  salts are sol. in  $H_2O$ , the others are slightly sol. or insol.

**$\beta$ . Pyroantimonates.** From  $H_4Sb_2O_7$ . As a class, insol. in  $H_2O$ , but decomp. thereby except in presence of large excess of alkali. (Fremy, A. ch. (3) 12. 499.)

Probably do not exist. (Beilstein and Blaesé.)

**Aluminum antimonate,  $Al_2O_3 \cdot 3Sb_2O_5$  (?).**

Ppt. Somewhat sol. in excess of Al salts + Aq. Insol. in  $K_2Sb_2O_7 + Aq.$

Ppt. (Beilstein and Blaesé, Bull. Ac. St. Petersb. 33. 101.)

Ppt. (B. and B.)

$Al_2O_3$ ,  $Sb_2O_5 + 9H_2O$ . Ppt. (Ebel, B. 2. 3043.)

**Ammonium antimonate,  $NH_4SbO_3 + 2H_2O$ .**

Insol. in  $H_2O$ .

$+ 2\frac{1}{2}H_2O$ . Insol. in  $H_2O$ . (Senderens,

Bull. Soc. 1899, (3) 21. 56.)

$+ 6H_2O$ . See  $(NH_4)_2H_7Sb_2O_7 + 5H_2O$ .

**Ammonium pyroantimonate,  $(NH_4)_2Sb_2O_7$ .**

Known only in solution.

Sol. in  $H_2O$ , but decomp. by standing or boiling into insol. salt. Insol. in alcohol. (Fremy, J. pr. 45. 215). Composition is  $NH_4SbO_3 + 6H_2O$ , according to Raschig (B. 18. 2743).

**Barium antimonate,  $Ba(SbO_3)_2$ .**

Ppt. Scarcely sol. in  $H_2O$ . Slowly sol. in  $BaCl_2 + Aq.$

$+ 2H_2O$ . Somewhat sol. in  $H_2O$ . Easily sol. in  $HCl + Aq.$  (Delacroix, Bull. Soc. 1899, (3) 21. 1051.)

$+ 5$ , or  $6H_2O$ . Ppt.

$BaSb_2O_7 + 5H_2O$ . Sol. in conc.  $HCl$ . (Delacroix, Bull. Soc. 1899, (3) 21. 1051.)

$BaO$ ,  $3Sb_2O_5 + 5H_2O$ . Insol. in  $H_2O$ . In-

completely sol. in  $HCl$ . (Delacroix, l.c.)

$9BaO$ ,  $10Sb_2O_5 + 18H_2O$ . Insol. in  $HCl +$

$Aq.$  (Delacroix, l.c.)

**Bismuth antimonate,  $BiSbO_4 + H_2O$ .**

Ppt. Insol. in  $H_2O$ ; sol. in  $HCl + Aq.$  (Cavazzi, Gazz. ch. it. 15. 37.)

$3Bi_2O_3$ ,  $Sb_2O_5 + H_2O$ . Insol. in  $H_2O$ ; sol. in  $HCl + Aq.$  (Cavazzi.)

$2Bi_2O_3$ ,  $Sb_2O_5$ . As above. (Cavazzi.)

**Cadmium antimonate,  $Cd(SbO_3)_2 + 2H_2O$ .**

Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 56.)

$+ 3\frac{1}{2}H_2O$ . Very sol. in  $H_2O$ . Sol. in  $HCl + Aq.$  (Ebel, Dissert. 1890.)

$+ 5H_2O$ . Insol. in  $H_2O$ . (Senderens, l.c.)

$+ 6H_2O$ . Ppt. Insol. in  $H_2O$ . (Ebel, B. 22. 3043.)

**Calcium antimonate,  $Ca(SbO_3)_2$ .**

Ppt.

$+ 5H_2O$ . Ppt. (Heffter, Pogg. 86. 418.)

$+ 6H_2O$ . Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 56.)

**Chromic antimonate,  $Cr(SbO_3)_3 + 14H_2O$ .**

Ppt. (Beilstein and Blaesé.)

**Cobaltous antimonate,  $Co(SbO_3)_2 + 5H_2O$ .**

Insol. in  $H_2O$ . Loses  $3H_2O$  in the presence of  $H_2SO_4$  and passes into  $Co(SbO_3)_2 + 2H_2O$ ,

also insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 55.)

+ $6H_2O$ . Ppt. (Ebel, B. 22. 3043.)

+ $7H_2O$ . Sl. sol. in  $H_2O$ . Sl. sol. in boiling solutions of cobalt salts.

+ $12H_2O$ . Ppt. (Heffter, Pogg. 86. 448.)

**Cobaltous hydrogen antimonate**,  $CoH_4(SbO_4)_2 + H_2O$ .

(Gorgeul, Ann. Phys. Beibl. 1897, 21. 198.)

**Cupric antimonate**,  $3CuO, 2Sb_2O_3$ .

Ppt. (Beilstein and Blaesé.)

$Cu(SbO_4)_2$ . Insol. in  $H_2O$ , acids, or alkalies. (Berzelius.)

+ $2H_2O$ . Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 55.)

+ $5H_2O$ . Ppt. (Ebel, B. 22. 3043.)

Insol. in  $H_2O$ . (Senderens, l.c.)

$CuO, 2Sb_2O_3 + 9H_2O$ . Insol. in  $H_2O$ . Sol. in  $Sb_2O_3, 4H_2O + Aq$ . (Delacroix, Bull. Soc. 1899, (3) 21. 1054.)

$2CuO, 3Sb_2O_3 + 10H_2O$ . Insol. in  $H_2O$ . Sol. in  $NH_4OH$  and in triantimonic acid +  $Aq$ . (Delacroix, l. c.)

$CuO, 6Sb_2O_3 + 16H_2O$ . (Delacroix, l.c.)

**Cupric antimonate ammonia**,  $Cu(SbO_4)_2, 4NH_3 + 4H_2O$ .

Insol. in  $H_2O$  and  $NH_4OH + Aq$ . (Schiff, A. 123. 39.)

$CuSb_2N_3H_{11}O_{12} = Cu(ONH_4)_2OH, 2(NH_4SbO_3 + 2H_2O)$ . (Raschig, B. 18. 2743.)

$Cu(SbO_4)_2, 3NH_3 + 9H_2O$ . (Delacroix, Bull. Soc. 1901, (3) 25. 289.)

**Glucinum antimonate**,  $Gl(SbO_4)_2 + 6H_2O$ .

Somewhat sol. in hot  $H_2O$ . Easily sol. in warm  $HCl$ . (Ebel, Dissert. 1890.)

**Iron (ferrous) antimonate**.

Sl. sol. in  $H_2O$ . (Berzelius.)

**Iron (ferric) antimonate**.

Insol. in  $H_2O$ . (B.)

$Fe_2O_3, Sb_2O_3 + 7H_2O$ . Ppt. (Ebel, B. 22. 3043.)

$Fe_2O_3, 2Sb_2O_3 + 11H_2O$ . Ppt. (Beilstein and Blaesé.)

$Fe(SbO_4)_3 + 6\frac{1}{2}H_2O$ . Ppt. (B. and B.)

**Lead antimonate, basic**,  $Pb_3(SbO_4)_2(OH)_4 + 2H_2O = Pb_3(SbO_4)_2 + 4H_2O$ .

Min. *Bleinerite, Bindheimite*.

$2Pb(SbO_4)_2, PbO + 11H_2O$ . Ppt. (B. and B.)

**Lead antimonate**,  $Pb(SbO_4)_2$ .

Insol. in  $H_2O$ . Incompletely decomp. by acids. (Berzelius.)

*Naples Yellow*. Insol. in  $H_2O$ .

+ $2H_2O$ . Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 57.)

+ $5H_2O$ . Ppt. (Ebel, B. 22. 3043.)

+ $6H_2O$ . Ppt. (Beilstein and Blaesé.)

+ $9H_2O$ . Insol. in  $H_2O$ . (Senderens, l.c.)

**Lead antimonate chloride**,  $Pb(SbO_4)_2, PbCl_2$ .

Min. *Nadorite*. Sol. in  $HCl, HNO_3$ , and tartaric acid +  $Aq$ .

**Lithium antimonate**,  $LiSbO_3$ .

Sl. sol. in cold, sol. in hot  $H_2O$ , and crystallizes on cooling. Much more sol. than  $NaSbO_3$ .

+ $3H_2O$ . Ppt. Sl. sol. in  $H_2O$ . (Beilstein and Blaesé.)

**Magnesium antimonate**,  $Mg(SbO_4)_2 + 12H_2O$ .

Sol. in hot, less sol. in cold  $H_2O$ . (Heffter.)

Sol. in  $MgSO_4 + Aq$ ; insol. in  $KSbO_3 + Aq$ . (Berzelius.)

**Manganous antimonate**,  $Mn(SbO_4)_2$ .

Difficultly sol. in  $H_2O$ .

When heated, is sol. only in strong acids.

+ $2H_2O$ . Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 56.)

+ $5H_2O$ . Ppt. (Ebel, B. 22. 3043.)

+ $6H_2O$ . Insol. in  $H_2O$ . (Senderens, l.c.)

+ $7H_2O$ . Ppt. (Beilstein and Blaesé.)

**Mercurous antimonate**.

Insol. in  $H_2O$ . (Berzelius.)

**Mercuric antimonate**,  $Hg(SbO_4)_2$ .

Insol. in  $H_2O$ , alkalies, and most acids.

Sl. attacked by boiling  $H_2SO_4$ , and  $HCl + Aq$ .

+ $2H_2O$ . Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 55.)

+ $5H_2O$ . Insol. in  $H_2O$ . (Senderens.)

+ $6H_2O$ . Ppt. (Beilstein and Blaesé.)

**Nickel antimonate**,  $Ni(SbO_4)_2 + 2H_2O$ .

Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 54.)

+ $5H_2O$ . Insol. in  $H_2O$ . (Senderens.)

+ $6H_2O$ . Ppt. Insol. in  $H_2O$ . (Heffter, Pogg. 86. 446.)

+ $12H_2O$ . Sl. sol. in  $H_2O$ . (Heffter.)

**Potassium antimonate**,  $KSbO_3$ .

Insol. in  $H_2O$ . Sol. in warm  $KOH + Aq$ , but separates nearly completely on cooling. By boiling with  $H_2O$ , or by standing for a long time with cold  $H_2O$ , it gradually dissolves as  $2KSbO_3 + 5H_2O$ , or  $K_2H_3Sb_2O_7 + 4H_2O$ , or  $2KH_2SbO_4 + 3H_2O$ .

Insol. in  $CS_2$ . (Arctowski, Z. anorg. 1894, 6. 257.)

+ $H_2O$ . Insol. in  $H_2O$ . (Senderens, Bull. Soc. 1899, (3) 21. 57.)

+ $1\frac{1}{2}H_2O$  (=  $2KSbO_3 + 5H_2O$  of Fremy). Easily sol. in  $H_2O$ , especially if warm. Solution is pptd. by  $NH_4Cl + Aq$ . (Fremy, A. ch. (3) 12. 499.)

+ $2\frac{1}{2}H_2O$ . 100 pts.  $H_2O$  at  $20^\circ$  dissolve 2.81 pts. anhydrous salt; sp. gr. of solution sat. at  $18^\circ = 1.0263$ . Composition is given as  $K_2H_3Sb_2O_7 + 4H_2O$ . (Knorre and Olschewsky, B. 20. 3043.)

+ $3\frac{1}{2}H_2O$ . Insol. in  $H_2O$ . (Senderens, l.c.)

+4½H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Delacroix, J. Pharm. 1897, (6) 6. 533.)  
 2K<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>+10H<sub>2</sub>O. Sl. sol. in H<sub>2</sub>O. (Delacroix, J. Pharm. 1897, 6. 337.)  
 +10H<sub>2</sub>O. (Delacroix, l.c.)

**Potassium pyroantimonate, K<sub>2</sub>Sb<sub>2</sub>O<sub>7</sub>.**

Deliquescent; decomp. by boiling with H<sub>2</sub>O into K<sub>2</sub>SbO<sub>3</sub>+5H<sub>2</sub>O, by cold H<sub>2</sub>O into K<sub>2</sub>H<sub>2</sub>Sb<sub>2</sub>O<sub>7</sub>+6H<sub>2</sub>O. (Freym.)

Does not exist. (Knorre and Olschewsky.)  
 Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

**Potassium hydrogen pyroantimonate, K<sub>2</sub>H<sub>2</sub>Sb<sub>2</sub>O<sub>7</sub>.**

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

+2½H<sub>2</sub>O. (Senderens, Bull. Soc. 1899, (3) 21. 57.)

+3½H<sub>2</sub>O. Very difficultly sol. in hot or cold H<sub>2</sub>O. (Knorre and Olschewsky, B. 18. 2358.)

+6H<sub>2</sub>O. Quite difficultly sol. in cold H<sub>2</sub>O. Not precipitated by NH<sub>4</sub>Cl+aq. Aqueous solution gradually decomposes. (Freym.)

+4H<sub>2</sub>O. See 2K<sub>2</sub>SbO<sub>3</sub>+5H<sub>2</sub>O.

**Potassium antimonate sulphantimonate, K<sub>2</sub>SbO<sub>3</sub>, K<sub>2</sub>SbS<sub>4</sub>+5H<sub>2</sub>O.**

Decomp. on air, and with cold H<sub>2</sub>O. Sol. in hot H<sub>2</sub>O. (Rammelsberg.)

**Silver antimonate.**

Insol. in H<sub>2</sub>O. (Berzelius.)

AgSbO<sub>3</sub>+3H<sub>2</sub>O=AgH<sub>2</sub>SbO<sub>4</sub>+2H<sub>2</sub>O. Easily sol. in NH<sub>4</sub>OH+aq, when freshly pptd. (Beilstein and Blaesé.)

+1½H<sub>2</sub>O. Ppt. (Ebel, B. 22. 3043.)

**Silver antimonate ammonia, AgH<sub>2</sub>SbO<sub>4</sub>, 2NH<sub>3</sub>+H<sub>2</sub>O.**

(Beilstein and Blaesé.)

**Sodium antimonate, NaSbO<sub>3</sub>.**

Sol. in much H<sub>2</sub>O, but soon becomes decomposed into Na<sub>2</sub>H<sub>2</sub>Sb<sub>2</sub>O<sub>7</sub>.

+3½H<sub>2</sub>O, composition of Na<sub>2</sub>H<sub>2</sub>Sb<sub>2</sub>O<sub>7</sub>+6H<sub>2</sub>O, according to Beilstein and Blaesé.

1000 pts. H<sub>2</sub>O dissolve 0.31 pt. NaSbO<sub>3</sub>+3½H<sub>2</sub>O at 12.3°.

1000 pts. alcohol of 15.8% dissolve 0.13 pt. NaSbO<sub>3</sub>+3½H<sub>2</sub>O at 12.3°.

1000 pts. alcohol of 25.6% dissolve 0.07 pt. NaSbO<sub>3</sub>+3½H<sub>2</sub>O at 12.3°.

Somewhat more sol. when freshly precipitated.

Absolutely insol. in glacial HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>.

Presence of NaOH or Na salts diminish solubility, while NH<sub>4</sub>OH or K salts increase it

slightly. (Beilstein and Blaesé, Bull. Ac. St. Petersb. 33. 201.)

+4½H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Delacroix, Bull. Soc. 1899, (3) 21. 1051.)

2Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>+10H<sub>2</sub>O. (Delacroix, l.c.)  
 Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>+11H<sub>2</sub>O. (Delacroix, l.c.)

**Sodium pyroantimonate, Na<sub>2</sub>H<sub>2</sub>Sb<sub>2</sub>O<sub>7</sub>+6H<sub>2</sub>O.**

Boiling H<sub>2</sub>O dissolves ¾ pt. of this salt. (Freym.) 1000 pts. H<sub>2</sub>O dissolve 2.5 pts. salt.

(Ebel, B. 22. 3044.) See also NaSbO<sub>3</sub>+3½H<sub>2</sub>O.

+5H<sub>2</sub>O. (Knorre and Olschewsky.)

**Strontium antimonate, Sr(SbO<sub>3</sub>)<sub>2</sub>+6H<sub>2</sub>O.**

Ppt. Less sol. in H<sub>2</sub>O than SrSO<sub>4</sub>. (Heffter, Pogg. 86. 418.)

**Thallos antimonate, TlSbO<sub>3</sub>+2H<sub>2</sub>O=**  
**TlH<sub>2</sub>SbO<sub>4</sub>+H<sub>2</sub>O.**

Somewhat sol. in H<sub>2</sub>O, when freshly precipitated; insol. when dried. (Beilstein and Blaesé.)

**Tin (stannous) antimonate, 2SnO, Sb<sub>2</sub>O<sub>3</sub>.**

Ppt. (Lenassen, A. 114. 113.)

Sn(SbO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O. Attacked with difficulty by acids or alkalis, most easily by hot conc. H<sub>2</sub>SO<sub>4</sub>. (Schiff, A. 120. 55.)

2SnO, 3Sb<sub>2</sub>O<sub>3</sub>+4H<sub>2</sub>O.

SnO, 2Sb<sub>2</sub>O<sub>3</sub>.

**Tin (stannic) antimonate.**

Insol. in H<sub>2</sub>O. (Levol, A. ch. (3) 1. 504.)

**Uranium antimonate, 5UO<sub>3</sub>, 3Sb<sub>2</sub>O<sub>3</sub>+15H<sub>2</sub>O.**

Ppt. Sol. in hot conc. HCl+aq, and in UCl<sub>3</sub>+aq. (Rammelsberg.)

**Zinc antimonate, Zn(SbO<sub>3</sub>)<sub>2</sub>.**

Very slightly sol. in H<sub>2</sub>O (Berzelius); sol. in solutions of Zn salts.

+2H<sub>2</sub>O. (Ebel, Dissert. 1890.)

Insol. in H<sub>2</sub>O. (Senderens, Bull. Soc. 1899, (3) 21. 57.)

+5H<sub>2</sub>O. Not wholly insol. in cold, moderately sol. in hot H<sub>2</sub>O. (Ebel, Dissert. 1890.)

+6H<sub>2</sub>O. Insol. in H<sub>2</sub>O. (Senderens.)

**Antimoniomolybdic acid.**

**Ammonium antimoniomolybdate, 5(NH<sub>4</sub>)<sub>2</sub>O,**  
**4Sb<sub>2</sub>O<sub>3</sub>, 7MoO<sub>3</sub>+12H<sub>2</sub>O.**

Readily sol. in hot H<sub>2</sub>O. (Gibbs, Am. Ch. J. 7. 392.)

**Antimoniotungstic acid, 3Sb<sub>2</sub>O<sub>3</sub>, 4WO<sub>3</sub>+11H<sub>2</sub>O.**

Sol. in H<sub>2</sub>O. (Hallopeau, C. R. 1896, 123. 1068.)

**Potassium antimoniotungstate, 3K<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>,**  
**4WO<sub>3</sub>+4H<sub>2</sub>O.**

Much more sol. in hot than in cold H<sub>2</sub>O. Decomp. by HCl, H<sub>2</sub>SO<sub>4</sub> and HNO<sub>3</sub>. (Hallopeau, C. R. 1890, 123. 1066.)

+16H<sub>2</sub>O. Much more easily sol. in hot than cold H<sub>2</sub>O. Decomp. by HCl, H<sub>2</sub>SO<sub>4</sub>, and HNO<sub>3</sub>. (Hallopeau, l.c.)  
6K<sub>2</sub>O, 4Sb<sub>2</sub>O<sub>3</sub>, 12WO<sub>3</sub>+25H<sub>2</sub>O.  
Sl. sol. in H<sub>2</sub>O. (Gibbs, Am. Ch. J. 7. 392.)

#### Antimoniuretted hydrogen.

See Antimony hydride.

#### Antimonosomolybdic acid.

Ammonium antimonosomolybdate, 6(NH<sub>4</sub>)<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>, 17MoO<sub>3</sub>+21H<sub>2</sub>O.

Insol. in cold H<sub>2</sub>O. (Gibbs, Am. Ch. J. 7. 313.)

#### Antimonosophosphotungstic acid.

Potassium antimonosophosphotungstate, 12K<sub>2</sub>O, 5Sb<sub>2</sub>O<sub>3</sub>, 6P<sub>2</sub>O<sub>5</sub>, 22WO<sub>3</sub>+48H<sub>2</sub>O.

Nearly insol. in cold or warm H<sub>2</sub>O. (Gibbs, Am. Ch. J. 7. 392.)

#### Antimonosotungstic acid.

Ammonium antimonosotungstate.

Sol. in H<sub>2</sub>O.

Barium antimonosotungstate, 4BaO, 6Sb<sub>2</sub>O<sub>3</sub>, 22WO<sub>3</sub>+36H<sub>2</sub>O.

Precipitate; very sl. sol. in hot H<sub>2</sub>O. (Gibbs, Am. Ch. J. 7. 313.)

#### Antimonous acid, HSbO<sub>3</sub>.

(Long, J. Am. Chem. Soc. 1895, 17. 87.)

+1½H<sub>2</sub>O. Ppt. (Schaffner, A. 51. 182.)

H<sub>2</sub>SbO<sub>3</sub>. Ppt. (Clarke and Stallo, B. 13. 1793.)

Does not exist. (Guntz, C. R. 102. 1472.)

H<sub>2</sub>SbO<sub>3</sub>. When freshly pptd., is sol. in dil. KOH, and NaOH+Aq. Scarcely sol. in NH<sub>4</sub>OH+Aq, or in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>, or KHCO<sub>3</sub>+Aq.

Completely sol. in K<sub>2</sub>CO<sub>3</sub>, and Na<sub>2</sub>CO<sub>3</sub>+Aq, especially if warm. When recently pptd. is sl. sol. in succinic acid+Aq.

Calcium antimonite, CaSb<sub>2</sub>O<sub>4</sub> (?).

Min. *Romeite*. Insol. in acids.

#### Cobaltous antimonite (?).

Sl. sol. in H<sub>2</sub>O. (Berzelius.)

Cuprous antimonite, Cu<sub>3</sub>(SbO<sub>3</sub>)<sub>2</sub>.

Insol. in H<sub>2</sub>O. Sol. in acids; most easily in conc. HCl+Aq. (Hausmann and Stromeyer, Schw. J. 19. 241.)

#### Cupric antimonite (?).

Insol. in H<sub>2</sub>O. (Berzelius.)

CuSb<sub>2</sub>O<sub>4</sub>. Min. *Ammitolite*.

CuSb<sub>2</sub>O<sub>4</sub>. Sol. in HCl+Aq, tartaric and citric acids. (Harding, Z. anorg. 1899, 20. 238.)

#### Iron (ferrous) antimonite (?).

More sol. in H<sub>2</sub>O than the antimonate. (Dumas.)

Potassium antimonite, K<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>.

Easily decomp. by cold H<sub>2</sub>O. Not decomp. by KOH+Aq containing over 20.9% K<sub>2</sub>O. (Corimimbœuf, C. R. 115. 1305.)

+3H<sub>2</sub>O. As above. (C.)

Potassium antimonite iodide, K<sub>2</sub>O, 8Sb<sub>2</sub>O<sub>3</sub>, 2KI.

Insol. and not decomp. by cold or hot H<sub>2</sub>O. Not decomp. by acids or alkalis. Aqua regia decomp. slowly. Tartaric acid dissolves gradually. (Grühl, Dissert. 1897.)

Sodium antimonite, NaSbO<sub>3</sub>+3H<sub>2</sub>O.

Difficultly sol. in H<sub>2</sub>O. (Terreil, A. ch. (4) 7. 380.)

2Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>+H<sub>2</sub>O. Decomp. by H<sub>2</sub>O, but not by NaOH+Aq containing 94.3 g. NaOH per l. (Corimimbœuf.)

Na<sub>2</sub>O, 2Sb<sub>2</sub>O<sub>3</sub>. Decomp. by H<sub>2</sub>O but not by NaOH+Aq containing 188.6 g. NaOH per l. (C.)

Na<sub>2</sub>O, 3Sb<sub>2</sub>O<sub>3</sub>. Decomp. by H<sub>2</sub>O, but not by NaOH+Aq containing 113.2 g. NaOH per l. (C.)

+2H<sub>2</sub>O=NaH<sub>2</sub>(SbO<sub>3</sub>)<sub>2</sub>. (Terreil.)

#### Antimony, Sb.

Does not decomp. H<sub>2</sub>O. Not attacked by HCl+Aq (Berzelius); slowly sol. in conc. HCl+Aq (Debray); slowly sol. in conc. warm HCl+Aq (Troost). Attacked by very conc. HCl+Aq only when finely divided (Schützenberger, Willm); very sl. attacked by dil. or conc. acid (Guntz). Not attacked by boiling HCl+Aq (Gmelin). By careful experiments, pure Sb is absolutely insol. in dil. or conc., hot or cold HCl+Aq, except when in contact with oxygen. (Ditte and Metzner, A. ch. (6) 29. 889.)

Insol. in dil. or cold conc., but sol. in hot conc. H<sub>2</sub>SO<sub>4</sub>. Oxidized but not dissolved by HNO<sub>3</sub>+Aq. Easily and completely sol. in aqua regia.

Very slowly attacked by pure HNO<sub>3</sub>+Aq of 1.51-1.42 sp. gr.; weaker acid has no marked action whether it contains NO<sub>2</sub> or not. HCl+HNO<sub>3</sub> has no action if dil. or at low temp., but when even very dil. and KNO<sub>3</sub> is added, the action will begin. (Millon, A. ch. (3) 6. 101.)

Not attacked in 10 months by 2% HNO<sub>3</sub>+Aq. Sb is not dissolved by HNO<sub>3</sub>+Aq of any concentration, a white powder being always left, which is insol. in HNO<sub>3</sub>+Aq or H<sub>2</sub>O. (Montemartini, Gazz. ch. it. 22. 384.)

Insol. in alkalis+Aq.

Somewhat sol. in distilled H<sub>2</sub>O. More or less sol. in solutions of acids, alkalis and salts and in alcohol and ether. Only sl. sol. in a mixture of alcohol and ether. (Ruff and Albert, B. 1905, 38. 54.)

Alkaline H<sub>2</sub>O<sub>2</sub> converts Sb into antimonie acid, but neutral H<sub>2</sub>O<sub>2</sub> is without action. (Clark, Chem. Soc. 1893, 63. 886.)

Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20. 826.)

Easily attacked by pyrosulphuryl chloride. (Heumann and Köchlin, B. 16. 479.)

Sb is sol. in a mixture of  $\text{HNO}_3$  and tartaric acid or other polybasic acids. (Czerwek, Z. anal. 1906, 45. 507.)

Not attacked by a mixture of alcohol and ether. (Cohen, Z. phys. Ch. 1904, 47. 12.)

$\frac{1}{2}$  cc. oleic acid dissolves 0.0007 g. Sb in 6 days. (Gates, J. phys. Ch. 1911, 16. 143.)

There are three modifications.

1. Ordinary gray metallic.

2. Black amorphous. Unstable at ord. temp. By boiling with  $\text{H}_2\text{O}$  is changed to metallic Sb.

3. Yellow. Very unstable. At  $-50^\circ$  goes over rapidly into the ordinary black modification. Sol. in  $\text{CS}_2$  at a little above  $-90^\circ$ . (Stock, B. 1903, 37. 898.)

Unstable above  $-90^\circ$ . (Stock, B. 1905, 38. 3837.)

#### Antimony arsenide, $\text{Sb}_3\text{As}$ .

(Descamps, C. R. 86. 1065.)

#### Antimony tribromide, $\text{SbBr}_3$ .

Deliquescent; decomp. by  $\text{H}_2\text{O}$ .

Very sol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 826.)

Very sol. in warm liquid  $\text{AsBr}_3$ , forming a solution with sp. gr. = 3.685 at  $47^\circ$ . (Retgers, Z. phys. Ch. 1893, 11. 339.)

Sol. in  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25. 217.)

Sol. in  $\text{AlBr}_3$ . (Isbekow, Z. anorg. 1913, 34. 27.)

Easily sol. in  $\text{PCl}_3$  and  $\text{PBr}_3$ . (Walden, Z. anorg. 1900, 25. 211.)

Sol. in alcohol and  $\text{CS}_2$ .

Sol. in ether forming two layers. (Hayes, J. Chem. Soc. 1902, 24. 360.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Solubility of  $\text{SbBr}_3$  in organic liquids.  
Data in parentheses indicate labile equilibrium.

(Menschutkin, Ann. Inst. Pol. P. le Gr. 13. 1.)

#### Antimony bromide with $\text{MBr}$ .

See Bromantimonate, M.

Also below.

#### Antimony hydrogen bromide, $\text{SbBr}_3$ , $\text{HBr} + 3\text{H}_2\text{O}$ .

Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . (Weinland and Feige, B. 1903, 36. 256.)

See Metabromantimononic acid.

**Antimony caesium bromide**,  $2\text{SbBr}_3, 3\text{CsBr} + 2\text{H}_2\text{O}$ .  
Loses  $\text{Br}_2$  in the air. (Weinland, B. 1903, **36**, 257.)

**Antimony calcium bromide**,  $\text{SbBr}_3, \text{CaBr}_2 + 8\text{H}_2\text{O}$ .  
Easily decomp. (Benedict, Proc. Am. Acad. 1895, **30**, 9.)

**Antimony glucinum bromide**,  $3\text{SbBr}_3, 2\text{GlBr}_3 + 18\text{H}_2\text{O}$ .  
Hydroscopic. Easily decomp. (Weinland, B. 1903, **36**, 258.)

**Antimony magnesium bromide**,  $\text{SbBr}_3, \text{MgBr}_2 + 8\text{H}_2\text{O}$ .  
As Ca salt. (Benedict, Proc. Am. Acad. 1895, **30**, 9.)

**Antimony potassium bromide**,  $10\text{SbBr}_3, 23\text{KBr} + 27\text{H}_2\text{O}$ .  
(Herty, Am. Ch. J. 1894, **16**, 496.)

**Antimony rubidium bromide**,  $2\text{SbBr}_3, 3\text{RbBr}$ .  
Decomp. by  $\text{H}_2\text{O}$ ; can be recryst. from dil.  $\text{HBr} + \text{Aq}$ . (Wheeler, Z. anorg. **5**, 258.)  
 $\text{SbRb}_2\text{Br}_4$ . Slowly loses  $\text{Br}_2$  in the air.  
Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1903, **36**, 259.)

$10\text{SbBr}_3, 23\text{RbBr}$  (?). Cryst. from conc.  $\text{HBr} + \text{Aq}$ . (Wheeler.)  
The composition assigned to this salt by Wheeler (Z. anorg. **5**, 253) is incorrect. (Ephraim, B. 1903, **36**, 1817.)

**Antimony vanadium bromide**,  $\text{SbBr}_3, \text{VBr}_4 + 7\text{H}_2\text{O}$ .  
Hydroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl}$  and in tartaric acid. (Weinland, B. 1903, **36**, 260.)

**Antimony bromide potassium chloride**,  $\text{SbBr}_3, 3\text{KCl} + 1\frac{1}{2}\text{H}_2\text{O}$ .  
Slowly deliquescent. Very sol. in  $\text{H}_2\text{O}$ .  
Sat. solution contains 120.5 g. to 100 cc.  $\text{H}_2\text{O}$ , and has sp. gr. = 1.9.  
Decomp. by much  $\text{H}_2\text{O}$ . (Atkinson, Chem. Soc. **43**, 290.)  
Does not exist. (Herty, Am. Ch. J. 1894, **16**, 497.)  
See also Antimony chloride potassium bromide.

**Antimony bromofluoride**,  $\text{SbF}_2\text{Br}$ .  
Decomp. by  $\text{H}_2\text{O}$ . (Ruff, B. 1906, **39**, 4319.)

**Antimony trichloride**,  $\text{SbCl}_3$ .  
Deliquescent. Decomp. by  $\text{H}_2\text{O}$  with precipitation of  $\text{SbOCl}$ . This precipitation is prevented by tartaric, citric, or hydrochloric acid, or by conc. solutions of chlorides of alkalis and alkaline earths.

Solubility in  $\text{H}_2\text{O}$ .  
100 pts.  $\text{SbCl}_3$  sol. in pts.  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts. $\text{H}_2\text{O}$
0°	16.6
15°	12.3
20°	10.9
25°	10.1
30°	9.4
35°	8.7
40°	7.3
50°	5.2
60°	2.2

(Meerburg, Z. anorg. 1903, **33**, 299.)

Solubility in  $\text{HCl} + \text{Aq}$ .  
100 mol.  $\text{H}_2\text{O}$  dissolve mol.  $\text{SbCl}_3$  in presence of mol.  $\text{HCl}$  at  $20^\circ$ .

Mol. $\text{HCl}$	Mol. $\text{SbCl}_3$
0	72.1–72.8
2.4	73.0
6.5	67.5
8.4	67.6
8.6	66.5
9.8	65.0
12.2	65.3
29.6	54.5

(Meerburg, Z. anorg. 1903, **33**, 304.)

Solubility in  $\text{HCl} + \text{Aq}$ .

Solid phase	100 mol. $\text{H}_2\text{O}$ dissolve at $20^\circ$			
	1	2	3	4

	68.3	3.6		

1 & 2. (Meerburg, Z. anorg. 1903, **33**, 302.)

3 & 4. (Noodt, Z. anorg. 1903, **33**, 302.)

Somewhat sol. in liquid  $(\text{CN})_2$ . (Centnerszwer, Bull. Soc. 1901, (3) **28**, 405.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, **20**, 826.)

Easily sol. in  $\text{PCl}_3$  and  $\text{PBr}_3$ . (Walden, Z. anorg. 1900, **25**, 211.)

Sol. in  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, **25**, 217.)

Easily sol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in alcohol without decomp. Very sol. in hot  $\text{CS}_2$ , but solubility diminishes rapidly on cooling. (Cooke, Proc. Am. Acad. 13. 72.)

1 g.  $\text{SbCl}_3$  is sol. in 0.186 g. acetone at  $18^\circ$ . Sp. gr. of sat. solution  $18^\circ/4^\circ = 2.216$ . (Naumann, B. 1904, 37. 4332.)

Sol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

1 pt. sol. in 16.97 pts. of ethyl acetate at  $18^\circ$ . Sp. gr. of sat. solution  $18^\circ/4^\circ = 1.7968$ . (Naumann, B. 1910, 43. 320.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in methylal. (Eidmann, C. C. 1899, II. 1014.)

Solubility of  $\text{SbCl}_3$  in organic liquids. Data in parentheses indicate labile equilibrium.

(Menschutkin, Ann. Inst. Pol. P.-le Gr., 13. 1.)

Antimony hydrogen trichloride,  $2\text{SbCl}_3$ ,  $\text{HCl} + 2\text{H}_2\text{O}$ .

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ .

Melts in crystal  $\text{H}_2\text{O}$  at  $16^\circ$ . (Engel, C. R. 106. 1797.)

Antimony pentachloride,  $\text{SbCl}_5$ .

Deliquesces to  $\text{SbCl}_3 + 4\text{H}_2\text{O}$ , which can be crystallized out of a little  $\text{H}_2\text{O}$ . Decomp. by more  $\text{H}_2\text{O}$  into  $\text{SbO}_2\text{Cl}$ . Sol. in a large amt. of  $\text{H}_2\text{O}$ , if it is added all at one time. Precipitation by  $\text{H}_2\text{O}$  is also hindered by presence of tartaric, or hydrochloric acid.

+  $\text{H}_2\text{O}$ . Deliquescent. Sol. in chloroform. (Anschütz and Evans, A. 239. 285.)

+  $4\text{H}_2\text{O}$ . Insol. in chloroform. (Anschütz and Evans.)

Antimony pentachloride with  $\text{MCl}$ .

See Chlorantimonate, M.

See also below.

**Antimony hydrogen pentachloride**,  $\text{SbCl}_5$ ,  $\text{HCl} + 4\frac{1}{2}\text{H}_2\text{O}$ .

"Metachlorantimonic acid" according to Weinland and Schmid, (Z. anorg. 1905, **44**, 43.)

Very easily sol. in  $\text{H}_2\text{O}$ , alcohol, acetone and glacial acetic acid. Aqueous solution decomp. on standing with separation of  $\text{Sb}_2\text{O}_3$ , but remains clear in presence of 10%  $\text{HCl}$ . (Weinland and Schmid, Z. anorg. 1905, **44**, 43.)

$\text{SbCl}_5$ ,  $5\text{HCl} + 10\text{H}_2\text{O}$ . Not deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Melts in crystal  $\text{H}_2\text{O}$  at about  $55^\circ$ . (Engel, C. R. **106**, 1797.)

**Antimony antimonyl chloride**,  $\text{SbCl}_3$ ,  $\text{SbOCl}$ .

More easily attacked by  $\text{H}_2\text{O}$  than  $\text{SbOCl}$ . (Bemmelen, Z. anorg. 1903, **33**, 293.)

**Antimony antimonyl potassium chloride**,  $\text{SbCl}_3$ ,  $\text{SbOCl}$ ,  $2\text{KCl}$ .

Not deliquescent. Immediately decomp. by hot or cold  $\text{H}_2\text{O}$ ; sol. in hot glacial  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$ , or in  $\text{HCl}$ , or tartaric acid +  $\text{Aq}$ .

Insol. in  $\text{KCl}$  +  $\text{Aq}$ , hot or cold alcohol,  $\text{CS}_2$ , or ligroine. (Benedikt, Proc. Am. Acad. **29**, 217.)

**Antimony antimonyl rubidium chloride**,  $\text{SbCl}_3$ ,  $\text{SbOCl}$ ,  $2\text{RbCl}$ .

Sol. in very dil.  $\text{HCl}$  +  $\text{Aq}$ . (Wells, Am. J. Sci. 1897, (4) **3**, 463.)

**Antimony barium chloride**,  $\text{SbCl}_3$ ,  $\text{BaCl}_2$ , +  $\frac{1}{2}\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ .

**Antimony caesium chloride**,  $\text{SbCl}_3$ ,  $6\text{CsCl}$ .

Decomp. by  $\text{H}_2\text{O}$ . Cryst. from dil.  $\text{HCl}$  +  $\text{Aq}$ . (Godeffroy, Arch. Pharm. (3) **12**, 47.)

$2\text{SbCl}_3$ ,  $3\text{CsCl}$ . Decomp. by  $\text{H}_2\text{O}$ ; sl. sol. in cold, easily in hot dil.  $\text{HCl}$  +  $\text{Aq}$ . This is identical with the above salt. (Saunders, Am. Ch. J. **14**, 152.)

$\text{SbCl}_3$ ,  $2\text{CsCl}$ . Sol. in boiling conc.  $\text{HCl}$  +  $\text{Aq}$  without decomp. (Setterberg, Oef. Vet. Akad. 1882, **6**, 23.)

$\text{SbCl}_3$ ,  $\text{CsCl}$ . Cryst. from  $\text{HCl}$  +  $\text{Aq}$  without decomp. Decomp. by  $\text{H}_2\text{O}$ . (Setterberg, Oef. Vet. Akad. 1882, **6**, 27.)

**Antimony calcium chloride**,  $\text{SbCl}_3$ ,  $\text{CaCl}_2$ , +  $8\text{H}_2\text{O}$ .

Easily decomp. (Benedikt, Proc. Am. Acad. 1895, **30**, 9.)

$\text{SbCl}_3$ ,  $\text{CaSbCl}_6$ ,  $\text{OH} + 9\text{H}_2\text{O}$ . Deliquescent; sl. sol. in  $\text{H}_2\text{O}$ . (Weinland, B. 1901, **34**, 2635.)

**Antimony chromium chloride**,

$\text{CrCl}_3$ ,  $3\text{SbCl}_3$ , +  $13\text{H}_2\text{O}$ . (Weinland.) should be

$[\text{SbCl}_4]_3[\text{Cr}(\text{OH})_3] + 7\text{H}_2\text{O}$ ;

and  $\text{CrCl}_3$ ,  $\text{SbCl}_3$ , +  $10\text{H}_2\text{O}$  should be

$[\text{SbCl}_4]_3[\text{Cr}(\text{OH})_3] + 6\text{H}_2\text{O}$ .

(Pfeiffer, Z. anorg. 1903, **36**, 349.)

**Antimony glucinum chloride**,  $\text{SbCl}_3$ ,  $\text{GlCl}_2$ , +  $3\text{H}_2\text{O}$ .

Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Very easily sol. in  $\text{HCl}$ . (Ephraim, B. 1903, **36**, 1822.)

+  $4\text{H}_2\text{O}$ . Ppt. Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ . (Ephraim, B. 1903, **36**, 1822.)

**Antimony hydrazine chloride**,  $\text{SbCl}_3$ ,  $3\text{N}_2\text{H}_4\text{Cl}$ .

Sol. in conc.  $\text{HCl}$  +  $\text{Aq}$ ; decomp. by  $\text{H}_2\text{O}$ . (Ferratini, C. A. **1912**, 1613.)

**Antimony lithium chloride**,  $\text{SbCl}_3$ ,  $2\text{LiCl}$ , +  $5\text{H}_2\text{O}$ .

Hydroscopic. Decomp. by  $\text{H}_2\text{O}$ . Very easily sol. in  $\text{HCl}$ . (Ephraim, B. 1903, **36**, 1821.)

+  $6\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl}$ . (Ephraim, B. 1903, **36**, 1822.)

**Antimony magnesium chloride**,  $\text{SbCl}_3$ ,  $\text{MgCl}_2$ , +  $5\text{H}_2\text{O}$ .

Hydroscopic. Decomp. by  $\text{H}_2\text{O}$ . Can be cryst. from  $\text{HCl}$  without decomp. (Ephraim, B. 1903, **36**, 1823.)

$2\text{SbCl}_3$ ,  $\text{MgCl}_2$ . Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Very sol. in  $\text{HCl}$ . (Ephraim.)

$\text{SbCl}_3$ ,  $\text{MgSbCl}_6$ ,  $\text{MgOH} + 17\text{H}_2\text{O}$ . Hydroscopic. Sol. in  $\text{H}_2\text{O}$  with decomp. (Weinland, B. 1901, **34**, 2635.)

**Antimony nitrosyl chloride**,  $\text{SbCl}_3$ ,  $\text{NOCl}$ .

Very deliquescent; decomp. by pure  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_2\text{O}$  containing tartaric acid. (Weber, Pogg. **123**, 347.)

$2\text{SbCl}_3$ ,  $5\text{NOCl}$ . Decomp. by  $\text{H}_2\text{O}$ . (Sudborough, Chem. Soc. **59**, 661.)

**Antimony phosphorus chloride**,  $\text{SbCl}_3$ ,  $\text{PCl}_3$ .

Deliquescent. (Weber, Pogg. **125**, 78.)

**Antimony phosphoryl chloride**,  $\text{SbCl}_3$ ,  $\text{POCl}_3$ .

Deliquescent. (Weber.)

**Antimony platinum potassium chloride**,  $(\text{Sb}, \text{Pt})\text{Cl}_6\text{K}_2$ .

Ppt. (Weinland, B. 1905, **38**, 1086.)

**Antimony potassium chloride**,  $\text{SbCl}_3$ ,  $2\text{KCl}$ .

Sol. in  $\text{H}_2\text{O}$  without decomp. (Jacquelin, A. ch. (2) **66**, 128.)

Not deliquescent. Immediately decomp. by hot or cold  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ , or tartaric acid +  $\text{Aq}$ . (Benedikt, Proc. Am. Acad. **29**, 219.)

+  $2\text{H}_2\text{O}$ . Very efflorescent.

$\text{SbCl}_3$ ,  $3\text{KCl}$ . Deliquescent. Decomp. by hot  $\text{H}_2\text{O}$ . (Poggiale.)

+  $2\text{H}_2\text{O}$ . (Romanis, C. N. **49**, 273.)

Not obtained by Benedikt (*l.c.*)

$10\text{SbCl}_3$ ,  $23\text{KCl}$ . True composition of above salts. Sol. in  $\text{H}_2\text{O}$ . (Herty, Am. Ch. J. 1894, **16**, 495.)

$\text{SbCl}_3$ ,  $2\text{KCl}$  is the only true compound, all

others being isomorphous mixtures. (Jordis, B. 1903, **36**, 2539.)

2SbCl<sub>3</sub>, 3KCl. Deliquescent. Decomp. by H<sub>2</sub>O. (Bosek, Chem. Soc. 1895, **67**, 516.)

SbCl<sub>3</sub>, K<sub>2</sub>SbCl<sub>5</sub>, KOH. Hydrosopic. Sol. in H<sub>2</sub>O with decomp. (Weinland, B. 1901, **34**, 2635.)

See also Antimony antimonyl potassium chloride.

**Antimony rubidium chloride**, SbCl<sub>3</sub>, RbCl.

Decomp. on air or with H<sub>2</sub>O. (Saunders, Am. Ch. J. **14**, 162.)

2SbCl<sub>3</sub>, RbCl + H<sub>2</sub>O. Decomp. on air. (Wheeler, Z. anorg. **5**, 253.)

SbCl<sub>3</sub>, 6RbCl. Decomp. by H<sub>2</sub>O. (Godefroy, Arch. Pharm. (3) **9**, 343.)

Formula is 10SbCl<sub>3</sub>, 23RbCl (?). (Saunders Am. Ch. J. **14**, 159.)

10SbCl<sub>3</sub>, 23RbCl (?). Decomp. by H<sub>2</sub>O; sol. in HCl + Aq. (Saunders.)

Formula is 3SbCl<sub>3</sub>, 7RbCl. (Wells and Foote, Am. J. Sci. 1897, (4) **3**, 461.)

Composition assigned to this salt by Saunders (Am. Ch. J. **14**, 155) is incorrect. (Ephraim, B. 1903, **36**, 1817.)

3SbCl<sub>3</sub>, 5RbCl. As above. (Saunders.)

Formula is 2SbCl<sub>3</sub>, 3RbCl. (Wheeler.)

Rb<sub>2</sub>SbCl<sub>5</sub>. Ppt. Decomp. by H<sub>2</sub>O. (Weinland, B. 1905, **38**, 1083.)

Rb<sub>2</sub>SbCl<sub>5</sub>, 2Rb<sub>2</sub>SbCl<sub>5</sub>. Ppt. Decomp. by H<sub>2</sub>O. (Weinland, B. 1901, **34**, 2635.)

**Antimony selenium chloride**, SbCl<sub>3</sub>, SeCl<sub>4</sub>.

Deliquescent. (Weber.)

**Antimony selenyl chloride**, SbCl<sub>3</sub>, SeOCl<sub>2</sub>.

Very deliquescent. (Weber, Pogg. **125**, 325.)

**Antimony sodium chloride**, SbCl<sub>3</sub>, 3NaCl (?).

Decomp. by much H<sub>2</sub>O. (Poggiale.)

**Antimony sulphur chloride**, 2SbCl<sub>3</sub>, 3SCl<sub>2</sub>.

Decomp. by H<sub>2</sub>O.

SbCl<sub>3</sub>, SCl<sub>4</sub>. Sol. in dil. HNO<sub>3</sub> + Aq.

Mpt. 125-126° in an atmos. of chlorine. Violently decomp. by H<sub>2</sub>O. (Ruff, B. 1904, **37**, 4515.)

**Antimony thallium chloride**, SbCl<sub>3</sub>, 3TlCl.

Ppt. (Ephraim, Z. anorg. 1909, **61**, 249.)

SbCl<sub>3</sub>, TlCl. (Ephraim and Barteczko, Z. anorg. 1909, **61**, 251.)

2SbCl<sub>3</sub>, 2TlCl, TlCl<sub>3</sub>. Slowly decomp. by cold H<sub>2</sub>O. (Ephraim and Barteczko, Z. anorg. 1909, **61**, 253.)

**Antimony trichloride ammonia**, SbCl<sub>3</sub>, NH<sub>3</sub>.

Not very deliquescent. Decomp. by H<sub>2</sub>O.

**Antimony pentachloride ammonia**, SbCl<sub>5</sub>, 6NH<sub>3</sub>.

Decomp. by H<sub>2</sub>O. (Persoz.)

**Antimony pentachloride cyanhydric acid**, SbCl<sub>5</sub>, 3HCN.

Deliquescent; decomp. by H<sub>2</sub>O. (Klein, A. **74**, 85.)

**Antimony pentachloride nitric oxide**, 2SbCl<sub>5</sub>, NO.

Decomp. by H<sub>2</sub>O. (Besson, C. R. **108**, 1012.)

**Antimony pentachloride nitrogen peroxide**, 3SbCl<sub>5</sub>, 2NO<sub>2</sub>.

Decomp. by H<sub>2</sub>O. (Besson.)

**Antimony pentachloride nitrogen sulphide**, SbCl<sub>5</sub>, N<sub>2</sub>S<sub>4</sub>.

Easily decomp. (Davis, Chem. Soc. 1906, **89**, 1577.)

Decomp. by cold H<sub>2</sub>O, HCl, H<sub>2</sub>SO<sub>4</sub> and warm alcohol, also by boiling with KOH + Aq. Almost insol. in organic solvents. (Wölbling, Z. anorg. 1908, **57**, 283.)

**Antimony chloride potassium bromide**, SbCl<sub>3</sub>, 3KBr + 1½H<sub>2</sub>O.

Very deliquescent. Decomp. by much H<sub>2</sub>O. (Atkinson, Chem. Soc. **43**, 289.)

2SbCl<sub>3</sub>, 3KBr + 2H<sub>2</sub>O. (Atkinson.)

SbCl<sub>3</sub>, KBr + H<sub>2</sub>O. (Atkinson.)

Above are mixtures. (Herty, Am. Ch. J. 1894, **16**, 497.)

See Antimony bromide potassium chloride.

**Antimony chlorofluoride**, SbCl<sub>3</sub>F<sub>3</sub>.

(Swarts, Z. anorg. 1896, **12**, 71.)

**Antimony fluoiodide**, SbF<sub>3</sub>I.

Slowly decomp. by H<sub>2</sub>O. (Ruff, B. 1906, **39**, 4321.)

(SbF<sub>3</sub>)<sub>2</sub>I. Sol. in H<sub>2</sub>O with pptn. of I<sub>2</sub>. (Ruff, B. 1906, **39**, 4321.)

**Antimony trifluoride**, SbF<sub>3</sub>.

Deliquescent. Sol. in H<sub>2</sub>O.

Solubility in H<sub>2</sub>O at t°.

t°	100 g. of the solution contain g. SbF <sub>3</sub>	100 g. H <sub>2</sub> O contain g. SbF <sub>3</sub>

(Rosenheim, Z. anorg. 1909, 61. 192.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 826.)

**Antimony pentafluoride,  $\text{SbF}_5$ .**

Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. 145. 239.)  
 Very hygroscopic; bpt.  $155^\circ$ . Sol. in  $\text{H}_2\text{O}$  with hissing. (Ruff, B. 1904, 37. 678.)  
 $+2\text{H}_2\text{O}$ . (Ruff, B. 1904, 37. 679.)

**Antimony pentafluoride diantimony trifluoride,  $\text{Sb}_2\text{F}_{11} = 2\text{SbF}_5, \text{SbF}_3$ .**

Hygroscopic; bpt.  $390^\circ$ . Easily sol. in  $\text{H}_2\text{O}$ . (Ruff, B. 1904, 37. 680.)

**Antimony pentafluoride pentantimony trifluoride,  $\text{SbF}_5, 5\text{SbF}_3$ .**

B pt.  $384^\circ$  (corr.). (Ruff, B. 1904, 37. 681.)

**Antimony caesium fluoride;**

$\text{CsF}, 2\text{SbF}_5$ .

$\text{CsF}, 3\text{SbF}_5$ .

$4\text{CsF}, 7\text{SbF}_5$ .

$\text{CsF}, \text{SbF}_3$ .

$2\text{CsF}, \text{SbF}_3$ .

(Wells, Am. J. Sci. 1901, (4) 11. 451.)

**Antimony lithium fluoride,  $\text{SbF}_3, 2\text{LiF}$ .**

Sol. in more than 20 pts.  $\text{H}_2\text{O}$ . (Flückinger, Pogg. 87. 245.)

$\text{SbF}_3, \text{LiF}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Stein, Chem. Z. 13. 357.)

**Antimony potassium fluoride,  $\text{SbF}_3, 2\text{KF}$ .**

Sol. in less than 2 pts. boiling, and in 9 pts. cold  $\text{H}_2\text{O}$ . Insol. in alcohol or ether.

$\text{SbF}_3, \text{KF}$ . More sol. than  $\text{SbF}_3, 2\text{KF}$ . Sol. in 2.8 pts.  $\text{H}_2\text{O}$ . (Flückinger, Pogg. 87. 245.)

$\text{SbF}_3, \text{KF}$ . Easily sol. in  $\text{H}_2\text{O}$ .

$\text{SbF}_3, 2\text{KF} + 2\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Marignac, A. 145. 239.)

**Antimony sodium fluoride,  $\text{SbF}_3, 3\text{NaF}$ .**

Sol. in 14 pts. cold, and 4 pts. boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{HF}$ . (Flückinger, Pogg. 87. 245.)

$\text{SbF}_3, \text{NaF}$ . 100 pts. cold  $\text{H}_2\text{O}$  dissolve 93 pts. 100 pts. hot  $\text{H}_2\text{O}$  dissolve 166 pts. (Stein, Wagners' J. B. 1887. 1160.)

$4\text{SbF}_3, \text{NaF}$ . As  $\text{NH}_4$  salt. (Raad and Hauser, B. 1890, 23. R. 125.)

$\text{SbF}_3, 2\text{NaF}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Marignac, A. 145. 329.)

**Antimony thallium fluoride,  $\text{TlF}, \text{SbF}_3$ .**

Sol. in  $\text{H}_2\text{O}$  without decomp. (Ephraim, B. 1909, 42. 4458.)

$\text{TlF}, 2\text{SbF}_3$ . Sol. in  $\text{H}_2\text{O}$  without decomp. (Ephraim.)

$\text{TlF}, 3\text{SbF}_3$ . Sol. in  $\text{H}_2\text{O}$  without decomp. Decomp. by cold conc.  $\text{H}_2\text{SO}_4$ . (Ephraim.)

**Antimony trifluoride ammonia,  $\text{SbF}_3, 2\text{NH}_3$ .**

Sl. sol. in liquid  $\text{NH}_3$ . (Ruff, B. 1906, 39. 4326.)

**Antimony trifluoride ammonium chloride.**

$\text{SbF}_3, \text{NH}_4\text{Cl}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (de Haen, B. 21. 901 R.)

**Antimony trifluoride ammonium sulphate,  $\text{SbF}_3, (\text{NH}_4)_2\text{SO}_4$ .**

More sol. than K or Na salt. 1 pt.  $\text{H}_2\text{O}$  dissolves 1.4 pts. at  $24^\circ$  and 15 pts. at  $100^\circ$ . (de Haen, B. 21. 902 R.)

**Antimony fluoride lithium chloride,  $\text{SbF}_3, \text{LiCl}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Stein, Chem. Z. 13. 357.)

**Antimony pentafluoride nitrosyl fluoride,  $\text{SbF}_5, \text{NOF}$ .**

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. in liquid  $\text{NH}_3$  with decomp. Sl. sol. in  $\text{NOCl}$ ,  $\text{SiCl}_4$ ,  $\text{PCl}_5$ ,  $\text{AsCl}_3$ ,  $\text{SO}_2\text{Cl}_2$  and  $\text{SOCl}_2$ . (Ruff, Z. anorg. 1908, 58. 334.)

**Antimony trifluoride potassium chloride,  $\text{SbF}_3, \text{KCl}$ .**

100 pts.  $\text{H}_2\text{O}$  dissolve 51 pts. at  $24^\circ$  and 300 pts. at  $100^\circ$ . (de Haen, B. 21. 901 R.)

- Antimony trifluoride potassium sulphate**,  $\text{SbF}_3, \text{K}_2\text{SO}_4$ .  
Sol. in  $\text{H}_2\text{O}$ . (de Haen.)  
 $2\text{SbF}_3, \text{K}_2\text{SO}_4$ . Very sol. in  $\text{H}_2\text{O}$ . (Mayer, B. 1894, 27. R. 922.)
- Antimony trifluoride sodium chloride**,  $\text{SbF}_3, \text{NaCl}$ .  
Easily sol. in  $\text{H}_2\text{O}$ . (de Haen, B. 21. 901 R.)
- Antimony trifluoride sodium sulphate**,  $\text{SbF}_3, \text{Na}_2\text{SO}_4$ .  
Sol. in  $\text{H}_2\text{O}$ . (de Haen.)
- Antimony fluoiodide**,  $\text{SbF}_2\text{I}$ .  
Mpt.  $80^\circ$ ; slowly decomp. by  $\text{H}_2\text{O}$ . (Ruff, B. 1906, 39. 4321.)  
 $(\text{SbF}_2)_2\text{I}$ . Mpt.  $110-115^\circ$ ; decomp. by  $\text{H}_2\text{O}$ . (Ruff.)
- Antimony fluosulphide**,  $\text{SbF}_2\text{S}$ .  
Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . Sol. with decomp. in alcohol. Sol. in  $\text{CCl}_4$ . (Ruff, B. 1906, 39. 4372.)
- Antimony gold**,  $\text{Au}_3\text{Sb}$ .  
Insol. in equal pts. of  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9. 72.)
- Antimony hydride**,  $\text{SbH}_3$ .  
Scarcely sol. in  $\text{H}_2\text{O}$ . 1000 ccm.  $\text{H}_2\text{O}$  absorb 4.12 cc.  $\text{SbH}_3$  at  $10.5^\circ$ . Decomp. by long contact with  $\text{H}_2\text{O}$ ; also by conc.  $\text{H}_2\text{SO}_4$  or  $\text{KOH} + \text{Aq}$ . (Jones, Chem. Soc. 29. 641.)
- Antimony trihydroxide**,  $\text{Sb}_2\text{O}_3, 2\text{H}_2\text{O} = \text{Sb}_2\text{O}(\text{OH})_4$ .  
(Schaffner, A. 51. 182.)  
 $\text{Sb}(\text{OH})_3$ . Ppt. (Clarke and Stolla, B. 13. 1787.)  
Does not exist. (Guntz, C. R. 102. 1472.)  
See Antimonous acid and antimony trioxide.
- Antimony triiodide**,  $\text{SbI}_3$ .  
Decomp. by  $\text{H}_2\text{O}$  or 80% alcohol. Sol. in  $\text{HI} + \text{Aq}$ ; sol. in boiling  $\text{CS}_2$ , and in boiling benzene, but separates out on cooling. Almost insol. in  $\text{CHCl}_3$ . (Cooke, Proc. Am. Acad. (2) 5. 72.)  
Easily sol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 374.)  
Sol. in warm  $\text{AsBr}_3$ . Sp. gr. of a solution sat. at  $40^\circ$ , which solidifies at  $37^\circ$ , = 3.720. This dissolves further  $\text{AsI}_3$ , whereby the mpt. sinks to  $31^\circ$  and sp. gr. rises to 3.801. By mixing the latter solution with a solution of  $\text{AsI}_3$  in  $\text{CH}_2\text{I}_2$ , a liquid can be obtained with a sp. gr. of 3.702 at  $20^\circ$ . (Retgers, Z. phys. Ch. 1893, 11. 340.)  
Sol. in  $\text{PCl}_5$ . (Beckmann, Z. anorg. 1906, 51. 110.)  
Sol. in  $\text{SO}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 27. 215.)
- Sol. in  $\text{SOCl}_2$  and  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25. 216.)  
Sol. in  $\text{AsCl}_3$ . (Walden, Z. anorg. 1900, 25. 214.)  
Sol. in  $\text{SnCl}_4$ . (Walden, Z. anorg. 1900, 25. 218.)  
Sol. in  $\text{POCl}_3$ . (Walden, Z. anorg. 1900, 25. 212.)  
Easily sol. in  $\text{PCl}_5$  and  $\text{PBr}_5$ . (Walden, Z. anorg. 1900, 25. 211.)  
Partly sol. in, and partly decomp. by alcohol or ether. (M'Ivor, Chem. Soc. (2) 14. 328.)  
Insol. in oil of turpentine and  $\text{CCl}_4$ .  
100 pts. methylene iodide dissolve 11.3 pts.  $\text{SbI}_3$  at  $12^\circ$ ; sp. gr. of solution = 3.453. (Retgers, Z. anorg. 3. 343.)  
Sol. in  $\text{C}_6\text{H}_6$ . (Retgers, Z. phys. Ch. 1893, 11. 334.)  
Sol. in acetone. (Naumann, B. 1904, 37. 4328.)
- Antimony penta iodide**,  $\text{SbI}_5$ .  
Very unstable. (Pendleton, C. N. 48. 97.)
- Antimony barium iodide**,  $\text{SbI}_3, \text{BaI}_2 + 9\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{C}_2\text{H}_3\text{O}_6 + \text{Aq}$ .  $\text{CS}_2$  dissolves out  $\text{SbI}_3$ . (Schäffer, Pogg. 109. 611.)
- Antimony caesium iodide**,  $2\text{SbI}_3, 3\text{CsI}$ .  
Sl. sol. in  $\text{HI} + \text{Aq}$ . Exists in two distinct forms. (Wells, Am. J. Sci. 1901, (4) 11. 455.)
- Antimony potassium iodide**,  $2\text{SbI}_3, 3\text{KI} + 3\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{C}_2\text{H}_3\text{O}_6 + \text{Aq}$ .  $\text{CS}_2$  dissolves out  $\text{SbI}_3$ . (Schäffer, Pogg. 109. 611.)  
 $\text{SbI}_3, 2\text{KI} + 2\frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Nicklès, J. Pharm. (3) 39. 116.)
- Antimony rubidium iodide**,  $2\text{SbI}_3, 3\text{RbI}$ .  
Decomp. by  $\text{H}_2\text{O}$ . (Wheeler, Z. anorg. 5. 259.)
- Antimony sodium iodide**,  $2\text{SbI}_3, 3\text{NaI} + 12\text{H}_2\text{O}$ .  
As  $2\text{SbI}_3, 3\text{KI}$ . (Schäffer, Pogg. 109. 611.)
- Antimony thalious iodide**,  $2\text{SbI}_3, 3\text{TlI}$ .  
Decomp. by  $\text{H}_2\text{O}$  and by  $\text{HCl} + \text{Aq}$ , also by alcohol. (Ephraim, Z. anorg. 1908, 58. 354.)
- Antimony nitride**,  $\text{SbN}$ .  
Decomp. by heat. (Franz Fischer, B. 1910, 43. 1471.)
- Antimony trioxide**,  $\text{Sb}_2\text{O}_3$ .  
Very sl. sol. in  $\text{H}_2\text{O}$ . Sol. in 8900-10,000 pts.  $\text{H}_2\text{O}$  at  $100^\circ$ ; 55,000-61,100 pts. at  $15^\circ$ . (Schulze, J. pr. (2) 27. 320.)  
Sol. in  $\text{HCl} + \text{Aq}$ . Insol. in  $\text{HNO}_3 + \text{Aq}$ , but not as insol. as metastannic acid. Sol. in cold fuming  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Insol. in dil., but sol. in conc. alkalis, or alkali carbonates +

l. in cold  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  15 pts. boiling  $\text{SbCl}_3$ . (Schneider, 8. 407.)

l.  $\text{H}_2\text{C}_2\text{H}_3\text{O}_2$ , or  $\text{H}_2\text{C}_4\text{H}_5\text{O}_6 + \text{Aq.}$  and from these solutions by  $\text{H}_2\text{O}$ . Easily benzoic acid. Insol. in pyrotartaric ery sol. in  $\text{KHC}_4\text{H}_4\text{O}_6 + \text{Aq.}$  Sol. in .

what sol. in  $\text{H}_3\text{PO}_4 + \text{Aq.}$  (Köhler, 385, 258. 520.)

in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 826.)

lactic acid. (Kretzschmar, Ch. Z. 943.)

in grape sugar solution to which has been added. (Vogel, B. 1885, 3.)

in acetone. (Naumann, B. 1904, 37. dmann, C. C. 1899, II. 1014.)

in glycerine in presence of alkalis. Dingl. 1885, 258. 520.)

in a sol. colloidal modification. B. 16. 1142.)

*Valentinite, Senarmontite.*

l. See Antimonous acid.

**y tetroxide,  $\text{Sb}_2\text{O}_4$ .**

in  $\text{H}_2\text{O}$ . Slightly attacked by acids;  $\text{HCl} + \text{Aq}$  acts only slightly. (Fre-

*tervantite.* Sl. sol. in  $\text{HCl} + \text{Aq.}$

**y pentoxide,  $\text{Sb}_2\text{O}_5$ .**

in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq.}$  Sl. conc.  $\text{KOH} + \text{Aq.}$  monoxyl" is sol. in glycerine in pres-

alkalies. glycerine, to which have been added  $\text{aOH} + \text{Aq}$  (1 : 1), dissolve 20.6 g.; 20 g.  $\text{NaOH} + \text{Aq}$  (1 : 1), dissolve at b.-pt.; 40 g.  $\text{NaOH} + \text{Aq}$  (1 : 1), 68.5 g. at b.-pt.; 80 g.  $\text{NaOH} + \text{Aq}$  dissolve 93.0 g. at b.-pt.; 120 g.  $\text{NaOH}$  (1 : 1), dissolve 119.2 g. at b.-pt. Dingl. 258. 520.)

**Antimonic acid.**

**y nitrogen pentoxide,  $2\text{Sb}_2\text{O}_5, \text{N}_2\text{O}_5$ .** Decomp. by  $\text{H}_2\text{O}$ . (Thomas, C. R. 0. 1116.)

**y oxybromide.**

**Antimonyl bromide.**

**y oxychloride.**

**Antimonyl chloride.**

**y oxyfluoride.**

**Antimonyl fluoride.**

**y oxysulphide,  $\text{Sb}_2\text{OS}_2$ .**

*Antimony blende (kermesite).*

in  $\text{H}_2\text{O}$  or dil. acids, except  $\text{HCl} + \text{Aq.}$  er, Pogg. 110. 147.)

**Antimony palladium,  $\text{Sb}_2\text{Pd}$ .**

Sl. sol. in equal pts. of  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9. 69.)

**Antimony platinum,  $\text{Sb}_2\text{Pt}$ .**

Insol. in equal pts. of  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9. 67.)

**Antimony phosphide,  $\text{SbP}$ .**

Insol. in benzene, ether, or  $\text{CS}_2$ . (M'Ivor, B. 6. 1362.)

**Antimony selenide,  $\text{SbSe}$ .**

(Chrétien, C. R. 1906, 142. 1341.)

$\text{Sb}_2\text{Se}_3$ . (Chrétien, l.c.)

$\text{Sb}_2\text{Se}_3$ . (Chrétien, l.c.)

$\text{Sb}_2\text{Se}_3$ . Sol. in  $\text{KOH} + \text{Aq.}$  (Hofacker, A. 107. 6.)

$\text{Sb}_2\text{Se}_3$ . (Hofacker.)

**Antimony selenide, with M selenide.**

See Selenoantimonates, M.

**Antimony trisulphide,  $\text{Sb}_2\text{S}_3$  (Kermes).**

Insol. in  $\text{H}_2\text{O}$  and dil. acids.

1 l.  $\text{H}_2\text{O}$  dissolves  $5.2 \times 10^{-4}$  mols. pptd.  $\text{Sb}_2\text{S}_3$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Decomp. by conc.  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Sol. in conc.  $\text{HCl} + \text{Aq.}$  Easily sol. in dil.  $\text{KOH}$ ,  $\text{NaOH}$ ,  $(\text{NH}_4)_2\text{S}$ , and  $\text{K}_2\text{S} + \text{Aq.}$  Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$ ; very sl. sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ ; insol. in  $\text{KSH} + \text{Aq.}$  (Fresenius.)

Sol. in a mixture of 50 pts.  $\text{H}_2\text{O}$  and 18 pts.  $\text{HCl}$  (sp. gr. 1.16) even when completely sat. with  $\text{H}_2\text{S}$ . (Lang and Carson, J. Soc. Chem. Ind. 1902, 21. 1018.)

Sl. sol. in  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Guerout, C. R. 1872, 75. 1276.)

Cryst.  $\text{Sb}_2\text{S}_3$  is only sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (1 pt. in about 2000 pts.  $\text{NH}_3$ ).

Pptd. amorphous  $\text{Sb}_2\text{S}_3$  is appreciably more sol. (1 pt. in 600 pts.  $\text{NH}_3$ ). (Garot, J. pr. 1843, 29. 83.)

Sl. sol. in hot 2%  $\text{Na}_2\text{B}_2\text{O}_7 + \text{Aq.}$  still less sol. in cold. (Materne, C. C. 1906, II. 557.)

Insol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$

Sol. in 14–15 pts. pure  $\text{SbCl}_3$ . (Schneider, Pogg. 108. 407.)

Slowly sol. in  $\text{H}_2\text{C}_4\text{H}_5\text{O}_6 + \text{Aq.}$

Sol. in boiling  $\text{Na}_2\text{SbS}_4 + \text{Aq.}$

Sol. in hot citric, tartaric and oxalic acids. Sl. sol. in malic, benzoic, picric and pyrogalllic acids. Insol. in formic and acetic acids. Especially easily sol. in citric and oxalic acids with addition of  $\text{KNO}_3$ ,  $\text{KNO}_2$  or  $\text{KClO}_3$ . (Bolton, C. N. 1878, 37. 86 and 99.)

Sol. in ethylamine sulphhydrate +  $\text{Aq.}$

Min. *Stibnite*. Sol. in cold citric acid +  $\text{Aq.}$  (Bolton, C. N. 37. 14.)

*Soluble modification.*  $\text{Sb}_2\text{S}_3$  may be obtained in a colloidal state in aqueous solution containing 1 pt.  $\text{Sb}_2\text{S}_3$  to 200 pts.  $\text{H}_2\text{O}$ . This can be boiled without decomp., but  $\text{Sb}_2\text{S}_3$  is pptd. by acids and salts.

Table of maximum dilution of solutions of acids and salts which cause pptn. of  $\text{Sb}_2\text{S}_3$ .

HCl	1 : 270
$\text{H}_2\text{SO}_4$	1 : 140
$\text{H}_2\text{C}_2\text{O}_4$	1 : 45
$\text{K}_2\text{SO}_4$	1 : 65
$(\text{NH}_4)_2\text{SO}_4$	1 : 130
$\text{MgSO}_4$	1 : 1720
$\text{MnSO}_4$	1 : 2060
NaCl	1 : 135
$\text{BaCl}_2$	1 : 2050
$\text{MgCl}_2$	1 : 5800
$\text{CoCl}_2$	1 : 2500
$\text{KNO}_3$	1 : 75
$\text{Fe}_2\text{Cl}_6$	1 : 2500
$\text{Ba}(\text{NO}_3)_2$	1 : 1250
$\text{K}_3\text{Al}_2(\text{SO}_4)_4$	1 : 35,000
$(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4$	1 : 800
$\text{K}_2\text{Cr}_2(\text{SO}_4)_4$	1 : 40,000
$\text{KSbOC}_2\text{H}_4\text{O}_4$	1 : 18

(Schulze, J. pr. (2) 27. 320.)

#### Antimony trisulphide with $\text{M}_2\text{S}$ .

See Sulphantimonites, M.

#### Antimony pentasulphide, $\text{Sb}_2\text{S}_5$ .

Insol. in  $\text{H}_2\text{O}$ , or  $\text{H}_2\text{O}$  containing  $\text{H}_2\text{S}$ . Sol. in conc.  $\text{HCl} + \text{Aq}$ . Completely sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; traces dissolve in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Easily sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ , or in alkali sulphides +  $\text{Aq}$ . Sol. in 50 pts. cold dil.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Geiger.)

Insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ .

Insol. in cold, but sol. in hot alkali carbonates +  $\text{Aq}$ . (Berzelius.)

Insol. in  $\text{Na}_2\text{SbS}_4 + \text{Aq}$ .

When boiled with alcohol, ether,  $\text{CS}_2$ , oil of turpentine, etc., portion of the S is dissolved out. (Berzelius.)

$\text{CS}_2$  dissolves about 5% of the sulphur. (Rammelsberg.)

#### Antimony pentasulphide with $\text{M}_2\text{S}$ .

See Sulphantimonates, M.

#### Antimony sulphochloride, $\text{SbSCl}_2$ .

Decomp. by moist air or  $\text{H}_2\text{O}$ . (Cloeze, A. ch. (3) 30. 374.)

$\text{SbS}_2\text{Cl}$ . Easily attacked by acids; insol. in  $\text{CS}_2$ . (Ouvrard, C. R. 116. 1516.)

$\text{Sb}_2\text{S}_3\text{Cl}$ . (Ouvrard.)

$2\text{SbSCl}$ ,  $3\text{Sb}_2\text{S}_3$ . Decomp. by dil.  $\text{HCl} + \text{Aq}$ . (Schneider.)

$\text{SbSCl}$ ,  $7\text{SbCl}_2$ . Deliquescent; decomp. by  $\text{H}_2\text{O}$ . (Schneider, Pogg. 108. 407.)

#### Antimony sulphofluoride, $\text{SbF}_2\text{S}$ .

See Antimony fluosulphide.

#### Antimony sulphoiodide, $\text{SbSI}$ .

Not attacked by  $\text{H}_2\text{O}$ , and decomp. only by conc. acids. Insol. in  $\text{CS}_2$ . (Schneider, Pogg. 110. 147.)

$\text{Sb}_2\text{S}_3\text{I}_2$ . (Henry and Garot.)

$\text{Sb}_2\text{S}_3\text{I}_3$ . Sol. in dry  $\text{CS}_2$ . Very easily decomp. (Ouvrard, C. R. 117. 108.)

#### Antimony sulphur dioxide, $\text{SbSO}_2$ .

Ppt. (Faktor, C. C. 1900, I. 1211.)

#### Antimony telluride, $\text{SbTe}$ .

Insol. in  $\text{H}_2\text{O}$ .

$\text{Sb}_2\text{Te}_3$ . Insol. in  $\text{H}_2\text{O}$ . (Oppenheim, J. pr. 71. 277.)

#### Antimonyl bromide, $\text{SbOBr}$ .

Insol. in  $\text{CS}_2$ . (Cooke, Proc. Am. Acad. 13. 104.)

Sl. sol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 826.)

$\text{Sb}_2\text{O}_3\text{Br}_2$ . (M'Ivor, C. N. 29. 179.)

$10\text{Sb}_2\text{O}_3\text{Br}_3$ ,  $\text{SbBr}_3$ .

#### Antimonyl chloride.

From  $\text{SbCl}_3$ .  $\text{SbOCl}$ . Insol. in  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . Insol. in alcohol or ether; sol. in  $\text{CS}_2$ ,  $\text{CHCl}_3$ , or  $\text{C}_6\text{H}_6$ . (Sabanajew, Zeit. Ch. 1871. 204.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 826.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

$\text{Sb}_2\text{O}_3\text{Cl}_2$ . *Alparoth powder*. Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$  (Cooke, Proc. Am. Acad. 13. 1); tartaric acid +  $\text{Aq}$ . (Schäffer, A. 152. 135.)

$\text{Sb}_2\text{O}_{11}\text{Cl}_2$ . (Cooke.)

$\text{Sb}_2\text{OCl}_3$ .

$\text{Sb}_{11}\text{O}_{10}\text{Cl}_{11}$ .

From  $\text{SbCl}_3$ .  $\text{SbOCl}_2$ . Deliquescent. Decomposed by  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Daubrawa, A. 184. 118.)

Does not exist. (Anschütz and Evans, A. 239. 285.)

$\text{Sb}_2\text{OCl}_{11}$ . Deliquescent. Insol. in  $\text{CS}_2$ ; easily sol. in tartaric acid +  $\text{Aq}$ . (Williams, C. N. 24. 224.)

$\text{Sb}_2\text{O}_3\text{Cl}_7$ . (Williams.)

$\text{SbO}_2\text{Cl}$ . Decomp. by hot  $\text{H}_2\text{O}$  into  $\text{HSbO}_3$ .

#### Antimonyl fluoride.

From  $\text{SbF}_3$ .  $\text{Sb}_2\text{O}_3\text{F}_3$ . Not deliquescent. (Flückiger, Pogg. 87. 249.)

#### Antimonyl caesium fluoride, $\text{SbF}_4\text{OH}$ , $\text{CsF}$ .

(Wells, Am. J. Sci. 1901, (4) 11. 456.)

#### Antimonyl sodium fluoride, $\text{SbOF}_3$ , $\text{NaF} + \text{H}_2\text{O}$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (Marignac, A. 145. 239.)

#### Antimonyl iodide, $\text{Sb}_2\text{O}_3\text{I}_2$ .

Difficultly sol. in solution of tartaric acid or tartrates. Decomp. by  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Easily sol. in alkalies, or  $(\text{NH}_4)_2\text{S} + \text{Aq}$ .

$\text{SbOI}$ . Insol. in  $\text{CS}_2$ . (Cooke, Proc. Am. Acad. (2) 5. 62.)

#### Antimonyl sulphide.

See Antimony oxysulphide.

**Argon, A.**

100 cc.  $H_2O$  dissolve 4.05 cc. argon at  $13.9^\circ$ . Critical t.— $121.6^\circ$  under 50.6 atmos. Bpt.— $186.9^\circ$ . Sp. gr. 19.9. (Rayleigh, C. N. 1895, 71. 51-62; 299-302; C. C. 1895. 467.)

Coefficient of absorption in  $H_2O$  at  $12^\circ = 0.0394$ ; at  $13.9^\circ = 0.0405$ . (Ramsay, Phil. Trans. 1895, 186. A. 225.)

**Absorption by  $H_2O$  at  $t^\circ$ .**

$t^\circ$	Coefficient of absorption
$0^\circ$	0.0561
10	0.0438
20	0.0379
30	0.0348
40	0.0338
50	0.0343

(Antropoff, Roy. Soc. Proc. 1910, 83. A. 480.)

**Absorption of argon by  $H_2O$  at  $t^\circ$  and 760 mm. pressure.**

$t^\circ$	Coefficient of absorption
$0^\circ$	0.05780
1	0.05612
5	0.05080
10	0.04525
15	0.04099
20	0.03790
25	0.03470
30	0.03256
35	0.03053
40	0.02865
45	0.02731
50	0.02567

(Estreicher, Z. phys. Ch. 1899, 31. 184.)

1 l.  $H_2O$  at  $38^\circ$  absorbs 25.7 cc. A.

1 l. blood absorbs 25.3 cc. A. (Regnard and Schloesing, C. R. 1897, 124. 303.)

Not absorbed by members of the fatty series of organic compounds; with members of the aromatic series absorption was observed varying from 8% of the volume employed for benzene to 1% for aniline. (Berthelot, C. R. 1899, 129. 71.)

**Arsenamide,  $As(NH_2)_3$ .**

Insol. in liquid  $NH_3$ . Decomp. by  $H_2O$ . (Hugot, C. R. 1904, 139. 55.)

**Arsenic, As.**

Unaltered by pure  $H_2O$ . Insol. in  $HCl$  + Aq if air is excluded, but al. sol. in presence of air. Not attacked by dil.  $H_2SO_4$  + Aq. Oxidized by conc.  $H_2SO_4$ ,  $HNO_3$ , or aqua regia. Not attacked at  $20^\circ$  by  $HNO_3$ , conc. or dil., or containing  $NO_2$ ; nor by  $HNO_3$  +  $HCl$ , as long as they do not act on each other; but if treated with the above mixture in extremely dilute state, and a few drops of  $KNO_3$  + Aq

are added, the As is attacked at once. (Millon, A. ch. (3) 6. 101.)

Sol. in sea water; 0.009 mg. per liter off Brittany; 0.01 to 0.09 mg. per liter near Azores. (Gautier, C. R. 1903, 137. 232.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in liquid  $NH_3$ . (Hugot, A. ch. 1900, (7) 21. 31.)

Insol. in  $NaOH$ ,  $KOH$ , or  $NH_4OH$  + Aq. Sol. in  $S_2Br_2$ . (Hannay, Chem. Soc. (2) 11. 823.)

Insol. in alcohol and ether.

Sol. in certain fatty oils.

Insol. in methylene iodide. (Retgers, Z. anorg. 3. 343.)

$\frac{1}{2}$  ccm. oleic acid dissolves 0.0032 g. As in 6 days. (Gates, J. phys. Ch. 1911, 15. 143.)

**Yellow modification.** Very unstable. (McLeod, C. N. 1894, 70. 139.)

Fairly stable in liquid air. (Thomson, Chem. Soc. 1906, 90. (2) 745.)

100 ccm.  $CS_2$  dissolve at:

$46^\circ$   $20^\circ$   $12^\circ$   $0^\circ$   $-15^\circ$   $-60^\circ$   
11 8 6 4 2.0-2.5 1.0 g. As.

Less sol. in benzene and ethyl acetate. (Erdmann, Z. anorg. 1902, 32. 448.)

**Arsenic acid.** See page 59.

**Arsenic bromide,  $AsBr_3$ .**

Decomp. by  $H_2O$ . Completely sol. in about 3 pts. boiling  $H_2O$ , and much less, in presence of  $HBr$ . (Wallace, Phil. Mag. (4) 17. 261.)

Sol. in  $CS_2$ .

Sol. in  $AlBr_3$ . (Isbekow, Z. anorg. 1913, 84. 26.)

Easily sol. in  $PCl_3$  and  $PBr_3$ . (Walden, Z. anorg. 1900, 25. 211.)

Sol. in  $S_2Cl_2$ . (Walden, Z. anorg. 1900, 25. 217.)

**Arsenic caesium bromide,  $2AsBr_3, 3CsBr$ .**

Decomp. by  $H_2O$ ; can be recryst. from conc.  $HBr$  + Aq. (Wheeler, Z. anorg. 4. 451.)

**Arsenic rubidium bromide,  $2AsBr_3, 3RbCl$ .**

As the corresponding Cs comp.

**Arsenic bromide ammonia,  $AsBr_3, 3NH_3$ .**

Decomp. by  $H_2O$ . (Besson, C. R. 110. 1258.)

**Arsenic bromide copper,  $2AsBr_3, 7Cu$ .**

Stable toward hot  $H_2O$ . Decomp. by  $KOH$ . (Hilpert and Herrman, B. 1913, 46. 2224.)

**Arsenic bromide silver,  $AsBr_3, 3Ag$ .**

Scarcely decomp. by cold  $H_2O$ . (Hilpert and Herrmann.)

**Arsenic chloride,  $AsCl_3$ .**

Miscible with little  $H_2O$ , and with alcohol, ether, and volatile oils. Decomp. by much  $H_2O$ , or by boiling. (Gmelin.)

Miscible with oil of turpentine, and with olive oil. Somewhat sol. in  $\text{HCl} + \text{Aq.}$

Easily sol. in  $\text{PCl}_3$  and  $\text{PBr}_3$ . (Walden, Z. anorg. 1900, **25**, 211.)

Sol. in liquid  $\text{CN.}$  (Centnerszwer, J. russ. phys. Ges. 1901, **33**, 545.)

Sol. in  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, **25**, 217.)

#### Arsenic pentachloride, $\text{AsCl}_5$ .

Fumes in the air with evolution of hydrogen chloride. Readily sol. in  $\text{CS}_2$ , and absolute ether cooled to  $-30^\circ$ . (Baskerville, J. Am. Chem. Soc. 1902, **24**, 1070.)

#### Arsenic caesium chloride, $2\text{AsCl}_3, 3\text{CsCl}$ .

Decomp. by  $\text{H}_2\text{O}$ . 100 pts.  $\text{HCl} + \text{Aq.}$  (1.2 sp. gr.) dissolve 0.429 pt. salt. (Wheeler, Z. anorg. **4**, 451.)

#### Arsenic iridium phosphorus chloride.

See Iridium phosphorus chloride arsenic chloride.

#### Arsenic rubidium chloride, $2\text{AsCl}_3, 3\text{RbCl}$ .

Decomp. by  $\text{H}_2\text{O}$ . 100 pts.  $\text{HCl} + \text{Aq.}$  (sp. gr. 1.2) dissolve 2.935 pts. salt. (Wheeler, Z. anorg. **4**, 451.)

#### Arsenic sulphur chloride, $2\text{AsCl}_3, 3\text{SCl}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Rose.)

Above compound is a mixture. (Nilson, C. N. **81**, 81.)

#### Arsenic chloride ammonia, $2\text{AsCl}_3, 7\text{NH}_3$ .

Decomp. by cold  $\text{H}_2\text{O}$ , with evolution of  $\text{NH}_3$ . From the solution crystallizes  $\text{As}_2\text{Cl}_6, \text{N}_2\text{H}_{10}\text{O}_8$ .

Sol. in alcohol without decomp. (Rose, Pogg. **52**, 62.)

Composition is  $\text{AsCl}_3, 4\text{NH}_3$ . (Besson, C. R. **110**, 1258.)

#### Arsenic chloride copper, $2\text{AsCl}_3, 7\text{Cu}$ .

Somewhat decomp. by  $\text{H}_2\text{O}$ . Decomp. by  $\text{KOH}$ , or hot  $\text{HCl}$ . (Hilpert and Herrman, B. 1913, **46**, 2224.)

#### Arsenic chloride silver, $2\text{AsCl}_3, 7\text{Ag}$ .

$\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$  and  $\text{KOH}$  split off  $\text{Ag}$ . (Hilpert and Herrmann.)

#### Arsenic trifluoride, $\text{AsF}_3$ .

Sol. in  $\text{H}_2\text{O}$  with evolution of heat and decomposition. (Berzelius.)

Easily sol. in benzene. (Moissan, C. R. **99**, 874.)

Miscible with alcohol and ether. (M'Ivor, C. N. **30**, 169.)

#### Arsenic pentafluoride, $\text{AsF}_5$ .

Sol. in  $\text{H}_2\text{O}$ , alkalis +  $\text{Aq}$  and liquid  $\text{AsF}_3$  with evolution of heat. Absorbed by ether, alcohol and benzene with evolution of heat. (Ruff, B. 1906, **39**, 67.)

#### Arsenic potassium fluoride, $\text{AsF}_3, \text{KF} + \frac{1}{2}\text{H}_2\text{O}$ .

$\text{AsF}_3, 2\text{KF} + \text{H}_2\text{O}$ .

$\text{AsF}_3, \text{AsOF}_3, 4\text{KF} + 3\text{H}_2\text{O}$ . (Marignac, A. **145**, 237.)

#### Arsenic fluoride ammonia, $2\text{AsF}_3, 5\text{NH}_3$ .

Easily decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. **110**, 1258.)

#### Arsenic pentafluoride nitrosyl fluoride, $\text{AsF}_5, \text{NOF}$ .

Decomp. by  $\text{H}_2\text{O}$ , fuming  $\text{HCl}$ ,  $\text{NaOH} + \text{Aq}$ , dry ether and dry alcohol with evolution of  $\text{NO}$ . Sol. in conc.  $\text{HNO}_3$ , hot conc.  $\text{H}_2\text{SO}_4$ , boiling  $\text{NOCl}$  and  $\text{AsF}_3$ . Insol. in  $\text{CCl}_4$  and  $\text{CS}_2$ . (Ruff, Z. anorg. 1908, **58**, 327.)

#### Arsenic trifluoride sulphur tetrachloride, $2\text{AsF}_3, \text{SCl}_4$ .

Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$  and  $\text{NaOH}$ . Decomp. by thionyl chloride,  $\text{CCl}_4$ ,  $\text{CS}_2$ , abs. alcohol and ether. Decomp. by ligroin, benzene and toluene. (Ruff, B. 1904, **37**, 4520.)

#### Arsenic hydride, $\text{AsH}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$  and alkali hydrates +  $\text{Aq}$ , with subsequent decomposition.  $\text{H}_2\text{O}$  absorbs  $\frac{1}{4}$  vol.  $\text{AsH}_3$ . Decomp. by conc. acids. Absorbed rapidly by oil of turpentine, slightly by fixed oils, and not at all by alcohol, ether, or  $\text{KOH} + \text{Aq}$ . (Gmelin.)

Insol. in  $\text{KOH} + \text{Alcohol}$ . (Meissner.)

Not more sol. in alkaline solutions than in pure  $\text{H}_2\text{O}$ . (Berzelius.)

$\text{AsH}_3$ . Solid. Insol. in  $\text{H}_2\text{O}$ , alcohol, ether, and  $\text{CS}_2$ . (Wiederhold, Pogg. **118**, 615.)

Insol. in  $\text{H}_2\text{O}$ ; sol. in methylene iodide, xylene, or in conc.  $\text{KOH} + \text{Aq}$ . (Retgers, Z. anorg. **4**, 403.)

#### Arsenic hydride boron bromide, $\text{AsH}_3, \text{BBr}_3$ .

Easily decomp. Decomp. by  $\text{H}_2\text{O}$ . Appreciably sol. in  $\text{AsH}_3$  or  $\text{BBr}_3$ . Insol. in  $\text{CS}_2$ . (Stock, B. 1901, **34**, 949.)

#### Arsenic diiodide, $\text{As}_2\text{I}_4$ .

Decomp. by  $\text{H}_2\text{O}$  or alkalis; easily sol. in alcohol, ether, chloroform, or carbon disulphide. (Bamberger and Phillip, B. **14**, 2643.)

Not attacked by cold conc.  $\text{H}_2\text{SO}_4$ , or by cold fuming  $\text{HNO}_3$ . The latter oxidizes on warming. Decomp. by pyridine. Sol. in boiling acetic anhydride. (Hewitt and Winmill, Chem. Soc. 1907, **91**, 962.)

#### Arsenic triiodide, $\text{AsI}_3$ .

Sol. in 3.32 pts. boiling  $\text{H}_2\text{O}$ , and solution if boiled down deposits pure  $\text{AsI}_3$ , but if left to cool slowly, deposits crystals of  $\text{As}_2\text{O}_3$  and  $\text{AsOI}$ .

Sl. sol. in  $\text{HCl} + \text{Aq}$ .

Sol. in  $\text{POCl}_3$ ,  $\text{PCl}_3$  and  $\text{PBr}_3$ . (Walden, Z. anorg. 1900, **25**, 212.)

Sol. in  $\text{PCl}_5$ . (Beckmann, Z. anorg. 1906, 11. 110.)

Sol. in  $\text{SOCl}_2$ ,  $\text{S}_2\text{Cl}_2$  and  $\text{SO}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25. 216.)

Sol. in  $\text{SnCl}_4$ . (Walden, l.c.)

Easily sol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in  $\text{AsCl}_3$ . (Walden, Z. anorg. 1900, 25. 214.)

Sol. in alcohol without decomp.

Sol. in ether, benzene, chloroform, and  $\text{CS}_2$ .

100 pts. methylene iodide dissolve 17.4 pts.  $\text{AsI}_3$  at  $12^\circ$ . (Retgers, Z. anorg. 3. 343.)

#### Arsenic pentafluoride, $\text{AsF}_5$ .

More or less sol. in  $\text{H}_2\text{O}$ , alcohol,  $\text{CHCl}_3$ , ether and  $\text{CS}_2$ . (Sloan, C. N. 1882, 46. 194.)

#### Arsenic caesium iodide, $2\text{AsI}_3$ , $3\text{CsI}$ .

Decomp. by  $\text{H}_2\text{O}$ ; sol. in conc.  $\text{HI} + \text{Aq}$ . (Wheeler, Z. anorg. 4. 451.)

#### Arsenic rubidium iodide, $2\text{AsI}_3$ , $3\text{RbI}$ .

As the corresponding  $\text{Cs}$  comp.

#### Arsenic sulphur iodide.

See Arsenic sulphoiodide.

#### Arsenic triiodide ammonia, $2\text{AsI}_3$ , $9\text{NH}_3$ .

Insol. in benzene. (Bamberger and Phillip, B. 14. 2643.)

$\text{AsI}_3$ ,  $4\text{NH}_3$ . (Besson, C. R. 110. 1258.)

#### Arsenic nitride, $\text{AsN}$ .

Easily decomp. into  $\text{As}$  and  $\text{N}$ . (Hugot, C. R. 1904, 139. 56.)

Decomp. by heat. (Franz Fischer, B. 1910, 43. 1471.)

#### Arsenic suboxide, $\text{As}_2\text{O}$ (?).

Insol. in  $\text{H}_2\text{O}$ ; decomp. by dil. acids or  $\text{NH}_4\text{OH} + \text{Aq}$ .

Does not exist. (Geuther, A. 240. 208.)

#### Arsenic trioxide, $\text{As}_2\text{O}_3$ .

"White arsenic" exists in two modifications:  $\alpha\text{As}_2\text{O}_3$ ,—crystalline, octahedral, opaque, porcelainous, etc.;  $\beta\text{As}_2\text{O}_3$ ,—amorphous, vitreous, "arsenic glass."

The data concerning the solubility of  $\text{As}_2\text{O}_3$  are very contradictory, the reasons being that (1) the solubility of the two modifications is different; (2) that the length of time necessary to effect solution differs in the two modifications; and (3) that there is a tendency of the amorphous  $\text{As}_2\text{O}_3$  to go over into the crystalline state during the process of solution.  $\alpha\text{As}_2\text{O}_3$  is also not easily moistened, especially when in a pulverulent condition, which is not the case with the  $\beta$  modification. (Winkler, J. pr. (2) 31. 247.)

The older data are very unreliable, but possess a certain historical interest.

1 pt.  $\text{As}_2\text{O}_3$  is sol. in 10.55 pts. (Wenzel); 11.34 pts. (Fischer); 11.86 pts. in  $\frac{1}{2}$  hour (Klaproth); 12.2 pts. (Bucholz); 15.0 pts. (Brandt; Bergman); 16.0 pts. (Vogel); 24 pts. (Lametherid); 40 pts. (Pörner); 64 pts.

(Baumé); 80 pts. (Navier); 200 pts. (Aschof and Nasse, 1812); 640 pts. (Hagen, 1798) boiling  $\text{H}_2\text{O}$ .

1 pt.  $\text{As}_2\text{O}_3$  is sol. in 7.72 pts.  $\text{H}_2\text{O}$  if  $\alpha$ , or 9.33 pts. if  $\beta$  (Guibort); in 24 pts.  $\text{H}_2\text{O}$  if  $\alpha$ , or 21 pts. if  $\beta$  (Taylor).

Sol. in 63.3 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$ . (Abl.)

Sol. in 30 pts.  $\text{H}_2\text{O}$ . (Nussebrook.)

After the solution in  $\text{H}_2\text{O}$  at  $100^\circ$  has been left standing at ordinary temperatures—

1 pt.  $\text{As}_2\text{O}_3$  remains dissolved in 16 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , and 20 pts.  $\text{H}_2\text{O}$  at  $7^\circ$  (Bucholz); in 33 pts.  $\text{H}_2\text{O}$  at  $7^\circ$  (Klaproth); in 38.45 pts.  $\text{H}_2\text{O}$  after 3 days, 55 pts.  $\text{H}_2\text{O}$  after 8 days, 64.50 pts.  $\text{H}_2\text{O}$  after 2.3 weeks at  $10^\circ$  (Fischer); in 33.52 pts. if  $\alpha\text{As}_2\text{O}_3$  was used, 55.06 pts. if  $\beta\text{As}_2\text{O}_3$  was used (Guibort); in 38 pts. if  $\alpha\text{As}_2\text{O}_3$  after 6 months, 53.71 pts. if  $\beta\text{As}_2\text{O}_3$  after 48 hours (Taylor).

When an excess of pulverized  $\text{As}_2\text{O}_3$  is left to digest for several days with cold  $\text{H}_2\text{O}$ —

1 pt. dissolves in 50 pts. (Bucholz); in 66 pts. (Fischer); in 80 pts. at  $15^\circ$  (Bergman); in 80 pts. if  $\alpha$ , and 103 pts. if  $\beta$  (Guibort); 96 pts. at  $10^\circ$  (Spelman); 96 pts. at  $35.5^\circ$  (Hahnemann); 320 pts.  $\text{H}_2\text{O}$  at  $20^\circ$  (Aschof and Nasse, 1812).

$\text{H}_2\text{O}$  at  $15.6^\circ$  or below dissolves less than  $\frac{1}{4}\%$   $\text{As}_2\text{O}_3$ . (Dalton.)

To dissolve 1 pt.  $\text{As}_2\text{O}_3$  in 12 pts.  $\text{H}_2\text{O}$ , it is necessary to boil an excess of  $\text{As}_2\text{O}_3$  with  $\text{H}_2\text{O}$ ; if 1 pt.  $\text{As}_2\text{O}_3$  is boiled with 12 pts.  $\text{H}_2\text{O}$ , considerable remains undissolved; and even with 1 pt.  $\text{As}_2\text{O}_3$  to 50–60 pts.  $\text{H}_2\text{O}$  long continued boiling is necessary to effect solution. If a clear solution saturated by long boiling with an excess of  $\text{As}_2\text{O}_3$  is poured off and evaporated continuously to  $\frac{1}{2}$  its original bulk, no  $\text{As}_2\text{O}_3$  separates out, and the solution contains 1 pt.  $\text{As}_2\text{O}_3$  to 6 pts.  $\text{H}_2\text{O}$ . (Fischer.)

100 pts. aqueous solution of  $\beta\text{As}_2\text{O}_3$  sat. at  $15^\circ$  contain 0.96 pt.  $\text{As}_2\text{O}_3$ , and 9.68 pts. when sat. at  $100^\circ$ . (Guibort.)

If 1 pt. pulverized  $\text{As}_2\text{O}_3$  be digested 10 days at  $19$ – $25^\circ$  in 3–10 pts.  $\text{H}_2\text{O}$ , the solution contains 1 pt.  $\text{As}_2\text{O}_3$  to 50 pts.  $\text{H}_2\text{O}$ . A solution of same strength is obtained in 25 days by digesting 1 pt.  $\text{As}_2\text{O}_3$  in 40 pts.  $\text{H}_2\text{O}$ . If 1 pt.  $\text{As}_2\text{O}_3$  be immersed in 80 pts.  $\text{H}_2\text{O}$ , the resulting solution contains 1 pt.  $\text{As}_2\text{O}_3$  to 90 pts.  $\text{H}_2\text{O}$ ; if in 160 pts.  $\text{H}_2\text{O}$ , 1 pt.  $\text{As}_2\text{O}_3$  to 180 pts.  $\text{H}_2\text{O}$ ; if in 240 pts.  $\text{H}_2\text{O}$ , 1 pt.  $\text{As}_2\text{O}_3$  to 280 pts.  $\text{H}_2\text{O}$ ; if in 1000 pts.  $\text{H}_2\text{O}$ , 1 pt.  $\text{As}_2\text{O}_3$  to 1200 pts.  $\text{H}_2\text{O}$ ; and even when 1 pt.  $\text{As}_2\text{O}_3$  is digested at ordinary temperatures for several days with 16,000–100,000 pts.  $\text{H}_2\text{O}$ , a portion remains undissolved. Pulverized  $\alpha\text{As}_2\text{O}_3$  was set aside with  $\text{H}_2\text{O}$  in closed bottles for 18 years; when 1 pt.  $\text{As}_2\text{O}_3$  was present in 1000 pts.  $\text{H}_2\text{O}$ , a perfect solution was obtained; when 1 pt.  $\text{As}_2\text{O}_3$  in 100 pts.  $\text{H}_2\text{O}$ , 0.017%  $\text{As}_2\text{O}_3$  was undissolved; when 1 pt.  $\text{As}_2\text{O}_3$  in 35 pts.  $\text{H}_2\text{O}$ , 0.35%  $\text{As}_2\text{O}_3$  was undissolved, so that the solution contained 1 pt.  $\text{As}_2\text{O}_3$  to 54 pts.  $\text{H}_2\text{O}$ . (Gmelin.)

Porcelainous modification ( $\alpha\text{As}_2\text{O}_3$ ) is much more sol. in  $\text{H}_2\text{O}$  than the vitreous ( $\beta\text{As}_2\text{O}_3$ ). 100 pts.  $\text{H}_2\text{O}$  at ordinary temperature dissolve 0.96 pt.  $\beta\text{As}_2\text{O}_3$  and 1.25 pts.  $\alpha\text{As}_2\text{O}_3$ ; 100 pts. boiling  $\text{H}_2\text{O}$  dissolve 9.68 pts.  $\beta\text{As}_2\text{O}_3$  and 11.47 pts.  $\alpha\text{As}_2\text{O}_3$ ; and when the temperature of this solution has fallen to  $15^\circ$ , the solution from  $\beta\text{As}_2\text{O}_3$  retains 1.78 pts., and that from  $\alpha\text{As}_2\text{O}_3$  retains 2.9 pts. (Berzelius [citing Guibort].)

$\beta\text{As}_2\text{O}_3$  dissolves more quickly and abundantly than  $\alpha\text{As}_2\text{O}_3$ . The same amount  $\text{H}_2\text{O}$  which will take up 36–38 pts.  $\beta\text{As}_2\text{O}_3$  at  $12$ – $13^\circ$  will dissolve only 12–14 pts.  $\alpha\text{As}_2\text{O}_3$ , or 100 pts.  $\text{H}_2\text{O}$  dissolve 4 pts.  $\beta\text{As}_2\text{O}_3$  and 1.2–1.3 pts.  $\alpha\text{As}_2\text{O}_3$ . By long boiling with  $\text{H}_2\text{O}$ ,  $\alpha\text{As}_2\text{O}_3$  is converted into  $\beta\text{As}_2\text{O}_3$ , and thus acquires the solubility of the latter, so that 100 pts. boiling  $\text{H}_2\text{O}$  can take up 11 pts.  $\text{As}_2\text{O}_3$ . But at low temperature  $\beta\text{As}_2\text{O}_3$  is converted into  $\alpha\text{As}_2\text{O}_3$ , when in contact with  $\text{H}_2\text{O}$ , so that the solution becomes weaker after a while, and retains only the proportion of  $\text{As}_2\text{O}_3$  corresponding to the solubility of  $\alpha\text{As}_2\text{O}_3$ . Comminution, which hastens the rate of solubility of  $\alpha\text{As}_2\text{O}_3$  without increasing the amount dissolved, diminishes the solubility of  $\beta\text{As}_2\text{O}_3$ , as this is converted into  $\alpha\text{As}_2\text{O}_3$ .

by the friction or contact with  $\text{H}_2\text{O}$ .  $\text{As}_2\text{O}_3$ , which has been rendered opaque by  $\text{NH}_4\text{OH}$ , and that which has been crystallized from an aqueous solution, are equally sol. in  $\text{H}_2\text{O}$ . (Bussy, C. R. 24. 774; A. 64. 286.)

100 pts.  $\text{H}_2\text{O}$  dissolve 1.707 pts.  $\beta\text{As}_2\text{O}_3$  in  $2\frac{1}{2}$  years; 100 pts. boiling  $\text{H}_2\text{O}$  dissolve 11.46 pts.  $\beta\text{As}_2\text{O}_3$  in 3 hours, and 11.86 pts. in 12 hours; 10.14 pts.  $\alpha\text{As}_2\text{O}_3$  in 3 hours, and 10.18 pts. in 12 hours. (Rose, Ann. Phys. (1) 36. 494.)

A cold sat. solution which stood over excess of  $\text{As}_2\text{O}_3$  for 10 months at  $10-20^\circ$  contains 1.2%  $\text{As}_2\text{O}_3$ ; hot sat. solution a few days after saturation contains 2.25-2.50%  $\text{As}_2\text{O}_3$ . If trace of  $\text{HCl}$  is present, the solution contains 3.8%  $\text{As}_2\text{O}_3$ . Hot sat. solution of porcelain mod. of  $\text{As}_2\text{O}_3$  contains 4 days after saturation 2.4%  $\text{As}_2\text{O}_3$  at  $24^\circ$ ; after 82 days at  $14^\circ$ , 1.5%; after 4 months at  $12^\circ$ , 1.3%  $\text{As}_2\text{O}_3$ . (Bacaloglo, J. pr. 83. 111.)

According to later experiments, 1 pt.  $\alpha\text{As}_2\text{O}_3$  dissolves in 355 pts.  $\text{H}_2\text{O}$  in 1 day at  $15^\circ$ , while 1 pt.  $\beta\text{As}_2\text{O}_3$  dissolves in 108 pts.  $\text{H}_2\text{O}$  under the same conditions. 1 pt.  $\alpha\text{As}_2\text{O}_3$  dissolves in 46 pts.  $\text{H}_2\text{O}$ , if solution is prepared at  $100^\circ$ , and allowed to stand 24 hours at  $15^\circ$ , while 1 pt.  $\beta\text{As}_2\text{O}_3$  dissolves in 30 pts.  $\text{H}_2\text{O}$  under the same conditions. (Büchner, N. Rep. Pharm. 22. 265.)

100 pts.  $\text{H}_2\text{O}$  dissolve pts.  $\alpha\text{As}_2\text{O}_3$  and  $\beta\text{As}_2\text{O}_3$  at ordinary temperature:

Time	$\alpha\text{As}_2\text{O}_3$	$\beta\text{As}_2\text{O}_3$
1 hour	0.023	1.589
3 hours	0.088	2.356
6 hours	0.353	3.666
12 hours	0.364	3.361
24 hours	0.956	3.306
2 days	1.627	2.629
4 days	1.814	2.429
1 week	1.673	1.763
3 weeks	1.776	1.713
$2\frac{1}{2}$ years	1.712	1.707

In the solution of  $\beta\text{As}_2\text{O}_3$ , octahedral crystals were deposited on the sides of the vessel after 12 hours, which continued to increase. There was no such deposit in the case of  $\alpha\text{As}_2\text{O}_3$ .

From the maxima in the above table, 100 pts.  $\text{H}_2\text{O}$  can dissolve 3.7 pts.  $\beta\text{As}_2\text{O}_3$  and 1.7 pts.  $\alpha\text{As}_2\text{O}_3$  at ordinary temperature.

100 pts. boiling  $\text{H}_2\text{O}$  dissolve 11.46 pts.  $\beta\text{As}_2\text{O}_3$  and 10.140 pts.  $\alpha\text{As}_2\text{O}_3$  in 3 hours; 11.86 pts.  $\beta\text{As}_2\text{O}_3$  and 10.176 pts.  $\alpha\text{As}_2\text{O}_3$  in 12 hours. (Cl. Winkler, J. pr. (2) 31. 247.)

100 pts.  $\text{H}_2\text{O}$  dissolve 1.75 pts. of a third modification (hexagonal crystalline) at ordinary temperature, and 2.75 pts. at  $100^\circ$ . (Claudet, Chem. Soc. (2) 6. 179.)

$\beta\text{As}_2\text{O}_3$  dissolves more rapidly in  $\text{HCl} + \text{Aq}$  than  $\alpha\text{As}_2\text{O}_3$ . (Schultz-Sellac, B. 4. 109.)

While 100 ccm.  $\text{H}_2\text{O}$  dissolve 0.8507 g.  $\beta\text{As}_2\text{O}_3$  at  $18.5^\circ$ , 100 ccm.  $\text{H}_2\text{O}$  containing 1.3195 g.  $\text{HCl}$  dissolve 1.1513 g.  $\beta\text{As}_2\text{O}_3$ ; containing 6.09 g.  $\text{HCl}$ , 1.2724 g.  $\beta\text{As}_2\text{O}_3$ . (Chodounsky, Listy Chemické, 13. 114.)

100 ccm.  $\text{H}_2\text{O}$  dissolve 1.495 g.  $\text{As}_2\text{O}_3$  at  $15^\circ$ . (Wood, Chem. Soc. 1908, 93. 412.)

Solubility of crystalline  $\text{As}_2\text{O}_3$  in  $\text{H}_2\text{O}$ .

1 l. of the sat. solution contains at:

$2^\circ$      $15^\circ$      $25^\circ$      $39.8^\circ$     bpt.  
12.006 16.566 20.384 29.302 60 + g.  $\text{As}_2\text{O}_3$   
(Bruner, Z. anorg. 1903, 37. 456.)

Much more easily sol. in many acids than in  $\text{H}_2\text{O}$ . Easily sol. in fuming  $\text{H}_2\text{SO}_4$ . (Schultz-Sellac.)

100 pts. dilute  $\text{H}_2\text{SO}_4 + \text{Aq}$  of various strengths dissolve at  $t^\circ$ .

$t^\circ$	Pts. $\beta\text{As}_2\text{O}_3$	$t^\circ$	Pts. $\beta\text{As}_2\text{O}_3$	Ratio of amts. dissolved at $80^\circ : 18.5^\circ$
$80^\circ$	1.0195	$18.5^\circ$	0.5422	1.88 : 1
..	1.3664	....	0.7203	1.89 : 1
..	1.1933	....	0.6522	1.84 : 1

(Chodounsky, l.c.)

Decomp. by  $\text{HNO}_3$  or aqua regia into  $\text{As}_2\text{O}_5$ .

Sol. in  $\text{H}_3\text{PO}_4 + \text{Aq}$ . (Bergman.)

More sol. in  $\text{HCl} + \text{Aq}$  than in  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3 + \text{Aq}$ , and still less in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ .

Solubility in  $\text{HCl} + \text{Aq}$ .

Conc. of $\text{HCl} + \text{Aq}$	Grams of $\text{As}_2\text{O}_3$ per 100 cc. of solution
0.46N	1.52
0.98N	1.41
2.03N	1.17
3.13N	1.11
3.81N	1.13
5.32N	2.20
6.50N	5.11
7.85N	12.28
9.17N	18.16

As the concentration of the acid increases, the solubility of the oxide decreases, a minimum being reached when the concentration of the solvent is about 3.2N. Beyond this point, an increase in the concentration of the solvent leads to a corresponding increase in the solubility. (Wood, Chem. Soc. 1908, 93. 413.)

Insol. in liquid  $\text{CO}_2$ . (Büchner, Z. phys. Ch. 1906, 54. 674.)

Easily sol. in cold  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ . (Bergman.)

When pulverized, it dissolves in hot  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ , but separates out on cooling.

Easily sol. in hot benzoic acid +  $\text{Aq}$ .

Sol. in tartaric acid +  $\text{Aq}$ .

Easily sol. in alkali hydrates, or carbonates +  $\text{Aq}$ .

Easily sol. in  $\text{NH}_4$  arsenite + Aq at  $70-80^\circ$ , crystallizing out on cooling. (Berzelius.)

Sol. in hot  $\text{K}_2\text{C}_2\text{O}_4$  + Aq.

Sol. in  $\text{AsCl}_3$ . (Penney and Wallace.)

More sol. in  $\text{Na}_2\text{B}_4\text{O}_7$  + Aq than in  $\text{H}_2\text{O}$ .

Very sl. sol. in absolute alcohol. (Vogel.)

Sol. in 80 pts. highly rectified spirit. (Wenzel.)

When 1 pt. powdered  $\text{As}_2\text{O}_3$  is digested 30 days in 10-40 pts. alcohol, a solution is formed containing 1 pt.  $\text{As}_2\text{O}_3$  to 60 pts. alcohol; when 1 pt.  $\text{As}_2\text{O}_3$  is digested with 60-150 pts. alcohol, a solution is formed containing 1 pt.  $\text{As}_2\text{O}_3$  to 124-140 pts. alcohol. (Fischer.)

Sol. in 70-80 pts. alcohol. (Thompson.)

Alcohol dissolves 0.446 pt.  $\beta\text{As}_2\text{O}_3$ . (Rose, A. Phys. (1) 52. 455.)

100 pts. alcohol dissolve pts.  $\text{As}_2\text{O}_3$ :

Vol. % of alcohol	$\alpha\text{As}_2\text{O}_3$ at $15^\circ$	$\alpha\text{As}_2\text{O}_3$ at b.-pt. of alcohol	$\beta\text{As}_2\text{O}_3$ at $15^\circ$
56	1.680	4.895	0.504
79	1.430	4.551	0.540
84	.....	.....	0.565
86	0.715	3.197	.....
88	.....	.....	0.717
100	0.025	3.402	1.060

(Girardin, J. Pharm. (3) 46. 269.)

100 pts. absolute alcohol dissolve 0.446 pt.  $\beta\text{As}_2\text{O}_3$  in  $2\frac{1}{4}$  years. (Winkler, J. pr. (2) 31. 347.)

Nearly insol. in ether.

100 pts. ether dissolve 0.454 pt.  $\beta\text{As}_2\text{O}_3$ . (Winkler.)

Ether extracts 1 mg.  $\text{As}_2\text{O}_3$  from sat.  $\text{As}_2\text{O}_3$  + Aq for every 15 cc. ether used; less is extracted when the solution is acidified with  $\text{HCl}$ , and almost none if acidified with  $\text{H}_2\text{SO}_4$  or  $\text{H}_2\text{C}_2\text{O}_4$ . (Selmi, B. 13. 206.)

$\alpha\text{As}_2\text{O}_3$  is sol. in 50 pts. boiling nitrobenzol.  $\beta\text{As}_2\text{O}_3$  is insol. in boiling nitrobenzol. (Auerbach, Z. anorg. 1903, 37. 353.)

$\beta\text{As}_2\text{O}_3$  dissolves in oil of turpentine, but  $\alpha\text{As}_2\text{O}_3$  is insol. therein.  $\alpha\text{As}_2\text{O}_3$  is very sl. sol. in benzene or petroleum ether, but more sol. in methyl alcohol, ethyl alcohol, ether, or chloroform. (Selmi.)

100 pts.  $\text{CS}_2$  dissolve 0.001 pt.  $\beta\text{As}_2\text{O}_3$  in  $2\frac{1}{4}$  years. (Winkler.)

Sl. sol. in the fatty oils.

1000 pts. castor-oil dissolve 1.33 pts.  $\text{As}_2\text{O}_3$  at ordinary temperature, and 9 pts. at boiling temperature. 1000 pts. other oils dissolve 0.6-0.8 pt.  $\text{As}_2\text{O}_3$  in the cold, and about 1.7 pts. on boiling. (Berzelius.)

Insol. in chinoline or aniline. (Hoffmann, A. ch. (3) 9. 143, 169.)

Moderately sol. in<sup>a</sup> chinolin. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329); (Eidmann, C. C. 1899, II. 1014.)

Sol. in amyl alcohol and is divided between it and  $\text{H}_2\text{O}$  in the constant ratio of 1 : 5.47 at  $25^\circ$ . (Auerbach, Z. anorg. 1903, 37. 376.)

Min. *Arsenolite*.

**Arsenic trioxide pentoxide**,  $3\text{As}_2\text{O}_3$ ,  $2\text{As}_2\text{O}_5$  +  $3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Joly, C. R. 100. 1221.)  $2\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_5$  +  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Joly.)

$\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_5$  +  $\text{H}_2\text{O}$ . (Joly.)

**Arsenic tetroxide**,  $\text{As}_2\text{O}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$  from which it is partially pptd. by alcohol. More easily sol. in alkali carbonates or  $\text{HCl}$  + Aq. Most easily sol. in  $\text{NaOH}$  or  $\text{KOH}$  + Aq. (Herbst, Dissert. 1894.)

**Arsenic pentoxide**,  $\text{As}_2\text{O}_5$ .

Deliquescent in moist air; slowly sol. in  $\text{H}_2\text{O}$ , forming  $\text{H}_3\text{AsO}_4$ , which see. Easily sol. in alcohol; much more sol. in alcohol than  $\text{As}_2\text{O}_3$ . Very sl. sol. in the fatty oils, 100 pts. of oil dissolving 0.2 pt.  $\text{As}_2\text{O}_5$  in the cold, and 1 pt. with partial decomp. on boiling. (Berzelius.)

1000 pts. boiling poppy-oil dissolve 27 pts.  $\text{As}_2\text{O}_5$ ; 1000 pts. boiling castor-oil dissolve 34 pts.  $\text{As}_2\text{O}_5$ . (Heimpel and Grundner.)

+  $4\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts. $\text{H}_3\text{AsO}_4$ in 100 pts. solution	$t^\circ$	Pts. $\text{H}_3\text{AsO}_4$ in 100 pts. solution
-55°	69.9	-5°	80.0
-50	70.9	0	81.0
-45	71.9	+5	82.1
-40	72.9	10	83.3

50	91.2
60	91.9
70	92.6
80	93.2
90	93.8
100	94.4
110	95.0
120	95.6
130	96.2
140	96.8

(Menzies and Potter, J. Am. Chem. Soc. 1912, 34. 1464.)

$\text{As}_2\text{O}_3 + 4\text{H}_2\text{O}$  and  $3\text{As}_2\text{O}_3 + 5\text{H}_2\text{O}$  are the only hydrates that can be isolated. (Menzies and Potter.)

See also **Arsenic Acid**.

**Arsenic trioxide, with alkali haloid.**

See **Arsenite, alkali haloid**.

**Arsenic sulphur trioxide,  $\text{As}_2\text{O}_3, \text{SO}_3$ .**

Deliquescent; decomp. by  $\text{H}_2\text{O}$ . (Adie, Chem. Soc. 55. 157.)

$\text{As}_2\text{O}_3, 2\text{SO}_3$ . As above. (Adie.)

$\text{As}_2\text{O}_3, 3\text{SO}_3$ . (Weber, B. 19. 3186.)

$\text{As}_2\text{O}_3, 4\text{SO}_3$ . As above. (Adie.)

$\text{As}_2\text{O}_3, 6\text{SO}_3$ . (Weber.)

$\text{As}_2\text{O}_3, 8\text{SO}_3$ . As above. (Adie.)

**Arsenic oxychloride, etc.**

See **Arsenyl chloride, etc.**

**Arsenic phosphide,  $\text{AsP}$ .**

Decomp. by  $\text{H}_2\text{O}$ . Not attacked by cold  $\text{H}_2\text{SO}_4$  or  $\text{HCl}$ , and only sl. sol. therein on warming. Easily decomp. by  $\text{HNO}_3$ ,  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{BaO}_2\text{H}_2 + \text{Aq}$ . Insol. in alcohol, ether, chloroform; sl. sol. in  $\text{CS}_2$ .

$\text{P}_2\text{As}_2\text{O}_3$ . Product of action of  $\text{H}_2\text{O}$  on above compound, which it resembles. (Janowsky, B. 6. 216.)

**Arsenic monoselenide,  $\text{As}_2\text{Se}$ .**

Insol. in most organic and inorganic solvents. Sol. very slowly in conc.  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$ . Sol. in boiling alkali hydroxides +  $\text{Aq}$ . (Szarvasy, B. 1897, 30. 1245.)

**Arsenic triselenide,  $\text{As}_2\text{S}_3$ .**

Partially sol. in  $\text{KOH} + \text{Aq}$  if boiled with it for a long time. (Uelsmann, A. 116. 123.)

**Arsenic pentaselenide,  $\text{As}_2\text{Se}_5$ .**

Insol. in most solvents, as conc.  $\text{HCl}$ . Sol. in alkali hydrates and sulpho-hydrates +  $\text{Aq}$ . (Szarvasy, B. 1895, 28. 2655-2656.)

Insol. in  $\text{H}_2\text{O}$ , in dil. acids and in conc.  $\text{HCl}$ . Sl. sol. in warm  $\text{HNO}_3 + \text{Aq}$ . Oxidized by cold fuming  $\text{HNO}_3$ . Sol. in alkalies and in hot alkali carbonates +  $\text{Aq}$ . Insol. in alcohol, ether,  $\text{CS}_2$ , etc. (Clever, Z. anorg. 1895, 10. 129.)

**Arsenic selenosulphide.**

See **Arsenic sulphoselenide**.

**Arsenic sulphide,  $\text{As}_2\text{S}_3$ .**

Ppt. Insol. in  $\text{NH}_4\text{OH}$  or in colorless  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . Sol. in yellow  $\text{NH}_4\text{SH} + \text{Aq}$ . (Scott, Chem. Soc. 1900, 77. 652.)

**Arsenic disulphide,  $\text{As}_2\text{S}_2$ .**

Min. *Realgar*. Difficultly sol. in alkali sulphides +  $\text{Aq}$ . Partly dissolved by  $\text{KOH} + \text{Aq}$  with decomposition. Sol. at  $150^\circ$  in a sealed tube in  $\text{NaHCO}_3 + \text{Aq}$ , and crystallizes out on cooling. (Senarmont, A. ch. (3) 32. 158.)

**Arsenic trisulphide,  $\text{As}_2\text{S}_3$ .**

Insol. in  $\text{H}_2\text{O}$  when prepared in the dry way, but when prepared moist is very liable to go into the colloidal modification mentioned below. Insol. in  $\text{H}_2\text{O}$  containing  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ ,  $\text{HCl}$ ,  $\text{H}_2\text{C}_2\text{O}_4$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ ,  $\text{H}_2\text{C}_2\text{H}_3\text{O}_2$ ,  $\text{CO}_2$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{KNO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{MgSO}_4$ . (Bontigny.)

Insol. in  $\text{H}_2\text{O}$ . Traces are dissolved by  $\text{H}_2\text{S} + \text{Aq}$ . Sl. decomp. by boiling with  $\text{H}_2\text{O}$ , or long contact with cold  $\text{H}_2\text{O}$ . (Fresenius.)

1 l.  $\text{H}_2\text{O}$  dissolves  $2.1 \times 10^{-6}$  mols. pptd.  $\text{As}_2\text{S}_3$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Insol. in dil. acids. Insol. in cold, and scarcely attacked by hot conc.  $\text{HCl} + \text{Aq}$ .

Easily decomp. by  $\text{HNO}_3$  or aqua regia.

Easily sol. in cold  $\text{KOH}$ ,  $\text{NaOH}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ , also in alkali carbonates, or sulphates +  $\text{Aq}$ .

Sol. in hot  $\text{KHSO}_3 + \text{Aq}$ .

Sol. in citric acid, and alkali citrates +  $\text{Aq}$ . (Spiller.)

Slowly sol. in cold 2%  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ . Easily sol. on heating. (Materne, C. C. 1906, II. 557.)

Insol. in  $\text{CS}_2$ .

Min. *Orpiment*.

$\text{As}_2\text{S}_3$  may also be obtained in a colloidal form, sol. in  $\text{H}_2\text{O}$ . Sat. solution contains  $34.46\%$   $\text{As}_2\text{S}_3$ ; it is decomp. by standing, but may be boiled without undergoing decomposition; most acids and many salts ppt.  $\text{As}_2\text{S}_3$ . (Schulze, J. pr. (2) 25. 431.)

The following solutions cause pptn. of  $\text{As}_2\text{S}_3$  in a solution of the colloidal modification, when added in the given state of dilution:—

$\text{HCl} + \text{Aq}$	1 : 555
$\text{HNO}_3 + \text{Aq}$	1 : 276
$\text{H}_2\text{SO}_4 + \text{Aq}$	1 : 255
$\text{H}_2\text{SO}_3 + \text{Aq}$	1 : 138
$\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$	1 : 65
$\text{H}_3\text{PO}_4 + \text{Aq}$	1 : 26
$\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$	1 : 0.18

Cold conc. solutions of boric, arsenious, tartaric, benzoic, and salicylic acids, also cane sugar, or chloral hydrate cause no pptn. Absolute alcohol and glycerine may also be mixed with the solutions without causing pptn. (Schulze, J. pr. (2) 25. 442.)

+6H<sub>2</sub>O; decomp. completely into As<sub>2</sub>S<sub>3</sub> under a pressure of 6000 to 7000 atmos. (Spring, Z. anorg. 1895, 10. 186.)

#### Arsenic pentasulphide, As<sub>2</sub>S<sub>5</sub>.

Insol. in H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH, KOH, NaOH+Aq, and solutions of alkali sulphides and carbonates. Sol. in BaO<sub>2</sub>H<sub>2</sub>, and CaO<sub>2</sub>H<sub>2</sub>+Aq.

Sol. in citric acid, and alkali citrates+Aq. (Spiller.)

Alcohol dissolves out S on boiling. (Berzelius.)

Sol. in alkali arsenates+Aq. (Nilson, J. pr. (2) 14. 155.)

+H<sub>2</sub>O. (Nilson, l.c.)

#### Arsenic trisulphide, with M<sub>2</sub>S.

See Sulpharsenites, M.

#### Arsenic pentasulphide, with M<sub>2</sub>S.

See Sulpharsenates, M.

#### Arsenic sulphobromide, AsS<sub>2</sub>Br<sub>3</sub>=AsSBr+SBr<sub>2</sub>.

Decomp. by H<sub>2</sub>O. (Hannay, Chem. Soc. 33. 284.)

#### Arsenic sulphochloride, As<sub>2</sub>S<sub>2</sub>Cl.

Slowly decomp. by boiling H<sub>2</sub>O. Sol. in hot AsCl<sub>3</sub> without decomp. (Ouvrard, C. R. 116. 1516.)

AsS<sub>2</sub>Cl. Decomp. by H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH, and alkali carbonates+Aq. (Ouvrard.)

AsS<sub>2</sub>Cl. Slowly decomp. by boiling H<sub>2</sub>O. Sol. in alkali carbonates and in NH<sub>4</sub>OH+Aq. (Ouvrard, C. R. 1893, 116. 1517.)

#### Arsenic sulphiodide, AsSI.

Insol. in alcohol, chloroform or carbon disulphide. (Schneider, J. pr. (2) 23. 486.)

Formula is probably As<sub>2</sub>S<sub>3</sub>, AsI<sub>3</sub>.

Slowly attacked by HCl+Aq; somewhat more easily by HNO<sub>3</sub>+Aq. Easily sol. in KOH, or NH<sub>4</sub>OH+Aq. (Schneider, J. pr. (2) 34. 505.)

2AsI<sub>3</sub>, SI<sub>4</sub>. Decomp. on air. (Schneider, J. pr. (2) 36. 509.)

As<sub>2</sub>S<sub>3</sub>I<sub>2</sub>. Less sol. in CS<sub>2</sub> than AsI<sub>3</sub>. (Ouvrard, C. R. 117. 107.)

As<sub>2</sub>SI<sub>4</sub>. (Ouvrard.)

See also Arsenyl sulphiodide.

#### Arsenic sulphoselenide, As<sub>2</sub>SeS<sub>2</sub>.

Easily sol. in cold NH<sub>4</sub>SH+Aq. Nearly completely sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq. (v. Gerichten, B. 7. 29.)

As<sub>2</sub>SSe<sub>2</sub>. More difficultly sol. than the preceding comp. in NH<sub>4</sub>SH+Aq. (v. Gerichten.)

As<sub>2</sub>Se<sub>2</sub>S<sub>3</sub>. Sp. gr.=6.402 at ca. 750°.

Insol. in most solvents. Easily sol. in alkali hydroxides and sulphides+Aq. (Szarvasy, B. 1895, 28. 2661.)

As<sub>2</sub>Se<sub>2</sub>S<sub>3</sub>. Sp. gr.=11.35 at 550–600°.

Insol. in most solvents. Easily sol. in alkali hydroxides and sulphides+Aq. (Szarvasy, B. 1895, 28. 2659.)

#### Arsenic telluride, As<sub>2</sub>Te<sub>2</sub>.

Sol. in HNO<sub>3</sub> and HNO<sub>3</sub>+HCl+Aq. (Oppenheim, J. pr. 71. 266.)

As<sub>2</sub>Te<sub>4</sub>. As above. (Oppenheim.)

#### Arsenic acid, anhydrous, As<sub>2</sub>O<sub>3</sub>.

See Arsenic pentoxide.

#### Metaarsenic acid, HAsO<sub>3</sub>.

Slowly sol. in cold, quite easily sol. in hot H<sub>2</sub>O, with considerable evolution of heat, and conversion into H<sub>2</sub>AsO<sub>4</sub>. (Kopp, A. ch. (3) 48. 196.)

#### Orthoarsenic acid, H<sub>2</sub>AsO<sub>4</sub>.

Sol. in H<sub>2</sub>O, with absorption of heat.

1 pt. As<sub>2</sub>O<sub>3</sub> dissolves in 0.405 pt. H<sub>2</sub>O at 12.5°, or 100 pts. H<sub>2</sub>O dissolve 244.81 pts. As<sub>2</sub>O<sub>3</sub> at 12.5°. (Vogel.)

Sol. in 0.5 pt. H<sub>2</sub>O. (Thénard.)

Sol. in 6 pts. cold H<sub>2</sub>O, and more quickly in 2 pts. hot H<sub>2</sub>O. (Bucholz.)

100 pts. H<sub>2</sub>O at 15.56° dissolve 150 pts. As<sub>2</sub>O<sub>3</sub>. (Ure's Dict.)

H<sub>2</sub>AsO<sub>4</sub>+Aq sat. at 15° contains 15% As<sub>2</sub>O<sub>3</sub>.

Sp. gr. of H<sub>2</sub>AsO<sub>4</sub>+Aq at 15°: a=sp. gr. if % is As<sub>2</sub>O<sub>3</sub>; b=sp. gr. if % is H<sub>2</sub>AsO<sub>4</sub>.

(Kopp, calculated by Gerlach, Z. anal. 27. 316.)

See also Arsenic pentoxide.

#### Pyroarsenic acid, $\text{H}_4\text{As}_2\text{O}_7$ .

Very deliquescent; easily sol. in  $\text{H}_2\text{O}$  with evolution of much heat, and conversion into  $\text{H}_3\text{AsO}_4$ .

#### Arsenates.

Arsenates of the alkali metals, and acid arsenates of the alkaline-earth metals are sol. in  $\text{H}_2\text{O}$ . Neutral and basic arsenates are easily sol. in mineral acids, including  $\text{H}_3\text{AsO}_4$ ;

less sol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . The neutral alkaline-earth arsenates are less sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  than in  $\text{H}_2\text{O}$ , but more sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Field). The alkali arsenates are sol. in hot glycerine. (Lefèvre, C. R. 103. 1058.)

#### Aluminum arsenate, $\text{Al}_2(\text{AsO}_4)_3$ .

Ppt. Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in acids. (Coloriano, C. R. 103. 273.)

Insol. in acetone. (Naumann, B. 1904. 37. 4328.)

$2\text{Al}_2\text{O}_3, 3\text{As}_2\text{O}_5$ . Nearly unattacked by boiling  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Lefèvre, A. ch. (6) 27. 5.)

#### Aluminum potassium arsenate, $2\text{Al}_2\text{O}_3, 3\text{K}_2\text{O}, 3\text{As}_2\text{O}_5$ .

(Lefèvre.)

#### Aluminum sodium arsenate, $2\text{Al}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$ .

(Lefèvre.)

#### Ammonium arsenate, $(\text{NH}_4)_3\text{AsO}_4 + 3\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$ . Less sol. in  $\text{H}_2\text{O}$  than  $(\text{NH}_4)_2\text{HAsO}_4$ . (Mitscherlich.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 826.)

#### Ammonium hydrogen arsenate, $(\text{NH}_4)_2\text{HAsO}_4$ .

Effloresces, giving off  $\text{NH}_3$ ; more sol. in  $\text{H}_2\text{O}$  than  $(\text{NH}_4)_3\text{AsO}_4$ . (Salkowsky, J. pr. 104. 129.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

#### Ammonium dihydrogen arsenate, $\text{NH}_4\text{H}_2\text{AsO}_4$ .

Not efflorescent. Very sol. in  $\text{H}_2\text{O}$ .

#### Ammonium barium arsenate, $\text{NH}_4\text{BaAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .

Sol. by 10 days' contact in 1391 pts.  $\text{H}_2\text{O}$ ; in 18,832 pts. of a mixture of 1 pt.  $\text{NH}_4\text{OH} + \text{Aq}$  and 3 pts.  $\text{H}_2\text{O}$ ; in 227 pts. of a solution of 1 pt.  $\text{NH}_4\text{Cl}$  in 10 pts.  $\text{H}_2\text{O}$ ; and in 2169 pts. of a solution of 1 pt.  $\text{NH}_4\text{Cl}$  in 10 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  and 60 pts.  $\text{H}_2\text{O}$ . (Lefèvre, A. ch. 1892, (6) 27. 13.)

$(\text{NH}_4)_2\text{BaH}_2(\text{AsO}_4)_2$ . Efflorescent. Insol. in  $\text{H}_2\text{O}$ ; easily sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Baumann, Arch. Pharm. 36. 36.)

#### Ammonium calcium arsenate, $\text{NH}_4\text{CaAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .

1000 pts. pure  $\text{H}_2\text{O}$  dissolve 0.20 pt. this salt; 1000 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (containing 50 pts.  $\text{NH}_4\text{Cl}$ ) dissolve 4.15 pts. this salt; 900 pts.  $\text{H}_2\text{O} + 100$  pts.  $\text{NH}_4\text{OH}$  (sp. gr. = 0.880) dissolve 0.01 pt. this salt. (Field, Chem. Soc. 11. 3.)

Soluble by 10 days' contact in 2167 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ ; in 381 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 : 7); in

43478 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (1 : 3); in 10570 pts.  $\text{NH}_4\text{Cl} + \text{NH}_4\text{OH} + \text{Aq}$  (1 : 10 : 60). (Lefèvre, A. ch. 1892, (6) 27. 13.)

+  $6\text{H}_2\text{O}$ . Sol. in hot, very sl. sol. in cold  $\text{H}_2\text{O}$ ; sl. sol. in  $\text{NH}_4\text{Cl}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Wach, Schw. J. 12. 285.)

+  $7\text{H}_2\text{O}$ . (Bloxam, C. N. 54. 163.)

$(\text{NH}_4)_3\text{Ca}_2\text{H}_2(\text{AsO}_4)_3$ . Efflorescent. Insol. in  $\text{H}_2\text{O}$ ; easily sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Baumann, Arch. Pharm. 36. 36.)

$(\text{NH}_4)_3\text{Ca}_2\text{H}_2(\text{AsO}_4)_3 + 3\text{H}_2\text{O}$ .

$(\text{NH}_4)_3\text{Ca}_2\text{H}_2(\text{AsO}_4)_3 + 3\text{H}_2\text{O}$ . (Bloxam, C. N. 54. 163.)

**Ammonium glucinum arsenate**,  $\text{NH}_4\text{GlaAsO}_4 + 4\frac{1}{2}\text{H}_2\text{O}$ .

More stable than the corresponding potassium salt. (Bleyer, Z. anorg. 1912, 75. 291.)

**Ammonium iron (ferric) dihydrogen arsenate**,  $\text{NH}_4\text{H}_2\text{AsO}_4 \cdot \text{FeAsO}_4$ .

Hydrolyzed by  $\text{H}_2\text{O}$ .

Sol. in cold conc.  $\text{HCl}$ , hot  $\text{HNO}_3$ , hot dil.  $\text{H}_2\text{SO}_4$ , and in hot arsenic acid +  $\text{Aq}$  containing 75% arsenic pentoxide.

Sol. in hot conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . Completely hydrolyzed by caustic alkalis.

Insol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$  and in 50% acetic acid. (Curtman, J. Am. Chem. Soc. 1910, 32. 628.)

**Ammonium magnesium arsenate**,  $\text{NH}_4\text{MgAsO}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in acids.

Anhydrous salt is sol. in 2784 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ ; in 15,904 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (1 : 3) (0.96 sp. gr.); in 1386 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 : 70); in 886.7 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 : 7); in 3014 pts.  $\text{NH}_4\text{Cl}$  (1 pt.) +  $\text{NH}_4\text{OH}$  (0.96 sp. gr.) (10 pts.) +  $\text{Aq}$  (60 pts.); in 32,827 pts. magnesia mixture. (Fresenius, Z. anal. 3. 206.)

Anhydrous salt is sol. in 4389 pts.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (1 : 50); in 2561.5 pts.  $\text{KCl} + \text{Aq}$  (1 : 165); in 1422 pts. ammoniacal solution of 3.5 g. tartaric acid in 250 cc.  $\text{H}_2\text{O}$ ; in 933.5 pts. ammoniacal solution of 2.5 g. citric acid in 250 cc.  $\text{H}_2\text{O}$ . (Puller, Z. anal. 10. 62.)

+  $\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in 2656 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ ; in 15,038 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (1 : 3) (0.96 sp. gr.); in 844 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 : 7); in 1315 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (1 : 70); in 2871 pts.  $\text{NH}_4\text{Cl}$  (1 pt.) +  $\text{NH}_4\text{OH}$  (0.96 sp. gr.) (10 pts.) +  $\text{Aq}$  (60 pts.). (Fresenius.)

1000 pts. pure  $\text{H}_2\text{O}$  dissolve 0.14 pt. salt; 1000 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (containing 100 pts.  $\text{NH}_4\text{Cl}$ ) dissolve 0.95 pt. salt; 900 pts.  $\text{H}_2\text{O} + 100$  pts.  $\text{NH}_4\text{OH}$  (sp. gr. 0.880) dissolve 0.07 pt. salt. (Field, Chem. Soc. 11. 6.)

+  $6\text{H}_2\text{O}$ . Sl. efflorescent. Sl. sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

Solubility of  $\text{NH}_4\text{MgAsO}_4 + 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  and  $\text{NH}_4$  salts +  $\text{Aq}$ .  
Grams salt dissolved in 100 g. solvent.

$t^\circ$	$\text{H}_2\text{O}$	5% $\text{NH}_4\text{NO}_3 + \text{Aq}$	5% $\text{NH}_4\text{Cl} + \text{Aq}$	$\text{NH}_4\text{OH} + \text{Aq}$ 1 pt. $\text{NH}_4\text{OH} + \text{Aq}$ (0.96) + 4 pts. $\text{H}_2\text{O}$	4% $\text{NH}_4\text{OH} + \text{Aq} + 5\%$ $\text{NH}_4\text{Cl} + \text{Aq}$	4% $\text{NH}_4\text{OH} + \text{Aq} + 10\%$ $\text{NH}_4\text{Cl} + \text{Aq}$

(Wenger, Dissert. 1911.)

**Ammonium manganous arsenate**,  $\text{NH}_4\text{MnAsO}_4 + 6\text{H}_2\text{O}$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ ; easily sol. in dil. acids; insol. in alcohol. (Otto, J. pr. 2. 414.)

**Ammonium sodium arsenate**,  $\text{NH}_4\text{NaHASO}_4 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Uelsmann, Zeit. f. ges. Nat. 23. 347.)

**Ammonium sodium hydrogen arsenate**,  $(\text{NH}_4)_2\text{Na}_2\text{H}_2(\text{AsO}_4)_4 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Filhol and Senderens, C. R. 94. 649.)

**Ammonium strontium arsenate**,  $\text{NH}_4\text{SrAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .

Sol. by 10 days' contact in 3229 pts.  $\text{H}_2\text{O}$ , in 11,586 pts. dil.  $\text{NH}_4\text{OH} + \text{Aq}$ , in 199 pts.

of a mixture of 1 pt.  $\text{NH}_4\text{Cl}$  in 7 pts.  $\text{H}_2\text{O}$ , and in 1519 pts. of a solution of 1 pt.  $\text{NH}_4\text{Cl}$  in 10 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  and 60 pts.  $\text{H}_2\text{O}$ . (Lefèvre, A. ch. 1892, (6) 27. 13.)

**Ammonium uranyl arsenate**,  $\text{NH}_4(\text{UO}_2)\text{AsO}_4 + x\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$ , and saline solutions as  $\text{NH}_4\text{Cl} + \text{Aq}$ ; sol. in mineral acids. (Puller, Z. anal. 10. 72.)

**Ammonium vanadium arsenate**,  $\text{NH}_4(\text{VO}_2)_2\text{AsO}_4$ , and  $(\text{NH}_4)_2\text{HASO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4$ .

See Arseniovanadate, ammonium.

**Ammonium arsenate tellurate**.

See Arseniotellurate, ammonium.

**Antimony arsenate (?)**

Insol. in  $H_2O$ ; insol. in acids after ignition, but when fresh is sol. in conc. boiling  $HCl$  + Aq. and sl. sol. in  $HNO_3$  + Aq. (Dumas.)

**Barium arsenate,  $Ba_3(AsO_4)_2$** 

1000 pts. pure  $H_2O$  dissolve 0.55 pt.  $Ba_3(AsO_4)_2$ ; 1000 pts.  $NH_4Cl$  + Aq. (containing 50 pts.  $NH_4Cl$ ) dissolve 1.95 pts.  $Ba_3(AsO_4)_2$ ; 900 pts.  $H_2O$  + 100 pts.  $NH_4OH$  + Aq. (sp. gr. = 0.88) dissolve 0.03 pt.  $Ba_3(AsO_4)_2$ . (Field, Chem. Soc. 11. 6.)

Sol. in cold  $HNO_3$ , and  $HCl$  + Aq. (Berzelius);  $H_2C_2H_4O_6$ , and  $HC_2H_3O_2$  + Aq. (Anthon.)

Solubility in  $H_2O$  is not increased by presence of  $NH_4$ , Na, or K salts. (Laugier.)

Not pptd. in presence of Na citrate. (Spiller.)

+  $1\frac{1}{2}H_2O$ . (Salkowsky, J. pr. 104. 129.)

**Barium hydrogen arsenate,  $BaHASO_4 + 1\frac{1}{2}H_2O$** 

Very sl. sol. in  $H_2O$ , but decomp. thereby into  $Ba_3(AsO_4)_2$  and  $BaH_4(AsO_4)_2$ . (Berzelius.)

Sl. sol. in cold acids.

+  $H_2O$ . Sl. sol. in either  $BaCl_2$  + Aq. or  $Na_2HASO_4$  + Aq. (Maumené, J. B. 1864. 237.)

**Barium tetrahydrogen arsenate,  $BaH_4(AsO_4)_2 + 2H_2O$** 

Easily sol. in  $H_2O$ . (Setterberg, Berz. J. B. 26. 206.)

Difficultly sol. in little, but decomp. by much  $H_2O$ . Easily sol. in  $HCl$  + Aq., less easily in  $HC_2H_3O_2$  + Aq. (Hörmann, Dissert, 1879.)

**Barium arsenate, acid,  $BaO, 2As_2O_5 + 4H_2O$** 

Very sl. sol. in  $H_2O$ . (Mitscherlich.)

**Barium pyroarsenate,  $Ba_2As_2O_7$** 

Insol. in  $H_2O$ , but decomp. thereby into  $BaHASO_4 + H_2O$ . (Lefèvre, C. R. 108. 1058.)

**Barium potassium arsenate,  $BaKAsO_4$** 

Sl. decomp. by cold  $H_2O$ ; rapidly sol. in dil. acids. (Lefèvre, A. ch. (6) 27. 1.)

**Barium sodium arsenate,  $BaNaAsO_4 + 9H_2O$** 

(Joly, C. R. 1887, 104. 1702.)

**Barium arsenate chloride,  $3Ba_3(AsO_4)_2, BaCl_2$** 

Insol. in  $H_2O$ ; sol. in dil.  $HNO_3$  + Aq. (Lechartier, C. R. 65. 172.)

**Bismuth arsenate, basic,  $BiAsO_4, 3Bi_2O_3$** 

Insol. in  $H_2O$ . Sol. in mineral acids. (Cavazzi, Gazz. ch. it. 14. 289.)

$5Bi_2O_3, 2As_2O_5 + 8H_2O$ . Min. *Rhagite*.

Easily sol. in  $HCl$  + Aq.; sl. sol. in  $HNO_3$  + Aq.

**Bismuth arsenate,  $BiAsO_4 + \frac{1}{2}H_2O$** 

Insol. in  $H_2O$ . Insol. in  $HNO_3$  + Aq. in presence of  $H_2AsO_4$ , or alkali arsenates + Aq.; sol. in  $HCl$  + Aq. (Salkowsky, J. pr. 104. 129.)

Not wholly insol. in  $HNO_3$  + Aq. (Schneider, J. pr. (2) 20. 418.)

Very sol. in  $H_2AsO_4$  + Aq. (Dumas.)

Insol. in  $Bi(NO_3)_3$  + Aq. (Dumas.)

Sol. in  $Bi(NO_3)_3$  + Aq. (Salkowsky.)

Insol. in conc.  $Bi(NO_3)_3$  + Aq. containing a small quantity of  $HNO_3$ . (Schneider.)

**Bismuth copper arsenate,  $Bi_2Cu_{20}As_{10}H_4O_{71} = Bi_2O_3, 20CuO, 5As_2O_5 + 22H_2O$** 

Min. *Mixite*. Decomp. by dil.  $HNO_3$  + Aq. into insol.  $BiAsO_4$ , and  $Cu_3(AsO_4)_2$ , which goes into solution. (Dana.)

**Bismuth uranyl arsenate,  $Bi_2(AsO_4)_2, 8BiO_3H_2, (UO_2)_2(AsO_4)_2$** 

Min. *Walpurgite*.

**Cadmium arsenate,  $Cd_3(AsO_4)_2$** 

Ppt. (Salkowsky, J. pr. 104. 129.)

$2CdO, As_2O_5$ . (Lefèvre, C. R. 110. 405.)

$5CdO, 2As_2O_5 + 5H_2O$ . Ppt. (Salkowsky.)

**Cadmium pyroarsenate,  $Cd_2As_2O_7$** 

(de Schulten.)

**Cadmium hydrogen arsenate,  $CdHASO_4 + H_2O$** 

Decomp. by  $H_2O$ . (Demel, B. 12. 1279.)

$CdH_4(AsO_4)_2 + 2H_2O$ . Decomp. by excess of  $H_2O$ . (de Schulten, Bull. Soc. (3) 1. 473.)

**Cadmium potassium arsenate,  $2CdO, K_2O, As_2O_5$** 

(Lefèvre, C. R. 110. 405.)

**Cadmium sodium arsenate,  $CdO, 2Na_2O, As_2O_5$** 

Slowly sol. in dil. acids. (Lefèvre, C. R. 110. 405.)

$2CdO, 4Na_2O, 3As_2O_5$ . (Lefèvre.)

**Cadmium arsenate bromide,  $3Cd_3(AsO_4)_2, CdBr_2$** 

Sol. in very dil.  $HNO_3$  + Aq. (de Schulten, Bull. Soc. (3) 1. 472.)

**Cadmium arsenate chloride,  $3Cd_3(AsO_4)_2, CdCl_2$** 

Sol. in very dil.  $HNO_3$  + Aq. (de Schulten.)

**Cæsium arsenate,  $Cs_2O, 2As_2O_5 + 5H_2O$** 

Ppt. (Ephraim, Z. anorg. 1910, 65. 246.)

**Calcium arsenate,  $Ca_3(AsO_4)_2 + 3H_2O$** 

Ppt. Insol. in  $H_2O$ ; sol. in  $H_2AsO_4$  + Aq. (Kotschoubey, J. pr. 49. 182.)

**Calcium pyroarsenate,  $Ca_2As_2O_7$** 

Slowly decomp. by cold  $H_2O$  into  $CaHASO_4 + 1\frac{1}{2}H_2O$ . (Lefèvre.)

**Calcium hydrogen arsenate**,  $\text{CaHAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Debray, A. ch. (3) 61. 419.)  
+  $\text{H}_2\text{O}$ . Min. *Haidingerite*. Easily sol. in acids.

+  $2\frac{1}{2}\text{H}_2\text{O}$ . Min. *Pharmacolite*. Easily sol. in acids.

+  $3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{AsO}_4 + \text{Aq}$ ; also in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ ,  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ , and  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Pfaff.)

**Calcium tetrahydrogen arsenate**,  $\text{CaH}_4(\text{AsO}_4)_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Graham.)

+  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by much hot  $\text{H}_2\text{O}$  into  $\text{H}_2\text{AsO}_4$  and  $\text{Ca}_3(\text{AsO}_4)_2$ . (Hörmann, Dissert. 1879.)

**Calcium iron (ferric) arsenate**,  $6\text{CaO}$ ,  $4\text{Fe}_2\text{O}_3$ ,  $5\text{As}_2\text{O}_5 + 15\text{H}_2\text{O}$  (?).

Min. *Arsenosiderite*. Sol. in acids.

**Calcium magnesium arsenate**,  $\text{Ca}_3\text{H}_2(\text{AsO}_4)_4$ ,  $\text{Mg}_3\text{H}_2(\text{AsO}_4)_4 + 10\text{H}_2\text{O}$ .

Min. *Picroparmacolite*. Easily sol. in acids.

$\text{Ca}_3(\text{AsO}_4)_2$ ,  $\text{Mg}_3(\text{AsO}_4)_2$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Kühn.)

Min. *Berzelite*. Sol. in  $\text{HNO}_3 + \text{Aq}$ .

$\text{Ca}_3\text{Mg}_6\text{H}_{14}(\text{AsO}_4)_{14} + 49\text{H}_2\text{O}$ . Min. *Wapplerite*.

**Calcium potassium arsenate**,  $\text{CaKAsO}_4$ .

(Lefèvre, A. ch. (6) 27. 5.)

**Calcium sodium arsenate**,  $\text{CaNaAsO}_4$ .

(Lefèvre, A. ch. (6) 27. 1.)

$4\text{CaO}$ ,  $2\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ . Not attacked by boiling  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Lefèvre.)

**Calcium uranyl arsenate**,  $\text{Ca}(\text{UO}_2)_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$ .

Min. *Uranospinite*.

**Calcium vanadium arsenate**,  $\text{CaHAsO}_4$ ,  $2(\text{VO}_2)\text{H}_2\text{AsO}_4 + 8\text{H}_2\text{O}$ .

See *Arseniovanadate*, calcium.

**Calcium arsenate chloride**,  $\text{Ca}_3(\text{AsO}_4)_2$ ,  $\text{CaCl}_2$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Lechartier, C. R. 65. 172.)

$3\text{Ca}_3(\text{AsO}_4)_2$ ,  $\text{CaCl}_2$ . As above. (Lechartier.)

**Cerous arsenate**,  $\text{CeHAsO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in arsenic acid +  $\text{Aq}$ . (Berzelius.)

**Ceric hydrogen arsenate**,  $\text{Ce}(\text{HAsO}_4)_2 + 6\text{H}_2\text{O}$ .

Ppt. Insol. in  $\text{H}_2\text{O}$  and dil. acids. (Barbieri, B. 1910, 43. 2216.)

**Ceric dihydrogen arsenate**,  $\text{Ce}(\text{H}_2\text{AsO}_4)_4 + 4\text{H}_2\text{O}$ .

Sol. in conc.  $\text{HNO}_3$ . (Barbieri l. c.)

**Chromic arsenate**,  $2\text{Cr}_2\text{O}_3$ ,  $3\text{As}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$  and conc. boiling acids. (Lefèvre, A. ch. (6) 27. 5.)

**Chromic potassium arsenate**,  $2\text{Cr}_2\text{O}_3$ ,  $3\text{K}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ .

(Lefèvre.)

**Chromic sodium arsenate**,  $2\text{Cr}_2\text{O}_3$ ,  $3\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ .

(Lefèvre.)

**Cobaltous arsenate, basic**,  $4\text{CoO}$ ,  $\text{As}_2\text{O}_5$ .

Easily sol. in acids. (Gentile, J. B. 1851. 359.)

$\text{Co}(\text{CoOH})\text{AsO}_4$ . Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in acids. (Coloriano.)

**Cobaltous arsenate**,  $\text{Co}_3(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$ .

Ppt. Insol. even in boiling  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HNO}_3$ ,  $\text{HCl}$ , and  $\text{NH}_4\text{OH} + \text{Aq}$ ; sol. in  $\text{H}_2\text{AsO}_4 + \text{Aq}$  (Proust); sol. in dil.  $\text{FeSO}_4 + \text{Aq}$ . (Karsten, Pogg. 60. 266.)

Min. *Cobalt bloom*, *Erythrite*. Easily sol. in acids.

$5\text{CoO}$ ,  $2\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in acids. (Coloriano, C. R. 103. 273.)

$2\text{CoO}$ ,  $\text{As}_2\text{O}_5$ . Sl. attacked by boiling  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Lefèvre.)

**Cobaltous hydrogen arsenate**,  $\text{CoH}_4(\text{AsO}_4)_2$ .

Sol. in  $\text{H}_2\text{C}$ .

**Cobaltous potassium arsenate**,  $\text{CoKAsO}_4$ .

(Lefèvre.)

**Cobaltous sodium arsenate**,  $\text{CoNaAsO}_4$ .

(Lefèvre.)

$4\text{CoO}$ ,  $2\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ . (Lefèvre.)

**Cobaltous vanadium arsenate**,

$\text{Co}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$ .

See *Arseniovanadate*, cobaltous.

**Cobaltous arsenate ammonia**,  $\text{Co}_3(\text{AsO}_4)_2$ ,  $\text{NH}_3 + 7\text{H}_2\text{O}$ .

(Ducru, A. ch. 1901, (7) 22. 185.)

$\text{Co}_3(\text{AsO}_4)_2$ ,  $2\text{NH}_3 + 6\text{H}_2\text{O}$ . (Ducru, l. c.)

$\text{Co}_3(\text{AsO}_4)_2$ ,  $3\text{NH}_3 + 5\text{H}_2\text{O}$ . (Ducru, l. c.)

**Cuprous arsenate**,  $2\text{Cu}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ .

(Hampe, Dissert. 1874.)

$4\text{Cu}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ . (Hampe, l. c.)

**Cuprous pyroarsenate**,  $\text{Cu}_4\text{As}_2\text{O}_7$ .

Ppt. Sol. in  $\text{NH}_4\text{OH}$  or  $\text{KOH} + \text{Aq}$ . (Reichard, B. 1898, 31. 2166.)

**Cupric arsenate, basic**,  $8\text{CuO}$ ,  $\text{As}_2\text{O}_5 + 12\text{H}_2\text{O}$ .

Min. *Chalcophyllite*. Easily sol. in acids and  $\text{NH}_4\text{OH} + \text{Aq}$ .

$6\text{CuO}$ ,  $\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$ . Min. *Aphanesite*, *Chloclasite*. Sol. in acids and ammonia.

$5\text{CuO}$ ,  $\text{As}_2\text{O}_5 + 2\text{H}_2\text{O}$ . Min. *Erinite*. Sol. in  $\text{HNO}_3 + \text{Aq}$ .

+5H<sub>2</sub>O. Min. *Cornwallite*. Sol. in acids, and NH<sub>4</sub>OH + Aq.  
 +9H<sub>2</sub>O. Min. *Tirolite*.  
 4CuO, As<sub>2</sub>O<sub>3</sub> + H<sub>2</sub>O. Insol. in H<sub>2</sub>O. (Debray, A. ch. (3) 61. 423.)  
 Min. *Olivenite*. Sol. in acids, and NH<sub>4</sub>OH + Aq; decomp. by hot KOH + Aq.  
 +7H<sub>2</sub>O. Min. *Euchroite*. Sol. in HNO<sub>3</sub> + Aq.  
 +4½H<sub>2</sub>O. (Hirsch, C. C. 1891, I. 15.)

#### Cupric arsenate, Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>.

Insol. in H<sub>2</sub>O. Easily sol. in HCl + Aq; sl. sol. in other acids; sol. in NH<sub>4</sub>OH + Aq. (Coloriano, C. R. 103. 273.)  
 Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)  
 Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 827.)  
 +4H<sub>2</sub>O. Decomp. by hot H<sub>2</sub>O. (Debray.)  
 +5H<sub>2</sub>O. Min. *Trichalcite*. Easily sol. in cold HCl + Aq.

#### Cupric arsenate, acid, 5CuO, 2As<sub>2</sub>O<sub>3</sub>.

Sol. in H<sub>2</sub>SO<sub>4</sub> + Aq. (Vogel.)  
 +3H<sub>2</sub>O. (Salkowsky.)  
 +8, 9½, and 12½H<sub>2</sub>O. (Hirsch.)  
 CuHAsO<sub>4</sub> + H<sub>2</sub>O. Insol. in H<sub>2</sub>O. (Coloriano.)  
 +1½H<sub>2</sub>O. Insol. in H<sub>2</sub>O. (Debray, A. ch. (3) 61. 419.)  
 8CuO, 3As<sub>2</sub>O<sub>3</sub> + 12H<sub>2</sub>O. (Hirsch.)

#### Cupric lead arsenate, 3CuO, PbO, As<sub>2</sub>O<sub>3</sub> + 2H<sub>2</sub>O.

Min. *Bayldonite*. Nearly insol. in HNO<sub>3</sub> + Aq.

#### Cupric potassium arsenate, CuKAsO<sub>4</sub>.

Slowly sol. in NH<sub>4</sub>OH + Aq; easily sol. in acids. (Lefèvre, A. ch. (6) 27. 5.)  
 8CuO, K<sub>2</sub>O, As<sub>2</sub>O<sub>3</sub>. Easily sol. in dil. acids. (Lefèvre.)

#### Cupric sodium arsenate, CuNaAsO<sub>4</sub>.

(Lefèvre.)  
 3CuO, Na<sub>2</sub>O, 2As<sub>2</sub>O<sub>3</sub>. Very sol. in dil. acids. (Lefèvre.)  
 2Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, NaH<sub>2</sub>AsO<sub>4</sub> + 5H<sub>2</sub>O. Ppt. (Hirsch, C. C. 1891, I. 15.)  
 6Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, 2NaH<sub>2</sub>AsO<sub>4</sub>, Na<sub>2</sub>HAsO<sub>4</sub> + 13½H<sub>2</sub>O, or 16H<sub>2</sub>O. Ppt. (Hirsch.)  
 3Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, Na<sub>2</sub>HAsO<sub>4</sub> + 9½H<sub>2</sub>O. Ppt. (Hirsch.)  
 4Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, Na<sub>2</sub>HAsO<sub>4</sub> + 11H<sub>2</sub>O. Ppt. (Hirsch.)

#### Cupric uranyl arsenate, Cu(UO<sub>2</sub>)<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub> + 8H<sub>2</sub>O.

(Werther, A. 68. 312.)  
 Min. *Zeunerite*.

#### Cupric vanadium arsenate, Cu(VO<sub>2</sub>)<sub>2</sub>H<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub> + 3H<sub>2</sub>O.

See *Arseniovanadate*, cupric.

#### Cupric arsenate ammonia, Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, 3NH<sub>3</sub> + 4H<sub>2</sub>O.

Insol. in cold or hot H<sub>2</sub>O. (Damour, J. pr. 37. 485.)

2CuO, As<sub>2</sub>O<sub>3</sub>, 4NH<sub>3</sub> + 3H<sub>2</sub>O. Decomp. by H<sub>2</sub>O. (Schiff, A. 123. 42.)

#### Cupric arsenate calcium carbonate, 5CuO, As<sub>2</sub>O<sub>3</sub>, CaCO<sub>3</sub> + 4H<sub>2</sub>O, or 9H<sub>2</sub>O.

Min. *Tyrolite*. Easily sol. in acids, and NH<sub>4</sub>OH + Aq.

#### Cupric arsenate sodium chloride, 2Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, NaCl + 7½H<sub>2</sub>O.

Decomp. by hot H<sub>2</sub>O. (Hirsch, Dissert. 1891.)

3Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, 2NaCl + 13½H<sub>2</sub>O.

+17½H<sub>2</sub>O. (Hirsch, l.c.)

5Cu<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, 3NaCl + 23H<sub>2</sub>O. (Hirsch.)

#### Didymium arsenate, Di<sub>2</sub>H<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>.

Ppt. Insol. in H<sub>2</sub>O; sl. sol. in weak acids. (Marignac, A. ch. (3) 38. 164.)

5Di<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, As<sub>2</sub>O<sub>3</sub> + 3H<sub>2</sub>O. Ppt.

#### Glucinum arsenate, Gl<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>.

Insol. in H<sub>2</sub>O; sol. in H<sub>2</sub>AsO<sub>4</sub> + Aq. (Berzelius.)

#### Glucinum hydrogen arsenate, GlHAsO<sub>4</sub>.

Obtained in impure state by heating As<sub>2</sub>O<sub>3</sub> with Gl(OH)<sub>3</sub> in a sealed tube at 220°. (Bleyer, Z. anorg. 1912, 75. 287.)

#### Glucinum tetrahydrogen arsenate, GlH<sub>4</sub>(AsO<sub>4</sub>)<sub>2</sub>.

Very hygroscopic. (Bleyer, Z. anorg. 1912, 75. 287.)

#### Glucinum potassium arsenate, KGlAsO<sub>4</sub>, ½GlO + 5H<sub>2</sub>O.

Unstable. Amorphous. Easily hydrolyzed, giving more basic salts. (Bleyer, Z. anorg. 1912, 75. 289.)

#### Glucinum sodium arsenate, NaGlAsO<sub>4</sub>, ½GlO + 6H<sub>2</sub>O.

Unstable. Easily hydrolyzed. (Bleyer, Z. anorg. 1912, 75. 290.)

#### Iron (ferrous) arsenate, Fe<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub> + 6H<sub>2</sub>O (?).

Ppt. Sl. sol. in NH<sub>4</sub>OH + Aq. Insol. in (NH<sub>4</sub>)<sub>2</sub>AsO<sub>4</sub> + Aq or other NH<sub>4</sub> salts + Aq. (Wittstein.)

+8H<sub>2</sub>O. Min. *Symplectite*. Sol. in HCl + Aq.

#### Iron (ferric) arsenate, basic, 16Fe<sub>2</sub>O<sub>3</sub>, As<sub>2</sub>O<sub>3</sub> + 24H<sub>2</sub>O.

Insol. in NH<sub>4</sub>OH + Aq. (Berzelius.)  
 2Fe<sub>2</sub>O<sub>3</sub>, As<sub>2</sub>O<sub>3</sub> + 12H<sub>2</sub>O. Insol. in NH<sub>4</sub>OH + Aq.

3Fe<sub>2</sub>O<sub>3</sub>, 2As<sub>2</sub>O<sub>3</sub>.

3Fe<sub>2</sub>(AsO<sub>4</sub>)<sub>2</sub>, Fe<sub>2</sub>O<sub>3</sub>H<sub>2</sub> + 12H<sub>2</sub>O. Min.

*Pharmacosiderite*. Easily sol. in acids; decomp. by KOH + Aq.

- Iron (ferric) arsenate,  $\text{Fe}_2\text{O}_3, \text{As}_2\text{O}_5$ .**  
 Ppt. Insol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ .  
 Sol. in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$ . (Metzke, Z. anorg. 1898, 19. 473.)  
 +  $4\text{H}_2\text{O}$ . Min. *Scorodite*. Easily sol. in  $\text{HCl}$  + Aq; insol. in  $\text{HNO}_3$  + Aq.  
 +  $8\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . When freshly pptd., sol. in  $\text{NH}_4\text{OH}$  + Aq. Sol. in  $\text{HCl}$ , or  $\text{HNO}_3$  + Aq. Insol. in  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4$  salts + Aq. (Wittstein.)  
 Sol. in warm  $\text{H}_2\text{SO}_4$  + Aq or  $(\text{NH}_4)_2\text{SO}_4$  + Aq. (Berthier, A. ch. (3) 7. 79.)
- Iron (ferric) arsenate, acid,  $\text{Fe}_2\text{O}_3, 3\text{As}_2\text{O}_5$ , +  $16.7\text{H}_2\text{O}$ .**  
 Ppt.; sl. sol. in acids with a yellow color, and in  $\text{NH}_4\text{OH}$  + Aq with a red color. (Metzke, Z. anorg. 1898, 19. 476.)  
 $2\text{Fe}_2\text{O}_3, 3\text{As}_2\text{O}_5$  +  $12\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  or  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq.  
 Sol. in mineral acids.  
 Sol. only in conc.  $\text{H}_2\text{AsO}_4$  + Aq.  
 Sol. in  $(\text{NH}_4)_2\text{AsO}_4$ , and other  $\text{NH}_4$  salts + Aq. (Wittstein.)  
 Sol. in  $\text{NH}_4\text{OH}$  + Aq.  
 +  $22\frac{1}{2}\text{H}_2\text{O}$ . Ppt. Sl. sol. in acids with a yellow color, and in  $\text{NH}_4\text{OH}$  + Aq with a red color. (Metzke, Z. anorg. 1898, 19. 475.)
- Iron (ferroferric) arsenate,  $6\text{FeO}, 3\text{Fe}_2\text{O}_3, 4\text{As}_2\text{O}_5$  +  $32\text{H}_2\text{O}$ .**  
 Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$  + Aq. Decomp. by  $\text{KOH}$  + Aq. (Wittstein, J. B. 1866. 243.)
- Iron (ferric) lead arsenate,  $5\text{Fe}_2(\text{AsO}_4)_2, \text{Pb}_2(\text{AsO}_4)_2$ .**  
 Min. *Carmin Spar. Carminite*. Sol. in acids;  $\text{KOH}$  + Aq dissolves out  $\text{As}_2\text{O}_5$ . (Sandberger.)
- Iron (ferric) potassium arsenate,  $2\text{Fe}_2\text{O}_3, 3\text{K}_2\text{O}, 3\text{As}_2\text{O}_5$ .**  
 Not attacked by boiling  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Lefèvre.)  
 $\text{Fe}_2\text{O}_3, \text{K}_2\text{O}, 2\text{As}_2\text{O}_5$ . (Lefèvre.)
- Iron (ferric) sodium arsenate,  $\text{Fe}_2\text{O}_3, \text{Na}_2\text{O}, 2\text{As}_2\text{O}_5$ .**  
 (Lefèvre.)  
 $2\text{Fe}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$ . (Lefèvre.)
- Lanthanum arsenate,  $\text{La}_2\text{H}_2(\text{AsO}_4)_3$ .**  
 (Frerichs and Smith.)  
 Doubtful. (Cleve, B. 11. 910.)
- Lead arsenate, basic,  $15\text{PbO}, 2\text{As}_2\text{O}_5$  (?).**  
 Ppt. (Strömholm, Z. anorg. 1904, 38. 446.)
- Lead arsenate,  $\text{Pb}_2(\text{AsO}_4)_2$ .**  
 Insol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts + Aq. (Wittstein.)  
 Sol. in 2703.5 pts.  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq containing 38.94%  $\text{HC}_2\text{H}_3\text{O}_2$ . (Bertrand, Monit. Scient. (3) 10. 477.)  
 Sol. in sat.  $\text{NaCl}$  + Aq. (Becquerel, C. R. 20. 1523.)
- Not pptd. in presence of  $\text{Na}$  citrate. (Spiller.)
- Lead pyroarsenate,  $\text{Pb}_2\text{As}_2\text{O}_7$ .**  
 Insol. in  $\text{H}_2\text{O}$  or  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq. Sol. in  $\text{HCl}$ , or  $\text{HNO}_3$  + Aq. (Rose.)  
 Decomp. by cold  $\text{H}_2\text{O}$ . (Lefèvre.)  
 +  $\text{H}_2\text{O} = \text{PbHASO}_4$ . Ppt. (Salkowsky, M. pr. 104. 109.)
- Lead potassium arsenate,  $\text{PbKAsO}_4$ .**  
 (Lefèvre, A. ch. (6) 27. 5.)
- Lead sodium arsenate,  $\text{PbNaAsO}_4$ .**  
 (Lefèvre.)  
 $4\text{PbO}, 2\text{Na}_2\text{O}, 3\text{As}_2\text{O}_5$ . Superficially decomp. by cold  $\text{H}_2\text{O}$ . (Lefèvre.)
- Lead arsenate chloride,  $3\text{Pb}_2(\text{AsO}_4)_2, \text{PbCl}_2$ .**  
 Sol. in dil.  $\text{HNO}_3$  + Aq. (Lechartier.)  
 Min. *Mimetite*. Sol. in  $\text{HNO}_3$ , and  $\text{KOH}$  + Aq.
- Lithium arsenate,  $\text{Li}_2\text{AsO}_4$ .**  
 Ppt. Sol. in dil. acids and in  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq. (de Schulten, Bull. Soc. (3) 1. 479.)  
 $\text{LiH}_2\text{AsC}_4$  +  $\frac{3}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  into  $\text{H}_2\text{AsO}_4$  and  $\text{Li}_2\text{AsO}_4$ . (Rammelsberg, Pogg. 128. 311.)
- Magnesium arsenate,  $\text{Mg}_2(\text{AsO}_4)_2$ .**  
 Ppt.  
 Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)  
 +  $7\text{H}_2\text{O}$ , +  $8\text{H}_2\text{O}$ , +  $10\text{H}_2\text{O}$ , and +  $22\text{H}_2\text{O}$ . (Grühl, Dissert. 1897.)  
 +  $8\text{H}_2\text{O}$ . Min. *Hörmesite*. Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids.
- Magnesium hydrogen arsenate,  $\text{MgHASO}_4$ .**  
 +  $\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (de Schulten, R. 100. 263.)  
 +  $5\text{H}_2\text{O}$ . (Schiefer.)  
 +  $6\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . 1000 pts. boiling  $\text{H}_2\text{O}$  dissolve 1.5 pts. (Thompson.)  
 Sol. in  $\text{HNO}_3$  + Aq before ignition, but insol. in acids after ignition. (Graham, A. 29. 29.)  
 +  $7\text{H}_2\text{O}$ . Min. *Roesslerite*. Sol. in  $\text{HCl}$  + Aq.
- Magnesium tetrahydrogen arsenate,  $\text{MgH}_4(\text{AsO}_4)_2$ .**  
 Very deliquescent; sol. in  $\text{H}_2\text{O}$ . (Schiefer.)
- Magnesium potassium arsenate,  $\text{MgKAsO}_4$ .**  
 Insol. in, but decomp. by cold  $\text{H}_2\text{O}$ . (Rose.)  
 Easily sol. in dil. acids. (Lefèvre.)  
 +  $7\text{H}_2\text{O}$ . (Kinkelin, Dissert. 1893.)  
 $4\text{MgO}, 2\text{K}_2\text{O}, 3\text{As}_2\text{O}_5$ . Not attacked by boiling  $\text{H}_2\text{O}$ ; slowly sol. in dil. acids. (Lefèvre.)
- Magnesium potassium hydrogen arsenate,  $\text{KMgH}(\text{AsO}_4)_2 + x\text{H}_2\text{O}$ .**  
 Decomp. by  $\text{H}_2\text{O}$ . (Kinkelin, D. 1883.)

$\text{Mg}_2\text{KH}_2(\text{AsO}_4)_3 + 5\text{H}_2\text{O}$ . (Chevron and Droxhe, J. B. 1888, 523.)

**Magnesium potassium sodium arsenate**,  $\text{Mg}_2\text{KNa}(\text{AsO}_4)_3 + 10\text{H}_2\text{O}$ . (Kinkelin, Dissert. 1883.)

**Magnesium sodium arsenate**,  $\text{MgNaAsO}_4$ . Insol. in  $\text{H}_2\text{O}$ . Very sl. sol. in dil. acids. (Lefèvre.)  
 $4\text{MgO}$ ,  $2\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ . (Lefèvre.)

**Magnesium vanadium arsenate**,  $\text{MgH}_2(\text{VO}_3)_2(\text{AsO}_4)_2 + 9\text{H}_2\text{O}$  and  $\text{MgHAsO}_4$ ,  $2(\text{VO}_3)_2\text{H}_2\text{AsO}_4 + 9\text{H}_2\text{O}$ . See Arseniovanadate, magnesium.

**Magnesium arsenate chloride**,  $\text{Mg}_2(\text{AsO}_4)_3$ ,  $\text{MgCl}_2$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Lechartier, C. R. 65. 172.)

**Magnesium arsenate fluoride**,  $\text{Mg}_2(\text{AsO}_4)_3$ ,  $\text{MgF}_2$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Lechartier.)

**Manganous arsenate, basic**,  $6\text{MnO}$ ,  $\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$  (?).

Min. *Chondroarsenite*. Easily and completely sol. in dil.  $\text{HCl}$ , and  $\text{HNO}_3 + \text{Aq}$ .

**Manganous arsenate**,  $\text{Mn}_2(\text{AsO}_4)_2 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in acids. (Coloriano, C. R. 103. 273.)

$5\text{MnO}$ ,  $2\text{As}_2\text{O}_5 + 5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Coloriano.)

$2\text{MnO}$ ,  $\text{As}_2\text{O}_5$ . Sl. decomp. by cold  $\text{H}_2\text{O}$ , but rapidly on heating. (Lefèvre.)

$\text{MnHAsO}_4 + \text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$  into  $5\text{MnO}$ ,  $2\text{As}_2\text{O}_5 + 5\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{H}_3\text{AsO}_4 + \text{Aq}$ .

**Manganous tetrahydrogen arsenate**,  $\text{MnH}_4(\text{AsO}_4)_2$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (Schiefer.)

**Manganous potassium arsenate**,  $\text{MnKAsO}_4$ . (Lefèvre, A. ch. (6) 27. 5.)

**Manganous sodium arsenate**,  $\text{MnNaAsO}_4$ .

Very sol. in dil. acids. (Lefèvre.)

$2\text{MnO}$ ,  $4\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ . Not attacked by boiling  $\text{H}_2\text{O}$ ; very sol. in dil. acids. (Lefèvre.)

**Manganous arsenate chloride**,  $\text{Mn}_2(\text{AsO}_4)_3$ ,  $\text{MnCl}_2$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Lechartier, A. 58. 259.)

**Manganic arsenate**,  $\text{Mn}_2(\text{AsO}_4)_2 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in acids.

**Mercurous arsenate**,  $(\text{Hg}_2)_2(\text{AsO}_4)_3$ .

Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in acids. (Coloriano, C. R. 103. 273.) Ppt. (Haack, C. C. 1890, II. 736.)

$\text{Hg}_2(\text{AsO}_4)_3$ . Insol. in  $\text{H}_2\text{O}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or alcohol. Decomp. by cold  $\text{HCl} + \text{Aq}$ . Sl. sol. in cold  $\text{HNO}_3 + \text{Aq}$ , from which it is precipitated by  $\text{NH}_4\text{OH}$  as  $\text{Hg}_2\text{HAsO}_4$ . (Simon, Pogg. 41. 424.)

**Mercurous hydrogen arsenate**,  $\text{Hg}_2\text{HAsO}_4$ .

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by cold  $\text{HCl} + \text{Aq}$ ; sol. in cold  $\text{HNO}_3 + \text{Aq}$  without decomp; very sl. sol. without decomp. in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Simon, Pogg. 41. 424.)

**Mercuric arsenate**,  $\text{Hg}_2(\text{AsO}_4)_3$ .

Ppt. Sol. in  $\text{H}_3\text{AsO}_4$  or  $\text{HNO}_3 + \text{Aq}$ . (Bergmann.) Very sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ . Sl. sol. in  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{H}_3\text{AsO}_4 + \text{Aq}$ . (Haack, C. C. 1890, II. 736.)

**Mercurous silver arsenate**,  $\text{Hg}_2\text{AgAsO}_4$ .

Sol. in hot conc.  $\text{HNO}_3$ . (Jacobsen, Bull. Soc. 1909, (4) 5. 948.)

**Mercurous arsenate nitrate**,  $\text{Hg}_2\text{AsO}_4$ ,  $\text{HgNO}_3 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HC}_2\text{H}_3\text{O}_2$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ . (Simon, Pogg. 41. 424.)

$3\text{Hg}_2\text{AsO}_4$ ,  $2\text{HgNO}_3$ ,  $2\text{Hg}_2\text{O}$ . Ppt. (Haack.)

**Molybdenum arsenate**.

Ppt.

**Nickel arsenate, basic**,  $5\text{NiO}$ ,  $\text{As}_2\text{O}_5$ .

Min. — (Bergemann.)

$\text{Ni}(\text{NiOH})\text{AsO}_4$ . Difficultly attacked by acids or alkalis. (Coloriano, Bull. Soc. (2) 45. 241.)

$5\text{NiO}$ ,  $2\text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$ . As above.

**Nickel arsenate**,  $\text{Ni}_2(\text{AsO}_4)_3$ .

Min. — (Bergemann.)

$+x\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_3\text{AsO}_4$ , and conc. mineral acids. Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

$+2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in acids. (Coloriano, Bull. Soc. 45. 241.)

$+8\text{H}_2\text{O}$ . Min. *Nickel-bloom*, *Annabergite*. Easily sol. in acids.

$\text{NiHAsO}_4 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Difficultly attacked by acids. (Coloriano, C. R. 103. 274.)

**Nickel potassium arsenate**,  $12\text{NiO}$ ,  $3\text{K}_2\text{O}$ ,  $5\text{As}_2\text{O}_5$ .

(Lefèvre.)

$2\text{NiO}$ ,  $\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ . Rapidly sol. in dil. acids. (Lefèvre.)

**Nickel sodium arsenate**,  $\text{NiNaAsO}_4$ .

Very slowly sol. in dil. acids. (Lefèvre.)

$4\text{NiO}$ ,  $2\text{Na}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ . (Lefèvre.)

**Nickel arsenate ammonia**,

$\text{Ni}_2(\text{AsO}_4)_3 \cdot \text{NH}_3 + 7\text{H}_2\text{O}$ .

$\text{Ni}_2(\text{AsO}_4)_3 \cdot 2\text{NH}_3 + 6\text{H}_2\text{O}$ .

$\text{Ni}_2(\text{AsO}_4)_3 \cdot 3\text{NH}_3 + 5\text{H}_2\text{O}$ . (Ducru, C. R. 1900, 131. 703.)

**n arsenate (?)****arsenate (?)**Sol. in  $\text{HNO}_3 + \text{Aq.}$ **m arsenate,  $\text{K}_2\text{AsO}_4$** 

escent. Very sol. in  $\text{H}_2\text{O}$ . (Graham, 47.)  
in ethyl acetate. (Naumann, B. 3601.)

**m hydrogen arsenate,  $\text{K}_2\text{HAsO}_4$**  $\text{H}_2\text{O}$ .**m dihydrogen arsenate,  $\text{KH}_2\text{AsO}_4$** 

5.3 pts.  $\text{H}_2\text{O}$  at  $6^\circ$ , forming a solution. gr. 1.1134. Much more sol. in hot sol. in alcohol.

6.666 pts. boiling conc. alcohol. (Wenzel.)

**m sodium hydrogen arsenate,  $\text{NaH}_2\text{AsO}_4 + 16\text{H}_2\text{O}$**  $\text{H}_2\text{O}$ .

$\text{H}_4(\text{AsO}_4)_4 + 9\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , and y. decomp. thereby into its constituents. (Hohl and Senderens, C. R. 95. 343.)

**m strontium arsenate,  $\text{K}_2\text{SrAsO}_4$** 

re, C. R. 108. 1058.)

**m vanadium arsenate,  $\text{K}(\text{VO}_2)_2\text{AsO}_4 + \frac{1}{2}\text{H}_2\text{O}$** 

seniovanadate, potassium.

**m zinc arsenate,  $\text{KZnAsO}_4$** 

re.)

**m arsenate sulphate.**

seniosulphate, potassium.

**a arsenate (?)****m metaarsenate,  $\text{RbAsO}_3$** 

a  $\text{H}_2\text{O}$ . (Bouchonnet, C. R. 1907, 1.)

**m arsenate,  $\text{Rb}_2\text{AsO}_4 + 2\text{H}_2\text{O}$** 

hygroscopic; sol. in  $\text{H}_2\text{O}$  to give an solution. Absorbs  $\text{CO}_2$  from the air. (Bouchonnet, l.c.)

**m pyroarsenate,  $\text{Rb}_4\text{As}_2\text{O}_7$** 

Bouchonnet, l.c.)

**m hydrogen arsenate,  $\text{Rb}_2\text{HAsO}_4 + \text{H}_2\text{O}$** 

abs.  $\text{CO}_2$  from the air. Very hydroscopic. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Bouchonnet, l.c.)

**m dihydrogen arsenate,  $\text{RbH}_2\text{AsO}_4$** 

hygroscopic. Very sol. in  $\text{H}_2\text{O}$ ; aq. is acid to litmus. (Bouchonnet, l.c.)

**arsenate,  $\text{Ag}_2\text{AsO}_4$** 

sol. in  $\text{H}_2\text{O}$ . Sol. in acids; easily sol. in  $\text{O}_2 + \text{Aq.}$  (Joly, C. R. 103. 1071.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.0085 g.  $\text{Ag}_2\text{AsO}_4$  at  $20^\circ$ . (Whitby, Z. anorg. 1910, 67. 108.)

Much less sol. in  $\text{H}_2\text{AsO}_4$  than  $\text{Ag}_3\text{PO}_4$ . (Graham.)

Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Scheele.)

Sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  Insol. in  $\text{NH}_4$  sulphate, nitrate, or succinate +  $\text{Aq.}$  (Wittstein.)

Very sl. sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq.}$ , more easily in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$  (Graham.)

Sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$ , but not so easily as  $\text{Ag}_3\text{PO}_4$ .

Not pptd. in presence of Na citrate. (Spiller.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 829.)

**Silver hydrogen arsenate,  $\text{Ag}_2\text{HAsO}_4$** 

Decomp. by  $\text{H}_2\text{O}$ , with formation of  $\text{Ag}_3\text{AsO}_4$ . (Setterberg, Berz. J. B. 26. 208.)

$\text{AgH}_2\text{AsO}_4$ . Decomp. by  $\text{H}_2\text{O}$ . (Joly, C. R. 103. 1071.)

$\text{Ag}_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ . Decomp. by  $\text{H}_2\text{O}$ . Rather sl. sol. in  $\text{HNO}_3 + \text{Aq.}$  Very easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Hurtzig and Geuther, A. 111. 168.)

**Silver arsenate ammonia,  $\text{Ag}_3\text{AsO}_4 \cdot 4\text{NH}_3$** 

Easily sol. in  $\text{H}_2\text{O}$ . (Widmann, Bull. Soc. (2) 20. 64.)

**Silver arsenate sulphate,  $3\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $\text{SO}_3$** 

Decomp. by  $\text{H}_2\text{O}$ , with separation of  $\text{Ag}_3\text{AsO}_4$ ; decomp. by dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Setterberg, Berz. J. B. 26. 209.)

**Sodium arsenate,  $\text{Na}_2\text{AsO}_4 + 12\text{H}_2\text{O}$** 

Permanent in dry air. Sol. in 3.57 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$ . (Graham.) 100 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 28 pts.  $\text{Na}_2\text{AsO}_4 + 12\text{H}_2\text{O}$ . (Berzelius.) Sol. in 3.75 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ ; or 100 pts.  $\text{H}_2\text{O}$  at  $17^\circ$  dissolve 26.7 pts.; or sat.  $\text{Na}_2\text{AsO}_4 + \text{Aq.}$  at  $17^\circ$  contains 21.1%  $\text{Na}_2\text{AsO}_4 + 12\text{H}_2\text{O}$  or 10.4%  $\text{Na}_2\text{AsO}_4$ , and has sp. gr. 1.1186. (Schiff, A. 113. 350.)

Melts in crystal  $\text{H}_2\text{O}$  at  $85.5^\circ$ .

Sp. gr. of  $\text{Na}_2\text{AsO}_4 + \text{Aq.}$  at  $17^\circ$ .

% = %  $\text{Na}_2\text{AsO}_4 + 12\text{H}_2\text{O}$ .

%	Sp. gr.	%	Sp. gr.	%	Sp. gr.
1	1.0053	9	1.0490	17	1.0945
2	1.0107	10	1.0547	18	1.1003

8	1.0435	16	1.0887	..	.....

(Schiff, calculated by Gerlach, Z. anal. 8. 286.)

"Arsenate of soda" dissolves in 60 pts. boiling alcohol. (Wenzel.)

+  $4\frac{1}{2}\text{H}_2\text{O}$ . (Hall, Chem. Soc. 51. 93.)

+  $10\text{H}_2\text{O}$ . Efflorescent. (Hall.)

**Sodium hydrogen arsenate,  $\text{Na}_2\text{HAsO}_4 + 7\text{H}_2\text{O}$ .**

Not efflorescent. (Schiff.)

Solubility in  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ . A table is given which records the g. of  $\text{As}_2\text{O}_3$  in 100 cc. of the filtrate. (Curry, J. Am. Chem. Soc. 1915, **37**, 1685.) $+7\frac{1}{2}\text{H}_2\text{O}$ . (Lescœur, C. R. **104**, 1171.) $+12\text{H}_2\text{O}$ . Efflorescent. Sol. in  $\text{H}_2\text{O}$ ; sol. in 1.79 pts.  $\text{H}_2\text{O}$  at  $14^\circ$ ; or 100 pts.  $\text{H}_2\text{O}$  at  $14^\circ$  dissolve 56 pts.  $\text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$ . Sat.  $\text{Na}_2\text{HAsO}_4 + \text{Aq}$  contains 35.9%  $\text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$ , or 16.5%  $\text{Na}_2\text{HAsO}_4$ , and has sp. gr. = 1.1722. (Schiff, A. **113**, 350.)100 pts.  $\text{H}_2\text{O}$  at  $7.2^\circ$  dissolve 22.268 pts. (Thompson.)100 pts.  $\text{H}_2\text{O}$  dissolve 17.2 pts.  $\text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$  at  $0^\circ$ , and 140.7 pts. at  $30^\circ$ . (Tilden, Chem. Soc. **45**, 409.)Melts in crystal  $\text{H}_2\text{O}$  at  $28^\circ$ . (Tilden.)Sp. gr. of  $\text{Na}_2\text{HAsO}_4 + \text{Aq}$  at  $14^\circ$ . $\% = \% \text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$ .

(Schiff, calculated by Gerlach, Z. anal. **8**, 280.)

Insol. in alcohol.

 $+13\frac{1}{2}\text{H}_2\text{O}$ . (Setterberg.)**Sodium dihydrogen arsenate,  $\text{NaH}_2\text{AsO}_4 + \text{H}_2\text{O}$ .**More sol. in  $\text{H}_2\text{O}$  than  $\text{Na}_2\text{AsO}_4$  or  $\text{Na}_2\text{HAsO}_4$ . (Schiff.) $+2\text{H}_2\text{O}$ . Efflorescent. (Joly and Duffet, C. R. **102**, 1391.)**Sodium trihydrogen diarsenate,** $\text{Na}_3\text{H}_3\text{AsO}_4 + 3\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ . (Filhol and Senderens, C. R. **95**, 343.)**Sodium strontium arsenate,  $\text{NaSrAsO}_4$ .**Not attacked by boiling  $\text{H}_2\text{O}$ . (Lefèvre.) $+9\text{H}_2\text{O}$ . Scarcely sol. in  $\text{H}_2\text{O}$ . (Joly, C. R. **104**, 905.) $+18\text{H}_2\text{O}$ . (Joly.)**Sodium uranyl arsenate,  $\text{Na}(\text{UO}_2)\text{AsO}_4$ .**Ppt. (Werther, A. **68**, 312.)**Sodium zinc arsenate,  $\text{NaZnAsO}_4$ .**

Slowly sol. in dil. acids. (Lefèvre.)

 $\text{Na}_2\text{ZnAs}_2\text{O}_7$ . As above. (Lefèvre.)**Sodium arsenate fluoride,  $\text{Na}_2\text{AsO}_4$ ,  $\text{NaF} + 12\text{H}_2\text{O}$ .**Sol. in 9.5 pts.  $\text{H}_2\text{O}$  at  $25^\circ$ , and 2 pts. at  $75^\circ$ . (Briegleb, A. **97**, 95.)**Sodium arsenate stannate,  $6\text{Na}_2\text{O}$ ,  $2\text{As}_2\text{O}_3$ ,  $\text{SnO}_2 + 50\text{H}_2\text{O}$ .**More difficultly sol. than sodium stannate. (Haefely, Phil. Mag. (4) **10**, 290.) $5\text{Na}_2\text{AsO}_4$ ,  $\text{Na}_2\text{SnO}_3 + 60\text{H}_2\text{O}$ . (Prandtl, B. 1907, **40**, 2133.)**Sodium arsenate sulphate,  $\text{Na}_3\text{As}_2\text{O}_{11}$ ,  $2\text{Na}_2\text{SO}_4$ .**Sol. in  $\text{H}_2\text{O}$ . (Mitscherlich.) $\text{Na}_4\text{As}_2\text{O}_7$ ,  $\text{Na}_2\text{SO}_4$ . (Setterberg.)**Sodium arsenate tungstate,  $\text{Na}_4\text{As}_2\text{O}_7$ ,  $\text{Na}_2\text{W}_2\text{O}_{10} + 20\text{H}_2\text{O}$ .**

See Arseniotungstate, sodium.

**Strontium arsenate,  $\text{Sr}_3(\text{AsO}_4)_2$ .**Not attacked by boiling  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Lefèvre, A. ch. (6) **27**, 5.)**Strontium pyroarsenate,  $\text{Sr}_2\text{As}_2\text{O}_7$ .**Decomp. by cold  $\text{H}_2\text{O}$  into  $\text{SrHAsO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$ . (Lefèvre.)**Strontium hydrogen arsenate,  $\text{SrHAsO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$ .**Insol. in cold, but decomp. by hot  $\text{H}_2\text{O}$  into a basic, and a sol. acid salt. 100 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 0.284 pt. (Thompson, **1831**.)Sol. in  $\text{HC}_2\text{H}_3\text{O}_2$ , and very easily in  $\text{HCl} + \text{Aq}$ . (Kotschoubey, J. pr. **49**, 182.)Sol. in  $\text{HNO}_3 + \text{Aq}$ .  $\text{SrH}_4(\text{AsO}_4)_2 + 2\text{H}_2\text{O}$ . Partly sol. in  $\text{H}_2\text{O}$ . (Hörmann, Dissert. **1879**.)**Strontium vanadium arsenate,  $\text{SrHAsO}_4$ ,  $2(\text{VO}_2)\text{H}_2\text{AsO}_4 + 7\frac{1}{2}\text{H}_2\text{O}$ .**

See Arseniovanadate, strontium.

**Strontium arsenate chloride,  $3\text{Sr}_3(\text{AsO}_4)_2$ ,  $\text{SrCl}_2$ .**Insol. in  $\text{H}_2\text{O}$ ; easily sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Lechartier, C. R. **65**, 172.)**Thallous arsenate,  $\text{Tl}_3\text{AsO}_4$ .**Sol. in  $\text{H}_2\text{O}$ . (Willm, A. ch. (4) **5**, 5.)**Thallous hydrogen arsenate,  $\text{Tl}_2\text{HAsO}_4$ .**Very easily sol. in  $\text{H}_2\text{O}$ . (Willm.)**Thallous dihydrogen arsenate,  $\text{TlH}_2\text{AsO}_4$ .**Easily sol. in  $\text{H}_2\text{O}$ . (Willm.)**Thallic arsenate,  $\text{TlAsO}_4 + 2\text{H}_2\text{O}$ .**Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ ; decomp. by  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Willm.)

- Thorium hydrogen arsenate**,  $\text{Th}(\text{HAsO}_4)_2 + 6\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{AsO}_4 + \text{Aq}$ . (Berzelius.)  
 Ppt.; insol. in  $\text{H}_2\text{O}$ . (Barbieri, C. A. 1911. 3385.)  
 $\text{Th}(\text{H}_2\text{AsO}_4)_4 + 4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Barbieri, l. c.)
- Tin (stannous) arsenate**,  $\text{SnHAsO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Lenssen, A. 114. 113.)
- Tin (stannic) arsenate**,  $2\text{SnO}_2, \text{As}_2\text{O}_3$ .  
 Ppt. Insol. in  $\text{H}_2\text{O}$  and dil.  $\text{HNO}_3 + \text{Aq}$ . (Haefely, Phil. Mag. (4) 10. 290.)  
 $\text{Sn}_2(\text{AsO}_4)_4 + 6\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in conc.  $\text{HCl} + \text{Aq}$ , and in aqua regia; insol. in  $\text{HNO}_3 + \text{Aq}$  or  $\text{H}_2\text{SO}_4$ . (Williams, Proc. Soc. Manchester, 15. 67.)  
*Colloidal.* Very slowly sol. in  $\text{H}_2\text{O}$ , from which it is pptd. by  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ ; also by  $\text{BaCl}_2$ ,  $\text{CaCl}_2$ ,  $\text{NH}_4\text{Cl}$ , and  $\text{FeCl}_3 + \text{Aq}$ , and by  $\text{AgNO}_3$ , or  $\text{KI} + \text{Aq}$ . Not pptd. by alcohol,  $\text{HC}_2\text{H}_3\text{O}_2$ ,  $\text{HgCl}_2$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{K}_2\text{CO}_3$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . The pptd. jelly is readily sol. in conc. acids, and  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ . (Williams, l. c.)
- Tin (stannous) arsenate chloride**,  $\text{Sn}_2(\text{AsO}_4)_2, \text{SnCl}_2 + 2\text{H}_2\text{O}$ .  
 Decomp. on air. (Lenssen, A. 114. 113.)
- Titanium arsenate (?)**.  
 Insol. in  $\text{H}_2\text{O}$ . Sol. in titanio acid, arsenic acid, or  $\text{HCl} + \text{Aq}$ . Sol. in Ti salts +  $\text{Aq}$ . (Rose.)
- Titanyl arsenate**,  $5\text{TiO}_2, 2\text{As}_2\text{O}_3$ .  
 Sol. in acids without decomp. Scarcely attacked by  $\text{KOH}$  or by  $\text{NH}_4\text{OH} + \text{Aq}$ . (Reichard, B. 1894, 27. 1026.)
- Uranous arsenate**,  $\text{U}_2(\text{AsO}_4)_2$ .  
 Ppt.
- Uranous hydrogen arsenate**,  $\text{UH}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$ .  
 Ppt. Sol. in  $\text{HCl} + \text{Aq}$ .
- Uranyl arsenate**,  $(\text{UO}_2)\text{HAsO}_4 + 4\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , and saline solutions, as  $\text{NH}_4\text{Cl} + \text{Aq}$ ; sol. in the mineral acids; sol. in  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Werther, A. 68. 313.)  
 $(\text{UO}_2)_2\text{H}_4(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$ . (Werther.)  
 $(\text{UO}_2)_2\text{As}_2\text{O}_7$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in acids.  
 $(\text{UO}_2)_2(\text{AsO}_4)_2 + 12\text{H}_2\text{O}$ .  
 Min. *Trogerite*.
- Vanadium dihydrogen arsenate**,  $(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 4\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Friedheim, B. 23. 2600.)  
 See *Arseniovanadic acid*.
- Vanadium zinc arsenate**,  $(\text{VO}_2)_2\text{ZnH}_2(\text{AsO}_4)_2 + 5\frac{1}{2}\text{H}_2\text{O}$ , and  $2(\text{VO}_2)_2\text{H}_2\text{AsO}_4 + 6\frac{1}{2}\text{H}_2\text{O}$ .  
 See *Arseniovanadate, zinc*.
- Vanadyl arsenate**,  $(\text{VO})_2\text{HAsO}_4 + \text{H}_2\text{O}$ .  
 Very slowly sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol; easily sol. in  $\text{HCl} + \text{Aq}$ . (Berzelius.)  
 Composition given by Friedheim (B. 23. 2600).
- Yttrium arsenate**,  $\text{YtHAsO}_4$ .  
 Ppt. Insol. in acetic, easily sol. in mineral acids.
- Zinc arsenate, basic**,  $4\text{ZnO}, \text{As}_2\text{O}_3 + \text{H}_2\text{O}$ .  
 (Friedel, J. B. 1866. 949.)  
 Min. *Adumite*. Easily sol. in dil.  $\text{HCl} + \text{Aq}$ , and is attacked by  $\text{HC}_2\text{H}_3\text{O}_2$ .
- Zinc arsenate**,  $\text{Zn}_3(\text{AsO}_4)_2$ .  
 (deSchulten, Bull. Soc. (3) 2. 300.)  
 $+ 3\text{H}_2\text{O}$ . Ppt. Sol. in  $\text{HNO}_3$ , and  $\text{H}_2\text{AsO}_4 + \text{Aq}$ . (Köttig, J. pr. 48. 182.)  
 $+ 8\text{H}_2\text{O}$ .  
 Min. *Köttigite*.
- Zinc arsenate, acid**,  $\text{Zn}_3\text{H}_2(\text{AsO}_4)_4$ .  
 Easily sol. in cold  $\text{HCl} + \text{Aq}$ , less easily in cold  $\text{HNO}_3$ . Sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  (Gorguel, Dissert, 1894.)  
 $+ 3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_2\text{AsO}_4$ , or  $\text{HNO}_3 + \text{Aq}$ . (Mitscherlich.)  
 $+ 5\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl} + \text{Aq}$ . (Demel, B. 12. 1279.) Could not be obtained, (Coloriano, Bull. Soc. (2) 45. 709.)  
 $2\text{ZnO}, \text{As}_2\text{O}_3$ . Very slowly decomp. by cold, rapidly by boiling  $\text{H}_2\text{O}$ . (Lefèvre.)  
 $\text{ZnHAsO}_4 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Debray, Bull. Soc. (2) 2. 14.)  
 Decomp. by hot  $\text{H}_2\text{O}$  into  $4\text{ZnO}, \text{As}_2\text{O}_3 + \text{H}_2\text{O}$ . (Coloriano, C. R. 103. 273.)  
 $\text{Zn}(\text{ZnOH})_2\text{As}_2\text{O}_7 + 7\text{H}_2\text{O}$  (Gorgeul.)
- Zinc arsenate ammonia**,  $\text{Zn}_3(\text{AsO}_4)_2, 2\text{NH}_3 + 3\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ ; sol. in acids,  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Bette, A. 15. 141.)
- Zirconium arsenate**,  $2\text{ZrO}_2, \text{As}_2\text{O}_3 + \frac{1}{2}\text{H}_2\text{O} = (\text{ZrO})\text{HAsO}_4 + \frac{3}{2}\text{H}_2\text{O}$ .  
 Ppt. Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ . (Paykull, B. 6. 1467.)
- Perarsenic acid**.  
 See *Perarsenic acid*.
- Arsenicotungstic Acid**.  
 See *Perarsenic acid*.
- Ammonium vanadium arsenicotungstate**.  
 See *Arsenicovanadicotungstate, ammonium*.
- Arsenicovanadicotungstic acid**.  
 See *Arsenicovanadicotungstate, ammonium*.
- Ammonium arsenicovanadicotungstate**,  
 $16(\text{NH}_4)_2\text{O}, 5\text{As}_2\text{O}_3, 15\text{V}_2\text{O}_3, 26\text{WO}_3 + 101\text{H}_2\text{O}$ .  
 Sl. sol. in cold, readily sol. in hot  $\text{H}_2\text{O}$ . (Rogers, J. Am. Chem. Soc. 1903, 25. 308.)
- Arsenimide**,  $\text{As}_2(\text{NH})_2$ .  
 Decomp. by  $\text{H}_2\text{O}$ . (Hugot, C. R. 1904, 139. 56.)

**Arsenioarsenic acid,  $3\text{As}_2\text{O}_3$ ,  $2\text{As}_2\text{O}_5$  +  $3\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Joly, C. R. 100. 1221.)  
 $3\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_5$  +  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Joly.)

$\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_5$  +  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Joly.)

See also Arsenic trioxide pentoxide.

**Arseniochromic acid.****Ammonium arseniochromate,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $4\text{CrO}_3$  +  $\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . (Friedheim and Mozkin, Z. anorg. 1894, 6. 280.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $8\text{CrO}_3$ . Decomp. by recryst. from  $\text{H}_2\text{O}$ . (Friedheim and Mozkin, Z. anorg. 1894, 6. 281.)

**Potassium arseniochromate,  $2\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $4\text{CrO}_3$ .**

Decomp. by recryst. from  $\text{H}_2\text{O}$ . (Friedheim and Mozkin, Z. anorg. 1894, 6. 275.)

$2\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $4\text{CrO}_3$  +  $\text{H}_2\text{O}$ . Decomp. by recryst. from  $\text{H}_2\text{O}$ . (Friedheim and Mozkin, l. c.)

**Arseniomolybdic acid,  $\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3$  +  $10\text{H}_2\text{O}$ .**

By recryst. from  $\text{H}_2\text{O}$  the comp. with  $18\text{H}_2\text{O}$  is formed. (Pufahl, Dissert. 1888.)

+  $16\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Debray.)

+  $18\text{H}_2\text{O}$ . Completely sol. in  $\text{H}_2\text{O}$ . Sp. gr. of sat. solution at  $18.8^\circ$  is 2.21. Easily sol. in abs. alcohol. Insol. in  $\text{CS}_2$ , liq. hydrocarbons and  $\text{CHCl}_3$ . (Pufahl, l. c.)

$\text{As}_2\text{O}_3$ ,  $7\text{MoO}_3$  +  $14\text{H}_2\text{O}$ . (Seyberth, B. 7. 391.)

$\text{As}_2\text{O}_3$ ,  $18\text{MoO}_3$  +  $28\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . Sp. gr. of sat. solution at  $18.3^\circ$  = 2.45 and 1 cc. contains 2.16 g. acid. Easily sol. in absolute alcohol; insol. in  $\text{CS}_2$ , liquid hydrocarbons and  $\text{CHCl}_3$ . (Pufahl, l. c.)

Sol. in ether with subsequent separation into two layers. See Phosphotungstic acid. (Drechsel, B. 20. 1452.)

+  $38\text{H}_2\text{O}$ . Efflorescent. When recryst. comp. with  $28\text{H}_2\text{O}$  is formed. (Pufahl, l. c.)

$\text{As}_2\text{O}_3$ ,  $20\text{MoO}_3$  +  $27\text{H}_2\text{O}$ . Sl. sol. in  $\text{HNO}_3$  + Aq. (Debray, C. R. 78. 1408.)

**Ammonium arseniomolybdate,  $(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $2\text{MoO}_3$  +  $3\text{H}_2\text{O}$ .**

(Friedheim, Z. anorg. 1894, 6. 28.)

+  $4\text{H}_2\text{O}$ . (Friedheim, l. c.)

$(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3$  +  $2\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ ; sol. in acids. (Debray.)

+  $4\text{H}_2\text{O}$ . Sl. sol. in cold, very easily sol. in hot  $\text{H}_2\text{O}$ . (Pufahl, l. c.)

$2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3$  +  $6\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Cannot be recryst. therefrom. (Pufahl.)

+  $12\text{H}_2\text{O}$ . (Friedheim, Z. anorg. 1894, 6. 31.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3$  +  $4\text{H}_2\text{O}$ . (Friedheim, l. c.)

+  $8\text{H}_2\text{O}$ . (Friedheim, l. c.)

$(\text{NH}_4)_2\text{O}$ ,  $2\text{H}_2\text{O}$ ,  $7\text{MoO}_3$ ,  $\text{As}_2\text{O}_3$  +  $4\text{H}_2\text{O}$

Sol. in hot  $\text{H}_2\text{O}$ . (Seyberth, B. 7. 391.)

Not obtained. (Pufahl.)

$7(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_3$ ,  $14\text{MoO}_3$  +  $28\text{H}_2\text{O}$ .

(Friedheim, l. c.)

$5(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $16\text{MoO}_3$  +  $5\text{H}_2\text{O}$ . (Friedheim, Z. anorg. 1894, 6. 31.)

$5(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $16\text{MoO}_3$  +  $9\text{H}_2\text{O}$ . Nearly

insol. in cold, sol. in boiling  $\text{H}_2\text{O}$ . Easily sol.

in  $\text{NH}_4\text{OH}$  + Aq. (Gibbs, Am. Ch. J. 3. 402.)

+  $12\text{H}_2\text{O}$ . (Pufahl, l. c.)

$2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $18\text{MoO}_3$  +  $17\text{H}_2\text{O}$ .

(Pufahl, l. c.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $18\text{MoO}_3$  +  $14\text{H}_2\text{O}$ . Very

sol. in  $\text{H}_2\text{O}$  and alcohol. (Kehrmann, Z.

anorg. 1894, 7. 421.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $20\text{MoO}_3$ . Easily sol. in

$\text{H}_2\text{O}$ . (Debray, C. R. 78. 1408.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $24\text{MoO}_3$  +  $12\text{H}_2\text{O}$ . De-

composed by  $\text{H}_2\text{O}$ , especially when boiling.

Easily sol. in  $\text{NH}_4\text{OH}$  + Aq, less easily sol. in

warm  $\text{H}_2\text{SO}_4$  and boiling  $\text{H}_2\text{AsO}_4$  + Aq. Sl.

sol. in molybdic acid + Aq,  $\text{HNO}_3$ , and conc.

$\text{NH}_4\text{NO}_3$  + Aq. (Pufahl, l. c.)

**Barium arseniomolybdate,  $\text{BaO}$ ,  $\text{As}_2\text{O}_3$ ,**

$6\text{MoO}_3$  +  $10\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Partially decomp. by boiling. (Pufahl, l. c.)

$3\text{BaO}$ ,  $\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3$ . Sl. sol. in  $\text{H}_2\text{O}$ .

(Pufahl, l. c.)

$3\text{BaO}$ ,  $\text{As}_2\text{O}_3$ ,  $7\text{MoO}_3$ . Ppt. (Seyberth.)

$3\text{BaO}$ ,  $\text{As}_2\text{O}_3$ ,  $18\text{MoO}_3$ . Decomp. by  $\text{H}_2\text{O}$ .

(Pufahl, l. c.)

**Cadmium arseniomolybdate,  $\text{CdO}$ ,  $2\text{H}_2\text{O}$ ,**

$\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3$  +  $11\text{H}_2\text{O}$ .

(Pufahl.)

$3\text{CdO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $18\text{MoO}_3$  +  $33\text{H}_2\text{O}$ .

(Pufahl.)

**Cæsium arseniomolybdate,  $\text{Cs}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,**

$6\text{MoO}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Pufahl, l. c.)

$4\text{Cs}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $26\text{MoO}_3$  +  $15\text{H}_2\text{O}$ . Ppt.

(Ephraim, Z. anorg. 1910, 65. 246.)

**Calcium arseniomolybdate,  $\text{CaO}$ ,  $\text{As}_2\text{O}_3$ ,**

$6\text{MoO}_3$  +  $10\text{H}_2\text{O}$ .

Rather difficultly sol. in cold  $\text{H}_2\text{O}$ . (Pufahl, l. c.)

$3\text{CaO}$ ,  $\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3$ . As Ba salt. (Pufahl, l. c.)

$3\text{CaO}$ ,  $\text{As}_2\text{O}_3$ ,  $18\text{MoO}_3$  +  $32\text{H}_2\text{O}$ . Very sol.

in  $\text{H}_2\text{O}$ . Solution sat. at  $18^\circ$  has sp. gr. =

2.163. (Pufahl, l. c.)

**Cobalt arseniomolybdate,  $\text{CoO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,**

$6\text{MoO}_3$  +  $11\text{H}_2\text{O}$ .

(Pufahl.)

$3\text{CoO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $18\text{MoO}_3$  +  $33\text{H}_2\text{O}$ .

(Pufahl.)

**Cupric arseniomolybdate,  $\text{CuO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,**

$6\text{MoO}_3$  +  $15\text{H}_2\text{O}$ . (Pufahl.)

$3\text{CuO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $18\text{MoO}_3$  +  $34\text{H}_2\text{O}$ .

(Pufahl.)

**Lithium arseniomolybdate**,  $\text{Li}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 14\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Pufahl, *l.c.*)

$3\text{Li}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 34\text{H}_2\text{O}$ . Solution sat. at  $15^\circ$  has sp. gr. of 2.481. (Pufahl, *l.c.*)

**Magnesium arseniomolybdate**,  $\text{MgO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 13\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Pufahl, *l.c.*)

$3\text{MgO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 36\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Pufahl, *l.c.*)

**Manganese arseniomolybdate**,  $\text{MnO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$ .

(Pufahl.)

$3\text{MnO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 33\text{H}_2\text{O}$ . (Pufahl.)

**Nickel arseniomolybdate**,  $\text{NiO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$ .

(Pufahl.)

$3\text{NiO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 34\text{H}_2\text{O}$ . (Pufahl.)

**Potassium arseniomolybdate**,  $\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{MoO}_3 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Friedheim, *Z. anorg.* 2. 314.)

$\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 5\text{H}_2\text{O}$ . Sol. in hot  $\text{H}_2\text{O}$  without decomp. (Friedheim, *Z. anorg.* 1892, 2. 330.)

$\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 25\text{H}_2\text{O}$ . Easily sol. in cold  $\text{H}_2\text{O}$ . Decomp. on dilution. (Pufahl, *l.c.*)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 26\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Pufahl, *l.c.*)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $20\text{MoO}_3$ . Insol. in  $\text{H}_2\text{O}$ . (Debray, *C. R.* 78. 1408.)

$3\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $24\text{MoO}_3 + 12\text{H}_2\text{O}$ . Somewhat sol. in  $\text{H}_2\text{O}$  acidified with  $\text{HNO}_3$ . (Pufahl, *l.c.*)

**Rubidium arseniomolybdate**,  $3\text{Rb}_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ ,  $5\text{MoO}_3 + 9\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Ephraim, *Z. anorg.* 1910, 65. 241.)

$\text{Rb}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Pufahl, *l.c.*)

$4\text{Rb}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 40\text{H}_2\text{O}$ . Pptd. (Ephraim, *Z. anorg.* 1910, 65. 241-4.)

**Silver arseniomolybdate**,  $3\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + z\text{H}_2\text{O}$ .

(Pufahl, Leipzig, 1888.)

$6\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 22\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH}$  and in dil.  $\text{HNO}_3$ . (Pufahl, *l.c.*)

$7\text{Ag}_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $36\text{MoO}_3 + 30\text{H}_2\text{O}$ . Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$  strongly acidified with  $\text{HNO}_3$ . (Pufahl, *l.c.*)

**Sodium arseniomolybdate**,  $\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{MoO}_3 + 8\text{H}_2\text{O}$ .

(Friedheim, *Z. anorg.* 1892, 2. 357.)

$\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 12\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . Solution sat. at  $19.8^\circ$  has sp. gr. = 1.678. (Friedheim, *l.c.*)

$3\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O} + 12\text{H}_2\text{O}$ , and  $+13\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . (Pufahl, *l.c.*)

$3\text{Na}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 24\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Pufahl, *l.c.*)

$+30\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . (Pufahl, *l.c.*)

**Strontium arseniomolybdate**,  $\text{SrO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 10\text{H}_2\text{O}$ .

As Ba salt. (Pufahl, *l.c.*)

$3\text{SrO}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3$ . As Ba salt. (Pufahl, *l.c.*)

$3\text{SrO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 32\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Pufahl, *l.c.*)

**Thallium arseniomolybdate**,  $6\text{Tl}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + z\text{H}_2\text{O}$ .

Ppt. (Pufahl.)

$3\text{Tl}_2\text{O}$ ,  $3\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 3\text{H}_2\text{O}$ . Ppt. (Pufahl.)

**Zinc arseniomolybdate**,  $\text{ZnO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $6\text{MoO}_3 + 11\text{H}_2\text{O}$ .

(Pufahl.)

$3\text{ZnO}$ ,  $\text{As}_2\text{O}_5$ ,  $18\text{MoO}_3 + 37\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Pufahl.)

#### Arseniophosphovanadicotungstic acid.

**Ammonium arseniophosphovanadicotungstate**,  $88(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $12\text{P}_2\text{O}_5$ ,  $69\text{V}_2\text{O}_5$ ,  $148\text{WO}_3 + 484\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol and ether. (Rogers, *J. Am. Chem. Soc.* 1903, 25. 313.)

#### Arseniophosphovanadovanadiotungstic acid.

**Ammonium arseniophosphovanadovanadiotungstate**,  $99(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_5$ ,  $12\text{P}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$ ,  $66\text{V}_2\text{O}_5$ ,  $191\text{WO}_3 + 522\text{H}_2\text{O}$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ . (Rogers, *J. Am. Chem. Soc.* 1903, 25. 314.)

#### Arseniophosphovanadiotungstic acid.

**Ammonium arseniophosphovanadiotungstate**,  $82(\text{NH}_4)_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ ,  $12\text{P}_2\text{O}_5$ ,  $52\text{V}_2\text{O}_5$ ,  $201\text{WO}_3 + 567\text{H}_2\text{O}$ .

Very sol. in warm  $\text{H}_2\text{O}$ . Insol. in organic solvents. (Rogers, *J. Am. Chem. Soc.* 1903, 25. 312.)

#### Arseniosulphuric acid.

**Ammonium arseniosulphate**,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{SO}_3 + 3\text{H}_2\text{O}$ .

Can be recryst. from  $\text{H}_2\text{O}$ . (Friedheim and Mozkin, *Z. anorg.* 1894, 6. 290.)

**Potassium arseniosulphate**,  $2\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $2\text{SO}_3 + 3\text{H}_2\text{O}$ .

(Friedheim and Mozkin, *Z. anorg.* 1894, 6. 289.)

$5\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_5$ ,  $8\text{SO}_3 + 6\text{H}_2\text{O}$ . (Friedheim and Mozkin, *Z. anorg.* 1894, 6. 291.)

**Sodium arseniosulphate**,  $2\text{Na}_2\text{O}, \text{As}_2\text{O}_3, 2\text{SO}_3 + 3\text{H}_2\text{O}$ .

(Friedheim and Mozkin, *Z. anorg.* 1894, **6**, 290.)

### Arseniotelluric acid.

**Ammonium arseniotellurate**,  $2(\text{NH}_4)_2\text{O}, \text{As}_2\text{O}_3, \text{TeO}_3 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Weinland, *Z. anorg.* 1901, **28**, 65.)

$4(\text{NH}_4)_2\text{O}, 3\text{As}_2\text{O}_3, 2\text{TeO}_3 + 11\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Weinland.)

**Sodium arseniotellurate**,  $2\text{Na}_2\text{O}, \text{As}_2\text{O}_3, 2\text{TeO}_3 + 9\text{H}_2\text{O}$ .

Ppt. (Weinland, *l.c.*)

**Arseniotungstic acid**,  $3\text{H}_2\text{O}, \text{As}_2\text{O}_3, 16\text{WO}_3 + 32\text{H}_2\text{O} = \text{H}_2\text{AsW}_3\text{O}_{23} + 16\text{H}_2\text{O}$  ( $\alpha$ -anhydroarsenioluteotungstic acid).

Sol. in  $\text{H}_2\text{O}$ . (Kehrmann, *A.* **245**, 45.)

$3\text{H}_2\text{O}, \text{As}_2\text{O}_3, 19\text{WO}_3$  (?). Sp. gr. of sat. solution in  $\text{H}_2\text{O}$  is 3.279. (Fremery, *B.* **17**, 296.)

Is a mixture containing principally  $\text{H}_2\text{AsW}_3\text{O}_{23} + 16\text{H}_2\text{O}$ . (Kehrmann.)  
 $\text{As}_2\text{O}_3, 18\text{WO}_3 + x\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Kehrmann, *Z. anorg.* 1899, **22**, 292.)

### Aluminum ammonium arseniotungstate.

See **Aluminicoarseniotungstate, ammonium**.

**Ammonium arseniotungstate**,  $4(\text{NH}_4)_2\text{O}, 2\text{H}_2\text{O}, \text{As}_2\text{O}_3, 6\text{WO}_3 + 3\text{H}_2\text{O}$ .

Sl. sol. in cold  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$ ; easily sol. in boiling  $\text{H}_2\text{O}$ . (Gibbs, *Proc. Am. Acad.* **16**, 135.)

$7(\text{NH}_4)_2\text{O}, \text{As}_2\text{O}_3, 14\text{WO}_3 + 17\text{H}_2\text{O}$ . Very sl. sol. even in boiling  $\text{H}_2\text{O}$ . (Fremery, *l.c.*)

$3(\text{NH}_4)_2\text{O}, \text{As}_2\text{O}_3, 16\text{WO}_3 + 16\text{H}_2\text{O} = (\text{NH}_4)_3\text{AsW}_3\text{O}_{23} + 8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Kehrmann.)

$5(\text{NH}_4)_2\text{O}, \text{As}_2\text{O}_3, 17\text{WO}_3 + 8\text{H}_2\text{O}$ . Can be recryst. from  $\text{H}_2\text{O}$  without decomp. Decomp. by long boiling with  $\text{H}_2\text{O}$ . (Kehrmann, *Z. anorg.* 1899, **22**, 294.)

$3(\text{NH}_4)_2\text{O}, \text{As}_2\text{O}_3, 18\text{WO}_3 + 14$ , or  $18\text{H}_2\text{O}$ . Very sol. in cold  $\text{H}_2\text{O}$ . Can be recryst. from  $\text{H}_2\text{O}$ . (Kehrmann, *l.c.*)

$3(\text{NH}_4)_2\text{O}, \text{As}_2\text{O}_3, 21\text{WO}_3 + x\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . Easily decomp. on recryst. (Kehrmann, *l.c.*)

$3(\text{NH}_4)_2\text{O}, \text{As}_2\text{O}_3, 24\text{WO}_3 + 12\text{H}_2\text{O}$ . More sol. in  $\text{H}_2\text{O}$  than corresponding phosphotungstate. (Kehrmann, *l.c.*)

**Barium arseniotungstate**,  $2\text{BaO}, \text{As}_2\text{O}_3, 16\text{WO}_3 + x\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Péchar, *A. ch.* (6) **22**, 262.)

$7\text{BaO}, \text{As}_2\text{O}_3, 22\text{WO}_3 + 54\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Can be recryst. therefrom. (Kehrmann, *l.c.*)

**Potassium arseniotungstate**,  $3\text{K}_2\text{O}, 3\text{H}_2\text{O}, \text{As}_2\text{O}_3, 6\text{WO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Readily sol. in alkali hydroxides +  $\text{Aq}$ . (Gibbs.)

$3\text{K}_2\text{O}, \text{As}_2\text{O}_3, 16\text{WO}_3 + 16\text{H}_2\text{O} = \text{K}_3\text{AsW}_3\text{O}_{23} + 8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Kehrmann.)

$5\text{K}_2\text{O}, \text{As}_2\text{O}_3, 17\text{WO}_3 + 22\text{H}_2\text{O}$ . Scarcely sol. in cold  $\text{H}_2\text{O}$ . (Kehrmann, *Z. anorg.* 1899, **22**, 295.)

$3\text{K}_2\text{O}, \text{As}_2\text{O}_3, 18\text{WO}_3 + 14\text{H}_2\text{O}$ . Efflorescent. (Kehrmann, *l.c.*)

$3\text{K}_2\text{O}, \text{As}_2\text{O}_3, 19\text{WO}_3 + 16\text{H}_2\text{O}$  (?). Sol. in  $\text{H}_2\text{O}$ . (Fremery.)

**Silver arseniotungstate**,  $\text{Ag}_3\text{AsW}_3\text{O}_{23}$ .

Insol. in  $\text{H}_2\text{O}$  (Kehrmann, *A.* **245**, 55); perhaps identical with—

$6\text{Ag}_2\text{O}, \text{As}_2\text{O}_3, 16\text{WO}_3 + 11\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Gibbs.)

**Sodium arseniotungstate**,  $3\text{Na}_2\text{O}, \text{As}_2\text{O}_3, 3\text{WO}_3 + 20\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Lefort, *C. R.* **92**, 1461.)

### Arsenious acid, $\text{HAsO}_2$ .

Solubility of  $\text{HAsO}_2$  in amyl alcohol +  $\text{Aq}$ . at  $25^\circ$ .

$a_w$  = mol. of  $\text{HAsO}_2$  in 1 l. of  $\text{H}_2\text{O}$ .

$a_a$  = mol. of  $\text{HAsO}_2$  in 1 l. of amyl alcohol.

$h$  = partition coefficient.

$a_w$	$a_a$	$h$
0.0449	0.0082	5.48
0.0446	0.0083	5.38
0.0887	0.0164	5.41
0.0892	0.0161	5.53
0.1800	0.0324	5.55

(Auerbach, *Z. anorg.* 1903, **37**, 356.)

Solubility of  $\text{HAsO}_2$  in sat.  $\text{H}_3\text{BO}_3 + \text{Aq}$  and amyl alcohol.

$a_w$  = mol. of  $\text{HAsO}_2$  in 1 l. of  $\text{H}_2\text{O}$ .

$a_a$  = mol. of  $\text{HAsO}_2$  in 1 l. of amyl alcohol.

$h$  = partition coefficient.

$a_w$	$a_a$	$h$
0.0859	0.0161	5.33
0.1720	0.0321	5.35

(Auerbach, *l.c.*)

Insol. in ethyl acetate. (Naumann, *B.* 1904, **37**, 3601.)

See **Arsenic trioxide**.

### Arsenites.

All arsenites, except those of the alkali metals, are partially or wholly insol. in  $\text{H}_2\text{O}$ , but easily sol. in acids; several are sol. in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4\text{Cl} + \text{Aq}$ .

All basic arsenites are sol. in acids except those that give an insol. salt with the bases. Many are sol. in excess of  $\text{As}_2\text{O}_3 + \text{Aq}$ .

**Aluminum arsenite**,  $\text{Al}_2\text{O}_3, \text{As}_2\text{O}_3$ .

Sl. sol. in boiling  $\text{H}_2\text{O}$ . Easily sol. in  $\text{NaOH} + \text{Aq}$  and in acids. (Reichard, B. 1894, **27**, 1029.)

**Aluminum arsenite iodide**,  $\text{AlI}_3, 6\text{As}_2\text{O}_3 + 16\text{H}_2\text{O}$ .

(Grühl, Dissert. 1897.)

**Ammonium arsenite**,  $\text{NH}_4\text{AsO}_2$ .

Very sol. in  $\text{H}_2\text{O}$ . (Luynes, J. pr. **72**, 180.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014); (Naumann, B. 1904, **37**, 4328.)

$(\text{NH}_4)_2\text{AsO}_3$  (?). Sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, J. pr. 1895, (2) **51**, 11.)

$(\text{NH}_4)_4\text{As}_2\text{O}_5$ . Very sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol or ether. (Stein, A. **74**, 218.)

Could not be obtained. (Stavenhagen.)

**Ammonium arsenite bromide**,  $2\text{As}_2\text{O}_3, \text{NH}_4\text{Br}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Rüdorff, B. **19**, 2679.)

**Ammonium arsenite chloride**,  $\text{As}_2\text{O}_3, \text{NH}_4\text{Cl}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in warm dil.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rüdorff.)

**Ammonium arsenite iodide**,  $2\text{As}_2\text{O}_3, \text{NH}_4\text{I}$ .

Sl. sol. in boiling  $\text{H}_2\text{O}$ . Sol. in warm dil.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rüdorff.)

**Antimony arsenite** (?).

Ppt. Sol. in a small amount  $\text{H}_2\text{O}$ , but insol. in a large quantity. (Berzelius.)

Completely sol. in  $\text{KOH} + \text{Aq}$ . (Reynolds.)

**Barium arsenite**,  $\text{Ba}(\text{AsO}_2)_2$ .

Easily sol. in  $\text{H}_2\text{O}$  when recently pptd., but insol. after being dried. Pptd. from aqueous solution by boiling. (Filhol, A. **68**, 308.)

Only sl. sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, J. pr. 1895, (2) **51**, 18.)

$\text{Ba}_3(\text{AsO}_3)_2$ . Sl. sol. in cold  $\text{H}_2\text{O}$ ; sol. in hot  $\text{H}_2\text{O}$  and dil. acids. (Stavenhagen, J. pr. 1895, (2) **51**, 17.)

$\text{BaH}_4(\text{AsO}_3)_2$ . Ppt. (Bloxam, Chem. Soc. **15**, 281.)

$+3\text{H}_2\text{O}$ . Moderately sol. in cold, more easily sol. in hot  $\text{H}_2\text{O}$ . Insol. in alcohol. (Perper, Dissert. 1894.)

$\text{Ba}_2\text{As}_2\text{O}_5 + 2\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, J. pr. 1895, (2) **51**, 18.)

$+4\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; also somewhat sol. in alcohol. (Stein, A. **74**, 218.)

Sl. sol. in  $\text{H}_2\text{AsO}_4 + \text{Aq}$  and  $\text{BaO}_2\text{H}_2 + \text{Aq}$ . (Dumas.)

Sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Wackenroder, A. **41**, 316.)

Not pptd. from solutions containing Na citrate. (Spiller.)

$\text{BaAs}_2\text{O}_7$ . Sol. in  $\text{H}_2\text{O}$ . Less sol. in alcohol. (Reichard, B. 1894, **27**, 1033.)

**Bismuth arsenite**,  $\text{BiAsO}_3 + 5\text{H}_2\text{O}$  (?).

Easily sol. in  $\text{HNO}_3 + \text{Aq}$ . (Schneider, J. p. (2) **20**, 419.)

Sl. sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, J. pr. 1895, (2) **51**, 35.)

**Cadmium arsenite**,  $\text{Cd}_2(\text{AsO}_3)_2$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  and dil. acids. (Stavenhagen, *l.c.*)

$\text{Cd}_2\text{As}_2\text{O}_5$ . Ppt. (Reichard, B. 1898, **31**, 2168.)

Sol. in acids without decomp.; insol. in alkalis. (Reichard, B. 1894, **27**, 1033.)

$5\text{CdO}, \text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$ . Not attacked by  $\text{KOH}$ ,  $\text{Ba}(\text{OH})_2$  or alkali carbonates  $+ \text{Aq}$ . Insol. in  $\text{KCN} + \text{Aq}$ . (Reichard, Ch. Z. 1902, **26**, 1145.)

**Cæsium arsenite bromide**,  $\text{As}_2\text{O}_3, \text{CsBr}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wheeler, Z. anorg. **4**, 451.)

**Cæsium arsenite chloride**,  $\text{As}_2\text{O}_3, \text{CsCl}$ .

As above.

**Cæsium arsenite iodide**,  $\text{As}_2\text{O}_3, \text{CsI}$ .

As above.

**Calcium arsenite**,  $\text{Ca}(\text{AsO}_2)_2$ .

Somewhat sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{Ca}(\text{OH})_2 + \text{Aq}$  or  $\text{As}_2\text{O}_3 + \text{Aq}$ . (Simon, Pogg. **47**, 417.)

$\text{Ca}_3(\text{AsO}_3)_2$ . Ppt. (Kühn, J. B. **1852**, 379.)

Only sl. sol.  $\text{H}_2\text{O}$ ; readily sol. in dil. acids. (Stavenhagen, *l.c.*)

Sol. in  $\text{H}_2\text{O}$ , insol. in alcohol. (Reichard, B. 1894, **27**, 1036.)

$3\text{CaO}, 2\text{As}_2\text{O}_3 + 3\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ ; sol. in  $\text{As}_2\text{O}_3 + \text{Aq}$ . (Stein.)

$\text{CaH}_4(\text{AsO}_3)_2 + x\text{H}_2\text{O}$ . Moderately sol. in  $\text{H}_2\text{O}$ . Insol. in abs. alcohol. (Perper, Dissert. 1894.)

$\text{Ca}_2\text{As}_2\text{O}_5$ . Sl. sol. in  $\text{H}_2\text{O}$ ; 1 pt. in 3000-4000 pts.  $\text{H}_2\text{O}$ . Alkali chlorides increase solubility slightly. (Stavenhagen, *l.c.*)

Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in  $\text{H}_2\text{O}$  containing  $\text{CaO} \cdot \text{H}_2\text{O}$ . (Berzelius.)

Not pptd. in presence of 4000-5000 pts.  $\text{H}_2\text{O}$ . (Harting, Lassaing.)

Not pptd. from solutions containing  $\text{NH}_4$  salts; and when pptd. is sol. in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ ,  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ , and  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Gieseke and Schweigger.)

Sol. in  $\text{NH}_4\text{AsO}_3 + \text{Aq}$ . (Schweigger.)

Sol. in  $\text{CaCl}_2 + \text{Aq}$ . (Ordway.)

Easily sol. in dil. acids. Not pptd. from solutions containing sodium citrate. (Spiller.)

**Calcium arsenite iodide**,  $\text{CaI}_2, 3\text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. on heating. (Grühl, Dissert. 1897.)

**Chromic arsenite**,  $\text{CrAsO}_3$ .

Sol. in  $\text{H}_2\text{O}$ , but slowly decomp. by boiling. (Neville, C. N. **34**, 220.)

Sol. in  $\text{HCl}$ ; repptd. by  $\text{NH}_4\text{OH} + \text{Aq}$ ; sol. in  $\text{KOH} + \text{Aq}$ . (Reichard, B. 1894, **27**, 1028.)

**Cobaltous arsenite basic**,  $7\text{CoO}, \text{As}_2\text{O}_3$ .

Very sol. in dil., difficultly sol. in conc.  $\text{H}_2\text{SO}_4$ . Sol. in conc.  $\text{NaOH}$  and in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Reichard, Z. anal. 1903, **42**, 10.)

**Cobaltous arsenite,  $3\text{CoO} \cdot \text{As}_2\text{O}_3$ .**

Sol.  $\text{KOH} + \text{Aq}$  with decomp. (Identical with salt of Girard). (Reichard, B. 1894, **27**, 1031.)

+  $4\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in acids. (Stavenhagen, J. pr. 1895, (2) **51**, 39.)

$3\text{CoO}$ ,  $2\text{As}_2\text{O}_3 + 4\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ . (Girard, C. R. 1852, **34**, 918.)

$\text{Co}_2\text{H}_3(\text{AsO}_3)_4$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Proust.)

Only sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  when formed in a solution containing an excess of those reagents. (Reynoso, C. R. **31**, 68.)

$\text{Co}_2\text{As}_2\text{O}_5$ . Ppt. (Reichard, B. 1898, **31**, 2165.)

Sol. in  $\text{HNO}_3$  and  $\text{HCl} + \text{Aq}$ . (Proust.)

**Cupric arsenite,  $\text{Cu}(\text{AsO}_2)_2$ .**

(Avery, J. Am. Chem. Soc. 1906, **28**, 1161.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, **20**, 827.)

+  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, l.c.)

+  $2\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Stavenhagen, l.c.)

$3\text{CuO}$ ,  $\text{As}_2\text{O}_3$ . Ppt. (Stavenhagen, l.c.)

$2\text{CuO} \cdot \text{As}_2\text{O}_3$ . (Scheele's green.) Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{KOH} + \text{Aq}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ , and in most acids. Formula is  $\text{Cu}_3(\text{AsO}_3)_2 + 2\text{H}_2\text{O}$ . (Sharples, C. N. **35**, 89.)

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp. Sol. in  $\text{KOH} + \text{Aq}$  with decomp. (Reichard, B. 1894, **27**, 1026.)

Insol. in pyridine. (Schroeder, Dissert. 1901.)

$5\text{CuO}$ ,  $\text{As}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ , sol. in acids,  $\text{NH}_4\text{OH} + \text{Aq}$  and conc.  $\text{MOH} + \text{Aq}$ . (Reichard, Ch. Z. 1902, **26**, 1142.)

$x\text{CuO}$ ,  $y\text{As}_2\text{O}_3$ . Min. *Trippkëite*. Easily sol. in  $\text{HNO}_3$  and in  $\text{HCl} + \text{Aq}$ .

**Didymium arsenite,  $\text{Di}_2\text{H}_3(\text{AsO}_3)_3$ .**

Ppt. (Frerichs and Smith, A. **191**, 355.)

Does not exist. (Cleve, B. **11**, 910.)

**Glucinum arsenite iodide,  $\text{GlH}_3$ ,  $3\text{As}_2\text{O}_3 + 8\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Grühl, Dissert. 1897.)

**Gold (aurous) arsenite,  $3\text{Au}_2\text{O} \cdot \text{As}_2\text{O}_3$ .**

Decomp. by light. (Reichard, B. 1894, **27**, 1027.)

**Gold (auric) arsenite,  $\text{AuAsO}_4 + \text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$  and dil. acids. (Stavenhagen, J. pr. 1895, (2) **51**, 28.)

**Iron (ferrous) arsenite,  $\text{FeO} \cdot \text{As}_2\text{O}_3$ .**

Decomp. in the air when moist; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  when freshly pptd. (Reichard, B. 1894, **27**, 1029-30.)

$\text{Fe}_2\text{As}_2\text{O}_5$ . Ppt. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; insol. in  $\text{NH}_3$ , arsenite, or other  $\text{NH}_4$  salts +  $\text{Aq}$ . (Wittstein.)

**Iron (ferric) arsenite, basic,  $4\text{Fe}_2\text{O}_3 \cdot \text{As}_2\text{O}_3 + 5\text{H}_2\text{O}$ .**

Ppt.  $\text{H}_2\text{O}$  extracts  $\text{As}_2\text{O}_3$ . Sol. in conc. acids with separation of  $\text{As}_2\text{O}_3$ . Acetic acid is without action. (Bunsen and Berthold, 1834.)

Sol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ .

**Iron (ferric) arsenite,  $\text{Fe}_2\text{O}_3 \cdot \text{As}_2\text{O}_3$ .**

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  when freshly pptd. (Reichard, B. 1894, **27**, 1030.)

$\text{Fe}_4\text{As}_2\text{O}_9$ . Ppt. (Reichard, B. 1898, **31**, 2170.)

+  $7\text{H}_2\text{O}$ . Sol. in  $\text{NaOH}$ , and  $\text{KOH} + \text{Aq}$ .

"Ferric arsenite" is sl. sol. in  $\text{Al}_2(\text{SO}_4)_3 + \text{Aq}$ . (Kynaston, Dingl. **235**, 326.)

**Lanthanum arsenite,  $\text{La}_2\text{H}_3(\text{AsO}_3)_3$ .**

Ppt. (Frerichs and Smith, A. **191**, 355.)

Does not exist. (Cleve, B. **11**, 910.)

**Lead arsenite,  $\text{Pb}(\text{AsO}_2)_2 + x\text{H}_2\text{O}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{KOH}$ , but sol. in  $\text{NaOH} + \text{Aq}$ . (Berzelius.)

$\text{Pb}_2\text{As}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ ,  $\text{NH}_3$ , arsenite, or other  $\text{NH}_4$  salts +  $\text{Aq}$ . (Wittstein.)

$\text{Pb}_3(\text{AsO}_3)_2$ . Scarcely sol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HNO}_3$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . Boiling  $\text{H}_2\text{O}$  dissolves some  $\text{As}_2\text{O}_3$ . Not completely insol. in  $\text{KOH} + \text{Aq}$ . (Streng, A. **129**, 238.)

Sol. in acetic acid; insol. in  $\text{H}_2\text{O}$  in the presence of ammonium salts; sol. in  $\text{NaOH} + \text{Aq}$ ; sl. sol. in  $\text{KOH} + \text{Aq}$ . (Reichard, B. 1894, **27**, 1024.)

+  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Stavenhagen, J. pr. 1895, (2) **51**, 33.)

**Lead arsenite chloride,  $\text{Pb}_3\text{As}_2\text{O}_5 \cdot 2\text{PbCl}_2$ .**

Min. *Ekdemite*. Easily sol. in  $\text{HNO}_3 + \text{Aq}$ , and warm  $\text{HCl} + \text{Aq}$ .

**Magnesium arsenite,  $\text{Mg}_3(\text{AsO}_3)_2$ .**

Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , but sol. in a large excess of  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose.)

Very sol. in boiling  $\text{H}_2\text{O}$  and in dil. acids. Sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Reichard, B. 1894, **27**, 1032.)

Very sol. in  $\text{H}_2\text{O}$  and dil. acids. (Stavenhagen, l.c.)

$\text{Mg}_3\text{As}_2\text{O}_5 + 4\text{H}_2\text{O}$ . Hygroscopic. Very sol. in  $\text{H}_2\text{O}$  and acids. (Stavenhagen, l.c.)

$3\text{MgO} \cdot 2\text{As}_2\text{O}_3 + 3\text{H}_2\text{O} + 15\text{H}_2\text{O}$ , and +  $18\text{H}_2\text{O}$ . (Perper, Dissert. 1894.)

**Magnesium arsenite iodide,  $\text{MgI}_3$ ,  $3\text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$ .**

Moderately sol. in  $\text{H}_2\text{O}$ . (Grühl, Dissert. 1897.)

**Manganous arsenite,  $\text{Mn}_3(\text{AsO}_3)_2 + 3\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol; easily oxidized by moist air. (Stavenhagen, l.c.)

$3\text{MnO} \cdot 2\text{As}_2\text{O}_3$ . (Reichard, B. 1894, **27**, 1032.)

$\text{Mn}_2\text{H}_2\text{As}_2\text{O}_{10} + 4\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Very sol. in acids and alkali. (Stavenhagen, *l.c.*)

$\text{Mn}_2\text{As}_2\text{O}_8$ . Ppt. (Reichard, B. 1898, 31. 2165.)

**Mercurous arsenite**,  $\text{Hg}_2\text{O}_2\text{As}_2\text{O}_3$ .

Decomp. by light. Decomp. by  $\text{H}_2\text{O}$ . (Reichard, B. 1894, 27. 1022.)

$\text{Hg}_2\text{AsO}_3$ . Only sl. sol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Stavenhagen, J. pr. 1895, (2) 51. 24.)

Gradually and completely decomposed by  $\text{H}_2\text{O}$ . (Reichard, Ch. Z. 1902, 26. 1143.)

**Mercuric arsenite**,  $\text{Hg}_2(\text{AsO}_3)_2$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, *l.c.*)

Decomp. more easily by  $\text{H}_2\text{O}$  than is the mercurous comp. (Reichard, Ch. Z. 1902, 26. 1143.)

$2\text{HgO} \cdot \text{As}_2\text{O}_3$ . Not decomp. by boiling with  $\text{H}_2\text{O}$ . Undecomp. by boiling acids. Decomp. by  $\text{KOH} + \text{Aq}$ ,  $\text{K}_2\text{CO}_3 + \text{Aq}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Reichard, B. 1894, 27. 1021.)

$\text{Hg}_2\text{As}_2\text{O}_8$ . Ppt. Decomp. by boiling  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{SO}_4 + \text{HCl}$ . (Reichard, B. 1898, 31. 2170.)

**Nickel arsenite**,  $\text{Ni}_2(\text{AsO}_3)_2$ .

Insol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Proust.)

Ppt. (Reichard, B. 1898, 31. 2165.)

$3\text{NiO} \cdot 2\text{As}_2\text{O}_3$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (identical with salt of Girard). (Reichard, B. 1894, 27. 1031.)

$+4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Proust.)

Sol. in  $\text{KOH} + \text{Aq}$ . (Girard, C. R. 34. 918.)

$2\text{NiO} \cdot \text{As}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; sol. in  $\text{KOH} + \text{Aq}$ . (Reynoso, C. R. 31. 68.)

**Platinum arsenite**,  $\text{Pt}_2(\text{AsO}_3)_4$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol; very unstable. (Stavenhagen, *l.c.*)

**Potassium arsenite**,  $\text{KAsO}_3$ .

Sol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol. (Pasteur, A. 68. 309.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Does not exist. (Stavenhagen, *l.c.*)

$\text{K}_2\text{AsO}_3$ . Very sol. in  $\text{H}_2\text{O}$ ; sol. in alcohol. (Stavenhagen, *l.c.*)

$\text{K}_4\text{As}_2\text{O}_8 + 6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ ; sol. in alcohol. (Stavenhagen, *l.c.*)

$\text{K}_2\text{As}_2\text{O}_7 + 2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{C}$ ; sl. sol. in alcohol. (Pasteur, A. 68. 309.)

**Potassium arsenite bromide**,  $4\text{As}_2\text{O}_3, 2\text{KBr}$ .

More sol. in  $\text{H}_2\text{O}$  than iodide. (Schiff and Sestini, A. 228. 72.)

$2\text{As}_2\text{O}_3, \text{KBr}$ . (Rüdorff, B. 19. 2675.)

**Potassium arsenite chloride**,  $2\text{As}_2\text{O}_3, \text{KCl}$ .

Much more quickly sol. in hot  $\text{H}_2\text{O}$  than bromide or iodide. (Rüdorff, B. 19. 2675.)

$\text{As}_2\text{O}_3, \text{KCl}$ . Decomp. by  $\text{H}_2\text{O}$ .

**Potassium arsenite iodide**,  $3\text{As}_2\text{O}_3, 2\text{KI} + \text{H}_2\text{O}$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ ; sol. in 20 pts. boiling, and 40 pts. cold  $\text{H}_2\text{O}$ . (Emmet, Sill. Am. J. (2) 18. 583.)

$6\text{KAsO}_3, 2\text{KI} + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and alcohol. Decomp. by acids. (Harms.)

$2\text{KH}(\text{AsO}_3)_2, \text{As}_2\text{O}_3, 2\text{KI}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Harms, A. 91. 371.)

$2\text{As}_2\text{O}_3, \text{KI}$ . Very difficultly sol. even in boiling  $\text{H}_2\text{O}$ . Very easily sol. in  $\text{KOH} + \text{Aq}$ , but much less so in  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Rüdorff, B. 19. 2670.)

Sol. in 40 pts. cold, 20 pts. hot  $\text{H}_2\text{O}$ ; sol. in alkalis. (Schiff and Sestini, A. 228. 72.)

**Potassium arsenite sulphate**,  $\text{K}_2\text{AsO}_3, 10\text{K}_2\text{SO}_4$ .

(Stavenhagen, Zeit. angew. ch. 1894, 8. 166.)

**Rubidium arsenite**,  $\text{RbAsO}_3$ .

Sol. in  $\text{H}_2\text{O}$ ; aq. solution is alkaline to litmus. Insol. in alcohol. (Bouchonnet, C. R. 1907, 144. 641.)

**Rubidium arsenite bromide**,  $\text{As}_2\text{O}_3, \text{RbBr}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Wheeler, Z. anorg. 4. 451.)

**Rubidium arsenite chloride**,  $\text{As}_2\text{O}_3, \text{RbCl}$ .

As above.

**Rubidium arsenite iodide**,  $\text{As}_2\text{O}_3, \text{RbI}$ .

As above.

**Silver arsenite**,  $\text{Ag}_3\text{AsO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Not pptd. in presence of 20,000 pts.  $\text{H}_2\text{O}$ . (Harting.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.0115 g.  $\text{Ag}_3\text{AsO}_3$  at  $20^\circ$ . (Whitby, Z. anorg. 1910, 67. 108.)

Only sl. sol. in  $\text{H}_2\text{O}$  and in dil. acids; readily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  and conc. acids. (Stavenhagen, *l.c.*)

Decomp. by light, by  $\text{KOH} + \text{Aq}$  and by  $\text{NH}_4\text{OH} + \text{Aq}$ . (Reichard, B. 1894, 27. 1022-23.)

Easily sol. in  $\text{HNO}_3 + \text{Aq}$  and other acids. (Marcet.)

More easily sol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  than  $\text{Ag}_3\text{PO}_4$ ; sl. sol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Santos, C. N. 38. 94.)

Insol. in  $\text{KOH} + \text{Aq}$ . (Kühn, Arch. Pharm. (2) 69. 267.)

Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Marcet.)

Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , but sol. therein in presence of alkali nitrates. (Santos, *l.c.*)

Incompletely sol. in  $(\text{NH}_4)_2\text{CO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Wittstein, Repert. 51. 41.)

Decomp. by  $\text{NH}_4\text{Cl} + \text{Aq.}$  Sol. in  $\text{KAsO}_2 + \text{Aq.}$  (Kühn, *l.c.*)

Not pptd. in solutions containing sol. citrates. (Spiller.)

Sol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Sl. sol. in methyl acetate. (Bezold, Dissert. 1908.)

Insol. in ethyl acetate. (Hamers, Dissert. 1906); (Naumann, B. 1910, **43**, 314.)

+  $\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq.}$  and in dil. acids. (Stavenhagen, J. pr. 1895, (2) **51**, 29.)

$2\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ . Ppt. (Pasteur, J. Pharm. (3) **13**, 395.)

Could not be obtained. (Stavenhagen, *l.c.*)

$3\text{Ag}_2\text{O}$ ,  $2\text{As}_2\text{O}_3$ . \*Sol. in cold  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$  (Santos.)

Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  and in potassium arsenite +  $\text{Aq.}$  (Girard, C. R. **34**, 918.)

Ppt. (Reichard, B. 1898, **31**, 2167.)

Could not be obtained. (Stavenhagen, *l.c.*)

**Silver arsenite ammonia**,  $2\text{Ag}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $4\text{NH}_3$ .

Insol. in  $\text{H}_2\text{O}$  or alcohol. (Girard.)

#### Sodium arsenites.

Correspond to potassium arsenites, but have not been obtained in crystalline form. All are very sol. in  $\text{H}_2\text{O}$ . (Pasteur, A. **68**, 308.)

$\text{Na}_3\text{AsO}_3$ . Very sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, *l.c.*)

Insol. in ethyl acetate. (Naumann, B. 1904, **37**, 3602.)

**Sodium arsenite bromide**,  $2\text{As}_2\text{O}_3$ ,  $\text{NaBr}$ .

Decomp. by warm  $\text{H}_2\text{O}$ . (Rüdorff, B. **21**, 3052.)

**Sodium arsenite iodide**,  $2\text{As}_2\text{O}_3$ ,  $\text{NaI}$ .

Decomp. by hot  $\text{H}_2\text{O}$ . (Rüdorff.)

**Strontium arsenite**,  $\text{Sr}_3(\text{AsO}_3)_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, *l.c.*)

Sol. in  $\text{H}_2\text{O}$ , insol. in alcohol (identical with Stein). (Reichard, B. 1894, **27**, 1036.)

$\text{Sr}_2\text{As}_2\text{O}_7 + 2\text{H}_2\text{O}$ . Quite easily sol. in  $\text{H}_2\text{O}$ . (Stein.)

Sl. sol. in  $\text{H}_2\text{C}$ ,  $\text{SrO}_2\text{H}_2 + \text{Aq.}$  or  $\text{H}_3\text{AsO}_4 + \text{Aq.}$  (Dumas.)

Very sl. sol. in alcohol. (Stein.)

Easily sol. in  $\text{H}_2\text{O}$  and in acids. (Stavenhagen, J. pr. 1895, (2) **51**, 17.)

$\text{Sr}_3\text{As}_4\text{O}_{13}$ . Moderately sol. in  $\text{H}_2\text{O}$ . (Reichard, B. 1894, **27**, 1036.)

**Strontium arsenite iodide**,  $\text{SrI}_2$ ,  $3\text{As}_2\text{O}_3 + 12\text{H}_2\text{O}$ .

As Ba comp. (Grühl, Dissert. 1897.)

**Thallium arsenite**,  $\text{Tl}_3\text{AsO}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$  and alcohol; easily sol. in acids, especially in dil.  $\text{H}_2\text{SO}_4$ . (Stavenhagen, *l.c.*)

**Tin (stannous) arsenite**,  $\text{Sn}_2(\text{AsO}_2)_2$ .

Ppt.; decomp. by acids and alkali. (Reichard, B. 1898, **31**, 2169.)

+  $2\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids and alkalies. (Stavenhagen, *l.c.*)

**Tin (stannic) arsenite**,  $\text{Sn}_2(\text{AsO}_4)_2 + 5\frac{1}{2}\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Stavenhagen, *l.c.*)

$5\text{SnO}_2$ ,  $2\text{As}_2\text{O}_3$ . Ppt. Sol. in acids without decomp. (Reichard, B. 1894, **27**, 1025.)

$\text{Sn}_7\text{As}_2\text{O}_{17}$ . Ppt. (Reichard, B. 1898, **31**, 2169.)

**Uranium arsenite**,  $\text{UO}_3$ ,  $\text{As}_2\text{O}_3$ .

Insol. in  $\text{NH}_4\text{OH} + \text{Aq.}$ ; only sl. sol.  $\text{KOH} + \text{Aq.}$  Sol. in acids. (Reichard, B. 1894, **27**, 1029.)

**Zinc arsenite**,  $\text{ZnO}$ ,  $\text{As}_2\text{O}_3$ .

Ppt. (Avery, J. Am. Chem. Soc. 1906, **28**, 1163.)

$3\text{ZnO}$ ,  $\text{As}_2\text{O}_3$ . Sol. in acids without decomp. Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Reichard, B. 1894, **27**, 1033.)

**Arseniovanadic acid**,  $\text{As}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ , but solution easily decomposes; crystallizes from  $\text{H}_2\text{O}$  with  $10\text{H}_2\text{O}$ . Composition is vanadium dihydrogen arsenate  $(\text{VO}_2)_2\text{H}_2\text{AsO}_4$ . (Friedheim, B. **23**, 2600.)

+14, and +18 $\text{H}_2\text{O}$ . (Ditte, C. R. **102**, 757.) Could not be obtained. (Friedheim.)

$3\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5$ . (Berzelius.) Correct formula is as above. (Friedheim.)

$3\text{H}_2\text{O}$ ,  $7\text{As}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$ . (Gibbs, Am. Ch. J. **7**, 209.) Could not be obtained. (Friedheim.)

$3\text{H}_2\text{O}$ ,  $5\text{As}_2\text{O}_5$ ,  $8\text{V}_2\text{O}_5 + 24\text{H}_2\text{O}$ . (Gibbs.) Could not be obtained. (Friedheim.)

#### Arseniovanadates.

According to Friedheim (Z. anorg. 1892, **2**, 319) the arseniovanadates are double arsenates of  $\text{VO}_2$  and  $\text{NH}_4$ .

**Ammonium arseniovanadate**,  $(\text{NH}_4)_2\text{O}$ ,

$\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5$ ,  $+5\text{H}_2\text{O}$ .

Efflorescent in dry air; sl. sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . Composition is ammonium divanadium arsenate  $= (\text{VO}_2)_2(\text{NH}_4)\text{AsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$ . (Friedheim, B. **23**, 2600.)

Sl. sol. in cold  $\text{H}_2\text{O}$ . Somewhat more easily sol. in hot  $\text{H}_2\text{O}$  with separation of  $\text{V}_2\text{O}_5$ . (Schmitz-Dumont, Dissert. 1891.)

$2(\text{NH}_4)_2\text{O}$ ,  $3\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5 + 4\text{H}_2\text{O}$ . Cannot be crystallized from  $\text{H}_2\text{O}$ . Composition is  $(\text{NH}_4)_2\text{HAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4$ . (Friedheim.)

Decomp. under  $\text{H}_2\text{O}$  to  $(\text{NH}_4)_2\text{O}$ ,  $2\text{V}_2\text{O}_5$ ,  $\text{As}_2\text{O}_5 + 5\text{H}_2\text{O}$ . (Schmitz-Dumont, *l.c.*)

$5(\text{NH}_4)_2\text{O}$ ,  $1\text{As}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5 + 18\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. **102**, 1019.) Does not exist. (Friedheim, B. **23**, 2605.)

**arseniovanadate**,  $2\text{CaO}$ ,  $3\text{As}_2\text{O}_3$ ,  $+21\text{H}_2\text{O} = \text{CaHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2\text{O} + 8\text{H}_2\text{O}$ .

crystallized in presence of vanadic acid on decomp. (Friedheim.)  
Sol. in  $\text{H}_2\text{O}$ . (Schmitz-l.c.)

**eniovvanadate**,  $\text{CoO}$ ,  $\text{As}_2\text{O}_3$ ,  $\text{V}_2\text{O}_5 + = \text{Co}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 8\text{H}_2\text{O}$ .  
 $\text{I}_2\text{O}$ . (Friedheim.)

**seniovvanadate**,  $\text{CuO}$ ,  $\text{As}_2\text{O}_3$ ,  $\text{V}_2\text{O}_5 + = \text{Cu}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 3\text{H}_2\text{O}$ .  
 $\text{I}_2\text{O}$ . (Friedheim.)

**n arseniovanadate**,  $\text{MgO}$ ,  $\text{As}_2\text{O}_3$ ,  $+10\text{H}_2\text{O} = (\text{VO}_2)_2\text{MgH}_2(\text{AsO}_4)_2 +$

$\text{I}_2\text{O}$ . (Friedheim.)  
Slightly sol. in  $\text{H}_2\text{O}$ . Solution decomp. g. (Schmitz-Dumont, l.c.)

$\text{As}_2\text{O}_3$ ,  $2\text{V}_2\text{O}_5$ ,  $+23\text{H}_2\text{O} = \text{MgHAsO}_4$ ,  $\text{I}_2\text{AsO}_4 + 9\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Fried-

$\text{I}_2\text{O}$  but solution decomp. on evap-Schmitz-Dumont, l.c.)

**arseniovanadate**,  $\text{K}_2\text{O}$ ,  $\text{As}_2\text{O}_3$ ,  $+5\text{H}_2\text{O} = (\text{VO}_2)_2\text{KAsO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$ .  
 $\text{I}_2\text{O}$ . (Friedheim.)

in cold  $\text{H}_2\text{O}$ . Partially decomp. on Schmitz-Dumont.)

**arseniovanadate**,  $2\text{SrO}$ ,  $3\text{As}_2\text{O}_3$ ,  $+20\text{H}_2\text{O} = \text{SrHAsO}_4 + 2(\text{VO}_2)_2\text{H}_2 - 7\frac{1}{2}\text{H}_2\text{O}$ .

$\text{I}_2\text{O}$ . (Friedheim.)  
Easily sol. in  $\text{H}_2\text{O}$ . (Schmitz-

**iovanadate**,  $\text{ZnO}$ ,  $\text{As}_2\text{O}_3$ ,  $\text{V}_2\text{O}_5 + = \text{Zn}(\text{VO}_2)_2\text{H}_2(\text{AsO}_4)_2 + 5\frac{1}{2}\text{H}_2\text{O}$ .  
 $\text{I}_2\text{O}$ . (Friedheim.)

$\text{As}_2\text{O}_3$ ,  $2\text{V}_2\text{O}_5 + 5\text{H}_2\text{O}$ , and  $+18\text{H}_2\text{O} + 2(\text{VO}_2)_2\text{H}_2\text{AsO}_4$ , and  $+6\frac{1}{2}\text{H}_2\text{O}$ .  
(Friedheim.)

#### vanadicotungstic acid.

**arseniovanadicotungstate**,  $(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_3$ ,  $14\frac{1}{2}\text{V}_2\text{O}_5$ ,  $29\text{WO}_3 +$

in cold  $\text{H}_2\text{O}$ . Readily sol. in boiling  $\text{H}_2\text{O}$ , in alcohol, ether, benzene,  $\text{CS}_2$ , acetone, nitrobenzene, aniline and hydride. (Rogers, J. Am. Chem. Soc. 25. 307.)

#### vanadicovanadic acid.

**arseniovanadicovanadate**,  $(\text{NH}_4)_2\text{O}$ ,  $12\text{As}_2\text{O}_3$ ,  $12\text{VO}_2$ ,  $6\text{V}_2\text{O}_5 +$

in cold, sol. in hot  $\text{H}_2\text{O}$ , from which  $(\text{NH}_4)_2\text{O}$ ,  $9\text{As}_2\text{O}_3$ ,  $9\text{VO}_2$ ,  $8\text{V}_2\text{O}_5 + 11\text{H}_2\text{O}$ .  
(Gibbs, Am. Ch. J. 7. 209.)

#### Arseniovanadicovanadiotungstic acid.

**Ammonium arseniovanadicovanadiotungstate**,  $17(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_3$ ,  $7\text{V}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $32\text{WO}_3 + 73\text{H}_2\text{O}$ .

Sl. sol. in cold, readily sol. in boiling  $\text{H}_2\text{O}$ . (Rogers, J. Am. Chem. Soc. 1903, 25. 310.)

#### Arseniovanadiotungstic acid.

**Ammonium arseniovanadiotungstate**,  $18(\text{NH}_4)_2\text{O}$ ,  $2\text{As}_2\text{O}_3$ ,  $13\text{V}_2\text{O}_5$ ,  $39\text{WO}_3 + 88\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in organic solvents. (Rogers, J. Am. Chem. Soc. 1903, 25. 306.)

#### Arseniuretted hydrogen, $\text{AsH}_3$ .

See Arsenic hydride.

#### Arsenochromic acid.

**Potassium arsenochromate**,  $\text{K}_4\text{Cr}_2\text{As}_2\text{O}_{16} + 12\text{H}_2\text{O}$ .

Sol. in moderately conc. mineral acids. (Tarugi, C. C. 1897, II. 724.)

$\text{K}_7\text{Cr}_2\text{As}_2\text{O}_{12} + 24\text{H}_2\text{O}$ . Ppt. Sol. in dil. warm acids. (Tarugi.)

#### Potassium hydrogen arsenochromate,

$\text{K}_4\text{H}_6\text{Cr}_2\text{As}_2\text{O}_{16}$ .

(Tarugi, C. C. 1897, II. 724.)

#### Arsenosoarseniotungstic acid.

**Potassium arsenosoarseniotungstate**,  $10\text{K}_2\text{O}$ ,  $4\text{As}_2\text{O}_3$ ,  $\text{As}_2\text{O}_3$ ,  $21\text{WO}_3 + 26\text{H}_2\text{O}$ .

Precipitate. Sol. in a large amount of hot  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 7. 313.)

#### Arsenosomolybdic acid.

**Ammonium arsenosomolybdate**,  $3(\text{NH}_4)_2\text{O}$ ,  $5\text{As}_2\text{O}_3$ ,  $12\text{MoO}_3 + 24\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 7. 313.)

**Ammonium barium arsenosomolybdate**,  $3(\text{NH}_4)_2\text{O}$ ,  $2\text{BaO}$ ,  $5\text{As}_2\text{O}_3$ ,  $10\text{MoO}_3 + 50\text{H}_2\text{O}$ .

Ppt. (Ephraim, Z. anorg. 1910, 66. 57.)

**Ammonium cupric arsenosomolybdate**,  $(\text{NH}_4)_2\text{O}$ ,  $\text{CuO}$ ,  $2\text{As}_2\text{O}_3$ ,  $4\text{MoO}_3 + 2\text{H}_2\text{O}$ , and  $2(\text{NH}_4)_2\text{O}$ ,  $\text{CuO}$ ,  $3\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3 + 13\text{H}_2\text{O}$ .

Ppts. (Ephraim, Z. anorg. 1910, 66. 58.)

**Barium arsenosomolybdate**,  $3\text{BaO}$ ,  $2\text{As}_2\text{O}_3$ ,  $8\text{MoO}_3 + 13\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

**Copper arsenosomolybdate**,  $2\text{CuO}$ ,  $3\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

**Manganese arsenosomolybdate**,  $2\text{MnO}$ ,  $3\text{As}_2\text{O}_3$ ,  $6\text{MoO}_3 + 6\text{H}_2\text{O}$ , and  $+15\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Gibbs.)

**Potassium arsenosomolybdate**,  $3K_2O, As_2O_3, 5MoO_3 + 3H_2O$ .

Easily sol. in  $H_2O$ . (Ephraim, Z. anorg. 1910, **66**, 54.)

$3K_2O, As_2O_3, 8MoO_3 + 18H_2O$ . Easily sol. in  $H_2O$ . (Ephraim.)

**Sodium arsenosomolybdate**,  $Na_2O, As_2O_3, 2MoO_3 + 6H_2O$ .

Easily sol. in  $H_2O$ . (Ephraim, Z. anorg. 1910, **66**, 56.)

$2Na_2O, As_2O_3, 4MoO_3 + 13H_2O$ . Ppt. (Ephraim.)

**Zinc arsenosomolybdate**,  $2ZnO, 3As_2O_3, 6MoO_3 + 6H_2O$ .

Sol. in  $H_2O$ . (Gibbs.)

#### Arsenosophosphotungstic acid.

**Potassium arsenosophosphotungstate**,  $10K_2O, 14As_2O_3, 3P_2O_5, 32WO_3 + 28H_2O$ .

Moderately sol. in cold, very easily in hot  $H_2O$ . (Gibbs.)

$7K_2O, 2As_2O_3, 4P_2O_5, 60WO_3 + 55H_2O$ . Sol. in hot  $H_2O$  with decomp. (Gibbs.)

**Potassium sodium arsenosophosphotungstate**,  $5K_2O, Na_2O, 2As_2O_3, 2P_2O_5, 12WO_3 + 15H_2O$ .

(Gibbs, Am. Ch. J. **7**, 313.)

#### Arsenosotungstic acid.

**Ammonium arsenosotungstate**,  $7(NH_4)_2O, 2As_2O_3, 18WO_3 + 18H_2O$ .

Sol. in  $H_2O$ . (Gibbs.)

**Barium arsenosotungstate**,  $4BaO, As_2O_3, 9WO_3 + 21H_2O$ .

Precipitate. Nearly insol. in  $H_2O$ . (Gibbs.)

**Sodium arsenosotungstate**,  $9Na_2O, 8As_2O_3, 16WO_3 + 55H_2O$ .

Very sol. in  $H_2O$ . (Gibbs, Am. Ch. J. **7**, 313.)

#### Arsenyl bromide, $AsOBr$ .

$H_2O$  dissolves out  $As_2O_3$ ; insol. in alcohol. (Sérullas.)

$+ H_2O$ . (Wallace, Phil. Mag. (4) **17**, 122.)  
 $As_2O_3Br_4 = 2AsBr_3, 3As_2O_3 + 12H_2O$ .

#### Arsenyl bromide with MBr.

See Arsenite bromide, M.

#### Arsenyl chloride, $AsOCl$ .

Sol. in  $H_2O$  with decomp.

$+ H_2O$ . (Wallace, Phil. Mag. (4) **16**, 358.)  
 $As_2O_3Cl_4$ . (Wallace.)

#### Arsenyl chloride with MCl.

See Arsenite chloride, M.

**Arsenyl potassium fluoride**,  $AsOF_3, KF + H_2O$ .

(Marignac, A. **145**, 237.)

**Arsenyl iodide**,  $As_2I_{11} = 2AsOI, 3As_2O_3 + 12H_2O$ .

Decomp. by  $H_2O$ . (Wallace, Phil. Mag. (4) **17**, 122.)

Sl. sol. in cold  $H_2O$ , less sol. in alcohol. (Plisson, J. Pharm. **14**, 46.)

#### Arsenyl iodide with MI.

See Arsenite iodide, M.

**Arsenyl sulphiodide**,  $As_2I_2S_2O_3$ .

Scarcely attacked by cold  $H_2O$ . Boiling  $H_2O$  extracts  $AsI_3$ . Decomp. by hot  $HNO_3$  or  $H_2SO_4$ . Easily sol. in  $KOH$ , or  $NH_4OH + Aq$ . (Schneider, J. pr. (2) **36**, 513.)

#### Arsine.

See Arsenic hydride.

#### Atmospheric air.

See Air, atmospheric.

**Auriamine**,  $Au(OH)_3NH_3$ .

(Jacobsen, C. R. 1908, **146**, 1214.)

**Diauriamine**,  $Au_2(OH)_4NH_3$ .

(Jacobsen, C. R. 1908, **146**, 1214.)

**Sesquiauriamine**,  $NAu_3, NH_3$ .

Decomp. by  $H_2O$  into  $NAu$ . (Raschig, A. **235**, 341.)

**Auric acid**,  $HAu_2O_4$ .

Sol. in  $HBr$ , or  $HCl + Aq$ . (Krüss, B. **19**, 2546.)

#### Ammonium aurate.

See Auroamidoimide.

**Barium aurate**,  $BaAu_2O_4 + 5H_2O$ .

Sl. sol. in  $H_2O$ . (Weigand, Zeit. angew. Ch. 1905, **19**, 139.)

$+ 6H_2O$ . Sl. sol. in  $H_2O$ . Sol. in dil.  $H_2SO_4$  and in dil.  $HNO_3$ . Sol. in  $HCl$ . Decomp. by alcohol. (Meyer, C. R. 1907, **145**, 806.)

#### Calcium aurate (?).

Insol. in  $H_2O$ ; sol. in  $CaCl_2 + Aq$ . (Fremy, A. ch. (3) **31**, 485.)

$CaAu_2O_4 + 6H_2O$ . As Ba salt. (Meyer, C. R. 1907, **145**, 806.)

#### Magnesium aurate (?).

Ppt. Insol. in  $H_2O$ ; sol. in  $MgCl_2 + Aq$ . (Pelletier.)

**Potassium aurate**,  $KAuO_2 + 3H_2O$ .

Very sol. in  $H_2O$ , and easily decomp. (Fremy, A. ch. (3) **31**, 483.)

Sol. in alcohol; the solution in alcohol does not decomp. below  $50^\circ$ . (Figuier, A. ch. (3) **11**, 364.)

**Potassium aurate sulphite**,  $KAuO_2, 2K_2SO_3 + 5H_2O$ .

Sol. in  $H_2O$  with decomp. Nearly insol. in alkaline solutions. (Fremy, A. ch. (3) **31**, 485.)

urate,  $\text{Na}_2\text{Au}_2\text{O}_4 + 2\text{H}_2\text{O}$ .

$\text{H}_2\text{O}$ . Sol. in dil.  $\text{H}_2\text{SO}_4$ , dil.  $\text{HNO}_3$ , with decomp. Decomp. by alcohol. C. R. 1907, **145**, 806.)

aurate,  $\text{SrAu}_2\text{O}_4 + 6\text{H}_2\text{O}$ . salt. (Meyer.)

le chloride,  $\text{Au}(\text{NH})\text{Cl}$ . ig.)

nitrate,  $\text{Au}_2\text{N}_2\text{H}_2\text{O}$ ,  $2\text{HNO}_3$ , or  $\text{HNO}_3 + \frac{1}{2}\text{H}_2\text{O}$ , or  $\text{Au}_2\text{O}(\text{NH})_2$ ,  $\text{O}_2$ .

liquescent. Decomp. by hot  $\text{H}_2\text{O}$   $(\text{NH})_2$ . (Schottländer, J. B. 1884.

doimide,  $\text{Au}(\text{HN})\text{NH}_2 + 3\text{H}_2\text{O}$ .

nating gold.) Insol. in  $\text{H}_2\text{O}$ ; not by dil. acids; sol. in conc. acids, derately dil. acids, when freshly pre- Insol. in alkalies or alcohol. Sol. -Aq.

mine,  $\text{Au}_3\text{N} + 5\text{H}_2\text{O}$ .

comp. by boiling dil. acetic acid,  $\text{H}_2\text{SO}_4$ . (Raschig, A. 1886, **235**.

hydric acid,  $\text{HAu}(\text{CN})_4 + 1\frac{1}{2}\text{H}_2\text{O}$ .

sol. in  $\text{H}_2\text{O}$ , alcohol, or ether.

Bromauricyanides.

Chlorauricyanides.

Iodauricyanides.

m auricyanide,  $\text{NH}_4\text{Au}(\text{CN})_4$ .

sol. in  $\text{H}_2\text{O}$  or alcohol. Insol. in

auricyanide,  $\text{Co}[\text{Au}(\text{CN})_4]_2 + 9\text{H}_2\text{O}$ .

in cold, easily in hot  $\text{H}_2\text{O}$ . Sl. sol. l. (Lindbom.)

n auricyanide,  $\text{KAu}(\text{CN})_4 + 1\frac{1}{2}\text{H}_2\text{O}$ .

cent. Sl. sol. in cold, easily in hot sily sol. in alcohol.

ricyanide,  $\text{AgAuCN}_4$ .

in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$ . Sol. in -Aq.

amine nitrate.

rimide nitrate.

mhydric acid.

mauric acid.

mic acid.

auric acid.

orhydric acid.

orauric acid.

oric acid.

lorauric acid.

Aurocyanhydric acid.

Aurocyanides with MCN.

See Cyanide, aurous with MCN.

Azinosulphonic acid.

Ammonium azinosulphonate,  $\text{N}_2\text{SO}_3\text{NH}_4$ .

(Traube, B. 1914, **47**, 944.)

Barium azinosulphonate,  $(\text{N}_2\text{SO}_3)_2\text{Ba}$ .

(Traube, B. 1914, **47**, 944.)

Potassium azinosulphonate,  $\text{N}_2\text{SO}_3\text{K}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Can be cryst. from boiling abs. alcohol. (Traube, B. 1914, **47**, 943.)

Sodium azinosulphonate,  $\text{N}_2\text{SO}_3\text{Na}$ .

(Traube, B. 1914, **47**, 944.)

Azoimide,  $\text{HN}_3$ .

Miscible with  $\text{H}_2\text{O}$  and alcohol. (Curtius and Radershausen, J. pr. (2) **43**, 207.)

Stable in aq. solution; decomp. slowly by dil. boiling  $\text{HCl}$ . (Curtius, J. pr. 1898, (2) **58**, 265.)

For salts of  $\text{HN}_3$ , see azoimide of metal under metal.

Azoimide, hydroxylamine,  $\text{N}_2\text{H}_2\text{NH}_2\text{OH}$ .

Sol. in  $\text{H}_2\text{O}$ . Gradually volatilizes at ord. temp. (Dennis, J. Am. Chem. Soc. 1907, **29**, 22.)

Azophosphoric acid.

See Pyrophosphamic acid.

Deutazophosphoric acid.

See Pyrophosphodiamic acid.

Barium, Ba.

Decomp. by  $\text{H}_2\text{O}$  and abs. alcohol. (Guntz, C. R. 1901, **133**, 874.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, **20**, 827.)

Barium amalgam,  $\text{BaHg}_{12}$ .

Stable in contact with liquid amalgam up to  $30^\circ$ . Can be cryst. from  $\text{Hg}$  without decomp. if temp. does not exceed  $30^\circ$ . (Kerp, Z. anorg. 1900, **25**, 68.)

$\text{BaHg}_{12}$ . Stable in contact with liquid amalgam from  $30^\circ$ – $100^\circ$ . Can be cryst. from  $\text{Hg}$  without decomp. at any temp. within these limits. (Kerp.)

Barium amide,  $\text{Ba}(\text{NH}_2)_2$ .

B.-pt.  $280^\circ$ . (Mentrel, C. C. 1903, I. 276.)

Decomp. by  $\text{H}_2\text{O}$ . (Guntz and Mentrel, Bull. Soc. 1903, (3) **29**, 578.)

Barium potassium amide.

See Potassium ammonobarate.

Barium ammonia,  $\text{Ba}(\text{NH}_3)_4$ .

Takes fire in the air. Only sl. sol. in liquid  $\text{NH}_3$ . Violently decomp. by  $\text{H}_2\text{O}$ . (Mentrel, C. R. 1902, **135**, 740.)

**Barium arsenide,  $\text{Ba}_3\text{As}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Lebeau, C. R. 1899, 129. 48.)

**Barium azoimide,  $\text{Ba}(\text{N}_2)_2$ .**

Very sl. hygroscopic; explosive.

12.5 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $0^\circ$   
 16.2 " " " " 100 "  $\text{H}_2\text{O}$  "  $10.5^\circ$   
 16.7 " " " " 100 "  $\text{H}_2\text{O}$  "  $15^\circ$   
 17.3 " " " " 100 "  $\text{H}_2\text{O}$  "  $17^\circ$

0.0172 pts. are sol. in 100 pts. abs. alcohol at  $16^\circ$ .

Insol. in ether. (Curtius, J. pr. 1898, (2) 58. 290.)

See also Barium nitride.

**Barium boride,  $\text{BaB}_2$ .**

Sol. in fused oxidizing agents, not decomp. by  $\text{H}_2\text{O}$ ; insol. in aq. acids; sl. sol. in conc.  $\text{H}_2\text{SO}_4$ , sol. in dil. and conc.  $\text{HNO}_3$ . (Moissan, C. R. 1897, 125, 634.)

**Barium subbromide sodium bromide,  $\text{BaBr}$ ,  $\text{NaBr}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Guntz, C. R. 1903, 136. 750.)

**Barium bromide,  $\text{BaBr}_2$ , and  $+2\text{H}_2\text{O}$ .**

100 pts.  $\text{H}_2\text{O}$  dissolve—

at  $0^\circ$   $20^\circ$   $40^\circ$   $60^\circ$   $80^\circ$   $100^\circ$   
 98 104 114 123 135 149 pts.  $\text{BaBr}_2$ .

Sat.  $\text{BaBr}_2 + \text{Aq}$  contains at:

$-20^\circ$   $-9^\circ$   $+7^\circ$   $16^\circ$   $19^\circ$   $40^\circ$   
 45.7 46.5 48.5 48.8 49.3 50.9%  $\text{BaBr}_2$   
 71° 76° 77° 104° 145° 160° 175°

55.1 55.5 55.6 56.6 60.5 59.4 60.3%  $\text{BaBr}_2$   
 (Étard, A. ch. 1894, (7) 2. 540.)

Sp. gr. of  $\text{BaBr}_2 + \text{Aq}$  at  $19.5^\circ$  containing:

5 10 15 20 25 30%  $\text{BaBr}_2$   
 1.045 1.092 1.114 1.201 1.262 1.329

35 40 45 50 55%  $\text{BaBr}_2$ .

1.405 1.485 1.580 1.685 1.800

(Kremers, Pogg. 99. 444, calculated by Gerlach, Z. anal. 8. 285.)

$\text{BaBr}_2 + \text{Aq}$  containing 7.74%  $\text{BaBr}_2$  has sp. gr.  $20^\circ/20^\circ = 1.0716$ .

$\text{BaBr}_2 + \text{Aq}$  containing 16.76%  $\text{BaBr}_2$  has sp. gr.  $20^\circ/20^\circ = 1.1674$ .

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 279.)

Sat.  $\text{BaBr}_2 + \text{Aq}$  boils at  $113^\circ$ . (Kremers, Pogg. 99. 43.)

Solubility in  $\text{BaI}_2 + \text{Aq}$  at  $t^\circ$ .

$t^\circ$	Sat. solution contains	
	% $\text{BaBr}_2$	% $\text{BaI}_2$
$-16$	4.7	57.9
$-16$	5.0	59.0
$+60$	5.5	66.0
135	9.3	67.3
135	9.0	67.2
170	11.0	67.4
210	14.9	67.7

(Étard, A. ch. 1894, (7) 3. 287.)

Very sol. in absolute alcohol. (Hünefeld.)

100 pts. absolute methyl alcohol dissolve 50 pts.  $\text{BaBr}_2$  at  $22.5^\circ$ .

100 pts. absolute ethyl alcohol dissolve 3 pts.  $\text{BaBr}_2$  at  $22.5^\circ$ . (de Bruyn, Z. phys. Ch. 10. 783.)

Sat. solution in 87% alcohol contains 6%  $\text{BaBr}_2$ . (Richards, Z. anorg. 3. 455.)

100 pts. absolute methyl alcohol dissolve 45.8 pts.  $\text{BaBr}_2 + 2\text{H}_2\text{O}$  at  $15^\circ$ .

100 pts. 93.5% methyl alcohol dissolve 27.3 pts.  $\text{BaBr}_2 + 2\text{H}_2\text{O}$  at  $15^\circ$ .

100 pts. 50% methyl alcohol dissolve 4 pts.  $\text{BaBr}_2 + 2\text{H}_2\text{O}$  at  $15^\circ$ . (de Bruyn, Z. phys. Ch. 10. 787.)

100 g.  $\text{BaBr}_2 + \text{CH}_3\text{OH}$  contain 0.4 g.  $\text{BaBr}_2$  at the critical temp. (Centnerszwer, Z. phys. Ch. 1910, 72. 437.)

At  $15^\circ$ , 1 pt. by weight is sol. in:

36 pts. methyl alcohol, sp. gr. 0.709  
 207 " ethyl " " " 0.8035  
 652 " propyl " " " 0.8085

(Rohland, Z. anorg. 1897, 15. 413.)

Nearly insol. in boiling amyl alcohol, 10 ccm. dissolving only an amt. equal to 1.3 mg  $\text{BaO}$ . (Browning, Sill. Am. J. 144. 459.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328; Eidmann, C. C. 1899, II. 1014.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

**Barium cadmium bromide,  $\text{BaBr}_2$ ,  $\text{CdBr}_2 + 4\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (v. Hauer, W. A. B. 20. 40.)

**Barium rhodium bromide.**

See Bromorhodite, barium.

**Barium bromide ammonia,  $\text{BaBr}_2 \cdot 8\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Joannis, C. R. 1905, 140. 1244.)

**Barium bromide hydrazine,  $\text{BaBr}_2 \cdot 2\text{N}_2\text{H}_4$ .**

Hygroscopic. Very sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Franzen, Z. anorg. 1908, 60. 291.)

**Barium bromofluoride,  $\text{BaBr}_2 \cdot \text{BaF}_2$ .**

Insol. in and undecomp. by boiling alcohol. Sol. in  $\text{HBr}$  and in  $\text{HNO}_3$ . Decomp. by  $\text{H}_2\text{O}$ , hot  $\text{H}_2\text{SO}_4$ , dil.  $\text{HCl}$ , dil.  $\text{HNO}_3$ , or dil. acetic acid. (Defacqz, C. R. 1904, 138. 199.)

**Barium carbide,  $\text{BaC}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Maquenne, C. R. 144. 360.)

Sp. gr. 3.75. Easily decomp. by  $\text{H}_2\text{O}$  and dil. acids. (Moissan, Bull. Soc. 1894, (3) 11. 1008.)

**carbonyl, Ba(CO)<sub>2</sub>.**

in H<sub>2</sub>O. (Guntz and Mentrel, Bull. 33, (3) 29. 586.)

**subchloride, BaCl.**

mp. by H<sub>2</sub>O. (Guntz, C. R. 1903, l.)

**subchloride sodium chloride, BaCl, Cl.**

mp. by H<sub>2</sub>O. (Guntz, C. R. 1903, l.)

**chloride, BaCl<sub>2</sub>, and +2H<sub>2</sub>O.**

anhydrous in dry air.

1. H<sub>2</sub>O at t° dissolve (a) pts. BaCl<sub>2</sub> and (b) pts. BaCl<sub>2</sub>+2H<sub>2</sub>O.

a	b	t°	a	b
34.86	43.50	74.89	59.94	65.51
43.84	55.63	105.48	59.58	77.89

(Gay-Lussac, A. ch. (2) 11. 309.)

H<sub>2</sub>O at t° dissolve 32.62+0.2711t pts. BaCl<sub>2</sub>.

ts. H<sub>2</sub>O dissolve pts. BaCl<sub>2</sub>+2H<sub>2</sub>O at t°.

Pts. BaCl <sub>2</sub> +2H <sub>2</sub> O	t°	Pts. BaCl <sub>2</sub> +2H <sub>2</sub> O

(Mulder, calculated from his own and other observations. Scheik. Verhandel. 1864. 45.)

The saturated solution contains—

60.3 pts. BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and boils at 104.1°. (Mulder.)

60.1 pts. BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and boils at 104.4°. (Legrand.)

61.8 pts. BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and boils at 104.5°. (Griffith.)

59.58 pts. BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and boils at 105.48° (Gay-Lussac); at 106° (Kremers).

54.1 pts. BaCl<sub>2</sub> to 100 pts. H<sub>2</sub>O, and forms crust at 104.4°; highest temperature observed, 104.9°. (Gerlach, Z. anal. 26. 426.)

Sat. BaCl<sub>2</sub>+Aq contains at:

100° 130° 144° 160° 180° 215°  
36 37.3 37.5 38.9 40.7 43.1%BaCl<sub>2</sub>  
(Étard, A. ch. 1894, (7) 2. 535.)

Aq. solution contains 27.6% BaCl<sub>2</sub> at 30°. (Shreinemakers, C. C. 1910, 1. 9.)

Solubility of  $\text{BaCl}_2 + 2\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  equals 1.745 mol.-litre at  $30^\circ$ . (Masson, Chem. Soc. 1911, 99, 1136.)

$\text{BaCl}_2 + \text{Aq}$  sat. at  $8^\circ$  has sp. gr. 1.27. (Anthon.)  
 $\text{BaCl}_2 + \text{Aq}$  sat. at  $15^\circ$  has sp. gr. 1.282. (Michel and Kraft.)

$\text{BaCl}_2 + \text{Aq}$  sat. at  $18.1^\circ$  has sp. gr. 1.285, and contains 44.31 pts.  $\text{BaCl}_2 + 2\text{H}_2\text{O}$  to 100 pts.  $\text{H}_2\text{O}$ . (Karsten.)

Sp. gr. of  $\text{BaCl}_2 + \text{Aq}$  at  $19.5^\circ$ .

mers, Pogg. 111. 63, calculated by Gerlach, Z. anal. 8. 279.)

sily sol. in alcohol. (Henry.)

sol. in benzonitrile. (Naumann, B. 47. 1369.)

l. in acetone. (Naumann, B. 1904, 37. Eidmann, C. C. 1899, II. 1014.)

l. in methyl acetate. (Naumann, B. 42. 3789.)

2H<sub>2</sub>O. At 15° C., 1 pt. by weight in sol. in: 22 pts. methyl alcohol sp. gr. 0.790

93 " " " " 0.8035

07 " " " " 0.8085

(Rohland, Z. anorg. 1897, 15. 413.)

7H<sub>2</sub>O. (Thomson, B. 10. 1343.)

composition of the hydrates formed BaI<sub>2</sub> at different dilutions is calculated determinations of the lowering of the .. produced by BaI<sub>2</sub> and of the conduc- and sp. gr. of BaI<sub>2</sub>+Aq. (Jones, Am. J. 1905, 34. 306.)

Barium iodide, basic, Ba(OH)I+9H<sub>2</sub>O.

See Barium oxyiodide.

Barium bismuth iodide, BaI<sub>3</sub>, 2BiI<sub>3</sub>+18H<sub>2</sub>O. Deliquescent; decomp. by H<sub>2</sub>O. (Linna, Pogg. 111. 240.)

Barium cadmium iodide, BaI<sub>2</sub>, CdI<sub>2</sub>+5H<sub>2</sub>O. Deliquescent. (Croft.)

Barium mercuric iodide, BaI<sub>2</sub>, 2HgI<sub>2</sub>.

Decomp. by much H<sub>2</sub>O. (Boullay.)

BaI<sub>2</sub>, HgI<sub>2</sub>. Sol. in H<sub>2</sub>O. (Boullay.)

Sp. gr. of sat. solution = 3.575-3.588. (Rohrbach, W. Ann. 20. 169.)

+5H<sub>2</sub>O. (Duboin, C. R. 1906, 143. 314.)

2BaI<sub>2</sub>, 3HgI<sub>2</sub>+16H<sub>2</sub>O. (Duboin, C. R. 1906, 142. 888.)

BaI<sub>2</sub>, 5HgI<sub>2</sub>+8H<sub>2</sub>O. As the corresponding Ca salt. (Duboin, C. R. 1906, 142. 888.)

3BaI<sub>2</sub>, 5HgI<sub>2</sub>+21H<sub>2</sub>O. Very deliquescent. (Duboin, C. R. 1906, 142. 889.)

Barium stannous iodide.

Very sol. in H<sub>2</sub>O. (Boullay.)

Barium zinc iodide, BaI<sub>2</sub>, 2ZnI<sub>2</sub>.

Deliquescent, and sol. in H<sub>2</sub>O. (Rammelsberg.)

+4H<sub>2</sub>O. Very hygroscopic. (Ephraim, Z. anorg. 1910, 67. 385.)

Barium nitride, Ba<sub>3</sub>N<sub>2</sub>.

Decomp. H<sub>2</sub>O violently, not alcohol. (Maquenne, A. ch. (6) 29. 219.)

Ba<sub>3</sub>N<sub>4</sub>.

See Barium azoimide.

Barium oxide, BaO.

Sol. in H<sub>2</sub>O with evolution of heat.

Easily sol. in dil. HNO<sub>3</sub>, or HCl+Aq.

Solubility in NaOH+Aq. See Barium hydroxide.

Solubility in Na<sub>2</sub>O, HCl, +H<sub>2</sub>O at 30°. (Schreinemakers, Z. phys. Ch. 1909, 68. 98.)

Solubility in Na<sub>2</sub>O, NaCl, BaCl<sub>2</sub>+Aq at 30°. (Schreinemakers.)

Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20. 827.)

Sol. with combination in absolute alcohol and anhydrous wood-spirit. Insol. in ether.

Easily sol. in absolute methyl alcohol.

1 l. absolute ethyl alcohol sat. with BaO at 9° contains 213.8 g. BaO. (Berthelot, Bull. Soc. 8. 389.)

Sol. in methyl alcohol. (Neuberg and Neimann, Biochem. Z. 1906, 1. 173.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

See also Barium hydroxide.

Barium peroxide, BaO<sub>2</sub>.

Insol. in H<sub>2</sub>O; decomp. by boiling H<sub>2</sub>O.

Sol. in acids with formation of hydrogen dioxide.

Forms hydrate with  $8\text{H}_2\text{O}$ ; also  $10\text{H}_2\text{O}$  (Berthelot, A. ch. (5) 21. 157); also a compound  $\text{BaO}_2 \cdot \text{H}_2\text{O}_2$ , which is very unstable, sl. sol. in cold  $\text{H}_2\text{O}$ , and insol. in alcohol or ether. (Schöne, A. 192. 257.)

+  $8\text{H}_2\text{O}$ . 100 cc. pure  $\text{H}_2\text{O}$  dissolve 0.168 g.  $\text{BaO}_2 + 8\text{H}_2\text{O}$ ; if  $\text{H}_2\text{O}$  contains 0.3 g.  $\text{Ba}(\text{OH})_2 + 8\text{H}_2\text{O}$ , only 0.102 g.  $\text{BaO}_2 + 8\text{H}_2\text{O}$  are dissolved; if 0.6 g.  $\text{Ba}(\text{OH})_2 + 8\text{H}_2\text{O}$  only 0.019 g.  $\text{BaO}_2 + 8\text{H}_2\text{O}$  are dissolved. (Schöne, A. 1878, 192. 266.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

**Barium oxybromide**,  $\text{Ba}(\text{OH})\text{Br} + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Beckmann, J. pr. (2) 27. 132.)

$\text{BaBr}_2 \cdot \text{BaO} + 5\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Tassilly, C. R. 1895, 120. 1340.)

**Barium oxychloride**,  $\text{Ba}(\text{OH})\text{Cl} + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Beckmann, J. pr. (2) 26. 388, 474.)

**Barium mercury oxychloride**,  $\text{BaCl}_2 \cdot \text{HgO} + 6\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (André, C. R. 104. 431.)

**Barium oxyiodide**,  $\text{Ba}(\text{OH})\text{I} + 9\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol. (Beckmann, B. 14. 2154.)

$\text{BaI}_2 \cdot \text{BaO} + 9\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Tassilly, C. R. 1895, 120. 1340.)

**Barium oxysulphides**,  $\text{Ba}_3\text{O}_2\text{S}_2 + 58\text{H}_2\text{O}$ ,  
 $\text{Ba}_4\text{O}_3\text{S}_3 + 10\text{H}_2\text{O}$ ,  $\text{Ba}_5\text{O}_4\text{S}_4 + 28\text{H}_2\text{O}$ .

Very unstable; decomp. by recrystallization into  $\text{BaS}_2\text{H}_2$  and  $\text{BaO}_2\text{H}_2$ .

**Barium phosphide**,  $\text{BaP}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Dumas, A. ch. 32. 364.)

$\text{Ba}_3\text{P}_2$ . Crystallized. Sol. in dil. acids; insol. in conc. acids; decomp. by  $\text{H}_2\text{O}$ . Insol. in organic solvents at ord. temp. (Jaboin, C. R. 1899, 129. 765.)

**Barium selenide**,  $\text{BaSe}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp.

Sl. sol. in  $\text{H}_2\text{O}$ . (Favre, C. R. 102. 1469.)

**Barium silicide**,  $\text{Ba}_2\text{Si}$ .

(Jüngst, C. C. 1905, I. 195.)

$\text{BaSi}_2$ . Slowly decomp. by  $\text{H}_2\text{O}$ , not by  $\text{NH}_4\text{OH} + \text{Aq}$ . Rapidly decomp. by conc.  $\text{NaOH}$ . Sol. in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , and  $\text{H}_3\text{PO}_4$ , with evolution of spontaneously inflammable gas. Sol. in  $\text{HF}$  and  $\text{HCl}$ . Sol. in acetic acid without evolution of gas. (Moissan, Traité ch. min. 1904, III. 680.)

Decomp. rapidly in both hot and cold  $\text{H}_2\text{O}$ . (Bradley, C. N. 1900, 82. 150.)

**Barium sulphide**,  $\text{BaS}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp.

Crystallized. Decomp. by  $\text{H}_2\text{O}$ .

Attacked by cold conc.  $\text{HNO}_3$ . (Mourlot, A. ch. 1899, (7) 17. 521.)

Cryst. modification is less readily acted on by air and other reagents than the amorphous modification; sol. in fuse oxidizing agents. (Mourlot, C. R. 1898, 126. 645.)

+  $\text{H}_2\text{O}$ . (Neuberg and Neimann, Biochem. Z. 1906, 1. 174.)

+  $6\text{H}_2\text{O}$ . Slowly sol. in boiling  $\text{H}_2\text{O}$ , with decomp.; insol. in, but decomp. by boiling alcohol. (Schöne.)

**Barium sulphide**,  $\text{Ba}_3\text{S}_7 + 25\text{H}_2\text{O}$  (?).

Sol. in  $\text{H}_2\text{O}$ . (Schöne, Pogg. 112. 215.)

**Barium trisulphide**,  $\text{BaS}_3$ .

Sol. in large amount of boiling  $\text{H}_2\text{O}$ . (Schöne, Pogg. 112. 215.)

**Barium tetrasulphide**,  $\text{BaS}_4 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ , especially if hot; sol. in 2.42 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ ; insol. in  $\text{CS}_2$  or alcohol. (Schöne, Pogg. 112. 224.)

+  $2\text{H}_2\text{O}$ . (Veley, Chem. Soc. 49. 369.)

**Barium pentasulphide**,  $\text{BaS}_5$ .

Known only in solution.

**Barium mercuric sulphide**,  $\text{BaS} \cdot \text{HgS} + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wagner, J. pr. 98. 23.)

**Barium nickel sulphide**,  $\text{BaS} \cdot 4\text{NiS}$ .

Sol. in warm conc.  $\text{HCl}$ . (Bellucci, C. A. 1909, 293.)

**Barium stannic sulphide**.

See Sulphostannate, barium.

**Barium uranyl sulphide**,  $6\text{BaS} \cdot \text{UO}_2\text{S} + x\text{H}_2\text{O}$  (?).

Decomp. by  $\text{HCl} + \text{Aq}$ . (Remelé, Pogg. 124. 159.)

**Baryta**.

See Barium oxide,  $\text{BaO}$ .

**Beryllium**,  $\text{Be}$ .

For beryllium and its salts, see Glucinum and the corresponding salts.

**Bismuth**,  $\text{Bi}$ .

Not attacked by  $\text{H}_2\text{O}$ . Very slowly attacked by  $\text{HCl} + \text{Aq}$  (Troost). Very sl. sol. in conc.  $\text{HCl} + \text{Aq}$  (Schützenberger, Willm). Not attacked by dil.  $\text{HCl} + \text{Aq}$  (Naquet and Hanriot). Very slowly attacked by cold  $\text{HCl} + \text{Aq}$  (Godeffroy). According to very careful experiments pure  $\text{Bi}$  is absolutely unattacked by hot or cold, dil. or conc.  $\text{HCl} + \text{Aq}$  except in presence of oxygen. (Ditte and Metzner, A. ch. (6) 29. 397.)

Not attacked by dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Decomp.

by hot conc.  $\text{H}_2\text{SO}_4$ . Easily sol. in dil. or conc.  $\text{HNO}_3$  + Aq. or aqua regia.

Not attacked by pure  $\text{HNO}_3$  + Aq. of 1.52 to 1.42 sp. gr. at  $20^\circ$ ; violently attacked by a more dil. acid, but the acid becomes concentrated thereby. Conc.  $\text{HNO}_3$  + Aq. attacks only by heating or adding  $\text{NO}_2$ . (Millon, A. ch. (3) 6. 95.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

$\frac{1}{2}$  ccm. oleic acid dissolves 0.0091 g. Bi in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

#### Bismuth arsenide, $\text{Bi}_2\text{As}_3$ .

(Descamp, C. R. 86. 1065.)

#### Bismuth dibromide, $\text{Bi}_2\text{Br}_4$ .

Not known in a pure state. (Weber, Pogg. 107. 599.)

#### Bismuth tribromide, $\text{BiBr}_3$ .

Very deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol or ether.

Sol. in  $\text{AlBr}_3$ . (Isbekow, Z. anorg. 1913, 84. 27.)

#### Bismuth hydrogen bromide, $\text{BiBr}_3 \cdot 2\text{HBr} + 4\text{H}_2\text{O}$ .

Deliquescent.

Decomp. in the air. (Aloy, Bull. Soc. 1906, (3) 35. 398.)

#### Bismuth caesium bromide, $2\text{BiBr}_3 \cdot 3\text{CsBr}$ .

Ppt. Insol. in  $\text{HBr}$ .

Sol. in  $\text{HCl}$  and in  $\text{HNO}_3$ . (Hutchins, J. Am. Chem. Soc. 1907, 29. 33.)

#### Bismuth potassium bromide, $\text{BiBr}_3 \cdot 2\text{KBr}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Aloy, Bull. Soc. 1906, (3) 35. 398.)

#### Bismuth bromide ammonia, $\text{BiBr}_3 \cdot 3\text{NH}_3$ .

Sol. in  $\text{HCl}$  + Aq.

$\text{BiBr}_3 \cdot 2\text{NH}_3$  (?).

$2\text{BiBr}_3 \cdot 5\text{NH}_3$ . Not deliquescent; not decomp. by  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Muir, Chem. Soc. 29. 144.)

#### Bismuth bromide potassium chloride,

$\text{K}_2\text{BiCl}_2\text{Br}_2 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Atkinson, Chem. Soc. 43. 289.)

#### Bismuth dichloride, $\text{Bi}_2\text{Cl}_4$ .

Very deliquescent. Decomp. by  $\text{H}_2\text{O}$ , dil. acids, or conc.  $\text{NH}_4\text{Cl}$  + Aq. (Weber, Pogg. 107. 596.)

#### Bismuth trichloride, $\text{BiCl}_3$ .

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl}$  + Aq. and alcohol. Not decomp. by  $\text{H}_2\text{O}$  in presence of citrates. (Spiller.)

0.08 g. sol. in 100 ccm. liquid  $\text{H}_2\text{S}$ . (Antony, C. C. 1905, I. 1692.)

Moderately sol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

1 g.  $\text{BiCl}_3$  is sol. in 5.59 g. acetone at  $18^\circ$ . Sp. gr. of sat. solution  $18^\circ/4^\circ = 0.9194$ . (Naumann, B. 1904, 37. 4331.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

1 pt. is sol. in 60.36 pts. ethyl acetate at  $18^\circ$ . Sp. gr. at  $18^\circ/40^\circ = 0.9106$ . (Naumann, B. 1910, 43. 320.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

#### Bismuth chloride, $\text{Bi}_2\text{Cl}_6$ (?).

Decomp. by  $\text{H}_2\text{O}$ . (Dehérain, C. R. 54. 724.)

#### Bismuth hydrogen chloride, $2\text{BiCl}_3 \cdot \text{HCl} + 3\text{H}_2\text{O}$ .

Not deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Engel, C. R. 106. 1797.)

$\text{BiCl}_3 \cdot 2\text{HCl}$ . (Jacquelin, A. ch. (2) 62. 363.)

#### Bismuth caesium chloride, $\text{BiCl}_3 \cdot 3\text{CsCl}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in cold dil.  $\text{HCl}$  + Aq. but easily sol. on warming. (Brigham, Am. Ch. J. 14. 181.)

$2\text{BiCl}_3 \cdot 3\text{CsCl}$ . As above. (Brigham.)

$\text{BiCl}_3 \cdot 6\text{CsCl}$ . Easily sol. in  $\text{H}_2\text{O}$  and dil.  $\text{HCl}$  + Aq. (Godeffroy, B. 8. 9.)

Does not exist. (Brigham.)

#### Bismuth hydrazine chloride, $\text{BiCl}_3 \cdot 3\text{N}_2\text{H}_4\text{HCl}$ .

Sol. in acids, from which it is pptd. by  $\text{H}_2\text{O}$ . (Ferratini, C. A. 1912. 1613.)

#### Bismuth nitrosyl chloride, $\text{BiCl}_3 \cdot \text{NOCl}$ .

Very deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Sudborough, Chem. Soc. 59. 662.)

#### Bismuth potassium chloride, $\text{BiCl}_3 \cdot \text{KCl} + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Cannot be recryst. except from conc.  $\text{BiCl}_3$  +  $\text{HCl}$ . Decomp. by  $\text{HCl}$  + Aq. into  $\text{BiCl}_3 \cdot 2\text{KCl} + 2\text{H}_2\text{O}$ . (Brigham, Am. Ch. J. 14. 167.)

$\text{BiCl}_3 \cdot 2\text{KCl}$ . Decomp. by  $\text{H}_2\text{O}$ . (Arppe, Pogg. 64. 37.)

Deliquescent.

Sol. in  $\text{H}_2\text{O}$  with decomp. into the oxychloride when excess  $\text{H}_2\text{O}$  is used. (Aloy, Bull. Soc. 1906, (3) 35. 397.)

+  $2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Jacquelin, J. pr. 14. 1.)

Sol. in moderately conc.  $\text{HCl}$  + Aq.

$\text{BiCl}_3 \cdot 3\text{KCl}$ . Decomp. by  $\text{H}_2\text{O}$ . (Arppe.)

Does not exist. (Brigham.)

**Bismuth rubidium chloride**,  $\text{BiCl}_3$ ,  $\text{RbCl} + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HCl} + \text{Aq}$ , from which  $\text{BiCl}_3$ ,  $3\text{RbCl}$  crystallizes. (Brigham, Am. Ch. J. 14. 174.)

$\text{BiCl}_3$ ,  $3\text{RbCl}$ . Decomp. by  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HCl} + \text{Aq}$  without decomp. (Brigham.)

$\text{BiCl}_3$ ,  $6\text{RbCl}$ . Decomp. by  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$  (Godeffroy, B. 8. 9); does not exist. (Brigham.)

$10\text{BiCl}_3$ ,  $23\text{RbCl}$  (?). As above. (Brigham.)

**Bismuth sodium chloride**,  $\text{BiCl}_3$ ,  $2\text{NaCl} + \text{H}_2\text{O}$ .

+  $3\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Arppe, Pogg. 64. 237.)

$\text{BiCl}_3$ ,  $3\text{NaCl}$ .

**Bismuth thallous chloride**,  $\text{BiCl}_3$ ,  $3\text{TlCl}$ .

Ppt. (Ephraim, Z. anorg. 1909, 61. 254.)

$\text{BiCl}_3$ ,  $6\text{TlCl}$ . Ppt. (Ephraim.)

**Bismuth chloride ammonia**,  $2\text{BiCl}_3$ ,  $\text{NH}_3$ .

Stable. (Dehérain, C. R. 54. 724.)

$\text{BiCl}_3$ ,  $2\text{NH}_3$ . (D.)

$\text{BiCl}_3$ ,  $3\text{NH}_3$ . (D.)

**Bismuth chloride nitric oxide**,  $\text{BiCl}_3$ ,  $\text{NO}$ .

Very hygroscopic. (Thomas, C. R. 1895, 121. 129.)

**Bismuth chloride nitrogen peroxide**,  $\text{BiCl}_3$ ,  $\text{NO}_2$ .

Decomp. by moist air, but stable in dry air. (Thomas, C. R. 1896, 122. 612.)

**Bismuth chloride selenide**.

See Bismuth selenochloride.

**Bismuth trifluoride**,  $\text{BiF}_3$ .

Insol. in  $\text{H}_2\text{O}$  or alcohol. (Gott and Muir, Chem. Soc. 53. 138.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

**Bismuth hydrogen fluoride**,  $\text{BiF}_3$ ,  $3\text{HF}$ .

Deliquescent. Decomp. by boiling  $\text{H}_2\text{O}$ . (Muir, Chem. Soc. 39. 21.)

**Bismuth gold**,  $\text{Au}_3\text{Bi}$ .

Insol. in equal pts. of  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9. 71.)

**Bismuthous hydroxide**,  $\text{Bi}(\text{OH})_3$ .

Sol. in strong acids. Insol. in solutions of alkalis, alkali carbonates,  $(\text{NH}_4)_2\text{CO}_3$ , or  $\text{NH}_4\text{NO}_3$ ; or of amyl amine (Wurts). When recently pptd. is sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ , but insol. in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett, 1837). Not pptd. in presence of Na citrates (Spiller).

Solubility of freshly pptd.  $\text{Bi}(\text{OH})_3$  in  $\text{NaOH} + \text{Aq}$ .

g. NaOH per l.	g. Bi dissolved per l. at 20°	g. Bi dissolved per l. at 100°
400	0.16	1.70
320	0.11	1.20

168	0.06	....
112	0.03	0.3
56	trace	0.2
28	0	0.15

(Moser, Z. anorg. 1909, 61. 386.)

$\text{Bi}_2\text{O}_3$ ,  $2\text{H}_2\text{O}$ .

$\text{Bi}_2\text{O}_3$ ,  $\text{H}_2\text{O}$ . (Muir, Chem. Soc. 32. 131.)

See also Bismuth trioxide.

**Bismuth tetrahydroxide**,  $\text{Bi}_2\text{O}_4$ ,  $\text{H}_2\text{O}$ .

$\text{Bi}_2\text{O}_4$ ,  $2\text{H}_2\text{O}$ . (Wernicke, Pogg. 141. 109.)

**Bismuthic hydroxide (Bismuthic acid)**,  $\text{Bi}_2\text{O}_5$ ,  $\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; easily decomp. by acids. (Fremy, A. ch. (3) 12. 495.) Decomp. by  $\text{H}_2\text{SO}_4$ ; not attacked by  $\text{SO}_2 + \text{Aq}$ ; neither dissolved nor decomp. by dil.  $\text{HNO}_3 + \text{Aq}$ , but slowly converted into an allotropic modification (?). Partially decomp. by conc.  $\text{HNO}_3$ . Slowly but wholly dissolved by hot conc.  $\text{HNO}_3$ . Sl. sol. in conc.  $\text{KOH} + \text{Aq}$ . (Arppe.) Sol. in about 100 pts. boiling  $\text{KOH} + \text{Aq}$ , so conc. that it solidifies on removing the lamp. (Muir, Chem. Soc. 51. 77.)

$\text{Bi}_2\text{O}_5$ ,  $2\text{H}_2\text{O}$ . (Bödeker, A. 123. 61.)

Does not exist. (Hoffmann and Geuther.)

**Bismuth iodide**,  $\text{BiI}_3$ .

Not attacked by cold  $\text{H}_2\text{O}$ , but by boiling,  $\text{BiOI}$  is formed. 100 pts. absolute alcohol dissolve  $3\frac{1}{2}$  pts. salt at 20°. (Gott and Muir, Chem. Soc. 57. 138.)

Sol. in  $\text{HNO}_3$ , and  $\text{HI} + \text{Aq}$ , from which it is repptd. by  $\text{H}_2\text{O}$  or alcohol. Sol. in  $\text{KI} + \text{Aq}$  or  $\text{KOH} + \text{Aq}$ . (Rammelsberg.)

l. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. 20. 827.)

absolute alcohol dissolve 3.5 g.  $\text{BiI}_3$ . (Gott and Muir, Chem. Soc. 57. 138.)  
in acetone. (Naumann, B. 1904, 37.

pts. methylene iodide dissolve 0.15 pt.  $\text{BiI}_3$  at  $12^\circ$ , and very little more at higher temperatures. (Retgers, Z. anorg. 3. 343.)  
in methyl acetate. (Naumann, B. 2. 3790.)

1 hydrogen iodide,  $\text{BiI}_3$ ,  $\text{HI} + 4\text{H}_2\text{O}$ . (Pogg. 44. 248.)

1 caesium iodide,  $3\text{CsI} \cdot 2\text{BiI}_3$ .

sl. sol. in  $\text{H}_2\text{O}$ . (Wells, Am. J. Sci. 10. 3. 464.)

1 calcium iodide,  $2\text{BiI}_3$ ,  $\text{CaI}_2 + 18\text{H}_2\text{O}$ .  
luculent; decomp. by  $\text{H}_2\text{O}$ . (Linau, 11. 240.)

1 magnesium iodide,  $2\text{BiI}_3$ ,  $\text{MgI}_2 + \text{H}_2\text{O}$ .  
luculent; decomp. by  $\text{H}_2\text{O}$ . (Linau, 11. 240.)

1 potassium iodide,  $\text{BiI}_3$ ,  $4\text{KI}$ .

(Arppe, Pogg. 44. 237.)

$3\text{KI}$ . (Astre, C. R. 110. 1137.)

$2\text{KI}$ . Sol. in acetic ether. (Astre.)

$\text{H}_2\text{O}$ . Sol. in small amt.  $\text{H}_2\text{O}$  without decomp. by much  $\text{H}_2\text{O}$ .

$2\text{KI}$ ,  $\text{HI}$ . (Arppe.)

$3\text{KI} + 2\text{H}_2\text{O}$ . (Astre.)

$\text{KI} + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Nicklès, 1. 1097.)

$\text{KI}$ . Sol. in acetic ether. (Astre.)

1 sodium iodide,  $\text{BiI}_3$ ,  $\text{NaI} + \text{H}_2\text{O}$ .

luculent; decomp. by  $\text{H}_2\text{O}$ . (Nicklès, 1. 1097.)

$3\text{NaI} + 12\text{H}_2\text{O}$ . As above. (Linau, 11. 240.)

1 zinc iodide,  $2\text{BiI}_3$ ,  $\text{ZnI}_2 + 12\text{H}_2\text{O}$ .

deliquescent. (Linau, Pogg. 111. 240.)

1 iodide ammonia,  $\text{BiI}_3$ ,  $3\text{NH}_3$ .

mp. by  $\text{H}_2\text{O}$ . (Rammelsberg.)

1 iodide zinc bromide.

in  $\text{H}_2\text{O}$ . (Linau, Pogg. 111. 240.)

1 nitride.

insol. (Fischer, B. 1910, 43. 1471.)

Ppt. Decomp. by  $\text{H}_2\text{O}$  or dil. acids.  
in, J. Am. Chem. Soc. 1905, 27. 847.)

1 dioxide,  $\text{Bi}_2\text{O}_3$ .

in conc.  $\text{HNO}_3 + \text{Aq}$ . Decomp. by acids, and boiling  $\text{KOH} + \text{Aq}$ .

mp. by  $\text{H}_2\text{O}$ . (Tanatar, Z. anorg. 7. 438.)

### Bismuth trioxide, $\text{Bi}_2\text{O}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in conc. acids.

Solubility of  $\text{Bi}_2\text{O}_3$  in  $\text{HNO}_3 + \text{Aq}$  at  $20^\circ$ .

Solubility in  $\text{NaOH} + \text{Aq}$  at 25°.

Conc. of $\text{NaOH}$ Mol./l.	g. $\text{Bi}_2\text{O}_3$ in 100 cc. of solution. Mean result.
1.0	0.0013 $\pm$ 0.0002
2.0	0.0026 $\pm$ 0.0002
3.0	0.0049 $\pm$ 0.0005

(Knox, Chem. Soc. 1909, 95. 1767.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Min. *Bismite*. Easily sol. in  $\text{HNO}_3 + \text{Aq}$ .

See also *Bismuthous hydroxide*.

**Bismuth tetroxide,  $\text{Bi}_2\text{O}_4$ .**

Sol. in conc.  $\text{HCl} + \text{Aq}$ , with evolution of  $\text{Cl}_2$ ; in oxygen acids with evolution of  $\text{O}$ . Less easily sol. in conc.  $\text{H}_2\text{SO}_4$  than in  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ .

**Bismuth oxide,  $\text{Bi}_2\text{O}_3$  (?).**

(Hoffmann and Geuther.)

**Bismuth pentoxide,  $\text{Bi}_2\text{O}_5$ .**

Sol. in dil. acids. Combines with  $\text{H}_2\text{O}$  to form bismuthic hydroxide, which see. (Hasebroek, B. 20. 213.)

**Bismuth oxybromide, etc.**

See *Bismuthyl bromide*, etc.

**Bismuth palladium,  $\text{PdBi}_3$ .**

Insol. in equal pts.  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9. 70.)

**Bismuth platinum,  $\text{PtBi}_3$ .**

Insol. equal pts.  $\text{HNO}_3$  and tartaric acids. (Roessler, Z. anorg. 1895, 9. 69.)

**Bismuth phosphide,  $\text{BiP}$ .**

(Cavazzi.)

**Bismuth triselenide,  $\text{Bi}_2\text{Se}_3$ .**

Insol. in  $\text{H}_2\text{O}$ , alkalis, or alkali sulphides +  $\text{Aq}$ ; sl. attacked by  $\text{HCl} + \text{Aq}$ ; oxidized by  $\text{HNO}_3 + \text{Aq}$ . (Schneider, Pogg. 94. 628.)

Min. *Frenzelite*.

**Bismuth potassium selenide.**

See *Selenobismuthite*, potassium.

**Bismuth selenochloride,  $\text{BiSeCl}$ .**

Not attacked by  $\text{H}_2\text{O}$ ; very sl. sol. in  $\text{HCl} + \text{Aq}$ ; easily and completely sol. with decomp. in  $\text{HNO}_3 + \text{Aq}$ . (Schneider.)

**Bismuth disulphide,  $\text{Bi}_2\text{S}_2 + 2\text{H}_2\text{O}$  (?).**

Insol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{HCl} + \text{Aq}$ .

**Bismuth trisulphide,  $\text{Bi}_2\text{S}_3$ .**

Insol. in  $\text{H}_2\text{O}$ .

1 l.  $\text{H}_2\text{O}$  dissolves  $0.35 \times 10^{-4}$  moles  $\text{Bi}_2\text{S}_3$  at 18°. (Weigel, Z. phys. Ch. 1907, 53. 294.)

Easily sol. in moderately dil.  $\text{HNO}_3 + \text{Aq}$ , and conc.  $\text{HCl} + \text{Aq}$ , with separation of  $\text{S}$ . Insol. in alkalis, alkali sulphides,  $\text{Na}_2\text{S}_2\text{O}_3$ , or  $\text{KCN} + \text{Aq}$ ; insol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett). Insol. in potassium thiocarbonate +  $\text{Aq}$ . (Rosenblatt, Z. anal. 26. 15.)

Insol. in alkali hydroxides or alkali hydro-sulphides.

Insol. in  $2\text{N}-(\text{NH}_4)_2\text{S} + \text{Aq}$ .

0.0090 g.  $\text{Bi}_2\text{S}_3$  is sol. in 100 cc.  $\text{N}-\text{Na}_2\text{S}_2 + \text{Aq}$  at 25°. (Knox, Chem. Soc. 1909, 95. 1764.)

Somewhat sol. in  $\text{Na}_2\text{S} + \text{Aq}$ . 75 cc. of  $\text{Na}_2\text{S} + \text{Aq}$  (sp. gr. 1.06) dissolve an amt. of  $\text{Bi}_2\text{S}_3$  corresponding to 0.031 g.  $\text{Bi}_2\text{O}_3$ . (Stillman, J. Am. Chem. Soc. 1896, 18. 683.)

Solubility in  $\text{Na}_2\text{S} + \text{NaOH} + \text{Aq}$  at 25°.

Conc. of $\text{Na}_2\text{S}$ Mol./l.	Conc. of $\text{NaOH}$ Mol./l.	g. $\text{Bi}_2\text{S}_3$ in 100 cc. of solution
0.5	1.0	0.0185
1.0	1.0	0.0838

(Knox, Chem. Soc. 1909, 95. 1763.)

Bismuth sulphide pptd. from acid solution is not dissolved by subsequent treatment with  $\text{K}_2\text{S} + \text{Aq}$ . (Stone, J. Am. Chem. Soc. 1896, 18. 1091.)

Sol. in  $\text{K}_2\text{S} + \text{Aq}$ . (Ditte, C. R. 1895, 120. 187.)

Solubility in  $\text{K}_2\text{S} + \text{KOH} + \text{Aq}$  at 25°.

Conc. of $\text{K}_2\text{S}$ Mol./l.	Conc. of $\text{KOH}$ Mol./l.	g. $\text{Bi}_2\text{S}_3$ in 100 cc. of solution

x, Chem. Soc. 1909, **95**. 1762.)

y by FeCl<sub>3</sub> + Aq. (Cammerer, C. C. 525.)

z KCN + Aq. (Hoffmann, A. 1884,

*ismuthinite*. Easily sol. in HNO<sub>3</sub> +

*suprous sulphide*, Bi<sub>2</sub>S<sub>3</sub>, Cu<sub>2</sub>S.

1 H<sub>2</sub>O. Sol. with decomp. in HNO<sub>3</sub>,  
chneider, J. pr. (2) **40**. 564.)

*nplectonite*.

*potassium sulphide*, Bi<sub>2</sub>S<sub>3</sub>, K<sub>2</sub>S.

der, Pogg. **136**. 460.)

n ethyl acetate. (Naumann, B. 314.)

5<sub>2</sub>S + 4H<sub>2</sub>O. Decomp. by H<sub>2</sub>O.  
in K<sub>2</sub>S + Aq. Efflorescent in dry  
ze, C. R. 1895, **120**. 186.)

*Sulphobismuthite*, potassium.

*silver sulphide*, Bi<sub>2</sub>S<sub>3</sub>, Ag<sub>2</sub>S.

1 cold HCl or HNO<sub>3</sub>. Sol. in warm  
h separation of S, in boiling HCl  
ation of H<sub>2</sub>S.

*enargyrite*, *Matildite*.

ler, J. pr. 1890, (2) **41**. 414.)

*sodium sulphide*, Bi<sub>2</sub>S<sub>3</sub>, Na<sub>2</sub>S.

ler.)

*ulphide telluride*, Bi<sub>2</sub>S<sub>3</sub>, 2Bi<sub>2</sub>Te<sub>3</sub>.

*tradymite*. Sol. in HNO<sub>3</sub> with sepa-

s.

Bi<sub>2</sub>Te.

*seite*. As above.

*ulphobromide*, BiSBr<sub>2</sub>.

nd Eagles, Chem. Soc. 1895, **67**. 91.)

*ulphochloride*, BiSCl.

n H<sub>2</sub>O or dil. HCl + Aq. Sol. in  
l, or HNO<sub>3</sub> + Aq. Decomp. by  
Aq. (Schneider, Pogg. **93**. 464.)

*ulphoiodide*, BiSI.

acked by boiling H<sub>2</sub>O, and dil. acids.  
y hot conc. HCl + Aq, and HNO<sub>3</sub> +  
[+ Aq dissolves out I<sub>2</sub>. (Schneider,  
114.)

*Bismuth telluride*, Bi<sub>2</sub>Te<sub>3</sub>.

Min. *Tetradymite*. Sol. in HNO<sub>3</sub> + Aq.

See also *Bismuth sulphide telluride*.

*Bismuthic acid*, HBiO<sub>3</sub>.

See *Bismuthic hydroxide*.

*Potassium bismuthate*, KBiO<sub>3</sub>.

Sol. in H<sub>2</sub>O. (Arppe.)

KH(BiO<sub>3</sub>)<sub>3</sub>. Insol. in H<sub>2</sub>O.

Not decomp. by boiling H<sub>2</sub>O. (André, C.  
R. **113**. 860.)

No salts of HBiO<sub>3</sub> can exist. (Muir and  
Carnegie, Chem. Soc. **51**. 77.)

*Bismuthicotungstic acid*.

*Ammonium bismuthicotungstate*, 3(NH<sub>4</sub>)<sub>2</sub>O,  
2Bi<sub>2</sub>O<sub>3</sub>, 11WO<sub>3</sub> + 10H<sub>2</sub>O.

A yellow oil which dries to a yellow glass.  
(E. F. Smith, J. Am. Chem. Soc. 1903, **25**.  
1232.)

*Potassium bismuthicotungstate*, 3K<sub>2</sub>O,  
2Bi<sub>2</sub>O<sub>3</sub>, 11WO<sub>3</sub> + 15H<sub>2</sub>O.

A yellow oil which dried to a pale yellow  
glass. (E. F. Smith, J. Am. Chem. Soc. 1903,  
**25**. 1233.)

*Strontium bismuthicotungstate*, 3SrO,  
2Bi<sub>2</sub>O<sub>3</sub>, 11WO<sub>3</sub> + 11H<sub>2</sub>O.

A yellow wax, insol. in pure H<sub>2</sub>O, but sol.  
in H<sub>2</sub>O containing a few drops HNO<sub>3</sub>. (E.  
F. Smith, J. Am. Chem. Soc. 1903, **25**. 1233.)

*Bismuthyl bromide*, BiOBr.

Insol. in H<sub>2</sub>O; sol. in moderately conc.  
HBr + Aq.

Insol. in H<sub>2</sub>O. (Herz, Z. anorg. 1903, **36**.  
348.)

Bi<sub>2</sub>O<sub>3</sub>Br<sub>2</sub>. Insol. in H<sub>2</sub>O; easily sol. in  
conc. HCl, or HNO<sub>3</sub> + Aq; less sol. in dil.  
HNO<sub>3</sub> + Aq.

Bi<sub>11</sub>O<sub>12</sub>Br<sub>7</sub>. As the preceding comp.  
(Muir.)

*Bismuthyl chloride*, BiOCl.

Insol. in H<sub>2</sub>O or dil. acids. Sol. in conc.  
HCl, or HNO<sub>3</sub> + Aq.

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J.  
1898, **20**. 827.)

Insol. in acetone. (Naumann, B. 1904, **37**.  
4329.)

+ H<sub>2</sub>O. (Heintz, Pogg. **63**. 55.)

+ 3H<sub>2</sub>O. (Phillips, Br. Arch. (1) **39**. 41.)

Bi<sub>7</sub>O<sub>8</sub>Cl<sub>3</sub>. (Arppe.)

BiO<sub>2</sub>Cl<sub>2</sub>. Insol. in H<sub>2</sub>O; sol. in hot HCl, or  
HNO<sub>3</sub> + Aq. (Muir.)

*Bismuthyl fluoride*, BiOF.

Insol. in H<sub>2</sub>O; sol. in HCl, HBr, or HI + Aq.  
(Gott and Muir, Chem. Soc. **33**. 139.)

BiOF, 2HF. Insol. in H<sub>2</sub>O.

**Bismuthyl iodide, BiOI.**

Not decomp. by  $H_2O$  or alkaline solutions.  
Sol. in  $HCl + Aq.$  Decomp. by  $HNO_3 + Aq.$   
(Schneider, J. pr. 79. 424.)

Insol. in  $KCl$ , or  $KI + Aq.$

$3BiOI, 7Bi_2O_3$ . Sol. in dil.  $HCl$ ; decomp.  
by  $HNO_3$ ; insol. in boiling  $H_2O$  and alkali.  
(Blyth, C. N. 1896, 74. 200.)

$BiI_3, 5Bi_2O_3$ . Ppt. Sl. sol. in  $HC_2H_3O_2 + Aq.$   
Not decomp. by  $H_2O$ . (Fletcher and Cooper, Pharm. J. (3) 13. 254.)

$4BiI_3, 5Bi_2O_3$ . Easily sol. in  $HCl + Aq.$   
Decomp. by  $HNO_3 + Aq.$  Sl. attacked by  
 $H_2SO_4$ ; somewhat sol. in  $H_2C_4H_4O_6$ , and  
 $KHC_4H_4O_6 + Aq.$

Sol. in  $(NH_4)_2S$ , and  $KOH + Aq.$  (Storer's Dict.)

**Bismuthyl sulphide,  $Bi_2O_3S$ .**

(Hermann, J. pr. 75. 452.)

$Bi_2O_3S$ . Insol. in  $H_2O$ . (Scherpenberg, C. C. 1889, II. 641.)

$Bi_2O_3S$ .

Min. *Karelinite*.

**Boracic acid.**

See Boric acid.

**Borax.**

See Tetraborate, sodium.

**Boric acid, anhydrous,  $B_2O_3$ .**

See Boron trioxide.

**Metaboric acid,  $HBO_2$ .**

Sol. in  $H_2O$ .

Sl. sol. in hot glacial acetic acid. (Holt, Chem. Soc. 1911, 100. (2) 720.)

**Orthoboric acid,  $H_3BO_3$ .**

Sol. in 33 pts.  $H_2O$  at  $10^\circ$ .

" 25 " "  $20^\circ$ .

" 3 " "  $100^\circ$ .

(Berzelius.)

Sol. in 20 pts.  $H_2O$  at  $18.75^\circ$ . (Abl.)

100 pts.  $H_2O$  at  $100^\circ$  dissolve 2 pts. (Ure's Dict.)

1 pt. crystallized acid dissolves in—

25.66 pts.  $H_2O$  at  $19^\circ$ .

14.88 " "  $25^\circ$ .

12.66 " "  $37.5^\circ$ .

10.16 " "  $50^\circ$ .

6.12 " "  $62.5^\circ$ .

4.73 " "  $75^\circ$ .

3.55 " "  $87.5^\circ$ .

2.97 " "  $100^\circ$ .

Or, 100 pts.  $H_2O$  dissolve at—

$19^\circ$  3.9 pts.  $H_3BO_3$ .

$25^\circ$  6.8 " "

$37.5^\circ$  7.8 " "

$50^\circ$  9.8 " "

$62.5^\circ$  16.0 " "

$75^\circ$  21.0 " "

$87.5^\circ$  28.0 " "

$100^\circ$  34.0 " "

Or, sat. aqueous solution contains at—

$19^\circ$  3.75%  $H_3BO_3$ .

$25^\circ$  6.27 " "

$37.5^\circ$  7.32 " "

$50^\circ$  8.96 " "

$62.5^\circ$  14.04 " "

$75^\circ$  17.44 " "

$87.5^\circ$  21.95 " "

$100^\circ$  25.17 " "

(Brandes and Firnhaber, Arch. Pharm. 7

1 litre  $H_2O$  dissolves at—

$0^\circ$  19.47 g.  $H_3BO_3$ .

$12^\circ$  29.20 " "

$20^\circ$  39.92 " "

$40^\circ$  69.91 " "

$62^\circ$  114.16 " "

$80^\circ$  168.15 " "

$102^\circ$  291.16 " "

(Ditte, C. R. 85. 1069.)

1 l.  $H_2O$  dissolves 0.901 mol.  $H_3BO_3$  at  
(Herz, Z. anorg. 1910, 66. 359.)

1 l.  $H_2O$  dissolves 0.898 mol.  $H_3BO_3$  at  
Sp. gr. of the solution = 1.0168. (Müller  
phys. Ch. 1907, 57. 529.)

1 l.  $H_2O$  dissolves 0.887 mol.  $H_3BO_3$  at  
and 1.025 mol. at  $30^\circ$ . (Ageno and  
Ist. Ven. (VIII) 14. II, 331.)

Solubility in  $H_2O$  is increased by presence  
 of  $KCl$ ,  $KNO_3$ ,  $K_2SO_4$ ,  $NaNO_3$ , and  $Na_2SO_4$ .

In general the solubility in  $H_2O$  is increased  
 by the presence of both electrolytes and non-  
 electrolytes. (Bogdan, C. C. 1903, II. 2.)

Sol. in borax + Aq. (McLauchlan, Z. anorg.  
 1903, **37**. 371.)

Sl. sol. in liquid  $NH_3$ . (Franklin, Am. Ch.  
 J. 1898, **20**. 827.)

Unattacked and undissolved by liquid  $NO_2$ .  
 (Frankland, Chem. Soc. 1901, **79**. 1362.)

Sol. in 6 pts. alcohol (Wittstein), 5 pts.  
 boiling alcohol (Wenzel). Only traces dis-  
 solve in anhydrous ether. (Schiff.) Sol. in  
 100 pts. ether. (Hager's Comm.) Sol. in  
 several essential oils.

1 l.  $H_2O$  sat. with amyl alcohol dissolves  
 0.8952 mol.  $H_2BO_3$  at  $25^\circ$ . (Auerbach, Z.  
 anorg. 1903, **37**. 357.)

Solubility of  $H_2BO_3$  in amyl alcohol + Aq at  $t^\circ$ .M = millimols  $H_2BO_3$  in 1 l. of  $H_2O$ .A = millimols  $H_2BO_3$  in 1 l. of alcohol.

Insol. in hot glacial acetic acid. (Holt, Chem. Soc. 1911, 100. (2) 720.)

**Borates.**

No borate is quite insol. in H<sub>2</sub>O; the alkali borates are very sol. The less sol. borates are easily decomp. by H<sub>2</sub>O; the easily sol. salts are also decomp., but less quickly. The less sol. borates are easily sol. in H<sub>2</sub>BO<sub>3</sub>, HNO<sub>3</sub>, etc. They are more sol. in H<sub>2</sub>O containing tartaric acid or potassium tartrate than in pure H<sub>2</sub>O. (Souberain.) The normal borates of the alkaline-earths are sol. to no inconsiderable extent in H<sub>2</sub>O, and more readily in hot, than in cold H<sub>2</sub>O. (Berzelius, Pogg. 34. 568.)

All borates are insol., or sl. sol. in alcohol.

Aluminum borate, 2Al<sub>2</sub>O<sub>3</sub>, B<sub>2</sub>O<sub>3</sub>.Min. *Jeremciwite*.+ 3H<sub>2</sub>O. Ppt. (Rose, Pogg. 91. 452.)3Al<sub>2</sub>O<sub>3</sub>, B<sub>2</sub>O<sub>3</sub>. *Crystallized*. Insol. in HNO<sub>3</sub> + Aq. (Ebels, A. ch. (3) 33. 62.)3Al<sub>2</sub>O<sub>3</sub>, 2B<sub>2</sub>O<sub>3</sub> + 7H<sub>2</sub>O. Ppt. (Rose, l. c.)**Ammonium borate.**The system (NH<sub>4</sub>)<sub>2</sub>O, B<sub>2</sub>O<sub>3</sub>, H<sub>2</sub>O at 60° has

been studied by Sborgi. (Real. Ac. Linc. 1915 (5) **24**, I, 1225.)

**Ammonium diborate.**

Difficultly sol. in acetone. (Naumann, B. 1904, **37**, 4328.)

**Ammonium tetraborate**,  $(\text{NH}_4)_2\text{B}_4\text{O}_7 + 4\text{H}_2\text{O}$ ,  
or perhaps  $\text{NH}_4\text{H}(\text{BO}_3)_2 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in 12 pts. cold  $\text{H}_2\text{O}$ ; decomp. by heat. (Rammelsberg, Pogg. **90**, 21.)

Sol. in acetone. (Eidmann, C. C. 1899, II, 1014.)

**Ammonium octoborate**,  $(\text{NH}_4)_2\text{B}_8\text{O}_{13} + 6\text{H}_2\text{O}$ .

Sol. in 8 pts. cold, decomp. by boiling  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. **90**, 21.)

Min. *Lirdellerite*. Sol. in  $\text{H}_2\text{O}$  with decomp.

**Ammonium dekaborate**,  $(\text{NH}_4)_2\text{B}_{10}\text{O}_{16} + 6\text{H}_2\text{O}$ .

Permanent. Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)  
 $+ 8\text{H}_2\text{O}$ . (Atterberg, Bull. Soc. (2) **22**, 350.)

**Ammonium dodekaborate**,  $(\text{NH}_4)_2\text{B}_{12}\text{O}_{18} + 9\text{H}_2\text{O}$ .

Sol. in hot  $\text{H}_2\text{O}$ . (Bechi, Sill. Am. J. (2) **17**, 129.)

**Ammonium perborate**,  $\text{NH}_4\text{BO}_3$ .

See Perborate, ammonium.

**Ammonium calcium borate**,  $(\text{NH}_4)_2\text{CaB}_4\text{O}_{11}$   
 $= \text{CaB}_4\text{O}_7 + 4(\text{NH}_4)_2\text{O}$ .

(Ditte, C. R. **96**, 1663.)

**Ammonium magnesium borate.**

Sol. in  $\text{H}_2\text{O}$ , decomp. by boiling. (Rammelsberg, Pogg. **49**, 451.)

**Ammonium zinc borate**,  $4(\text{NH}_4)_2\text{B}_4\text{O}_7$ ,  
 $\text{Zn}(\text{BO}_2)_2 + 5\text{H}_2\text{O}$ .

(Ditte, C. R. **96**, 1663.)

**Barium borate**,  $\text{Ba}(\text{BO}_2)_2$ .

Ppt. (Ouvrard, C. R. 1906, **142**, 283.)

Sol. in 3,300 pts. 45% alcohol.

" 7,800 " 50 "

" 25,000 " 60 "

" 55,000 " 75 "

(Berg, Z. anal. **16**, 25.)

$+ 10\text{H}_2\text{O}$ . Sl. sol. in cold, more readily in hot  $\text{H}_2\text{O}$ , especially in presence of ammonium salts. (Berzelius, Pogg. **34**, 568.) Sol. in sodium citrate + Aq. (Spiller.) Insol. in wood spirit. (Ebelmen.)

$2\text{BaO} \cdot \text{B}_2\text{O}_3$ . Decomp. by  $\text{H}_2\text{O}$  forming  $\text{BaO}$ ,  $\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$ . (Ouvrard, C. R. 1906, **142**, 283.)

$3\text{BaO} \cdot \text{B}_2\text{O}_3$ . Easily sol. in mineral acids. Sl. attacked by dil. acetic acid. (Ouvrard, C. R. 1901, **132**, 258.)

$\text{BaB}_4\text{O}_{10}$ . Slowly sol. in warm dilute  $\text{HNO}_3$  + Aq. (Ditte, C. R. **77**, 892.)

$+ 5\text{H}_2\text{O}$ . Sol. in 100 pts. cold, and more freely in hot  $\text{H}_2\text{O}$ . When freshly pptd. sol. in cold  $\text{NH}_4\text{Cl}$  + Aq (Wackenroder, A. **41**, 315);  $\text{NH}_4\text{NO}_3$  + Aq (Brett, Phil. Mag. (3) **10**, 96); and  $\text{BaCl}_2$  + Aq (Rose).

$\text{BaB}_4\text{O}_{10} + 13\text{H}_2\text{O}$ . (Laurent, A. ch. (2) **67**, 215.)

$\text{Ba}_2\text{B}_2\text{O}_5$ . (Bloxam, Chem. Soc. **14**, 143.)

$\text{Ba}_2\text{B}_{10}\text{O}_{15} + 6\text{H}_2\text{O}$ . Sol. in 100 pts. cold  $\text{H}_2\text{O}$ . Easily sol. in ammonium nitrate, or chloride, or barium chloride + Aq. (Rose, Pogg. **87**, 1.)

$\text{Ba}_2\text{B}_8\text{O}_{11}$ . Easily sol. in warm dilute acids.  $+ 6\text{H}_2\text{O}$ .

**Barium borate bromide**,  $3\text{BaO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{BaBr}_2$ .  
(Ouvrard, C. R. 1906, **142**, 283.)

**Barium borate chloride**,  $3\text{BaO} \cdot 5\text{B}_2\text{O}_3 \cdot \text{BaCl}_2$ .

Unaffected by  $\text{H}_2\text{O}$ . Sol. in acids. (Ouvrard, C. R. 1906, **142**, 283.)

**Bismuth borate**,  $\text{BiBO}_3 + 2\text{H}_2\text{O}$ .

Ppt. Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{S}$ . Not decomp. by  $\text{KOH}$  + Aq. (Vanino, J. pr. 1906, (2) **74**, 152.)

**Cadmium borate**,  $\text{Cd}_2(\text{BO}_3)_2$ .

Insol. in  $\text{H}_2\text{O}$ , easily sol. in dil. acids. (Ouvrard, C. R. 1900, **130**, 174.)

$\text{Cd}(\text{BO}_3)_2$ . Difficultly sol. in  $\text{H}_2\text{O}$  (Stromeyer); insol. in  $\text{H}_2\text{O}$ , sol. in  $\text{HCl}$  + Aq (Odling); easily sol. in warm  $\text{NH}_4\text{Cl}$  + Aq (Rose).

(Guertler, Z. anorg. 1904, **40**, 242.)

$3\text{CdO} \cdot 2\text{B}_2\text{O}_3 + 3\text{H}_2\text{O}$ . Ppt. Sl. sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. **88**, 299.)

$\text{CdO} \cdot 2\text{B}_2\text{O}_3 + 2\text{H}_2\text{O}$ . (Ditte, A. ch. 1883, (5) **30**, 255.)

$\text{CdO}$ ,  $4\text{B}_2\text{O}_3 + 10\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ ; decomp. on heating. (Ditte, A. ch. 1883, (5) **30**, 255.)

**Cadmium borate bromide**,  $6\text{CdO} \cdot 8\text{B}_2\text{O}_3 \cdot \text{CdBr}_2$ .

Insol. in  $\text{H}_2\text{O}$  and fuming  $\text{HCl}$  or  $\text{HBr}$  + Aq. (Rousseau and Allaire, C. R. 1894, **119**, 72.)

**Cadmium borate chloride**,  $6\text{CdO} \cdot 8\text{B}_2\text{O}_3 \cdot \text{CdCl}_2$ .

(Rousseau and Allaire, C. R. 1894, **118**, 1256.)

**Cadmium borate iodide**,  $6\text{CdO} \cdot 8\text{B}_2\text{O}_3 \cdot \text{CdI}_2$ .

(Allaire, C. R. 1898, **127**, 557.)

**Cæsium borate**,  $\text{Cs}_2\text{B}_4\text{O}_{10}$ .

Very sol. in  $\text{H}_2\text{O}$ , less in alcohol. (Reischle, Z. anorg. **4**, 116.)

**borate,  $\text{Ca}(\text{BO}_2)_2$ .**

l. in  $\text{H}_2\text{O}$ ; insol. in alkali chlorides, or conc. acetic acid+Aq; sol. in cold or solutions of ammonium salts, especially ammonium nitrate, in  $\text{CaCl}_2$ +Aq, and also sol. in dilute mineral acids at  $50^\circ$ . C. R. 80. 490, 561.)

$\text{CaO}$ .

$\text{CaO}$ ; two modifications of which one unstable. (van't Hoff and Meyer. A. 1906, 351. 101.)

$\text{CaO}$ . When warmed in  $\text{H}_2\text{O}$  it goes to  $\text{CaB}_2\text{O}_6$ + $4\text{H}_2\text{O}$ . (van't Hoff and offer.)

n  $\text{H}_2\text{O}$  without decomp.; 1 l. solution of 2 g. salt. (Ditte, C. R. 96. 1663.)

$\text{O}_2$ . Decomp. by  $\text{H}_2\text{O}$ . (Blount, C. N. )

in methyl acetate. (Naumann, B. 1. 3790.)

$\text{CaO}$ . (Ditte, C. R. 96. 1663.)

$\text{CaO}$ . Min. *Bechilite*.

$\text{CaO}$ . Min. *Borocalcite*. Sol. in acids.  $\text{CaO}$ + $4\text{H}_2\text{O}$ .

$\text{CaO}$ . Unstable. On standing in the air in which it is formed it changes into  $\text{CaO}$ + $4\text{H}_2\text{O}$ .

$\text{CaO}$ . Unstable. Goes over into  $\text{CaO}$ + $8\text{H}_2\text{O}$ . (van't Hoff and Meyer. A. 1906, 351. 104.)

$\text{O}_2$ + $12\text{H}_2\text{O}$ . (Ditte, C. R. 96. 1663.)

$\text{B}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ , sol. in dil. acids. d, C. R. 1905, 141. 353.)

$\text{O}_2$ . (Ditte, C. R. 77. 785.)

$\text{CaO}$ . Min. *Pandermite*, *Priceite*. See  $\text{B}_2\text{O}_3$ + $9\text{H}_2\text{O}$ .

$\text{CaO}$ . Min. *Colemanite*.

the Ca is in form of colemanite, the contains in 100 g., 4.8 g.  $\text{H}_2\text{BO}_3$  and  $\text{CaO}$ . (van't Hoff, B. A. B. 1907, 653.)

$\text{CaO}$ .

$\text{CaO}$ . (van't Hoff and Meyerhoffer, A. 11. 101.)

,  $\text{B}_2\text{O}_3$ . Easily sol. in dil. acids. d, C. R. 1901, 132. 258.)

,  $5\text{B}_2\text{O}_3$ + $9\text{H}_2\text{O}$ . (van't Hoff, B. A. B. 568.)

,  $5\text{B}_2\text{O}_3$ + $9\text{H}_2\text{O}$ . True composition of nite. (van't Hoff, B. A. B. 1906, II.

**iron (ferrous) borate silicate,**

$\text{FeB}_2\text{Si}_2\text{O}_{10}$ .

*Homilite*. Easily sol. in  $\text{HCl}$ +Aq.

**magnesium borate,  $\text{CaO}$ ,  $\text{MgO}$ ,  $\text{O}_2$ + $6\text{H}_2\text{O}$ .**

*Hydroboracite*. Somewhat sol. in  $\text{H}_2\text{O}$ . ol. in warm  $\text{HCl}$ +Aq or  $\text{HNO}_3$ +Aq. ,  $3\text{MgO}$ ,  $4\text{B}_2\text{O}_3$ . (Ditte, C. R. 77.

**sodium borate,  $2\text{CaO}$ ,  $\text{Na}_2\text{O}$ ,  $5\text{B}_2\text{O}_3$ ,  $\text{H}_2\text{O}$ .**

t Hoff, B. A. B. 1907, 303.

$\text{CaO}$ ,  $\text{Na}_2\text{B}_4\text{O}_{10}$ +15, or  $24\text{H}_2\text{O}$ .

Min. *Natroborocalcite*, *Ulexite*. Decomp. by boiling with  $\text{H}_2\text{O}$ . Sol. in acids.

$\text{Ca}_2\text{Na}_4\text{B}_{11}\text{O}_{22}$ + $15\text{H}_2\text{O}$ . Min. *Franklandite*. Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl}$ , and  $\text{HNO}_3$ +Aq.

**Calcium borate bromide,  $3\text{CaO}$ ,  $3\text{B}_2\text{O}_3$ ,  $\text{CaBr}_2$ .**

Sl. attacked by  $\text{H}_2\text{O}$ . Very sol. in dilute acetic acid. (Ouvrard, C. R. 1905, 141. 1023.)

$3\text{CaO}$ ,  $5\text{B}_2\text{O}_3$ ,  $\text{CaBr}_2$ . Hardly attacked by cold  $\text{H}_2\text{O}$  or very dil. acetic acid. Sol. in strong acids, even when dilute. (Ouvrard, C. R. 1905, 141. 1023.)

**Calcium borate chloride,  $\text{Ca}_2\text{B}_2\text{O}_6$ ,  $\text{CaCl}_2$ .**

Decomp. quickly by moist air or  $\text{H}_2\text{O}$ , slowly by absolute alcohol. (Chatelier, C. R. 99. 276.)

$3\text{CaO}$ ,  $3\text{B}_2\text{O}_3$ ,  $\text{CaCl}_2$ . (Ouvrard, C. R. 1905, 141. 353.)

$3\text{CaO}$ ,  $5\text{B}_2\text{O}_3$ ,  $\text{CaCl}_2$ . Sl. attacked by cold  $\text{H}_2\text{O}$  and dil. acetic acid+Aq. Strong acids dissolve even when very dilute. (Ouvrard, C. R. 1905, 141. 352.)

**Calcium borate silicate,  $2\text{CaO}$ ,  $\text{B}_2\text{O}_3$ ,  $2\text{SiO}_2$ ,  $+ \text{H}_2\text{O}$ .**

Min. *Datolite*. Sol. in  $\text{HCl}$ +Aq with separation of gelatinous silica.

+ $2\text{H}_2\text{O}$ . Min. *Botryolite*.

$\text{CaO}$ ,  $\text{B}_2\text{O}_3$ ,  $\text{SiO}_2$ . Min. *Danburite*. Very sl. attacked by  $\text{HCl}$ +Aq before ignition.

**Chromous borate.**

Precipitate. Sol. in free acids; insol. in borax+Aq. (Moberg.)

**Chromic borate,  $7\text{Cr}_2\text{O}_3$ ,  $4\text{B}_2\text{O}_3$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in excess of borax+Aq. (Hebberling, C. C. 1870. 122.)

**Chromic magnesium borate,  $3\text{Cr}_2\text{O}_3$ ,  $6\text{MgO}$ ,  $2\text{B}_2\text{O}_3$ .**

Not attacked by acids. (Ebelmen, A. ch. (3) 33. 52.)

$2\text{Cr}_2\text{O}_3$ ,  $9\text{MgO}$ ,  $3\text{B}_2\text{O}_3$ . (Mallard, C. R. 105. 1260.)

**Cobaltous borate,  $3\text{CoO}$ ,  $2\text{B}_2\text{O}_3$ + $4\text{H}_2\text{O}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 88. 299.)

$3\text{CoO}$ ,  $\text{B}_2\text{O}_3$ . (Mallard, C. R. 105. 1260.)

$2\text{CoO}$ ,  $\text{B}_2\text{O}_3$ . (Ouvrard, C. R. 1900, 130. 337.)

**Cobaltous borate bromide,  $6\text{CoO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{CoBr}_2$ .**

(Rousseau and Allaire, C. R. 1894, 119. 73.)

**Cobaltous borate chloride,  $6\text{CoO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{CoCl}_2$ .**

(Rousseau and Allaire, C. R. 1894, 118. 1257.)

**Cobaltous borate iodide,  $6\text{CoO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{CoI}_2$ .**

(Allaire, C. R. 1898, 127. 557.)

**Cuprous borate,  $3\text{Cu}_2\text{O}$ ,  $2\text{B}_2\text{O}_3$ .**

(Guertler, Z. anorg. 1904, 38. 459.)

**Cupric borate.**

Composition depends on temperature and concentration of solutions. Boiling  $H_2O$  dissolves out all the boric acid. Sol. in acids; slowly sol. in hot conc.  $NH_4Cl + Aq.$

$Cu(BO_2)_2$ . Insol. in cold dil. acids, even  $HF$ . Slowly sol. in hot conc.  $HCl$ . Not attacked by alkalis or alkali carbonates +  $Aq.$  (Guertler, Z. anorg. 1904, **38**, 456.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

**Cupric borate ammonia**,  $CuB_4O_7 \cdot 4NH_3 + 6H_2O$ .

Efflorescent. Can be recrystallized from a little  $NH_4OH + Aq.$  (Pasternack, A. 151. 227.)

**Dydymium borate**,  $DiBO_3$ .

Insol. in  $H_2O$  acidulated with  $HCl + Aq.$  (Cleve, Bull. Soc. (2) **43**, 363.)

$Di_2(B_4O_7)_2$ . Insol. in  $H_2O$ ; sol. in acids. (Frerichs and Smith, A. 191. 355.)

**Glucinum borate, basic**,  $5GfO \cdot B_2O_3$ .

Insol. in  $H_2O$ ; sol. in acids. (Krüss and Moraht, B. **23**, 735.)

**Iron (ferrous) borate.**

Ppt.  $H_2O$  dissolves out all the boric acid. (Tünnerman.)

**Iron (ferric) borate**,  $Fe_2(BO_2)_4 \cdot 3H_2O$ .

Ppt. Insol. in  $H_2O$ .

Min. *Lagonite*. Sol. in acids.

$2Fe_2O_3 \cdot 3B_2O_3$ . (Mallard, C. R. **105**, 1260.)  
 $6Fe_2O_3 \cdot B_2O_3 + 6H_2O$ . Ppt. (Rose, Pogg. **89**, 473.)

$9Fe_2O_3 \cdot B_2O_3 + 9H_2O$ . Ppt. (Rose.)

**Iron (ferric) magnesium borate**,  $3Fe_2O_3 \cdot 6MgO \cdot 2B_2O_3$ .

Insol. in  $H_2O$ . Sol. in conc.  $HCl + Aq.$  (Ebelmen, A. ch. (3) **33**, 53.)

$2Fe_2O_3 \cdot 9MgO \cdot 3B_2O_3$ . (Mallard, C. R. **105**, 1260.)

**Iron (ferroferric) magnesium borate**,  $3MgO \cdot FeO \cdot Fe_2O_3 \cdot B_2O_3$ .

Min. *Ludwigite*. Slowly sol. in  $HCl + Aq.$  when finely powdered.

**Iron (ferrous) borate bromide**,  $6FeO \cdot 8B_2O_3 \cdot FeBr_2$ .

Slowly sol. in hot  $HNO_3 + Aq.$  (Rousseau and Allaire, C. R. **116**, 1445.)

**Iron (ferrous) borate chloride**,  $6FeO \cdot 8B_2O_3 \cdot FeCl_2$ .

Slowly sol. in hot  $HNO_3 + Aq.$  (Rousseau and Allaire, C. R. **116**, 1195.)

**Lanthanum borate**,  $2La_2O_3 \cdot B_2O_3$ .

(Nordenskjöld, Pogg. **114**, 618.)

$La_2(B_4O_7)_3$ . Ppt. (Smith.)

Formula is  $La_2B_4O_{13} + xH_2O$ . (Cleve, B. **11**, 910.)

**Lead borate, basic,**

$2PbO \cdot B_2O_3 + 2H_2O$ . Ppt.

$4PbO \cdot 3B_2O_3 + 4H_2O$ . Ppt.

+  $5H_2O$ . Ppt.

$6PbO \cdot 5B_2O_3 + 6H_2O$ . Ppt.

$8PbO \cdot 3B_2O_3 + 8H_2O$ . Ppt.

$9PbO \cdot 5B_2O_3 + 9H_2O$ . Ppt. (Rose, Pogg. **87**, 470.)

**Lead borate**,  $Pb(BO_2)_2 + H_2O$ .

Insol. in  $H_2O$ . Easily sol. in dil.  $HNO_3$ , or boiling  $HC_2H_3O_2 + Aq.$  Decomp. by  $H_2SO_4$ ,  $HCl$ , also by boiling  $KOH$ , or  $NaOH + Aq.$  Insol. in alcohol. (Herapath, Phil. Mag. (3) **34**, 375.)

Sol. in  $NH_4Cl + Aq.$ ; sol. in sat.  $NaCl + Aq.$

$2PbO \cdot 3B_2O_3 + 4H_2O$ . (Herapath.)

$PbB_4O_7 + 4H_2O$ . Slightly sol. in pure  $H_2O$ , but insol. in solutions of Na salts as  $Na_2B_4O_7 + Aq.$  (Soubeiran.)

**Lead borate chloride**,  $Pb(BO_2)_2 \cdot PbCl_2 + H_2O$ .

Insol. in cold, very slowly decomp. by hot  $H_2O$  into its constituents. Easily sol. in dil. hot  $HNO_3 + Aq.$ ; insol. in alcohol. (Herapath, Phil. Mag. (3) **34**, 375.)

**Lead borate nitrate**,  $Pb(BO_2)_2 \cdot Pb(NO_3)_2 + H_2O$ .

Insol. in alcohol. (Herapath.)

**Lithium borate**,  $LiBO_2$ .

Solubility in  $H_2O$ .  
100 g.  $H_2O$  dissolve g.  $LiBO_2$  at  $t^\circ$ .

$t^\circ$	g. $LiBO_2$	$t^\circ$	g. $LiBO_2$
0	0.7	30	4.9
10	1.4	40	11.12
20	2.6	45	20.

(Le Chatelier, C. R. 1897, **124**, 1094.)

Insol. in acetone. (Eidmann, C. C. **1899**, II, 1014; Naumann, B. 1904, **37**, 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

+  $8H_2O$ . (Le Chatelier, Bull. Soc. 1899, (3) **21**, 35.)

+  $16H_2O$ . Effloresces in the air; slowly sol. in cold  $H_2O$ , rapidly in hot  $H_2O$ . (Le Chatelier, C. R. 1897, **124**, 1092.)

$Li_2H_2(BO_2)_2 + 14H_2O$ . (Reischle, Z. anorg. **4**, 166.)

$Li_2B_4O_7$ . Deliquescent; easily sol. in  $H_2O$ . (Arfvedson, A. ch. **10**, 82.)

Sol. in acetone. (Eidmann, C. C. **1899**, II, 1014.)

Insol. in acetone. (Naumann, B. 1904, **37**, 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

+  $5H_2O$ . Insol. in alcohol. (Filsinger, Arch. Ph. (3) **8**, 198.)

$3\text{B}_2\text{O}_3 + 6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ ; alcohol. (Filsinger.)  
 $\text{B}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ . (Le Chatelier, 1899, (3) 21. 35.)

$\text{O}$ . Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol.  
 "lithium borate" is less sol. than the te. (Gmelin.)  
 $5\text{B}_2\text{O}_3 + 10\text{H}_2\text{O}$ . (Dukelski, C. A. 9.

**um borate,  $\text{Mg}(\text{BO}_2)_2$ .**

C. R. 77. 893.)  
 Min. *Pinnoite*.  
 (Laurent, A. ch. (2) 67. 215.)  
 Insol. in cold or hot  $\text{H}_2\text{O}$ ; easily  $\text{HCl} + \text{Aq}$ . Decomp. by conc.  $\text{HCl}$  to  $\text{H}_3\text{BO}_3$  and  $\text{MgCl}_2$ . (Wöhler.)  
 $7 + 8\text{H}_2\text{O}$ . (Popp, A. Suppl. 8. 1.)  
 $3\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$ . Very slowly sol. in rose, A. 84. 221.)  
 75 pts. cold  $\text{H}_2\text{O}$ . (Rammelsberg, 445.)  
 $\text{B}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ , but sol. in  $\text{Aq}$ . (Guertler, Z. anorg. 1904, 40.

Very sl. sol. in  $1/10$  N  $\text{HCl} + \text{Aq}$ . off, B. A. B. 1907, 658.)  
*Scharite*.

$\text{B}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol. in Ebelmen, A. 80. 208.)  
 sol. in cold, but somewhat decomp.  $\text{H}_2\text{O}$ . (Rammelsberg.)  
 Somewhat sol. in cold  $\text{H}_2\text{O}$ . Pogg. 28. 525.)

$2\text{B}_2\text{O}_3$ . Sol. in warm  $\text{H}_2\text{SO}_4$  or  $\text{Aq}$ . (Ditte, C. R. 77. 893.)  
 $3\text{B}_2\text{O}_3 + 18\text{H}_2\text{O} = \text{Mg}(\text{BO}_2)_2 + 10\text{HBO}_2$ . (Rammelsberg, Pogg. 49. 445.)  
 $4\text{B}_2\text{O}_3$ . Sol. in hot dil. acids; insol. acid. (Ditte, C. R. 77. 893.)

$2\text{B}_2\text{O}_3 + 1\frac{1}{2}$ , and  $3\text{H}_2\text{O}$ . Min. ze. Difficultly sol. in  $\text{HCl} + \text{Aq}$ .  
 $\text{B}_2\text{O}_3$ . (Mallard, C. R. 105. 260.)

**um manganous borate,  $3\text{Mg}_2\text{B}_2\text{O}_7$ ,  $12\text{B}_2\text{O}_3 + 7\text{H}_2\text{O}$ .**  
*Mussexite*. Sol. in  $\text{HCl} + \text{Aq}$ .

**um potassium borate,  $\text{KMg}_2\text{B}_{11}\text{O}_{19} + 2$ .**

*Kaliborite*. Insol. in  $\text{H}_2\text{O}$ . (Feit, 189, 13. 1188.)  
 $2\text{K}_2\text{O}$ ,  $11\text{B}_2\text{O}_3 + 20\text{H}_2\text{O}$ . (van't Lichtenstein, B. A. B. 1904, 936.)

**um sodium borate,  $\text{Mg}_2\text{B}_2\text{O}_7$ ,  $\text{B}_2\text{O}_3 + 30\text{H}_2\text{O}$ .**

scent. About as sol. in cold  $\text{H}_2\text{O}$  as solution separates out a Mg borate ring, which redissolves on cooling. by boiling  $\text{H}_2\text{O}$ . (Rammelsberg.)

**um strontium borate,  $3\text{MgO}$ ,  $3\text{SrO}$ ,  $2$ .**

sol. in dil. acids. (Ditte, C. R. 77.

**Magnesium borate bromide,  $2\text{Mg}_2\text{B}_2\text{O}_7$ ,  $\text{MgBr}_2$  or  $6\text{MgO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{MgBr}_2$ .**  
 (Rousseau and Allaire, C. R. 1894, 119, 71.)

**Magnesium borate chloride,  $2\text{Mg}_2\text{B}_2\text{O}_7$ ,  $\text{MgCl}_2$ .**

Min. *Boracile*. Insol. in  $\text{H}_2\text{O}$ ; slowly sol. in acids. (Kraut.)  
*Stassfurthite*. Easily sol. in warm acids. (Bischof.)

**Magnesium borate iodide,  $6\text{MgO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{MgI}_2$ .**  
 (Allaire, C. R. 1898, 127. 556.)

**Magnesium borate phosphate,  $\text{Mg}(\text{BO}_2)_2$ ,  $2\text{MgHPO}_4 + 7\text{H}_2\text{O}$ .**  
 Min. *Lunenburgite*.

**Magnesium borate sulphate,  $2\text{Mg}_2\text{B}_2\text{O}_7$ ,  $3\text{MgSO}_4 + 12\text{H}_2\text{O}$ .**

Min. *Magnesium sulphoborite*.  
 Sol. in mineral acids when ground. (Nau-pert, B. 1893, 26. 874.)

**Manganous borate,  $\text{MnB}_4\text{O}_7$  (?)**

Insol. in  $\text{H}_2\text{O}$  (Berzelius); very sl. sol. in  $\text{H}_2\text{O}$  (Thomas, Am. Ch. J. 4. 358); decomp. by warm, slowly by cold  $\text{H}_2\text{O}$ . Sol. in  $\text{MgSO}_4 + \text{Aq}$  (Berzelius).  
 $+ 3\text{H}_2\text{O}$ . (Endemann and Paisley, Zeit. angew. Ch. 1903, 16. 176.)  
 $+ 5\text{H}_2\text{O}$ . Ppt. (Endemann and Paisley.)  
 Very hygroscopic. (Endemann, Am. Ch. J. 1903, 29. 72.)

$3\text{MnO}$ ,  $\text{B}_2\text{O}_3$ . (Mallard, C. R. 105. 1260.)  
 Not attacked by  $\text{H}_2\text{O}$ . Very sol. in acids. (Ouvrard, C. R. 1900, 130. 336.)  
 $3\text{MnO}$ ,  $2\text{B}_2\text{O}_3$ . (Mallard.)  
 $\text{MnH}_4(\text{BO}_2)_2$ . Very sl. sol. in  $\text{H}_2\text{O}$ .

Solubility in 2%  $\text{Na}_2\text{SO}_4 + \text{Aq}$ . At  $18.5^\circ$ , 0.77 g.  $\text{MnH}_4(\text{BO}_2)_2$  are dissolved per litre; at  $40^\circ$ , 0.65 g.; at  $60^\circ$ , 0.36 g.; at  $80^\circ$ , 0.12 g.  
 Solubility in 2%  $\text{NaCl} + \text{Aq}$ . 1 l. solution dissolves 1.31 g. salt at  $18.2^\circ$ ; 0.6 g. at  $59^\circ$ ; and 0.29 g. at  $80^\circ$ .

Solubility in 2%  $\text{CaCl}_2 + \text{Aq}$ . 1 l.  $\text{CaCl}_2 + \text{Aq}$  dissolves 2.91 g. salt at  $17.6^\circ$ ; 2.44 g. at  $43.0^\circ$ ; 2.25 g. at  $61^\circ$ ; and 1.35 g. at  $80^\circ$ . (Hartley and Ramage, Chem. Soc. 63. 129.)

**Manganous borate bromide,  $6\text{MnO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{MnBr}_2$ .**  
 (Rousseau and Allaire, C. R. 1894, 119. 73.)

**Manganous borate chloride,  $6\text{MnO}$ ,  $8\text{B}_2\text{O}_3$ ,  $\text{MnCl}_2$ .**

(Rousseau and Allaire, C. R. 1894, 118. 1257.)

**Molybdenum borate,  $\text{MoO}_3$ ,  $2\text{B}_2\text{O}_3$  (?)**

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_2\text{BO}_3 + \text{Aq}$ . (Berzelius.)

**Molybdenum borate,  $\text{Mo}_2\text{O}_3, \text{B}_2\text{O}_3$ .**

Precipitate. Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in a solution of boric acid. (Berzelius.)

See Boromolybdic Acid.

**Nickel borate,  $\text{Ni}(\text{BO}_2)_2 + 2\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids. Easily sol. in warm  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose, Pogg. 88. 299.)

$2\text{NiO}, \text{B}_2\text{O}_3 + x\text{H}_2\text{O}$ . Easily sol. in acids. (Rose.)

$3\text{NiO}, 2\text{B}_2\text{O}_3 + 5\text{H}_2\text{O}$ . Easily sol. in acids. (Rose.)

$3\text{NiO}, \text{B}_2\text{O}_3$ . Not attacked by  $\text{H}_2\text{O}$ ; sol. in acids. (Ouvrard, C. R. 1900, 130. 337.)

**Nickel borate bromide,  $6\text{NiO}, 8\text{B}_2\text{O}_3, \text{NiBr}_2$ .**  
(Rousseau, C. R. 1894, 119. 73.)**Nickel borate chloride,  $6\text{NiO}, 8\text{B}_2\text{O}_3, \text{NiCl}_2$ .**  
(Rousseau, C. R. 1894, 118. 1257.)**Potassium borates.**

Solubility of  $\text{B}_2\text{O}_3$  in  $\text{K}_2\text{O} + \text{Aq}$  at  $30^\circ$ .

Solution contains		Solid phase

At  $30^\circ$  only the three potassium borates  $\text{K}_2\text{O}, \text{B}_2\text{O}_3 + 2.5\text{H}_2\text{O}$ ;  $\text{K}_2\text{O}, 2\text{B}_2\text{O}_3 + 4\text{H}_2\text{O}$  and  $\text{K}_2\text{O}, 5\text{B}_2\text{O}_3 + 8\text{H}_2\text{O}$  exist in stable form. (Dukelski, Z. anorg. 1906, 50. 42.)

**Potassium metaborate,  $\text{KBO}_2$ .**

Sol. in small amount of  $\text{H}_2\text{O}$ . (Berzelius, Pogg. 34. 568.)

$+1\frac{1}{4}\text{H}_2\text{O}$ . Only stabile hydrate. (Dukelski, Z. anorg. 1906, 50. 42.)

$+1\frac{1}{2}\text{H}_2\text{O}$ . (Atterberg, Bull. Soc. (2) 22. 350.)

**Potassium tetraborate,  $\text{K}_2\text{B}_4\text{O}_7$ .**

Very sol. in  $\text{H}_2\text{O}$ .

$+4\text{H}_2\text{O}$ . (Atterberg, Bull. Soc. (2) 22. 350.)

Only stabile hydrate. (Dukelski, l. c.)

$+5\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ ; more sol. than  $\text{K}_2\text{B}_4\text{O}_{10}$  or  $\text{K}_2\text{B}_{12}\text{O}_{39}$ .

$+6\text{H}_2\text{O}$ . (Atterberg, l. c.)

**Potassium hexaborate,  $\text{K}_2\text{B}_6\text{O}_{10} + 5$ , and  $8\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ .

Does not exist. (Dukelski, l. c.)

**Potassium dekaborate,  $\text{K}_2\text{B}_{10}\text{O}_{16} + 8\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)

Only hydrate. (Dukelski.)

**Potassium dodekaborate,  $\text{K}_2\text{B}_{12}\text{O}_{18} + 10\text{H}_2\text{O}$ .**

Sl. sol. in cold, very sol. in hot  $\text{H}_2\text{O}$ . (Laurent, A. ch. 67. 215.)

$= \text{K}_2\text{B}_{10}\text{O}_{16}$ . (Rammelsberg.)

Does not exist. (Dukelski.)

**Potassium borate fluoride,  $\text{KBO}_2, \text{KF}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Schiff and Sestini, A. 223. 72.)

$\text{KBO}_2, 2\text{KF}$ . Sol. in little, decomp. by much  $\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Schiff and Sestini, A. 223. 72.)

**Rubidium borate,  $\text{Rb}_2\text{B}_4\text{O}_7$ .**

Anhydrous. (Reischle, Z. anorg. 4. 166.)

$+6\text{H}_2\text{O}$ . Not deliquescent or efflorescent.

Sol. in  $\text{H}_2\text{O}$ . (Reissig, A. 127. 33.)

**Samarium borate,  $\text{SmBO}_2$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (Cleve, Bull. Soc. (2) 43. 1670.)

**Scandium borate,  $\text{ScBO}_2$ .**

Sol. in dil. acids. (Crookes, Phil. Trans. 1910, 210. A. 364.)

**Silver borate,  $\text{AgBO}_2$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . By washing with  $\text{H}_2\text{O}$  the boric acid is dissolved out. (Rose, Pharm. Centralbl. 1853. 205.)

Sol. with decomp. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  (Herschel); sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  if pptd. cold.

1 l.  $\text{H}_2\text{O}$  dissolves ca.  $6 \times 10^{-2}$  gram-atoms at  $25^\circ$ . (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

$3\text{Ag}_2\text{O}, 4\text{B}_2\text{O}_3$ . (Rose, l. c.)

## 1 borates.

Solubility of  $B_2O_3$  in  $Na_2O + Aq$  at  $30^\circ$ .

Solution contains		Solid phase

$30^\circ$ , only the four sodium borates  $Na_2O, 4H_2O$ ;  $Na_2O, B_2O_3 + 8H_2O$ ;  $Na_2O, 10H_2O$ ; and  $Na_2O, 5B_2O_3 + 10H_2O$  as stable phases.

Dukelski, Z. anorg. 1906, 50. 46.)

1 metaborate,  $NaBO_2$ .

*Monoclinic*. Easily sol. in  $H_2O$ , with evolution of heat.

$H_2O$ . Easily sol. in  $H_2O$ . (Benedikt.)

$H_2O$ . Easily sol. in  $H_2O$ . (Benedikt, 183.)

$H_2O$ . Easily sol. in  $H_2O$ . (Berzelius.)

$H_2O$ . Sl. efflorescent. Sol. in hot, less cold  $H_2O$ . Melts at  $57^\circ$  in its crystal (Dukelski, Z. anorg. 50. 42.)

$2H_2O$ . (Atterberg, Z. anorg. 1906, 48.)

$2H_2O$ . (Atterberg.)

$+8H_2O$ . (Atterberg.)

$+4H_2O$  and  $+8H_2O$  are the only hydrates formed. (Dukelski.)

System  $Na_2O, B_2O_3, H_2O$  at  $60^\circ$  investigated by Sborgi. (Real. Ac. Linc. 1915, (5) 24. I, 443.)

Sodium tetraborate,  $Na_2B_4O_7$  (Borax).

100 g.  $H_2O$  dissolve at:

$5^\circ$   $10^\circ$   $21.5^\circ$   $30^\circ$   $37.5^\circ$

1.3 1.6 2.8 3.9 5.6 g. anhydrous salt.

$45^\circ$   $50^\circ$   $54^\circ$   $55^\circ$   $56^\circ$   $57^\circ$

8.1 10.5 13.3 14.2 15.0 16.0 g. anhydrous salt.

(Horn and van Wagener, Am. Ch. J. 1903, 30. 347.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol. in amyl alcohol in the presence of meta-arsenious acid and excess of  $H_2BO_3$ . (Auerbach, Z. anorg. 1903, 37. 358.)

$+4H_2O$ .

$+5H_2O$ .

100 g.  $H_2O$  dissolve at:

$65^\circ$   $70^\circ$   $80^\circ$   $90^\circ$   $100^\circ$

22.0 24.4 31.4 40.8 52.3 g. anhydrous salt.

(Horn and van Wagener, Am. Ch. J. 1903, 30. 347.)

$+6H_2O$ . Grows opaque in the air. (Bechi, Sill. Am. J. (2) 17. 129.)

$+10H_2O$ . Only stable hydrate. (Dukelski, Z. anorg. 50. 30.) Efflorescent on surface in dry air. Not efflorescent when free from  $Na_2CO_3$ . (Sims.)

Sol. in 12 pts. cold, and 2 pts. hot  $H_2O$ . Sat. cold  $Na_2B_4O_7 + Aq$  contains 9.23%, and sat. hot  $Na_2B_4O_7 + Aq$  contains 33.33%  $Na_2B_4O_7$ . (Gmelin.)

Sol. in 20 pts. cold, and 6 pts. boiling  $H_2O$ . (Wallerius.)

Sol. in 15 pts.  $H_2O$  at  $18.75^\circ$ . (Abl.)

100 pts.  $H_2O$  at  $15.5^\circ$  dissolve 5 pts.; at  $65^\circ$ , 40 pts.;

at  $100^\circ$ , 166 pts.  $Na_2B_4O_7 + 10H_2O$ . (Creswell's Dictionary.)

100 pts. sat.  $Na_2B_4O_7 + Aq$  at  $105.5^\circ$  contain 52.5 pts.

$Na_2B_4O_7$ , or 100 pts.  $H_2O$  dissolve 110.54 pts.  $Na_2B_4O_7$ ,

or 1 pt.  $Na_2B_4O_7$  is sol. in 0.9047 pt.  $H_2O$  at  $105.5^\circ$ .

(Griffith, Quar. J. Sci. 18. 90.)

Solubility in 100 pts.  $H_2O$  at  $t^\circ$ .

$t^\circ$	Pts. $Na_2B_4O_7$	Pts. $Na_2B_4O_7$ $+ 10H_2O$	$t^\circ$	Pts. $Na_2B_4O_7$	Pts. $Na_2B_4O_7$ $+ 10H_2O$
0	1.49	2.83	60	18.09	40.43

50	12.93	27.41	...	...	...

(Poggiale, A. ch. (3) 8. 46.)

100 pts.  $H_2O$  dissolve 1.4 pts.  $Na_2B_4O_7$  at  $0^\circ$ , and 55.3 pts. at  $100^\circ$ . (Mulder.)

$Na_2B_4O_7 + Aq$  sat. at  $15^\circ$  has sp. gr. = 1.0199, and contains 3.926 pts.  $Na_2B_4O_7$  to 100 pts.  $H_2O$ . (Michel and Krafft, A. ch. (3) 41. 471.)

$\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  sat. at  $17^\circ$  has sp. gr. = 1.0208. (Stolba, J. pr. 97. 503.)

Sp. gr. of  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  at  $15^\circ$ .

$\frac{\%}{\text{Na}_2\text{B}_4\text{O}_7}$	$\frac{\%}{\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}}$	Sp. gr.	$\frac{\%}{\text{Na}_2\text{B}_4\text{O}_7}$	$\frac{\%}{\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}}$	Sp. gr.
1	0.52	1.0049	4	2.11	1.0199
2	1.06	1.0099	5	2.64	1.0249
3	1.59	1.0149	6	3.17	1.0299

(Gerlach, Z. anal. 28. 473.)

Sp. gr. of  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  sat. at  $15^\circ$  = 1.032. (Gerlach.)

Sat.  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  boils at  $105.5^\circ$ , and contains 110.5 pts.  $\text{Na}_2\text{B}_4\text{O}_7$  to 100 pts.  $\text{H}_2\text{O}$ . (Griffith.)

Sat.  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  forms a crust at  $103^\circ$ , and contains 60.14 pts.  $\text{Na}_2\text{B}_4\text{O}_7$  to 100 pts.  $\text{H}_2\text{O}$ ; highest temp. observed,  $104.3^\circ$ . (Gerlach, Z. anal. 26. 427.)

B.-pt. of  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$  containing pts.  $\text{Na}_2\text{B}_4\text{O}_7$  to 100 pts.  $\text{H}_2\text{O}$ .

B.-pt.	Pts. $\text{Na}_2\text{B}_4\text{O}_7$	B.-pt.	Pts. $\text{Na}_2\text{B}_4\text{O}_7$
100.5°	8.64	103.0°	61.2
101.0	17.2	103.5	75.4
101.5	26.5	104.0	90.8
102.0	37.5	104.5	109.0
102.5	48.5	104.6	112.3

(Gerlach, Z. anal. 26. 452.)

M.-pt. of  $\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$  is  $75.5^\circ$ . (Tilden, Chem. Soc. 45. 407.)

Insol. in alcohol.

100 g. alcohol (0.941 sp. gr.) dissolve 2.48 g. at  $15.5^\circ$  (U. S. P.).

Sol. in alcoholic solution of  $\text{NaC}_2\text{H}_3\text{O}_2$ . (Stromeyer.)

Sol. in 14.7 pts. glycerine of 1.225 sp. gr. (Vogel.)

Sol. in 1 pt. glycerine. (Schultze, Arch. Pharm. (3) 6. 149.)

100 g. glycerine dissolve 60.3 g. at  $15.5^\circ$  (U. S. P.).

Min. *Tincal*.

**Sodium borate**,  $\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$ .

Sol. in 5-6 pts. cold  $\text{H}_2\text{O}$ . (Bolley, A. 68. 122.) Perhaps sodium hydrogen tetraborate  $\text{NaHB}_4\text{O}_7 + 4\frac{1}{2}\text{H}_2\text{O}$ .

$\text{Na}_2\text{B}_{10}\text{O}_{16} + 10\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Atterberg, Z. anorg. 48. 370.)

Stabile. (Dukelski, Z. anorg. 50. 42.)

+  $11\text{H}_2\text{O}$ . (Laurent, C. R. 29. 5.)

**Sodium borate fluoride**,  $\text{NaBO}_2 \cdot 3\text{NaF} + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

Basarow (B. 7. 112) considers this salt to be a mixture.

$\text{Na}_2\text{B}_4\text{O}_7 \cdot 12\text{NaF} + 22\text{H}_2\text{O}$ . Can be arated into its constituents by  $\text{H}_2\text{O}$ . (Zelius, Berz. J. B. 23. 96.)

**Strontium borate**,  $\text{Sr}(\text{BO}_2)_2$ .

(Ditte, C. R. 77. 788.)

Easily hydrated by  $\text{H}_2\text{O}$  forming  $\text{SrO} \cdot 1 + 2\text{H}_2\text{O}$ . Very sol. in dil. acetic acid. (Ouvard, C. R. 1906, 142. 282.)

Insol. in acetone. (Naumann, B. 1904 4329.)

+  $2\text{H}_2\text{O}$ . (Ouvard, l. c.)

+  $4\text{H}_2\text{O}$ . (Ouvard, l. c.)

+  $5\text{H}_2\text{O}$ . 1 l.  $\text{H}_2\text{O}$  dissolves 2.3 g. at (Ditte, A. ch. 1883 (5) 30. 253.)

$\text{SrB}_2\text{O}_7$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. a

(Guertler, Z. anorg. 1904, 40. 243.)

+  $4\text{H}_2\text{O}$ . Sol. in 130 pts. boiling  $\text{H}_2\text{O}$ . pts.  $\text{H}_2\text{O}$  at  $100^\circ$  dissolve 7.7 pts. (Ure's D.

Easily sol. in cold  $\text{NH}_4$  salts + Aq; sol. in  $\text{HNO}_3$  + Aq.

$2\text{SrO} \cdot \text{B}_2\text{O}_3$ . Easily decomp. by  $\text{H}_2\text{O}$  forming  $\text{B}_2\text{O}_3$ ,  $\text{SrO}$ ,  $4\text{H}_2\text{O}$ . Very sol. in a (Ouvard, C. R. 1906, 142. 282.)

$3\text{SrO} \cdot \text{B}_2\text{O}_3$ . Less easily attacked by than Ca comp. Very sol. in mineral a. Sl. attacked by dil. acetic acid. (Ouv C. R. 1901, 132. 258.)

$\text{SrB}_6\text{O}_{18}$ . Very sl. sol. in  $\text{H}_2\text{O}$ ; sol. in a (Laurent.)

$\text{SrB}_2\text{O}_7 + 7\text{H}_2\text{O}$ . Ppt. (Laurent.)

+  $12\text{H}_2\text{O}$ . (Ditte.)

$\text{Sr}_2\text{B}_4\text{O}_{13}$ . Sol. in cold mineral acids acetic acid. (Ditte, C. R. 77. 785.)

$2\text{SrO} \cdot 3\text{B}_2\text{O}_3$ . Easily sol. in acids. (I l. c.)

**Strontium borate bromide**,  $3\text{SrO} \cdot 5\text{SrBr}_2$ .

As the chloride. (Ouvard, C. R.

142. 283.)

**Strontium borate chloride**,  $3\text{SrO} \cdot 5\text{SrCl}_2$ .

Sl. attacked by cold  $\text{H}_2\text{O}$ , not attacked dilute acetic acid. (Ouvard, C. R. 1906, 282.)

**Thallous borate**,  $\text{TlBO}_2 + \frac{1}{2}\text{H}_2\text{O}$ .

Decomp. in the air. (Buchta, J. pr. (2) 88. 784.)

$\text{Tl}_2\text{B}_2\text{O}_7$ . (Buchta.)

$\text{Tl}_2\text{B}_4\text{O}_{13}$ . Ppt. Sol. in boiling  $\text{H}_2\text{O}$ ; i in cold dil.  $\text{H}_2\text{SO}_4$  + Aq. (Crookes.)

+  $2\text{H}_2\text{O}$ . (Buchta, J. pr. 1913 (2 774.)

$\text{Tl}_2\text{B}_6\text{O}_{18} + 3\text{H}_2\text{O}$ . (Buchta.)

$\text{Tl}_2\text{B}_8\text{O}_{22} + 4\text{H}_2\text{O}$ . (Buchta.)

$\text{Tl}_2\text{B}_{10}\text{O}_{26} + 8\text{H}_2\text{O}$ . (Buchta.)

$\text{Tl}_2\text{B}_{12}\text{O}_{30} + 7\text{H}_2\text{O}$ . (Buchta.)

**Thorium borate** (?).

Precipitate. Insol. in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{E}$  Aq. (Berzelius.)

**Tin (stannous) borate** (?).

Ppt. (Wenzel.)

**diyl borate.**

l. in  $H_2O$ ; sol. in  $H_3BO_3 + Aq.$  (Ber-

**um borate,  $YbBO_3$ .**

l. in conc.  $HCl$ ; sol. in  $HF.$  (Cleve, Z. 1902, **32**. 148.)

**a borate.**

ipitate. (Berlin, Pogg. **43**. 105.)

**orate,  $3ZnO, 2B_2O_3$ .**

llard, C. R. **105**. 1260.)

omp. by  $H_2O$ ; very sol. in dil. acids. ard, C. R. 1900, **130**. 336.)

,  $2B_2O_3 + 4H_2O$ . Sol. in  $H_2O$  with p. (Ditte, A. ch. 1883, (5) **30**. 256.)

,  $4B_2O_3 + H_2O$ . Ppt. (Holdermann, Pharm. 1904, **242**. 567.)

,  $4B_2O_3 + 10H_2O$ . (Ditte, A. ch. 1883, **256**.)

,  $4B_2O_3 + 9H_2O$ . Sl. sol. in  $H_3BO_3$  (Rose, Pogg. **38**. 299.)

,  $B_2O_3$ . Insol. in mineral acids. (leier, C. R. **113**. 1034.)

**orate ammonia,  $ZnB_2O_4, 4NH_3 + 6H_2O$ .**

ly sol. in  $NH_4OH, HC_2H_3O_2, H_2SO_4$ , and  $HNO_3 + Aq.$  (Büchner, A. **151**.)

**orate bromide,  $6ZnO, 8B_2O_3, ZnBr_2$ .**

usseau and Allaire, C. R. **116**. 1446.)

**orate chloride,  $6ZnO, 8B_2O_3, ZnCl_2$ .**

l. in  $HCl$ . (Rousseau, C. R. 1894, **118**.)

**orate iodide,  $6ZnO, 8B_2O_3, ZnI_2$ .**

ire, C. R. 1898, **127**. 556.)

**um borate, (?)**

l. in  $H_2O$ .

**ic acid.****Perboric Acid.****phosphoric acid.****Phosphoboric acid.****tungstic acid.****Borotungstic acid.****acid sulphur trioxide.****Borosulphuric acid.****de,  $B_2(NH)_3$ .**

omp. by  $H_2O$ ; insol. in all indifferent s; sol. in liquid  $NH_3 + S$  to form a dark lution. (Stock, B. 1901, **34**. 3044.)

**de hydrochloride,  $B_2(NH)_3, 3HCl$ .**

omp. by  $H_2O$ ; insol. in all ordinary olvents. (Stock, B. 1901, **34**. 3045.)

**Borofluorhydric acid,  $HBFl_4$ .**

See Fluoboric acid.

**Borofluorides.**

See Fluoborides.

**Boromolybdic acid.**

Sol. in  $H_2O$ . Decomp. by alcohol. (Berzelius.)

**Boron, B.**

(a) *Amorphous*. Somewhat sol. in pure  $H_2O$ , when not ignited. Salts and acids separate it out of aqueous solution. Upon evaporation of  $H_2O$  solution a crust is formed, which is only partially sol. in  $H_2O$ . (Berzelius, Pogg. **2**. 113.) Decomp. by hot  $H_2SO_4$  and cold moderately conc.  $HNO_3 + Aq.$  Strongly ignited amorphous B is much less easily attacked by reagents than freshly pptd., and is insol. in  $H_2O$ . (Berzelius.) Insol. in caustic alkalies +  $Aq$ ; also in alcohol and ether.

Above boron was very impure. (Moissan, C. R. **114**. 392.)

Pure B is not attacked by acids, but has a strong reducing action on  $KMnO_4 + Aq, FeCl_3 + Aq$ , etc. (Moissan, C. R. **114**. 617.)

Does not melt at  $1500^\circ$ . Readily sol. in conc. acids, as  $H_2SO_4, HNO_3, H_3PO_4$ ; very sl. sol. in hydracids; decomp.  $H_2O$  at red heat. (Moissan, A. ch. 1895, (7) **6**. 313-14.)

Insol. in liquid  $NH_3$ . (Gore, Am. Ch. J., 1898, **20**. 827.)

(b) *Crystallized*. 1. Insol. in  $H_2O, HCl$ , or  $KOH + Aq$ . Very slightly and slowly attacked by boiling conc.  $H_2SO_4$ . Gradually sol. in hot conc.  $HNO_3$ . Formula is  $Al_2B_{12}$ . (Hampe, A. **183**. 75.)

2. Very slightly attacked by conc.  $HCl$  or  $H_2SO_4$ ; slowly but completely sol. in conc.  $HNO_3$ ; insol. in  $KOH + Aq$ . Formula is  $C_2Al_2B_{14}$ . (Hampe.)

$C_2Al_2B_{14}$ . *Crystalline*. Insol. in a solution of  $CrO_3$  in  $H_2SO_4$ . Insol. in hot conc.  $HCl$  and  $H_2SO_4$ . Sol. in hot conc.  $HNO_3$ . (Biltz, B. 1910, **43**. 303.)

**Boron tribromide,  $BBr_3$ .**

Sol. in  $H_2O$  or alcohol with decomp. (Nicklès, C. R. **60**. 800.)

**Boron phosphorus bromide,  $BBr_3, PBr_3$ .**

Decomp. by  $H_2O$ .

Sol. in  $CS_2$  and  $CHCl_3$ . Decomp. by alcohol, ether, etc. (Tarible, C. R. **116**. 1521.)

$BBr_3, PBr_3$ . Sl. sol. in cold, easily in hot  $CS_2$ . (Tarible.)

**Boron bromide ammonia,  $BBr_3, 4NH_3$ .**

Decomp. by  $H_2O$  and alkalies. (Besson, C. R. **114**. 542.)

**Boron bromide phosphine,  $BBr_3, PH_3$ .**

Violently decomp. by  $H_2O$ . (Besson, C. R. **113**. 78.)

**Boron bromide phosphorus trichloride,**  
 $2\text{BBr}_3\text{PCl}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{BBr}_3$ ,  $\text{PCl}_3$ ,  $\text{CS}_2$ , and  $\text{CHCl}_3$ . Insol. in petroleum ether. (Tarible, C. R. 1901, **132**. 84.)

**Boron bromide phosphorus pentachloride,**  
 $2\text{BBr}_3\text{PCl}_5$ .

Sol. in  $\text{BBr}_3$  and  $\text{CS}_2$ ; decomp. by  $\text{H}_2\text{O}$ ; insol. in light petroleum. (Tarible, C. R. 1901, **132**. 85.)

**Boron bromide phosphorus diiodide,**  $2\text{BBr}_3\text{PI}_3$ .

Sol. in  $\text{BBr}_3$ ,  $\text{CS}_2$ ,  $\text{CHCl}_3$ ; insol. in light petroleum; decomp. by  $\text{H}_2\text{O}$ . (Tarible, C. R. 1901, **132**. 205.)

**Boron bromide phosphoryl chloride,**  $\text{BBr}_3\text{POCl}_3$ .

Very easily decomp. (Oddo and Tealdi, Gazz. ch. it. 1903, **33**. (2) 431.)

**Boron bromoiodide,**  $\text{BBr}_2\text{I}$ .

Decomp. violently by  $\text{H}_2\text{O}$ . (Besson, C. R. **112**. 100.)

$\text{BBrI}_2$ . (Besson, C. R. **112**. 100.)

**Boron bromosulphide,**  $\text{B}_2\text{S}_3\text{BBr}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Stock, B. 1901, **34**. 3040.)

**Boron carbide,**  $\text{B}_4\text{C}$ .

Very stable; insol. in  $\text{HF}$  and in  $\text{HNO}_3$ ; sol. in  $\text{KOH}$  at red heat. (Moissan, Bull. Soc. 1894, (3) **11**. 1101.)

Insol. in acids; sol. in fused alkali. (Moissan, C. R. 1894, **118**. 559.)

$\text{BC}$  or  $\text{B}_2\text{C}_2$ . Insol. in all the usual solvents. (Müllhäuser, Z. anorg. **5**. 92.)

**Boron trichloride,**  $\text{BCl}_3$ .

Rapidly absorbed by  $\text{H}_2\text{O}$  and alcohol with decomposition.

**Boron nitrosyl chloride,**  $\text{BCl}_3\text{NOCl}$ .

Decomp. violently by  $\text{H}_2\text{O}$ . (Geuther, J. pr. (2) **8**. 854.)

**Boron phosphoryl chloride,**  $\text{BCl}_3\text{POCl}_3$ .

Decomp. immediately by  $\text{H}_2\text{O}$ . (Gustavson, Zeit. Chem. **1870**. 521.)

**Boron chloride ammonia,**  $2\text{BCl}_3\text{, } 3\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Berzelius, Pogg. **2**. 147.)

**Boron chloride phosphine,**  $\text{BCl}_3\text{, PH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. **110**. 516.)

**Boron chlorosulphide,**  $\text{B}_2\text{S}_3\text{, BCl}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Stock, B. 1901, **34**. 3040.)

**Boron trifluoride,**  $\text{BF}_3$ .

$\text{H}_2\text{O}$  absorbs 700 vols.  $\text{BF}_3$  gas to form a

liquid of 1.77 sp. gr. On boiling,  $\frac{1}{2}$  of the  $\text{BF}_3$  is given off, and a residue boiling at  $165\text{--}200^\circ$  with composition  $\text{BF}_3 + 2\text{H}_2\text{O}$  or  $\text{HBO}_2 + 3\text{HF}$ , is left. (J. Davy, A. ch. **86**. 178.)

1 cc.  $\text{H}_2\text{O}$  absorbs at  $0^\circ$  and 762 mm. pressure 1.057 cc.  $\text{BF}_3$ .

1 vol. conc.  $\text{H}_2\text{SO}_4$  of 1.85 sp. gr. absorbs 50 vols.  $\text{BF}_3$ .

Absorbed by alcohol with decomp.

Cold oil of turpentine absorbs 6.8% of  $\text{BF}_3$ .

**Boron fluoride ammonia,**  $\text{BF}_3\text{, NH}_3$ ,  $\text{BF}_3\text{, } 2\text{NH}_3$ , and  $\text{BF}_3\text{, } 3\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ .

**Boron fluoride cyanhydric acid,**  $\text{BF}_3\text{, HCN}$ .

Very unstable. (Patein, C. R. **113**. 85.)

**Boron fluoride phosphine,**  $2\text{BF}_3\text{, PH}_3$ .

Very unstable at ordinary temp. Decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. **110**. 80.)

**Boron hydride,**  $\text{BH}_3$ .

Not obtained free from H. Sl. sol. in  $\text{H}_2\text{O}$ . (Jones, Chem. Soc. **35**. 41.)

See Cyclotriborene.

$\text{B}_2\text{H}_{10}$ . B.-pt.  $16\text{--}17^\circ$  at 760 mm.

Very unstable. Takes fire spontaneously in the air.

Decomp. by  $\text{H}_2\text{O}$ , dil.  $\text{HCl}$ , and oxidized by conc.  $\text{HNO}_3$  with explosive violence.

Absorbed by  $\text{NaOH} + \text{Aq}$ .

Decomp. by alcohol. Sol. in dry benzene. (Stock, B. 1912, **45**. 3562.)

$\text{B}_2\text{H}_{12}$ . B.-pt.  $100^\circ$  at atmospheric pressure. Decomp. by  $\text{H}_2\text{O}$ . With aqueous alkalis, hydrogen is evolved. (Stock, B. 1912, **45**. 3565.)

$\text{B}_2\text{H}_6$ . Insol. in  $\text{HCl}$ . Sol. in aqua regia and  $\text{Br}_2 + \text{Aq}$ . (Winkler, B. 1890, **23**. 778.)

$\text{B}_{10}\text{H}_{14}$ . M.-pt.  $99.5^\circ$ ; not attacked by cold or boiling  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{NaOH} + \text{Aq}$ . Sol. in alcohol, ether, benzene, and  $\text{CS}_2$ . (Stock, B. 1913, **46**. 3360.)

**Boron iodide,**  $\text{BI}_3$ .

Very hygroscopic, and instantly decomp. by  $\text{H}_2\text{O}$  or alcohol. Very sol. in  $\text{CS}_2$ ,  $\text{CCl}_4$ ,  $\text{C}_6\text{H}_6$ ; less sol. in  $\text{PCl}_3$ ,  $\text{AsCl}_3$ , and a great many organic liquids. (Moissan, C. R. **112**. 717.)

**Boron iodide ammonia,**  $\text{BI}_3\text{, } 5\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. **114**. 542.)

**Boron iodophosphide,**  $\text{BI}_2\text{P}$ .

Very hygroscopic; decomp. by  $\text{H}_2\text{O}$ . Not attacked by cold conc.  $\text{H}_2\text{SO}_4$ , even if fuming, but on heating decomposition takes place. Very sl. sol. in  $\text{CS}_2$ . Insol. in benzene,  $\text{PCl}_3$ , or  $\text{CCl}_4$ . (Moissan, C. R. **113**. 624.)

$\text{BIP}$ . Less hygroscopic than  $\text{BI}_2\text{P}$ , but otherwise the properties are similar. (Moissan.)

**nitride, BN.**

in  $H_2O$ , conc.  $HNO_3$ , conc.  $HCl$  + conc. solutions of alkalis.  
mp. by hot conc.  $H_2SO_4$  or  $HF$ .  
r, A. 74. 70.)

**trioxide,  $B_2O_3$ .**

luescent. Sol. in  $H_2O$  with a large in-  
n temp. (Ditte, C. R. 85. 1069.)

**dissolves—**

at	18.75°	in	47.01	pts.	$H_2O$ .

(Ditte, C. R. 85. 1069.)

$H_2O$  solution boils at 100°. (Brandes  
nhaber.)

$H_2O$  solution boils at 103.3°. (Grif-  
uar. J. Sci. 18. 90.)

in acetic acid, hot conc.  $HCl$  + Aq,  
and  $H_2SO_4$ . From the three latter it  
es on cooling or dilution with  $H_2O$ .

ility in  $Na_2O$  + Aq at 30°.

**orates, sodium.**

ility in  $K_2O$  + Aq at 30°.

**orates, potassium.**

in hot glacial acetic acid. (Holt,  
Soc. 1911, 100. (2) 720.)

in alcohol. (Graham.)

n alcohol. (Berzelius, Ebelmen.)

n oils.

**iso Boric acid.**

**trioxide potassium fluoride,  $B_2O_3$ , 2KF.**  
ually sol. in  $H_2O$ . Decomp. by much

Insol. in alcohol. (Schiff and Sestini,  
82.)

**oxychloride,  $BOCl$ .**

tavson, Zeit. Chem. 1870. 521.)

$I_2$ . Slowly decomp. by  $H_2O$ . (Coun-  
pr. (2) 18. 399.)

Oxychlorides of either the above formulæ  
do not exist; the true formula for boron oxy-  
chloride is  $B_2O_{11}Cl_2$ . (Lorenz, A. 247. 226.)

**Boron phosphide, BP.**

Insol. in  $H_2O$ . Sol. in conc. boiling alkalis  
+ Aq with decomp. Decomp. by  $HNO_3$  + Aq.  
(Besson, C. R. 113. 78.)

Insol. in  $PCl_3$ ,  $AsCl_3$ ,  $SbCl_3$ ,  $CCl_4$ , and in  
fact in all known solvents.

Not attacked by boiling  $H_2O$ , conc.  $HCl$ , or  
 $HI$  + Aq. Sol. in conc.  $HNO_3$  with decomp.  
on heating. Not attacked by cold  $H_2SO_4$ .  
(Moissan, C. R. 113. 726.)

$B_2P_3$ . Not attacked by boiling conc.  $HNO_3$   
+ Aq. Insol. in all solvents. (Moissan.)

**Boron phosphoiodide.**

See Boron iodophosphide.

**Boron selenide,  $B_2Se_3$ .**

Violently decomp. by  $H_2O$ . (Sabatier, C.  
R. 112. 1000.)

**Boron trisulphide,  $B_2S_3$ .**

Decomp. with violence with  $H_2O$ . Com-  
bines with alcohol and ether. (Fremy, A. ch.  
(3) 33. 312.)

Insol. in most solvents, but sl. sol. in  $PCl_3$   
without decomp.; more sol. in  $SCl_3$ , but does  
not crystallize from the solution. (Moissan,  
C. R. 115. 203.)

**Boron trisulphide ammonia,  $B_2S_3, 6NH_3$ .**

Ppt. (Stock, B. 1901, 34. 3042.)

**Boron pentasulphide,  $B_2S_5$ .**

Decomp. by  $H_2O$  and alcohol. (Moissan,  
C. R. 115. 271.)

**Borosulphuric acid,  $BOHSO_4 + SO_3$ .**

Decomp. by  $H_2O$ . (Schultz-Sellac, B. 4.  
12.)

$B(HSO_4)_3$ . Very deliquescent. Easily sol.  
in fuming  $H_2SO_4$ . (D'Arcy, Chem. Soc. 55.  
155.)

$SO_3(OBO)_2$ . Hygroscopic. Deliquescent.  
Sol. in  $H_2O$  with decomp. Decomp. by cold  
alcohols. (Pictet, Bull. Soc. 1908, (4) 3. 1121.)

$(SO_3)_2B_2O_3$ . Hygroscopic. Deliquescent.  
Sol. in  $H_2O$  with decomp. Decomp. by cold  
alcohols. (Pictet, Bull. Soc. 1908, (4) 3. 1121.)

**Borononotungstic acid,  $H_4B_3W_3O_{11} + 22H_2O = 9WO_3, B_2O_3, 2H_2O + 22H_2O$ .**

Sol. in less than  $\frac{1}{2}$  pt.  $H_2O$ , and as easily  
sol. in alcohol and ether. Sp. gr. of aqueous  
solution is somewhat under 3. (Klein, A. ch.  
(5) 23. 370.)

**Aluminum borononotungstate,  $Al_4(B_2W_3O_{11})_2 + 65H_2O$ .**

Extremely sol. in  $H_2O$ . (Klein.)

**Ammonium —,  $(NH_4)_4B_3W_3O_{11} + 18H_2O$ .**

Quickly effloresces. (Klein.)

**Barium boronotungstate**,  $\text{Ba}_2\text{B}_2\text{W}_9\text{O}_{32} + 19\text{H}_2\text{O}$ .

Sol. in 4 pts. cold, and less than  $\frac{1}{2}$  pt. hot  $\text{H}_2\text{O}$ . (Klein.)

**Cadmium** —,  $\text{Cd}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$ .

Deliquescent.

100 pts. of salt dissolve in less than 8 pts.  $\text{H}_2\text{O}$  at  $19^\circ$ . Sp. gr. of solution is 3.28. (Klein.)

Sp. gr. of sat. solution at  $15.6^\circ/4^\circ = 3.2887$ ; at  $16.2^\circ/4^\circ = 3.2868$ . (Kahlbaum, Z. anorg. 1902, 29. 229.)

**Calcium** —,  $\text{Ca}_2\text{B}_2\text{W}_9\text{O}_{32} + 15\text{H}_2\text{O}$ .

Sol. in  $\frac{1}{10}$  pt.  $\text{H}_2\text{O}$ . Solution has sp. gr. = 3.10. (Klein.)

**Cerium** —,  $\text{Ce}_2(\text{B}_2\text{W}_9\text{O}_{32})_2 + 57\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; sp. gr. of solution is over 3.

**Chromium** —,  $\text{Cr}_2(\text{B}_2\text{W}_9\text{O}_{32})_2 + 74\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; sp. gr. of solution is 2.80. (Klein.)

**Cobalt** —,  $\text{Co}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; sp. gr. of solution sat. at  $19^\circ = 3.36$ . (Klein.)

100 pts.  $\text{H}_2\text{O}$  dissolve 306.8 pts. anhydrous salt at  $16.2^\circ$ ; 288 pts. at  $18.5^\circ$ ; 299.7 pts. at  $19.6^\circ$ ; 286 pts. at  $21.8^\circ$ .

Sp. gr. of solution sat. at  $19.2^\circ/4^\circ = 3.1369$ . (Kahlbaum, Z. anorg. 1902, 29. 218.)

**Copper** —,  $\text{Cu}_2\text{B}_2\text{W}_9\text{O}_{32} + 19\text{H}_2\text{O}$ .

25 pts.  $\text{H}_2\text{O}$  dissolve 100 pts. salt. Sp. gr. of solution = 2.6. (Klein.)

**Lead** —,  $\text{Pb}_2\text{B}_2\text{W}_9\text{O}_{32} + 11\text{H}_2\text{O}$ .

Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$ . (Klein.)

**Lithium** —, (?).

Very sol. in  $\text{H}_2\text{O}$ . Sp. gr. of solution is about 3.

**Magnesium** —,  $\text{Mg}_2\text{B}_2\text{W}_9\text{O}_{32} + 22\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Klein.)

**Manganous** —,  $\text{Mn}_2\text{B}_2\text{W}_9\text{O}_{32} + 17\text{H}_2\text{O}$ .

100 pts. dissolve in 13 pts.  $\text{H}_2\text{O}$ . Sp. gr. of solution at  $19^\circ = 3.15$ . (Klein.)

**Mercurous** —,  $3\text{Hg}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $9\text{WO}_3 + 14\text{H}_2\text{O}$  (?).

Precipitate.

Insol. in  $\text{H}_2\text{O}$ . (Klein.)

Sol. in 20,000 pts. dil. cold, and 1000 pts. boiling  $\text{HNO}_3 + \text{Aq}$  of 1.42 sp. gr.

**Nickel** —,  $\text{Ni}_2\text{B}_2\text{W}_9\text{O}_{32} + 18\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; sp. gr. of sat. solution at  $19^\circ = 3.32$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 261.6 pts. at  $21.2^\circ$ .

Sp. gr.  $15.75^\circ/4^\circ$  of solution = 2.2959. (Kahlbaum, Z. anorg. 1902, 29. 218.)

**Potassium boronotungstate**,  $\text{K}_2\text{B}_2\text{W}_9\text{O}_{32} + 13\text{H}_2\text{O}$ .

5 pts. salt dissolve in 8 pts.  $\text{H}_2\text{O}$  at  $19^\circ$  form a solution of 1.38 sp. gr. The solution sat. at  $100^\circ$  has sp. gr. of over 2. (Klein.)

**Silver** —,  $\text{Ag}_2\text{B}_2\text{W}_9\text{O}_{32} + 14\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ .

**Sodium** —,  $\text{Na}_2\text{H}_2\text{B}_2\text{W}_9\text{O}_{32} + 23\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Solution sat. at  $19^\circ$  tains 84 pts. salt to 16 pts.  $\text{H}_2\text{O}$ . (Klein.)  $\text{Na}_4\text{B}_2\text{W}_9\text{O}_{32} + 12\text{H}_2\text{O}$ . Sol. in less than pt.  $\text{H}_2\text{O}$ .

**Thallium** —,  $\text{Tl}_2\text{B}_2\text{W}_9\text{O}_{32} + 5\text{H}_2\text{O}$ .

Sl. sol. in hot  $\text{H}_2\text{O}$  and nearly insol. in  $\text{H}_2\text{O}$ . (Klein.)

**Uranyl** —,  $(\text{UO}_2)_2(\text{B}_2\text{W}_9\text{O}_{32})_2 + 30\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Klein.)

Sp. gr. of solution = 3.1.

**Zinc** —,  $\text{Zn}_2\text{B}_2\text{W}_9\text{O}_{32} + 2\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Sp. gr. of solution = 3. (Klein.)

**Borodecitungstic acid**.

**Barium borodecitungstate**,  $\text{Ba}_2\text{B}_2\text{W}_{10}\text{O}_{30} + 20\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Klein, C. R. 99. 35.)

**Boroduodecitungstic acid**,  $\text{H}_2\text{B}_2\text{W}_{11}\text{O}_{41} + 4\text{H}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $12\text{WO}_3$ .

Known only in solution, which decomposes into boronotungstic acid and tungstic acid when evaporated to a certain concentration (Klein, C. R. 99. 35.)

**Barium potassium boroduodecitungstate**,  $3\text{BaO}$ ,  $\text{K}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $12\text{WO}_3 + 28\text{H}_2\text{O}$ .

**Potassium** —,  $\text{K}_2\text{B}_2\text{W}_{11}\text{O}_{41} + 21\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Klein.)

$2\text{K}_2\text{O}$ ,  $12\text{WO}_3$ ,  $\text{B}_2\text{O}_3 + 18\text{H}_2\text{O}$ . Sol. in 1 (Klein.)

**Boroquatuordecitungstic acid**,  $\text{H}_{11}\text{B}_2\text{W}_{14}\text{O}_{55} + 6\text{H}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3$ .

Has not been obtained in the free state (Klein, A. ch. (5) 28. 353.)

**Barium boroquatuordecitungstate**,  $\text{Ba}_2\text{B}_2\text{W}_{14}\text{O}_{55} + 3\text{BaO}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3 + 5\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Klein.)

**Barium sodium** —,  $3\frac{1}{2}\text{BaO}$ ,  $1\frac{1}{2}\text{Na}_2\text{O}$ ,  $5\text{H}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3 + 29\text{H}_2\text{O}$ .

**Potassium** —,  $3\text{K}_2\text{O}$ ,  $\text{H}_2\text{O}$ ,  $\text{B}_2\text{O}_3$ ,  $14\text{WO}_3 + 22\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Klein.)

**Silver** —,  $\text{Ag}_2\text{H}_2\text{B}_2\text{W}_{14}\text{O}_{55} + 7\text{H}_2\text{O}$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ . (Klein.)

**Sodium** —,  $\text{Na}_4\text{H}_2\text{B}_2\text{W}_{14}\text{O}_{55} + 29\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Klein.)

**strontium borooctadecitungstate**,  $5\text{SrO}, 1\frac{1}{2}\text{Na}_2\text{O}, \text{B}_2\text{O}_3, 14\text{WO}_3 + 29\text{H}_2\text{O}$ .  
p. by  $\text{H}_2\text{O}$ . (Klein.)

**trigintitungstic acid**.

**boroundecigintitungstate**,  $4\text{BaO}, 19\text{WO}_3 + 30\text{H}_2\text{O}$ .

p. cryst. from  $\text{H}_2\text{O}$ . (Ebenhusen, 905.)

**trigintitungstic acid**,  $\text{B}_2\text{O}_3 + 66\text{H}_2\text{O}$ .

p. scint. Somewhat more sol. in  $\text{H}_2\text{O}$  than  $\text{B}_2\text{O}_3$ ,  $28\text{WO}_3 + 62\text{H}_2\text{O}$ . Also more so. (Copaux, C. R. 1908, 147. 975.)

**borooctadecitungstic acid**,  $\text{B}_2\text{O}_3, 24\text{WO}_3 + 54\text{H}_2\text{O}$ .

p.  $\text{H}_2\text{O}$  dissolve 50 pts. salt. (Copaux, 19, (8) 17. 217.)

**borooctadecitungstic acid**,  $\text{B}_2\text{O}_3, 24\text{WO}_3 + 58\text{H}_2\text{O}$ . (Copaux,

—,  $5\text{CdO}, \text{B}_2\text{O}_3, 24\text{WO}_3 + 58\text{H}_2\text{O}$ .

p. easily sol. in  $\text{H}_2\text{O}$ . (Copaux, l. c.)

—,  $5\text{CaO}, \text{B}_2\text{O}_3, 24\text{WO}_3 + 44\text{H}_2\text{O}$ .  
l. in  $\text{H}_2\text{O}$ . (Copaux, l. c.)

—,  $15\text{Li}_2\text{O}, \text{B}_2\text{O}_3, 24\text{WO}_3 + 38\text{H}_2\text{O}$ .  
x, l. c.)

m —,  $5\text{MgO}, \text{B}_2\text{O}_3, 24\text{WO}_3 + 30\text{H}_2\text{O}$ .

l. in  $\text{H}_2\text{O}$ . (Copaux, l. c.)

s —,  $9\text{Hg}_2\text{O}, \text{B}_2\text{O}_3, 24\text{WO}_3 + 30\text{H}_2\text{O}$ .

x, l. c.)

t —,  $5\text{K}_2\text{O}, \text{B}_2\text{O}_3, 24\text{WO}_3 + 30\text{H}_2\text{O}$ .

x, l. c.)

—,  $5\text{Na}_2\text{O}, \text{B}_2\text{O}_3, 24\text{WO}_3 + 5\text{H}_2\text{O}$ .  
salt. (Copaux, l. c.)

**trigintitungstic acid**.

**borooctadecitungstic acid**,  $\text{B}_2\text{O}_3, 25\text{WO}_3 + 34\text{H}_2\text{O}$ . (Ebenhusen, 905.)

**trigintitungstic acid**,  $\text{B}_2\text{O}_3, 25\text{WO}_3 + 62\text{H}_2\text{O}$ .

p. in boiling aqueous solution. (C. R. 1908, 147. 975.)

**borooctadecitungstic acid**,  $6\text{K}_2\text{O}, 28\text{WO}_3 + 42\text{H}_2\text{O}$ .

p. by boiling alkalis. (Copaux, 19, (8) 17. 217.)

**trigintitungstic acid**.

$\text{H}_2\text{O}$ . Easily decomp. (Guyard, (2) 25. 354.)

**Metabromantimonic acid**,  $\text{HSbBr}_3 + 3\text{H}_2\text{O}$ .

Very hygroscopic. Loses  $\text{Br}_2$  in the air. Decomp. by  $\text{H}_2\text{O}$  with separation of antimonic acid. (Weinland, B. 1903, 36. 256.)

**Ammonium metabromantimonate**,  $\text{NH}_4\text{SbBr}_6 + \text{H}_2\text{O}$ .

Loses  $\text{Br}_2$  in the air. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Iron (ferric) metabromantimonate**,  $\text{Fe}(\text{SbBr}_6)_3 + 14\text{H}_2\text{O}$ .

Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Lithium metabromantimonate**,  $\text{LiSbBr}_6 + 4\text{H}_2\text{O}$ .

Very hygroscopic. Loses  $\text{Br}_2$  in the air. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Nickel metabromantimonate**,  $\text{Ni}(\text{SbBr}_6)_2 + 12\text{H}_2\text{O}$ .

Hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Potassium metabromantimonate**,  $\text{KSbBr}_6 + \text{H}_2\text{O}$ .

Loses  $\text{Br}_2$  in the air. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, l. c.)

**Bromarsenious acid**.

See Arsenyl bromide.

**Bromauric acid**,  $\text{HAuBr}_4 + 3\text{H}_2\text{O}$ .

(Lengfeld, Am. Ch. J. 1901, 26. 329.)  
+  $5\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Thomsen, J. pr. (2) 13. 337.)  
+  $6\text{H}_2\text{O}$ . Sol. in ether and  $\text{CHCl}_3$  without decomp. (Lengfeld, Am. Ch. J. 1901, 26. 329.)

**Ammonium bromaurate**,  $\text{NH}_4\text{AuBr}_4$ .

Ppt. (Gutbier, Z. anorg. 1914, 85. 358.)

**Barium bromaurate**.

Not deliquescent. Sol. in  $\text{H}_2\text{O}$ . (v. Bonsdorff, Pogg. 17. 261.)

**Cæsium bromaurate**,  $\text{CsAuBr}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$  or alcohol. Insol. in ether. (Wells and Wheeler, Sill. Am. J. 144. 157.)  
Ppt. (Gutbier, Z. anorg. 1914, 85. 360.)

**Cerium bromaurate**,  $\text{CeAuBr}_6 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Jolin, Bull. Soc. (2) 21. 533.)

**Didymium bromaurate**,  $\text{DiAuBr}_6 + 9\text{H}_2\text{O}$ .

Very deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Lanthanum bromaurate**,  $\text{LaAuBr}_6 + 9\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Magnesium bromaurate**.

Deliquescent in moist air. (v. Bonsdorff.)

**Manganese bromaurate**.

Deliquescent. (v. Bonsdorff.)

**Potassium bromaurate,  $\text{KAuBr}_4$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . More sol. in cold alcohol than in  $\text{H}_2\text{O}$ . (v. Bonsdorff.)

+ $2\text{H}_2\text{O}$ . Sol. in 5.12 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , 1.56 pts. at  $40^\circ$ , and 0.48 pt. at  $67^\circ$ . Decomp. by ether. Sl. sol. in  $\text{KBr} + \text{Aq}$ . (Schottländer, A. 217. 314.)

+ $5\text{H}_2\text{O}$ . Efflorescent. (v. Bonsdorff.)

**Rubidium bromaurate,  $\text{RbAuBr}_4$ .**

As caesium bromaurate.

Ppt. (Gutbier, Z. anorg. 1914, 85. 359.)

**Samarium bromaurate,  $\text{SmAuBr}_4 + 10\text{H}_2\text{O}$ .**

Very deliquescent. (Cleve, Bull. Soc. (2) 43. 165.)

**Sodium bromaurate,  $\text{NaAuBr}_4$ .**

Slowly sol. in  $\text{H}_2\text{O}$ . (v. Bonsdorff.)

**Zinc bromaurate,  $\text{Zn}(\text{AuBr}_4)_2$ .**

Very deliquescent. (v. Bonsdorff.)

**Bromauricyanhydric acid.**

Not known in free state.

**Barium bromauricyanide,  $\text{Ba}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 10\text{H}_2\text{O}$ .**

Very sol. in hot or cold  $\text{H}_2\text{O}$ , also in alcohol. (Lindbom, Lund. Univ. Arsk. 12. No. 6.)

**Cadmium bromauricyanide,  $\text{Cd}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 6\text{H}_2\text{O}$ .**

Very sol. in hot or cold  $\text{H}_2\text{O}$ , but solution is unstable. (Lindbom.)

**Calcium bromauricyanide,  $\text{Ca}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 10\text{H}_2\text{C}$ .**

Extremely sol. in  $\text{H}_2\text{O}$  and alcohol. (Lindbom.)

**Cobalt bromauricyanide,  $\text{Co}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 9\text{H}_2\text{O}$ .**

Moderately sol. in  $\text{H}_2\text{O}$ . Less sol. than other bromauricyanides. (Lindbom.)

**Potassium bromauricyanide,  $\text{KAu}(\text{CN})_2\text{Br}_2 + 3\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  and alcohol.

**Sodium bromauricyanide,  $\text{NaAu}(\text{CN})_2\text{Br}_2 + 2\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$  or alcohol.

**Strontium bromauricyanide,  $\text{Sr}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + x\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$  or alcohol.

**Zinc bromauricyanide,  $\text{Zn}[\text{Au}(\text{CN})_2\text{Br}_2]_2 + 8\text{H}_2\text{O}$ .**

Easily sol. in cold or hot  $\text{H}_2\text{O}$ .

**Bromhydric acid,  $\text{HBr}$ .**

Very sol. in  $\text{H}_2\text{O}$ .

The most concentrated  $\text{HBr} + \text{Aq}$  has a sp. gr. of 1.78, and contains 82.02%  $\text{HBr}$ . (Champion and Pellat, C. R. 70. 620.) This, or a weak acid on heating leaves a residue, which

distils unchanged at  $125\text{--}125.5^\circ$  under 785 mm. pressure, and contains 48.17%  $\text{HBr}$  (Topsoë); at  $126^\circ$  under 758 mm. pressure, and contains 46.83%  $\text{HBr}$  (Bineau); and has sp. gr. = 1.486 at  $20^\circ$  (Bineau); sp. gr. = 1.48 at  $20^\circ$  (Champion and Pellat); sp. gr. = 1.49 at  $20^\circ$  (Topsoë).

According to Roscoe (A. 116. 214) an acid of constant composition, obtained by boiling a stronger or a weaker acid, if distilled under 752–762 mm. pressure, contains 47.38–47.86%  $\text{HBr}$ , and boils at  $126^\circ$  at 760 mm. pressure; but the composition is dependent on the pressure, as, for example, under 1952 mm. pressure, the residue boils at  $153^\circ$ , and contains 46.3%  $\text{HBr}$ . (Roscoe.)

By conducting dry air through  $\text{HBr} + \text{Aq}$  an acid is obtained containing 51.65%  $\text{HBr}$  if at  $16^\circ$ , and 49.35%  $\text{HBr}$  if at  $100^\circ$  (Roscoe). 1 vol.  $\text{H}_2\text{O}$  dissolves 600 vols.  $\text{HBr}$  at  $10^\circ$ . (Berthelot, C. R. 76. 679.)

1 pt.  $\text{H}_2\text{O}$  at  $t^\circ$  and 760 mm. pressure dissolves pts.  $\text{HBr}$ .

$t^\circ$	Pts. $\text{HBr}$	$t^\circ$	Pts. $\text{HBr}$	$t^\circ$	Pts. $\text{HBr}$

+3H<sub>2</sub>O. Mpt. -48.0°. (Pickering.)+4H<sub>2</sub>O. Mpt. -55.8°. (Pickering.)+5H<sub>2</sub>O. (Pickering.)**Bromhydric cyanhydric acid, 3HBr, 2HCN.**Decomp. by H<sub>2</sub>O and alcohol.

Insol. in ether. (Gautier, A. ch. (4) 17. 141.)

**Bromic acid, HBrO<sub>3</sub>.**

Known only in aqueous solution.

Solution evaporated on water bath decomposes when it contains 4.26% HBrO<sub>3</sub>. In vacuo, an acid containing 50.59% HBrO<sub>3</sub> corresponding to formula HBrO<sub>3</sub>+7H<sub>2</sub>O can be obtained.Not decomp. by dil. HNO<sub>3</sub>, or H<sub>2</sub>SO<sub>4</sub>+Aq. Conc. H<sub>2</sub>SO<sub>4</sub> decomposes.Alcohol and ether are quickly oxidized by HBrO<sub>3</sub>.**Bromates.**Most of the bromates are very sol. in H<sub>2</sub>O, a few are sl. sol., but none are insol., the least sol. being AgBrO<sub>3</sub> and Hg<sub>2</sub>(BrO<sub>3</sub>)<sub>2</sub>.**Aluminum bromate, Al(BrO<sub>3</sub>)<sub>3</sub>.**

Deliquescent. (Rammelsberg, Pogg. 55. 63.)

+9H<sub>2</sub>O. Mpt. 62.3°. Less hygroscopic

than  $\text{Al}(\text{ClO}_3)_3$ . (Dobrosserdow, C. C. 1907. I, 1723.)

**Ammonium bromate,  $\text{NH}_4\text{BrO}_3$ .**

Decomposes spontaneously; sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52. 85.)

**Barium bromate,  $\text{Ba}(\text{BrO}_3)_2$ .**

Solubility of  $\text{Ba}(\text{BrO}_3)_2$  in  $\text{H}_2\text{O}$ . 100 g. sat.  $\text{Ba}(\text{BrO}_3)_2 + \text{Aq}$  at  $t^\circ$  contain g. anhydrous  $\text{Ba}(\text{BrO}_3)_2$ .

(Harkins, J. Am. Chem. Soc. 1911, 33. 1815.)

+  $\text{H}_2\text{O}$ . Sol. in 130 pts. cold, and 24 pts. boiling  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52. 81.)

Decomp. by  $\text{H}_2\text{SO}_4$  or  $\text{HCl} + \text{Aq}$ .

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

**Bismuth bromate.**

Known only in solution, which decomp. on evaporation. (Rammelsberg, Pogg. 55. 76.)

**Cadmium bromate,  $\text{Cd}(\text{BrO}_3)_2 + \text{H}_2\text{O}$ .**

Sol. in 0.8 pt. cold  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 55. 74.)

+  $2\text{H}_2\text{O}$ . (Topsoë, J. B. 1872, 164.)

**Cadmium bromate ammonia,  $\text{Cd}(\text{BrO}_3)_2 \cdot 3\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 55. 74.)

$\text{Cd}(\text{BrO}_3)_2 \cdot 4\text{NH}_3$ . Ppt. (Ephraim, B. 1915, 48. 51.)

**Calcium bromate,  $\text{Ca}(\text{BrO}_3)_2 + \text{H}_2\text{O}$ .**

Sol. in 1.1 pts. cold  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52. 98.)

**Cerous bromate,  $\text{Ce}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 55. 63.)

Mpt.  $49^\circ$ ; very sol. in  $\text{H}_2\text{O}$  with decomp. (James, J. Am. Chem. Soc. 1909, 31. 914.)

**Cobaltous bromate,  $\text{Co}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$ .**

Sol. in 2.2 pts. cold  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rammelsberg, Pogg. 55. 71.)

**Cupric bromate, basic,  $6\text{CuO}, \text{Br}_2\text{O}_3 + 10\text{H}_2\text{O}$ .**

Ppt. (Rammelsberg, Pogg. 55. 78.)

**Cupric bromate,  $\text{Cu}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52. 92.)

**Cupric bromate ammonia,  $\text{Cu}(\text{BrO}_3)_2 \cdot 4\text{NH}_3$ .**

Completely sol. in a little  $\text{H}_2\text{O}$ , but decomp. by dilution.

Insol. in alcohol. (Rammelsberg, Pogg. 52. 92.)

**Didymium bromate,  $\text{Di}(\text{BrO}_3)_2 + 9\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

**Dysprosium bromate,  $\text{Dy}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$ .**

Mpt.  $78^\circ$ . Easily sol. in  $\text{H}_2\text{O}$ . Difficultly sol. in alcohol. (Jantsch, B. 1911, 44. 1275.)

**Erbium bromate,  $\text{Er}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$ .**

Very sol. in alcohol and  $\text{H}_2\text{O}$ .

**Glucinum bromate.**

Deliquescent.

**Iron (ferrous) bromate,  $\text{Fe}(\text{BrO}_3)_2$ .**

Sol. in  $\text{H}_2\text{O}$ , but solution decomp. very easily.

**Iron (ferric) bromate,  $5\text{Fe}_2\text{O}_3, \text{Br}_2\text{O}_3 + 30\text{H}_2\text{O}$ .**

Partially sol. in  $\text{H}_2\text{O}$ , with separation of a more basic salt. Sol. in  $\text{HBO}_3 + \text{Aq}$ . (Rammelsberg, Pogg. 55. 68.)

**Lanthanum bromate,  $\text{La}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$ .**

Sol. in  $3\frac{1}{2}$  pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Marignac, Ann. Min. (5) 15. 274.)

Mpt.  $37.5^\circ$  in its water of crystallization. 416 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $25^\circ$ . (James, J. Am. Chem. Soc. 1909, 31. 913.)

**ate, basic**,  $3\text{PbO}$ ,  $\text{Pb}(\text{BrO}_3)_2 +$   
(*Strömholm, Z. anorg. 1904, 38. 441.*)

**ate**,  $\text{Pb}(\text{BrO}_3)_2$ .

$\text{H}_2\text{O}$ . 13.37 x 10<sup>-4</sup>g. are contained  
of sat. solution at 20°. (*Böttger,*  
*1. 1903, 46. 603.*)

Sol. in 75 pts. cold  $\text{H}_2\text{O}$ . (*Ram-*  
*logg, 52. 96.*)

**omate**,  $\text{LiBrO}_3$ .

Efflorescent, and sol. in  $\text{H}_2\text{O}$ . (*Ram-*  
*logg, A. 55. 63.*)

Efflorescent. (*Politilizin, B. 23.*)

Sat. solution sat. at 18° = 1.833, and  
0.4%  $\text{LiBrO}_3$ . (*Mylius, B. 1897,*

Not deliquescent. (*Potilizin.*)

**ate bromate**,  $\text{Mg}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$ .

Efflorescent. Sol. in 1.4 pts. cold  $\text{H}_2\text{O}$  at  
in its water of crystallization when  
(*Rammelsberg, Pogg. 52. 89.*)

**bromate, basic**,  $2\text{Hg}_2\text{O}$ ,  $\text{Br}_2\text{O}_3$ .

Warm  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ .  
(*erg, Pogg. 55. 79.*)

**bromate**,  $\text{Hg}_2(\text{BrO}_3)_2$ .

by  $\text{H}_2\text{O}$  into basic salt. Difficultly  
 $\text{O}_3 + \text{Aq}$ ; easily sol. in  $\text{HCl} + \text{Aq}$ .  
(*erg.*)

**omate, basic**,  $2\text{HgO}$ ,  $\text{Br}_2\text{O}_3 + \text{H}_2\text{O}$ .  
Decomp. by cold, quickly by hot  
side and an acid salt.

Insol. in dil. acids. (*Topsoë, W. A. B.*

**omate**,  $\text{HgBrO}_3 + 2\text{H}_2\text{O}$ .

50 pts. cold, and 64 pts. boiling  
ol. in  $\text{HNO}_3 + \text{Aq}$ . Easily sol. in  
(*Rammelsberg, Pogg. 55. 79.*)

**omate ammonia**.

Decomp. in  $\text{HCl} + \text{Aq}$ . (*Storer's*

**ate bromate**,  $\text{Nd}(\text{BrO}_3)_3 + 9\text{H}_2\text{O}$ .

7°. 146 pts. are sol. in 100 pts.  
°. (*James, J. Am. Chem. Soc.*  
*5.*)

**ate**,  $\text{Ni}(\text{BrO}_3)_2 + 6\text{H}_2\text{O}$ .

58 pts. cold  $\text{H}_2\text{O}$ . (*Rammelsberg,*  
*9.)*

**ate ammonia**,  $\text{Ni}(\text{BrO}_3)_2, 2\text{NH}_3$ .

$\text{H}_2\text{O}$ , with decomposition of the  
on. Insol. in alcohol. (*Rammels-*

**ate**,  $6\text{NH}_3$ . Ppt. (*Ephraim, B.*  
*1.)*

**omate**,  $\text{KBrO}_3$ .

$\text{H}_2\text{O}$  dissolve 6.58 pts.  $\text{KBrO}_3$  at  
(*elsberg*). 100 pts.  $\text{H}_2\text{O}$  dissolve  
 $\text{BrO}_3$  at 17.1° (*Pohl, W. A. B. 6.*

595); at 0°, 3.11 pts.; at 20°, 6.92 pts.; at 40°,  
13.24 pts.; at 60°, 22.76 pts.; at 80°, 33.90 pts.;  
at 100° 49.75 pts.  $\text{KBrO}_3$ . Sat. solution boils  
at 104°. (*Kremers, Pogg. 97. 5.*)

1 l.  $\text{H}_2\text{O}$  at 25° dissolves 0.4715 moles  
 $\text{KBrO}_3$ . (*Geffcken, Z. phys. Ch. 1904, 49.*  
*296.*)

1 l.  $\text{H}_2\text{O}$  dissolves 0.478 mol.  $\text{KBrO}_3$  at 25°.  
(*Rothmund, Z. phys. Ch. 1909, 69. 539.*)

Sp. gr. of  $\text{KBrO}_3 + \text{Aq}$  at 19.5°.

% $\text{KBrO}_3$	1	2	3	4	5

(*Rothmund, Z. phys. Ch. 1909, 69. 539.*)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

**Praseodymium bromate**,  $\text{Pr}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$ .

Mpt. 56.5°. 190 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at 25°. (James, J. Am. Chem. Soc. 1909, 31. 914.)

**Samarium bromate**,  $\text{Sm}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$ .

Mpt. 75°. 114 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at 25°. Very sl. sol. in alcohol. (James, J. Am. Chem. Soc. 1909, 31. 915.)

**Scandium bromate**.

(Crookes, Roy. Soc. Proc. 1908, 80, A, 518.)

**Silver bromate**,  $\text{AgBrO}_3$ .

1 pt.  $\text{H}_2\text{O}$  dissolves 0.00810 pt.  $\text{AgBrO}_3$  at 24.5°. (Noyes, Z. phys. Ch. 6. 246.)

Sol. in 595.3 pts.  $\text{H}_2\text{O}$  at 25°.

Sol. in 320.4 pts.  $\text{HNO}_3$  + Aq (sp. gr. 1.21) at 25°.

Sol. in 2.2 pts.  $\text{NH}_4\text{OH}$  + Aq (sp. gr. 0.96) at 25°. (Longi, Gazz. ch. it. 13. 87.)

1 l.  $\text{H}_2\text{O}$  dissolves 1.71 g.  $\text{AgBrO}_3$  at 27°. (Whitby, Z. anorg. 1910, 67. 108.)

Sl. sol. in  $\text{H}_2\text{O}$ .  $1.59 \times 10^{-4}$  g. are contained in 1 liter of sat. solution at 20°. (Böttger, Z. phys. Ch. 1903, 46. 603.)

Insol. in  $\text{HNO}_3$ . (Löwig.) Easily sol. in  $\text{NH}_4\text{OH}$  + Aq.

**Silver bromate ammonia**,  $\text{AgBrO}_3 \cdot 2\text{NH}_3$ .

Decomp. in air or by  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52. 94.)

**Sodium bromate**,  $\text{NaBrO}_3$ .

Sol. in 2.7 pts.  $\text{H}_2\text{O}$  at 15°. (Rammelsberg.)

100 pts.  $\text{H}_2\text{O}$  dissolve at—

0° 20° 40° 60° 80° 100°

27.54 34.48 50.25 62.5 75.75 90.9 pts.  $\text{NaBrO}_3$ .

(Kremers, Pogg. 94. 271.)

Easily forms supersaturated solutions.

Sat. solution boils at 109°. (Kremers.)

$\text{NaBrO}_3$  + Aq containing 10.10%  $\text{NaBrO}_3$  has sp. gr. 20°/20° = 1.0818.

$\text{NaBrO}_3$  + Aq containing 11.09%  $\text{NaBrO}_3$  has sp. gr. 20°/20° = 1.0900.

(Le Blanc and Rohland, Z. phys. Ch. 1896 19. 278.)

Sp. gr. of  $\text{NaBrO}_3$  + Aq at 19.5°.

$\% \text{NaBrO}_3$	5	10	15
Sp. gr.	1.041	1.083	1.129
$\% \text{NaBrO}_3$	20	25	30
Sp. gr.	1.178	1.231	1.289

(Kremers, Pogg. 97. 5, calculated by Gerlach, Z. anal. 8. 290.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

**Sodium bromate bromide**,  $3\text{NaBrO}_3 \cdot 2\text{NaBr} + 3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  or alcohol. (Fritzsche.)

**Strontium bromate**,  $\text{Sr}(\text{BrO}_3)_2 \cdot \text{H}_2\text{O}$ .

Sol. in 3 pts.  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 52. 84); less sol. in  $\text{H}_2\text{O}$  than  $\text{SrBr}_2 \cdot 6\text{H}_2\text{O}$ . (Löwig.)

**Thallous bromate**,  $\text{TlBrO}_3$ .

Sl. sol. in hot  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HNO}_3$  + Aq. (Oettinger.)

Easily sol. in  $\text{H}_2\text{O}$  and til. acids. (Ditte, A. ch. (6) 21. 145.)

**Terbium bromate**,  $\text{Tb}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$ .

Not deliquescent. (Potratz, C. N. 1905, 92, 3.)

**Thallous bromate**,  $\text{TlBrO}_3$ .

1 l.  $\text{H}_2\text{O}$  at 39.75° dissolves  $2.216 \times 10^{-2}$  g. mol. (Noyes and Abbott, Z. phys. Ch. 1895, 16. 130.)

Sl. sol. in  $\text{H}_2\text{O}$ .  $3.46 \times 10^{-1}$  gram are contained in 1 liter of sat. solution at 20°. (Böttger, Z. phys. Ch. 1903, 46. 603.)

**Thallic bromate**,  $\text{Tl}(\text{BrO}_3)_3 \cdot 3\text{H}_2\text{O}$ .

Very hygroscopic. Easily decomp. by  $\text{H}_2\text{O}$ . (Gewecke, Z. anorg. 1912, 75. 275.)

**Thulium bromate**,  $\text{Tm}_2(\text{BrO}_3)_6 \cdot 18\text{H}_2\text{O}$ .

Pptd. from sat. aqueous solution by 95% alcohol.

$\text{NH}_4\text{OH}$  is the best precipitant. (James, J. Am. Chem. Soc. 1911, 33. 1342.)

**Tin (stannous) bromate** (?).

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl}$  + Aq.

**Uranyl bromate**,  $4\text{UO}_3 \cdot 3\text{Br}_2\text{O}_3 \cdot 16\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)

**Yttrium bromate**,  $\text{Y}(\text{BrO}_3)_3 \cdot 9\text{H}_2\text{O}$ .

More easily sol. in  $\text{H}_2\text{O}$  than  $\text{Y}(\text{IO}_3)_3$ . Sl. sol. in alcohol. Insol. in ether. (Clève.)

Mpt. 74°. 168 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at 25°.

Sl. sol. in alcohol. (James, J. Am. Chem. Soc. 1909, 31. 916.)

**Zinc bromate**,  $\text{Zn}(\text{BrO}_3)_2 \cdot 6\text{H}_2\text{O}$ .

Sol. in 1 pt. cold  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 52. 90.)

**Zinc bromate ammonia**,  $\text{Zn}(\text{BrO}_3)_2 \cdot 2\text{NH}_3 + 3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol. Sol. in  $\text{NH}_4\text{OH}$  + Aq. (Rammelsberg, Pogg. 52. 90.)

$\text{Zn}(\text{BrO}_3)_2 \cdot 4\text{NH}_3$ . Ppt. (Ephraim, B. 1915, 48. 51.)

**Perbromic acid**.

See Perbromic acid.

(Winkler, Ch. Z. 1899, 23. 688.)

Solubility of bromine vapor.  
(Mean of many determinations)

Temp.	Pressure	Absorption coefficient
0.0	56-13mm.	60.53
9.94°	89-16	35.22
20.46	138-9	20.87
30.38	179-12	13.65
40.31	229-26	9.22
50.25	274-53	6.50
60.04	314-46	4.84
69.98	154-54	3.82
80.22	396-74	2.94

Solubility of liquid bromine.  
(The mean of many determinations)

Temp.	0°	10.34°	19.96°	30.17°	40.03°	49.85°
Pts. $H_2O$ that dissolve 1 pt. $Br_2$	24.0	26.74	27.94	29.10	29.02	28.38

Much less  $Br_2$  is sol. in ice cold  $H_2O$  in the presence of bromine hydrate.

Solubility in presence of bromine hydrate.  
(The mean of many determinations)

Temp.	0°	5.12°
Pts. $H_2O$ that dissolve 1 pt. $Br_2$	42.39	26.26

(Winkler, Ch. Z. 1899, 23. 688-689.)

Solubility of  $Br_2$  in  $H_2O$  at  $25^\circ$  = 0.21 mols. in 1 l. (Bray, J. Am. Chem. Soc. 1910, 32. 398.)

Sp. gr. of  $Br_2$  + Aq containing pts.  $Br$  in 1000 pts. solution.

Pts. Br.	Sp. gr.	Pts. Br.	Sp. gr.
10.72	1.00901	18.74-19.06	1.01491
10.68	1.00931	19.52-20.09	1.01585
12.05	1.00995	20.89-21.55	1.01807
12.21	1.01223	31.02-31.69	1.02367

(Slessor, N. Edin. Phil. J. 7. 287.)

Sp. gr. of  $Br_2$  + Aq at  $32.5^\circ$ .

% $Br_2$ by weight	Sp. gr.
0.7214	0.999814
1.1172	1.002520
1.6448	1.006100
1.9956	1.008870
2.5960	1.013200

(Joseph, Chem. Soc. 1915, 107. 3.)

Sol. in conc.  $HCl$ ,  $HBr$ , conc. solutions of bromides, and in liquid  $SO_2$ . (Sestini, Zeit. Chem. 1868. 718.)

Much more sol. in  $HCl$  + Aq than in  $H_2O$ . 100 cc.  $HCl$  + Aq of 1.153 sp. gr. dissolve 36.4 g.  $Br$  at  $12^\circ$ .

More sol. in  $SrCl_2$ , and  $BaCl_2$  + Aq than in  $H_2O$ . (Berthelot, C. R. 100. 761.)

Bromine is not more sol. in KBr+Aq than in H<sub>2</sub>O (?). (Balard.)

KBr+Aq containing 1 pt. KBr to 6 pts. H<sub>2</sub>O takes up as much Br as it already contains; when this solution is heated the dissolved Br is separated. 1 pt. KBr+1 pt. H<sub>2</sub>O takes up twice as much Br as it already contains, much heat being evolved. This solution loses Br on exposure to the air or when heated. (Löwig.)

#### Solubility of Br<sub>2</sub> in KBr+Aq.

g. Mols. KBr per l.	g. at. Br dissolved per l. at 18.5°	g. at. Br dissolved per l. at 26.5°
0.00	0.4448	0.4282
0.01	0.4634	0.4490
0.02	0.4823	0.4671
0.03	0.5049	0.4925
0.04	0.5243	0.5101
0.05	0.5431	0.5301
0.06	0.5668	0.5530
0.07	0.5895	0.5636
0.08	0.6059	0.5920
0.09	0.6301	0.5981
0.1	0.6533	0.6488
0.2	0.8718	0.8591
0.3	1.0549	1.0787
0.4	1.3124	1.2704
0.5	1.5436	1.4731
0.6	1.7712	1.6717
0.7	2.0006	1.9197
0.8	2.2354	2.1029
0.9	2.4851	2.3349

The above figures indicate that below a concentration of 0.1 g. mol. KBr per l. just enough Br is dissolved to form KBr<sub>3</sub>, while above that concentration somewhat larger amounts of Br are dissolved, which is greater at the lower temp.

(Worley, Chem. Soc. 1905, 87. 1109.)

#### Solubility of Br<sub>2</sub> in NaBr+Aq at 25°.

g. NaBr per l.	g.-atoms Br <sub>2</sub> per l.	Sp. gr.

$\frac{1}{4}$ -N	7.402	254.4
$\frac{1}{8}$ -N	7.609	252.8
$\frac{1}{16}$ -N	7.713	251.2

(Jakowkin, l. c.)

Crystallizes at  $4^\circ$  with  $10\text{H}_2\text{O}$ .

**Bromine chloride,  $\text{BrCl}$ .**

Sol. in  $\text{H}_2\text{O}$ ,  $\text{CS}_2$ , ether, etc.

**Bromine fluoride,  $\text{BrF}_3$ .**

Fumes in the air. Decomp. by  $\text{H}_2\text{O}$ . (Lebeau, C. R. 1905, 141, 1019.)

**Bromine oxides.**

No oxides of bromine are known in the free state. See hypobromous, bromic, and perbromic acids.

**Bromiridic acid.**

**Ammonium bromiridate,  $(\text{NH}_4)_2\text{IrBr}_6$ .**

Less sol. in cold  $\text{H}_2\text{O}$  than the K salt. (Birnbau, Zeit. Chem. 1865, 22.)

Very sol. in cold  $\text{H}_2\text{O}$ . (Gutbier, B. 1909, 42, 3910.)

**Cesium bromiridate,  $\text{Cs}_2\text{IrBr}_6$ .**

Sol. in  $\text{H}_2\text{O}$ . (Gutbier, B. 1909, 42, 3911.)

**Potassium bromiridate,  $\text{K}_2\text{IrBr}_6$ .**

Moderately sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .

Insol. in alcohol or ether.

Sol. in cold  $\text{H}_2\text{O}$  and in  $\text{HBr}$  + Aq. (Gutbier, B. 1909, 42, 3910.)

**Rubidium bromiridate,  $\text{Rb}_2\text{IrBr}_6$ .**

Very sol. in cold  $\text{H}_2\text{O}$ . Sol. in hot dil.  $\text{HBr}$  + Aq. (Gutbier, B. 1909, 42, 3911.)

**Sodium bromiridate.**

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ , alcohol, or ether.

**Bromiridous acid,  $\text{H}_2\text{Ir}_2\text{Br}_{12} + 6\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Birnbau, 1864.)

**Ammonium bromiridite,  $(\text{NH}_4)_2\text{Ir}_2\text{Br}_{12} + \text{H}_2\text{O}$ .**

Difficultly sol. in  $\text{H}_2\text{O}$ . (Birnbau.)

**Potassium bromiridite,  $\text{K}_2\text{Ir}_2\text{Br}_{12} + 6\text{H}_2\text{O}$ .**

Efflorescent. Sol. in  $\text{H}_2\text{C}$ .

**Silver bromiridite,  $\text{Ag}_2\text{Ir}_2\text{Br}_{12}$ .**

Ppt. Insol. in  $\text{H}_2\text{O}$  or acids.

**Sodium bromiridite,  $\text{Na}_2\text{Ir}_2\text{Br}_{12} + 24\text{H}_2\text{O}$ .**

Efflorescent. Very sol. in  $\text{H}_2\text{O}$ .

**Bromocarbonatoplatindiamine carbonate,  $\text{CO}_3[\text{Pt}(\text{N}_2\text{H}_5)_2]_2(\text{CO}_3)_2 + 4\text{H}_2\text{O}$ .**

Ppt.

**Bromocarbonatoplatindiamine carbonate bromoplatin/diamine nitrate,**

$\text{CO}_3[\text{Pt}(\text{N}_2\text{H}_5)_2]_2(\text{CCl}_3)_2, 2\text{Br}_2\text{Pt}(\text{N}_2\text{H}_5)_2(\text{NO}_3)_2$ .

**Bromochloroplatindiamine chloride,**

$\text{Br Pt}(\text{N}_2\text{H}_5)_2\text{Cl}_2$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

— chlorobromide,  $\text{Br Pt} \begin{smallmatrix} \text{N}_2\text{H}_5\text{Cl} \\ \text{N}_2\text{H}_5\text{Br} \end{smallmatrix} (?)$ .

Very sl. sol. in  $\text{H}_2\text{O}$ .

**Bromochloroplatinic acid.**

**Potassium bromochloroplatinate,  $\text{K}_2\text{PtCl}_2\text{Br}$**  (Pitkin, J. Am. Chem. Soc. 2, 408.)

Mixture. (Herty, J. Am. Chem. Soc. 1896, 18, 130.)

$\text{K}_2\text{PtCl}_2\text{Br}_2$ . Sl. sol. in cold  $\text{H}_2\text{O}$ ; much more sol. in hot  $\text{H}_2\text{O}$ . (Pitkin.)

Mixture. (Herty.)

$\text{K}_2\text{PtCl}_2\text{Br}_2$ . As above.

$\text{K}_2\text{PtCl}_2\text{Br}_4$ . (Pigeon, A. ch. 1894, (7) 2, 488.)

$\text{K}_2\text{PtClBr}_2$ . (Pitkin.)

**Bromochromic acid.**

**Potassium bromochromate,  $\text{KCrO}_2\text{Br}_2 = \text{CrO}_2(\text{Br})\text{OK}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Heintze, J. pr. (2) 4, 225.)

- Dibromochromium chloride**,  
 $[\text{Cr}(\text{H}_2\text{O})_4\text{Br}_2]\text{Cl} + 2\text{H}_2\text{O}$ .  
 Ppt. Nearly insol. in fuming  $\text{HCl}$ . (Bjerrum, B. 1907, 40. 2918.)
- Bromohydroxyplatindiamine bromide**,  
 $\text{OH} \text{ Pt}(\text{N}_2\text{H}_4\text{Br})_2$ .  
 Very sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)
- **chloride**,  $\text{OH} \text{ Pt}(\text{N}_2\text{H}_4\text{Cl})_2$ .  
 Sol. in  $\text{H}_2\text{O}$  (Cleve.)
- **nitrate**,  $\text{OH} \text{ Pt}(\text{N}_2\text{H}_4\text{NO}_2)_2$ .  
 Very sl. sol. in cold, moderately sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)
- Bromohydroxyplatindiamine**  
**nitrate**,  $\text{OH} \text{ Pt}(\text{N}_2\text{H}_4)_2\text{NO}_2 + \text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)
- Bromomercurosulphurous acid**.  
**Ammonium bromomercurosulphite**,  
 $\text{NH}_4\text{SO}_3\text{HgBr}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Barth, Z. phys. Ch. 9. 215.)
- Potassium bromomercurosulphite**,  
 $\text{KSO}_3\text{HgBr}$ .  
 As above. (B.)
- Bromomolybdenum bromide**,  
 $\text{Br}_4\text{Mo}_3\text{Br}_2 = \text{molybdenum dibromide}$ ,  
 $\text{MoBr}_2$ .  
 Insol. in  $\text{H}_2\text{O}$  or acids, or even in boiling aqua regia. Easily sol. in dilute, decomp. by conc. alkalis + Aq. (Blomstrand, J. pr. 82. 436.)
- Bromomolybdenum chloride**,  $\text{Br}_4\text{Mo}_3\text{Cl}_2 + 3\text{H}_2\text{O}$ .  
 Insol. in acids. (Blomstrand.)
- Bromomolybdenum chromate**,  $\text{Br}_4\text{Mo}_3\text{CrO}_4 + 2\text{H}_2\text{O}$ .  
 Insol. in dil. acids. Sol. in hot conc.  $\text{HCl}$  + Aq. Insol. in alkali chromates + Aq. (Atterberg.)
- Bromomolybdenum fluoride**,  $\text{Br}_4\text{Mo}_3\text{F}_2 + 3\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Atterberg.)
- Bromomolybdenum hydroxide**,  $\text{Br}_4\text{Mo}_3(\text{OH})_2$ .  
 Completely sol. in alkalis if not heated over  $90^\circ$ . (Atterberg.)  
 $+ 2\text{H}_2\text{O}$ .  
 $+ 8\text{H}_2\text{O}$ .
- Bromomolybdenum iodide hydroxide**,  
 $2\text{Br}_4\text{Mo}_3\text{I}_2, \text{Br}_4\text{Mo}_3(\text{OH})_2 + 8\text{H}_2\text{O}$ .  
 Precipitate. (Blomstrand, J. pr. 77. 92.)
- Bromomolybdenum molybdate**,  $\text{Br}_4\text{Mo}_3\text{MoO}_4$ .  
 Precipitate. (Atterberg.)
- Bromomolybdenum phosphate**,  
 $\text{Br}_4\text{Mo}_3\text{H}_4(\text{PO}_4)_2$ .  
 Precipitate. Insol. in  $\text{H}_2\text{O}$ . (Atterberg.)
- Bromomolybdenum sulphate**,  $\text{Br}_4\text{Mo}_3\text{SO}_4 + 3\text{H}_2\text{O}$ .  
 Precipitate. Sl. sol. in boiling  $\text{H}_2\text{SO}_4$ . (Atterberg.)
- Dibromomolybdous acid**,  $\text{MoOBr}_2(\text{OH}) + 1\frac{1}{2}\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . Very hygroscopic. (Weinland, Z. anorg. 1905, 44. 86.)
- Tetrabromomolybdous acid**,  $\text{MoBr}_4(\text{OH}) + 2\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . Hygroscopic. (Weinland, l. c.)
- Diammonium pentabromomolybdite**,  
 $\text{MoBr}_5\text{O}(\text{NH}_4)_2$ .  
 Hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (Weinland, l. c.)
- Dicæsium pentabromomolybdite**,  
 $\text{MoBr}_5\text{OCs}_2$ .  
 Hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (Weinland, l. c.)
- Calcium tetrabromomolybdite**,  $(\text{MoBr}_4\text{O})_2\text{Ca} + 7\text{H}_2\text{O}$ .  
 Hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (Weinland, l. c.)
- Monolithium tetrabromomolybdite**,  
 $\text{MoBr}_4(\text{OLi}) + 4\text{H}_2\text{O}$ .  
 Hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (Weinland, l. c.)
- Magnesium pentabromomolybdite**,  
 $\text{MoBr}_5(\text{OMg}) + 7\text{H}_2\text{O}$ .  
 Hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (Weinland, l. c.)
- Monopotassium tetrabromomolybdite**,  
 $\text{MoBr}_4(\text{OK}) + 2\text{H}_2\text{O}$ .  
 Hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (Weinland, l. c.)
- Dipotassium pentabromomolybdite**,  
 $\text{MoBr}_5\text{OK}_2$ .  
 Hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (Weinland, l. c.)
- Dirubidium pentabromomolybdite**,  
 $\text{MoBr}_5\text{ORb}_2$ .  
 Hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (Weinland, l. c.)
- Bromonitratoplatindiamine nitrate**,  
 $\text{Br} \text{ Pt} \text{ N}_2\text{H}_4\text{NO}_2$ .  
 $\text{NO}_2 \text{ N}_2\text{H}_4\text{NO}_2$ .  
 Decomp. by  $\text{H}_2\text{O}$ . (Cleve.)
- **sulphate**,  $\text{Br} \text{ Pt}(\text{N}_2\text{H}_4)_2\text{SO}_4 + \text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ .

**Bromonitritoplatinsemidiamine nitrite,**  
 $\text{NO}_2\text{Br}_2\text{Pt}(\text{NH}_3)_2\text{NO}_2$ .Sl. sol. in  $\text{H}_2\text{O}$ . (Blomstrand.)**Bromonitrous acid.****Platinum silver bromonitrite,  $\text{PtAg}_3\text{Br}_3(\text{NO}_2)_4$ .**

Ppt. (Miolati, Gazz. ch. it. 1900, 30. 588.)

**Bromopalladic acid.****Ammonium bromopalladate,  $(\text{NH}_4)_2\text{PdBr}_4$ .**Difficultly sol. in cold  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$  and by hot conc.  $\text{H}_2\text{SO}_4$ . (Gutbier, B. 1905, 38. 1907.)**Cesium bromopalladate,  $\text{Cs}_2\text{PdBr}_4$ .**Difficultly sol. in cold  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$  or by hot conc.  $\text{H}_2\text{SO}_4$ . (Gutbier, l. c.)**Potassium bromopalladate,  $\text{K}_2\text{PdBr}_4$ .**Difficultly sol. in cold  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$  or by hot conc.  $\text{H}_2\text{SO}_4$ . (Gutbier, l. c.)**Rubidium bromopalladate,  $\text{Rb}_2\text{PdBr}_4$ .**Insol. in cold  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$  or by hot conc.  $\text{H}_2\text{SO}_4$ . (Gutbier, l. c.)**Bromopalladious acid.****Ammonium bromopalladite,  $(\text{NH}_4)_2\text{PdBr}_4$ .**Very stable. Sol. in  $\text{H}_2\text{O}$ . (Smith, Z. anorg. 1894, 6. 381.)Very sol. in cold  $\text{H}_2\text{O}$ .Can be cryst. from a very small amount of hot  $\text{H}_2\text{O}$ . (Gutbier, B. 1905, 38. 2387.)**Barium bromopalladite.**Not deliquescent. Sol. in  $\text{H}_2\text{O}$ . (v. Bonsdorff.)**Cesium bromopalladite,  $\text{Cs}_2\text{PdBr}_4$ .**Very sol. in  $\text{H}_2\text{O}$ . (Gutbier, B. 1905, 38. 2388.)**Manganese bromopalladite,  $\text{MnPdBr}_4$ .**Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff.)  
+7 $\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Smith, Z. anorg. 1894, 6. 382.)**Potassium bromopalladite,  $\text{K}_2\text{PdBr}_4$ .**Easily sol. in  $\text{H}_2\text{O}$ . (Joannis, C. R. 95. 295.)Very stable. Sol. in  $\text{H}_2\text{O}$ . (Smith, Z. anorg. 1894, 6. 381.)+2 $\text{H}_2\text{O}$ . Unstable in the air. (Smith, l. c.)**Rubidium bromopalladite,  $\text{Rb}_2\text{PdBr}_4$ .**Can be cryst. from a very small amount of hot  $\text{H}_2\text{O}$ . (Gutbier, B. 1905, 38. 2388.)**Sodium bromopalladite,  $\text{Na}_2\text{PdBr}_4 + 4\frac{1}{2}\text{H}_2\text{O}$ .**Very deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Smith, l. c.)**Strontium bromopalladite,  $\text{SrPdBr}_4 + 6\text{H}_2\text{O}$ .**  
Stable in the air. Very sol. in  $\text{H}_2\text{O}$ . (Smi l. c.)**Zinc bromopalladite.**Sol. in  $\text{H}_2\text{O}$ . (v. Bonsdorff.)**Bromophosphatoplatinindiamine phosphate,  $\text{BrPt}(\text{N}_2\text{H}_4)_2 + 2\text{H}_2\text{O}$ .**Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)**Bromophosphoric acid.****Thorium bromophosphate,  $\text{ThBr}_4$ ,  
3(3 $\text{ThO}_3$ , 2 $\text{P}_2\text{O}_5$ ).**Insol. in most acids and in fused all carbonates. Decomp. by long boiling w conc.  $\text{H}_2\text{SO}_4$ . (Colani, C. R. 1909, 149. 2)**Bromoplatinamine bromide,**Sl. sol. in  $\text{H}_2\text{C}$ . (Cleve, Sv. V. A. H. 10 31.)— nitrite,  $\text{Br}_2\text{Pt}(\text{NH}_3\text{NO}_2)_2$ .Very sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)**Bromoplatinindiamine bromide,**Only sl. sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)— chloride,  $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_4)_2\text{Cl}_2$ .Very sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)— dichromate,  $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_4)_2\text{Cr}_2\text{O}_7$ .Sl. sol. in  $\text{H}_2\text{C}$ .— nitrate,  $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_4\text{NO}_3)_2$ .Sl. sol. in cold, rather easily sol. in hot  $\text{H}$  (Cleve.)— phosphate,  $\text{Br}_2\text{Pt}[\text{N}_2\text{H}_4\text{PO}_2(\text{OH})_2]_2 + 2\text{H}_2\text{O}$ .Rather easily sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)— sulphate,  $\text{Br}_2\text{Pt}(\text{N}_2\text{H}_4)_2\text{SO}_4$ .Very sl. sol. in  $\text{H}_2\text{O}$ .**Bromoplatinmonodiamine nitrate,**Easily sol. in  $\text{H}_2\text{O}$ .— sulphate,  $\text{Br}_2\text{Pt} \begin{array}{c} (\text{NH}_3)_2 \\ \text{NH}_3 \end{array} \text{SO}_4 + \text{H}_2\text{O}$ .Moderately sol. in  $\text{H}_2\text{O}$ . (Cleve.)**Bromoplatinsemidiamine bromide,**Sl. sol. in cold  $\text{H}_2\text{O}$ . (Cleve.)**Bromodiplatinindiamine anhydronitrate,**Sol. in  $\text{HNO}_3 + \text{Aq}$ .

**Platindiamine chloride,**

(Cleve.)

rate,  $\text{Br}_2\text{Pt}_2(\text{N}_2\text{H}_4)_4(\text{NO}_3)_4 + 2\text{H}_2\text{O}$ .ately sol. in hot  $\text{H}_2\text{O}$ .phate,  $\text{Br}_2\text{Pt}_2(\text{N}_2\text{H}_4)_4(\text{SO}_4)_2 + 2\text{H}_2\text{O}$ .

(Cleve.)

latinic acid,  $\text{H}_2\text{PtBr}_6 + 9\text{H}_2\text{O}$ .deliquescent, and sol. in  $\text{H}_2\text{O}$ , alcohol, chloroform, or acetic acid. (Topsoë, 38. 273.)um bromoplatinate,  $(\text{NH}_4)_2\text{PtBr}_6$ .200 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Topsoë.)s.  $(\text{NH}_4)_2\text{PtBr}_6 + \text{Aq}$  sat. at  $20^\circ$  con-  
9 pt. dry salt. (Halberstadt, B. 17.bromoplatinate,  $\text{BaPtBr}_6 + 10\text{H}_2\text{O}$ .iquescent. Very sol. in  $\text{H}_2\text{O}$ .bromoplatinate,  $\text{Cs}_2\text{PtBr}_6$ .l. in dil.  $\text{HBr} + \text{Aq}$ . (Obermaier,bromoplatinate,  $\text{CaPtBr}_6 + 12\text{H}_2\text{O}$ .iquescent. Very sol. in  $\text{H}_2\text{O}$ .romoplatinate,  $\text{CoPtBr}_6 + 12\text{H}_2\text{O}$ .

iescent.

romoplatinate,  $\text{CuPtBr}_6 + 8\text{H}_2\text{O}$ .deliquescent; sol. in  $\text{H}_2\text{O}$ .omoplatinate,  $\text{PbPtBr}_6$ .sol. in  $\text{H}_2\text{O}$ , but decomp. by largetrabromoplatinate,  $[\text{PtBr}_4(\text{OH})_2]\text{Pb}$ ,  
H.in  $\text{H}_2\text{O}$ . (Miolati, C. C. 1900, II.um bromoplatinate,  $\text{MgPtBr}_6 +$   
 $\text{H}_2\text{O}$ .

eliquescent.

ese bromoplatinate,  $\text{MnPtBr}_6 +$   
 $\text{H}_2\text{O}$ . $\text{H}_2\text{O}$ .  
 $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .: tetrabromoplatinate,  
 $\text{Br}_4(\text{OH})_2]\text{Hg}$ in  $\text{H}_2\text{O}$ . (Miolati, C. C. 1900, II.romoplatinate,  $\text{NiPtBr}_6 + 12\text{H}_2\text{O}$ .  
iescent.m bromoplatinate,  $\text{K}_2\text{PtBr}_6$ .l. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (v.  
f, Pogg. 19. 344.)Sol. in 10 pts. boiling  $\text{H}_2\text{O}$ . (Pitkin, C. N.  
41. 218.)100 pts.  $\text{K}_2\text{PtBr}_6 + \text{Aq}$  sat. at  $20^\circ$  contain  
2.02 pts. dry salt. (Halberstadt, B. 17. 2962.)Praseodymium bromoplatinate,  $\text{PrBr}_3\text{PtBr}_6$   
 $+ 10\text{H}_2\text{O}$ .Deliquescent; very sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HBr}$ .  
(Von Schule, Z. anorg. 1898, 18. 353.)Rubidium bromoplatinate,  $\text{Rb}_2\text{PtBr}_6$ .Sl. sol. in dil.  $\text{HBr} + \text{Aq}$ . (Obermaier.  
Dissert.)Silver bromoplatinate,  $\text{Ag}_2\text{PtBr}_6$ .Insol. in  $\text{H}_2\text{O}$ . (Miolati, C. C. 1900, II.  
810.)Silver tetrabromoplatinate,  $[\text{PtBr}_4(\text{OH})_2]\text{Ag}_2$ .  
Ppt.; insol. in  $\text{H}_2\text{O}$ . (Miolati, l. c.)Sodium bromoplatinate,  $\text{Na}_2\text{PtBr}_6 + 6\text{H}_2\text{O}$ .Easily sol. in  $\text{H}_2\text{O}$  and alcohol.Strontium bromoplatinate,  $\text{SrPtBr}_6 + 10\text{H}_2\text{O}$ .Sl. deliquescent. Very sol. in  $\text{H}_2\text{O}$ .

Thallium tetrabromoplatinate,

Insol. in  $\text{H}_2\text{O}$ . (Miolati, C. C. 1900, II.  
810.)Ytterbium bromoplatinate,  $\text{YbBr}_3\text{PtBr}_6$   
 $+ 30\text{H}_2\text{O}$ .

Ppt. (Cleve, Z. anorg. 1902, 32. 138.)

Zinc bromoplatinate,  $\text{ZnPtBr}_6 + 12\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ .

Bromoplatinocyanhydric acid,

See Perbromoplatinocyanhydric acid.

Potassium bromoplatinocyanide,  $5\text{K}_2\text{Pt}(\text{CN})_4$ ,  
 $\text{K}_2\text{Pt}(\text{CN})_4\text{Br}_2 + 18\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ .

Bromoplatinous acid.

Potassium bromoplatinite,  $\text{K}_2\text{PtBr}_4 + 2\text{H}_2\text{O}$ .Extremely sol. in  $\text{H}_2\text{O}$ . (Billmann and An-  
dersen, B. 1903, 36. 1566.)

Bromopurpureochromium bromide,

Less sol. in  $\text{H}_2\text{O}$  than chloropurpureo-  
chromium chloride. (Jørgensen, J. pr. (2)  
25. 83.)— bromoplatinate,  $\text{BrCr}(\text{NH}_3)_5\text{PtBr}_6$ .  
(Jørgensen, l. c.)— chloride,  $\text{BrCr}(\text{NH}_3)_5\text{Cl}_2$ .More sol. in  $\text{H}_2\text{O}$  than the bromide.  
(Jørgensen, l. c.)

**Bromopurpleochromium chromate,**  
 $\text{BrCr}(\text{NH}_3)_4\text{CrO}_4$ .Precipitate. (Jørgensen, *l. c.*)— **nitrate**,  $\text{BrCr}(\text{NH}_3)_4(\text{NO}_3)_2$ .More sol. than bromide and less than chloride. (Jørgensen, *l. c.*)**Bromopurpleocobaltic bromide,**Sol. in 530 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ . Insol. in alcohol,  $\text{NH}_4\text{Br}$ ,  $\text{KBr}$ , or  $\text{HBr} + \text{Aq}$ . More sol. in hot  $\text{H}_2\text{O}$  containing a little  $\text{HBr}$ . (Jørgensen, *J. pr.* (2) 19. 49.)**Bromopurpleocobaltic mercuric bromide,**  
 $\text{CoBr}(\text{NH}_3)_4\text{Br}_2 \cdot 3\text{HgBr}_2$ .More sol. in  $\text{H}_2\text{O}$  than the corresponding  $\text{HgCl}_2$  salt. (J.)— **bromoplatinate**.Very sl. sol. in cold  $\text{H}_2\text{O}$ . (J.)— **chloride**,  $\text{CoBr}(\text{NH}_3)_4\text{Cl}_2$ .Difficultly sol. in cold  $\text{H}_2\text{O}$ , but much more easily than the bromide. Insol. in dil.  $\text{HCl} + \text{Aq}$ . and in alcohol.— **mercuric chloride**,  $\text{CoBr}(\text{NH}_3)_4\text{Cl}_2 \cdot 3\text{HgCl}_2$ .Sl. sol. in  $\text{H}_2\text{O}$ .— **chloroplatinate**.Nearly or quite insol. in  $\text{H}_2\text{O}$ . (J.)— **chromate**,  $\text{CoBr}(\text{NH}_3)_4\text{CrO}_4$ .Nearly insol. in  $\text{H}_2\text{O}$ .— **dithionate**,  $\text{CoBr}(\text{NH}_3)_4\text{S}_2\text{O}_8$ .Nearly insol. in  $\text{H}_2\text{O}$ .— **fluosilicate**,  $\text{CoBr}(\text{NH}_3)_4\text{SiF}_6$ .Very sl. sol. in cold  $\text{H}_2\text{O}$ ; insol. in alcohol.— **nitrate**,  $\text{CoBr}(\text{NH}_3)_4(\text{NO}_3)_2$ .More sol. in  $\text{H}_2\text{O}$  than the bromide, but less than the chloride. Wholly insol. in dil.  $\text{HNO}_3 + \text{Aq}$  or alcohol.— **oxalate**,  $\text{CoBr}(\text{NH}_3)_4\text{C}_2\text{O}_4$ .Nearly insol. in  $\text{H}_2\text{O}$ .— **sulphate**,  $\text{CoBr}(\text{NH}_3)_4\text{SO}_4$ .Can be crystallized from very dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Insol. in alcohol.  
 $+ 6\text{H}_2\text{O}$ . Efflorescent.**Bromopurpleorhodium bromide,**Much less easily sol. in  $\text{H}_2\text{O}$  than the chlorochloride. Insol. in dil.  $\text{HBr} + \text{Aq}$  and alcohol. (Jørgensen, *J. pr.* (2) 27. 433.)— **bromoplatinate**,  $\text{BrRh}(\text{NH}_3)_4\text{PtBr}_4$ .Almost insol. in  $\text{H}_2\text{O}$ .— **fluosilicate**,  $\text{BrRh}(\text{NH}_3)_4\text{SiF}_6$ .Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in boiling  $\text{NaOH} + \text{Aq}$  as roseo salt.**Bromopurpleorhodium nitrate,**  
 $\text{BrRh}(\text{NH}_3)_4(\text{NO}_3)_2$ .Sl. sol. in  $\text{H}_2\text{O}$ , but much more sol. than the bromide.**Bromorhodos acid.****Ammonium bromorhodite,  $(\text{NH}_4)_2\text{RhBr}_4$ .**Sol. in  $\text{H}_2\text{O}$ . (Goloubkine, *Chem. Sc.* 1911, 100 (2) 45.)Sol. in  $\text{H}_2\text{O}$ . (Gutbier, *B.* 1908, 41. 215.)**Barium bromorhodite,  $\text{BaRhBr}_4$ .**Sol. in  $\text{H}_2\text{O}$ . (Goloubkine, *l. c.*)**Cæsium bromorhodite,  $\text{Cs}_2\text{RhBr}_4$ .**Difficultly sol. in  $\text{H}_2\text{O}$ . (Gutbier, *l. c.*)**Potassium bromorhodite,  $\text{K}_2\text{RhBr}_4$ .**Very sol. in  $\text{H}_2\text{O}$ . (Goloubkine, *l. c.*)Sol. in  $\text{H}_2\text{O}$ . (Gutbier, *l. c.*)**Rubidium bromorhodite,  $\text{Rb}_2\text{RhBr}_4$ .**Sol. in  $\text{H}_2\text{O}$ . (Goloubkine, *l. c.*)Difficultly sol. in  $\text{H}_2\text{O}$ . (Gutbier, *l. c.*)**Sodium bromorhodite,  $\text{Na}_2\text{RhBr}_4$ .**Very sol. in  $\text{H}_2\text{O}$ . (Goloubkine, *l. c.*)**Bromoruthenic acid.****Potassium bromoruthenate,  $\text{K}_2\text{RuBr}_4$ .**Very sol. in  $\text{H}_2\text{O}$ . (Howe, *J. Am. Ch. Soc.* 1904, 26. 946.)**Potassium aquobromoruthenate,**  
 $\text{K}_2\text{Ru}(\text{H}_2\text{O})\text{Br}_4$ .Ppt. (Howe, *l. c.*)**Rubidium bromoruthenate,  $\text{Rb}_2\text{RuBr}_4$ .**Sol. in  $\text{H}_2\text{O}$ . (Howe, *l. c.*)**Rubidium aquobromoruthenate,**  
 $\text{Rb}_2\text{Ru}(\text{H}_2\text{O})\text{Br}_4$ .Ppt. (Howe, *l. c.*)**Bromoruthenious acid.****Cæsium bromoruthenite,  $\text{CsRuBr}_4 + \text{H}_2\text{O}$ .**Ppt. (Howe, *J. Am. Chem. Soc.* 1904, 945.)**Potassium bromoruthenite,  $\text{K}_2\text{RuBr}_4$ .**Very sol. in  $\text{H}_2\text{O}$  with decomp. Very in dil.  $\text{HBr}$ . (Howe, *l. c.*)**Rubidium bromoruthenite,  $\text{Rb}_2\text{RuBr}_4 + \text{H}$** Sol. in dil.  $\text{HBr}$ . (Howe, *l. c.*)**Bromoselenic acid.****Ammonium bromoselenate,  $(\text{NH}_4)_2\text{SeBr}_4$ .**Sol. in  $\text{H}_2\text{O}$  with decomp. (Muthmann; Schäfer, *B.* 26. 1008.)**Cæsium bromoselenate,  $\text{Cs}_2\text{SeBr}_4$ .**Sl. sol. in  $\text{H}_2\text{O}$ . (Lenher, *J. Am. Ch. Soc.* 1898, 20. 571.)**Potassium bromoselenate,  $\text{K}_2\text{SeBr}_4$ .**As  $\text{NH}_4$  salt. (M. and S.)

**m bromoselenate**,  $\text{Rb}_2\text{SeBr}_6$ .  
ol. in  $\text{H}_2\text{O}$  than K salt. (Lenher, *l. c.*)

**pyroselenious acid**.

**ium bromopyroselenite**,  $\text{NH}_4\text{Br} \cdot 2\text{SeO}_3 \cdot \text{H}_2\text{O}$ .

easily sol. in  $\text{H}_2\text{O}$  than corresponding bound. (Muthmann and Schäfer, *B. i.* 1014.)

**um bromopyroselenite**,  $\text{KBr} \cdot 2\text{SeO}_3 + \text{H}_2\text{O}$ .

n  $\text{H}_2\text{O}$ . (Muthmann and Schäfer, *B. i.*)

**smic acid**.

**ium bromosmate**,  $(\text{NH}_4)_2\text{OsBr}_6$ .

sl. sol. in  $\text{H}_2\text{O}$ . (Rosenheim, *Z. anorg. l.* 135.)

**um bromosmate**,  $\text{Cs}_2\text{OsBr}_6$ .

ly insol. in  $\text{H}_2\text{O}$  and dil.  $\text{HBr}$ . (Gut-1913, 46. 2103.)

**um bromosmate**,  $\text{K}_2\text{OsBr}_6$ .

sl. sol. in  $\text{H}_2\text{O}$ . (Rosenheim, *l. c.*)

**um bromosmate**,  $\text{Rb}_2\text{OsBr}_6$ .

ultly sol. in  $\text{H}_2\text{O}$  and in dil.  $\text{HBr}$ . (*r, l. c.*)

**romosmate**,  $\text{Ag}_2\text{OsBr}_6$ .

insol. in  $\text{H}_2\text{O}$ . (Rosenheim, *l. c.*)

**bromosmate**,  $\text{Na}_2\text{OsBr}_6 \cdot 4\text{H}_2\text{O}$ .

n  $\text{H}_2\text{O}$ . (Rosenheim, *l. c.*)

**stannic acid**,  $\text{H}_2\text{SnBr}_6 + 8\text{H}_2\text{O}$ .

deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Seubert, 794.)

**ium bromostannate**,  $(\text{NH}_4)_2\text{SnBr}_6$ .

deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Ray- and Preis, *A.* 223. 323.)

**um bromostannate**.

n  $\text{H}_2\text{O}$ . (Raymann and Preis.)

**um bromostannate**,  $\text{CaSnBr}_6 + 6\text{H}_2\text{O}$ .

deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Ray- and Preis.)

**bromostannate**,  $\text{CoSnBr}_6 + 10\text{H}_2\text{O}$ .

uescent. (Raymann and Preis.)

**s bromostannate**,  $\text{FeSnBr}_6 + 6\text{H}_2\text{O}$ .

uescent. (Raymann and Preis.)

**um bromostannate**,  $\text{Li}_3\text{SnBr}_6 + 6\text{H}_2\text{O}$ .

emely deliquescent. (Leteur, *C. R.* 1.)

**ium bromostannate**,  $\text{MgSnBr}_6 + \text{H}_2\text{O}$ .

uescent. (Raymann and Preis.)

**Manganous bromostannate**,  $\text{MnSnBr}_6 + 6\text{H}_2\text{O}$ .

Deliquescent. (Raymann and Preis.)

**Nickel bromostannate**,  $\text{NiSnBr}_6 + 8\text{H}_2\text{O}$ .

Deliquescent. (Raymann and Preis.)

**Potassium bromostannate**,  $\text{K}_2\text{SnBr}_6$ .

Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Rubidium bromostannate**.

Sol. in  $\text{H}_2\text{O}$ . (Raymann and Preis.)

**Sodium bromostannate**,  $\text{Na}_2\text{SnBr}_6 + 6\text{H}_2\text{O}$ .

Not deliquescent, but extremely sol. in  $\text{H}_2\text{O}$ . (Seubert, *B.* 20. 796.)

**Strontium bromostannate**,  $\text{SrSnBr}_6 + 6\text{H}_2\text{O}$ .

Very hygroscopic, and sol. in  $\text{H}_2\text{O}$ . (Ray- mann and Preis.)

**Bromosulphatoplatindiamine sulphate**,

Rather easily sol. in hot  $\text{H}_2\text{O}$ .

**Bromosulphobismuthous acid**.

**Cuprous bromosulphobismuthite**,  $2\text{Cu}_2\text{S}$ ,  $\text{Bi}_2\text{S}_3$ ,  $2\text{BiSBr}$ .

Stable in the air and insol. in  $\text{H}_2\text{O}$  at ord. temp. Partially decomp. by boiling  $\text{H}_2\text{O}$ . Decomp. by mineral acids with the evolution of  $\text{H}_2\text{S}$ . (Ducatte, *C. R.* 1902, 134. 1212.)

**Lead bromosulphobismuthite**,  $\text{PbS} \cdot \text{Bi}_2\text{S}_3 \cdot 2\text{BiSBr}$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . Decomp. by dil. mineral acids with evolution of  $\text{H}_2\text{S}$ . (Ducatte, *l. c.*)

**Bromotantalum bromide**,  $(\text{Ta}_6\text{Br}_{12})\text{Br}_2 + 7\text{H}_2\text{O}$ .

Stable in the air when in the solid state. Sol. in  $\text{H}_2\text{O}$  without decomp. Sol. in propyl alcohol. (Chapin, *J. Am. Chem. Soc.* 1910, 32. 328.)

**Bromotantalum chloride**,  $(\text{Ta}_6\text{Br}_{12})\text{Cl}_2 + 7\text{H}_2\text{O}$ .

(Chapin, *l. c.*)

**Bromotantalum hydroxide**,  $(\text{Ta}_6\text{Br}_{12})(\text{OH})_2 + 10\text{H}_2\text{O}$ .

Sl. sol. in  $\text{HCl}$ . Stable in the air below  $100^\circ$ .

Sol. in alcohol. Insol. in ether. (Chapin, *l. c.*)

**Bromotantalum iodide**,  $(\text{Ta}_6\text{Br}_{12})\text{I}_2 + 7\text{H}_2\text{O}$ .

(Chapin, *l. c.*)

**Bromotelluric acid**.

**Ammonium bromotellurate**,  $(\text{NH}_4)_2\text{TeBr}_6$ .

Less sol. in  $\text{H}_2\text{O}$  than K salt. (Muthmann and Schmidt, *B.* 1893, 26. 1011.)

**Cæsium bromotellurate, Cs<sub>2</sub>TeBr<sub>4</sub>.**Decomp. by H<sub>2</sub>O.

100 pts. HBr + Aq (sp. gr. 1.49) dissolve 0.02 pt. at 22°.

100 pts. HBr + Aq (sp. gr. 1.08) dissolve 0.13 pt. at 22°.

Insol. in alcohol. (Wheeler, Sill. Am. J. 145. 267.)

**Potassium bromotellurate, K<sub>2</sub>TeBr<sub>4</sub> + 3H<sub>2</sub>O.**Sol. in little, decomp. by much H<sub>2</sub>O. (v. Hauer.)Contains 2H<sub>2</sub>O. (Wheeler, Sill. Am. J. 145. 267.)

Efflorescent.

100 pts. HBr + Aq (sp. gr. 1.49) dissolve 6.57 pts. at 22°.

100 pts. HBr + Aq (sp. gr. 1.08) dissolve 62.90 pts. at 22°.

*Anhydrous.* Stable on air. (Wheeler.)**Rubidium bromotellurate, Rb<sub>2</sub>TeBr<sub>4</sub>.**Sol. in a little hot H<sub>2</sub>O, but H<sub>2</sub>TeO<sub>3</sub> separates on cooling.

100 pts. HBr + Aq (sp. gr. 1.49) dissolve 0.25 pt. at 22°.

100 pts. HBr + Aq (sp. gr. 1.08) dissolve 3.88 pts. at 22°. (Wheeler.)

**Bromotetramine chromium bromide,**CrBr(NH<sub>3</sub>)<sub>4</sub>Br<sub>2</sub> + H<sub>2</sub>O.Easily sol. in H<sub>2</sub>O. (Cleve.)— **chloride**, CrBr(NH<sub>3</sub>)<sub>4</sub>Cl<sub>2</sub> + H<sub>2</sub>O.Sol. in H<sub>2</sub>O. (Cleve.)— **sulphate**, CrBr(NH<sub>3</sub>)<sub>4</sub>SO<sub>4</sub> + H<sub>2</sub>O.Easily sol. in H<sub>2</sub>O. (Cleve.)**Bromotetramine cobaltic sulphate,**BrCo(NH<sub>3</sub>)<sub>4</sub>SO<sub>4</sub>, or Br<sub>2</sub>Co<sub>2</sub>(NH<sub>3</sub>)<sub>8</sub>(SO<sub>4</sub>)<sub>2</sub>.Sol. in H<sub>2</sub>O. (Vortmann and Blasberg, B. 22. 2652.)**Cadmium, Cd.**Not attacked by H<sub>2</sub>O. Sol. in HCl, or dil. H<sub>2</sub>SO<sub>4</sub> + Aq, but more easily in HNO<sub>3</sub> + Aq. Sol. in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq.Chemically pure Cd like Zn is almost insol. in dil. acids, with the exception of HNO<sub>3</sub>. (Weeren, B. 1891, 24. 1798.)Sol. in HClO<sub>4</sub> + Aq without evolution of H. (Hendrixson, J. Am. Chem. Soc. 1904, 26. 756.)Cadmium is sol. in molten CdCl<sub>2</sub> and can be recryst. therefrom. (Auerbach, Z. anorg. 1901, 28. 42.)From 4 g. Cd in 32 g. molten CdCl<sub>2</sub> at 650°, 2.197 g. were dissolved in ½ hr. (Helfenstein, Z. anorg. 1900, 23. 295.)Moderately quickly sol. in K<sub>2</sub>S<sub>2</sub>O<sub>8</sub> + Aq. More slowly sol. in (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub> + Aq. (Levi, Gazz. ch. it. 1908, 38 (1) 583.)Sol. in (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub> + Aq without evolution of gas. (Turrentine, J. phys. Chem. 1907, 11. 627.)

Sol. in sulphostannates + Aq. (Storch, B. 1883, 16. 2015.)

½ ccm. oleic acid dissolves 0.0293 g. Cd in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Not attacked by sugar solution. (Klein and Berg, C. R. 102. 1170.)

**Cadmium amalgam, Cd<sub>2</sub>Hg.**

Stable from 0°–44°. Can be cryst. from Hg without decomp. if temp. does not exceed 44°. (Kerp. Z. anorg. 1900, 25. 68.)

**Cadmium amide, Cd(NH<sub>2</sub>)<sub>2</sub>.**Decomp. by H<sub>2</sub>O. (Bohart, J. phys. Chem. 1915, 19. 543.)**Cadmium arsenide, Cd<sub>2</sub>As.**

(Descamps, C. R. 86. 1022.)

Cd<sub>2</sub>As<sub>2</sub>. Sol. in dil. cold HNO<sub>3</sub>. Attacked by aqua regia. (Granger, C. R. 1904, 138. 575.)**Cadmium azoimide, Cd(N<sub>3</sub>)<sub>2</sub>.**

Ppt. (Curtius, J. pr. 1898, (2) 58. 294.)

**Cadmium subbromide, Cd<sub>2</sub>Br<sub>7</sub>.**Decomp. by H<sub>2</sub>O. (Morse and Jones, Am. Ch. J. 1890, 12. 490.)**Cadmium bromide, CdBr<sub>2</sub>.**Deliquescent. Very sol. in H<sub>2</sub>O.Solubility in H<sub>2</sub>O at t°

(Forchheimer, Z. phys. Ch. 1900, **34**, 29.)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, **20**, 827.)

Sol. in AlBr<sub>3</sub>. (Isbekow, Z. anorg. 1913, **84**, 27.)

Sol. in HCl+Aq, HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, alcohol, or ether. (Berthelot, A. ch. **44**, 387.)

Sol. in 0.94 pt. H<sub>2</sub>O, 3.4 pts. abs. alcohol, 250 pts. ether, and 16 pts. alcohol-ether (1 : 1) (Eder, Dingl. **231**, 89.)

Anhydrous CdBr<sub>2</sub> is sol. in acetone. (Krug and M'Elroy.)

1 g. CdBr<sub>2</sub> is sol. in 64.5 g. acetone at 18°. Sp. gr. of sat. solution 18°/4° = 0.8073. (Naumann, B. 1904, **37**, 4337.)

Sol. in acetone. (Eidmann, C. C. **1899**, II, 1014.)

Insol. in mustard oil. (Mathews, J. phys. Chem. 1905, **9**, 647.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

Sol. in chinoline. (Beckmann and Gabel, Z. anorg. 1906, **51**, 236.)

100 g. benzonitrile dissolve 0.857 g. CdBr<sub>2</sub> at 18°. (Naumann, B. 1914, **47**, 1370.)

Mol. weight determined in piperidine. (Ferchland, Z. anorg. 1897, **15**, 17.)

+H<sub>2</sub>O. Solubility in H<sub>2</sub>O.

+1½H<sub>2</sub>O. (Étard, A. ch. 1894, (7) **2**, 541.)

+4H<sub>2</sub>O. Efflorescent. (Rammelsberg, Pogg. **55**, 241.)

Solubility in H<sub>2</sub>O.

100 g. of the sat. solution contain at:  
0° 18° 30° 38°  
37.92 48.90 56.90 61.84 g. CdBr<sub>2</sub>.  
Sp. gr. of sat. solution at 18° = 1.683.  
(Dietz, Z. anorg. 1899, **20**, 261.)

100 g. sat. solution of CdBr<sub>2</sub>+4H<sub>2</sub>O in absolute alcohol contain 20.93 g. CdBr<sub>2</sub> at 15°.

100 g. sat. solution of CdBr<sub>2</sub>+4H<sub>2</sub>O in absolute ether contain 0.4 g. CdBr<sub>2</sub> at 15°. (Eder, Dingl. **221**, 89.)

**Cadmium hydrogen bromide.**

Decomp. by H<sub>2</sub>O. (Berthelot, C. R. **91**, 1024.)

**Cadmium caesium bromide, CdBr<sub>2</sub>, CsBr.**

Easily sol. in H<sub>2</sub>O. (Wells and Walden, Z. anorg. **5**, 270.)

CdBr<sub>2</sub>, 2CsBr. Decomp. by H<sub>2</sub>O into above comp. (W. and W.)

CdBr<sub>2</sub>, 3CsBr. Decomp. by H<sub>2</sub>O into CdBr<sub>2</sub>, CsBr. (W. and W.)

**Cadmium potassium bromide, CdBr<sub>2</sub>, KBr + ½H<sub>2</sub>O.**

Sol. in 0.79 pt. H<sub>2</sub>O at 15°; pptd. by alcohol and ether. (Eder, Dingl. **221**, 89.)

+H<sub>2</sub>O. Sol. in H<sub>2</sub>O without decomp. from 0.4°-112.5°. (Rimbach, B. 1905, **38**, 1554.)

100 pts. of the solution contain at:  
0.4° 15.8° 50° 112.5°

53.75 58.68 68.25 78.10 pts. of the salt.

CdBr<sub>2</sub>, 4KBr. Sol. in 1.40 pts. H<sub>2</sub>O at 15°; pptd. by alcohol and ether. (Eder, Dingl. **221**, 89.)

Cannot be prepared in a pure state as it is decomp. by H<sub>2</sub>O below 160°. (Rimbach, B. 1905, **38**, 1560.)

**Cadmium rubidium bromide, CdBr<sub>2</sub>, RbBr.**

Sol. in H<sub>2</sub>O without decomp. from 0.4° to 107.5°.

100 pts. of the solution contain at:

0.4° 14.5° 49.2° 107.5°  
32.65 41.87 58.54 75.77 pts. of the salt.

(Rimbach, B. 1905, **38**, 1556.)

CdBr<sub>2</sub>, 4RbBr. Sol. in H<sub>2</sub>O without decomp. from 0.5° to 114.5°.

100 pts. of the solution contain at:

0.5° 13.5° 51.5° 114.5°  
47.95 55.17 68.82 79.04 pts. of the salt.

(Rimbach, B. 1905, **38**, 1561.)

**Cadmium sodium bromide**,  $\text{CdBr}_2$ ,  $\text{NaBr} + 2\frac{1}{2}\text{H}_2\text{O}$ .

Sol. at  $15^\circ$  in 1.04 pts.  $\text{H}_2\text{O}$ , 3.7 pts. abs. alcohol, and 190 pts. ether (sp. gr. 0.729). (Eder, *Dingl.* **221**, 89.)

$3\text{CdBr}_2$ ,  $2\text{NaBr} + 6\text{H}_2\text{O}$ . Stable in conc. solutions and decomp. only by great dilution. (Jones and Knight, *Am. Ch. J.* 1899, **22**, 134.)

**Cadmium bromide ammonia**,  $\text{CdBr}_2$ ,  $2\text{NH}_3$ .

Can be crystallized out of warm  $\text{NH}_4\text{OH} + \text{Aq}$ . (Croft, *Phil. Mag.* **21**, 356.)

$\text{CdBr}_2$ ,  $3\text{NH}_3$ . (Tassily, *C. R.* 1897, **124**, 1022.)

$\text{CdBr}_2$ ,  $4\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$ . (Croft.)

**Cadmium bromide cupric oxide**,  $\text{CdBr}_2$ ,  $3\text{CuO} + 3\text{H}_2\text{O}$ . (Mailhe, *A. ch.* 1902, (7) 27, 383.)

**Cadmium bromide hydrazine**,  $\text{CdBr}_2$ ,  $2\text{N}_2\text{H}_4$ .

Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Franzen, *Z. anorg.* 1908, **60**, 280.)

**Cadmium bromide hydroxylamine**,  $\text{CdBr}_2$ ,  $2\text{NH}_2\text{OH}$ .

Sol. in hot  $\text{H}_2\text{O}$  with formation of a basic salt. Sol. in dil. acids. Insol. in alcohol and ether. (Adams, *Am. Ch. J.* 1902, **28**, 218.)

**Cadmium subchloride**,  $\text{Cd}_2\text{Cl}_3$ .

Decomp. by  $\text{H}_2\text{O}$  and by acids. (Morse and Jones, *Am. Ch. J.* 1890, **12**, 490.)

**Cadmium chloride**,  $\text{CdCl}_2$ .

Sol. at  $20^\circ$   $40^\circ$   $60^\circ$   $80^\circ$   $100^\circ$   
in 0.71 0.72 0.72 0.70 0.67 pts.  $\text{H}_2\text{O}$ .  
(Krcmers, *Pogg.* **103**, 57.)

At  $34.5^\circ$ ,  $\text{CdCl}_2 + 2\frac{1}{2}\text{H}_2\text{O} \rightarrow \text{CdCl}_2 + \text{H}_2\text{O}$  and water.  
(Sudhaus, Miner. Jahrb. Beil.-Bd. 1914, 37. 28.)

Insol. in  $\text{SbCl}_3$ . (Klemensiewicz, C. A. 1909, 269.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. or sl. sol. in ethyl alcohol, furfural, acetophenone, ethyl monochloracetate, ethyl cyanacetate, ethyl oxalate, ethyl nitrate, amyl nitrite, o-nitrotoluene, pyridine, piperidine, and quinoline. Sol. in salicylic aldehyde. (Lincoln, J. phys. Chem. 1899, 3. 461.)

Insol. in anhydrous ether. (Hampe, Ch. Z. 1887, II, 847.)

Readily sol. in alcohol.  
100 pts. absolute methyl alcohol dissolve 1.71 pts.  $\text{CdCl}_2$  at  $15.5^\circ$ .

100 pts. absolute ethyl alcohol dissolve 1.52 pts.  $\text{CdCl}_2$  at  $15.5^\circ$ . (de Bruyn, Z. phys. Ch. 10. 783.)

100 g.  $\text{CdCl}_2 + \text{CH}_3\text{OH}$  contain 1.5 g.  $\text{CdCl}_2$ .

at the critical temp. (Centnerszwer, Z. phys. Ch. 1910, **72**, 437.)

Somewhat sol. in acetone. (Krug and M'Elroy.)

Sol. in acetone; insol. in methylal. (Eidmann, C. C. 1899, II, 1014.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

Sol. in ethyl acetate. (Naumann, B. 1904, **37**, 3601.)

Difficultly sol. in ethylacetate. (Naumann, B. 1910, **43**, 314.)

Sol. in urethane. (Castoro, Z. anorg. 1899, **20**, 61.)

At 18°, 100 g. benzonitrile dissolve 0.06332 g. CdCl<sub>2</sub>. (Naumann, B. 1914, **47**, 1370.)

Insol. in toluene. (Baxter and Hines, Am. Ch. J. 1904, **31**, 222.)

Sol. in chinolin. (Beckmann and Gabel, Z. anorg. 1906, **51**, 236.)

+H<sub>2</sub>O. Solubility in H<sub>2</sub>O.

100 g. of the sat. solution contain at:

10°	20°	40°	60°
57.47	57.35	57.51	57.77
80°	100°		
58.41	59.52 g. CdCl <sub>2</sub> .		

110° is bpt. of the sat. solution.

(Dietz, Z. anorg. 1899, **20**, 257.)

+2½H<sub>2</sub>O. Solubility in H<sub>2</sub>O.

100 g. of the sat. solution contain at:

-10°	0°	18°	30°	36°
44.35	47.37	52.53	56.27	57.91 g. CdCl <sub>2</sub> .

Sp. gr. of sat. solution = 1.741.

(Dietz, Z. anorg. 1899, **20**, 257.)

+4H<sub>2</sub>O. Solubility in H<sub>2</sub>O.

100 g. of the sat. solution contain at:

-9°	0°	+10°	+15°
43.58	49.39	55.58	59.12 g. CdCl <sub>2</sub> .

(Dietz, Z. anorg. 1899, **20**, 257.)

+5H<sub>2</sub>O. (Worobieff, Z. anorg. 1898, **18**, 386.)

**Cadmium hydrogen chloride**, CdCl<sub>2</sub>, 2HCl + 7H<sub>2</sub>O.

Decomp. in air. (Berthelot, C. R. **91**, 1024.)

**Cadmium caesium chloride**, CdCl<sub>2</sub>, 2CsCl.

Easily sol. in H<sub>2</sub>O and dil. HCl + Aq; insol. in conc. HCl + Aq. (Godeffroy, B. **8**, 9.)

Nearly insol. in CsCl + Aq. (Wells and Walden, Z. anorg. **5**, 266.)

CdCl<sub>2</sub>, CsCl. Sl. sol. in H<sub>2</sub>O; nearly insol. in CdCl<sub>2</sub> + Aq. (Wells and Walden.)

**Cadmium calcium chloride**, 2CdCl<sub>2</sub>, CaCl<sub>2</sub> + 7H<sub>2</sub>O.

Rather deliquescent, and very sol. in H<sub>2</sub>O. When ignited is only sl. sol. in H<sub>2</sub>O with evolution of heat. (v. Hauer, J. pr. **63**, 432.)

(CdCl<sub>2</sub>, 2CaCl<sub>2</sub> + 12H<sub>2</sub>O.) Very deliquescent. (v. Hauer.)

**Cadmium cobaltous chloride**, 2CdCl<sub>2</sub>, CoCl<sub>2</sub> + 12H<sub>2</sub>O.

Deliquescent. Sol. in H<sub>2</sub>O. (v. Hauer, W. A. B. **17**, 331.)

**Cadmium cupric chloride**, CdCl<sub>2</sub>, CuCl<sub>2</sub> + 4H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (v. Hauer, W. A. B. **17**, 331.)

**Cadmium hydrazine chloride**, CdCl<sub>2</sub>, N<sub>2</sub>H<sub>4</sub>.HCl.

Unstable in the air when moist. Very sol. in H<sub>2</sub>O; sl. sol. in alcohol; sol. in NH<sub>3</sub> + Aq. (Curtius, J. pr. 1894, (2) **50**, 334.)

CdCl<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>.HCl + 4H<sub>2</sub>O. Very sol. in H<sub>2</sub>O; sl. sol. in alcohol. (Curtius, J. pr. 1894, (2) **50**, 335.)

**Cadmium iron (ferrous) chloride**, 2CdCl<sub>2</sub>, FeCl<sub>2</sub> + 12H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (v. Hauer, W. A. B. **17**, 331.)

**Cadmium lithium chloride**, CdCl<sub>2</sub>, LiCl + 3½H<sub>2</sub>O.

Very deliquescent. Decomp. by solution in H<sub>2</sub>O, but not in alcohol. (Chassevant, A. ch. (6) **30**, 39.)

**Cadmium magnesium chloride**, 2CdCl<sub>2</sub>, MgCl<sub>2</sub> + 12H<sub>2</sub>O.

Deliquescent in moist, stable in dry air. Easily sol. in H<sub>2</sub>O with absorption of heat. Much more sol. in hot than in cold H<sub>2</sub>O. (v. Hauer.)

Solubility in H<sub>2</sub>O at t°.

t°	G. Cd <sub>2</sub> MgCl <sub>2</sub> in 100 g. solution	G. Cd <sub>2</sub> MgCl <sub>2</sub> in 100 g. H <sub>2</sub> O
2 4	45.61	83.86
26.8	49.69	98.77
45.5	53.51	115.10
67.2	58.14	138.90
121.8	65.48	189.69

(Rimbach, B. 1897, **30**, 3084.)

CdCl<sub>2</sub>, 2MgCl<sub>2</sub> + 12H<sub>2</sub>O. Very deliquescent. (v. Hauer.)

**Cadmium manganese chloride**, 2CdCl<sub>2</sub>, MnCl<sub>2</sub> + 12H<sub>2</sub>O.

Deliquescent in moist, efflorescent in dry air. Sol. in H<sub>2</sub>O. (v. Hauer.)

**Cadmium nickel chloride**, CdCl<sub>2</sub>, 2NiCl<sub>2</sub> + 12H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (v. Hauer, W. A. B. **20**, 40.) 2CdCl<sub>2</sub>, NiCl<sub>2</sub> + 12H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (v. Hauer.)

**Cadmium potassium chloride**, CdCl<sub>2</sub>, KCl + ½H<sub>2</sub>O.

Sol. in H<sub>2</sub>O without decomp. (v. Hauer.)

H<sub>2</sub>O. 100 mol. H<sub>2</sub>O dissolve at:  
29.7° 40.1° 54.5°  
3.21 3.72 4.33 mol. CdCl<sub>2</sub>, KCl+H<sub>2</sub>O.  
haus, Miner. Jahrb. Beil.-Bd. 1914, **37**,  
26.)

Solubility in H<sub>2</sub>O at t°.

from 0-104°. (Rimbach, B. 1902, **35**. 1303.)

**CdCl<sub>2</sub>, 4RbCl.**

Solubility of CdCl<sub>2</sub>, 4RbCl and CdCl<sub>2</sub>, RbCl  
in H<sub>2</sub>O at t°.

t°	In 100 pts. by wt. of the solution			Composition of the solid phase	
	Pts. by wt. Cd	Pts. by wt. Cl	Pts. by wt. Rb	Mol.-% mono- salt	Mol.-% tetra- salt
0.7	0.65	6.52	14.73	30	70
8.8	1.07	7.37	16.13	24	76
13.8	1.32	7.86	16.93	16	84
42.4	3.21	11.35	22.45	14	86
59.0	4.61	13.41	25.31	33	67
108.4	8.94	18.57	31.15	..	..

(Rimbach, B. 1902, **35**. 1305.)

Decomp. by H<sub>2</sub>O between 0° and 108°.  
(Rimbach, B. 1905, **38**. 1571.)

Sol. in conc. HCl without decomp. (Rim-  
bach, B. 1905, **38**. 1571.)

Not sol. in CaCl<sub>2</sub>+Aq and LiCl+Aq with-  
out decomp. (Rimbach, B. 1905, **38**. 1571.)

**Cadmium sodium chloride, CdCl<sub>2</sub>, 2NaCl+  
3H<sub>2</sub>O.**

Sol. in 1.4 pts. H<sub>2</sub>O at 16°. (Croft.)

100 mol. H<sub>2</sub>O dissolve at:

19.3° 29.7° 40.1° 54.5°  
3.93 4.29 4.73 5.18 mol. CdCl<sub>2</sub>,  
2NaCl+3H<sub>2</sub>O.

Stable between 19° and 55°.

(Sudhaus, Miner. Jahrb. Beil.-Bd. 1914, **37**,  
25.)

Sl. sol. in alcohol or wood alcohol. (Croft.)

**Cadmium strontium chloride, 2CdCl<sub>2</sub>, SrCl<sub>2</sub>+  
7H<sub>2</sub>O.**

Sol. in H<sub>2</sub>O. (v. Hauer.)

**Cadmium chloride ammonia, CdCl<sub>2</sub>, 2NH<sub>3</sub>.**

Nearly insol. in H<sub>2</sub>O. (v. Hauer.)

CdCl<sub>2</sub>, 3NH<sub>3</sub>+ $\frac{1}{4}$ H<sub>2</sub>O.

CdCl<sub>2</sub>, 4NH<sub>3</sub>+ $\frac{1}{2}$ H<sub>2</sub>O.

CdCl<sub>2</sub>, 5NH<sub>3</sub>. (André, C. R. **104**. 908.)

CdCl<sub>2</sub>, 6NH<sub>3</sub>. Difficultly sol. in cold H<sub>2</sub>O.  
(Schüler, A. **87**. 34.)

**Cadmium chloride cupric oxide**,  $\text{CdCl}_2 \cdot 3\text{CuO} + 3\text{H}_2\text{O}$ .

Not decomp. by  $\text{H}_2\text{O}$ . (Mailhe, A. ch. 1902, (7) 27. 378 and 174.)

**Cadmium chloride hydrazine**,  $\text{CdCl}_2 \cdot 2\text{N}_2\text{H}_4$ .  
Insol. in  $\text{H}_2\text{O}$ .

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Franzen; Z. anorg. 1908, 60. 279.)

+  $\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Curtius, J. pr. 1894, (2) 50. 345.)

**Cadmium chloride hydroxylamine**,  $\text{CdCl}_2 \cdot 2\text{NH}_2\text{OH}$ .

Sl. sol. in cold, somewhat more in warm  $\text{H}_2\text{O}$ . Very sol. in hydroxylamine + Aq. Very sl. sol. in alcohol and other organic solvents. (Crismer, Bull. Soc. (3) 3. 116.)

Aq solution sat. at  $20^\circ$  contains about 1%. (Antonoff, C. C. 1905, II. 810.)

**Cadmium fluoride**,  $\text{CdF}_2$ .

Difficultly sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HF} + \text{Aq}$ . (Berzelius, Pogg. 1. 26.)

Very sol. in  $\text{H}_2\text{O}$ ; insol. in 95% alcohol; sol. in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3 + \text{Aq}$  with evolution of  $\text{HF}$ . (Poulenc, C. R. 116. 582.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.289 mol.  $\text{CdF}_2$  at  $25^\circ$ , or 100 cc. sat. aqueous solution contains 4.36 g.  $\text{CdF}_2$  at  $25^\circ$ . (Jaeger, Z. anorg. 1901, 27. 35.)

1 l. of 1.08-N  $\text{HF}$  dissolves 0.372 mol.  $\text{CdF}_2$  at  $25^\circ$ . (Jaeger, Z. anorg. 1901, 27. 35.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

**Cadmium ceric fluoride**,  $\text{CdF}_2 \cdot 2\text{CeF}_4 + 7\text{H}_2\text{O}$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Rimbach, A. 1909, 368. 106.)

**Cadmium columbium fluoride**.

See Fluocolumbate, cadmium.

**Cadmium molybdenyl fluoride**.

See Fluoxymolybdate, cadmium.

**Cadmium silicon fluoride**.

See Fluosilicate, cadmium.

**Cadmium stannic fluoride**.

See Fluostannate, cadmium.

**Cadmium titanium fluoride**.

See Fluotitanate, cadmium.

**Cadmium zirconium fluoride**.

See Fluozirconate, cadmium.

**Cadmous hydroxide**,  $\text{CdOH}$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by acids into cadmic salt. (Morse and Jones, Am. Ch. J. 12. 488.)

**Cadmium hydroxide**,  $\text{CdO} \cdot \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ .

1 l.  $\text{CdO} \cdot \text{H}_2\text{O} + \text{Aq}$  contains 0.0026 g.  $\text{CdO} \cdot \text{H}_2\text{O}$

at  $25^\circ$ . (Bodländer, Z. phys. Ch. 1896, 27. 66.)

Solubility in  $\text{H}_2\text{O} = 2.6 \times 10^{-4}$ . (Herz, Z. anorg. 1900, 24. 126.)

Sol. in acids; very sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; insol. in  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{K}_2\text{CO}_3$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ .

Easily sol. in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{NH}_4\text{NO}_3$ , and  $\text{NH}_4$  succinate + Aq. (Wittstein.)

Freshly pptd.  $\text{CdO} \cdot \text{H}_2\text{O}$  is sol. in alkali haloids + Aq. (Bersch, Z. phys. Ch. 1891, 8. 392.)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  increases with increase in concentration of  $\text{NH}_4\text{OH}$ . (Euler, B. 1903, 36. 3401.)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ .

$\text{NH}_3$ norm.	g. $\text{CdO}$ per l.
0.5	0.24
1.0	0.62
1.8	1.33
4.6	4.92

(Bonsdorff, Z. anorg. 1904, 41. 187.)

Insol. in ethyl, and methyl amine + Aq. (Wurtz.)

Very sl. sol. in  $\text{HCN} + \text{Aq}$  even when freshly pptd. (Schüler, A. 87. 48.)

Not pptd. in presence of Na citrate (Spiller), and many non-volatile organic substances. (Rose.)

**Cadmium iodide**,  $\text{CdI}_2$ .

Sol. in 1.13 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Eder, Dingl. 221. 89.)

Sol. at  $20^\circ$   $40^\circ$   $60^\circ$   $80^\circ$   $100^\circ$   
in 1.08 1.00 0.93 0.86 0.75 pts.  $\text{H}_2\text{O}$ .

(Kremers, Pogg. 103. 57.)

Sat.  $\text{CdI}_2 + \text{Aq}$  contains at:

$-4^\circ$	$+2^\circ$	$+10^\circ$	$13^\circ$	$24^\circ$	$32^\circ$
42.4	43.7	45.2	44.8	46.5	47.4% $\text{CdI}_2$

(Forchheimer, Z. phys. Ch. 1900, 34. 29.)

$\text{CdI}_2 + \text{Aq}$  containing 1 pt.  $\text{CdI}_2$  in 2.2691  
 pts.  $\text{H}_2\text{O}$  at  $17^\circ$  has sp. gr. = 1.3341. (Hit-  
 torf, Z. phys. Ch. 1902, 39. 628.)

Sol. in sat.  $\text{HI} + \text{Aq}$ .

Sol. in warm  $\text{NH}_4\text{OH} + \text{Aq}$ .

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J.  
 1898, 20. 827.)

Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch.  
 J. 1898, 20. 827.)

Sol. in  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25.  
 217.)

Difficultly sol. in  $\text{POCl}_3$ . (Walden, Z.  
 anorg. 1900, 25. 212.)

Nearly insol. in  $\text{AsBr}_3$ . (Walden, Z. anorg.  
 1902, 29. 374.)

Sol. in  $\text{SO}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900,  
 25. 215.)

Sol. in 15 pts. alcohol. (Vogel, N. Rep.  
 Pharm. 12. 393.)

Sol. in 0.98 pt. abs. alcohol. (Eder, Dingl.  
 221. 89.)

Sp. gr. of  $\text{CdI}_2 + \text{alcohol}$ .

(Linebarger, Am. J. Sci. 1895, (3) 49. 52.)

Sol. in acetone. (Eidmann, C. C. 1899, II.  
 1014.)

1 g.  $\text{CdI}_2$  is sol. in 4 g. acetone at  $18^\circ$ .  
 Sp. gr. of sat. solution  $18^\circ/4^\circ = 0.994$ . (Nau-  
 mann, B. 1904, 37. 4338.)

Sp. gr. of  $\text{CdI}_2 + \text{acetone}$ .

% $\text{CdI}_2$	Sp. gr. $20^\circ/20^\circ$
0	0.7998
12.02	0.8929

(Le Blanc and Rohland, Z. phys. Ch. 1896,  
 19. 284.)

Sol. in chinolin. (Beckmann and Gabel, Z. anorg. 1906, **51**, 236.)

100 g. benzonitrile dissolve 1.6295 g. CdI<sub>2</sub> at 18°. (Naumann, B. 1914, **47**, 1370.)

Insol. in methylene iodide. (Retgers, Z. anorg. **3**, 343.)

Sl. sol. in ethylamine. (Shinn, J. phys. Chem. 1907, **11**, 538.)

Insol. in CS<sub>2</sub>. (Arctowski, Z. anorg. 1849, **6**, 257.)

Solubility in methyl acetate = 0.7–1.5%; 2.1% at bpt. (Schröder and Steiner, J. pr. 1909, (2) **79**, 49.)

Sol. in methyl acetate. (Naumann, B. 1909, **42**, 3790.)

1 pt. is sol. in 54.3 pts. ethyl acetate at 18°.

The sat. solution has D<sub>18°/4°</sub> = 0.9145. (Naumann, B. 1910, **43**, 318.)

Insol. in mustard oil. (Mathews, J. phys. Chem. 1905, **9**, 647.)

Mol. weight determined in piperidine, pyridine, methyl and ethyl sulphide. (Werner, Z. anorg. 1897, **15**, 17.)

**Cadmium hydrogen iodide**, CdI<sub>2</sub>, HI + 3H<sub>2</sub>O.

Decomp. in air. (Dobroserdow, C. C. 1900, II, 527.)

**Cadmium caesium iodide**, CdI<sub>2</sub>, CsI + H<sub>2</sub>O.

Sol. in H<sub>2</sub>O without decomp. (Wells and Walden, Z. anorg. **5**, 271.)

CdI<sub>2</sub>, 2CsI. As above.

CdI<sub>2</sub>, 3CsI. Decomp. by H<sub>2</sub>O into the above salt.

**Cadmium hydrazine iodide**, CdI<sub>2</sub>·2N<sub>2</sub>H<sub>4</sub>·HI.

Sol. in H<sub>2</sub>O. (Ferratini, C. A. 1912, 1612.)

**Cadmium mercuric iodide.**

Very sol. in H<sub>2</sub>O. (Berthemot, J. Pharm. 14, 613.)

CdI<sub>2</sub>, 3HgI<sub>2</sub>. Sol. in H<sub>2</sub>O. Can be recrystallized in alcohol. (Clarke and Kebler, Am. Ch. J. **5**, 235.)

**Cadmium potassium iodide**, CdI<sub>2</sub>, KI + H<sub>2</sub>O.

Sol. in 0.94 pt. H<sub>2</sub>O at 15°. (Eder, Dingl. **221**, 89.)

CdI<sub>2</sub>, 2KI + 2H<sub>2</sub>O. Deliquescent. Extremely sol. in H<sub>2</sub>O. Sol. at 15° in 0.73 pt. H<sub>2</sub>O. Sl. sol. in alcohol and wood spirit, but less than CdI<sub>2</sub>. (Croft.)

Sol. at 15° in 1.4 pts. absolute alcohol, 24.5 pts. ether (0.729 sp. gr.), and 4.5 pts. alcohol-ether (1 : 1). (Eder, l. c.)

Sp. gr. of K<sub>2</sub>CdI<sub>4</sub> + Aq at 18°.

	20.63	1.0061	

(Wershofen, Z. phys. Ch. 1890, **5**, 493.)

Sol. in ethyl acetate. (Naumann, B. 1904, **37**, 3601.)

**Cadmium sodium iodide**, CdI<sub>2</sub>, 2NaI + 6H<sub>2</sub>O.

Deliquescent. (Croft.)

Sol. at 15° in 0.63 pt. H<sub>2</sub>O, 0.86 pt. abs. alcohol, and 10.1 pts. ether (sp. gr. 0.729). (Eder, Dingl. **221**, 89.)

**Cadmium strontium iodide**, CdI<sub>2</sub>, SrI<sub>2</sub> + 8H<sub>2</sub>O.

Deliquesces in moist, effloresces in dry air; sol. in H<sub>2</sub>O. (Croft.)

**Cadmium iodide ammonia**, CdI<sub>2</sub>, 2NH<sub>3</sub>.

Decomp. by H<sub>2</sub>O. (Rammelsberg.)

CdI<sub>2</sub>, 4NH<sub>3</sub>. (Dawson and McCrae, Chem. Soc. 1900, **77**, 1246.)

CdI<sub>2</sub>, 6NH<sub>3</sub>. Decomp. by H<sub>2</sub>O; sol. in warm, less sol. in cold NH<sub>4</sub>OH + Aq. (Rammelsberg.)

**Cadmium iodide hydrazine**, CdI<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>.

Easily sol. in warm NH<sub>4</sub>OH + Aq. (Franzen, Z. anorg. 1908, **60**, 281.)

**Cadmium iodide hydroxylamine**, CdI<sub>2</sub>, 3NH<sub>2</sub>OH.

Sol. in H<sub>2</sub>O and alcohol. Insol. in ether. (Adams, Am. Ch. J. 1902, **28**, 218.)

**Cadmium iodide selenide**, CdI<sub>2</sub>, 3CdSe.

Easily decomp. (Fonzees-Diacon, C. R. 1900, **131**, 897.)

**Cadmium iodosulphide**, CdI, 2CdS.

Ppt. (Naumann, B. 1904, **37**, 4338.)

**Cadmium suboxide**, Cd<sub>2</sub>O.

Decomp. by H<sub>2</sub>O, acids and NH<sub>4</sub>OH + Aq. (Tanatar, Z. anorg. 1901, **27**, 433.)

Cd<sub>2</sub>O. Properties as cadmous hydroxide. (Morse and Jones.)

**Cadmium oxide**, CdO.

Insol. in H<sub>2</sub>O. Sol. in acids. Sol. in NH<sub>4</sub>OH + Aq. Insol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq. Easily sol. in NH<sub>4</sub>Cl + Aq, less in NH<sub>4</sub>NO<sub>3</sub> + Aq. (Brett, 1837.)

in KOH, NaOH,  $K_2CO_3$ , and  $Na_2CO_3$ .

**Cadmium hydroxide.**

Insol. in (calcium sacrate+sugar)+

aqueous solution containing 418.6 g. sugar and 100 g.  $CdO$  dissolves 0.22 g.  $CdO$ .

Aqueous solution containing 174.4 g. sugar and 100 g.  $CdO$  dissolves 0.48 g.  $CdO$ .

(Odenbender, J. B. 1866. 600.)

Insol. in acetone. (Naumann, B. 1904, 37.)

Insol. in methyl acetate. (Naumann, B. 3790.)

Insol. in ethyl acetate. (Naumann, B. 3601.)

Not a peroxide,  $Cd_2O_2$  or  $Cd_2O_3$ (?).

$Cd(OH)_2$ . (Kouriloff, A. ch. (6) 23.)

Insol. towards  $H_2O$ . Insol. in  $NH_4OH$  (Faas, B. 1884, 17. 2253.)

$Cd(OH)_2$ . Ppt. Insol. in NaOH +  $Km$ , C. C. 1906, I. 1629.)

$CdO+3H_2O$ . Ppt. (Teletow, C. A. )

**Cadmium oxybromide,  $CdO, CdBr_2+H_2O$ .**

Ppt. by  $H_2O$ . (Tassily, C. R. 1897, 1.)

Stable in dry air; insol. in  $H_2O$ . C. R. 1897, 124. 1022.)

Slowly decomp. by  $H_2O$ . (Tassily, 1897, 124. 1022.)

(Mailhe, C. R. 1901, 132. 1561.)

**Cadmium oxychloride,  $CdCl_2, CdO+H_2O$ .**

Insol. in hot  $H_2O$ . (Habermann, M. Ch. )

(Mailhe, Bull. Soc. 1901, (3) 25.)

$CdCl_2$ . Insol. in  $H_2O$ , but slowly thereby. (Canzoneri, Gazz. ch. it. (2) 486.)

**Cadmium oxyiodide,  $CdO, CdI_2+H_2O$ .**

Ppt. by  $H_2O$ . (Tassily, C. R. 1897, 1.)

Stable in dry air; insol. in  $H_2O$ . C. R. 1897, 124. 1022.)

**Cadmium phosphide,  $Cd_3P_2$ .**

Insol. in  $HCl+aq$  with evolution of  $PH_3$ . (Ber.)

Sol. in conc.  $HCl+aq$ . (Emmer-12. 152.)

Decomp. by acids. (Kulisch, A. 231.)

Decomp. by boiling conc.  $HCl+aq$ . C. R. 76. 283.)

**Cadmium selenide,  $CdSe$ .**

Insol. in  $HCl+aq$ . (Uelsmann, A. 116. 122.)

Decomp. by acids. (Fonzes-Diacon, 00, 131. 897.)

**Cadmium sulphide,  $CdS$ .**

Insol. in  $H_2O$ .

Solubility in  $H_2O$  at  $16-18^\circ = 6.6 \times 10^{-4}$  mols. per l. (Biltz, Z. phys. Ch. 1907, 58. 291.)

1 l.  $H_2O$  dissolves  $9.00 \times 10^{-4}$  mols.  $CdS$  (artificial greenockite) at  $18^\circ$ .

1 l.  $H_2O$  dissolves  $8.86 \times 10^{-4}$  mols. pptd.  $CdS$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Difficultly sol. in hot dil.  $HCl+aq$ . Easily sol. in cold conc.  $HCl+aq$ . (Stromeyer.) Sol. in  $HNO_3+aq$  (Meissner), and at boiling dil.  $H_2SO_4+aq$  (1:6). (A. W. Hoffmann, A. 115. 286.) Very sl. sol. in  $NH_4OH+aq$ . (Wackenroder, Repert. 46. 226.) Insol. in  $KOH$ , or  $(NH_4)_2S+aq$ . Appreciably sol. in an acid solution of  $NH_4Cl$ . (Baxter and Hines, Z. anorg. 1905, 44. 160.)

Much more sol. in  $(NH_4)_2S+aq$  than usually supposed. (Ditte, C. R. 85. 402.) Solubility increases by warming, and at  $68^\circ$  is twice that at ordinary temperatures. A sat. solution of  $(NH_4)_2S$  dissolves about 2 g.  $CdS$  to a litre. Alkali sulphides dissolve much less. (Ditte.)

Fresenius (Z. anal. 20. 236) could not confirm the above. According to Fresenius,  $CdS$  is not appreciably sol. in  $(NH_4)_2S+aq$ .

Insol. in  $Na_2SO_3$  or  $KCN+aq$ . (Fresenius.)

Insol. in  $NH_4Cl$  or  $NH_4NO_3+aq$ . (Brett.)

Sol. in alkali sulpho-molybdates, -tungstates, -vanadates, -arsenates, -antimonates, -stannates+aq. (Storch, B. 16. 2015.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Min. *Greenockite*. Sol. in  $HCl+aq$ .

*Colloidal*.—Solution of 4 g. colloidal  $C$  in a litre  $H_2O$  remains transparent several days. If it contains 11 g.  $CdS$  in a litre, it is completely coagulated in 24 hours. Solutions of salts of the following concentration cause an immediate coagulation in an aqueous solution of  $CdS$  containing 3.62 g. in a litre.

(Prost, Belg. Acad. Bull. (3) 14. 312; J. B. 1887. 537.)

**Cadmium pentasulphide,  $\text{CdS}_5$ .**  
 Insol. in  $\text{H}_2\text{O}$ . (Schiff, A. 115. 74.)  
 Mixture of  $\text{CdS}$  and  $\text{S}$ . (Follenius, Z. anal. 13. 412.)

**Cadmium potassium sulphide,  $\text{K}_2\text{Cd}_2\text{S}_4$ .**  
 (Milbauer, Z. anorg. 1904, 42. 439.)

**Cadmium sodium sulphide,  $3\text{CdS}, \text{Na}_2\text{S}$ .**  
 Decomp. by  $\text{H}_2\text{O}$ . (Schneider, J. pr. (2) 8. 29.)

**Cadmium sulphoiodide.**  
 See Cadmium iodosulphide.

**Cadmium telluride,  $\text{CdTe}$ .**  
 Not attacked by dil. acids. Attacked in the cold only by  $\text{HNO}_3$ . (Tibbals, J. Am. Chem. Soc. 1909, 31. 908.)

**Cadmic acid.**

**Potassium cadmate.**  
 Insol. in  $\text{H}_2\text{O}$ , but gradually decomp. when in contact therewith. (Meunier, C. R. 63. 330.)

**Cæsium, Cs.**  
 Decomp.  $\text{H}_2\text{O}$  with great violence. (Setterberg, A. 211. 100.)  
 Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

**Cæsium acetylide acetylene,  $\text{Cs}_2\text{C}_2, \text{C}_2\text{H}_2$ .**  
 Insol. in  $\text{C}_2\text{H}_4$  and in  $\text{CHCl}_3$ . (Moissan, C. R. 1903, 136. 1218.)

**Cæsium amide,  $\text{CsNH}_2$ .**  
 Decomp. by  $\text{H}_2\text{O}$ . Very sol. in liquid  $\text{NH}_3$ . (Rengade, C. R. 1905, 140. 1185.)

**Cæsium ammonia,  $\text{Cs}, \text{NH}_3$ .**

Sol. in liquid  $\text{NH}_3$ . (Moissan, C. R. 1903, 136. 1177.)

**Cæsium azoimide,  $\text{CsN}_3$ .**

Deliquescent. Stable in aq. solution.  
 224.2 pts. sol. in 100 pts.  $\text{H}_2\text{O}$  at  $0^\circ$   
 307.4 " " " 100 "  $\text{H}_2\text{O}$  "  $16^\circ$   
 1.0366 " " " 100 " abs. alcohol "  $16^\circ$   
 Insol. in pure ether. (Curtius, J. pr. 1898, (2) 58. 283.)

**Cæsium bromide,  $\text{CsBr}$ .**

Ppt. (Chabrié, C. R. 1901, 132. 679.)  
 Sat.  $\text{CsBr} + \text{Aq}$  at  $25^\circ$  contains 55.23%  
 $\text{CsBr}$ . (Foote, Am. Ch. J. 1907, 37. 125.)

**Cæsium tribromide,  $\text{CsBr}_3$ .**

Sol. in  $\text{H}_2\text{O}$ ; decomp. by alcohols. (Wells, Sill. Am. J. 143. 17.)

**Cæsium pentabromide,  $\text{CsBr}_5$ .**

Very unstable. (Wells and Wheeler, Sill. Am. J. 144. 42.)

**Cæsium cobalt bromide,  $\text{Cs}_2\text{CoBr}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Campbell, Z. anorg. 1894, 8. 126.)

Decomp. by  $\text{H}_2\text{O}$  and by alcohol. (Campbell, Am. J. Sci. 1894, (3) 48. 418.)

$\text{Cs}_2\text{CoBr}_4$ . Decomp. by  $\text{H}_2\text{O}$ . (Campbell, Z. anorg. 1894, 8. 126.)

Decomp. by  $\text{H}_2\text{O}$  and by alcohol. (Campbell, Am. J. Sci. 1894, (3) 48. 418.)

**Cæsium copper bromide,  $\text{CsBr}, \text{CuBr}_2$ .**

Sol. in  $\text{H}_2\text{O}$  without decomp. (Wells and Walden, Z. anorg. 5. 304.)

2  $\text{CsBr}, \text{CuBr}_2$ . (W. and W.)

**Cæsium iridium bromide.**

See Bromiridate, cæsium.

**Cæsium iron (ferric) bromide,  $\text{CsFeBr}_4$ .**

Sol. in  $\text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 7. 332.)

$\text{Cs}_2\text{FeBr}_4 + \text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 7. 332.)

**Cæsium lead bromide,  $\text{CsBr}, 2\text{PbBr}_2$ .**

Nearly stable in aqueous solution. (Walden, Sill. Am. J. 145. 127.)

$\text{CsBr}, \text{PbBr}_2$ . Decomp. by  $\text{H}_2\text{O}$ . (Walden.)

4  $\text{CsBr}, \text{PbBr}_2$ . As above.

Solubility determinations show that the double salts formed by cæsium and lead bromides at  $25^\circ$  are  $\text{CsPb}_2\text{Br}_4$ ,  $\text{CsPbBr}_3$  and  $\text{Cs}_2\text{PbBr}_4$ . (Foote, Am. Ch. J. 1907, 37. 125.)

**Cæsium magnesium bromide,  $\text{CsBr}, \text{MgBr}_2 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Wheeler and Campbell, Z. anorg. 5. 275.)

**Cæsium mercuric bromide,  $\text{CsBr}, 2\text{HgBr}_2$ .**

Not decomp. by  $\text{H}_2\text{O}$ . 100 pts. solution sat. at  $16^\circ$  contain 0.807 pt.  $\text{CsBr}, 2\text{HgBr}_2$ . Sol. in hot strong alcohol, from which  $\text{CsBr}, \text{HgBr}_2$  separates on cooling. (Wells, Sill. Am. J. 144. 221.)

$\text{CsBr}, \text{HgBr}_2$ . Decomp. by  $\text{H}_2\text{O}$  into above sat. Sol. in alcohol without decomp. (Wells.)  $2\text{CsBr}, \text{HgBr}_2$ . Decomp. by  $\text{H}_2\text{O}$  into  $\text{CsBr}, 2\text{HgBr}_2$ .

$3\text{CsBr}, \text{HgBr}_2$ . As above.

**Cæsium molybdenyl bromide,  $2\text{CsBr}, \text{MoOBr}_2$ .**

(Weinland and Knöll, Z. anorg. 1905, 44. 107.)

**Cæsium nickel bromide,  $\text{CsNiBr}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Campbell, Z. anorg. 1894, 8. 126.)

Decomp. by  $\text{H}_2\text{O}$  and by alcohol. (Campbell, Am. J. Sci. 1894, (3) 48. 418.)

**Cæsium osmium bromide.**

See Bromosmate, cæsium.

**Cæsium palladium bromide.**

See Bromopalladate, cæsium and bromopalladite, cæsium.

**Cæsium platinum bromide.**

See Bromoplatinate, cæsium.

**Cæsium ruthenium bromide.**

See Bromoruthenite, cæsium.

**Cæsium selenium bromide.**

See Bromoselenate, cæsium.

**Cæsium tellurium bromide.**

See Bromotellurate, cæsium.

**Cæsium thallic bromide,  $\text{CsBr}, \text{TlBr}_2$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp. (Pratt, Z. anorg. 1895, 9. 19.)

By recryst. from  $\text{H}_2\text{O}$ , forms  $3\text{CsBr}, 2\text{TlBr}_2$ . (Pratt, Am. J. Sci. 1895, (3) 49. 403.)

$3\text{CsBr}, 2\text{TlBr}_2$ . Can be recryst. unchanged from  $\text{H}_2\text{O}$ . (Pratt, Am. J. Sci. 1895, (3) 49. 402.)

**Cæsium tin (stannic) bromide.**

See Bromostannate, cæsium.

**Cæsium zinc bromide,  $3\text{CsBr}, \text{ZnBr}_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Wells and Campbell, Z. anorg. 5. 275.)

$2\text{CsBr}, \text{ZnBr}_2$ . As above.

**Cæsium bromide columbium oxybromide,  $2\text{CsBr}, \text{CbOBr}_2$ .**

Unstable in moist air. Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1906, 39. 3059.)

**Cæsium bromochloride,  $\text{CsBr}_2\text{Cl}$ .**

Properties\* as  $\text{CsBr}_2$ . (Wells.)

$\text{CsBrCl}_2$ . As above. (Wells.)

**Cæsium mercuric bromochloride,  $\text{Cs}_2\text{HgCl}_2\text{Br}_2$ .**

Decomp. by  $\text{H}_2\text{O}$  finally to  $\text{HgBr}_2$ . (Wells, Sill. Am. J. 144. 121.)

$\text{Cs}_2\text{HgCl}_2\text{Br}_2$ . As above.

$\text{CsHgClBr}_2$ . As above.

$\text{CsHg}_2\text{ClBr}_4$ . As above.

$\text{CsHg}_3\text{ClBr}_{10}$ . As above.

**Cæsium bromochloriodide,  $\text{CsBrClI}$ .**

More sol. in  $\text{H}_2\text{O}$  than in alcohol. Not decomp. at once by ether. (Wells.)

**Cæsium bromiodide,  $\text{CsBrI}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol. Decomp. by ether with residue of  $\text{CsBr}$ . (Wells, Sill. Am. J. 143. 17.)

$\text{CsBr}_2\text{I}$ . More sol. in  $\text{H}_2\text{O}$  than in alcohol. Not decomp. by ether.

$\text{CsBr}_2\text{I} + \text{Aq}$  sat. at  $20^\circ$  contains about 4.45%  $\text{CsBr}_2\text{I}$ . (Wells.)

**Cæsium carbide,  $\text{Cs}_2\text{C}_2$ .**

Decomp. by cold  $\text{H}_2\text{O}$ . (Moissan, C. R. 1903, 136. 1221.)

**Cæsium chloride,  $\text{CsCl}$ .**

Very deliquescent; sol. in  $\text{H}_2\text{O}$  and alcohol.

Solubility of  $\text{CsCl}$  at  $t^\circ$ .

$t^\circ$	Pts. by wt. of $\text{CsCl}$ in 100 pts. solution
0.3	61.9
10	63.5
20	64.9
30	66.3
40	67.4

(Hinrichsen, Z. phys. Ch. 1904, 50. 99.)

Solubility of  $\text{CsCl}$  at  $t^\circ$ .

(Foote and Haigh, J. Am. Ch. Soc. 1911, 33. 461.)

Insol. in methyl acetate. (Naumann, 1909, 42. 3790.)

Solubility in glycol at ord. temp. 10.8%. (de Coninck, Belg. Acad. Bul 359.)

Insol. in anhydrous pyridine and pyridine+Aq. Sl. sol. in 95% pyridine and in 93% pyridine+Aq. (Kahlen, Am. Chem. Soc. 1908, 30. 1107.)

Cæsium chromium chloride, 2CsCl, H<sub>2</sub>O.Stable in the air. Sol. in H<sub>2</sub>O. (V anorg. 1895, 10. 182.)  
2CsCl, CrCl<sub>3</sub>+4H<sub>2</sub>O; hygroscopic; v in H<sub>2</sub>O. (Wells, l. c.)Cæsium tetra-aquochromium chloride CrCl<sub>3</sub>(OH<sub>2</sub>)<sub>4</sub>Cl, 2CsCl.

Ppt. (Werner, B. 1901, 34. 1602.)

Cæsium cobalt chloride, CsCoCl<sub>3</sub>+2H<sub>2</sub>O.Decomp. by H<sub>2</sub>O and alcohol. (Cs Z. anorg. 1894, 8. 126.)  
Cs<sub>2</sub>CoCl<sub>4</sub>. Decomp. by H<sub>2</sub>O and alcohol. (Campbell, Z. anorg. 1894, 8. 126.)  
Cs<sub>2</sub>CoCl<sub>4</sub>. Decomp. by H<sub>2</sub>O and alcohol. (Campbell, Z. anorg. 1894, 8. 126.)Cæsium cuprous chloride, CsCl, Cu<sub>2</sub>Cl<sub>2</sub>.Decomp. by H<sub>2</sub>O into CuCl<sub>2</sub>, CsCl. Z. anorg. 5. 306.)  
3CsCl, Cu<sub>2</sub>Cl<sub>2</sub>. (Wells.)  
6CsCl, Cu<sub>2</sub>Cl<sub>2</sub>. (Wells.)Cæsium cupric chloride, 2CsCl, CuCl<sub>2</sub>.Easily sol. in H<sub>2</sub>O and dil. HCl. Insol. in conc. HCl+Aq. (Godeff 8. 9.)

Sol. in small amount  $H_2O$  without decomp. (Wells and Dupee, Z. anorg. 5. 300.)  
 $+2H_2O$ . Efflorescent. (W. and D.)

$3CsCl, 2CuCl_2 + 2H_2O$ .

$CsCl, CuCl_2$ . Sol. in  $H_2O$  without decomp. (W. and D.)

**Cæsium gold chloride.**

See Chloraurate, cæsium.

**Cæsium iridium tetrachloride.**

See Chloriridate, cæsium.

**Cæsium iron (ferric) chloride,  $CsFeCl_4 + \frac{1}{2}H_2O$ .**

Sol. in  $H_2O$ . Decomp. in the air. (Walden, Z. anorg. 1894, 7. 332.)

$Cs_2FeCl_6 + H_2O$ . Sol. in  $H_2O$ . (Walden.)

$Cs_2FeCl_6 + H_2O$ . Sol. in  $H_2O$ . (Walden.)

**Cæsium lanthanum chloride,  $Cs_2LaCl_6 + 4H_2O$ .**

Very hygroscopic. Easily sol. in  $H_2O$ . (R. J. Meyer, Z. anorg. 1914, 86. 273.)

**Cæsium lead chloride,  $CsCl, 2PbCl_2$ .**

Nearly stable in aqueous solution. (Campbell, Sill. Am. J. 145. 126.)

$CsCl, PbCl_2$ . Decomp. by  $H_2O$ . (Campbell.)

$4CsCl, PbCl_2$ . As above. (Campbell.)

**Cæsium lead tetrachloride.**

See Chloroplumbate, cæsium.

**Cæsium magnesium chloride,  $CsCl, MgCl_2 + 6H_2O$ .**

Sol. in  $H_2O$ . (Wells and Campbell, Z. anorg. 5. 275.)

**Cæsium manganous chloride,  $CsCl, MnCl_2 + 2H_2O$ .**

Not deliquescent; sol. in  $H_2O$ . (Saunders, Am. Ch. J. 14. 143.)

$2CsCl, MnCl_2$ . (Godeffroy.)

$+2\frac{1}{2}H_2O$ . (Godeffroy.)

$+3H_2O$ . Sol. in  $H_2O$ . Conc.  $HCl + Aq$  precipitates anhydrous salt from aqueous solution. (Godeffroy, B. 8. 9.)

The only salt which exists contains  $2H_2O$ . (Saunders, Am. Ch. J. 14. 143.)

**Cæsium manganic chloride,  $2CsCl, MnCl_3$ .**

Easily decomp. (Meyer and Best, Z. anorg. 1899, 22. 187.)

**Cæsium mercuric chloride,  $CsCl, HgCl_2$ .**

100 pts. solution sat. at  $17^\circ$  contain 1.406 pts.  $CsHgCl_3$ . Not decomp. by  $H_2O$ . Insol. in absolute alcohol, but sol. on diluting with  $\frac{1}{2}$  vol.  $H_2O$ . (Wells, Sill. Am. J. 144. 221.)  
 $2CsCl, HgCl_2$ . Easily sol. in  $H_2O$  and dil.  $HCl + Aq$ ; insol. in conc.  $HCl + Aq$ . (Godeffroy.)

$3CsCl, HgCl_2$ . Decomp. by  $H_2O$ ; on re-crystallizing from  $H_2O$ ,  $CsCl, HgCl_2$  is finally formed. (Wells, Sill. Am. J. 144. 221.)

$CsCl, 5HgCl_2$ . Decomp. by  $H_2O$ . (Wells.)

Solubility determinations show that the only double salts of  $CsCl$  and  $HgCl_2$  which exist at  $25^\circ$  are  $Cs_2HgCl_5$ ,  $Cs_2HgCl_4$ ,  $CsHgCl_3$ ,  $CsHg_2Cl_4$ ,  $CsHg_3Cl_{11}$ . (Foote, Am. Ch. J. 1903, 30. 340.)

**Cæsium molybdenum chloride,  $Cs_2MoCl_6 + H_2C$ .**

Sol. in  $H_2O$ . Nearly insol. in alcohol and ether. (Chilesotti, C. C. 1903, II. 652.)

**Cæsium molybdenyl chloride,  $CsCl, MoO_2Cl_2 + H_2O$ .**

Hygroscopic. Decomp. by  $H_2O$ . (Weinland and Knöll, Z. anorg. 1905, 44. 93.)

$2CsCl, MoO_2Cl_2$ . Hygroscopic. Decomp. by  $H_2O$ . (Weinland and Knöll, Z. anorg. 1905, 44. 92.)

$2CsCl, 6MoO_2Cl_2 + 22H_2O$ . Very hygroscopic. Decomp. by  $H_2O$ . (Weinland and Knöll, Z. anorg. 1905, 44. 94.)

$2CsCl, MoOCl_3$ . Only sl. sol. in  $H_2O$ . (Nordenskjöld, B. 1901, 34. 1573.)

**Cæsium neodymium chloride,  $Cs_2NdCl_6 + 5H_2O$ .**

Very hygroscopic. Easily sol. in  $H_2O$ . (R. J. Meyer, Z. anorg. 1914, 86. 273.)

**Cæsium nickel chloride,  $2CsCl, NiCl_2$ .**

As the corresponding Cu salt.

$CsNiCl_3$ . Decomp. by  $H_2O$  and by alcohol. (Campbell, Am. J. Sci. 1894, (3) 48. 418.)

**Cæsium palladium dichloride.**

See Chloropalladite, cæsium.

**Cæsium palladium tetrachloride.**

See Chloropalladate, cæsium.

**Cæsium praseodymium chloride,  $Cs_2PrCl_6 + 5H_2O$ .**

Very hygroscopic. Easily sol. in  $H_2O$ . (R. J. Meyer, Z. anorg. 1914, 86. 273.)

**Cæsium rhodium chloride.**

See Chlororhodite, cæsium.

**Cæsium ruthenium chloride.**

See Chlororuthenite, cæsium and chlororuthenate, cæsium.

**Cæsium oxyruthenium chloride,  $Cs_2RuO_2Cl_4$ .**

Ppt.; decomp. by  $H_2O$ ; sol. in cold  $HCl$ . (Howe, J. Am. Chem. Soc. 1901, 23. 779.)

**Cæsium samarium chloride,  $Cs_2SmCl_6 + 5H_2O$ .**

Very hygroscopic. Easily sol. in  $H_2O$ . (R. J. Meyer, Z. anorg. 1914, 86. 273.)

**Cæsium silver chloride,  $2\text{CsCl}$ ,  $\text{AgCl}$ .**

Easily decomp. by  $\text{H}_2\text{O}$ . (Wells and Wheeler, Sill. Am. J. **144**. 155.)

**Cæsium tellurium chloride.**

See Chlorotellurate, cæsium.

**Cæsium thallic chloride,  $2\text{CsCl}$ ,  $\text{TiCl}_3$ .**

By recryst. from  $\text{H}_2\text{O}$  forms  $3\text{CsCl}$ ,  $2\text{TiCl}_3$ . (Pratt, Am. J. Sci. 1895, (3) **49**. 398.)

+  $\text{H}_2\text{O}$ . Readily sol. in hot  $\text{H}_2\text{O}$  but  $3\text{CsCl}$ ,  $2\text{TiCl}_3$  cryst. from the solution. (Pratt, Am. J. Sci. 1895, (3) **49**. 399.)

$3\text{CsCl}$ ,  $2\text{TiCl}_3$ . Can be recryst. from  $\text{H}_2\text{O}$  without change. (Pratt, Am. J. Sci. 1895, (3) **49**. 401.)

$3\text{CsCl}$ ,  $\text{TiCl}_3 + 2\text{H}_2\text{O}$ . Sol. in 36.4 pts.  $\text{H}_2\text{O}$  at  $17^\circ$  and 3 pts. at  $100^\circ$ . (Godeffroy, Zeitsch. d. allgem. österr. Apothekerv. **1880**. No. 9.)

**Cæsium tin (stannic) chloride.**

See Chlorostannate, cæsium.

**Cæsium titanium chloride,  $\text{TiCl}_3$ ,  $2\text{CsCl} + \text{H}_2\text{O}$ .**

Difficultly sol. in  $\text{H}_2\text{O}$ . (Stähler, B. 1904, **37**. 4409.)

**Cæsium tungsten chloride,  $\text{Cs}_2\text{W}_2\text{Cl}_4$ .**

Nearly insol. in cold  $\text{H}_2\text{O}$ .

Sol. in a hot mixture of equal pts.  $\text{H}_2\text{O}$  and conc.  $\text{HCl}$ .

Nearly insol. in conc.  $\text{HCl}$ .

Sol. in very dil.  $\text{NaOH} + \text{Aq}$ .

Nearly insol. in most organic solvents. (Olsson, B. 1913, **46**. 574.)

**Cæsium uranous chloride,  $\text{Cs}_2\text{UCl}_6$ .**

As K salt. (Aloy, Bull. Soc. 1899, (3) **21**. 264.)

**Cæsium uranyl chloride,  $2\text{CsCl}$ ,  $(\text{UO}_2)\text{Cl}_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Wells, Z. anorg. 1895, **10**. 183.)

100 pts. of the solution contain at  $29.75^\circ$ , 56.07 pts.  $\text{UO}_2\text{Cl}_2$ ,  $2\text{CsCl}$ . (Rimbach, B. 1904, **37**. 468.)

Pptd. from aq. solution by gaseous  $\text{HCl}$ . (Wells, Am. J. Sci. 1894, (3) **50**. 251.)

**Cæsium vanadium chloride,  $\text{Cs}_2\text{VdCl}_5 + \text{H}_2\text{O}$ .**

Difficultly sol. in  $\text{H}_2\text{O}$  and alcohol. (Stähler, B. 1904, **37**. 4412.)

**Cæsium zinc chloride,  $3\text{CsCl}$ ,  $\text{ZnCl}_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Wells and Campbell, Z. anorg. **5**. 275.)

$2\text{CsCl}$ ,  $\text{ZnCl}_2$ . Easily sol. in  $\text{H}_2\text{O}$  and dil.  $\text{HCl} + \text{Aq}$ . Insol. in conc.  $\text{HCl} + \text{Aq}$ . (Godeffroy.)

**Cæsium chloride chromic oxychloride,  $2\text{CsCl}$ ,  $\text{CrOCl}_2$ .**

Decomp. in the air.

Sol. in conc.  $\text{HCl}$  without decomp. (Weinland, B. 1906, **39**. 4045.)

**Cæsium chloride columbium oxychloride,  $2\text{CsCl}$ ,  $\text{CbOCl}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1906, **39**. 3057.)

**Cæsium chloroiodide,  $\text{CsCl}_2\text{I}$ .**

Properties as  $\text{CsBrCl}_2$ . (Wells.)

$\text{CsCl}_2\text{I}$ . Sl. sol. in  $\text{H}_2\text{O}$ , from which it can be recrystallized without decomp. (Wells and Wheeler.)

**Cæsium mercuric chloroiodide,  $\text{Cs}_2\text{HgCl}_2\text{I}_2$ .**

Decomp. instantly by  $\text{H}_2\text{O}$  to  $\text{HgI}_2$ . (Wells.)

**Cæsium fluoride,  $\text{CsF}$ .**

Ppt. (Chabrié, C. R. 1901, **132**. 680.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . 100 g.  $\text{H}_2\text{O}$  dissolve 366.5 g  $\text{CsF}$  at  $15^\circ$ . (de Forcrand, C. R. 1911, **152**. 1210.)

**Cæsium hydrogen fluoride,  $\text{CsHF}_2$ .**

Ppt. (Chabrié, C. R. 1901, **132**. 680.)

**Cæsium tantalum fluoride.**

See Fluotantalate, cæsium.

**Cæsium tellurium fluoride,  $\text{CsF}$ ,  $\text{TeF}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Wells, Am. J. Sci. 1901, (4) **12**. 190.)

**Cæsium titanium fluoride.**

See Fluotitanate, cæsium.

**Cæsium zirconium fluoride.**

See Fluozirconate, cæsium.

**Cæsium hydride,  $\text{CsH}$ .**

Decomp. by  $\text{H}_2\text{O}$  with evolution of  $\text{H}_2$ . (Moissan, C. R. 1903, **136**. 589.)

**Cæsium hydroxide,  $\text{CsOH}$ .**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . Sol. in alcohol.

79.41%  $\text{CsOH}$  is contained in a sat. aq. solution at  $15^\circ$ . (de Forcrand, C. R. 1909, **148**. 1344.)

75.08%  $\text{CsOH}$  is contained in sat. aq. solution at  $30^\circ$ . (Schreinemakers, C. C. **1909**, I. 11.)

**Cæsium iodide,  $\text{CsI}$ .**

Sol. in  $\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 44 pts.  $\text{CsI}$  at  $0^\circ$ ; 66.3 pts. at  $14.5^\circ$ ; 160 pts. at  $61^\circ$ .

Sp. gr. of  $\text{CsI} + \text{Aq}$  sat. at  $14^\circ = 1.393$ . (Betekoff, Bull. Soc. Pétersb. (4) **2**. 197.)

**periodide.**

Solubility determinations show that  $\text{CsI}_2$  and  $\text{CsI}_3$  are the only periodides of caesium existing between  $-4^\circ$  and  $+73^\circ$ . (Foote, *Am. J.* 1903, **29**, 203.)

**triiodide,  $\text{CsI}_3$ .**

Sat. sol.  $\text{CsI} + \text{Aq}$  dissolves 0.0097 g. and sp. gr. of solution is 1.154. Only slightly sol. by solution in  $\text{H}_2\text{O}$ . Much more sol. in alcohol than in  $\text{H}_2\text{O}$ . Not immediately sol. by ether. (Wells, *Sill. Am. J.* **143**.)

**pentaiodide,  $\text{CsI}_5$ .****cobalt iodide,  $\text{Cs}_2\text{CoI}_4$ .**

Mp. by  $\text{H}_2\text{O}$ . (Campbell, *Z. anorg. Chem.* **12**.)  
Decomposes; decomp. by  $\text{H}_2\text{O}$  and by  $\text{H}_2$ . (Campbell, *Am. J. Sci.* 1894, (3) **12**.)

**lead iodide,  $\text{CsPbI}_2$ .**

Sol. in hot  $\text{CsI} + \text{Aq}$ . (Wheeler, *Sill. Am. J.* **129**.)

**mercuric iodide,  $\text{CsI}, 2\text{HgI}_2$ .**

Mp. by  $\text{H}_2\text{O}$  finally into  $\text{HgI}_2$ . (Wells, *Am. J.* **144**, 221.)  
 $3\text{HgI}_2$ . Decomp. by  $\text{H}_2\text{O}$  finally into

$\text{HgI}_2$ . As above.

$\text{HgI}_2$ . Decomp. by  $\text{H}_2\text{O}$ ; insol. in

$\text{HgI}_2$ . As above.

**silver iodide,  $\text{CsI}, \text{AgI}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Z. anorg. **1**, 100.)  
 $2\text{AgI}$ . More sol. in hot than in cold. (Marsh, *Chem. Soc.* 1913, **103**.)

**tellurium iodide.****iodotellurate, caesium.****thallous iodide,  $\text{CsI}, \text{TlI}_2$ .**

Mp. by  $\text{H}_2\text{O}$ . (Pratt, *Am. J. Sci.* **49**, 403.)

**zinc iodide,  $3\text{CsI}, \text{ZnI}_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Wells and Campbell, *Z. anorg. Chem.* **12**, 775.)

$\text{ZnI}_2$ . As above.

**oxide,  $\text{Cs}_2\text{O}$ .**

Decomposed by  $\text{H}_2\text{O}$  and  $\text{CO}_2$  from the air. Sol. by  $\text{H}_2\text{O}$  and by liquid  $\text{NH}_3$ . (Rengade, *C. R.* 1906, **143**, 593.)

**dioxide,  $\text{Cs}_2\text{O}_2$ .**

Mp. by  $\text{H}_2\text{O}$ . (Rengade, *C. R.* 1905, **7**.)

**Caesium trioxide,  $\text{Cs}_2\text{O}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Rengade, *C. R.* 1905, **140**, 1537.)

**Caesium tetroxide,  $\text{Cs}_2\text{O}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Rengade, *C. R.* 1905, **140**, 1538.)

**Caesium sulphide,  $\text{Cs}_2\text{S} + 4\text{H}_2\text{O}$ .**

Deliquescent; very sol. in  $\text{H}_2\text{O}$ . (Biltz, *Z. anorg.* 1906, **48**, 300.)

**Caesium disulphide,  $\text{Cs}_2\text{S}_2$ .**

Anhydrous. Sol. in  $\text{H}_2\text{O}$ . Hydroscopic. (Biltz, *Z. anorg.* 1906, **50**, 72.)  
 $+ \text{H}_2\text{O}$ . From  $\text{Cs}_2\text{S}_2 + \text{Aq}$ . Hydroscopic. (Biltz, *Z. anorg.* 1906, **50**, 72.)

**Caesium trisulphide,  $\text{Cs}_2\text{S}_3$ .**

Anhydrous. Sol. in  $\text{H}_2\text{O}$ . Not hydroscopic. (Biltz, *Z. anorg.* 1906, **50**, 75.)  
 $+ \text{H}_2\text{O}$ . From  $\text{Cs}_2\text{S}_3 + \text{Aq}$ . (Biltz, *Z. anorg.* 1906, **50**, 76.)

**Caesium tetrasulphide,  $\text{Cs}_2\text{S}_4$ .**

Sol. in  $\text{H}_2\text{O}$ . Insol. in abs. alcohol. (Biltz, *Z. anorg.* 1906, **48**, 305.)

**Caesium pentasulphide,  $\text{Cs}_2\text{S}_5$ .**

Mpt.  $2^\circ$ . Not hydroscopic. Very sol. in cold 70% alcohol. (Biltz, *B.* 1905, **38**, 129.)

**Caesium hydrogen sulphide,  $\text{CsHS}$ .**

Deliquescent; very sol. in  $\text{H}_2\text{O}$ . (Biltz, *Z. anorg.* 1906, **48**, 300.)

**Caesium copper tetrasulphide,  $\text{CsCuS}_4$ .**

Sl. sol. in cold  $\text{H}_2\text{O}$ .  
Decomp. by conc. and dil.  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$ .  
Sl. sol. in alcohol. (Biltz, *B.* 1907, **40**, 978.)

**Calcium, Ca.**

Decomp.  $\text{H}_2\text{O}$  violently. Slowly attacked by cold  $\text{H}_2\text{SO}_4$ . Dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  or  $\text{HCl} + \text{Aq}$  attack violently and dissolve. Dil.  $\text{HNO}_3 + \text{Aq}$  oxidizes, but fuming  $\text{HNO}_3$  scarcely attacks even on boiling. (Bunsen and Matthiessen.) Not attacked by anhydrous alcohol. (Lies-Bodart and Jobin, *A. ch.* (3) **54**, 364.)

Pure Ca is only very slowly decomp. by  $\text{H}_2\text{O}$  at ordinary temp.; sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ . (Moissan, *C. R.* 1898, **129**, 589.)  
Insol. in liquid  $\text{NH}_3$ . (Gore, *Am. Ch. J.* 1898, **20**, 827.)

$\frac{1}{2}$  ccm. oleic acid dissolves 0.0334 g. Ca in 6 days. (Gates, *J. phys. Chem.* 1911, **15**, 143.)

**Calcium amalgam,  $\text{Ca}_2\text{Hg}$ .**

Decomp.  $\text{H}_2\text{O}$  readily. (Féré, *C. R.* 1898, **127**, 619.)

$\text{CaHg}$ . Rapidly decomp. in moist air. (Schürger, *Z. anorg.* 1900, **25**, 425.)

**Calcium amide,  $\text{Ca}(\text{NH}_2)_2$ .**

(Moissan, A. ch. 1899, (7) 18. 326.)

**Calcium ammonia,  $\text{Ca}, 4\text{NH}_3$ .**Decomp. at ordinary temp.; takes fire in contact with the air; sl. sol. in liquid  $\text{NH}_3$ . (Moissan, C. R. 1898, 127. 691.) $\text{Ca}, 6\text{NH}_3$ . (Kraus, J. Am. Chem. Soc. 1908, 30. 665.)**Calcium arsenide,  $\text{Ca}_2\text{As}_2$ .**Decomp. by cold  $\text{H}_2\text{O}$ ; insol. in cold fuming  $\text{HNO}_3$ ; very sol. in hot  $\text{HNO}_3$ . (Lebeau, C. R. 1899, 128. 98.)**Calcium azoimide,  $\text{Ca}(\text{N}_2)_2$ .**

Hydroscopic; explosive.

38.1	pts. sol. in 100 pts.	$\text{H}_2\text{O}$	at 0°
45.0	" " " 100 "	$\text{H}_2\text{O}$	" 15.2
0.211	" " " 100. "	abs. alcohol	" 16.

Sol. in  $\text{H}_2\text{O}$ ; decomp. when heated and on standing in the air. (Dennis, Z. anorg. 1898, 17. 21.)

Insol. in pure ether. (Curtius, J. pr. 1898, (2) 58. 286.)

**Calcium boride,  $\text{CaB}_2$ .**Not decomp. by  $\text{H}_2\text{O}$  at 250°; sol. in fused oxidizing agents.Insol. in aq. acids; sl. sol. in conc.  $\text{H}_2\text{SO}_4$ ; sol. in dil. or conc.  $\text{HNO}_3$ . (Moissan, C. R. 1897, 125. 631-32.)**Calcium bromide,  $\text{CaBr}_2$ .**

Very deliquescent. 100 pts. $\text{H}_2\text{O}$ dissolve—				
at 0°	20°	40°	60°	105°
125	143	213	278	312 pts. $\text{CaBr}_2$ .

(Kremers, Pogg. 103. 65.)

Sat.  $\text{CaBr}_2 + \text{Aq}$  contains at:

(Menschutkin, Z. anorg. 1907, 54. 95.)

Insol. in benzonitrile. (Naumann, B. 1914,  
47. 1370.)

Insol. in ethyl acetate. (Naumann, B.  
1910, 43. 314.)

Sl. sol. in anhydrous pyridine.

Sol. in 97%, 95% and 93% pyridine+Aq.  
(Kahlenberg, J. Am. Chem. Soc. 1908, 30.  
1107.)

100 g. sat. solution of CaCl<sub>2</sub> in sat. sugar +  
Aq at 31.25° contain 42.84 g. sugar + 25.25 g.  
CaCl<sub>2</sub>, or 100 g. H<sub>2</sub>O dissolve 135.1 g. sugar  
+ 79.9 g. CaCl<sub>2</sub> at 31.25°. (Köhler, Z. Ver.  
Zuckerind, 1907, 47. 447.)

+H<sub>2</sub>O. (Bakhuis Roozeboom.) See above.

+2H<sub>2</sub>O. (Bakhuis Roozeboom.) See above.

+4H<sub>2</sub>O. Two modifications. (Bakhuis  
Roozeboom.) See above.

α and β modifications (α=stable form.)  
(Kuznetzov, C. A. 1911, 842.)

+6H<sub>2</sub>O. Very deliquescent. Sol. in H<sub>2</sub>O  
with absorption of much heat.

250 pts. CaCl<sub>2</sub>+6H<sub>2</sub>O with 100 pts. H<sub>2</sub>O  
at 10.8° lower the temp. 23.2°. (Rüdrorf, B.  
2. 68.)

Melts in crystal H<sub>2</sub>O at 28° (Tilden, Chem.  
Soc. 45. 409); at 30.2° (Bakhuis Roozeboom.)

Sat. solution in H<sub>2</sub>O contains at:

-22°	-17°	-5°	-5°	+4°
31.5	32.4	35.1	35.2	36.5% salt,
8°	22°	29°	35°	49°
37.9	42.1	46.1	49.0	55.1% salt,
63°	80°	104°	115°	
55.9	57.5	58.5	58.6% salt.	

(Étard, A. ch. 1894, (7) 2. 532.)

Sat. solution of CaCl<sub>2</sub>+6H<sub>2</sub>O contains

44.77 g.  $\text{CaCl}_2$  at  $25^\circ$ . (Schreinemakers and Figue, Chem. Weekbl. 1911, 8. 685.)  
See also above.

Solubility of  $\text{CaCl}_2 \cdot 6\text{H}_2\text{O}$  in ethyl alcohol + Aq under addition of increasing amounts of  $\text{CaCl}_2$ .

Per cent of alcohol by volume	G. $\text{CaCl}_2$ added	Grams $\text{CaCl}_2$ in 5 cc. of solution
92.3		1.430

"	1	1.529
"	2	1.561
"	3	1.590
"	4	1.641
"	5	1.709

(Bödtker, Z. phys. Ch. 1897, 22. 510.)

**Calcium hydroxylamine chloride**,  $\text{CaCl}_2 \cdot 3\text{NH}_2\text{OH} \cdot \text{HCl}$ .

(Antonow, J. Russ. Phys. Chem. Soc. 1905, 37. 479.)

**Calcium iodine trichloride**,  $2\text{ICl}_3 \cdot \text{CaCl}_2 + 8\text{H}_2\text{O}$ .

Hydroscopic. (Weinland, Z. anorg. 1902, 30. 142.)

**Calcium mercuric chloride**,  $\text{CaCl}_2 \cdot 5\text{HgCl}_2 + 8\text{H}_2\text{O}$ .

Decomp. by cold  $\text{H}_2\text{O}$ , which dissolves out  $\text{CaCl}_2$ , but all dissolves on heating. (v. Bonsdorff, 1829.)

$\text{CaCl}_2 \cdot 2\text{HgCl}_2 + 6\text{H}_2\text{O}$ . Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (v. Bonsdorff.)

$\text{CaCl}_2 \cdot 6\text{HgCl}_2 + 6\text{H}_2\text{O}$ . Very deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Strömholm, J. pr. 1902, (2) 66. 521.)

**Calcium lead chloride, basic.**

See Calcium lead oxychloride.

**Calcium magnesium chloride**,  $\text{CaCl}_2 \cdot 2\text{MgCl}_2 + 12\text{H}_2\text{O}$ .

Min. *Tachhydrite*. Deliquescent.

100 pts.  $\text{H}_2\text{O}$  dissolve 160.3 pts. at  $18.75^\circ$ . By dissolving 20 pts. in 80 pts.  $\text{H}_2\text{O}$  the temp. is raised  $7.75^\circ$ . (Bischof.)

**Calcium mercuric chloride, basic**,  $\text{CaCl}_2 \cdot 2\text{HgO} + 4\text{H}_2\text{O}$ .

See Calcium mercuric oxychloride.

**Calcium thallic chloride**,  $2\text{TlCl}_3 \cdot \text{CaCl}_2 + 6\text{H}_2\text{O}$ .

Can be cryst. from  $\text{H}_2\text{O}$ . (Gewecke A. 1909, 366. 222.)

**Calcium tin (stannic) chloride.**

See Chlorostannate, calcium.

**Calcium uranium chloride**,  $\text{CaCl}_2 \cdot \text{UCl}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . (Aloy, Bull. Soc. 1898, (3) 21. 265.)

**Calcium zinc chloride.**

$\text{CaZnCl}_4 + 5\frac{1}{2}\text{H}_2\text{O}$ , and  $\text{Ca}_2\text{ZnCl}_6 + 6\text{H}_2\text{O}$ . Very hygroscopic. (Ephraim, Z. anorg. 1910, 67. 379.)

**Calcium chloride ammonia**,  $\text{CaCl}_2 \cdot 8\text{NH}_3$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Faraday.)

**Calcium chloride hydrazine**,  $\text{CaCl}_2 \cdot 2\text{N}_2\text{H}_4(?)$ .

Ppt. (Franzen, Z. anorg. 1908, 60. 288.)

**Calcium chloride hydroxylamine**,  $\text{CaCl}_2 \cdot \text{NH}_2\text{OH} + 5\text{H}_2\text{O}$ .

Not hygroscopic. (Antonow, J. Russ. Phys. Chem. Soc. 1905, 37. 479.)

$\text{CaCl}_2 \cdot 2\text{NH}_2\text{OH}$ .

+  $\text{H}_2\text{O}$ . Aqueous solution sat. at  $20^\circ$  contains 56.6 pts. salt.

+  $2\text{H}_2\text{O}$ . (Antonow, l. c.)

$2\text{CaCl}_2 \cdot 3\text{NH}_2\text{OH} + 6\text{H}_2\text{O}$ . (Antonow, l. c.)

$2\text{CaCl}_2 \cdot 5\text{NH}_2\text{OH} + 4\text{H}_2\text{O}$ . (Antonow, l. c.)

**Calcium chloride lead oxide**,  $\text{CaCl}_2 \cdot 3\text{PbO} + 3\text{H}_2\text{O}$ .

See Calcium lead oxychloride.

**Calcium chloroferrite**,  $\text{CaO} \cdot \text{CaCl}_2 \cdot \text{Fe}_2\text{O}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (le Chatelier, C. R. 99. 276.)

**Calcium chlorofluoride**,  $\text{CaF}_2 \cdot \text{CaCl}_2$ .

Decomp. by  $\text{H}_2\text{O}$ , by very dil.  $\text{HCl}$ ,  $\text{HNO}_3$ , or acetic acid, by hot dil. or conc.  $\text{H}_2\text{SO}_4$ . Sol. in conc.  $\text{HCl}$  or  $\text{HNO}_3$ . Insol. in, and not decomp. by cold or boiling alcohol. (Defacqz, A. ch. 1904, (8) 1. 355.)

**Calcium cyanamide, basic**,  $\text{CN}_2(\text{CaOH})_2 + 6\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Meyer, J. pr. 1878, (2) 18. 425.)

**Calcium cyanamide**,  $\text{CaCN}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Meyer, J. pr. 1878, (2) 18. 425.)

**Calcium subfluoride**,  $\text{CaF}$ .

Decomp. by  $\text{H}_2\text{O}$ .

Sol. in hot dil.  $\text{HCl}$  and somewhat sol. in dil. acetic acid.

Somewhat sol. in boiling absolute alcohol. (Wöhler, Z. anorg. 1909, 61. 81.)

**Calcium fluoride**,  $\text{CaF}_2$ .

Sol. in 26,923 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$ . (Wilson, Ch. Gaz. 1850, 366.)

1 l.  $\text{H}_2\text{O}$  dissolves 16 mg.  $\text{CaF}_2$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 60. 356.)

16.3 mg. in 1 l. of sat. solution at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

When pptd. not completely insol. in  $H_2O$ ; scarcely sol. in dil., more sol. in conc.  $HCl + Aq$ ; decomp. by conc.  $H_2SO_4$ ; not decomp. by dil. alkaline solutions. (Fresenius.)

Not decomp. by conc.  $H_2SO_4$  below  $40^\circ$ , but forms a transparent syrup.  $CaF_2$  is pptd. from this solution by addition of  $H_2O$ .

Sol. in conc.  $HCl$  and  $HNO_3 + Aq$  in the same way, but the liquid is not viscid. Very sl. sol. in  $HF$ . Boiling  $HCl + Aq$  dissolves slightly. Decomp. by boiling  $HNO_3 + Aq$ .

Sol. in  $NH_4$  salts +  $Aq$ . (Rose.)

Partly decomp. by boiling  $K_2CO_3$ , and  $Na_2CO_3 + Aq$ . (Dulong, A. ch. 82. 278.)

Insol. in liquid  $HF$ . (Franklin, Z. anorg. 1905, 46. 2.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Min. *Fluorite* (*Fluorspar*). Calculated from electrical conductivity of  $CaF_2 + Aq$ , 11.  $H_2O$  dissolves 14 mg.  $CaF_2$  at  $18^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

**Calcium hydrogen fluoride,  $CaH_2F_4 + 6H_2O$ .**

Decomp. by boiling  $H_2O$ . Sol. in  $HF + Aq$ . (Fremy, A. ch. (3) 47. 35.)

**Calcium tantalum fluoride.**

See *Fluotantalate*, calcium.

**Calcium stannic fluoride.**

See *Fluostannate*, calcium.

**Calcium titanium fluoride.**

See *Fluotitanate*, calcium.

**Calcium fluoiodide,  $CaF_2, CaI_2$ .**

Very deliquescent. Decomp. by cold  $H_2O$ , more rapidly by hot  $H_2O$ , by dil.  $HCl$ ,  $HNO_3$ ,  $H_2SO_4$ , conc.  $H_2SO_4$ , and by alcohol and by ether if these reagents are not absolute. (Defacqz, A. ch. 1904, (8) 1. 358.)

**Calcium hydride,  $CaH$ .**

Decomp. by  $HCl + Aq$ . (Winkler, B. 24. 1975. (Moldenhauer, Z. anorg. 1913, 82. 136.)

$CaH_2$ . Readily decomp. by  $H_2O$  and dil. acids, almost insol. in conc. acids. Insol. in benzene, turpentine and alkyl haloids. (Moissan, C. R. 1898, 127. 30-31.)

Decomp.  $H_2O$  and ether; sol. in dil.  $H_2SO_4$  and  $HNO_3$ ; almost insol. in conc.  $H_2SO_4$  and  $HNO_3$ . (von Lengyll, C. C. 1898, II. 262.)

Insol. in  $CCl_4$ ,  $CS_2$ , alcohols and ethers. No known solvent. (Moissan, C. C. 1903, I. 863.)

**Calcium hydrosulphide,  $CaS_2H_2$ .**

Cryst. with  $6H_2O$ . Extremely sol. in  $H_2O$  and alcohol.  $\frac{1}{4}$  of its weight of  $H_2O$  at or-

dinary temp. more than suffices to hold it in solution. (Divers and Shimidzu, Chem. Soc. 45. 271.)

Sp. gr. of aqueous solution containing 32% anhydrous  $CaS_2H_2$  ( $64\% CaS_2H_2 + 6H_2O$ ) = 1.255; 37.5%  $CaS_2H_2$  ( $75.5\% CaS_2H_2 + 6H_2O$ ) = 1.310. (Divers and Shimidzu.)

**Calcium hydroxide,  $CaO, H_2$ .**

See also *Calcium oxide*.

Sl. sol. in cold, and less in hot  $H_2O$ .

ett and Taylor, Chem. Soc. 1914, 105.  
1926.)

solubility of  $\text{CaO}$  in  $\text{KCl}$  and  $\text{NaCl} + \text{Aq.}$   
values are given which show that the solubility of lime in solutions of either  $\text{NaCl}$  or

$\text{KCl}$  is a maximum for all temps. when the solution contains about 60 g. of salt per l. It is a minimum at any fixed temp. when the solution is sat., the solubility then being much less than in pure  $\text{H}_2\text{O}$  of the same temp. A solution of  $\text{NaCl}$  dissolves more lime at all temps. and concentrations than a corresponding solution of  $\text{KCl}$ . In all cases the maximum solubility of lime occurs when the temp. is lowest. With solutions of all concentrations the solubility decreases regularly as the temp. increases. (Cabot, J. Soc. Chem. Ind. 1897, 16. 417-419.)

Solubility in  $\text{KCl} + \text{Aq}$  increases with increased quantities of  $\text{KCl}$  and then diminishes, becoming less than the solubility in  $\text{H}_2\text{O}$  alone. (Kernot, Gazz. ch. it. 1906, 38. (1) 532.)

$\text{KOH}$  or  $\text{NaOH} + \text{Aq}$  containing 1 pt.  $\text{KOH}$  or  $\text{NaOH}$  in 100 pts.  $\text{H}_2\text{O}$  do not dissolve more than  $\frac{1}{10000}$  pt.  $\text{CaO}_2\text{H}_2$ , but it is sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Pelouze, A. ch. (3) 33. 11.)

Solubility in  $\text{NaOH} + \text{Aq}$  at  $t^\circ$ .

Wt. of glycerine in 100 ccm. of solution	Wt. $\text{CaO}$ contained in 100 ccm. of liquid sat. with $\text{CaO}$	Relation of $\text{CaO}$ to glycerine	
		$\text{CaO}$	Glycerine
10.00	0.370	3.6	96.4
5.00	0.240	4.6	95.4
2.86	0.196	6.4	93.6
2.50	0.192	7.1	92.9
2.00	0.186	8.5	91.5
1.00	0.165	14.2	85.8

(Berthelot, A. ch. (3) 46, 176.)

1000 g.  $\text{H}_2\text{O}$  dissolve 1.251 g.  $\text{CaO}$ ; 1000 g.  $\text{H}_2\text{O} + 50$  g. glycerine dissolve 1.865 g.  $\text{CaO}$ ; 1000 g.  $\text{H}_2\text{O} + 100$  g. glycerine dissolve 2.583 g.  $\text{CaO}$ ; 1000 g.  $\text{H}_2\text{O} + 200$  g. glycerine dissolve 4.040 g.  $\text{CaO}$ ; 1000 g.  $\text{H}_2\text{O} + 400$  g. glycerine dissolve 6.569 g.  $\text{CaO}$ . (Carles, Arch. Pharm. (3) 4, 558.)

Insol. in pure glycerine.

Solubility of  $\text{CaO}_2\text{H}_2$  in glycerine + Aq at  $25^\circ$ .  
G = g. glycerine in 100 g. glycerine + Aq.  
 $\frac{1}{2}\text{Ca}(\text{OH})_2$  = millimols sol. in 100 cc. glycerine + Aq.

G	$\frac{1}{2}\text{CaO}_2\text{H}_2$	Sp. gr.
0	4.3	1.0003
7.15	8.13	1.0244
20.44	14.9	1.0537
31.55	22.5	1.0842
40.95	40.1	1.1137
48.7	44.0	1.1356
69.2	95.8	1.2027

(Herz and Knoch, Z. anorg. 1905, 46, 193.)

Solubility in glycerine + Aq at  $25^\circ$ .

Solution contains			Sp. gr.
% $\text{Ca}(\text{OH})_2$	% glycerine	% $\text{H}_2\text{O}$	
0.117	0	96.32	1.008
0.178	3.50	80.28	1.042
0.413	15.59	64.80	1.068
0.48	17.84	43.62	1.149
0.88	34.32		
1.34	55.04		

Solid phase in this system is  $\text{CaO}_2\text{H}_2$ .  
(Cameron and Patten, J. phys. Chem. 1911, 15, 71.)

100 pts. sugar dissolved in  $\text{H}_2\text{O}$  dissolve 55.6 pts.  $\text{CaO}$  (Omann); 50 pts.  $\text{CaO}$  (Ure); 49.6 pts.  $\text{CaO}$  (Daniell); 29-30.6 pts.  $\text{CaO}$  (Hunton); 23 pts.  $\text{CaO}$  (Soubeiran.)

Sugar solution at  $100^\circ$  takes up  $\frac{1}{4}$  mol.  $\text{CaO}$  for each mol. sugar; at  $0^\circ$ , if it contains not less than 25% of sugar, it takes up 2 mols.  $\text{CaO}$  to 1 mol. sugar. (Dabrunfaut.)

Amount dissolved is proportional to the density and temperature of the solutions.

Solubility of  $\text{CaO}$  in sugar + Aq.

Pts. sugar dissolved in 100 pts. $\text{H}_2\text{O}$	Relation of $\text{CaO}$ to sugar	
	$\text{CaO}$	Sugar
40	21.0	79.8
37.5	20.8	79.2

5.38	17.42	76.93	1.109
6.07	19.86	73.07	1.123

The solid phase in this system consists of a series of solid solutions with Ca(OH)<sub>2</sub> a limiting case.

(Cameron and Patten, J. phys. Chem. 1911, 15. 70.)

## Solubility of CaO in sugar + Aq at 80°.

% sugar	% CaO	% Sugar	% CaO
4.90	0.117	19.50	0.358
9.90	0.189	24.60	0.458
14.75	0.230	29.70	1.017

Solid phase, CaO<sub>2</sub>H<sub>2</sub>.  
(von Ginneken, Proc. Kon. Akad. v. Wetensch, Amsterdam, 1911, 14. 457.)

## Solubility of CaO in mannite + Aq.

Wt. of mannite in 100 ccm. of solution	Wt. of CaO contained in 100 ccm. of liquid sat. with CaO	Relation of CaO to mannite	
		CaO	Mannite
9.60	0.753	7.3	92.7
4.80	0.372	7.2	92.8
2.40	0.255	9.6	90.4
1.92	0.225	10.5	89.5
1.60	0.207	11.4	88.6
1.37	0.194	12.5	87.5
1.20	0.193	13.9	86.1
1.07	0.190	15.1	84.9
0.96	0.186	16.2	86.8
0.192	0.155	44.6	55.4
0.096	0.154	61.6	38.4
0.000	0.148	...	...

(Berthelot, A. ch. (3) 46. 176.)

Solutions of CaO in sugar, mannite, or glycerine afford an abundant ppt. on being heated, but this redissolves on cooling. (Berthelot.)

Sol. in sorbite + Aq (Pelouze); sl. sol. in quercite + Aq. Sol. in monobasic Ca saccharate + Aq. (Peligot.) Much more sol. in gelatine + Aq than in pure H<sub>2</sub>O.

**Calcium hydroxyhydrosulphide**, Ca(OH)SH + 3H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O with almost immediate decomposition. Insol. in alcohol, but slowly

decomp. thereby. (Divers and Shimidzu, Chem. Soc. **45**. 270.)

### Calcium subiodide, $\text{CaI}$ .

Decomp. by moisture. (Wöhler, Z. anorg. 1909, **61**. 76.)

### Calcium iodide, $\text{CaI}_2$ .

Deliquescent. 100 pts.  $\text{H}_2\text{O}$  dissolve—  
 at 0° 20° 40° 43° 92°  
 192 204 228 286 435 pts.  $\text{CaI}_2$ .  
 (Kremers, Pogg. **103**. 65.)

Sp. gr. of  $\text{CaI}_2 + \text{Aq}$  at 19.5° containing:  
 5 10 15 20 25 30%  $\text{CaI}_2$ ,  
 1.044 1.09 1.14 1.198 1.26 1.321

35 40 45 50 55 60%  $\text{CaI}_2$ .  
 1.398 1.477 1.567 1.665 1.78 1.91  
 (Kremers, calculated by Gerlach, Z. anal. **8**. 285.)

Sol. in absolute alcohol. (Gay-Lussac, A. ch. **91**. 57.)

Sol. in acetone. (Naumann, B. 1904, **37**. 4328; Eidmann, C. C. **1899**, II. 1014.)

Sol. in ethyl acetate. (Naumann, B. 1910, **43**. 314.)

+4 $\text{H}_2\text{O}$ . (Kuznetsov, C. A. **1911**. 842.)

+6 $\text{H}_2\text{O}$ . Sat. aq. solution contains at:

—22° +7° 10° 19°  
 61.6 65.0 65.1 66.3% salt.

51° 64° 130° 248°  
 69.4 75.9 81.3 87.1% salt.

(Étard, A. ch. 1894, (7) **2**. 543.)

+7 $\text{H}_2\text{O}$ . (Kuznetsov.)

### Calcium periodide, $\text{CaI}_2 + 15\text{H}_2\text{O}$ .

(Mosnier, A. ch. 1897, (7) **12**. 401.)

$\text{CaI}_2$ . (Herz and Bulla, Z. anorg. 1911, **71**. 255.)

### Calcium mercuric iodide, $\text{CaI}_2 \cdot \text{HgI}_2 + 8\text{H}_2\text{O}$ .

Very deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohols, allyl iodide, aldehyde, acetic acid, ethyl oxalate and aniline. Sl. sol. in nitrobenzene. Completely insol. in  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , ethyl iodide, ethylene bromide,  $\text{C}_6\text{H}_6$ , monochlorobenzene and toluene. (Duboin, C. R. 1906, **142**. 573.)

$3\text{CaI}_2 \cdot 4\text{HgI}_2 + 24\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with pptn. of red  $\text{HgI}_2$ .

Very sol. in alcohols, glycerine, ethyl acetate, methyl and isobutyl propionate, allyl iodide, aldehyde, acetone, aniline and ethyl oxalate. Insol. or sl. sol. in nitrobenzene. Insol. in  $\text{CHCl}_3$ ,  $\text{C}_6\text{H}_6$ , ethyl iodide, monochlorobenzene, etc. (Duboin, C. R. 1906, **142**. 397.)

$\text{CaI}_2 \cdot 2\text{HgI}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Boullay.)

$\text{CaI}_2 \cdot 5\text{HgI}_2 + 8\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ ,

alcohols, glycerine, aldehyde, and acetic acid; slowly by nitrobenzene and ethyl oxalate. Insol. in monochlorobenzene, toluene,  $\text{CHCl}_3$  and ethylene bromide. (Duboin, *l. c.*)

### Calcium silver iodide, $\text{CdI}_2 \cdot 2\text{AgI} + 6\text{H}_2\text{O}$ .

Immediately decomp. by  $\text{H}_2\text{O}$ . (Simpson, Roy. Soc. Proc. **27**. 120.)

### Calcium zinc iodide, $\text{CaI}_2 \cdot \text{ZnI}_2 + 8\text{H}_2\text{O}$ .

Very hygroscopic. (Ephraim, Z. anorg. 1910, **67**. 384.)

### Calcium iodide ammonia, $\text{CaI}_2 \cdot 6\text{NH}_3$ .

(Isambert, C. R. **66**. 1259.)

### Calcium nitride, $\text{Ca}_3\text{N}_2$ .

Sol. in dil. acids; insol. in conc. (water free) acids. (Moissan, C. R. 1898, **127**. 499.)

### Calcium oxide, $\text{CaO}$ .

Decomp. by  $\text{H}_2\text{O}$ , with evolution of much heat, to form  $\text{CaO}_2\text{H}_2$ , which see for solubility in  $\text{H}_2\text{C}$ , etc.

### Calcium peroxide, $\text{CaO}_2$ .

Very sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in acids, and  $\text{NH}_3$  salts +  $\text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Conroy, Chem. Soc. (2) **11**, 808.)

+2 $\text{H}_2\text{O}$ . True composition is  $\text{CaO}_2\text{H}_2 + \text{H}_2\text{O}_2$ . (de Forcrand, C. R. 1900, **130**. 1390.)  
 +8 $\text{H}_2\text{O}$ . Efflorescent. Difficultly sol. in  $\text{H}_2\text{O}$  with gradual decomp. Insol. in alcohol or ether. (Gay-Lussac and Thénard, A. ch. (2) **8**. 313.)

### Calcium oxybromide, $3\text{CaO} \cdot \text{CaBr}_2 + 16\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol. Very easily sol. in hydracids and dil.  $\text{HNO}_3$ . (Tassily, C. R. 1894, **119**. 372.)

### Calcium oxychloride, $\text{Ca}_2\text{O}_2\text{Cl}_2 + 15\text{H}_2\text{O} = 3\text{CaO} \cdot \text{CaCl}_2 + 15\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  or alcohol. (Rose.)

Formula is  $\text{Ca}_2\text{HO}_2\text{Cl} + 7\text{H}_2\text{O}$ . (Grimshaw, C. N. **30**. 280.)

+16 $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  into  $\text{CaO}_2\text{H}_2$  and  $\text{CaCl}_2$  until a maximum of 85 g.  $\text{CaCl}_2$  are dissolved per litre. (Ditte, C. R. **91**. 576.)  
 4 $\text{CaO} \cdot \text{CaCl}_2 + 14\text{H}_2\text{O}$ . (Schreinemakers and Figeé, Chem. Weekbl. 1911, **8**. 685.)

$\text{CaO} \cdot \text{CaCl}_2$ . (Schreinemakers and Figeé.)

### Calcium lead oxychloride, $\text{CaCl}_2 \cdot \text{CaO} \cdot 2\text{PbO} + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (André, C. R. **104**. 359.)

$\text{CaCl}_2 \cdot 3\text{PbO} + 3\text{H}_2\text{O}$ . (André.)

### Calcium mercuric oxychloride, $\text{CaCl}_2 \cdot 2\text{HgO} + 4\text{H}_2\text{O}$ .

Decomp. immediately by  $\text{H}_2\text{O}$ . (Klinger, B. **16**. 997.)

**xyiodide**,  $3\text{CaO}$ ,  $\text{CaI}_2 + 16\text{H}_2\text{O}$ .

p. by  $\text{H}_2\text{O}$ , alcohol, and acids. Sol. in dil.  $\text{HNO}_3$ . (Tassily, *ibid.* 119. 372.)

**oxysulphide**,  $\text{Ca}_2\text{O}_3\text{S}_2 + 12\text{H}_2\text{O} = \text{CaS}_2 + 12\text{H}_2\text{O}$ .

p. by  $\text{H}_2\text{O}$ . Not acted on by alcohol. (Schöne, *Pogg.* 117. 77.)  
ing to Geuther (A. 224. 178) =  $\text{CaS}_2$ , or  $11\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl} + \text{Aq}$  in ratio of S.

$+ 18\text{H}_2\text{O} = 4\text{CaO}$ ,  $\text{CaS}_4 + 18\text{H}_2\text{O}$ .

by  $\text{H}_2\text{O}$ , but not acted on by alcohol. (Schöne, *Pogg.* 117. 82.)  
ing to Geuther (A. 224. 178) =  $\text{CaS}_2$ , or  $15\text{H}_2\text{O}$ .

$+ 20\text{H}_2\text{O} = 5\text{CaO}$ ,  $\text{CaS}_4 + 20\text{H}_2\text{O}$ .  
gg. 55. 433.)

400 pts. cold, decomp. by boiling (Hner); sl. sol. in cold, much more in but it is not deposited on cooling. solution sat. at  $6^\circ\text{--}7.2^\circ$  has sp. gr. = 1.75 (Lerschel); sol. in alcohol (Gay-Lussac); in alcohol (Gmelin).

**sulphide**,  $\text{CaP}$ .

acent. Decomp. in moist air or by  $\text{H}_2\text{O}$ . Not attacked by conc.  $\text{HNO}_3$ , but by dil.  $\text{HNO}_3 + \text{Aq}$ . (Thénard, A. 14.)

Crystallized.

p. by  $\text{H}_2\text{O}$ .

attacked by conc.  $\text{H}_2\text{SO}_4$ . Violently by dil.  $\text{H}_2\text{SO}_4$ .

attacked by abs. alcohol, ether, benzol, oil of turpentine. (Moissan, C. R. 792.)

Insol. in liquid  $\text{CO}_2$ . (Büchner, *ibid.* 1906, 54. 674.)

**selenide**,  $\text{CaSe}$ .

in  $\text{H}_2\text{O}$ . Very easily decomp. (R. 102. 1469.)

**silicide**,  $\text{CaSi}_2$ .

decomp. by  $\text{H}_2\text{O}$ ; sol. in conc.  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$  with evolution of  $\text{H}_2$ . With  $\text{HCl}$  it gives  $\text{H}_2$ , Si and silicon hydride;  $\text{HCl}$ ,  $\text{H}_2$  and a yellow substance.  $\text{K}_2\text{CO}_3 + \text{Aq}$  or  $\text{NH}_3 + \text{Aq}$  with evolution. (Moissan, C. R. 1902, 134. 505.)

modifications:  
y al. sol. in  $\text{HNO}_3$ ; decomp.  $\text{H}_2\text{O}$  to sol. ppt. on addition of  $\text{HCl}$ .  
ily sol. in  $\text{HNO}_3$  and acetic acid;  $\text{HCl}$  to give a ppt. which is sol. in q. (de Chalmot, *Am. Ch. J.* 1896,

Slowly decomp. by  $\text{H}_2\text{O}$ , rapidly by acetic acid or by  $\text{H}_2\text{SO}_4 + \text{Aq}$  without evolution of spontaneously inflammable gas. (M. 1909, 30. 497.)

p. by dil. min. acids, with evolution

of spontaneously inflammable gas. (Hackspill, *Bull. Soc.* 1908, (4) 3. 619.)

$\text{Ca}_2\text{Si}_{10}$ . Insol. in all solvents. Decomp. by boiling  $\text{H}_2\text{O}$ , by conc.  $\text{HCl}$  and by acetic acid. Sol. in dil. alkali and alkali carbonates +  $\text{Aq}$ . Hardly attacked by conc.  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$ . (Kolb, *Z. anorg.* 1909, 64. 349.)

$\text{Ca}_{11}\text{Si}_{10}$ . Easily decomp. by boiling with  $\text{H}_2\text{O}$ . Decomp. by dil. acetic acid, dil. or conc.  $\text{HCl}$ . (Kolb, *Z. anorg.* 1909, 64. 349 and 356.)

**Calcium siliconitride**,  $\text{CaSi}_2\text{N}_2$ .

(Kolb, *Z. anorg.* 1909, 64. 363.)

$\text{Ca}_2\text{Si}_2\text{N}_4$ . Slowly decomp. by boiling with  $\text{H}_2\text{O}$ , somewhat more rapidly with dil.  $\text{NaOH} + \text{Aq}$ . Slowly decomp. by conc.  $\text{HCl}$ . (Kolb, *l. c.*)

$\text{Ca}_{11}\text{Si}_{10}\text{N}_{10}$ . Completely decomp. by  $\text{HCl}$ . (Kolb, *l. c.*)

**Calcium sulphide**,  $\text{CaS}$ .

500 pts.  $\text{H}_2\text{O}$  dissolve 1 pt.  $\text{CaS}$  completely; less  $\text{H}_2\text{O}$  dissolves out  $\text{CaS}_2\text{H}_2$  and leaves  $\text{CaO}_2\text{H}_2$ . Very much  $\text{H}_2\text{O}$  decomposes completely into  $\text{CaO}_2\text{H}_2$  and  $\text{H}_2\text{S}$ . (Béchamp, A. ch. (4) 16. 222.)

Not decomp. by  $\text{H}_2\text{O}$ , and only sl. sol. therein at ordinary temp. (Pelouze.)

After 48 hours contact with  $\text{CaS}$ , 1 l.  $\text{H}_2\text{O}$  contains at:

$10^\circ$	$18^\circ$	$40^\circ$	$60^\circ$	$90^\circ$
0.15	0.23	0.30	0.48	0.33 g. $\text{CaS}$ .

After boiling for 2 hours, 0.27 g.  $\text{CaS}$  is dissolved; addition of  $\text{NaCl}$  diminishes solubility, but  $\text{Na}_2\text{SO}_4$  increases it. Lime-water dissolves at  $14^\circ$  0.18 g.  $\text{CaS}$ , the same amount which  $\text{H}_2\text{O}$  dissolves at  $60^\circ$ . Milk of lime dissolves 0.55 g. at  $60^\circ$ .  $\text{H}_2\text{O}$  containing 3 to 79 g.  $\text{Na}_2\text{O}$  per litre dissolves only traces of  $\text{CaS}$  at  $10^\circ$ , but at  $40\text{--}60^\circ$ , or by boiling, a large amount of  $\text{Na}_2\text{S}$  is formed. (Kolb, A. ch. (4) 7. 126.)

Sol. in 12,500 pts.  $\text{H}_2\text{O}$  at  $12.6^\circ$ . (Scheurer-Kestner, *Répert. chim. appl.* 1862. 331.)

Sat.  $\text{Na}_2\text{CO}_3 + \text{Aq}$  has scarcely any action on  $\text{CaS}$ , but a dilute solution has more action. (Kolb.)

Sol. in  $\text{H}_2\text{O}$  and sulphur, forming  $\text{CaS}_2$ .

Insol. in liquid  $\text{NH}_3$ . (Franklin, *Am. Ch. J.* 1898, 20. 827.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Insol. in methylal. (Eidmann, C. C. 1899, II. 1014.)

Sol. in 10 pts. glycerine. (Cap and Garot, *J. Pharm.* (3) 26. 81.)

Sol. in sugar +  $\text{Aq}$ . (Stolle, C. C. 1900, I. 1044.)

**Calcium tetrasulphide**,  $\text{CaS}_4$ .

Known only in solution.

**Calcium pentasulphide,  $\text{CaS}_5$ .**

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Berzelius.)  
Exists only in aqueous solution. (Schöne, Pogg. 117. 73.)

**Calcium hydroxyl sulphide,  $\text{Ca(OH)SH} + 3\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$  with immediate decomp. and separation of  $\text{Ca(OH)}_2$ . Insol. in alcohol, but slowly decomp. thereby. (Divers and Shimidzu, Chem. Soc. 45. 270.)

**Calcium stannic sulphide.**

See Sulphostannate, calcium.

**Calomel.**

See Mercurous chloride.

**Carbamic acid.****Ammonium carbamate acid carbonate (commercial carbonate of ammonia).**

See Carbonate carbamate, ammonium hydrogen.

— (salts of hartshorn),  $2\text{NH}_4\text{HCO}_3$ ,  $\text{NH}_4\text{CONH}_2$ .

See Carbonate carbamate, ammonium hydrogen.

**Carbazote silicon,  $\text{C}_2\text{SiN}$ .**

Insol. in acids, even HF; also in boiling  $\text{KOH} + \text{Aq.}$  (Schützenberger and Colson, C. R. 92. 1508.)

**Carbon, C.**

Insol. in all solvents.

Diamond is unacted upon by  $\text{KClO}_3 + \text{fum. HNO}_3$ ; graphite forms graphitic acid by  $\text{KClO}_3 + \text{fum. HNO}_3$ ; amorphous carbon is sol. in  $\text{KClO}_3 + \text{fum. HNO}_3$ . (Berthelot, A. ch. (4) 19. 399.)

Diamond is sol. in molten iron at  $1160^\circ$ . Amorphous carbon is insol. in molten iron at  $1160^\circ$ , but becomes sol. therein by heating to  $1400^\circ$ . (Hempel, B. 18. 998.)

Insol. in liquid  $\text{CO}_2$ . (Büchner, Z. phys. Ch. 1906, 54. 674.)

Charcoal is insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

The quantity of carbon dissolved by iron diminishes by increasing phosphorus, falling by about 0.5% for each additional 2.0% of phosphorus. (Fettweis, Metallurgie, 1906, 3. 60.)

Solubility in iron is reduced by the presence of tin and of sulphur. (Wüst, Metallurgie, 1906, 3. 169.)

The solubility of C in iron is increased by the presence of chromium; 9.2% C dissolved when 62% Cr is present in the mixture. (Goerens, Metallurgie, 1907, 4. 18.)

**Carbon boride,  $\text{CB}_3$ .**

Insol. in boiling  $\text{HNO}_3 + \text{Aq.}$  (Joly, C. R. 97. 456.)

**Carbon suboxide,  $\text{C}_2\text{O}_2$ .**

B.-pt.  $+7^\circ$  at 761 mm.

Sol. in  $\text{H}_2\text{O}$  with formation of malonic acid. Slowly decomp. on standing in a sealed tube. (Diels, B. 1906, 39. 696.)

**Carbon monoxide, CO.**

Sol. in 50 vols. recently boiled  $\text{H}_2\text{O}$ . (Davy.)

Sol. in 16 vols.  $\text{H}_2\text{O}$ . (de Saussure.)

Sol. in 27 vols.  $\text{H}_2\text{O}$ . (Dalton.)

100 vols.  $\text{H}_2\text{O}$  dissolve 6.2 vols. CO at  $18^\circ$ . (de Saussure.)

Solubility of CO in  $\text{H}_2\text{O}$ : 1 vol.  $\text{H}_2\text{O}$  at  $t^\circ$  dissolves V vols. CO reduced to  $0^\circ$  and 760 mm.

$t^\circ$	V	$t^\circ$	V	$t^\circ$	V

(Bunsen's Gasometry, pp. 287, 128, 146.)

Coefficient of absorption =  $0.032874 - 0.00081632t + 0.000016421t^2$ . (Bunsen and Pauli, A. 93. 16.)

**Solubility of CO in  $\text{H}_2\text{O}$ .**

$\beta$  = Vol. CO absorbed by 1 vol.  $\text{H}_2\text{O}$  at a partial pressure of 760 mm.

$\beta'$  = Vol. CO (reduced to  $0^\circ$  and 760 mm.) absorbed by 1 vol. of  $\text{H}_2\text{O}$  under a total pressure of 760 mm.

q = g. CO dissolved by 100 g.  $\text{H}_2\text{O}$  at a total pressure of 760 mm.

Coefficient of absorption for petroleum = 0.123 at 20°, and 0.134 at 10°. (Griewas and Walfas, Zeit. phys. Ch. 1. 70.)

Carbon dioxide, CO<sub>2</sub>.

## Gas.—

H<sub>2</sub>O dissolves about its own vol. CO<sub>2</sub> at the ordinary temperature (the solution obtained being of 1.0018 sp. gr.) and pressure, and an additional vol. for the pressure of each additional atmosphere to which it is subjected.

The power of H<sub>2</sub>O to absorb CO<sub>2</sub> does not increase in precisely the same ratio as the pressure. (Soubeiran.) 5 vols. CO<sub>2</sub> dissolve in 1 vol. H<sub>2</sub>O at 7 atmos. pressure, and much greater pressure is necessary in order to increase the amount of gas dissolved; but up to 4 or 5 atmospheres the amount of gas dissolved is very nearly proportional to the pressure. (Courbe, J. Pharm. 36. 121.)

100 vols. H<sub>2</sub>O at 12.78° absorb 116 vols. CO<sub>2</sub> (Cavendish); at 20.44°, 84 vols. CO<sub>2</sub> (Henry); at 15.56°, 106 vols. CO<sub>2</sub> (Saussure); at 15.56°, 108 vols. CO<sub>2</sub> (Henry); at 15.56°, 100 vols. CO<sub>2</sub> (Dalton).

100 vols. H<sub>2</sub>O at t° C. absorb V vols. of CO<sub>2</sub> gas reduced to 60° F. and 30 in. pressure.

t°	V	t°	V
0	175.72	26.7	66.60
4.4	147.94	32.2	57.50
10	132.27	37.8	50.39
15.6	100.50	65.6	11.40
21.1	83.86	100	trace

(Rogers, Am. J. Sci. (2) 6. 107.)

1 vol. H<sub>2</sub>O at 5° absorbs somewhat more than 1 vol. CO<sub>2</sub>; at 10° scarcely 1 vol., and still less at higher temp. CO<sub>2</sub> + Aq sat. at 2° has 1.0015 sp. gr.; most of the CO<sub>2</sub> escapes upon exposing the solution to the air, the more quickly the higher the temperature. But as CO<sub>2</sub> diminishes, the remainder is more obstinately held, so that boiling for  $\frac{1}{2}$  hour is necessary to expel it completely. (Bergman.)

Solubility of CO<sub>2</sub> in H<sub>2</sub>O. 1 vol. H<sub>2</sub>O at t° and 760 mm. dissolves V vols. CO<sub>2</sub> gas reduced to 0° and 760 mm.

2 mols. CO<sub>2</sub>. (Setschenow.)

ms of salts of similar constitution are  
at in regard to their power of absorp-  
O<sub>2</sub>, when they contain the same per-  
of crystal water. Experiments were  
th solutions of alum, MgSO<sub>4</sub>, 7H<sub>2</sub>O,  
O<sub>4</sub>, 7H<sub>2</sub>O, containing 10% of the  
The MgSO<sub>4</sub> solution absorbed the  
proportional amount of CO<sub>2</sub>, and  
the least. The further rule was de-  
at with salts of similar constitution  
same amount of crystal water, the

absorptiometric equivalents are identical with  
the chemical equivalents. (Setschenow, B.  
6. 1461.)

Salts can be divided into two classes, ac-  
cording as CO<sub>2</sub> has chemical action on the  
salt or not. In the first case, i. e., when there  
is chemical combination or action of CO<sub>2</sub> on  
the salt in solution, the amount of CO<sub>2</sub> ab-  
sorbed increases with increasing concentra-  
tion of the solution; in the second case, how-  
ever, the amount of CO<sub>2</sub> decreases with the  
strength of the solution. Several salts can  
be arranged in a series as regards their power  
of absorption, beginning with that which  
has the greatest, as follows: Na<sub>2</sub>CO<sub>3</sub>, Na<sub>2</sub>B<sub>4</sub>O<sub>7</sub>,  
Na<sub>2</sub>HPO<sub>4</sub>, NaC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, Na<sub>2</sub>C<sub>2</sub>H<sub>3</sub>O<sub>7</sub>, Na<sub>2</sub>C<sub>2</sub>O<sub>4</sub>,  
NaC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, MNO<sub>3</sub>, MCl, M<sub>2</sub>SO<sub>4</sub>. The divi-  
sion between the two classes occurs in this  
series at Na<sub>2</sub>C<sub>2</sub>O<sub>4</sub>.

The matter is discussed at length in the  
original papers. (Setschenow, Mémoires  
Acad. St. Petersb. 22. No. 3. Also further,  
Setschenow, ib. 34. No. 3, and 35. No. 7.  
See also Ostwald, Allgemeine Chemie, 2<sup>te</sup>  
Aufl. vol. 1, p. 629.)

(Sethenow, A. ch. 1892, (6) 25. 226.)

CO<sub>2</sub> is not disengaged at ordinary temp. from H<sub>2</sub>O, in which  $\frac{1}{1000}$  pt. of CaCO<sub>3</sub> or MgCO<sub>3</sub> is held in solution thereby. These solutions have a great power of retaining CO<sub>2</sub> even at a boiling temp. or with diminished pressure, and they also absorb CO<sub>2</sub> from the air in much larger quantity than pure H<sub>2</sub>O. (Bineau.)

BaCO<sub>3</sub> in H<sub>2</sub>O also retains CO<sub>2</sub> even after long boiling. (Storer.)

CO<sub>2</sub> is also absorbed from the air by Na<sub>2</sub>CO<sub>3</sub>, or K<sub>2</sub>CO<sub>3</sub> + Aq, especially if dilute.

Absorption of CO<sub>2</sub> by NaCl + Aq at t°.  
 $\alpha$  = Coefficient of absorption for a 6.52% NaCl solution.

$\alpha_1$  = Coefficient of absorption for a 17.62% NaCl solution.

## Solubility of carbon dioxide in solutions of aniline at 25°.

I. Concentration, 0.206 g. aniline in 100 c. c. of solution.

P = Pressure.

S = Solubility calc. according to formula given in original article.

P	S	P	S
748	0.865	1053	0.855
808	0.855	1159	0.862
920	0.857	1243	0.860

II. Concentration, 0.425 g. aniline in 100 c. c. of solution.

P	S	P	S
760	0.909	1150	0.897
816	0.897	1236	0.902
921	0.897	1380	0.908

Solubility of carbon dioxide in solutions of aniline at 25°.—*Continued*

III. Concentration, 0.566 g. aniline in 100 c. c. of solution.

P	S	P	S
760	0.935	1082	0.923
823	0.929	1223	0.924
941	0.925	1341	0.930

IV. Concentration, 0.743 g. aniline in 100 c. c. of solution.

P	S	P	S
760	0.953	1063	0.946
895	0.941	1223	0.940
983	0.940	1302	0.942

(Findlay and Creighton, Chem. Soc. 1910, 97. 555.)

Solubility of CO<sub>2</sub> in CS<sub>2</sub> increases approx. proportionally with the pressure. The absorption is greater at lower temp. and less at higher temp. than is required by Dalton's law. (Woukoloff, C. R. 1889, 108. 674.)

Absorption of CO<sub>2</sub> by sugar + Aq.

Sugar + Aq	Grams CO <sub>2</sub> absorbed by 75 cc. of solution at 15.5° and 720 mm.
$\frac{1}{10}$ -N sugar solution	0.1225
$\frac{1}{2}$ -N " "	0.1089
1-N " "	0.0931

(Christoff, Z. phys. Ch. 1905, 53. 329.)

Absorption of CO<sub>2</sub> in sugar + Aq at 20°.

Cone. of solution	Sp. gr.	Coefficient of absorption
$\frac{1}{10}$ mol. per l.	1.01518	0.846
$\frac{1}{4}$ " " "	1.03125	0.815
$\frac{1}{2}$ " " "	1.06372	0.756
1 " " "	1.12809	0.649

(Usher, Chem. Soc. 1910, 97. 72.)

*Liquid*.—Not miscible with H<sub>2</sub>O, though slightly sol. therein, or with fatty oils; miscible with alcohol, ether, CS<sub>2</sub>, and the essential oils. (Thilorier, Mitchell.)

Unacted upon by H<sub>2</sub>O; sol. in alcohol, ethers, petroleum, oil of turpentine, and CS<sub>2</sub>. (Mareska and Donny.)

Petroleum dissolves 5 to 6 vols. liquid CO<sub>2</sub>. (Cailletet, C. R. 75. 1271.)

Sl. sol. in CS<sub>2</sub>. (Cailletet.)

*Solid*.—When immersed in H<sub>2</sub>O, rapidly volatilizes and dissolves. With alcohol or ether it forms a semi-fluid mixture. (Channing, Am. J. Sci. (2) 6. 186.)

Only slightly sol. in anhydrous ether, but may be mixed therewith to a paste. (Thilorier.)

Sol. in methyl chloride below -65° to the point of sat. without decomp. (Villard, C. R. 1895, 120. 1413.)

+6H<sub>2</sub>O. (Villard, C. R. 1894, 119. 369.)

**Carbon selenide, C<sub>2</sub>Se.**

Sol. only in hot conc. H<sub>2</sub>SO<sub>4</sub>. (v. Bartsch, Ch. Z. 1906, 30. 810.)

C<sub>2</sub>Se. Insol. in H<sub>2</sub>O, CS<sub>2</sub>, and ether. Easily sol. in hot conc. H<sub>2</sub>SO<sub>4</sub>; sol. in conc. NaOH + Aq from which it is pptd. by HCl (v. Bartsch.)

**Carbon silicide CSI.**

(Carborundum.) Not attacked by any acids, even HF; sl. attacked by caustic alkalis or carbonates. (Acheson, C. N. 68. 179.)

Not attacked by KOH + Aq. (Schützenberger, C. R. 114. 1089.)

**Carbon monosulphide, CS.**

Insol. in H<sub>2</sub>O, alcohol, oil of turpentine, or benzene; somewhat sol. in CS<sub>2</sub> or ether; sol. in warm HNO<sub>3</sub>; sol. in conc. KOH + Aq. (Sidot, C. R. 81. 32.)

Readily absorbed by alcohol and aniline. (Deninger, J. pr. 1895, (2) 61. 349.)

**Carbon disulphide, CS<sub>2</sub>.**

Very sl. sol. in H<sub>2</sub>O.

1 l. H<sub>2</sub>O dissolves 2-3 g. CS<sub>2</sub>. (Ckiani, Bull. Soc. 43. 562); 3.5-4.52 g. (Peligot, *ib.* 43. 563).

30 cc. CS<sub>2</sub> shaken with 8690 cc. H<sub>2</sub>O at 20-23° for 18 days decreased 11 cc. in 9 days and 1.4 cc. in the next 3 days by diffused light, and 0.6 cc. in the last 5 days (no light). Part of the CS<sub>2</sub> was decomp. and 7.85 cc. were dissolved, therefore H<sub>2</sub>O dissolves  $\frac{1}{1000}$  of its weight CS<sub>2</sub>. (Sestini, Gazz. ch. it. 1. 473.)

Solubility of CS<sub>2</sub> in H<sub>2</sub>O.

100 pts. H <sub>2</sub> O dissolve 0.203 pts. CS <sub>2</sub> at 12-13°				
" " 0.191 " " 15-16°				
" " 0.168 " " 25-27°				
" " 0.145 " " 30-33°				

(Page, C. N. 41. 195.)

Solubility of CS<sub>2</sub> in H<sub>2</sub>O. a = g. CS<sub>2</sub> in 1000 cc. solution at t°.

a	t°	a	t°	a	t°

midt and Follenius, B. 4. 583.)

with absolute alcohol, ether, ethery oils, and liquid CO<sub>2</sub>.

disulphide, C<sub>2</sub>S<sub>2</sub>.

H<sub>2</sub>O; easily sol. in alcohol, ether, benzene, and CS<sub>2</sub>. The alcoholic solutions decomp. on standing. 26. 2960.)

alcohol with decomp. Sol. in CS<sub>2</sub>, ene. (Stock, B. 1912, 45. 3575.)

ification. Insol. in H<sub>2</sub>O and solvents. Sol. in KOH+Aq.

hoselenide, CSSe.

5°, bpt. +84°.

by light. Not attacked by H<sub>2</sub>O. t conc. HNO<sub>3</sub>. Decomp. by Br<sub>2</sub> ol. in alcohol with decomp. Mis-S<sub>2</sub>. (Stock, B. 1914, 47. 150.)

hotelluride, CSTe.

t°. Very unstable.

with CS<sub>2</sub> and benzene without stock, B. 1914, 47. 142.)

chloroplatindiamine carbon-  
chloroplatindiamine nitrate.

[H<sub>2</sub>]  
[H<sub>2</sub>]<sub>2</sub> (CO<sub>2</sub>)<sub>2</sub>, Cl<sub>2</sub>Pt(N<sub>2</sub>H<sub>4</sub>NO<sub>2</sub>)<sub>2</sub>.  
e. (Cleve, J. B. 1867. 321.)

Carbonatonitratoplatindiamine carbon-

ate, CO<sub>2</sub>  
(NO<sub>2</sub>)<sub>2</sub> [Pt(N<sub>2</sub>H<sub>4</sub>)<sub>2</sub>(CO<sub>2</sub>)<sub>2</sub>].

Sol. in boiling H<sub>2</sub>O. (Cleve.)

Carbonatotetramine cobaltic bromide,  
Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>Br.

Much less sol. than chloride. (Jörgensen, Z. anorg. 2. 279.)

— carbonate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>CO<sub>2</sub>+3H<sub>2</sub>O.  
Very sol. in H<sub>2</sub>O. (Jörgensen.)

— chloraurate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>AuCl<sub>4</sub>+  
½H<sub>2</sub>O.

Somewhat sol. in H<sub>2</sub>O; nearly absolutely insol. in alcohol. (Jörgensen.)

— chloride, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>Cl.

Easily sol. in H<sub>2</sub>O; insol. in alcohol. (Jörgensen.)

— chloroplatinate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>PtCl<sub>6</sub>+  
2H<sub>2</sub>O.

Nearly insol. in H<sub>2</sub>O and alcohol. (Jörgensen.)

— chloroplatinite, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>PtCl<sub>4</sub>.

Nearly insol. in H<sub>2</sub>O; wholly in alcohol. (Jörgensen.)

— dithionate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>S<sub>2</sub>O<sub>6</sub>.

Ppt. (Jörgensen.)

— iodide, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>I.

Much less sol. than bromide or chloride. (Jörgensen.)

— nitrate, Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>NO<sub>2</sub>+½H<sub>2</sub>O.

Sol. in about 15 pts. cold H<sub>2</sub>O; insol. in alcohol. (Jörgensen.)

— sulphate, [Co(NH<sub>3</sub>)<sub>4</sub>CO<sub>2</sub>]<sub>2</sub>SO<sub>4</sub>+3H<sub>2</sub>O.

Considerably less sol. in H<sub>2</sub>O than the nitrate. (Jörgensen.)

Carbonic acid, H<sub>2</sub>CO<sub>3</sub>

See Carbon dioxide.

Carbonates.

Carbonates of Na, K, Rb, and Cs are easily sol. in H<sub>2</sub>O; carbonates of Li and Tl are much less sol.; other carbonates are nearly or quite insol. All carbonates are sol. to some extent in H<sub>2</sub>O containing CO<sub>2</sub>. All carbonates, except those of NH<sub>4</sub>, Rb, and Cs, are insol. in alcohol.

Sol. in those acids which are themselves sol. in H<sub>2</sub>O, except HCN and H<sub>3</sub>BO<sub>3</sub>.

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 824.)

**Aluminum carbonate, basic.**

$5\text{Al}_2\text{O}_3, 6\text{CO}_2 + 37\text{H}_2\text{O} = 3\text{Al}(\text{OH})_3,$   
 $\text{Al}_2(\text{CO}_3)_3 + 14\text{H}_2\text{O}.$  (Seubert, Z. anorg. 1893, 4. 67.)

$\text{Al}_2\text{O}_3, \text{CO}_2.$  (Parkmann, Sill. Am. J. (2) 34. 324.)

$3\text{Al}_2\text{O}_3, 2\text{CO}_2 + 16\text{H}_2\text{O}.$  (Muspratt and Danson, A. 72. 120.)

$3\text{Al}_2\text{O}_3, 2\text{CO}_2 + 9\text{H}_2\text{O}.$  (Wallace, Chem. Gaz. 1858. 410.)

$5\text{Al}_2\text{O}_3, 3\text{CO}_2 + 18\text{H}_2\text{O}.$  (Bley, J. pr. 39. 11.)

$2\text{Al}_2\text{O}_3, \text{CO}_2 + 6\text{H}_2\text{O} = 10\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}.$  Sol. in cold dil. acids. (Schlumberger, Bull. Soc. 1895, (3) 13. 46.)

$+ 8\text{H}_2\text{O}.$  (Urbain and Renoul, J. Pharm. (4) 30. 340.)  $= 10\text{Al}(\text{OH})_3, \text{Al}_2(\text{CO}_3)_3 + 9\text{H}_2\text{O}.$  (Seubert, Z. anorg. 1893. 4. 67.)

$8\text{Al}_2\text{O}_3, 3\text{CO}_2 + 40\text{H}_2\text{O}.$  (Langlois, A. ch. (3) 48. 505.)

All are precipitates, insol. in  $\text{H}_2\text{O}$ , sol. in acids, and give off  $\text{CO}_2$  at slight heat.

There are no definite carbonates of aluminum. (Cameron, J. phys. Chem. 1908, 12. 572.)

**Aluminum ammonium carbonate,  $\text{Al}_2\text{O}_3, \text{CO}_2, (\text{NH}_4)_2\text{CO}_3 + 4\text{H}_2\text{C}.$** 

Precipitate. (Rose, Pogg. 91. 460.)

**Aluminum sodium carbonate,  $\text{Al}_2\text{O}_3, \text{CO}_2, 2\text{Na}_2\text{CO}_3 + 24\text{H}_2\text{O}.$** 

Precipitate. Sol. in cold dil. acids. (Bley, J. pr. 39. 22.)

**Ammonium carbonate,  $(\text{NH}_4)_2\text{CO}_3 + \text{H}_2\text{O}.$** 

Sol. at  $15^\circ$  in its own weight  $\text{H}_2\text{O}$ . Solution in  $\text{H}_2\text{O}$  gives off gas at  $70-75^\circ$ , and boils at  $75-80^\circ$ . Sl. sol. in cold dil.  $\text{NH}_4\text{OH} + \text{Aq}$ , more sol. at ordinary temp. Insol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}.$  (Divers, Chem. Soc. (2) 8. 171, 259, and 364.)

Insol. in liquid  $\text{NH}_3.$  (Franklin, Am. Ch. J. 1898, 20. 826.)

Insol. in alcohol.

Insol. in  $\text{CS}_2.$  (Arcetowski, Z. anorg. 1894, 6. 257.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

100 g. pure glycerine dissolve 20 g.  $(\text{NH}_4)_2\text{CO}_3$  at  $15^\circ.$  (Ossendowski, Pharm. J. 1907, 79. 575.)

**Ammonium hydrogen carbonate,  $\text{NH}_4\text{HCO}_3.$** 

Sol. at  $15^\circ$  in about 8 pts.  $\text{H}_2\text{O}.$  (Berthollet, J. Phys. 66. 168.)

Sol. at  $12.8^\circ$  in about 6 pts.  $\text{H}_2\text{O}.$  (J. Davy, N. Edinb. J. 16. 245.)

Solution decomp. on air or by gentle heat or by addition of the solid salt. (Berthollet.)

100 pts.  $\text{H}_2\text{O}$  dissolve at  $0^\circ$ , 11.9 pts.; at  $10^\circ$ , 15.85 pts.; at  $20^\circ$ , 21 pts.; at  $30^\circ$ , 27 pts.  $\text{NH}_4\text{HCO}_3.$  (Dibbitts, J. pr. (2) 10. 417.)

Conc. alcohol dissolves out carbamate and  
 leaves carbonate. (Hünefeld, J. pr. 7. 25.)  
 Insol. in acetone. (Naumann, B. 1904, 37.  
 4328.)

Ammonium cerous carbonate,  $(\text{NH}_4)_2\text{CO}_3$ ,  
 $\text{Ce}_2(\text{CO}_3)_3 + 6\text{H}_2\text{O}$ .

Ppt. Very sl. sol. in conc.  $(\text{NH}_4)_2\text{CO}_3$  + Aq.  
 (Meyer, Z. anorg. 1904, 41. 104.)

Ammonium chromous carbonate,  $(\text{NH}_4)_2\text{CO}_3$ ,  
 $\text{CrCO}_3 + \text{H}_2\text{O}$ .

Decomp. by moist air; sol. in dil.  $\text{HCl}$  and  
 $\text{H}_2\text{SO}_4$ . (Baugé, C. R. 1896, 122. 476.)

Ammonium cobaltous carbonate,  $(\text{NH}_4)_2\text{CO}_3$ ,  
 $\text{CoCO}_3 + 4\text{H}_2\text{O}$ .

Permanent. Sol. in  $\text{H}_2\text{O}$ . (Deville, A. ch.  
 (3) 35. 460.)  
 $(\text{NH}_4)_2\text{O}$ ,  $2\text{CoO}$ ,  $4\text{CO}_2$ ,  $9\text{H}_2\text{O}$ . Quickly de-  
 comp. on air; sol. in  $\text{H}_2\text{O}$ . (Deville.)  
 $+12\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

Ammonium didymium carbonate,  $(\text{NH}_4)_2\text{CO}_3$ ,  
 $\text{Di}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Cleve.)

Ammonium dysprosium carbonate,  
 $\text{NH}_4\text{Dy}(\text{CO}_3)_3 + \text{H}_2\text{O}$ .

Only sl. sol. in  $\text{H}_2\text{O}$ . (Jantsch, B. 1911, 44.  
 1277.)

**Ammonium glucinum carbonate**,  $2(\text{NH}_4)_2\text{CO}_3 \cdot 3\text{GlCO}_3(?)$ .

Very sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . Nearly insol. in alcohol. (Debray.)

Composition is  $(\text{NH}_4)_2\text{CO}_3 \cdot 2\text{GlCO}_3 \cdot \text{Gl}(\text{OH})_2 + 2\text{H}_2\text{O}$ . (Humpidge, Royal Soc. Proc. 39. 1.)

**Ammonium lanthanum carbonate**,  $\text{La}_2(\text{CO}_3)_3 \cdot (\text{NH}_4)_2\text{CO}_3 + 4\text{H}_2\text{O}$ .

Ppt. (Meyer, Z. anorg. 1904, 41. 102.)

**Ammonium magnesium carbonate**,  $(\text{NH}_4)_2\text{Mg}(\text{CO}_3)_2 + 4\text{H}_2\text{O}$ .

Sol. in 71 pts.  $\text{H}_2\text{O}$  with decomp.; more sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Divers, Chem. Soc. 51. 196.)

$\text{H}_2\text{O}$  containing  $(\text{NH}_4)_2\text{CO}_3$  dissolves very slightly; more sol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{Cl}$ . (Favre, A. ch. (3) 10. 473.)

**Ammonium magnesium hydrogen carbonate**,  $(\text{NH}_4)_2\text{Mg}_2\text{H}_2(\text{CO}_3)_4 + 8\text{H}_2\text{O}$ , or  $12\text{H}_2\text{O}$ .

Decomp. on air. (Deville, A. ch. (3) 35. 454.)

**Ammonium neodymium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Nd}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Ppt. Sl. sol. in conc.  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Meyer, Z. anorg. 1904, 41. 106.)

**Ammonium nickel carbonate**,  $\text{NH}_4\text{HCO}_3 \cdot \text{NiCO}_3 + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Deville, A. ch. (3) 35. 452.)

**Ammonium praseodymium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Pr}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Ppt. Insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Meyer, Z. anorg. 1904, 41. 105.)

**Ammonium samarium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Sm}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Ppt.

**Ammonium scandium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot 2\text{Sc}_2(\text{CO}_3)_3 + 6\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$ . Sol. in cold alkali-carbonate + Aq, less sol. in hot. (R. Meyer, Z. anorg. 1910, 67. 410.)

**Ammonium tin (stannous) carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot 2\text{SnCO}_3 + 3\text{H}_2\text{O}$ .

Decomp. by cold  $\text{H}_2\text{O}$ . (Deville, A. ch. (3) 35. 456.)

**Ammonium uranyl carbonate**,  $2(\text{NH}_4)_2\text{CO}_3 \cdot \text{UO}_2\text{CO}_3$ .

Sol. at  $15^\circ$  in 20 pts.  $\text{H}_2\text{O}$ , more abundantly in  $\text{H}_2\text{O}$  containing  $(\text{NH}_4)_2\text{CO}_3$ . (Ebelmen.)

Insol. in pure  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_2\text{O}$  containing  $(\text{NH}_4)_2\text{CO}_3$ . Solution is decomp. by boiling. (Berzelius.)

Sol. in  $\text{SO}_2 + \text{Aq}$ . (Berthier, A. ch. (3) 76.)

$3(\text{NH}_4)_2\text{CO}_3 \cdot 2(\text{UO}_2)_2\text{CO}_3 + 4\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Giollitti C. C. 1905, II. 227.)

**Ammonium vanadyl carbonate**,  $3(\text{NH}_4)_2\text{O} \cdot 7\text{VO}_3 \cdot 5\text{CO}_2 + 16\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ .

Sol. in acids and alkalis. (Koppel, Z. anorg. 1905, 45. 350.)

**Ammonium yttrium carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{Y}_2(\text{CO}_3)_3 + 2\text{H}_2\text{O}$ .

Insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Mosander.)

**Ammonium zinc carbonate, basic**,  $3\text{ZnO} \cdot \text{NH}_4\text{OH} \cdot 2\text{CO}_2 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Kassner, Arch. Pharm. (3) 27. 673.)

**Ammonium zinc carbonate**,  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{ZnCO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (Deville.)

Quite sol. in  $\text{H}_2\text{O}$ ; more sol. than  $(\text{NH}_4)_2\text{CO}_3 \cdot \text{MgCO}_3$ . Tolerably permanent in the air. Slowly decomp. by cold, rapidly by hot  $\text{H}_2\text{O}$ .

Very sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Not attacked by alcohol. (Favre, A. ch. (3) 10. 481.)

**Barium carbonate**,  $\text{BaCO}_3$ .

Sol. in 4304 pts. cold, and 2304 pts. boiling  $\text{H}_2\text{O}$ . (Fourcroy.)

Sol. in 47,620 pts.  $\text{H}_2\text{O}$ . (Bineau, A. ch. (3) 51. 290.)

Sol. in 14,137 pts.  $\text{H}_2\text{O}$  at  $16-20^\circ$ , and 15,421 pts. at  $100^\circ$ . (Fresenius.)

Sol. in 12,027 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Kremers, Pogg. 85. 247.)

Calculated from electrical conductivity of solution, 1 pt.  $\text{BaCO}_3$  is sol. in 64,070 pts.  $\text{H}_2\text{O}$  at  $8.8^\circ$  and 45,566 pts. at  $24.2^\circ$ . (Holleman, Z. phys. Ch. 12. 125.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	g. sol. in 100 g. $\text{H}_2\text{O}$
14	$4.32 \times 10^{-4}$
18	$4.57 \times 10^{-4}$
23	$4.89 \times 10^{-4}$
27	$5.22 \times 10^{-4}$
32	$5.69 \times 10^{-4}$
38	$6.27 \times 10^{-4}$

(Weissenberger, Z. phys. Ch. 1914, 88. 266.)

"Solubility product" =  $8.1 \times 10^{-9}$  mol. l. (McCoy and Smith, J. Am. Chem. Soc. 1911, 33. 473.)

Sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ . (See *barium hydrogen carbonate*.)

Easily sol. in dil. acids. Not acted upon by conc.  $\text{HNO}_3 + \text{Aq}$ .

Not decomp. by 1 pt.  $\text{H}_2\text{SO}_4 + 6$  pts. absolute alcohol. Slowly decomp. by 1 pt.

+6 pts. absolute alcohol. Slowly de-  
by 1 pt.  $\text{H}_2\text{C}_2\text{O}_4$  +6 pts. absolute al-

t decomp. by absolute alcoholic solu-  
of racemic, tartaric, citric, or glacial  
acids. (Babington and Phillips, 1816.)  
most completely insol. in  $\text{H}_2\text{O}$  containing  
 $\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3$ , when digested in  
a solution and allowed to stand. 1 pt.  
 $\text{H}_2\text{O}$  dissolves in 141,000 pts. of such a solu-  
(Fresenius.)

t more sol. in  $\text{NaCl}$ +Aq than in  $\text{H}_2\text{O}$ .  
sten.)

. in cold  $\text{NH}_4\text{Cl}$ ,  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4$  suc-  
e+Aq. (Vogel, J. pr. 7. 453.)

nols.  $\text{NH}_4\text{Cl}$  dissolved in  $\text{H}_2\text{O}$  dissolve 1  
 $\text{BaCO}_3$  by continued boiling. (Smith,  
Mag. J. 9. 540.)

ubility in  $\text{H}_2\text{O}$  increases by addition of  
 $\text{Cl}$ , at first strongly, then less strongly  
inally strongly again. (D'Agustino and  
grino, Gazz. ch. it. 1906, 38 (I) 532.)

newhat sol. in  $\text{K}_2\text{CO}_3$ +Aq. (Wacken-  
, A. 24. 30.)

ility of  $\text{BaCO}_3$  in  $\text{KCl}$ +Aq at bpt. of  
solution

KCl per 100 g. solution	g. $\text{BaCO}_3$ per 1000 cc. sat. solution
0.15	0.0847
1	0.1781
3	0.2667
10	0.4274
30	0.5550

toni and Goguelia, Bull. Soc. 1905, (3)  
33. 13.)

bility of  $\text{BaCO}_3$  in  $\text{NaCl}$ +Aq at bpt. of  
solution

NaCl per 100 g. solution	g. $\text{BaCO}_3$ per 1000 cc. sat. solution

(Cantoni and Goguelia, l. c.)

Solubility of  $\text{BaCO}_3$  in 10%  $\text{NaCl}$ +Aq at  $t^\circ$ .

$t^\circ$	g. $\text{BaCO}_3$ per 1000 cc. sat. solution
10	0.1085
20	0.1126
40	0.1231
60	0.1303
80	0.1418

(Cantoni and Goguelia, l. c.)

Slowly sol. in conc.  $\text{Na}_2\text{SO}_4$ ,  $\text{MgSO}_4$ ,  $\text{ZnSO}_4$ ,  
 $\text{Ca}(\text{NO}_3)_2$ , or  $\text{CaCl}_2$ +Aq, but insol. in  $\text{ZnCl}_2$   
+Aq. (Karsten.)

Sl. decomp. by boiling  $\text{K}_2\text{SO}_4$ +Aq.

Sl. decomp. in the cold by 1 pt.  $\text{K}_2\text{SO}_4$ +2  
pts.  $\text{Na}_2\text{SO}_4$ +Aq.

Decomp. by salts of Al, Mn, Cr, Fe, U, Bi,  
Cd, Cu, Hg, Pb, Sn<sup>II</sup>, Sn<sup>IV</sup>, Hg<sub>2</sub>, Rh, Ir, Au,  
with pptn. of oxide of metal. (Rose, Tr.)

Pptn. of  $\text{BaCO}_3$  is hindered by presence of  
alkali citrates or metaphosphates.

Sol. in solutions of various salts, as in the  
case of calcium carbonate (see *Calcium car-  
bonate*). The solvent power of these solutions  
for barium carbonate is somewhat less than  
for calcium carbonate.

Insol. in acetone. (Naumann, B. 1904, 37.  
4329.)

Insol. in methyl acetate. (Naumann, B.  
B. 1909, 42. 3790); ethyl acetate. (Naumann,  
B. 1904, 37. 3602.)

Insol. in acetone and in methylal. (Eid-  
mann, C. C. 1899, II. 1014.)

Min. *Witherite*.

**Barium hydrogen carbonate**,  $\text{BaH}_2(\text{CO}_3)_2$ (?).

100 pts.  $\text{H}_2\text{O}$  containing  $\text{CO}_2$  dissolve 0.079  
pt.  $\text{BaCO}_3$ . (Bineau.)

100 pts.  $\text{H}_2\text{O}$  containing  $\text{CO}_2$  dissolve 0.17  
pt.  $\text{BaCO}_3$ . (Lassaigne.)

100 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  under a pressure  
of 4-6 atmospheres dissolve 0.725 pt.  $\text{BaCO}_3$ .  
Upon evaporating,  $\text{BaCO}_3$  is deposited.  
(Wagner, Z. anal. 6. 167.)

$\text{BaCO}_3$  is sol. in 833 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$   
at  $10^\circ$ . (Lassaigne.)

$\text{BaCO}_3$  is sol. in 830 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$   
at  $10^\circ$ . (Fourcroy.)

$\text{BaCO}_3$  is sol. in 1550 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$   
at  $10^\circ$ . (Bergman.)

100 cc.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  dissolve 0.73 g.  
 $\text{BaH}_2(\text{CO}_3)_2$ . (McCoy and Smith, J. Am.  
Chem. Soc. 1911, 33. 473.)

**Barium calcium carbonate**,  $\text{BaCO}_3$ ,  $\text{CaCO}_3$ .

Min. *Barytocalcite*, *Bromlith*. Sol. in dil.  
acids.

**Barium uranyl carbonate**,  $\text{BaO}$ ,  $2\text{UO}_3$ ,  $2\text{CO}_2$ ,  
+ $5\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Blinkoff.  
Dissert. 1900.)

+ $8\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Blinkoff.)

**Bismuth carbonate, basic,  $(\text{BiO})_2\text{CO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. Insol. in  $\text{CO}_2 + \text{Aq.}$  (Bergman.)

Completely sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ ; sl. sol. in  $\text{K}_2\text{CO}_3 + \text{Aq.}$ ; insol. in  $\text{Na}_2\text{CO}_3 + \text{Aq.}$  (Lau-gier.)

Absolutely insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  unless  $\text{H}_3\text{PO}_4$  or  $\text{H}_2\text{AsO}_4$  are present. (Berzelius.)

Insol. in  $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{K}_2\text{CO}_3$ , or  $\text{Na}_2\text{CO}_3 + \text{Aq.}$  (Rose.)

Sol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Wackenroder.) Insol. in  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Brett.)

Sol. in  $\text{CaCl}_2 + \text{Aq.}$  (Pearson.)

Min. *Bismuthosphaerite*.

$3\text{Bi}_2\text{O}_3$ ,  $\text{CO}_2$ . Min. *Bismuthile*. Easily sol. in acids.

$4\text{Bi}_2\text{O}_3$ ,  $3\text{CO}_2 + 4\frac{1}{2}\text{H}_2\text{O}$ . Min. *Bismuth spar*. Easily sol. in acids.

**Bismuth potassium carbonate,  $\text{Bi}_2\text{OK}_4(\text{CO}_3)_4 + \text{H}_2\text{O}$ .**

Decomp. by large quantities of  $\text{H}_2\text{O}$ . (Reynolds, Chem. Soc. 1898, 73. 266.)

**Cadmium carbonate,  $\text{CdCO}_3$ .**

Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids; insol. in  $\text{K}_2\text{CO}_3$ , and  $\text{Na}_2\text{CO}_3 + \text{Aq.}$ ; very sl. sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  (Fresenius.)

Easily sol. in  $\text{NH}_4$  sulphate, nitrate, and succinate +  $\text{Aq.}$  (Wittstein.)

Sol. in  $\text{KCN} + \text{Aq.}$ ; sol. in cold  $\text{NH}_4\text{Cl} + \text{Aq.}$ ; less sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Brett, 1837.)

Not prevented from pptn. by non-volatile organic substances. (Rose.)

Not pptd. from solutions containing sodium citrate. (Spiller.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate. (Naumann, B. 1909, 43. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

$+ \frac{1}{2}\text{H}_2\text{O}$ . (Lefort, J. B. 1847. 346.) (Kraut, Z. anorg. 1897, 13. 14.)

**Cadmium carbonate hydrazine,  $\text{CdCO}_3, 2\text{N}_2\text{H}_4$ .**

Easily sol. in cold  $\text{NH}_4\text{OH} + \text{Aq.}$  (Franzen, Z. anorg. 1908, 60. 281.)

**Cæsium carbonate,  $\text{Cs}_2\text{CO}_3$ .**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ .

100 pts. absolute alcohol dissolve 11.1 pts.  $\text{Cs}_2\text{CO}_3$  at  $19^\circ$ ; 20.1 pts.  $\text{Cs}_2\text{CO}_3$  at boiling temp. (Bunsen.)

**Cæsium hydrogen carbonate,  $\text{CsHCO}_3$ .**

Not deliquescent. Sol. in  $\text{H}_2\text{O}$ .

**Calcium carbonate basic,  $\text{CaO}, \text{CaCO}_3 + \text{H}_2\text{O}$ .**

Hardened by  $\text{H}_2\text{O}$ , but not dissolved. (Raoult, C. R. 92. 189.)

**Calcium carbonate,  $\text{CaCO}_3$ .**

More sol. in cold than in hot  $\text{H}_2\text{O}$ . (Gmelin.)

When recently pptd., sol. in 8834 pts. boiling, and 10,601 pts. cold  $\text{H}_2\text{O}$ ; much less sol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3$ , 65,246 pts. of which dissolve 1 pt.  $\text{CaCO}_3$ . (Fresenius (1844), A. 86. 122.)

Sol. in 16,000 pts. pure  $\text{H}_2\text{O}$ . (Brandes, 1838.)

Sol. in 12,858 pts. pure  $\text{H}_2\text{O}$  at  $15^\circ$ . (Kremers, Pogg. 55. 247.)

Sol. in 16,000–24,000 pts. pure  $\text{H}_2\text{O}$ . (Bucholz.)

1 l.  $\text{H}_2\text{O}$  dissolves 34 mg.  $\text{CaCO}_3$ . (Chevallet, Z. anal. 8. 91; Hoffmann, Z. anal. 4. 414.)

1 l.  $\text{H}_2\text{O}$  may contain 0.016 g.  $\text{CaCO}_3$ , i. e., 1 pt. is sol. in 62,500 pts.  $\text{H}_2\text{O}$ . (Bineau, A. ch. (3) 51. 290.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.02 g.  $\text{CaCO}_3$ , i. e., 1 pt.  $\text{CaCO}_3$  is sol. in 50,000 pts.  $\text{H}_2\text{O}$ . (Peligot.) Solubility is much affected by  $\text{CO}_2$  of the air.

1 l.  $\text{H}_2\text{O}$  at  $16^\circ$  dissolves 13.1 mg.  $\text{CaCO}_3$ . (Schlissing, C. R. 74. 1552.)

Calculated from electrical conductivity of  $\text{CaCO}_3 + \text{Aq.}$  1 pt.  $\text{CaCO}_3$  is sol. in 99,500 pts.  $\text{H}_2\text{O}$  at  $8.7^\circ$  and 80,040 pts. at  $23.8^\circ$ . (Holle-mann, Z. phys. Ch. 12. 125.)

By continued boiling  $\text{CaH}_2(\text{CO}_3)_2$ , 36 mg.  $\text{CaCO}_3$  remain in solution. (WELTSIEN, A. 128. 165.)

**Solubility in  $\text{H}_2\text{O}$  at different pressures.**

Pressure in atmos.	Solubility
1	1079
2	1403
4	1820
6	2109

(Engel, C. R. 101. 949.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.0005 pt. (calculated as  $\text{CaO}$ ) from pptd.  $\text{CaCO}_3$  and 0.0027 pt. from calcspar. (Lubavin, J. russ. Soc. 34. 389.)

1 l.  $\text{H}_2\text{O}$  dissolves 13 mg.  $\text{CaCO}_3$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1893, 12. 241.)

1 l.  $\text{CO}_2$  free water dissolves 17.4 mg.  $\text{CaO}$  or 31.0 mg.  $\text{CaCO}_3$ . (Gothe, Ch. Z. 1915, 39. 305.)

$\text{CaCO}_3$  dissolves in 9662 pts.  $\text{H}_2\text{O}$  at  $12^\circ$ . (Pollacci, C. C. 1896, II. 946.)

1 l.  $\text{H}_2\text{O}$  free from  $\text{CO}_2$  dissolves 9.6 mg.  $\text{CaCO}_3$ . (McCoy and Smith, J. Am. Chem. Soc. 1911, 33. 473.)

Found dissolved in 10,000 pts. sea water. (Davy.)

Pptd. amorphous  $\text{CaCO}_3$  dissolves in 1600 pts. sea water. Pptd. crystalline  $\text{CaCO}_3$  dissolves in 8000 pts. sea water. (Irvine and Young, Chem. Soc. 56. 344.)

Artificial sea water sat. with  $\text{CO}_2$  dissolves  $\text{CaCO}_3$  corresponding to 57.27 mg. of combined  $\text{CO}_2$  per litre at  $15^\circ$ .

Sea water which contains 52–55 mg. neutral combined  $\text{CO}_2$  per litre must be sat. with  $\text{CaCO}_3$ . (Cohen, Chem. Soc. 1900, 78 (2) 725.)

For action of  $\text{H}_2\text{CO}_3 + \text{Aq.}$  see *Calcium hydrogen carbonate*.

Sol. in  $\text{H}_2\text{SO}_4$ , even when native. Sol. in acids generally. When treated with acids in closed vessels effervescence ceases on increase of pressure, but is renewed at once on removing it. (Link, 1814.)

Unacted upon by conc.  $\text{HNO}_3$ , even when boiling, as  $\text{Ca}(\text{NC}_2)_2$  is insol. in conc.  $\text{HNO}_3$ .

Not decomp. by mixture of 1 pt.  $\text{H}_2\text{SO}_4$  and 5 pts. absolute alcohol, but immediately by  $\text{HNO}_3$  + absolute alcohol.

Not decomp. by absolute alcoholic solutions of oxalic, racemic, tartaric, citric, or glacial acetic acids. (Babington and Phillips, 1816.)

Unacted upon by glacial  $\text{HC}_2\text{H}_3\text{O}_2$ , even when boiling.

Freely pptd.  $\text{CaCO}_3$  is sol. in cold  $\text{NH}_4\text{Cl}$  + Aq; but the solution becomes cloudy on exposure to air, a portion, however, of  $\text{CaCO}_3$  remains dissolved, which cannot be pptd. even by boiling. If ppt. is washed and allowed to stand 24 hours, it is not as sol. in  $\text{NH}_4\text{Cl}$  as at first, but natural  $\text{CaCO}_3$  is not wholly insol. in  $\text{NH}_4\text{Cl}$  + Aq; it is, however, much less sol. than  $\text{MgCO}_3$ . (Vogel, J. pr. 7. 453.)

Sol. in boiling  $\text{NH}_4\text{Cl}$  + Aq with evolution of  $\text{NH}_3$ . (Demarcay, 1834.)

When  $\text{NH}_4\text{OH}$  + Aq, incompletely sat. with  $\text{CO}_2$ , is mixed with  $\text{CaCl}_2$  + Aq, no ppt. occurs even during several days, if kept in a closed vessel; and only a slight ppt. if the mixture is exposed to the air, but  $\text{CaCO}_3$  is pptd. if the solution is boiled.

$\text{NH}_4\text{OH}$  + Aq wholly sat. with  $\text{CO}_2$  produces ppt. when mixed with  $\text{CaCl}_2$  + Aq, but pptn. is not complete until heat is applied. Also when an excess of  $\text{CaCl}_2$  + Aq is added to a solution of crystallized carbonate of ammonia, only a portion of the  $\text{CaCO}_3$  is pptd. until the solution is boiled. (Vogel, 1814.)

When  $\text{CaCl}_2$  + Aq mixed with  $\text{NH}_4\text{OH}$  + Aq is exposed to an atmos. of pure  $\text{CO}_2$ , no ppt. occurs for several hours, but  $\text{CaCO}_3$  is completely pptd. in several days. (Vogel.)

When recently pptd., readily sol. in  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4\text{NO}_3$  + Aq. (Brett, 1837; Wackenroder, A. 41. 315.)

When recently pptd., readily sol. in  $(\text{NH}_4)_2\text{CO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{NH}_4\text{NO}_3$ ,  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4$  succinate + Aq. (Wittstein.)

Sol. in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$  + Aq. (Thomson.)  
More sol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3$  + Aq, or in neutral potassium, or sodium salts + Aq than in  $\text{H}_2\text{O}$ . (Fresenius.)

From solutions in  $\text{NH}_4$  salts,  $\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3$  + Aq precipitate  $\text{CaCO}_3$  more completely than  $\text{BaCO}_3$ . (Fresenius.)

When boiled with  $\text{NH}_4\text{Cl}$  + Aq,  $\text{CaCO}_3$  is dissolved, and  $(\text{NH}_4)_2\text{CO}_3$  given off. (D. Smith.)

$\text{CaCl}_2$  + Aq prevents pptn. of  $\text{CaCO}_3$  in the cold, as do also  $\text{NH}_4\text{Cl}$ ,  $\text{KCl}$ , or  $\text{NaCl}$  + Aq, but it is pptd. when boiled, if the latter solutions are not too conc.  $\text{K}_2\text{SO}_4$ ,  $\text{KNO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ , or  $\text{Na}_2\text{SO}_4$  + Aq have a similar effect. A large excess of  $(\text{NH}_4)_2\text{CO}_3$  + Aq when quickly added to  $\text{CaCl}_2$  + Aq produces

no ppt. in the cold.  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3$  + Aq act likewise. (Storer, Am. J. Sci. (2) 25. 41.)

1 g.  $\text{CaCO}_3$  requires 13.98 g.  $\text{NH}_4\text{Cl}$ , 8.380 g.  $(\text{NH}_4)_2\text{SO}_4$ , or 14.438 g.  $\text{NH}_4\text{NO}_3$  to effect solution. (Bertrand, Monit. Sci. (3) 10. 477.)

Less sol. in Na than in  $\text{NH}_4$  salts, but more than in K salts. (Berthelot.)

When  $\text{NH}_4\text{OH}$  + Aq, partially neutralized by  $\text{CO}_2$ , is mixed with  $\text{CaO}_2\text{H}_2$  + Aq, no cloudiness appears until the mixture is boiled; when more  $\text{CO}_2$  has been added to  $\text{NH}_4\text{OH}$  + Aq, a ppt. appears at first, which disappears and only reappears on addition of much  $\text{CaO}_2\text{H}_2$  + Aq; but  $\text{NH}_4\text{OH}$  + Aq does not dissolve pptd.  $\text{CaCO}_3$ . (Vogel.)

#### Solubility in $\text{NH}_4$ salts + Aq at 25°.

$\text{NH}_4$ salt	Millimols $\text{NH}_4$ salt per l.	Millimols $\text{CaO}$ dissolved per l.

5	0.211
10	0.258
20	0.340
40	0.462
80	0.584

(Berju and Kosminiko, Landw. Vers. Sta. 1904, 60. 422.)

$\text{CaO}_2\text{H}_2 + \text{Aq}$  dissolves a little  $\text{CaCO}_3$ . (Welter and Berthollet, 1789.)

$\text{CaO}_2\text{H}_2 + \text{Aq}$  retains a little  $\text{CaCO}_3$  in solution at ordinary temperature, which is pptd. on boiling. (Eliot and Storer, Proc. Am. Acad. 1860, 5. 63.)

$\text{CaO}_2\text{H}_2 + \text{Aq}$ , mixed with dil.  $\text{NaOH}$ ,  $\text{KOH}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ , gives no immediate ppt. when  $\text{CO}_2$  is passed through it, unless boiled.

Sol. in boiling  $\text{MgCl}_2 + \text{Aq}$  even when dilute. Cousté.)

Not decomp. when boiled with  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{CaSO}_4$ ,  $\text{MgSO}_4$ , and  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ ; but partially decomp. by boiling with  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{HPO}_4$ ,  $\text{K}_2\text{HPO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{HPO}_4$ ,  $\text{K}_2\text{HASO}_4$ ,  $\text{Na}_2\text{AsO}_4$ ,  $\text{K}_2\text{C}_2\text{O}_4$ ,  $(\text{NH}_4)_2\text{C}_2\text{O}_4$ ,  $\text{NaF}$ , and  $\text{K}_2\text{CrO}_4 + \text{Aq}$ . With the  $\text{NH}_4$  salts the decomposition is complete. (Dulong, A. ch. 82. 286.)

Not decomp. by alkali sulphates +  $\text{Aq}$ . (Malaguti.)

Precipitation of  $\text{CaCO}_3$  is much hindered by alkali citrates or metaphosphates.

The solubility of  $\text{CaCO}_3$  in  $\text{CO}_2$ -free water

is therefore increased by the addition of NaCl, NaNO<sub>3</sub>, or Na<sub>2</sub>SO<sub>4</sub>, 10H<sub>2</sub>O, but decreased by the addition of Na<sub>2</sub>CO<sub>3</sub> or CaCl<sub>2</sub>, 6H<sub>2</sub>O.

(Gothe, Ch. Z. 1915, 39. 306.)

Sol. in ferric chloride or nitrate + Aq with evolution of CO<sub>2</sub> and pptn. of Fe<sub>2</sub>O<sub>3</sub>H<sub>2</sub> (Fuchs, 1831); also in chlorides or nitrates of Al, Mn, Cr, or U, but not in FeCl<sub>2</sub> + Aq.

Sol. in cold SnCl<sub>4</sub> + Aq with pptn. of SnO<sub>2</sub>. Insol. in conc. Na<sub>2</sub>SO<sub>4</sub>, MgSO<sub>4</sub>, BaCl<sub>2</sub>, MgCl<sub>2</sub>, Pb(NO<sub>3</sub>)<sub>2</sub>, or AgNO<sub>3</sub> + Aq. (Karsten.)

Abundantly sol. when freshly precipitated in CaCl<sub>2</sub> + Aq, and MgSO<sub>4</sub> + Aq. (Hunt.) Absolutely insol. at 15–19° in BaO<sub>2</sub>H<sub>2</sub> + Aq; also on boiling.

1 l. H<sub>2</sub>O containing 3–4 g. MgSO<sub>4</sub> dissolves 1–2 g. CaCO<sub>3</sub>, and also 1 g. MgCO<sub>3</sub>. (Hunt, Am. J. Sci. (2) 26. 109.)

100 pts. NaCl + Aq (2.525% NaCl) dissolve 0.0037 pt. (calculated as CaO) pptd. CaCO<sub>3</sub>, and 0.0053 pt. calcspar. (Lubavin, J. russ. Soc. 24. 389.)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in liquid CO<sub>2</sub>. (Büchner, Z. phys. Ch. 1906, 54. 674.)

Alcohol dissolves traces of CaCO<sub>3</sub>. (Grischow.)

Sol. in Na citrate + Aq. (Spiller.)

Sol. in Ca succinate + Aq. (Barreswill.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II. 1014.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

*Amorphous.* Solubility in H<sub>2</sub>O cannot be determined because of its instability. (Kendall, Phil. Mag. 1912, (6) 23. 972.)

*Min. Calcite.* In contact with air free from CO<sub>2</sub>, 1 l. H<sub>2</sub>O dissolves at:

25°	50°	100°
0.01433	0.01504	0.01779 g. calcite.

(Kendall, Phil. Mag. 1912, (6) 23. 964.)

In contact with air containing 3.7 pts. CO<sub>2</sub> per 10,000, the solubility of calcite in H<sub>2</sub>O was found to be 0.04608 g. per l. at 25° and 0.02925 g. per l. at 50°. (Kendall, Phil. Mag. 1912, (6) 23. 973.)

*Min. Aragonite.* In contact with air free from CO<sub>2</sub>, 1 l. H<sub>2</sub>O dissolves at:

25°	50°	100°
0.01528	0.01617	0.01902 g. aragonite.

(Kendall, Phil. Mag. 1912, (6) 23. 964.)

+5H<sub>2</sub>O. Efflorescent.  
+6H<sub>2</sub>O. (Pelouze.)

### Calcium hydrogen carbonate, CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

Known only in aqueous solution.

CaCO<sub>3</sub> dissolves in CO<sub>2</sub> + Aq.

CaCO<sub>3</sub> is sol. in 1428 pts. H<sub>2</sub>O sat. with CO<sub>2</sub> at 0°, and 1136 pts. at 10°. (Lassaigne, J. ch. med. 4. 312.) Bineau could dissolve, even in large quantities of H<sub>2</sub>O sat. with CO<sub>2</sub>, only 1/4 enough CaCO<sub>3</sub> to form CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

Chalk dissolves in 994.5 pts. H<sub>2</sub>O sat. with CO<sub>2</sub>, while Iceland spar requires 3149 pts. (Bischof.) CaCO<sub>3</sub> is sol. in 1015 pts. H<sub>2</sub>O sat. with CO<sub>2</sub> at 21° and 748.3 mm. (Warrington, Chem. Soc. 6. 296.)

Solubility of CaCO<sub>3</sub> in CO<sub>2</sub> + Aq at p pressure in atmospheres. CaO + CO<sub>2</sub> = mg. CO<sub>2</sub> and CaC dissolved, corresponding to CaCO<sub>3</sub> = mg. CaCO<sub>3</sub>.

p	CaO + CO <sub>2</sub>	CaCO <sub>3</sub>

0.7297	2270	972
0.9841	2864	1086

(Schlösing, C. R. 74. 1522.)

With high pressure, 1 l. H<sub>2</sub>O containing CO<sub>2</sub> dissolves at most 3 g. CaCO<sub>3</sub>. This maximum is reached at 5° under 4 atmospheres' pressure; at 10–13° under 5 atmospheres; and at 20° under 7 atmospheres. (Caro, Arch. Pharm. (3) 4. 145.)

CaCO<sub>3</sub> is sol. in about 1000 pts. H<sub>2</sub>CCl<sub>2</sub> + Aq, and solubility is considerably increased by Na<sub>2</sub>SO<sub>4</sub> or MgSO<sub>4</sub>.

1000 pts. H<sub>2</sub>O sat. with CO<sub>2</sub> dissolve pts. Carrara marble at t°, and B = height of barometer in millimetres.

t°	B	Pts. CaCO <sub>3</sub>	t°	B	Pts. CaCO <sub>3</sub>
7.5	754	1.224	22.0	746	0.920

(Treadwell and Reuter, Z. anorg. 1898, 17. 185.)

1 l.  $\text{H}_2\text{O}$  sat. with carbonic acid dissolves 1.30 g.  $\text{CaCO}_3$  at 13.2°; 1.45 g. at 2.8° (Treadwell, Z. anorg. 1898, 17. 189.)

At 30° C. in equilibrium with the air, not more than 3 per cent of the calcium present is combined as  $\text{CaCO}_3$ . At lower temperatures and lesser concentrations the percentage of normal carbonate is even less, and practically all the calcium present is combined as  $\text{Ca}(\text{HCO}_3)_2$ . (Cameron and Briggs, J. phys. Chem. 1901, 5. 549.)

With pressures less than 4.5 atmospheres of  $\text{CO}_2$  no other than normal calcium carbonate or a hydrate of the normal carbonate can exist as the solid phase at 0°. (Cameron, J. phys. Chem. 1908, 12. 566.)

Solubility in  $\text{H}_2\text{O}$  in contact with air, containing  $\text{CO}_2$  with varying partial pressures at t°.

(Cameron and Seidell, J. phys. Chem. 1902, 6. 53.)

Data are also given for solubility of CaCO<sub>3</sub> in NaCl+Na<sub>2</sub>SO<sub>4</sub>+Aq, and CaCO<sub>3</sub>+CaSO<sub>4</sub> in NaCl+Na<sub>2</sub>SO<sub>4</sub>+Aq. (Cameron, Bell and Robinson.)

**Calcium copper uranium carbonate**, CaCO<sub>3</sub>, 3CuCO<sub>3</sub>, 4U(CO<sub>3</sub>)<sub>2</sub>+24H<sub>2</sub>O.

Sol. in acids.

**Calcium lead carbonate**, xCaCO<sub>3</sub>, yPbCO<sub>3</sub>.

Min. *Plumbocalcite*.

**Calcium magnesium carbonate**, CaCO<sub>3</sub>, MgCO<sub>3</sub>.

Min. *Dolomite*. 1 l. H<sub>2</sub>O sat. with CO<sub>2</sub> at 18° and 750 mm. dissolves 0.31 g. dolomite. (Cossa, B. 2. 697.)

Not obtained by evaporating solution, but can be crystallized from CO<sub>2</sub>+Aq between 100° and 200°. (Hoppe-Seyler.)

Dolomite is dissolved by CO<sub>2</sub> and H<sub>2</sub>O, but solution is prevented partially by CaCO<sub>3</sub>, and wholly by MgCO<sub>3</sub>. (Leather and Sen, C. A. 1915. 181.)

Insol. in cold dil. acids. (Dolomieu, J. Phys. 39. 1.)

Insol. in cold acetic acid. (Forchhammer.)

**Calcium potassium carbonate**, CaK<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

Decomp. by H<sub>2</sub>O. (Reynolds, Chem. Soc. 1898, 73. 265; Bütschli, C. A. 1907. 2223.)

2CaCO<sub>3</sub>, 3K<sub>2</sub>CO<sub>3</sub>+6H<sub>2</sub>O. (Bütschli.)

**Calcium sodium carbonate**, CaNa<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

*Anhydrous*. Decomp. by H<sub>2</sub>O.

+2H<sub>2</sub>O. (Bütschli, C. A. 1907. 2223.)

+5H<sub>2</sub>O. Min. *Gaylussite*. Sparingly sol. in H<sub>2</sub>O.

**Calcium uranyl carbonate**, CaCO<sub>3</sub>, UO<sub>2</sub>CO<sub>3</sub>+20H<sub>2</sub>O.

Min. *Liebigite*. Sol. in HCl+Aq.

+xH<sub>2</sub>O. Decomp. by H<sub>2</sub>O. (Blinkoff, Dissert. 1900.)

2CaO, 4UO<sub>3</sub>, 3CO<sub>2</sub>+24H<sub>2</sub>O. Decomp. by H<sub>2</sub>O. (Blinkoff, Dissert. 1900.)

**Calcium carbonate chloride**, CaCO<sub>3</sub>, CaCl<sub>2</sub>+6H<sub>2</sub>O.

Sol. in H<sub>2</sub>O with immediate decomp. (Fritzsche, J. pr. 83. 213.)

**Cerous carbonate**, Ce<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>+5, and 9H<sub>2</sub>O.

Insol. in H<sub>2</sub>O, and solution of CO<sub>2</sub> in H<sub>2</sub>O. (Vauquelin.)

Somewhat sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq. (Jolin.)

Insol. in neutral salt solutions and neutral alkali carbonates+Aq; easily sol. in SO<sub>3</sub>+Aq. (Berthier, A. ch. (3) 7. 77.)

**Ceric carbonate**, Ce(CO<sub>3</sub>)<sub>2</sub>+½H<sub>2</sub>O.

Precipitate. (Hisinger, A. ch. 94. 108.)

Insol. in H<sub>2</sub>O. Sol. in slight traces in Na<sub>2</sub>CO<sub>3</sub>+Aq; sl. sol. in NaHCO<sub>3</sub>+Aq, and in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq. (Rose.)

**Cerous lanthanum carbonate fluoride**.

Min. *Butnasite*, *Hamartite*, *Hydrofluocerite*. Slowly decomp. by HCl+Aq, easily by H<sub>2</sub>SO<sub>4</sub>.

**Cerous potassium carbonate**, Ce<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>, K<sub>2</sub>CO<sub>3</sub>+3H<sub>2</sub>O.

Ppt. (Jolin.)

Ce<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>, K<sub>2</sub>CO<sub>3</sub>+12H<sub>2</sub>O. Ppt.

Sol. in 30% K<sub>2</sub>CO<sub>3</sub>+Aq. (Meyer, Z. anorg. 1904, 41. 103.)

**ceric potassium carbonate**,  $\text{Ce}_2\text{O}_3(\text{CO}_3)_2$ ,  $4\text{K}_2\text{CO}_3 + 12\text{H}_2\text{O}$ .

*Crystalline*. Sl. sol. in  $\text{H}_2\text{O}$  containing  $\text{CO}_2$ ; sol. in dil.  $\text{H}_2\text{SO}_4$  with decomp. ob, C. R. 1899, 128, 1098.)

**erous sodium carbonate**,  $\text{Ce}_2(\text{CO}_3)_3$ ,  $2\text{Na}_2\text{CO}_3 + 2\text{H}_2\text{O}$ .

Ppt. (Jolin.)  
 $2\text{Ce}_2(\text{CO}_3)_3$ ,  $3\text{Na}_2\text{CO}_3 + 24\text{H}_2\text{O}(?)$ . Ppt. easily decomp. (Meyer, Z. anorg. 1904, 41, 83.)

**chromous carbonate**,  $\text{CrCO}_3$ .

Sol. in much  $\text{H}_2\text{O}$ ; sl. sol. in  $\text{KHCO}_3 + \text{Aq}$ . (Jöberg, J. pr. 44, 328; Moissan, A. ch. (5) 1, 199.)

**chromic carbonate, basic**,  $\text{Cr}_2\text{O}_3, 2\text{CO}_2$ .

Precipitate. (Parkmann, Sill. Am. J. (2) 4, 321.)

$\text{Cr}_2\text{O}_3, \text{CO}_2 + 4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in acids; when freshly pptd. is sol. in  $\text{K}_2\text{CO}_3$ , or  $\text{NH}_4\text{CO}_3 + \text{Aq}$ , and still more sol. in  $\text{KOH} + \text{Aq}$ . (Meissner.)

Insol. in ethyl acetate (Naumann, B. 910, 43, 314); methyl acetate. (Naumann, 3, 1909, 42, 3790.)

$2\text{Cr}_2\text{O}_3, \text{CO}_2 + 6\text{H}_2\text{O}$ . Precipitate. (Langlois, A. ch. (3) 49, 502.)

**chromous potassium carbonate**,

$\text{CrCO}_3, \text{K}_2\text{CO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  when freshly prepared; slowly polymerizes; stable in dry air, decomp. in moist air; sol. in acids with decomp. (Baugé, C. R. 1898, 126, 1568.)

**chromous sodium carbonate**,  $\text{CrNa}_2(\text{CO}_3)_2 + \text{H}_2\text{O}$ .

Decomp. when heated. In Aq. solution, passes into the hydrate containing 10 mols.  $\text{H}_2\text{O}$ . (Baugé, C. R. 1897, 125, 1179.)

+10  $\text{H}_2\text{O}$ . Very sol. in cold  $\text{H}_2\text{O}$ ; Aq. solution decomp. below  $100^\circ$ ; effloresces in the air; sol. in  $\text{HCl} + \text{Aq}$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Baugé, C. R. 1897, 125, 1178.)

**Cobaltous carbonate, basic**,  $5\text{CoO}, 2\text{CO}_2 + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $(\text{NH}_4)_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{NH}_4\text{NO}_3$ , and  $\text{NH}_4\text{Cl} + \text{Aq}$ .

Sol. in cold  $\text{NH}_4\text{NO}_3$ , and  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Brett, 1837.)

Sol. in  $\text{CO}_2 + \text{Aq}$ , and acid alkali carbonates + Aq, from which it is pptd. on boiling. Very sl. sol. in conc.  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3 + \text{Aq}$ ; largely sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , and partly sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Berzelius.)

Not pptd. from solutions containing Na citrate. (Spiller.)

$4\text{CoO}, \text{CO}_2 + 4\text{H}_2\text{O}$ . Ppt. (Beetz.)

+3 $\text{H}_2\text{O}$ . (Meigen, C. C. 1906, I, 1363.)

**Cobaltous carbonate, basic**,  $3\text{CoO}, \text{CO}_2 + 2\text{H}_2\text{O}$ .

(Meigen, C. C. 1906, I, 1363.)

3 $\text{H}_2\text{O}$ . (Rose, Pogg. 84, 551.)

$3\text{CoO}, 2\text{CO}_2 + 4\text{H}_2\text{O}$ . (Bratin, Z. anal. 6, 76.)

$2\text{CoO}, \text{CO}_2 + 3\frac{1}{2}\text{H}_2\text{O}$ . Converted into  $5\text{CoO}, 2\text{CO}_2 + 4\text{H}_2\text{O}$  by  $\text{H}_2\text{O}$ . (Beetz.)

**Cobaltous carbonate,  $\text{CoCO}_3$ .**

*Anhydrous*. Not attacked by cold conc.  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . (Senarmont, A. ch. (3) 30, 129.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 827.)

Min. *Sphaerocobaltite*. Sl. attacked by cold  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ .

+ $\frac{1}{2}\text{H}_2\text{O}$ . Sol. in acids. (Deville, A. ch. (3) 33, 95.)

+6 $\text{H}_2\text{O}$ . (Deville.)

Decomp. by  $\text{H}_2\text{O}$  with formation of a basic carbonate. (Berzelius.)

**Cobaltous potassium carbonate**,  $\text{CoCO}_3, \text{K}_2\text{CO}_3 + 4\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Deville, A. ch. (3) 33, 90.)

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Reynolds, Chem. Soc. 1898, 73, 264.)

$\text{CoCO}_3, \text{KHCO}_3 + 4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Deville.)

**Cobaltous sodium carbonate**,  $\text{CoCO}_3, \text{Na}_2\text{CO}_3 + 4\text{H}_2\text{O}$ , and  $10\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Deville, A. ch. (3) 33, 75.)

**Cupric carbonate, basic.**

The compounds produced by pptn. of copper solutions by carbonates are unstable and possess varying solubilities in solutions of  $\text{CO}_2$ . On treatment with solutions of  $\text{CO}_2$ , these substances pass over into an apparently stable compound possessing a definite solubility in solutions of  $\text{CO}_2$  of definite concentration, which solubility increases with the concentration of  $\text{CO}_2$ . Solubility of this compound in various salts + Aq is recorded. (Free, J. Am. Chem. Soc. 1908, 30, 1374.)

$8\text{CuO}, \text{CO}_2 + 5\text{H}_2\text{O}$ . (Deville, A. ch. (3) 33, 75.)

$6\text{CuO}, \text{CO}_2$ . (Field, Chem. Soc. 14, 70.)

$3\text{CuO}, \text{CO}_2 + 2\text{H}_2\text{O}$ . (Favre, A. ch. (3) 10, 119.)

$5\text{CuO}, 2\text{CO}_2 + 6\text{H}_2\text{O}$ . (Struve.)

$2\text{CuO}, \text{CO}_2 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids, even  $\text{H}_2\text{SO}_4 + \text{Aq}$ ; sl. sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ , 30,720 pts. of the solution containing 1 pt.  $\text{CuO}$ . (Jahn.) Sol. in 4690 pts.  $\text{H}_2\text{CO}_3 + \text{Aq}$  sat. at 4-6 atmos. pressure. (Wagner.) Sol. in 3833 pts. sat.  $\text{H}_2\text{CO}_3 + \text{Aq}$ . (Lassaigne, J. ch. méd. 4, 312.)

Sol. in  $\text{NH}_4$  salts + Aq. Partially sol. in  $\text{Na}_2\text{CO}_3$ , or  $\text{K}_2\text{CO}_3 + \text{Aq}$ , and more sol. in

**NaHCO<sub>3</sub>**, or **KHCO<sub>3</sub>** + Aq; sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq. (Favre, A. ch. (3) 10. 18.)

Less sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq than CuO in NH<sub>4</sub>OH + Aq. (Thomson, 1831.) Sol. in KCN + Aq. (Berzelius.) Sol. in NH<sub>4</sub>Cl, or NH<sub>4</sub>NO<sub>3</sub> + Aq. (Brett.)

Sol. in ferric salts with pptn. of Fe<sub>2</sub>O<sub>3</sub>H<sub>2</sub>.

Insol. in liq. NH<sub>3</sub>. (Franklin and Kraus, Am. Ch. J. 1898, 20. 827.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

Sol. in ethyl amine carbonate + Aq. (Wurtz.)

Sol. in cane sugar + Aq. (Peschier, Repert. 1820, 6. 85.)

Not pptd. from solutions containing sodium citrate. (Spiller.)

Insol. in pyridine. (Schroeder, Dissert. 1901.)

Min. *Malachite*. Sol. in acids, and NH<sub>4</sub>OH + Aq.

+ 2H<sub>2</sub>O. (Favre.)

8CuO, 5CO<sub>2</sub> + 7H<sub>2</sub>O. (Gröger, Z. anorg. 1900, 24. 137.)

3CuO, 2CO<sub>2</sub> + H<sub>2</sub>O. Insol. in H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH + Aq, also in hot conc. NaHCO<sub>3</sub> + Aq.

Min. *Azurite*.

**Copper potassium carbonate, basic**, 8CuO, 2K<sub>2</sub>CO<sub>3</sub>, 7CO<sub>2</sub> + 17H<sub>2</sub>O.

Ppt.; decomp. by H<sub>2</sub>O. (Gröger, B. 1901, 34. 430.)

Mixture. (Wood and Jones, C. A. 1907. 2667.)

5CuO, 4CO<sub>2</sub>, K<sub>2</sub>CO<sub>3</sub> + 10H<sub>2</sub>O. Decomp. by H<sub>2</sub>O. (Deville, A. ch. (3) 33. 102.)

**Cupric potassium carbonate**, CuCO<sub>3</sub>, K<sub>2</sub>CO<sub>3</sub>.

Decomp. by H<sub>2</sub>O. (Wood and Jones, C. A. 1907. 2667.)

+ H<sub>2</sub>O. (Wood and Jones.)

+ 4H<sub>2</sub>O. Decomp. by H<sub>2</sub>O. (Reynolds, Chem. Soc. 1898, 73. 263.)

Could not be obtained. (Wood and Jones.)

2CuCO<sub>3</sub>, K<sub>2</sub>CO<sub>3</sub> + 4H<sub>2</sub>O. Decomp. by H<sub>2</sub>O. (Wood and Jones.)

**Cupric sodium carbonate**, CuCO<sub>3</sub>, Na<sub>2</sub>CO<sub>3</sub>.

Not decomp. by cold H<sub>2</sub>O. (Debray, C. R. 49. 218.)

+ 3H<sub>2</sub>O.

**Cupric zinc carbonate**, 2CuO, 3ZnO, 2CO<sub>2</sub> + 3H<sub>2</sub>O, or 3CuO, 9ZnO, 4CO<sub>2</sub> + 8H<sub>2</sub>O.

Min. *Aurichalcite*. Easily sol. in HCl + Aq.

**Cupric carbonate ammonia (cuprammonium carbonate)**, CuCO<sub>3</sub>, 2NH<sub>3</sub>.

Decomp. by H<sub>2</sub>O. Insol. in alcohol and ether. Sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq. (Favre, A. ch. (3) 10. 116.)

**Didymium carbonate**, Di<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub> + H<sub>2</sub>O, 6H<sub>2</sub>O.

Insol. in H<sub>2</sub>O. Only traces dissolve in CO<sub>2</sub> + Aq. Insol. in solutions of alkali carbonates or bicarbonates + Aq. (Marignac, A. ch. (3) 38. 166.) Very sl. sol. in conc. NH<sub>4</sub>Cl + Aq. (Rose.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+ 8H<sub>2</sub>O. (Cleve, Bull. Soc. (2) 43. 363.)

**Didymium potassium carbonate**, Di<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>, K<sub>2</sub>CO<sub>3</sub> + 4H<sub>2</sub>O.

Insol. in H<sub>2</sub>O. (Cleve, Bull. Soc. (2) 43. 363.)

+ 12H<sub>2</sub>O. (Cleve.)

**Didymium sodium carbonate**, 2Di<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>, 3Na<sub>2</sub>CO<sub>3</sub> + 9H<sub>2</sub>O.

Ppt. (Cleve.)

Di<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>, 2Na<sub>2</sub>CO<sub>3</sub> + 8H<sub>2</sub>O. Ppt. (Cleve.)

**Dysprosium carbonate**, Dy<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub> + 4H<sub>2</sub>O.

Insol. in H<sub>2</sub>O. (Jantsch, B. 1911, 44. 1277.)

**Erbium carbonate**, Er<sub>2</sub>O<sub>3</sub>, 2CO<sub>2</sub> + 2H<sub>2</sub>O.

Insol. in H<sub>2</sub>O. (Höglund.)

**Erbium sodium carbonate**, Er<sub>2</sub>(CO<sub>3</sub>)<sub>3</sub>, 5Na<sub>2</sub>CO<sub>3</sub> + 36H<sub>2</sub>O.

Efflorescent. Decomp. by H<sub>2</sub>O.

**Gadolinium carbonate, basic**, Gd(OH)CO<sub>3</sub> + H<sub>2</sub>O.

Ppt. (Benedicks, Z. anorg. 1900, 22. 417.)

**Glucinum carbonate, basic**, 3GdO, CO<sub>2</sub>; 4GdO, CO<sub>2</sub>; 5GdO, CO<sub>2</sub> + 5H<sub>2</sub>O, etc.

Not perceptibly sol. in H<sub>2</sub>O or H<sub>2</sub>CO<sub>3</sub> + Aq. Decomp. by boiling H<sub>2</sub>O. Easily sol. in acids. Sol. in NH<sub>4</sub> salts, and KOH, or NaOH + Aq. Sol. in alkali carbonates, especially (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq. (Vauquelin.) Sl. sol. in K<sub>2</sub>CO<sub>3</sub> + Aq. When solution in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> is boiled, a more basic carbonate is pptd. (Rose.)

**Glucinum carbonate**, GdCO<sub>3</sub> + 4H<sub>2</sub>O.

Efflorescent. Sol. in 278 pts. H<sub>2</sub>O. (Klatso, J. pr. 106. 242.)

Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20. 828.)

No definite carbonate of glucinum exists. (Cameron, J. phys. Chem. 1908, 12. 572.)

um potassium carbonate,  $3\text{LiCO}_3$ ,  $5\text{FeCO}_3$ .

ly sol. in  $\text{H}_2\text{O}$ , but decomp. by boiling. y.) Less easily sol. in alcohol.

carbonate,  $\text{In}_2(\text{CO}_3)_3$ .

Insol. in  $\text{K}_2\text{CO}_3$ , or  $\text{Na}_2\text{CO}_3 + \text{Aq}$ .  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Winkler, J. pr.

erric) carbonate, basic.

$\text{O}_3$ ,  $\text{CO}_2 + 12\text{H}_2\text{O}$ . (Wallace, Chem. 158. 410.)

$\text{O}_3$ ,  $\text{CO}_2 + 4\text{H}_2\text{O}$ , and  $8\text{H}_2\text{O}$ . (Barrat, l. 110.)

$\text{I}_2\text{O}_3$ . (Wallace.)

$\text{O}_3$ ,  $\text{CO}_2 + 1\frac{1}{2}\text{H}_2\text{O}$ . (Rother, Pharm. is. (3) 4. 576.)

$\text{I}_2$ ,  $\text{CO}_2$ . (Parkmann, Sill. Am. J. (2) ..)

and other similar basic salts are ppts., decomp. on standing into  $\text{Fe}_2\text{O}_3\text{H}_2$ .

errous) carbonate,  $\text{FeCO}_3$ .

l. in  $\text{H}_2\text{O}$ .

in acids, even in  $\text{H}_2\text{CO}_3 + \text{Aq}$ .

Carbonate, ferrous hydrogen.

. *Siderite*, *Spathic ore*. Sl. attacked by

ds. Sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$  under pressure.

l. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Brett.)

$\text{O}_3$ . Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in acids;

$\text{H}_2\text{CO}_3 + \text{Aq}$ .

in  $\text{NH}_4\text{Cl} + \text{Aq}$ . Sol. in ferric salts + Aq

olution of  $\text{CO}_2$ , and pptn. of  $\text{Fe}_2\text{O}_3\text{H}_2$ .

ble in an aqueous solution of cane sugar.

lability in salts + Aq free from  $\text{CO}_2$ .

(Ehlert, Z. Elektrochem. 1912, 18. 728.)

A bicarbonate of ferrous iron is not formed under pressures of  $\text{CO}_2$  up to 5 atmospheres at  $0^\circ$ . (Cameron, J. phys. Chem. 1908, 12. 571.)

Iron (ferrous) magnesium carbonate,  $\text{FeCO}_3$ ,  $\text{MgCO}_3$ .

Min. *Pistomesite*.

$\text{FeCO}_3$ ,  $2\text{MgCO}_3$ . Min. *Mesitile*.

Iron (ferrous) potassium carbonate,

$\text{FeK}_2(\text{CO}_3)_2 + 4\text{H}_2\text{O}$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Reynolds, Chem. Soc. 1898, 73. 265.)

Lanthanum carbonate,  $\text{La}_2(\text{CO}_3)_3 + \text{H}_2\text{O}$ ,  $3\text{H}_2\text{O}$ , and  $8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ .  $\text{CO}_2 + \text{Aq}$  dissolves traces.

Insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ .

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Min. *Lanthanite*.

**Lanthanum potassium carbonate**,  $\text{La}_2(\text{CO}_3)_3$ ,  $\text{K}_2\text{CO}_3 \cdot 12\text{H}_2\text{O}$ .

Sol. in 30%  $\text{K}_2\text{CO}_3$  + Aq. (Meyer, Z. anorg. 1904, 41. 101.)

**Lanthanum sodium carbonate**,  $2\text{La}_2(\text{CO}_3)_3$ ,  $3\text{Na}_2\text{CO}_3 \cdot 20\text{H}_2\text{O}(?)$ .

Ppt. Easily decomp. (Meyer, Z. anorg. 1904, 41. 102.)

**Lead carbonate, basic**,  $2\text{PbCO}_3$ ,  $\text{PbO} \cdot \text{H}_2$ ;  $5\text{PbCO}_3$ ,  $3\text{PbO} \cdot \text{H}_2$ ;  $3\text{PbCO}_3$ ,  $\text{PbO} \cdot \text{H}_2$ ;  $5\text{PbCO}_3$ ,  $\text{PbO} \cdot \text{H}_2$ .

*White Lead*. Insol. in  $\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{CO}_3$  + Aq, even under pressure. Sol. in dil., insol. in conc.  $\text{KOH}$  + Aq. Insol. in normal, or acid alkali carbonates + Aq. (Böttger.)

Sol. in cold dil.  $\text{NH}_4\text{Cl}$  + Aq. (Brett.)  $\text{PbCO}_3$ ,  $\text{PbO} \cdot \text{H}_2$ . Very sl. sol. in  $\text{H}_2\text{O}$ . (Yorke.)

$2\text{PbCO}_3$ ,  $\text{PbO} \cdot \text{H}_2$ .

Solubility is less than 0.0002 millimol Pb in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$ . (Pleissner, C. C. 1907, II. 1056.)

When not exposed to air, sol. in 32,000 pts.  $(\text{NH}_4)_2\text{SO}_4$  + Aq (0.2 g. per l.); 26,000 pts.  $\text{KNO}_3$  + Aq (0.2 g. per l.); 23,000 pts.  $\text{CaCl}_2$  + Aq (0.2 g. per l.); 4600 pts.  $\text{NH}_4\text{NO}_3$  + Aq (0.2 g. per l.); 4300 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$ .

When exposed to air in beakers, sol. in 43,000 pts.  $(\text{NH}_4)_2\text{SO}_4$  + Aq (0.2 g. per l.); 43,000 pts.  $\text{KNO}_3$  + Aq (0.2 g. per l.); 26,000 pts.  $\text{CaCl}_2$  + Aq (0.2 g. per l.); 26,000 pts.  $\text{NH}_4\text{NO}_3$  + Aq (0.2 g. per l.); 4300 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  (0.2 g. per l.). (Muir, Chem. Soc. 31. 664.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

$3\text{PbO}$ ,  $4\text{Pb}(\text{CO}_3)_2 + 2\text{H}_2\text{O}$ . Ppt. (Strömholm, Z. anorg. 1904, 38. 446.)

**Lead carbonate,  $\text{PbCO}_3$** .

Sol. in 50,551 pts.  $\text{H}_2\text{O}$  at ordinary temp.

Sol. in 23,450 pts.  $\text{H}_2\text{O}$  with little ammonium acetate, carbonate, and free ammonia; and in somewhat less  $\text{H}_2\text{O}$ , containing much ammonium nitrate with carbonate and free ammonia. (Fresenius, A. 59. 124.)

Calculated from electrical conductivity of  $\text{PbCO}_3$  + Aq, 1 l.  $\text{H}_2\text{O}$  dissolves 3 mg.  $\text{PbCO}_3$  at  $10^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

Solubility is 0.0002 millimol. Pb in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$ . (Pleissner, C. C. 1907, II. 1056.)

Sl. sol. in  $\text{H}_2\text{O}$ .  $1.5 \times 10^{-1}$  g. are contained in 1 l. of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46. 604.)

Easily sol. in acids, even  $\text{HC}_2\text{H}_3\text{O}_2$ ; but not decomp. by conc.  $\text{HNO}_3$  + Aq on account of insolubility of  $\text{Pb}(\text{NO}_3)_2$  in  $\text{HNO}_3$  + Aq. Insol. in a mixture of 1 pt.  $\text{H}_2\text{SO}_4$  and 6 pts. absolute alcohol, or in an alcoholic solution of racemic or tartaric acids.

Insol. in  $\text{H}_2\text{CO}_3$  + Aq. (Jahn, A. 23. 11) Very sl. sol. in  $\text{H}_2\text{CO}_3$  + Aq, but solution prevented by traces of various salts. (Tnerman.) Sol. in 7144 pts. sat.  $\text{H}_2\text{CO}_3$  + (Lassaigne, J. ch. méd. 4. 312.)  $\text{H}_2\text{O}$  sat. w  $\text{CO}_2$  under 4-6 atmos. pressure dissolves o traces of Pb; 1000 pts. of solution contain 0.5 pt.  $\text{PbCO}_3$ . (Wagner, Z. anal. 6. 167.

Solubility of  $\text{PbCO}_3$  in  $\text{H}_2\text{CO}_3$  + Aq at :

mg. per l.	
$\text{CO}_2$	$\text{PbCO}_3$
0	1.75
2.8	6
5.4	7
14.4	8.2
26	9.9
43.5	10.9
106	15.4

(Pleissner, C. C. 1907, II. 1056.)

Sol. in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$  + Aq, and  $\text{NH}_4\text{Cl}$  + (Weppen, 1837.) Sol. in  $\text{KOH}$  + Aq; not solutely insol. at ord. temp. in an excess  $\text{K}_2\text{CO}_3$ , or  $\text{Na}_2\text{CO}_3$  + Aq, and still more sol  $100^\circ$ ; but absolutely insol. in  $\text{NaHCO}_3$ , or  $(\text{NH}_4)_2\text{CO}_3$  + Aq. (Rose.) In in  $\text{NH}_4\text{OH}$  + Aq; sol. in  $\text{KOH}$  or  $\text{NaOH}$  + decomp. by boiling  $\text{Ca}(\text{NO}_3)_2$  + Aq. (Be lius.)

Sl. decomp. (Persoz), not at all decomp. (Malaguti) by alkali sulphates + Aq.

Partially decomp. by boiling with  $\text{K}_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{CaSO}_4$ ,  $\text{Mg}$ ,  $\text{Na}_2\text{HPO}_4$ ,  $\text{NaNH}_2\text{HPO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $\text{Na}_2\text{B}_4\text{O}_7$ ,  $\text{K}_2\text{Al}$ ,  $\text{Na}_2\text{AsO}_4$ ,  $\text{K}_2\text{C}_2\text{O}_4$ ,  $\text{Na}_2\text{C}_2\text{O}_4$ ,  $\text{NaF}$ ,  $\text{K}_2\text{CrO}_4$  + Aq. With the  $\text{NH}_4$  salts, decomp. is complete. (Dulong, A. ch. 290.)

Easily sol. in hot  $\text{NH}_4\text{Cl}$  + Aq. (Br Rose.)

When 1 mol.  $\text{PbCO}_3$  is boiled with 1 :  $\text{K}_2\text{C}_2\text{O}_4$ , 15% of the  $\text{PbCO}_3$  is decomp.; v 1 mol.  $\text{K}_2\text{CO}_3$ , 93.28% is decomp. (Mal guti.)

Not decomp. by  $\text{K}_2\text{SO}_4$  + Aq. (Rose.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. J. 1898, 20. 828.)

Sol. in an aqueous solution of aceta (Mercer, 1844.)

Insol. in methyl acetate. (Naumann, 1909, 42. 3790.)

Not pptd. in presence of Na citra (Spiller.)

Min. (erussile.)

**Lead sodium carbonate**,  $4\text{PbCO}_3$ ,  $\text{Na}_2\text{CO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (Berselius, Pogg. 47. 19

**Lead carbonate bromide**,  $\text{PbCO}_3$ ,  $\text{PbBr}_2$ .

Insol. in  $\text{H}_2\text{O}$ . (Storer's Dict.)

**rbonate chloride**,  $\text{PbCO}_3$ ,  $\text{PbCl}_2$ .  
in  $\text{H}_2\text{O}$ . (Miller, Chem. Soc. (2) 8.

*Phosgenite*. Easily sol. in acids.

**rbonate iodide**,  $\text{PbCO}_3$ ,  $\text{PbI}_2$ .  
in  $\text{H}_2\text{O}$ . (Poggiale.)

**rbonate sulphate**,  $\text{PbCO}_3$ ,  $\text{PbSO}_4$ .  
*Lanarkite*. Sol. in  $\text{HNO}_3$  + Aq with  
of  $\text{PbSO}_4$ .  
 $\text{O}_3$ ,  $\text{PbSO}_4$ . Min. *Leadhillite*. As

**carbonate**,  $\text{Li}_2\text{CO}_3$ .

ts.  $\text{H}_2\text{O}$  dissolve 1 pt.  $\text{Li}_2\text{CO}_3$ . (Vau-  
A. ch. 7. 284.)

pts.  $\text{H}_2\text{O}$  at  $13^\circ$  dissolve 0.769 pt.  
at  $102^\circ$ , 0.778 pt.  $\text{Li}_2\text{CO}_3$ . (Kremers,  
3. 48.)

ts.  $\text{H}_2\text{O}$ , cold or hot, dissolve 1.2 pts.  
(Troost, A. ch. (3) 51. 103.)

ts.  $\text{H}_2\text{O}$  dissolve 1.4787 pts. at  $15^\circ$ ,  
t. at  $100^\circ$ . (Draper, C. N. 55. 169.)

ts.  $\text{H}_2\text{O}$  dissolve pts.  $\text{Li}_2\text{CO}_3$  at  $t^\circ$ .

Pts. $\text{Li}_2\text{CO}_3$	$t^\circ$	Pts. $\text{Li}_2\text{CO}_3$
1.539	75	0.866
1.406	100	0.728
1.329	102	0.796
1.181	...	...

pt. is dissolved at  $102^\circ$  in less than  
and 0.955 in 1 hour. (Beketow, J.  
c. 1884. 591.)

solution at  $15^\circ$  has sp. gr. 1.014, and  
1 g.  $\text{Li}_2\text{CO}_3$  to 70 g.  $\text{H}_2\text{O}$ , while solu-  
at  $0^\circ$  has sp. gr. 1.0168 and contains  
 $\text{CO}_2$  in 64.6 g.  $\text{H}_2\text{O}$ . By long spon-  
evaporation at  $15^\circ$  a solution can  
ined of 1.0278 sp. gr. containing 1 g.  
in 45.57 g.  $\text{H}_2\text{O}$ . (Flückiger, Arch.  
(3) 25. 549.)

illing for an instant with  $\text{H}_2\text{O}$  a solu-  
btained, which has sp. gr. 1.0074 and  
1 g.  $\text{Li}_2\text{CO}_3$  to 139 g.  $\text{H}_2\text{O}$ . (Flücki-  
h. Pharm. (3) 26. 543.)

7 mol. is sol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ . (Roth-  
Z. phys. Ch. 1909, 69. 531.)

$\text{Li}_2\text{CO}_3$  + Aq contains at:

$15^\circ$        $75^\circ$   
723      0.833% by wt.  $\text{Li}_2\text{CO}_3$ .

chugæff, Z. anorg. 1914, 86. 159.)

solution boils at  $102^\circ$ . (Kremers.)

sol. in  $\text{CO}_2$  + Aq than in  $\text{H}_2\text{O}$ . 100

pts. sat.  $\text{CO}_2$  + Aq dissolve 5.25 pts.  $\text{Li}_2\text{CO}_3$ .  
(Troost.) See  $\text{LiHCO}_3$ .  
Sol. in  $\text{NH}_4$  salts + Aq.

Solubility in salts + Aq at  $25^\circ$ .

C = concentration of salt solution in g.-  
equiv. per l.

In a solution near the saturation point and in equilibrium with atmospheric air upwards of 50 per cent of the magnesium is in the form of the normal carbonate. When the solution is brought in contact with the solid phase, the proportion of the base combined as normal carbonate falls to about 34 per cent, or lower. (Cameron and Briggs, J. phys. Chem. 1901, 5. 552-3.)

For solubility in  $\text{H}_2\text{CO}_3 + \text{Aq}$ , see *Magnesium hydrogen carbonate*.

Scarcely acted upon by  $\text{HCl} + \text{Aq}$ . (Senarmont.)

The solubility of  $\text{MgCO}_3$  in  $\text{NaCl} + \text{Aq}$  when in contact with ordinary air increases with increasing concentration of  $\text{NaCl}$  up to a maximum, and then decreases. (Cameron and Seidell, J. phys. Chem. 1903, 7. 579.)

Solubility of  $\text{MgCO}_3$  in salts +  $\text{Aq}$  in equilibrium with an atmosphere free from  $\text{CO}_2$ .

$\text{NaCl} + \text{Aq}$ ;  $t = 23^\circ$ .

The solubility of  $\text{MgCO}_3$  in  $\text{CO}_2$ -free w is increased by the addition of  $\text{NaCl}$ ,  $\text{Na}$  or  $\text{Na}_2\text{SO}_4, 10\text{H}_2\text{O}$  but decreased by the a tion of  $\text{Na}_2\text{CO}_3$  or  $\text{MgCl}_2, 6\text{H}_2\text{O}$ .

(Gothe, Ch. Z. 1915, 39. 306.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. J. 1898, 20. 828.)

Insol. in acetone. (Naumann, B. 1 37. 4329.)

Insol. in acetone and in methylal. (I mann, C. C. 1899, II. 1014.)

Insol. in methyl acetate (Naumann, 1909, 42. 3790); ethyl acetate. (Naum B. 1904, 37. 3601.)

Min. *Magnesite*. Very sl. attacked warm conc.  $\text{HCl} + \text{Aq}$ . 100 pts.  $\text{H}_2\text{O}$  diss 0.0027 pt., calculated as  $\text{MgO}$ . (Lubavin Solution in  $\text{H}_2\text{O}$  contains 0.018 g.  $\text{Mg}$  0.065 g.  $\text{CO}_2$  per l. at  $20^\circ$ . (Wells, J. Chem. Soc. 1915, 37. 1705.)

Solution in  $\text{H}_2\text{O}$  containing 27.2 g.  $\text{N}$  per l. contains 0.028 g.  $\text{Mg}$  and 0.086 g. per l. at  $20^\circ$ . (Wells, J. Am. Chem. 1915, 37. 1705.)

+  $\text{H}_2\text{O}$ .  
+  $2\text{H}_2\text{O}$ . Decomp. by suspension in l into basic salt. (Engel, C. R. 100. 911.)

+  $3\text{H}_2\text{O}$ . Small quantities of this salt wholly dissolved by much  $\text{H}_2\text{O}$ . (Bineau

The solution contains in 100 pts. at—

$0^\circ$  6.5° 8° 16°  
0.15 0.153 0.155 0.179 pts.  $\text{MgCO}_3 + 3\text{H}$   
(Norgaard, 1850.)

Decomp. by boiling  $\text{H}_2\text{O}$  into a basic in salt and  $\text{CO}_2$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 0.1 pt. at  $19^\circ$ . (Fritzsche, Pogg. 37. 304.)

Sol. in 48 pts.  $\text{H}_2\text{O}$ , and decomp. by l amt. (Fourcroy.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.1518 pt. at  $19^\circ$  sol. in 658 pts.  $\text{H}_2\text{O}$  at  $19^\circ$ . (Beckurts, J. 1881. 212.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.0812 pt., calcula as  $\text{MgO}$ . (Lubavin, J. russ. Soc. 24. 389.)

Solution in  $\text{H}_2\text{O}$  contains 0.36 g.  $\text{Mg}$  1.01 g.  $\text{CO}_2$  per l. at  $20^\circ$ . (Wells, J. Chem. Soc. 1915, 37. 1707.)

Solubility in  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  has b determined at  $20^\circ, 25^\circ, 30^\circ, 34^\circ$  and  $39^\circ$

at  $\text{CO}_2$  pressures corresponding with 0.5 to 30.3%  $\text{CO}_2$  in the gas phase. (Leather and Sen, Chem. Soc. 1915, 108 (2) 13.)

Easily sol. in acids, even when dil.

Not decomp. by 1 pt.  $\text{H}_2\text{SO}_4$  + 6 pts. alcohol, or by alcoholic solutions of glacial acetic, racemic, or tartaric acids, but is slowly decomp. by alcoholic solution of citric acid, or  $\text{HNO}_3$  + abs. alcohol. (Butini, 1827.)

100 pts.  $\text{NaCl}$  + Aq (2.525%) dissolve 1.1250 pt., calculated as  $\text{MgO}$ . (Lubavin.)

1%  $\text{Na}_2\text{CO}_3$  + Aq, when mixed with 1%  $\text{MgSO}_4$  + Aq, cause no ppt., but 1.5–2% solutions ppt. this salt. (Brandes, 1825.)

More sol. in  $\text{NH}_4\text{Cl}$  + Aq than  $\text{CaCO}_3$ . Sol. in  $\text{NH}_4\text{NO}_3$  + Aq, but less easily than in  $\text{NH}_4\text{Cl}$  + Aq.

Solubility in  $\text{KHCO}_3$  + Aq at  $t^\circ$ .

Values are given in mol./litre.

The experiments were performed in such a way as to prevent, as far as possible, loss of  $\text{CO}_2$  from the solutions.

(Auerbach, Z. Elektrochem. 1904, 10. 164.)

1 l.  $\text{H}_2\text{O}$ , containing 6%  $\text{MgSO}_4 + 7\text{H}_2\text{O}$  and

a little  $\text{NaCl}$ , dissolves 5 g.  $\text{MgCO}_3$ . (Hunt, Sill. Am. J. (2) 42. 49.)

More sol. in cold alkali borates + Aq than in hot. (Wittstein.)

Sol. in  $\text{Na}$  citrate + Aq.

+  $4\text{H}_2\text{O}$ . Efflorescent.

+  $5\text{H}_2\text{O}$ . Two modifications.

$\alpha$ . Plates. Sol. in 600 pts.  $\text{H}_2\text{O}$  at  $0-7^\circ$ ; solution gradually separates out  $\text{MgCO}_3 + 2\text{H}_2\text{O}$ .  $\text{H}_2\text{CO}_3$  + Aq sat. at 3–4 atmos. pressure dissolves 9% at  $0-4^\circ$ .  $\text{MgSO}_4$  + Aq dissolves 4% moist salt at  $3-4^\circ$ , and it is easily sol. in  $\text{Na}_2\text{CO}_3$ , or  $\text{NaHCO}_3$  + Aq. (Norgaard.)

$\beta$ . Prisms. More efflorescent than  $\alpha$ . Sol. in 600 pts.  $\text{H}_2\text{O}$  but not in  $\text{MgSO}_4$ , or  $\text{Na}_2\text{CO}_3$  + Aq. Both forms are decomp. by boiling  $\text{H}_2\text{O}$ . (Norgaard.)

**Magnesium hydrogen carbonate,**  
 $\text{MgH}_2(\text{CO}_3)_2(?)$ .

Known only in solution.

1 l.  $\text{H}_2\text{CO}_3$  + Aq sat. at 1 atmos. pressure dissolves 23.5 g.  $\text{MgCO}_3$ . (Bineau.)

1 l. carbonic acid water dissolves 0.115 g. magnesite at  $18^\circ$  and 0.75 m. pressure. (Cossa, B. 2. 697.)

1 pt.  $\text{MgOC}$ , dissolves in  $\text{H}_2\text{O}$  saturated with  $\text{CO}_2$  at  $5^\circ$  and a pressure of—

1	2	3	4	5	6 atmospheres
in 161	144	134	100.7	110	76 pts. $\text{H}_2\text{O}$

(Merkel, Techn. J. B. 1867. 213.)

$\text{H}_2\text{CO}_3$  + Aq sat. at 3–4 atmos. pressure and  $0-4^\circ$  dissolved 9%  $\text{MgCO}_3 + 5\text{H}_2\text{O}$ . (Norgaard.)

$\text{MgCO}_3 + 3\text{H}_2\text{O}$  is sol. in 72.4 pts.  $\text{H}_2\text{CO}_3$  + Aq sat. at  $20^\circ$  and ord. pressure; 30.5 pts.  $\text{H}_2\text{CO}_3$  + Aq sat. at 2 atmos. pressure; 26.0 pts.  $\text{H}_2\text{CO}_3$  + Aq sat. at 3 atmos. pressure; 21.1 pts.  $\text{H}_2\text{CO}_3$  + Aq sat. at 4 atmos. pressure; 17.09 pts.  $\text{H}_2\text{CO}_3$  + Aq sat. at 5 atmos. pressure. (Beckurts, J. B. 1881. 212.)

1.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  at p pressure and  $t^\circ$  dissolves g.  $\text{MgCO}_3$ .

p atmos.	$t^\circ$	K. $\text{MgCO}_3$	p mm.	$t^\circ$	K. $\text{MgCO}_3$
1.0	19.5	27.79	751	13.4	28.45
2.1	19.5	33.11	760	19.5	25.79
3.2	19.7	37.3	762	29.3	21.95
4.7	19.0	43.5	764	46	15.7
5.6	19.2	46.2	764	62	10.4
6.2	19.2	48.51	765	70	8.1
7.5	19.5	51.2	765	82	4.9
9.0	18.7	56.53	765	91	2.4
...	...	...	765	100	0.0

(Engel and Ville, C. R. 93. 34.)

The low figures of other observers are due to their using basic carbonates. By very careful experiments it was found that 1 l.  $\text{H}_2\text{O}$

sat. with  $\text{CO}_2$  at 1 atmos. pressure and  $t^\circ$  dissolved the following amts. of  $\text{MgCO}_3$ :

$t^\circ$	$\% \text{CO}_2$	$t^\circ$	$\% \text{MgCO}_3$	$t^\circ$	$\% \text{MgCO}_3$
3.5	35.6	18	22.1	40	22.1
12	26.5	30	15.8	50	9.5

(Engel, C. R. 100. 444.)

1.9540 g. are sol. in 1 l.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Treadwell and Reuter, Z. anorg. 1898, 17. 202.)

$\text{MgH}_2(\text{CO}_3)_2$  is not stable except in the presence of free  $\text{CO}_2$ .

At  $15^\circ$  and 760 mm., a solution having the partial pressure of  $\text{CO}_2=0$ , contains 1.9540 g.  $\text{MgH}_2(\text{CO}_3)_2$  and 0.7156 g.  $\text{MgCO}_3$  per liter. (Treadwell and Reuter, Z. anorg. 1898, 17. 204.)

Solubility of  $\text{MgH}_2(\text{CO}_3)_2$  in  $\text{H}_2\text{O}$  containing carbonic acid, at  $15^\circ$ .

% carbonic acid in the gas at $0^\circ$ and 760 mm.	partial pressure mm. Hg	mg. free $\text{CO}_2$	mg. $\text{MgH}_2(\text{CO}_3)_2$ in 100 cc. of the solution	mg. $\text{MgCO}_3$ in 100 cc. of the solution	mg. Mg

Strength of $\text{Na}_2\text{SO}_4 + \text{Aq}$	g. $\text{Mg}(\text{HCO}_3)_2$ in 100 cc
0.0	1.463
12%	1.916
saturated	1.612

(Cameron and Seidell.)

**Magnesium potassium carbonate,**  
 $\text{MgK}_2(\text{CO}_3)_2 + 4\text{H}_2\text{O}$ .

Quickly decomp. by cold  $\text{H}_2\text{O}$ . (Deville, ch. (3) 33. 87.)

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Reynolds, Ch. Soc. 1898, 73, 264.)

$\text{MgKH}(\text{CO}_3)_2 + 4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , decomp. thereby into an insol. basic  $\text{Mg}$  carbonate, and  $\text{MgH}_2(\text{CO}_3)_2$  and  $\text{KHCO}_3$ , which dissolve. (Berzelius.)

**Magnesium rubidium hydrogen carbonate,**  
 $\text{MgRbH}(\text{CO}_3)_2 + 4\text{H}_2\text{O}$ .

Decomp. in the air. (Erdmann, A. 18294. 75.)

**Magnesium sodium carbonate,  $\text{MgCO}_3$ ,  $\text{Na}_2\text{CO}_3$ .**

Quickly decomp. with  $\text{H}_2\text{O}$ . (Deville, ch. (3) 33. 89.)  
 $+ 15\text{H}_2\text{O}$ . (Norgaard.)

**Magnesium sodium carbonate sodium chloride,  $\text{MgCO}_3$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{NaCl}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (de Schulten, C. 1896, 122. 1427.)

**Manganous carbonate,  $\text{MnCO}_3$ .**

Permanent. Practically insol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$  and in acids generally.

1 l.  $\text{H}_2\text{O}$  dissolves 0.065 g. at  $25^\circ$ . (Ag and Valla, Att. Accad. Linc. 1911, 20, II. 7.)  
Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. J. 1898, 20. 828.)

Insol. in ethyl acetate. (Naumann, 1910, 43. 314.)

Min. *Rhodochrosite*.

$+ \frac{1}{2}$ , or  $1\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. Sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ . 1 pt.  $\text{Mn}$  requires 2000 pts.  $\text{H}_2\text{CO}_3 + \text{Aq}$  for soluti

(Lassaigne.) Sol. in 7680 pts.  $H_2O$ , and 3840 pts.  $H_2O$  containing  $CO_2$ . (Jahn.) When freshly precipitated is sol. in  $NH_4$  salts + Aq. (Wittstein.) Not more sol. in  $H_2O$  containing  $Na_2CO_3$  or  $K_2CO_3$  than in pure  $H_2O$ . (Ebelmen.) Insol. in  $NH_4Cl$ , or  $NH_4NO_3$  + Aq. (Brett.)

Sol. in ferric salts + Aq, with evolution of  $CO_2$  and pptn. of  $Fe_2O_3 \cdot H_2O$ . (Fuchs.)

Not pptd. in presence of Na citrate. (Spiller.)

#### Manganous potassium carbonate,

Ppt. Decomp. by  $H_2O$  alone.

Sl. sol. in  $Mn(C_2H_3O_2)_2$  + Aq or  $K_2CO_3$  + Aq. (Reynolds, Chem. Soc. 1898, 73. 264.)

#### Manganous carbonate hydroxylamine,

Ppt. Sol. in acids. (Goldschmidt and Syngros, Z. anorg. 5. 138.)

#### Mercurous carbonate, $Hg_2CO_3$ .

Ppt. Decomp. by hot  $H_2O$ . Sol. in hot or warm  $NH_4Cl$  + Aq, but less easily than mercuric carbonate; less sol. in  $NH_4NO_3$  + Aq. (Brett, 1837.)

Sl. sol. in  $K_2CO_3$  + Aq; partially sol. with decomp. in  $NH_4OH$  + Aq. (Wittstein.)

#### Mercuric carbonate, basic, $4HgO, CO_2$ .

Can be washed with cold  $H_2O$  without decomp. (Millon, A. ch. (3) 19. 368.)

$3HgO, CO_2$ . Insol. in cold  $H_2O$ . Sol. in  $CO_2$  + Aq; sl. sol. in  $K_2CO_3$  + Aq. Easily sol. in  $NH_4Cl$  + Aq. (Berzelius.)

#### Neodymium potassium carbonate, $Nd_2(CO_3)_2, K_2CO_3 + 12H_2O$ .

Ppt. Sol. in 30%  $K_2CO_3$  + Aq. (Meyer, Z. anorg. 1904, 41. 105.)

#### Neodymium sodium carbonate, $2Nd_2(CO_3)_2, 3Na_2CO_3 + 22H_2O(?)$ .

Ppt. Easily decomp.

Sl. sol. in conc.  $Na_2CO_3$  + Aq. (Meyer, Z. anorg. 1904, 41. 106.)

#### Nickel carbonate, basic, $3NiO, CO_2 + 5H_2O$ .

Min. *Zaratite*. Easily sol. in  $HCl$  + Aq.

Pptd. nickel carbonate is a basic salt of varying composition. Insol. in  $H_2O$  or  $H_2CO_3$  + Ao. Sol. in acids. Sol. in  $(NH_4)_2CO_3$  + Aq;

very sl. sol. in  $Na_2CO_3$  + Aq; sol. in warm  $NH_4Cl$  + Aq, and  $KCN$  + Aq. (Rose.)

Not pptd. in presence of Na citrate. (Spiller.)

#### Nickel carbonate, $NiCO_3$ .

1 l.  $H_2O$  dissolves 0.0925 g. at 25%. (Ageno and Valla, Att. Accad. Linc. 1911, 20. II. 706.)

Not attacked by cold conc.  $HCl$ , or  $HNO_3$  + Aq. (Senarmont, A. ch. (3) 30. 138.)

+  $6H_2O$ . Sol. in acids. (Dewille, A. ch. (3) 35. 446.)

See also Carbonate, nickel, basic.

#### Nickel potassium carbonate, $NiCO_3, K_2CO_3 + 4H_2O$ .

Ppt. (Dewille, A. ch. (3) 33. 96.)

$NiCO_3, KHCO_3 + 4H_2O$ . Decomp. by  $H_2O$ , but may be washed by  $KHCO_3$  + Aq without decomp. (Rose, Pogg. 84. 566.)

#### Nickel sodium carbonate, $NiCO_3, Na_2CO_3 + 10H_2O$ .

Ppt. (Dewille.)

#### Nickel carbonate hydroxylamine, $2Ni(OH)_2, 4NiCO_3, 5NH_4OH + 7H_2O$ .

Ppt. (Goldschmidt and Syngros, Z. anorg. 1894, 5. 143.)

Ppt. (Goldschmidt and Syngros.)

#### Palladious carbonate, $PdCO_3, 9PdO + 10H_2O$ .

Insol. in  $H_2O$ ; partly sol. in  $NH_4OH$  + Aq; sl. sol. in  $Na_2CO_3$  + Aq; sol. in acids. (Kane, 1842.)

#### Potassium carbonate, $K_2CO_3$ .

Deliquescent. Very sol. in  $H_2O$  with evolution of heat.

Sol. in 1.05 pts.  $H_2O$  at 3°; 0.962 pt. at 6°; 0.900 pt. at 12.6°; 0.747 pt. at 23°; and 0.190 pt. at 70°. (Osann.)

Sol. in 0.92 pt.  $H_2O$ . (M. R. and P.)

Sol. in 0.922 pt.  $H_2O$  at 15°. (Gerlach.)

Sol. in 1 pt.  $H_2O$ . (Abl.)

100 pts.  $H_2O$  at 15.5° dissolve 100 pts.  $K_2CO_3$ . (Ure's Diet.)

Solubility in 100 pts.  $H_2O$  at t°.

t°	Pts. $K_2CO_3$	t°	Pts. $K_2CO_3$	t°	Pts. $K_2CO_3$

When  $K_2CO_3 + Aq$  is sat. with  $NH_3$ , two layers form. When  $K_2CO_3$  is added to  $NH_4OH + Aq$ , it dissolves with formation of two layers and evolution of  $NH_3$ . The same takes place also when sat.  $K_2CO_3 + Aq$  and  $NH_4OH + Aq$  are brought together. (Girard, Bull. Soc. (2) 43. 552.)

Solubility of  $K_2CO_3 + KHCO_3$  in  $H_2O$  at  $0^\circ$ .

(Frankforter and Cohen, J. Am. Chem. Soc. 1914, **36**, 1121.)

Insol. in benzonitrile. (Naumann, B. 1914, **47**, 1370.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790); ethyl acetate. (Naumann, B. 1910, **34**, 314.)

Sol. in phenol.

Sol. in 13.5 pts. glycerine of 1.225 sp. gr. (Vogel, N. Repert. **16**, 557.)

100 g. sat.  $K_2CO_3$  + sugar + Aq. contains 22.44 g.  $K_2CO_3$  and 56 g. sugar at 31.25° (Köhler, Z. Ver. Zuckerind. 1897, **47**, 447.)

+  $H_2O$ .

+  $1\frac{1}{2}H_2O$ . Very deliquescent. (Pohl.)

Deliquescent only in very moist air. (Stadeler.)

Sol. in  $H_2O$  with evolution of heat. (Pohl.)

Sol. at 17.6° with absorption of heat, at 32° with evolution of heat, and at 25° with neither absorption nor evolution of heat. (Berthelot, C. R. **78**, 1722.)

Sat. solution of  $K_2CO_3$  +  $1\frac{1}{2}H_2O$  in  $H_2O$  contains 53.27 g. anhydrous  $K_2CO_3$  in 100 g. solution at 30°. (de Waal, Dissert. **1910**.)

+  $2H_2O$ . Salt usually given as containing  $1\frac{1}{2}H_2O$  contains  $2H_2O$ . (Gerlach, Z. anal. **26**, 460.)

Sat. solution of  $K_2CO_3$  +  $2H_2O$  contains 112 g. anhydrous  $K_2CO_3$  in 100 g.  $H_2O$  at 25°. (Osaka, J. Tok. Ch. Soc. 1911, **32**, 870.)

+  $4H_2O$ . Not deliquescent in closed vessels. (Gerlach, l. c.)

Potassium hydrogen carbonate,  $KHCO_3$ .

Not deliquescent.

Sol. in 3.5 pts.  $H_2O$  at 15°. (Redwood.) Sol. in 4 pts.  $H_2O$  at moderate temperatures. (Bergmann.) Sol. in 0.8333 pt. boiling  $H_2O$  (Pelletier); in 4 pts. cold and 1.2 pts. boiling  $H_2O$  (M. R. and P.'s Pharm.). Sol. in 4 pts.  $H_2O$  at 18.75°. (Abl.) 100 pts.  $H_2O$  at 15.3° dissolve 30 pts. and at 100° 83 pts. (Ure's Diet.) 100 pts.  $H_2O$  at 10-11.2° dissolve 26.1 pts.  $KHCO_3$  and the sp. gr. of solution is 1.1536. (Anthon, Diss. **161**, 216.)

100 pts.  $H_2O$  dissolve at—

0°	10°	20°	30°
19.61	23.23	26.91	30.57 pts. $KHCO_3$
40°	50°	60°	70°
34.15	37.92	41.35	45.24 pts. $KHCO_3$

(Poggiale, A. ch. (3) **8**, 468.)

100 pts.  $H_2O$  dissolve pts.  $KHCO_3$  at t°.

t°	Pts. $KHCO_3$	t°	Pts. $KHCO_3$
0	22.4	40	45.2
20	33.2	60	46.4

(Dibbitts, J. pr. (2) **10**, 417.)

Sp. gr. of  $KHCO_3$  + Aq. at 15° containing 5%  $KHCO_3$  = 1.0328; containing 10%  $KHCO_3$  = 1.0674. (Kohlrausch, Z. anal. **28**, 472.)

Sol. in 1200 pts. boiling alcohol. (Berthelot.) Insol. in alcohol. (Dumas.)

100 pts.  $H_2O$  dissolve 19.3 pts.  $KHCO_3$  and 8.3 pts.  $NaHCO_3$ ; if the sat. solution of latter is sat. with former; and 26.1 pts.  $KHCO_3$  and 6.0 pts.  $NaHCO_3$ , if the sat. solution of the former is sat. with the latter, all at 10°. (Mulder, J. B. **1868**, 67.)

Insol. in sat.  $K_2CO_3$  + Aq. (Engel, C. R. **102**, 365.)

Solubility of  $KHCO_3$  +  $KNO_3$  in  $H_2O$  in an atmosphere of  $CO_2$ .

1 litre of the solution contains			
at 11.5°		at 25.2°	
Mol. $KHCO_3$	Mol. $KNO_3$	Mol. $KHCO_3$	Mol. $KNO_3$
0.60	2.33	0.60	3.28
0.39	2.17	0.89	2.84
0.76	2.03	1.33	2.65
1.16	1.92	1.91	2.45
1.55	1.81	....	....

This case is complicated by the fact that  $KNO_3$  is more sol. in  $H_2O$  sat. with  $CO_2$  than in pure  $H_2O$ .

(Touren, C. R. 1906, **131**, 261.)

Insol. in benzonitrile (Naumann, B. 1914, **47**, 1370.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790); ethyl acetate (Naumann, B. 1910, **43**, 314.)

Potassium praseodymium carbonate,  $K_2CO_3$   $Pr_2(CO_3)_3$  +  $12H_2O$ .

Ppt. Sol. in 0%  $K_2CO_3$  + Aq. (Meyer, Z. anorg. 1904, **41**, 104.)

**Potassium samarium carbonate**,  $K_2CO_3$ ,  $Sm_2(CO_3)_3 + 12H_2O$ .  
(Cleve.)

**Potassium silver carbonate**,  $KAgCO_3$ .  
Decomp. by  $H_2O$ . (de Schulten, C. R. 105. 811.)  
Ppt. Decomp. by  $H_2O$ . (Reynolds, Chem. Soc. 1898, 73. 265.)

**Potassium sodium carbonate**,  $KNaCO_3 + 6H_2O$ .

Slightly efflorescent. Sol. in 0.75 pt.  $H_2O$  at  $12.5^\circ$ ; in 0.54 pt.  $H_2O$  at  $15^\circ$ .  
Sat. solution at  $15^\circ$  has sp. gr. = 1.366. (Stolba, J. pr. 94. 406.)

Decomp. by recrystallizing from  $H_2O$ , but crystallizes undecomposed from sat.  $K_2CO_3 + Aq$ .

Sol. in  $H_2O$ . (Osaka, C. A. 1911. 2601.)  
See  $K_2CO_3 + Na_2CO_3$  under  $Na_2CO_3 + 3H_2O$ . (Kremann and Zite, M. 1909. 30. 317.) Does not exist. (Osaka.)  
 $K_2CO_3 + 2Na_2CO_3 + 18H_2O$ . Sl. efflorescent. Very sol. in  $H_2O$ . (Marignac.)

**Potassium stannous carbonate**,  $K_2CO_3$ ,  $2SnCO_3 + 2H_2O$ .

Decomp. by  $H_2O$ . (Deville.)

**Potassium uranyl carbonate**,  $2K_2CO_3$ ,  $(UO_2)_2CO_3$ .

Sol. without decomp. in 13.5 pts.  $H_2O$  at  $15^\circ$ , and in somewhat less warm  $H_2O$ . Sol. in boiling  $H_2O$  with decomp.

More sol. in  $K_2CO_3$ , or  $KHCO_3 + Aq$  than in  $H_2O$ . (Rose.)

Insol. in alcohol. (Ebelmen, A. ch. (3) 5. 189.)

**Potassium zinc carbonate**,  $4K_2O$ ,  $6ZnO$ ,  $11CO_2 + 8H_2O$ .

Can be washed with cold  $H_2O$  without decomp. (Deville, A. ch. (3) 33. 99.)

**Praseodymium carbonate**,  $Pr_2(CO_3)_3 + 8H_2O$ .

Sol. in  $H_2O$ . (von Schule, Z. anorg. 1898, 18. 362.)

**Praseodymium sodium carbonate**,  $2Pr_2(CO_3)_3$ ,  $3Na_2CO_3 + 22H_2O(?)$ .

Ppt. Easily decomp. (Meyer, Z. anorg. 1904, 41. 105.)

**Radium carbonate**.

Less sol. in  $H_2O$  than corresponding Ba comp. (Curie, Dissert. 1903.)

**Rubidium carbonate**,  $Rb_2CO_3$ .

Very deliquescent, and sol. in  $H_2O$ . 100 pts. absolute alcohol dissolve 0.74 pt.  $Rb_2CO_3$ . (Bunsen.)

**Rubidium hydrogen carbonate**,  $RbHCO_3$ .

Not deliquescent. Easily sol. in  $H_2O$ . (Bunsen.)

**Samarium carbonate**,  $Sm_2(CO_3)_3 + 3H_2O$ .

Insol. in  $H_2O$ . (Cleve, Bull. Soc. (2) 43. 168.)

**Samarium sodium carbonate**,  $Sm_2(CO_3)_3$ ,  $Na_2CO_3 + 16H_2O$ .

Ppt. (Cleve.)

**Scandium carbonate**,  $Sc_2(CO_3)_3 + 12H_2O$ .

(Crookes, Roy. Soc. Proc. 1908, 80, A. 518.)

**Scandium sodium carbonate**,  $Sc_2(CO_3)_3$ ,  $4Na_2CO_3 + 6H_2O$ .

Difficultly sol. in  $H_2O$ .

Sol. in cold, less sol. in hot alkali carbonates + Aq. (R. Meyer, Z. anorg. 1910, 67. 410.)

**Silver carbonate**,  $Ag_2CO_3$ .

Somewhat sol. in  $H_2O$ . Sol. in 31,978 pts.  $H_2O$  at  $15^\circ$ . (Kremers, Pogg. 85. 248.) 1 g.  $Ag_2CO_3$  dissolves in 2 l. boiling  $H_2O$ . (Joulin, A. ch. (4) 30. 260.)

Solubility in  $H_2O$  at  $25^\circ = 1.16 \times 10^{-4}$  mol./l. (Spencer and Le Pla, Z. anorg. 1910, 65. 14.)

1 l.  $H_2O$  at  $25^\circ$  dissolves  $1.2 \times 10^{-4}$  gram atoms of silver. (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

Insol. in  $H_2CO_3 + Aq$ . (Bergman.) Sol. in 961 pts.  $H_2CO_3 + Aq$ . (Lassaigne.) 1 l. sat.  $H_2CO_3 + Aq$  dissolves 0.846 g.  $Ag_2CO_3$  at  $15^\circ$ . (Johnson, C. N. 54. 75.)

Sol. in  $(NH_4)_2CO_3 + Aq$  or  $NH_4OH + Aq$ ; sl. sol. in  $K_2CO_3 + Aq$ . (Wittstein.) Easily sol. in  $Na_2S_2O_3 + Aq$ . (Herschel, 1819.) Sol. in hot  $NH_4Cl + Aq$ , and sl. sol. in  $NH_4NO_3 + Aq$ . (Brett, 1837.) Not pptd. in presence of Na citrate. (Spiller.) Decomp. by  $HCl + Aq$ , and chlorides + Aq.

Somewhat sol. in conc.  $NaNO_3 + Aq$ . (de Coninck, Belg. Acad. Bull. 1909, 333.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol.

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

**Silver carbonate ammonia**.

Easily sol. in  $H_2O$ . Sol. in  $NH_4OH + Aq$ , from which it is precipitated by absolute alcohol. (Berzelius.)

$Ag_2CO_3 + 4NH_3$ . Ppt. Insol. in alcohol. (Keen, C. N. 31. 231.)

**Sodium carbonate**,  $Na_2CO_3$ .

*Anhydrous*. Sol. in  $H_2O$  with evolution of heat.

Sol. in 5,967 pts.  $H_2O$  at  $15^\circ$ . (Fresenius.) 100 pts.  $H_2O$  at  $14.6^\circ$  dissolve 7.74 pts.  $Na_2CO_3$ , or 20.64 pts.  $Na_2CO_3$ . 10  $H_2O$  is sol. in rather less than 1 pt. boiling  $H_2O$ . (Thomson, 1831.)

Sol. in 2 pts.  $H_2O$ . (Bergman.)  
Sol. in 2 pts.  $H_2O$  at  $18.75^\circ$ . (Abl.)

Solubility in 100 pts. H <sub>2</sub> O at t°.					
t°	Pts. Na <sub>2</sub> CO <sub>3</sub>	Pts. Na <sub>2</sub> CO <sub>3</sub> + 10H <sub>2</sub> O	t°	Pts. Na <sub>2</sub> CO <sub>3</sub>	Pts. Na <sub>2</sub> CO <sub>3</sub> + 10H <sub>2</sub> O

20	30.83	123.12	104.6	48.50	420.68

(Poggiale, A. ch. (3) 8. 468.)

Possesses four different degrees of solubility, according to different states of molecular constitution and degrees of hydration. (A. ch. (3) 44. 330.)

Little more sol. at 34–38° than at 10°; maximum of solubility is probably at (Löwel.)

Solubility of Na<sub>2</sub>CO<sub>3</sub>, Na<sub>2</sub>CO<sub>3</sub>+10H<sub>2</sub>O, Na<sub>2</sub>CO<sub>3</sub>+7H<sub>2</sub>O (a), and Na<sub>2</sub>CO<sub>3</sub>+7H<sub>2</sub>O (b) in

(Mulder, Scheik. Verhandel. 1864. 1)

Liabie to form supersaturated solutions. Supersat. Na<sub>2</sub>CO<sub>3</sub>+Aq (2 pts. N 10H<sub>2</sub>O: 1 pt. H<sub>2</sub>O) may be kept in closed with cotton wool. (Schröder.)

When supersat. Na<sub>2</sub>CO<sub>3</sub>+Aq is exposed to low temperatures, the 10H<sub>2</sub>O salt crystallizes out; but under other circumstances two salts are formed, each containing 7H<sub>2</sub>O, is four times as sol. at 10° as the 10H<sub>2</sub>O, and the other twice as sol. See above. (A. ch. (3) 33. 337.)

See also Na<sub>2</sub>CO<sub>3</sub>+H<sub>2</sub>O, 7H<sub>2</sub>O, and 1

(Poggiale, A. ch. (3) 8. 468.)

Min. Trona, Urao. See  $\text{Na}_2\text{H}(\text{CO}_3)_2 +$   
 $2\text{H}_2\text{O}$ .

**Trisodium hydrogen carbonate**,  $\text{Na}_3\text{H}(\text{CO}_3)_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

True formula of "Trona" and "Urao." (Zepharovich, Zeit. Kryst. 13. 135; de Mon-desir, C. R. 104. 1505.)

**Sodium thorium carbonate**,  $3\text{Na}_2\text{CO}_3$ ,  $\text{Th}(\text{CO}_3)_2 + 12\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Cleve.)

**Sodium uranyl carbonate**,  $2\text{Na}_2\text{CO}_3$ ,  $(\text{UO}_2)_2\text{CO}_3$ .

Slowly sol. in  $\text{H}_2\text{O}$ . Solution sat. at  $15^\circ$  has sp. gr. = 1.161. (Anthon, Dingl. 156. 207.)

**Sodium yttrium carbonate**,  $\text{Na}_2\text{CO}_3$ ,  $\text{Y}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

Ppt. Not decomp. by cold  $\text{H}_2\text{O}$ . (Cleve.)

**Sodium zinc carbonate**,  $3\text{Na}_2\text{O}$ ,  $8\text{ZnO}$ ,  $11\text{CO}_2 + 8\text{H}_2\text{O} = 3\text{Na}_2\text{CO}_3$ ,  $8\text{ZnCO}_3 + 8\text{H}_2\text{O}$ .

Sl. decomp. by pure  $\text{H}_2\text{O}$ . (Wöhler.)

Less easily decomp. by  $\text{H}_2\text{O}$  than most double carbonates. (Deville, A. ch. (3) 33. 101.)

$\text{Na}_2\text{O}$ ,  $3\text{ZnO}$ ,  $4\text{CO}_2 + 3\text{H}_2\text{O}$ . (Kraut, Z. anorg. 1897, 13. 13.)

**Sodium carbonate sulphite**,  $\text{Na}_2\text{CO}_3$ ,  $2\text{Na}_2\text{SO}_3 + 21\text{H}_2\text{O}$ .

Sol. in hot  $\text{H}_2\text{O}$ , sl. sol. in cold  $\text{H}_2\text{O}$ . (Johnson, J. Soc. Chem. Ind. 1895, 14. 271.)

**Strontium carbonate**,  $\text{SrCO}_3$ .

Sol. in 18,045 pts.  $\text{H}_2\text{O}$  at ordinary temp. (Fresenius.)

Sol. in 12,522 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Kremers, Pogg. 85. 247.)

Sol. in 33,000 pts.  $\text{H}_2\text{O}$ . (Bineau, C. R. 41. 511.)

Less sol. in  $\text{H}_2\text{O}$  than  $\text{SrSO}_4$ . (Dulong.)

Sol. in 1536 pts. boiling  $\text{H}_2\text{O}$ . (Hepe, Edinb. Trans. 4. 5.)

Calculated from electrical conductivity of  $\text{SrCO}_3 + \text{Aq}$ ,  $\text{SrCO}_3$  is sol. in 121,760 pts.  $\text{H}_2\text{O}$  at  $8.8^\circ$  and 91,468 pts. at  $24.3^\circ$  (Holle-mann, Z. phys. Ch. 12. 130.)

1 l.  $\text{H}_2\text{O}$  dissolves 11 mg.  $\text{SrCO}_3$  at  $18^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

"Solubility product" =  $15.67 \times 10^{-10}$  mol. litre. (McCoy and Smith, J. Am. Chem. Soc. 1911, 33. 473.)

Sol. in 833 pts.  $\text{H}_2\text{CO}_3 + \text{Aq}$  at  $10^\circ$ . (Gmelin.)

Sol. in 56,545 pts.  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3$ .

Quite sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ , but reprecipitated on addition of  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Fresenius.)

Partially decomp. by boiling with aqueous solutions of  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{CaSO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{MgSO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{HPO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{Na}_2\text{B}_4\text{O}_7$ ,

$\text{Na}_2\text{AsO}_3$ ,  $\text{K}_2\text{AsO}_3$ ,  $\text{K}_2\text{C}_2\text{O}_4$ ,  $\text{Na}_2\text{C}_2\text{O}_4$ ,  $\text{NaF}$ , and  $\text{K}_2\text{CrO}_4$ . Decomp. is complete with the  $\text{NH}_4$  salts. (Dulong, A. ch. 82. 286.)

Sl. decomp. by  $\text{Na}_2\text{SO}_4$ , or  $\text{K}_2\text{SO}_4 + \text{Aq}$ . (Persoz.)

Easily sol. in  $\text{NH}_4$  chloride, nitrate, or succinate +  $\text{Aq}$ , but less so than  $\text{BaCO}_3$ . (Fresenius.) Sol. in ferric salts +  $\text{Aq}$ , with pptn. of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Sol. in  $\text{Na}$  citrate +  $\text{Aq}$ . (Spiller.) Not decomp. by a mixture of 1 pt.  $\text{H}_2\text{SO}_4$  and 6 pts. absolute alcohol, or by alcoholic solutions of tartaric, racemic, citric, or glacial acetic acids; immediately decomp. by  $\text{HNO}_3$  + absolute alcohol, or  $\text{H}_2\text{C}_2\text{O}_4$  + abs. alcohol.

Solubility of  $\text{SrCO}_3$  in  $\text{NH}_4\text{Cl} + \text{Aq}$ .

% $\text{NH}_4\text{Cl}$	% $\text{SrCO}_3$
5.35	0.179
10	0.259
20	0.358

(Cantoni and Goguelia, Bull. Soc. 1905, (3) 33. 13.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3602.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Insol. in acetone and in methylal. (Ed-mann, C. C. 1899, II. 1014.)

Min. *Strontianite*.

**Strontium hydrogen carbonate.**

$\text{SrCO}_3$  is sol. in 850 pts. of a sat. solution of  $\text{CO}_2$  in  $\text{H}_2\text{O}$ .

**Strontium uranyl carbonate**,  $\text{SrO}$ ,  $2\text{UO}_3$ ,  $2\text{CO}_2 + 16\text{H}_2\text{O}$ .

As  $\text{Ba}$  comp. (Blinkoff, Dissert. 1900.)

**Terbium carbonate.**

Ppt. Insol. in excess  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Potratz, C. N. 1905, 92. 3.)

**Thallous carbonate**,  $\text{Tl}_2\text{CO}_3$ .

100 pts.  $\text{H}_2\text{O}$  dissolve pts.  $\text{Tl}_2\text{CO}_3$  (C=ac-cording to Crookes; L=according to Lamy) at—

15.5°	18°	62°	100°	100.8°
4.2	5.23	12.85	27.2	22.4 pts. $\text{Tl}_2\text{CO}_3$
C	L	L	C	L

Insol. in absolute alcohol (L), and ether (C). Insol. in acetone and pyridine. (Naumann,

B. 1904, 37. 4329.) Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

**Thallous carbonate, acid**,  $\text{Tl}_2\text{O}$ ,  $2\text{CO}_2$ .

Rather easily sol. in cold  $\text{H}_2\text{O}$ . (Carsten-jen.)

**TiHCO<sub>3</sub>.** (Giorgis, Gass. ch. it. 1894, 24, 74-479.)

**halloous carbonate platinocyanide,**  $\text{Ti}_2\text{CO}_3$ ,  $\text{Ti}_2\text{Pt}(\text{CN})_4$ .

**Sl. sol. in hot, insol. in cold H<sub>2</sub>O.** (Friswell, Chem. Soc. (2) 9, 461.)

**Thorium carbonate, basic,**  $2\text{ThO}_2$ ,  $\text{CO}_2 + 3\text{H}_2\text{O}$ .

**Insol. in CO<sub>2</sub>+Aq, but sol. in excess of alkali carbonates+Aq, if conc.**

**Tin (stannous) carbonate,**  $2\text{SnO}$ ,  $\text{CO}_2$ .

**Easily decomp. on air; insol. in H<sub>2</sub>O or H<sub>2</sub>CO<sub>3</sub>+Aq.** (Deville, A. ch. (3) 35, 448.)

**Uranyl carbonate, basic,**  $5(\text{UO}_2)(\text{OH})_2$ ,  $3(\text{UO}_2)\text{CO}_2 + 6\text{H}_2\text{O}$ .

**Ppt.** (Seubert and Elten, Z. anorg. 1893, 4, 80.)

**Ytterbium carbonate, basic,**  $\text{Yb}(\text{OH})\text{CO}_2 + \text{H}_2\text{O}$ .

**Ppt.** (Cleve, Z. anorg. 1902, 32, 146.)

**Ytterbium carbonate,**  $\text{Yb}_2(\text{CO}_3)_3 + 4\text{H}_2\text{O}$ .

**Ppt.** (Cleve, Z. anorg. 1902, 32, 146.)

**Yttrium carbonate,**  $\text{Y}_2(\text{CO}_3)_3 + 3\text{H}_2\text{O}$ .

**Insol. in H<sub>2</sub>O; very sl. sol. in H<sub>2</sub>CO<sub>3</sub>+Aq. Sol. in SO<sub>2</sub>+Aq and all mineral acids. Sol. in NH<sub>4</sub> salts, and alkali carbonates+Aq to some extent. More sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq than in K<sub>2</sub>CO<sub>3</sub>+Aq. (Berlin.) More sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq than cerium, but 5 or 6 times less sol. than glucinum carbonate. (Vauquelin.) Sol. in large excess of KHCO<sub>3</sub>+Aq. (Rose.) Slowly sol. in NH<sub>4</sub> salts+Aq. (Berzelius.)**

**Zinc carbonates, basic,**  $8\text{ZnO}$ ,  $\text{CO}_2 + 2\text{H}_2\text{O}$ ;  $5\text{ZnO}$ ,  $2\text{CO}_2 + 3$ , or  $7\text{H}_2\text{O}$ ;  $3\text{ZnO}$ ,  $\text{CO}_2 + \text{H}_2\text{O}$ ;  $11\text{ZnO}$ ,  $4\text{CO}_2 + 14\text{H}_2\text{O}$ ;  $14\text{ZnO}$ ,  $5\text{CO}_2 + 9\text{H}_2\text{O}$ ;  $2\text{ZnO}$ ,  $\text{CO}_2 + \text{H}_2\text{O}$ ;  $8\text{ZnO}$ ,  $3\text{CO}_2 + 5\text{H}_2\text{O}$ , etc.

**All ppts. formed from Zn salts and carbonates+Aq. Sol. in 2000-3000 pts. cold H<sub>2</sub>O, separates out on heating and does not redissolve on cooling. (Schindler.) Sol. in 20,895 pts. H<sub>2</sub>O at 15°. (Kremers, Pogg. 85, 248.) Sol. in 44,600 pts. H<sub>2</sub>O at ord. temp. (Frese- senius.)**

**Sol. in 1428 pts. sat. H<sub>2</sub>CO<sub>3</sub>+Aq. (Las-aigne.) Sol. in 189 pts. H<sub>2</sub>CO<sub>3</sub>+Aq sat. at 4-6 atmos. (Wagner, Z. anal. 6, 107.) Easily sol. in KOH, NaOH, NH<sub>4</sub>OH, (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq, and in acids. Somewhat sol. in alkali bicarbonates and NH<sub>4</sub> salts+Aq. (Frese- senius.) Sol. in hot (Fuchs), also cold (Brett, 1837) NH<sub>4</sub>Cl+Aq; less sol. in NH<sub>4</sub>NO<sub>3</sub>+Aq. (Brett.)**

**Sol. in all NH<sub>4</sub> salts+Aq excepting (NH<sub>4</sub>)<sub>2</sub>S +Aq. (Terreil, Bull. Soc. (2) 9, 441.)**

**Insol. in Na<sub>2</sub>CO<sub>3</sub>, or K<sub>2</sub>CO<sub>3</sub>+Aq. Sol. in ferric salts+Aq with pptn. of Fe<sub>2</sub>O<sub>3</sub>H<sub>2</sub>. (Fuchs, 1831.)**

**The carbonates described by Boussingault, Wackenroder, Rose, and probably all salts between ZnO, CO<sub>2</sub>, and 5ZnO, 2CO<sub>2</sub>, are mix- tures. (Kraut, Z. anorg. 1897, 13, 1-15.)**

**3ZnO, CO<sub>2</sub>+2H<sub>2</sub>O. Min. Zinc bloom, Hy- drozincite.**

**ZnCO<sub>3</sub>, 3ZnO, H<sub>2</sub>. Min. Auricalcite.**

**Zinc carbonate, ZnCO<sub>3</sub>.**

**1 l. H<sub>2</sub>O at 15° dissolves 0.01 g.; 1 l. H<sub>2</sub>O dissolves  $1.64 \times 10^{-4}$  mols., or 0.206 g. ZnCO<sub>3</sub> at 25°. (Agno and Valla, Att. acc. Linc. 1911, 20, II, 706.)**

**1 l. 5.85% NaCl+Aq dissolves 0.0586 g.; 1 l. 7.45% KCl+Aq dissolves 0.0477 g. ZnCO<sub>3</sub>. (Essen, Gm.-K. 4, 1, 680.)**

**Sol. in acids, KOH+Aq, and NH<sub>4</sub> salts+Aq.**

**Sol. in H<sub>2</sub>CO<sub>3</sub>+Aq.**

**Solubility in various salts+Aq.**

Solvent	g. ZnCO <sub>3</sub> sol. in 1 l. of the solvent
10% NaNO <sub>3</sub> +Aq	0.058981
sat. NaNO <sub>3</sub> +Aq	0.149000
5% NaCl+Aq	0.021730
10% NaCl+Aq	0.046564
sat. NaCl+Aq	0.130380
10% Na <sub>2</sub> SO <sub>4</sub> +Aq	0.009313
sat. Na <sub>2</sub> SO <sub>4</sub> +Aq	0.015521

(Ehlert, Z. Elektrochem. 1912, 18, 728.)

**Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20, 830.)**

**Insol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 4329.)**

**Insol. in methyl acetate (Naumann, B. 1909, 42, 3790); ethyl acetate. (Naumann, B. 1910, 43, 314.)**

**Min. Calamine, Smithsonite.**

**Calamine is sol. in NH<sub>4</sub>OH+Aq only in the presence of NH<sub>4</sub> salts. (Brandhorst, Zeit. angew. Ch. 1904, 17, 513.)**

**+ $\frac{1}{2}$ H<sub>2</sub>O. (Mikusch, Z. anorg. 1908, 56, 366.)**

**+H<sub>2</sub>O. (Belar, Zeit. Kryst. 1890, 17, 126.)**

**Zinc carbonate ammonia, ZnCO<sub>3</sub>, NH<sub>3</sub>.**

**Slowly decomp. by H<sub>2</sub>O, but not on the air, or by boiling with alcohol. (Favre, A. ch. (3) 10, 474.)**

**Zinc carbonate hydroxylamine, ZnCO<sub>3</sub>, 2NH<sub>2</sub>O.**

**Insol. in H<sub>2</sub>O. Decomp. by acids. (Gold- schmidt and Syngros, Z. anorg. 5, 129.)**

**Zirconium carbonate, 3ZrO<sub>2</sub>, CO<sub>2</sub>+6H<sub>2</sub>O.**

**Decomp. by hot H<sub>2</sub>O, all CO<sub>2</sub> being given off. (Hermann.)**

**Sol. in alkali carbonates+Aq.**

**Percarbonic acid.**

See Percarbonic acid.

**Carbonic anhydride, CO<sub>2</sub>.**

See Carbon dioxide.

**Carbonophosphoric acid.****Potassium carbonophosphate, (K<sub>2</sub>HPO<sub>4</sub>)<sub>2</sub>, 2CO<sub>2</sub>, 2KHCO<sub>3</sub>.**

Known only in solution. (Barillé, C. R. 1903, 137. 566.)

**Carbonyl bromide, COBr<sub>2</sub>.**

Decomp. by H<sub>2</sub>O. (Besson, C. R. 1895, 120. 192.)

**Carbonyl platinous bromide, CO, PtBr<sub>2</sub>.**

Sol. in H<sub>2</sub>O with almost instant decomp. Sol. in absolute alcohol. (Pullinger, Chem. Soc. 59. 603.)

Quite easily sol. in hot C<sub>6</sub>H<sub>6</sub>, insol. in ligroine, and can be crystallized from CCl<sub>4</sub>. Very easily sol. in HBr+Aq. (Mylius and Förster, B. 24. 2432.)

**Carbonyl bromochloride, COClBr.**

Decomp. by H<sub>2</sub>O. (Besson.)

**Carbonyl chloride, COCl<sub>2</sub>.**

*Phosgene.* Cold H<sub>2</sub>O dissolves 1-2 vols. COCl<sub>2</sub> gas with slow decomposition. Alcohol decomp. immediately. Immediately absorbed by KOH, or NH<sub>4</sub>OH+Aq. Very sol. in glacial HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, benzene, and most liquid hydrocarbons. (Berthelot, Bull. Soc. (2) 13. 14.) Sol. in SCl<sub>2</sub>.

1 vol. AsCl<sub>3</sub> absorbs 10 vols. COCl<sub>2</sub>.

**Dicarbonyl cuprous chloride, Cu<sub>2</sub>Cl<sub>2</sub>, 2CO + 4H<sub>2</sub>O.**

Decomp. by air. (Jones, Am. Ch. J. 1899, 22. 305.)

**Carbonyl platinous chloride, 2COCl<sub>2</sub>, PtCl<sub>2</sub>.**

Sl. deliquescent. Easily sol. in H<sub>2</sub>O without decomp.; sl. sol. in alcohol. Almost insol. in CCl<sub>4</sub>. (Pullinger, Chem. Soc. 59. 600.)

**Monocarbonyl platinous chloride, CO, PtCl<sub>2</sub>.**

Decomp. by H<sub>2</sub>O and alcohol; sol. in hot CCl<sub>4</sub>. (Schützenberger, A. ch. (4) 15. 100.)

Sol. in conc. HCl+Aq. (Mylius and Förster.)

**Dicarbonyl platinous chloride, 2CO, PtCl<sub>2</sub>.**

Decomp. by H<sub>2</sub>O and alcohol. Sol. in CCl<sub>4</sub>. (Schützenberger.)

Decomp. by conc. HCl+Aq into CO and CO, PtCl<sub>2</sub>. (Mylius and Förster.)

**Sesquicarbonyl platinous chloride, 3/2PtCl<sub>2</sub>.**

Decomp. by H<sub>2</sub>O or alcohol. Mud sol. in CCl<sub>4</sub> than 2CO, PtCl<sub>2</sub>.

**Carbonyl platinous iodide, CO, PtI<sub>2</sub>.**

Not hygroscopic. Insol. in, but slow comp. by, H<sub>2</sub>O. Easily sol. in benz ether, also in alcohol, which decomp. on ing; sol. in HI+Aq. (Mylius and Förster.)

**Carbonyl platinous sulphide, CO, PtS.**

Easily decomp. Insol. in ordinary so (Mylius and Förster.)

**Carbonyl sulphide, COS.**

H<sub>2</sub>O absorbs 1 vol. COS.

Absorption of COS by H<sub>2</sub>O at t°

t°	Coefficient of absorption
0	1.333
10	0.835
20	0.561
30	0.403

(Winkler, Z. phys. Ch. 1906, 55. 35)

1 ccm. H<sub>2</sub>O at 13.5° and 756 mm dissolves 0.8 ccm. COS. (Hempel, angew. ch. 1901, 14. 867.)

1 ccm. of a hydrochloric acid soln Cu<sub>2</sub>Cl<sub>2</sub> absorbs about 0.2 ccm. COS. pel.)

**Carbonyl ferrocyanhydric acid.**

H<sub>2</sub>Fe(CO)(CN)<sub>5</sub>.

Very sol. in H<sub>2</sub>O; decomp. on h (Müller, A. ch. (6) 17. 94.)

**Cobalt carbonyl ferrocyanide.**

Sl. sol. in H<sub>2</sub>O; very sol. in dil. HNO (M.)

**Cupric carbonyl ferrocyanide,**

Cu<sub>2</sub>[Fe(CO)(CN)<sub>5</sub>]<sub>2</sub>.

Insol. in H<sub>2</sub>O, H<sub>2</sub>SO<sub>4</sub>, or dil. HNO (M.)

**Iron (ferric) carbonyl ferrocyanide,**

FeFeCO(CN)<sub>5</sub>.

Insol. in H<sub>2</sub>O. Sol. in H<sub>2</sub>C<sub>2</sub>O<sub>4</sub>+Aq. in acetic, lactic, succinic, tartaric, and acids+Aq, but easily sol. in the neutr of those acids. Insol. in KCl, or KNO but sensibly sol. in Na<sub>2</sub>HPO<sub>4</sub>+Aq. even on warming in very dil. H<sub>2</sub>SO<sub>4</sub>, or 1 +Aq. (Müller.)

**Potassium carbonyl ferrocyanide,**

K<sub>2</sub>Fe(CO)(CN)<sub>5</sub>+3 1/2 H<sub>2</sub>O.

100 pts. H<sub>2</sub>O dissolve 148 pts. (Müller, C. R. 104. 992.)

**amyl ferrocyanide**,  
 $\text{CO}(\text{CN})_5$ .

$\text{H}_2\text{O}$ ; al. sol. in dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ ,  
 Aq.; scarcely attacked by conc.  
 Aq. (Müller.)

**bonyl ferrocyanide**,  
 $\text{CO}(\text{CN})_5 + 6\text{H}_2\text{O}$ .  
 O. (Müller.)

**bonyl ferrocyanide**,  
 $[\text{FeCO}(\text{CN})_5]_2 + 5\text{H}_2\text{O}$ .

1  $\text{H}_2\text{O}$ , but more easily if  $\text{H}_2\text{O}$  is  
 th  $\text{HC}_2\text{H}_3\text{O}_2$ .

**gstatic acid**.

**cericotungstate**,  $2(\text{NH}_4)_2\text{O}$ ,  
 $16\text{WO}_3 + 2\text{H}_2\text{O}$ .

$\text{H}_2\text{O}$ , but decomp. by boiling  
 (Smith, J. Am. Chem. Soc. 1904,

e.

pure  $\text{H}_2\text{O}$  very slowly at ordinary  
 attacked by cold conc.  $\text{H}_2\text{SO}_4$  or  
 $\text{HNO}_3$ . Sol. in dil.  $\text{H}_2\text{SO}_4$  + Aq,  
 and conc. or dil.  $\text{HCl}$  + Aq.  
 and Norton, Pogg. 155. 633.)

**midide**,  $\text{CeBr}_3$ .

us. As the chloride. (Robinson,  
 Soc. 37. 150.)

acetone. (Eidmann, C. C. 1899,  
 Naumann, B. 1904, 37. 4328.)

methyl acetate. (Naumann, B.  
 790.)

Very deliquescent. (Jolin.)

**d bromide**,  $\text{CeBr}_3$ ,  $\text{AuBr}_3 + 8\text{H}_2\text{O}$ .

**aurate**, cerium.

**bide**,  $\text{CeC}_2$ .

by fused alkali nitrates, chlorates,  
 and carbonates; and by conc.  
 heating. Insol. in conc.  $\text{HNO}_3$ ;  
 y  $\text{H}_2\text{O}$  and dil. acids. (Moissan,  
 122. 359.)

Not attacked by hot conc. acids.  
 ine, J. B. 1865. 176.)

**oride**,  $\text{CeCl}_3$ .

us. Deliquescent. Sol. in  $\text{H}_2\text{O}$   
 ig and evolution of heat; sol. in

acetone. (Eidmann, C. C. 1899,  
 Naumann, B. 1904, 37. 4328.)  
 ly sol. in methyl acetate. (Nau-  
 1909, 42. 3790.)

Insol. in  $\text{NH}_4\text{OH}$  + Aq. (Den-  
 rg. 1894, 7. 260.)

O. Deliquescent. (Berzelius.)

by boiling with  $\text{H}_2\text{O}$ . Sol. in 1 pt.  
 rd. temp. and 3-4 pts. alcohol.

**Ceric chloride**.

Known only in solution, which decom-  
 poses by slight heat. (Berzelius.)

**Cerous mercuric chloride**.

Not deliquescent. (v. Bonsdorff.)

$\text{CeCl}_3$ ,  $4\text{HgCl}_2 + 10\text{H}_2\text{O}$ . Permanent; eas-  
 ily sol. in  $\text{H}_2\text{O}$ . (Jolin, Bull. Soc. (2) 21. 533.)

**Cerium stannic chloride**.

See Chlorostannate, cerium.

**Cerous chloride zinc iodide**.

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Holzmann, J. pr.  
 84. 76.)

**Cerous fluoride**,  $\text{CeF}_3$ .

Insol. ppt.

+  $\frac{1}{2}\text{H}_2\text{O}$ .

**Ceric fluoride**,  $\text{CeF}_4$ .

Insoluble precipitate. (Berzelius.)

+  $\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . (Brauner, B. 14.  
 1944.)

**Ceric cobaltous fluoride**,  $2\text{CeF}_4$ ,  $\text{CoF}_2 + 7\text{H}_2\text{O}$ .

Ppt. Easily decomp. by  $\text{H}_2\text{O}$ . (Rimbach,  
 A. 1909, 368. 107.)

**Ceric cupric fluoride**,  $2\text{CeF}_4$ ,  $\text{CuF}_2 + 7\text{H}_2\text{O}$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Rimbach, l. c.)

**Ceric nickel fluoride**,  $2\text{CeF}_4$ ,  $\text{NiF}_2 + 7\text{H}_2\text{O}$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Rimbach, l. c.)

**Ceric potassium fluoride**,  $2\text{CeF}_4$ ,  $3\text{KF} + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Brauner, B. 14. 1944; 16.  
 109.)

Could not be obtained pure. (Rimbach,  
 l. c.)

**Ceric zinc fluoride**,  $2\text{CeF}_4$ ,  $\text{ZnF}_2 + 7\text{H}_2\text{O}$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Rimbach, l. c.)

**Ceroceric fluoride**,  $2\text{CeF}_3$ ,  $\text{CeF}_4$ .

Min. *Fluocerite*.

**Cerium hydride**,  $\text{CeH}_2$ .

Decomp. by acids. (Winkler, B. 24. 873.)

$\text{CeH}_2$ . Decomp. in moist air; decomp. by  
 hot or cold  $\text{H}_2\text{O}$ ; sol. in acids with evolution  
 of  $\text{H}_2$ . Decomp. by alkalis. (Muthmann,  
 A. 1902, 325. 266.)

**Cerous hydroxide**,  $\text{Ce}_2\text{O}_3$ ,  $z\text{H}_2\text{O}$ .

Easily sol. in acids. Insol. in excess of  
 alkali hydroxides + Aq. Sol. in  $(\text{NH}_4)_2\text{CO}_3$  +  
 Aq.

100 cem. of a solution in glycerine + Aq  
 containing about 60% by vol. of glycerine  
 contain 7.9 g.  $\text{Ce}_2\text{O}_3$ . (Müller, Z. anorg.  
 1905, 43. 322.)

Exists in two modifications: one insol. in

cold HCl+Aq; the other sol. in cold HCl+Aq. (Brauner, C. N. 1895, 71. 283.)

**Ceric hydroxide,  $2\text{CeO}_2, 3\text{H}_2\text{O}$ .**

Sol. in  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ ; also in HCl+Aq, forming cerous chloride and free chlorine. Insol. in hydrofluoric, acetic, or formic acids+Aq. Somewhat sol. in dil.  $\text{HNO}_3$ , or HCl+Aq. (Ordway, Am. J. Sci. (2) 26. 205.) Insol. in  $\text{NH}_4\text{OH}$ , KOH, and NaOH+Aq. Sl. sol. in alkali carbonates+Aq. (Dumas.)

Sl. sol. in  $(\text{NH}_4)_2\text{CO}_3$ +Aq. (Ordway.)  
100 ccm. of a solution in glycerine+Aq containing about 60% by vol. of glycerine contain 0.08 g.  $\text{CeO}_2$ . (Müller, Z. anorg. 1905, 43. 232.)

**Cerous iodide,  $\text{CeI}_3$ .**

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

+ $9\text{H}_2\text{O}$ . Very deliquescent and sol. in  $\text{H}_2\text{O}$ . (Lange, J. pr. 62. 134.)

Sol. in alcohol.

**Cerium nitride,  $\text{CeN}$ .**

Decomp. by  $\text{H}_2\text{O}$  and alkali. Sol. in mineral acids with formation of cerous and ammonium salts. (Muthmann, A. 1902, 325. 272.)

**Cerous oxide,  $\text{Ce}_2\text{O}_3$ .**

When ignited, insol. in HCl+Aq; when long digested with  $\text{H}_2\text{SO}_4$ , is sol. in HCl+Aq with addition of alcohol.

**Ceric oxide,  $\text{CeO}_2$ .**

When ignited, is only dissolved in traces, even on heating, by HCl or  $\text{HNO}_3$ +Aq. Sol. in conc.  $\text{H}_2\text{SO}_4$  when warmed. Sol. in the cold in a solution of KI in HCl+Aq (Bunsen), in a mixture of HCl and  $\text{FeCl}_3$ +Aq, or any reducing substance.

**Cerium peroxide,  $\text{Ce}_4\text{O}_9$ .**

Insol. in boiling conc. acids. Sol. in  $\text{H}_2\text{SO}_4$  by long digestion. (Popp, A. 131. 361.)

Probably does not exist. (Rammelsberg, Pogg. 108. 40.)

$\text{Ce}_2\text{O}_3$ . (Hermann, J. pr. 30. 184.)

Probably does not exist. (Rammelsberg.)

$\text{CeO}_2 + z\text{H}_2\text{O}$ . Sol. in HCl+Aq. (Popp, A. 131. 361.) (Lecoq de Boisbaudran, C. R. 100. 605.)

$\text{CeO}_2 + \text{H}_2\text{O}_2$ , according to Cleve (Bull. Soc. (2) 43. 57.)

**Cerium oxycarbide,  $\text{CeC}_2, 2\text{CeO}_2$ .**

Stable in the air. Slowly attacked by cold  $\text{H}_2\text{O}$ . With hot  $\text{H}_2\text{O}$  and with acids, it gives unsat. hydrocarbons. (Sterba, C. R. 1902, 134. 1058.)

**Cerium oxychloride,  $\text{CeOCl}$ .**

Slightly attacked by hot conc. HCl+Aq. Slowly sol. in conc.  $\text{HNO}_3$ +Aq. (Wöhler.)

Easily sol. in dil. acids. (Didier, C. 882.)

**Cerium oxychloride tungsten trioxide  $\text{WO}_3$ .**

(Didier, C. R. 102. 823.)

**Cerium selenide.**

Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in (Berselius.)

**Cerium silicide,  $\text{CeSi}_2$ .**

Insol. in  $\text{H}_2\text{O}$ , by which it is act only very slowly.

Sol. in HCl and HF+Aq with evol  $\text{H}_2$ .

Not attacked by alkalis+Aq or N. Aq.

Insol. in organic solvents. (Sterb. 1902, 135. 170.)

**Cerium silicide,  $\text{Ce}_3\text{Si}_2$ .**

Insol. in acids. (Ullik, W. A. F. 115.)

**Cerium disulphide,  $\text{Ce}_2\text{S}_4$ .**

Not decomp. by cold  $\text{H}_2\text{O}$ .

Slowly sol. in cold dil.  $\text{H}_2\text{SO}_4$ , 1 acetic acid. Rapidly sol. in warm dil. HCl and acetic acid with decomp. (1908, 41. 3342.)

**Cerium sesquisulphide,  $\text{Ce}_2\text{S}_3$ .**

Insol. in, and not decomp. by, 1 easily decomp. by the weakest acid sander); (Didier, C. R. 100. 1461.)

**Monochloramine,  $\text{NH}_2\text{Cl}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Raschig, Ch. 31. 926.)

**Chlorotetramine comps.**

See Chlorotetramine comps.

**Metachlorantimononic acid,  $\text{HSbCl}_4\frac{1}{2}\text{H}_2\text{O}$ .**

Hydrosopic. Sol. in  $\text{H}_2\text{O}$  with sol. in alcohol, acetone, and aco (Weinland, Z. anorg. 1905, 44. 43.)

**Metachlorantimononic acid ammonia,  $2\text{NH}_3$ .**

Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Wein Schmid, Z. anorg. 1905, 44. 59.)

**Aluminum metachlorantimonate,  $\text{A} + 15\text{H}_2\text{O}$ .**

Hydrosopic.

Sol. in dil. HCl+Aq. (Weinland, 36. 254.)

<i>metachlorantimonate</i> , $\text{NH}_4\text{SbCl}_4$	Sol. in dil. $\text{HCl} + \text{Aq.}$ (Weinland, B. 1903, 36. 250.)
pic. O. Solution decomp. slowly when y on warming.	<b>Rubidium metachlorantimonate</b> , $\text{RbSbCl}_4$ .
il. $\text{HCl}$ . (Weinland, B. 1903, 36.)	Hydrosopic. Sol. in dil. $\text{HCl} + \text{Aq.}$ (Weinland.)
<i>metachlorantimonate ammonia</i> , $\text{Cl}_4)_3, 7\text{NH}_3$ .	<b>Silver metachlorantimonate ammonia</b> , $\text{AgSbCl}_4, 2\text{NH}_3$ .
Weinland and Schmid, Z. anorg. 3.)	Decomp. by $\text{H}_2\text{O}$ . (Weinland and Schmid.)
<i>etachlorantimonate</i> , $\text{Ca}(\text{SbCl}_4)_2 +$	<b>Zinc metachlorantimonate ammonia</b> , $\text{Zn}(\text{SbCl}_4)_2, 4\text{NH}_3$ .
pic.	(Weinland and Schmid.)
il. $\text{HCl} + \text{Aq.}$ (Weinland, B. 1903,	<b>Chlorarsenious acid.</b>
<i>metachlorantimonate</i> , $\text{Cr}(\text{SbCl}_4)_2$ O.	See Arsenyl chloride.
pic.	<b>Chlorauric acid</b> , $\text{HAuCl}_4 + 4\text{H}_2\text{O}$ .
il. $\text{HCl} + \text{Aq.}$ (Weinland.)	Sol. in $\text{H}_2\text{O}$ , alcohol, and ether. Sol. in $\text{POCl}_3$ . (Walden, Z. anorg. 1900, 25. 212.)
<i>orthochlorantimonate</i> , $\text{CrSbCl}_4 +$	Difficultly sol. in $\text{PCl}_3$ . (Walden.)
pic.	Cryst. with $3\text{H}_2\text{O}$ as stated by Weber and Schottlander and not with $4\text{H}_2\text{O}$ as stated by Thomsen. (Schmidt, C. C. 1906, II. 855.)
il. $\text{HCl} + \text{Aq.}$ (Weinland.)	<b>Chloraurates.</b>
<i>chlorantimonate ammonia</i> , $\text{Cl}_4)_3, 5\text{NH}_3$ .	All chloraurates are easily sol. in $\text{H}_2\text{O}$ and in alcohol. (v. Bonsdorff, 1829.)
id and Schmid, Z. anorg. 1905, 44.	<b>Ammonium chloraurate</b> , $\text{NH}_4\text{AuCl}_4 + \text{H}_2\text{O}$ .
<i>metachlorantimonate</i> , $\text{Gl}(\text{SbCl}_4)_2$ O.	Very easily sol. in $\text{H}_2\text{O}$ . $+ 2\text{H}_2\text{O}$ . Very easily sol. in $\text{H}_2\text{O}$ .
ircoscopic.	<b>Barium chloraurate</b> , $\text{Ba}(\text{AuCl}_4)_2 + x\text{H}_2\text{O}$ .
il. $\text{HCl}$ . (Weinland, B. 1903, 36.)	Deliquescent in moist air. Sol. in $\text{H}_2\text{O}$ and alcohol. (v. Bonsdorff, Pogg. 17. 261.)
e) <i>orthochlorantimonate</i> , $\text{FeSbCl}_4$ O.	<b>Cadmium chloraurate.</b>
pic.	Not deliquescent. Sol. in $\text{H}_2\text{O}$ and alcohol. (v. Bonsdorff.)
ily be cryst. from dil. $\text{HCl} + \text{Aq.}$ )	<b>Cesium chloraurate</b> , $\text{CsAuCl}_4$ .

(Cleve.)**Zinc chloraurate,  $\text{Zn}(\text{AuCl}_4)_2 + 8\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)+  $12\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and alcohol. (Bonsdorff.)

**Chlorauric anhydric acid.**

**Barium chlorauricyanide**,  $\text{Ba}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  or alcohol. (Lindbom, and Univ. Arsk. 12. No. 6.)

**Potassium chlorauricyanide**,  $\text{KAu}(\text{CN})_2\text{Cl}_2 + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  or alcohol.

**Strontium chlorauricyanide**,  $\text{Sr}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

**Zinc chlorauricyanide**,  $\text{Zn}[\text{Au}(\text{CN})_2\text{Cl}_2]_2 + 7\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ .

**Chlorhydric acid, HCl.**

*Liquid.* Miscible with liquid  $\text{CO}_2$ , and  $\text{H}_2\text{S}$ .  
*Gas.* Absorbed by  $\text{H}_2\text{O}$  with production of much heat.

$\text{H}_2\text{O}$  absorbs 400–500 vols. at ord. temp. and pressure or a little less than 1 pt. by weight. (Dalton.)

1 vol.  $\text{H}_2\text{O}$  absorbs 480 vols. at  $0^\circ$ : sp. gr. of sat. solution is 1.2109. (Davy.)

1 vol.  $\text{H}_2\text{O}$  absorbs 417 822 vols. at  $20^\circ$ , the vol. increasing to 1.4138 vols.; 1 vol. of  $\text{HCl} + \text{Aq}$  then contains 311 vols.  $\text{HCl}$ , has sp. gr. 1.1958, and contains 40.39%  $\text{HCl}$  by weight. (Thomson, 1831.)

1 vol.  $\text{H}_2\text{O}$  absorbs 464 vols. and sat. solution has 1.21 sp. gr. and contains 42.4%  $\text{HCl}$  by weight. (Wittstein.)

$\text{H}_2\text{O}$  sat. at  $0^\circ$  contains 480 times its vol. of  $\text{HCl}$ , and sp. gr. = 1.2109; sat. at ori. temp. contains 38.3% of its weight in  $\text{HCl}$ , and sp. gr. = 1.192. (Berzelius.)

1 vol.  $\text{H}_2\text{O}$  absorbs V vols.  $\text{HCl}$  at  $t^\circ$  and 760 mm. pressure, and the liquid formed has the given sp. gr., and contains the given per cent  $\text{HCl}$ .

$t^\circ$	V	Sp. gr.	% $\text{HCl}$
0	525.2	1.2257	45.148
4	494.7	1.2265	44.361
8	480.3	1.2185	43.828
12	471.3	1.2148	43.277
14	462.4	1.2074	42.829
18	451.2	1.2064	42.344
18.25	450.7	1.2056	42.283
23	435.0	1.2014	41.536

(Deicke, Pogg. 119. 156.)

At 760 mm. pressure 1 g.  $\text{H}_2\text{O}$  absorbs g.  $\text{HCl}$  at  $t^\circ$ .

$t^\circ$	g. $\text{HCl}$	$t^\circ$	g. $\text{HCl}$	$t^\circ$	g. $\text{HCl}$
0	0.825	22	0.710	44	0.618

10	0.772	32	0.665	54	0.582
12	0.762	34	0.657	56	0.575
14	0.752	36	0.649	58	0.568
16	0.742	38	0.641	60	0.561
18	0.731	40	0.633	..	..
20	0.721	42	0.626	..	..

(Roscoe and Dittmar.)

Conc.  $\text{HCl} + \text{Aq}$  loses  $\text{HCl}$ , and dil.  $\text{HCl} + \text{Aq}$  loses  $\text{H}_2\text{O}$  on warming, until an acid of constant composition is formed, containing 20.18%  $\text{HCl}$ , with a sp. gr. of 1.101 at  $15^\circ$ , which can be distilled unchanged at  $110^\circ$ . (Bineau, A. ch. (3) 7. 257.)

The above is true if barometer is at 760 mm., but the composition changes with the pressure as follows—

Mm. Hg	% $\text{HCl}$	Mm. Hg	% $\text{HCl}$	Mm. Hg	% $\text{HCl}$
50	23.2	800	20.2	1700	18.8
100	22.9	900	19.9	1800	18.7
200	22.3	1000	19.7	1900	18.6
300	21.8	1100	19.5	2000	18.5
400	21.4	1200	19.4	2100	18.4
500	21.1	1300	19.3	2200	18.3
600	20.7	1400	19.1	2300	18.2
700	20.4	1500	19.0	2400	18.1
760	20.24	1600	18.9	2500	18.0

(Roscoe and Dittmar.)

Conc.  $\text{HCl} + \text{Aq}$  gradually gives off  $\text{HCl}$  on the air until it has a sp. gr. 1.128 at  $15^\circ$ , and contains 25.2%  $\text{HCl}$ . (Bineau, l. c.)

According to Roscoe and Dittmar, this depends on the temperature. If a current of air is passed through  $\text{HCl} + \text{Aq}$ , acid or water is given off according as the acid is strong or weak, until an acid of constant composition for a given temperature is formed, as follows—

Temp.	% $\text{HCl}$	Temp.	% $\text{HCl}$	Temp.	% $\text{HCl}$
$0^\circ$	25.0	$35^\circ$	23.9	$70^\circ$	22.6
5	24.9	40	23.8	75	22.3
10	24.7	45	23.6	80	22.0
15	24.6	50	23.4	85	21.7
20	24.4	55	23.2	90	21.4
25	24.3	60	23.0	95	21.1
30	24.1	65	22.8	100	20.7

From the above it is seen that the acid which distills unchanged at a given pressure, that is, boils at a certain constant temperature, is identical with the acid which undergoes no change in composition by a current of dry air at the same temperature, and under the ordinary pressure, thus—

Mm. Hg	B.-pt.	% $\text{HCl}$	Temp. of air current	% $\text{HCl}$
100	61–62°	22.8	62°	22.9
200	76–77	22.1	77	22.2
300	84–85	21.7	85	21.7
380	91	21.3	91	21.4
490	97	20.9	98	21.1
620	103	20.6	..	....

(Roscoe and Dittmar.)

Solubility of HCl in H<sub>2</sub>O at 0° under different degrees of pressure. P = partial pressure in mm. Hg, i. e., total pressure minus the tension of aqueous vapour at the given temp.; G = grammes of HCl dissolved in 1 g. H<sub>2</sub>O at the pressure P and 0° temp.

(Roscoe and Dittmar, A. 112. 334.)

1 vol. H<sub>2</sub>O dissolves 560 vols. HCl at -12°  
 " " 500 " " 0°  
 " " 440 " " +20°

(Berthelot, C. R. 76. 779.)

1 vol. H<sub>2</sub>O absorbs 480 vols. HCl at 15° to form a solution containing 42.85% HCl with a sp. gr. of 1.215. (Hager.)

Solubility of HCl at low temperatures, and 760 mm. pressure.

44.2	23.5	40.2
42.7	32.0	38.1

(de Bruyn, l.c.)

Solubility of HCl in ether at t° and 760 mm.  
pressure.

t°	% HCl	t°	% HCl
—9.2	37.51	15	27.62
—5	37.0	20	24.9
0	35.6	25	22.18
+5	33.1	30	19.47
10	30.35	..	.....

(Schuncke, Z. phys. Ch. 1894, **14**, 336.)

Sol. in glacial  $\text{HC}_2\text{H}_3\text{O}_2$ , ether, hexane,  
benzene, xylene, etc.

Oil of turpentine absorbs 50% HCl.  
(Thénard.)

Oil of turpentine absorbs 163 vols. HCl at  
22° and 724 mm.; isoterebenthenes absorbs  
34% at 24° and 724 mm.; metaterebenthenes  
absorbs 17.7% at 24° and 724 mm. (Berthe-  
lot.)

Oil of lavender absorbs 68.7 vols. at 24°.  
(Thénard.)

Oil of lavender absorbs 210 vols. without  
being saturated; oil of rosemary absorbs 218  
vols. at 22°; sol. in 0.4 vol. petroleum.  
(Saussure.)

Absorbed by caprylic alcohol. (Bouis.)

Fuming  $\text{HCl} + \text{Aq}$  is sol. in glycerine and  
miscible with conc.  $\text{HC}_2\text{H}_3\text{O}_2$ .

Solubility of HCl in phenol + Aq at 12°.

Comp. of $\text{H}_2\text{O}$ layer		Comp. of phenol layer	
% HCl	% phenol	% HCl	% phenol
0	7.45	0	72
3.1	6.6	0.09	78
6.6	5.3	0.2	80.3
8.0	5.1	0.36	82.6

Composition of solution in contact with solid phenol.

% $\text{H}_2\text{O}$	% HCl	% phenol
11.22	0	88.78
14.98	0.52	84.5
84.5	10.7	4.8
80.38	15.64	3.98
72.43	24.37	3.2
60.25	36.25	3.5

(Schreinemakers, Z. phys. Ch. 1912, **79**, 553.)

+  $\text{H}_2\text{O}$ . F.-pt. — 15.35°.

Very sol. in  $\text{H}_2\text{O}$  but only slightly sol. in  
HCl. (Rupert, J. Am. Chem. Soc. 1909, **31**,  
866.)

+  $2\text{H}_2\text{O}$ . M.-pt. — 17.4°.

+  $3\text{H}_2\text{O}$ . M.-pt. — 24.8°. (Pickering, B.  
1893, **26**, 280.)

The composition of the hydrates formed  
by HCl at different dilutions is calculated

from determinations of the lowering of the f.-pt. produced by HCl, and of the conductivity and sp. gr. of HCl+Aq. (Jones, Am. Ch. J. 1905, 34. 323.)

#### Chlorhydric cyanhydric acid, 3HCl, 2HCN.

Decomp. by H<sub>2</sub>O or alcohol; sol. in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>. Insol. in ether, chloroform, or acetic ether. (Claisen, B. 16. 309.)

HCl, HCN. Sol. in H<sub>2</sub>O, absolute alcohol, HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, and CHCl<sub>3</sub>, with decomp.; decomp. is especially rapid in H<sub>2</sub>O. (Gautier, A. ch. (4) 17. 130.)

#### Chloric acid, HClO<sub>3</sub>.

Known only in aqueous solution, which can be concentrated in vacuo to a sp. gr. of 1.282 at 14.2°, and then contains 40.10% HClO<sub>3</sub>, corresponding to HClO<sub>3</sub>+7H<sub>2</sub>O; if left longer in vacuo over H<sub>2</sub>SO<sub>4</sub>, an acid corresponding to HClO<sub>3</sub>+4½H<sub>2</sub>O is obtained. Aqueous solution of HClO<sub>3</sub> decomp. at 40°. (Kämmerer, Pogg. 138. 390.)

#### Chlorates.

All chlorates except mercurous chlorate are sol. in H<sub>2</sub>O; most of them are deliquescent; many are sol. in alcohol.

#### Aluminum chlorate, Al(ClO<sub>3</sub>)<sub>3</sub>+6H<sub>2</sub>O.

Very hygroscopic. (Dobroserdow, C. C. 1904, II. 177.)

+9H<sub>2</sub>O. Very sol. in cold but much less than in hot H<sub>2</sub>O. (Dobroserdow.)

#### Ammonium chlorate, NH<sub>4</sub>ClO<sub>3</sub>.

Easily sol. in H<sub>2</sub>O; less sol. in alcohol.

Much less sol. in H<sub>2</sub>O at 0° than NaClO<sub>3</sub>. (Storer.)

Very sl. sol. in absolute alcohol. (Wächter, J. pr. 30. 321.)

#### Barium chlorate, Ba(ClO<sub>3</sub>)<sub>2</sub>+H<sub>2</sub>O.

Sol. in 4 pts. cold, and less hot H<sub>2</sub>O. (Chevenix.)

100 pts. H<sub>2</sub>O dissolve at:

0° 20° 40° 60° 80° 100°  
22.8 37.0 52.1 77.5 98.0 126.4 pts. Ba(ClO<sub>3</sub>)<sub>2</sub>.

100 grams sat. Ba(ClO<sub>3</sub>)<sub>2</sub>+Aq at t° contain grams anhydrous Ba(ClO<sub>3</sub>)<sub>2</sub>.

t°	Grams Ba(ClO <sub>3</sub> ) <sub>2</sub>	t°	Grams Ba(ClO <sub>3</sub> ) <sub>2</sub>
Eutectic point.

80	92.1	1.50
100	113.2	1.58
105.6 *	120.	1.60

\* Bpt. of sat. solution.

(Carlson, Dissert. 1910.)

Only slight traces dissolve in ab alcohol. (Wächter, J. pr. 30. 334.)

Sol. in acetone. (Eidmann, C. C. 18 1014.)

Difficultly sol. in acetone. (Nauman 1904, 37. 4328.)

Insol. in methyl acetate. (Nauman 1909, 42. 3790); ethylacet ate (Nau B. 1910, 43. 314.)

#### Bismuth chlorate.

Known only in solution, which decomp. by evaporation.

#### Cadmium chlorate, Cd(ClO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O.

Very deliquescent; sol. in H<sub>2</sub>O and al Melts in crystal H<sub>2</sub>O at 80°. (Wächter, 30. 321.)

Solubility in H<sub>2</sub>O.

Sat. solution contains at:

-20°	-15°	0°	+18°
72.18	72.53	74.95	76.36
49°	65°		
80.08	82.95%	Cd(ClO <sub>3</sub> ) <sub>2</sub> .	

Sp. gr. of solution containing 7% Cd(ClO<sub>3</sub>)<sub>2</sub> at 18°=2.284. (Meusser, B. 35. 1422.)

Sol. in acetone. (Naumann, B. 190 4328.)

#### Cadmium chlorate ammonia, Cd(C 6NH<sub>3</sub>).

Ppt. (Ephraim, B. 1915, 48. 49.)

#### Cæsium chlorate, CsClO<sub>3</sub>.

100 g. H<sub>2</sub>O dissolve at:

0°	8°	19.8°	30°	42°
2.46	3.50	6.28	9.53	14
50°	77°	99°		
19.40	41.65	76.5 g. CsClO <sub>3</sub>		

(Calzolari, Acc. Sc. med. di Ferrara, 85. 150.)

#### Calcium chlorate, Ca(ClO<sub>3</sub>)<sub>2</sub>+2H<sub>2</sub>O.

Deliquescent; very sol. in H<sub>2</sub>O and al (Wächter, J. pr. 30. 323.)

- its water of crystallisation at over  
f solution sat. at  $18^{\circ}$  = 1.729, con-

 $\text{Cu}(\text{ClO}_3)_2, 6\text{NH}_3$ . Not hygroscopic. (Eph-  
raim, B. 1915, 48. 46.)
- Erbium chlorate,  $\text{Er}(\text{ClO}_3)_3 + 8\text{H}_2\text{O}$ .  
Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol.
- Glucinum chlorate.  
Known only in aqueous solution, which de-  
composes on evaporation.
- Ferrous chlorate.  
Known only in solution.
- Ferric chlorate,  $\text{Fe}(\text{ClO}_3)_3$ .  
Sol. in  $\text{H}_2\text{O}$ .  
Basic salt. Insol. in  $\text{H}_2\text{O}$ .
- Lanthanum chlorate,  $\text{La}(\text{ClO}_3)_3$ .  
Deliquescent. (Cleve.)
- Lead chlorate,  $\text{Pb}(\text{ClO}_3)_2 + \text{H}_2\text{O}$ .  
Deliquescent; easily sol. in  $\text{H}_2\text{O}$  and alcohol.  
(Wächter, J. pr. 30. 321.)  
Sp. gr. of solution sat. at  $18^{\circ}$  = 1.947 and  
contains 60.2%  $\text{Pb}(\text{ClO}_3)_2$ . (Mylius, B.  
1897, 30. 1718.)  
100 g.  $\text{H}_2\text{O}$  dissolve 440 g.  $\text{Pb}(\text{ClO}_3)_2$  at  
 $18^{\circ}$ ; sp. gr. of sat. solution = 1.63. (Carlson,  
Dissert. 1910.)
- Lithium chlorate,  $\text{LiClO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .  
Very deliquescent and sol. in  $\text{H}_2\text{O}$ . Very  
easily sol. in alcohol. Melts at  $50^{\circ}$  in its  
crystal water. (Wächter, J. pr. 30. 321.)  
 $\text{LiClO}_3 + \text{Aq}$  sat. at  $18^{\circ}$  contains 75.8%  
 $\text{LiClO}_3$ . Sp. gr. = 1.815. (Mylius, B. 1897,  
30. 1718.)  
483 g.  $\text{LiClO}_3$  dissolve in 100 g.  $\text{H}_2\text{O}$  at  $15^{\circ}$ ;  
sp. gr. of solution = 1.82. (Carlson, Dissert.  
1910.)  
Contains  $3\text{H}_2\text{O}$ , and is not deliquescent.  
(Lagorio, Zeit. f. Kryst. 15. 80.)  
Salt is anhydrous. (Retgers, Z. phys. Ch.  
5. 449.)
- Magnesium chlorate,  $\text{Mg}(\text{ClO}_3)_2$ .  
128.1 g.  $\text{Mg}(\text{ClO}_3)_2$  dissolve in 100 g.  $\text{H}_2\text{O}$   
at  $19^{\circ}$ ; sp. gr. of solution = 1.59. (Carlson,  
Dissert. 1910.)  
Sp. gr. of solution containing 56.5%  
 $\text{Mg}(\text{ClO}_3)_2$  at  $18^{\circ}$  = 1.564. (Meusser, l.c.)  
Sp. gr. of solution sat. at  $18^{\circ}$  = 1.594, con-  
taining 56.3%  $\text{Mg}(\text{ClO}_3)_2$ . (Mylius, B. 1897,  
30. 1718.)  
Sol. in acetone. (Naumann, B. 1904, 37.  
4328.)  
Sol. in acetone. (Eidmann, C. C. 1899,  
II. 1014.)  
 $+2\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

**Manganous chlorate, Mn(ClO<sub>3</sub>)<sub>2</sub>.**

Known only in solution which decomposes on evaporation. (Wächter.)

**Mercurous chlorate, Hg<sub>2</sub>(ClO<sub>3</sub>)<sub>2</sub>.**

α. Easily sol. in alcohol and H<sub>2</sub>O. (Wächter, J. pr. 30. 321.)

β. Insol. in H<sub>2</sub>O; easily sol. in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq. (Wächter.) Decomp. by boiling H<sub>2</sub>O.

**Mercuric chlorate, 2HgO, Cl<sub>2</sub>O<sub>3</sub> + H<sub>2</sub>O.**

Deliquescent. Decomp. by H<sub>2</sub>O into oxide and an acid salt. (Wächter.)

Sol. in 4 pts. cold H<sub>2</sub>O. (Chevenix, 1802.)

**Nickel chlorate, Ni(ClO<sub>3</sub>)<sub>2</sub> + 4H<sub>2</sub>O.**

Solubility in H<sub>2</sub>O.

Sat. solution contains at:

48.5° 55° 65° 79.5°  
67.60 68.78 69.05 75.50% Ni(ClO<sub>3</sub>)<sub>2</sub>.  
(Meusser, B. 1902, 35. 1419.)

+6H<sub>2</sub>O. Deliquescent. Easily sol. in H<sub>2</sub>O and alcohol. Melts in crystal H<sub>2</sub>O at 80°. (Wächter, J. pr. 30. 321.)

Solubility in H<sub>2</sub>O.

Sat. solution contains at:

-18° -8° 0° +18° 40°  
49.55 51.52 52.66 56.74 64.47% Ni(ClO<sub>3</sub>)<sub>2</sub>.

Sp. gr. of solution containing 56.74% Ni(ClO<sub>3</sub>)<sub>2</sub> at 18° = 1.661.

Goes over into 4H<sub>2</sub>O salt at 39°. (Meusser.)

156 g. Ni(ClO<sub>3</sub>)<sub>2</sub> dissolve in 100 g. H<sub>2</sub>O at 16°; sp. gr. of solution = 1.76. (Carlson, Dissert. 1910.)

**Nickel chlorate ammonia, Ni(ClO<sub>3</sub>)<sub>2</sub>, 6NH<sub>3</sub>.**

Ppt. (Ephraim, B. 1915, 48. 47.)

**Potassium chlorate, KClO<sub>3</sub>.**

Sol. in H<sub>2</sub>O with absorption of heat.

Sol. in about 16 pts. cold, and in much less hot H<sub>2</sub>O. (Chevenix, 1802.)

Sol. in 30.03 pts. H<sub>2</sub>O at 0°; 17.85 pts. at 13.3°; and in 1.66 pts. at 104.78°. (M. R. and P.)

Sol. in 16 pts. H<sub>2</sub>O at 13.75°. (Abl.)  
100 pts. H<sub>2</sub>O at 15.5° dissolve 6.2 pts.; at 100° 8 pts. (Ure's Dict.)

(Winteler, Z. Elektrochem. 1900, 7. 361.)

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am  
 Ch. J. 1898, 20. 829.)

Sol. in 34 pts. alcohol of 83% at 16° and i  
 less hot alcohol. (Wittstein.)

Somewhat more easily sol. in alcohol tha  
 $\text{NaCl}$ . (Berzelius.)

#### Solubility of $\text{NaClO}_3$ in alcohol. (g. $\text{NaClO}_3$ per l. of solution.)

t°	Alcohol		
	90 %	75 %	50 %
20	16.1	110.8	311.3
40	22.9	133.5	321.8
60	29.0	155.8	326.8
70	....	161.3	....

(Carlson, Dissert. 1910.)

Insol. in methyl acetate. (Naumann, F  
 1909, 42. 3790); ethyl acetate. (Naumann  
 B. 1910, 48. 314.)

100 g. glycerol dissolve 20 g.  $\text{NaClO}_3$  a  
 15.5°. (Ossendowski, Pharm. J. 1907, 71  
 575.)

**m chlorate**,  $\text{Sr}(\text{ClO}_3)_2 + 5\text{H}_2\text{O}$ .  
deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Top-  
A. B. 66, 2. 29.)  
r. of solution sat. at  $18^\circ$  containing  
r  $(\text{ClO}_3)_2 = 1.839$ . (Mylius, B. 1897,  
,)  
sol. in  $\text{H}_2\text{O}$ , less in alcohol, but more  
alcohol than  $\text{SrCl}_2$ . (Souhay, A. 102.)  
in absolute alcohol. (Wächter.)

**chlorate**,  $\text{TiClO}_3$ .  
in  $\text{H}_2\text{O}$ , but decomp. by heating.

in  $\text{H}_2\text{O}$  dissolve at:  
 $20^\circ$   $50^\circ$   $80^\circ$   $100^\circ$   
1.92 12.67 36.65 57.31 pts.  $\text{TiClO}_3$ .  
(Muir, Chem. Soc. 29. 857.)

$\text{ClO}_3 + \text{Aq}$  sat. at  $10^\circ$  contains 25.637  
pts. (Roozeboom, Z. phys. Ch. 8. 532.)  
 $\text{H}_2\text{O}$  dissolves 0.134 equivalents  
at  $20^\circ$ ; or 38.51 g. in 1 l. of the solu-  
tion of 10 experiments). (Noyes and  
J. Am. Chem. Soc. 1911, 33. 1657.)

Solubility in  $\text{Ti}_2\text{SO}_4 + \text{Aq}$  at  $20^\circ$ .

quiv. per l.		Solid phase
	$\text{Ti}_2\text{SO}_4$	
3	0.1366	$\text{TiClO}_3 + \text{Ti}_2\text{SO}_4$

(Noyes and Farrell, l.c.)

**chlorate**,  $\text{Ti}(\text{ClO}_3)_3 + 4\text{H}_2\text{O}$ .  
deliquescent; sol. in  $\text{H}_2\text{O}$ . Decomp.  
in the air. (Gewecke, Z. anorg. 1912,  
,)

**m chlorate**.  
in  $\text{H}_2\text{O}$ . (Popp, A. 131. 179.)

**chlorate**,  $\text{Y}(\text{ClO}_3)_3 + 8\text{H}_2\text{O}$ .  
deliquescent. Easily sol. in alcohol. Sl.  
ther. (Cleve.)

**chlorate**,  $\text{Zn}(\text{ClO}_3)_2 + 4\text{H}_2\text{O}$ .  
sol. in  $\text{H}_2\text{O}$ .  
solution contains at:  
 $30^\circ$   $40^\circ$   $55^\circ$   
67.66 69.06 75.44%  $\text{Zn}(\text{ClO}_3)_2$ .  
gr. of solution containing 66.52%  
, at  $18^\circ = 1.916$ .  
(Meusser, B. 1902, 35. 1417.)

sol. in  $\text{H}_2\text{O}$  than chlorates of Mg, Co,  
u; less sol. than chlorate of Cd; more  
in  $\text{Zn}(\text{NO}_3)_2$ . (Meusser, l.c.)  
O. Very deliquescent. Easily sol. in  
alcohol. Melts in crystal  $\text{H}_2\text{O}$  at  $60^\circ$ .  
lin, A. ch. 95. 113.)

Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at:

$-18^\circ$	$0^\circ$	$8^\circ$	$15^\circ$
55.62	59.19	60.20	67.32% $\text{Zn}(\text{ClO}_3)_2$ .

(Meusser, l.c.)

Sp. gr. of solution sat. at  $18^\circ$  containing  
65%  $\text{Zn}(\text{ClO}_3)_2 = 1.914$ . (Mylius, B. 1897,  
30. 1718.)

**Zinc chlorate ammonia**,  $\text{Zr}(\text{ClO}_3)_2 \cdot 4\text{NH}_3$ .

$\text{Zn}(\text{ClO}_3)_2 \cdot 6\text{NH}_3$ . Ppt. (Ephraim, B.  
1915, 48. 48.)

**Perchloric acid**

See Perchloric acid.

**Chlorides.**

Most chlorides are sol. in  $\text{H}_2\text{O}$ ; a few, how-  
ever, are insol. or nearly so therein, the chief  
of which are  $\text{AgCl}$ ,  $\text{Hg}_2\text{Cl}_2$ ,  $\text{Cu}_2\text{Cl}_2$ ,  $\text{PtCl}_2$ , and  
 $\text{AuCl}$ . Several chlorides are decomp. into  
insol. basic salts or hydroxides, either by the  
addition of  $\text{H}_2\text{O}$ , as in the case of  $\text{BiCl}_3$  and  
 $\text{SbCl}_3$ , or on evaporating the aqueous solution,  
as  $\text{AlCl}_3$ ,  $\text{ZnCl}_2$ ,  $\text{MgCl}_2$ , etc.

Some chlorides are sol. in alcohol or ether.

See under each element.

**Chlorine,  $\text{Cl}_2$ .**

The maximum solubility of  $\text{Cl}$  in  $\text{H}_2\text{O}$  is at  
 $10^\circ$  (Schönfeld); at  $8-10^\circ$  (Gay-Lussac); at  
 $9-10^\circ$  (Pelouze).

Solubility decreases from  $9-0^\circ$ ; at  $100^\circ$  the  
solubility = 0. (Gay-Lussac.)

$\text{Cl}_2 + \text{Aq}$  sat. at  $6^\circ$  has sp. gr. = 1.003. (Ber-  
thelot.)

1 vol.  $\text{H}_2\text{O}$  at  $t^\circ$  absorbs vols.  $\text{Cl}$  reduced to  
 $0^\circ$  and 760 mm. pressure.

$t^\circ$	Vols. $\text{Cl}$	$t^\circ$	Vols. $\text{Cl}$
10	2.5852	26	1.9099

(Kohn and O'Brien, J. Soc. Chem. Ind. 1898, 17. 1100.)

Sat. KCl+Aq absorbs  $\frac{1}{2}$  less Cl at 15° than pure H<sub>2</sub>O. (Dettmer, A. 33. 35.)

1 l. of a solution of CaCl<sub>2</sub> (1 pt. in 15 pts. H<sub>2</sub>O) dissolves 2.45 g. Cl at 12°.

1 l. of a solution of MgCl<sub>2</sub> (1 pt. in 15 pts. H<sub>2</sub>O) dissolves 2.33 g. Cl at 12°.

1 l. of a solution of MnCl<sub>2</sub> (1 pt. in 15 pts. H<sub>2</sub>O) dissolves 2.00 g. Cl at 12°.

Sl. sol. in KOH+Aq. (Fremy.)

Somewhat sol. in liquid NO<sub>2</sub>. (Frankland, Chem. Soc. 1901, 79. 1361.)

CCl<sub>4</sub> absorbs 10% of Cl<sub>2</sub> at 13°. (Perkins, Chem. Soc. 1894, 65. 20.)

1 mol. CrOCl<sub>2</sub> dissolves at 0°, 0.70 atom Cl; at -14°, 1.24 atoms; at -21°, 2.31 atoms; and at -24°, 3.00 atoms Cl. (Roozeboom, R. t. c. 4. 379.)

Sulphuryl chloride absorbs 71 vols. Cl or 0.136 pt. Cl by weight at 0°. (Schulze, J. pr. (2) 27. 168.)

Insol. in benzene. (Moride.)

Sl. sol. in chloral and iodal. (Dumas.)

Sol. in perchlorethylene. (Faraday.)

Sol. in a very large quantity of ether with decomp.

Coefficient of solubility of Cl<sub>2</sub> in organic  
liquids at 15°.

Substance	Coefficient of Solubility
Carbon tetrachloride	51.7
Acetic anhydride	39.6
Acetic acid (99.84%)	36.7
" (90 vol. %)	25.3
" (75 vol. %)	16.43
" (65 vol. %)	13.43

(Jones, Chem. Soc. 1911, 99. 392.)

+8H<sub>2</sub>O. Critical temp. of decomposition in open vessel = 9.6°, in closed vessel = 28.7°.

Solubility in H<sub>2</sub>O.

(Bray.)

**Chlorine oxide, Cl<sub>2</sub>O<sub>7</sub>.**

Very easily decomp. (Millon, A. 46. 281.)  
Probably a mixture of ClO<sub>2</sub> and O.

**Chlorine heptoxide, Cl<sub>2</sub>O<sub>7</sub>.**

Explosive; decomp. by H<sub>2</sub>O; sol. in well cooled benzene with sl. decomp. (Michael, Am. Ch. J. 1909, 23. 447.)

**Chlorirididiamine chloride,**

Sl. sol. in cold, easily in hot H<sub>2</sub>O. (Skoblikoff, A. 84. 275.)

— **nitrate, Cl<sub>2</sub>Ir(N<sub>2</sub>H<sub>5</sub>NO<sub>2</sub>)<sub>2</sub>.**

Sol. in H<sub>2</sub>O.

— **sulphate, Cl<sub>2</sub>Ir(N<sub>2</sub>H<sub>5</sub>)SO<sub>4</sub>.**

Sl. sol. in cold, much more easily in hot H<sub>2</sub>O.

**Chloriridic acid.**

**Chloriridates.**

Most of the chloriridates are very difficultly sol. in H<sub>2</sub>O, but a little more sol. than the corresponding chloroplatinates. Insol. or nearly so in alcohol, but not so difficultly sol. as the chloroplatinates. (Rose.)

**Ammonium chloriridate, (NH<sub>4</sub>)<sub>2</sub>IrCl<sub>6</sub>.**

Sol. in 20 pts. cold H<sub>2</sub>O (Vauquelin); sl. sol. in cold, much more in hot H<sub>2</sub>O (Claus); sol. in HCl + Aq (Soblewsky); insol. in cold NH<sub>4</sub>Cl + Aq (Claus); insol. in alcohol (Berselius).

100 pts. H<sub>2</sub>O dissolve at:

14.4° 26.8° 39.4°  
0.699 0.905 1.226 pts. (NH<sub>4</sub>)<sub>2</sub>IrCl<sub>6</sub>,

52.2° 61.2° 69.3°  
1.608 2.130 2.824 pts. (NH<sub>4</sub>)<sub>2</sub>IrCl<sub>6</sub>.

(Rimbach and Korten, Z. anorg. 1907, 52. 407.)

**Cæsium chloriridate, Cs<sub>2</sub>IrCl<sub>6</sub>.**

Only sl. sol. in H<sub>2</sub>O. (Delépine, C. R. 1908, 146. 1268.)

**Lithium chloriridate, Li<sub>2</sub>IrCl<sub>6</sub>.**

Somewhat deliquescent; very sol. in H<sub>2</sub>O (Antony, Gazz. ch. it. 23, 1. 190.)

**Potassium chloriridate, K<sub>2</sub>IrCl<sub>6</sub>.**

Sl. sol. in cold H<sub>2</sub>O; sol. in 15 pts. boiling H<sub>2</sub>O; less sol. in H<sub>2</sub>O containing HCl; in alcohol or sat. KCl and CaCl<sub>2</sub> + Aq.

Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. 1898, 20. 829.)

**Rubidium chloriridate, Rb<sub>2</sub>IrCl<sub>6</sub>.**

Very sl. sol. in H<sub>2</sub>O. (Rimbach, Z. anorg. 1907, 52. 408.)

**Sodium chloriridate, Na<sub>2</sub>IrCl<sub>6</sub> + 6H<sub>2</sub>O.**

Easily sol. in H<sub>2</sub>O; sol. in alcohol of 0 sp. gr.

**Thallium chloriridate, Tl<sub>2</sub>IrCl<sub>6</sub>.**

Decomp. by hot HCl forming Tl<sub>3</sub>Cl (Delépine, C. R. 1909, 149. 1073.)

**Chloriridium pentamine comps.**

See Iridopentamine chloro comps.

**Chloriridosulphurous acid.**

**Potassium chloriridosulphite, K<sub>4</sub>Ir<sub>2</sub>Cl<sub>2</sub>(SO<sub>3</sub>)<sub>4</sub> + 12H<sub>2</sub>O.**

Insol. in cold, decomp. by hot H<sub>2</sub>O. K<sub>4</sub>Ir<sub>2</sub>Cl<sub>2</sub>(SO<sub>3</sub>)<sub>4</sub>, 2K<sub>2</sub>SO<sub>3</sub>. Decomp. by 1 Cl<sub>2</sub>Ir<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub>, 8KCl + 4H<sub>2</sub>O. Sol. in H<sub>2</sub>O, insol. in alcohol. (Claus, J. pr. 42. 354.)

**Chloriridous acid.**

**Ammonium chloriridite, (NH<sub>4</sub>)<sub>2</sub>IrCl<sub>5</sub>.**

Decomp. by H<sub>2</sub>O. (Delépine, C. R. 1. 146. 1268.)

+1½H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Claus.)  
IrCl<sub>5</sub>(H<sub>2</sub>O)(NH<sub>4</sub>)<sub>2</sub>. (Delépine.)

**Cæsium chloriridite, IrCl<sub>5</sub>(H<sub>2</sub>O)Cs<sub>2</sub>.**

(Delépine.)

**Lithium chloriridite, Li<sub>2</sub>IrCl<sub>5</sub> + 12H<sub>2</sub>O.**

Deliquescent; sol. in H<sub>2</sub>O and also in alcohol. (Delépine, C. R. 1914, 158. 1277.)

**Lithium sodium chloriridite, Li<sub>2</sub>NaIrCl<sub>5</sub> + 12H<sub>2</sub>O.**

Stable in aq. solution in the presence of excess of lithium salt. (Delépine, C. R. 1. 158. 1278.)

LiNa<sub>2</sub>IrCl<sub>5</sub> + 12H<sub>2</sub>O. Stable in aq. solution in the presence of excess of sodium salt. (Delépine, C. R. 1914, 158. 1278.)

**Potassium chloriridite, K<sub>2</sub>IrCl<sub>5</sub>.**

Decomp. by H<sub>2</sub>O. (Delépine.)  
+3H<sub>2</sub>O. Easily sol. in H<sub>2</sub>O; insol. in alcohol; insol. in sat. KCl + Aq. (Berselius IrCl<sub>5</sub>(H<sub>2</sub>O)K<sub>2</sub>. (Delépine.)

**n chloriridite**,  $\text{IrCl}_3(\text{H}_2\text{O})\text{Rb}_2$ .  
(ine.)

**loriridite**,  $\text{Ag}_3\text{IrCl}_4$ .

in  $\text{H}_2\text{O}$  or acids; sl. sol. in  $\text{NH}_4\text{OH}$  +  
(Delépine, Bull. Soc. 1910, (4), 7. 55.)

**chloriridite**,  $\text{Na}_3\text{IrCl}_4 \cdot 12\text{H}_2\text{O}$ .

scent; sol. in  $\frac{1}{2}$  pt.  $\text{H}_2\text{O}$ . Insol. in  
Melts in crystal  $\text{H}_2\text{O}$  at  $50^\circ$ .

**chloriridite**,  $\text{Ti}_3\text{IrCl}_4$ .

hot  $\text{HCl}$ ; pptd. on cooling. (Delé-  
R. 1909, 149. 1073.)

**tramine chromium comps.**

**lorotetramine chromium comps.**

**zoimide**,  $\text{N}_2\text{Cl}$ .

in  $\text{H}_2\text{O}$ . (Raschig, B. 1908, 41.)

**romo comps:**

**omochloro comps.**

**rbonic acid.**

**rbonyl chloride.**

**romic acid**.  $\text{CrO}_2\frac{\text{OH}}{\text{Cl}}$ .

only in its salts.

2. See Chromyl chloride.

**um chlorochromate**,  $\text{NH}_4\text{CrO}_2\text{Cl} =$   
 $\frac{\text{Cl}}{\text{Cl}}$   
 $\text{ONH}_4$ .

ol. in  $\text{H}_2\text{O}$  than the K salt. (Peligot,  
283.)

**hlorochromate chloride**,

$\text{CrO}_2\text{Cl}_2$ ,  $\text{BaCl}_2$ .

scent. Very sol. in  $\text{H}_2\text{O}$ . (Prätor-  
1. 1.)

Not deliquescent.

**hlorochromate**,  $\text{Ca}(\text{CrO}_2\text{Cl})_2$ .

scent. (Peligot.)

). Very deliquescent. (Prätorius.)

**s chlorochromate.**

**chromyl chloride.**

**lorochromate**,  $\text{Co}(\text{CrO}_2\text{Cl})_2 + 9\text{H}_2\text{O}$ .

scent; melts at  $40^\circ$  in crystal  $\text{H}_2\text{O}$ .  
s.)

**hlorochromate**,  $\text{LiCrO}_2\text{Cl}$ .

$\text{H}_2\text{O}$  acidified with  $\text{HCl}$  without  
(Löwenthal, Z. anorg. 1894, 6.)

**Magnesium chlorochromate**,  $\text{Mg}(\text{CrO}_2\text{Cl})_2$ .

Deliquescent. (Peligot.)

+  $9\text{H}_2\text{O}$ . Less deliquescent than the other  
chlorochromates. (Prätorius, A. 201. 1.)

Very hygroscopic; sol. in  $\text{H}_2\text{O}$  acidified  
with  $\text{HCl}$  without decomp. (Löwenthal, Z.  
anorg. 1894, 6. 359.)

**Nickel chlorochromate**,  $\text{Ni}(\text{CrO}_2\text{Cl})_2 + 9\text{H}_2\text{O}$ .

Deliquescent; melts in its crystal  $\text{H}_2\text{O}$  at  
 $46-48^\circ$ . (Prätorius.)

**Potassium chlorochromate**,  $\text{KCrO}_2\text{Cl} =$   
 $\text{CrO}_2(\text{Cl})\text{OK}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. Cryst. from  $\text{H}_2\text{O}$   
containing  $\text{HCl}$  without decomp. (Peligot.)

Sol. in acetone. (Naumann, B. 1904, 37.  
4328.)

**Sodium chlorochromate**,  $\text{NaCrO}_2\text{Cl}$ .

Deliquescent. (Peligot.)

+  $2\text{H}_2\text{O}$ . Deliquescent. (Prätorius.)

**Strontium chlorochromate**,  $\text{Sr}(\text{CrO}_2\text{Cl})_2 +$   
 $4\text{H}_2\text{O}$ .

Deliquescent; melts in crystal  $\text{H}_2\text{O}$  at  $72^\circ$ .  
(Prätorius.)

**Thallous chlorochromate**,  $\text{TlCrO}_2\text{Cl}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Lachaud and Lepierre,  
C. R. 103. 198.)

**Zinc chlorochromate**,  $\text{Zn}(\text{CrO}_2\text{Cl})_2 + 9\text{H}_2\text{O}$ .

Deliquescent; melts at  $37.5^\circ$  in crystal  $\text{H}_2\text{O}$ .  
(Prätorius.)

Very hygroscopic; very sol. in  $\text{H}_2\text{O}$  and  
acids. (Löwenthal, Z. anorg. 1894, 6. 360.)

**Dichlorochromium bromide**,

$[\text{Cr}(\text{H}_2\text{O})_4\text{Cl}_2]\text{Br}$ .

Very deliquescent. Sol. in fuming  $\text{HBr}$ .  
in a mixture of equal volumes ether and fum-  
ing  $\text{HBr}$ , in alcohol and in acetone. (Bjerrum,  
B. 1907, 40. 2919.)

**Chlorochromotetrammonium comps.**

See Chlorotetramine chromium comps.

**Chlorocolumbium bromide**,  $(\text{Cb}_2\text{Cl}_{12})\text{Br}_2 +$   
 $7\text{H}_2\text{O}$ .

Sol. in a small quantity of cold  $\text{H}_2\text{O}$ .  
(Harned, J. Am. Chem. Soc. 1913, 35. 1083.)

**Chlorocolumbium chloride**,  $(\text{Cb}_2\text{Cl}_{12})\text{Cl}_2 +$   
 $7\text{H}_2\text{O}$ .

Insol. in cold, sol. in boiling  $\text{H}_2\text{O}$ .

Not easily decomp. by boiling with  $\text{NH}_4\text{OH}$ .  
Conc.  $\text{HNO}_3$  decomp. a boiling solution of  
this comp. Completely sol. in conc. alkalies.  
(Harned, J. Am. Chem. Soc. 1913, 35. 1080.)

**Chlorocolumbium hydroxide**,  $(\text{Cb}_2\text{Cl}_{12})(\text{OH})_2 + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids and alkalies. (Harned, J. Am. Chem. Soc. 1913, **35**, 1082.)

**Chloroctamine cobaltic carbonate**,  $\text{Cl}_4\text{Co}_2(\text{NH}_3)_2\text{CO}_3 + 2\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Vortmann and Blasberg, B. **22**, 2851.)

$\text{Cl}_2\text{Co}_2(\text{NH}_3)_2(\text{CO}_3)_2 + \text{H}_2\text{O}$ . (Vortmann and Blasberg.)

**Chloroferrous acid**.

**Calcium chloroferrite**,  $\text{CaO}$ ,  $\text{CaCl}_2$ ,  $\text{Fe}_2\text{O}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (le Chatelier, C. R. **99**, 276.)

**Dichlorofulminoplatinum**,

$\text{Pt}_4\text{N}_4\text{Cl}_2\text{O}_{12}\text{H}_{22}(?)$ .

Insol. in  $\text{H}_2\text{O}$ . (v. Meyer, J. pr. (2) **18**, 305.)

**Trichlorofulminoplatinum**,

$\text{Pt}_4\text{N}_4\text{Cl}_3(\text{OH})\text{O}_{12}\text{H}_{22}(?)$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (v. Meyer.)

**Tetrachlorofulminoplatinum**,

$\text{Pt}_4\text{N}_4\text{Cl}_4\text{O}_{12}\text{H}_{22}(?)$ .

Insol. in  $\text{H}_2\text{O}$ . (v. Meyer.)

**Chlorohydroxylonitritoplatinsemidi-amine nitrite**,  $(\text{OH})\text{ClNO}_2\text{Pt}(\text{NH}_3)_2\text{NO}_2$ .

Easily sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)

**Chlorohydroxyloplatin/diamine bromide**,

$\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_4\text{Br})_2$ .

Sl. sol. in  $\text{H}_2\text{O}$ .

— **carbonate**,  $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_4)_2\text{CO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (Cleve.)

— **chloride**,  $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_4\text{Cl})_2$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

— **chromate**,  $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_4)_2\text{CrO}_4$ .

Nearly insol. in  $\text{H}_2\text{O}$ .

— **dichromate**,  $\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_4)_2\text{Cr}_2\text{O}_7$ .

Ppt. (Cleve.)

— **nitrate** (Raewsky's nitrate),

$\frac{\text{OH}}{\text{Cl}}\text{Pt}(\text{N}_2\text{H}_4\text{NO}_2)_2$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . (Gerhardt.)

**Chlorohyposulphuric acid**,  $\text{S}_2\text{O}_3\text{Cl}_4$ .

See Sulphur oxytetrachloride.

**Chloromanganic acid**.

See Manganic hydrogen chloride.

**Chloromercurosulphurous acid**.

**Ammonium chloromercurosulphite**,

$\text{NH}_4\text{SO}_3\text{HgCl}$ .

Sol. in  $\text{H}_2\text{O}$ . (Barth, Z. phys. Ch. **1**

**Barium chloromercurosulphite**,

$\text{Ba}(\text{SO}_3\text{HgCl})_2$ .

Insol. in  $\text{H}_2\text{O}$ . (Barth.)

**Potassium chloromercurosulphite**,  $\text{KSO}$

Sol. in  $\text{H}_2\text{O}$ . (Barth.)

**Sodium chloromercurosulphite**,  $\text{NaSC}$  +  $\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Barth.)

**Chloromolybdenum bromide**,

$\text{Cl}_4\text{Mo}_3\text{Br}_2 + 3\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  and dil. acids; sol. in  $\text{H}_2\text{O} + 6\text{H}_2\text{O}$ . At first easily sol. in  $\text{H}_2\text{O}$ , precipitate soon forms. Can be cryst. from dil.  $\text{HBr} + \text{Aq}$ . Sol. in alcohol and (Blomstrand.)

**Chloromolybdenum potassium bromide**,

$\text{Cl}_4\text{Mo}_3\text{Br}_2$ ,  $2\text{KBr} + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Can be cryst. from  $+\text{Aq}$ . (Blomstrand.)

**Chloromolybdenum chloride**,  $\text{Cl}_4\text{Mo}$  molybdenum dichloride,  $\text{MoCl}_4$ .

Insol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl} + \text{H}_2\text{SO}_4 + \text{Aq}$ ; sl. sol. in  $\text{HNO}_3$ ; sol. in  $\text{N} + \text{Aq}$ ,  $\text{NaOH} + \text{Aq}$ , or  $\text{KOH} + \text{Aq}$ , with aration of precipitate on boiling; sol. in alcohol and ether. (Blomstrand, J. **1** 96.)

Very sol. in conc.  $\text{HCl}$ . (Rosenheim Kohn, Z. anorg. 1910, **66**, 2.)

+  $3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ .

+  $4\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Liech Kempe, A. **170**, 351.)

+  $6\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , alcohol, or (Blomstrand.)

**Chloromolybdenum hydrogen chloride**,

$\text{Mo}_3\text{Cl}_6$ ,  $\text{HCl} + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ , but ppt. forms after minutes. (Rosenheim and Kohn, Z. 1910, **66**, 5.)

**Chloromolybdenum potassium chloride**,  $\text{Cl}_4\text{Mo}_3\text{Cl}_2$ ,  $2\text{KCl} + 2\text{H}_2\text{O}$ .

Decomp. by pure  $\text{H}_2\text{O}$ ; can be recryst. from  $\text{HCl} + \text{Aq}$ . (Blomstrand, J. **108**.)

<p><b>denum hydroxide</b>, <math>\text{Cl}_4\text{Mo}_2(\text{OH})_2</math>  <math>\text{H}_2\text{O}</math> or alcohol. Easily sol. in  if fresh, and washed only with  If washed with warm <math>\text{H}_2\text{O}</math>, it is  sols. Ppt.; decomp. by boiling <math>\text{H}_2\text{O}</math>. Sol. in cold  <math>\text{H}_2\text{O}</math>. (Leidie, C. R. 1902, <b>134</b>, 1583.)</p>

$\text{Ir}_2\text{K}_{12}\text{Cl}_{18}(\text{NO}_2)_3 + 4\text{H}_2\text{O}$ . Ppt. (Quen-  
nessen, C. R. 1905, 141. 258.)

### Chloropalladic acid.

#### Chloropalladates.

The chloropalladates are generally very sol. in  $\text{H}_2\text{O}$ , and sol. in alcohol. (v. Bonsdorff, Pogg. 17. 264.)

#### Ammonium chloropalladate, $(\text{NH}_4)_2\text{PdCl}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

#### Barium chloropalladate.

Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff.)

#### Cadmium chloropalladate.

As above.

#### Cæsium chloropalladate, $\text{Cs}_2\text{PdCl}_4$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$  or by hot conc.  $\text{H}_2\text{SO}_4$ . (Gutbier, B. 1905, 38. 2386.)

#### Calcium chloropalladate.

Deliquescent; sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff, 1829.)

#### Glucinum chloropalladate, $\text{GIPdCl}_4 + 8\text{H}_2\text{O}$ .

Very hygroscopic, and sol. in  $\text{H}_2\text{O}$ .

#### Magnesium chloropalladate, $\text{MgPdCl}_4 + 6\text{H}_2\text{O}$ .

Deliquescent; sol. in  $\text{H}_2\text{O}$ .

#### Nickel chloropalladate, $\text{NiPdCl}_4 + 6\text{H}_2\text{O}$ .

Extremely deliquescent.

#### Potassium chloropalladate, $\text{K}_2\text{PdCl}_4$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ . Decomp. by long boiling with  $\text{H}_2\text{O}$ . Sl. sol. in dil.  $\text{HCl} + \text{Aq}$  without decomp. Insol. in  $\text{NH}_4\text{Cl}$ ,  $\text{KCl}$ , or  $\text{NaCl} + \text{Aq}$ . Insol. in alcohol. (Berzelius.)

#### Rubidium chloropalladate, $\text{Rb}_2\text{PdCl}_4$ .

Insol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$  or by hot conc.  $\text{H}_2\text{SO}_4$ . (Gutbier, B. 1905, 38. 2387.)

#### Zinc chloropalladate, $\text{ZnPdCl}_4 + 6\text{H}_2\text{O}$ .

Very deliquescent. (v. Bonsdorff.)

### Chloropalladous acid

#### Aluminum chloropalladite, $\text{Al}_2\text{Pd}_2\text{Cl}_{10} + 20\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Welkow, B. 7. 804.)

#### Ammonium chloropalladite, $(\text{NH}_4)_2\text{PdCl}_4 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. Sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Claus.)

Easily sol. in  $\text{H}_2\text{O}$ . (Gutbier, B. 19 2386.)

#### Barium chloropalladite.

Easily sol. in  $\text{H}_2\text{O}$  or alcohol.

#### Cadmium chloropalladite.

Not deliquescent.

#### Cæsium chloropalladite, $\text{Cs}_2\text{PdCl}_4$ .

Can be cryst. from hot  $\text{H}_2\text{O}$ . (Gutbier 1905, 38. 2386.)

#### Calcium chloropalladite.

Deliquescent. Sol. in  $\text{H}_2\text{O}$  or alcohol.

#### Glucinum chloropalladite, $\text{GIPdCl}_4 + 6\text{H}_2\text{O}$ .

Very hygroscopic; very sol. in  $\text{H}_2\text{O}$ , or ether. (Welkow.)

#### Magnesium chloropalladite.

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (Bonsdorff.)

#### Manganese chloropalladite.

Sol. in  $\text{H}_2\text{O}$  and alcohol.

#### Nickel chloropalladite.

Sol. in  $\text{H}_2\text{O}$ .

#### Potassium chloropalladite, $\text{K}_2\text{PdCl}_4$ .

Much more sol. in hot than cold (Joannis, C. R. 95. 295.) Sol. in  $\text{NH}_4\text{Aq}$ . (Berzelius.) Sol. in cold sat.  $\text{KCl}$  (Gibbs, Sill. Am. J. (2) 31. 70.) Insol. in alcohol. (Wollaston.) Somewhat sol. in alcohol of 0.84 sp. gr., but insol. in absolute alcohol; decomp. on boiling (Berzelius.)

#### Rubidium chloropalladite, $\text{Rb}_2\text{PdCl}_4$ .

Can be cryst. from hot  $\text{H}_2\text{O}$ . (Gutbier 1905, 38. 2387.)

#### Sodium chloropalladite.

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol.

#### Zinc chloropalladite.

Very deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff.)

#### Chlorophosphoarsenoiiridic acid, $3\text{H}_3\text{PO}_3, 3\text{H}_3\text{PO}_4, 5\text{H}_3\text{AsO}_4(?)$ .

Very sol. in  $\text{H}_2\text{O}$ . (Geisenheimer.)

#### Lead chlorophosphoarsenoiiridate, $3\text{Pb}_2\text{H}_3(\text{PO}_3)_2, 3\text{Pb}_2\text{H}_3(\text{PO}_4)_2, 5\text{Pb}_2\text{H}_3(\text{AsO}_4)_2$ .

Insol. in  $\text{H}_2\text{O}$ .

#### Chlorophosphoiridic acid, $2\text{IrCl}_3, 3\text{H}_3\text{PO}_3$ .

Very sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Geisenheimer, A. ch. (6) 23. 254.) Sol. in  $\text{H}_2\text{O}$  and alcohol.

**um chlorophosphoiridate**,  $2\text{IrCl}_3 \cdot (\text{H}_2\text{O})_2 \cdot \text{PO}_4 \cdot 3(\text{NH}_4)_2\text{HPO}_4$ .  
deliquescent. Very sol. in  $\text{H}_2\text{O}$ .  
(Cleve.)

**orophosphoiridate**,  $4\text{IrCl}_3 \cdot (\text{PO}_4)_2 \cdot 3\text{PbH}_2(\text{PO}_3)_2$ .  
in  $\text{H}_2\text{O}$  or acetic acid; very sol. in dil. Aq. (Geisenheimer.)

**lorophosphoiridate**,  $2\text{IrCl}_3 \cdot \text{H}_2\text{PO}_4 \cdot 3\text{AgH}_2\text{PO}_3$ .  
in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ , and + Aq. (Geisenheimer.)

**hosphoplatinic acid**.

**loroplatinophosphoric acid**.

**hosphoric acid**.

**chlorophosphate**,  $3\text{ThO}_2 \cdot \text{ThCl}_4$ .  
in  $\text{H}_2\text{O}$  and acids; decomp. by boil-  
 $\text{H}_2\text{SO}_4$ , and fusing with alkali car-  
(Colani, C. R. 1909, 149. 208.)

**latinamine chloride**,  $\text{Cl}_2\text{Pt} \cdot \frac{\text{NH}_4\text{Cl}}{\text{NH}_3\text{Cl}}$ .  
about 700 pts.  $\text{H}_2\text{O}$  at  $0^\circ$ , and 33–34  
 $00^\circ$ . Not attacked by boiling conc.  
 $\text{H}_2\text{SO}_4$ . Sol. in boiling  $\text{KOH} + \text{Aq}$   
mp. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Cleve,  
H. 10, 9. 30.)

**ite**,  $\text{Cl}_2\text{Pt}(\text{NH}_2\text{NO}_2)_2$ .  
in cold, easily in hot  $\text{H}_2\text{O}$ .

**ite silver nitrite**,  $\text{Cl}_2\text{Pt}(\text{NH}_2\text{NO}_2)_2 \cdot \text{O}_2$ .  
sol. in hot, sl. sol. in cold  $\text{H}_2\text{O}$ .

**itochloride**,  $\text{Cl}_2\text{Pt} \cdot \frac{\text{NH}_2\text{NO}_2}{\text{NH}_3\text{Cl}}$ .  
 $\text{H}_2\text{O}$ . (Cleve.)

**indiamine bromide**,  
 $\text{Pt}(\text{N}_2\text{H}_4\text{Br})_2$ .  
in hot  $\text{H}_2\text{O}$ . (Cleve.)

**ide** (Gros' chloride),  
 $\text{Pt}(\text{N}_2\text{H}_4\text{Cl})_2$ .  
insol. in cold, and only sl. sol. in hot  
sl. in hot conc.  $\text{KOH} + \text{Aq}$ , with de-  
Grimm.)  
cold  $\text{KOH} + \text{Aq}$  without decomp.  
sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Buckton.)  
(Raewsky.)

**roplatinite**,  $\text{NCl}_2\text{Pt}(\text{N}_2\text{H}_4\text{Cl})_2 \cdot \text{PtCl}_4$ .  
sol. in hot  $\text{H}_2\text{O}$ .

**roplatinite**,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_4\text{Cl})_2 \cdot \text{PtCl}_4$ .  
in  $\text{H}_2\text{O}$ . (Cleve.)

**Chloroplatindiamine chromate**,  
 $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_4)_2 \cdot \text{CrO}_4$ .

Nearly insol. in  $\text{H}_2\text{O}$ . (Cleve.)

— **dichromate**,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_4)_2 \cdot \text{Cr}_2\text{O}_7$ .

Sl. sol. in cold, more sol. in hot  $\text{H}_2\text{O}$ .  
(Cleve.)

— **nitrate** (Gros' nitrate),  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_4\text{NO}_2)_2$ .  
Much more easily sol. in hot than in cold  
 $\text{H}_2\text{O}$ . Sol. in hot  $\text{KOH} + \text{Aq}$  with decomp.  
Nearly insol. in cont.  $\text{HNO}_3 + \text{Aq}$ .

— **nitritochloride**,  $\text{Cl}_2\text{Pt} \cdot \frac{\text{N}_2\text{H}_4\text{NO}_2}{\text{N}_2\text{H}_4\text{Cl}}$ .  
Ppt. (Jørgensen.)

— **phosphate**.

See Chlorophosphatoplatindiamine phos-  
phate.

— **sulphate**,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_4)_2 \cdot \text{SO}_4$ .

Sl. sol. in both cold or hot  $\text{H}_2\text{O}$ . (Cleve.)  
+  $x\text{H}_2\text{O}$ . Sl. sol. in cold, easily in hot  
 $\text{H}_2\text{O}$ . (Grimm.)

— **sulphocyanide**,  $\text{Cl}_2\text{Pt}(\text{N}_2\text{H}_4)_2(\text{CNS})_2$   
+  $\text{H}_2\text{O}$ .  
Ppt. (Cleve.)

**Chloroplatinmonodiamine chloride**,

Quite easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Chloroplatinsemidiamine carbonate chlo-  
ride**,  $2\text{Pt}(\text{NH}_3)_2\text{Cl}_2 \cdot \text{Pt}_2(\text{NH}_3)_4\text{Cl}_2(\text{CO}_3)_2$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol and ether.  
Decomp. by cold  $\text{HCl} + \text{Aq}$ . (Schon, Z. anorg.  
1897, 13. 37.)

**Chloroplatinsemidiamine chloride**,  
 $\text{Cl}_2\text{Pt}(\text{NH}_3)_2\text{Cl}$ .

Sol. in 300 pts.  $\text{H}_2\text{O}$  at  $0^\circ$ , and 65 pts. at  
 $100^\circ$ . Not decomp. by conc.  $\text{H}_2\text{SO}_4$ . Sol. in  
 $\text{KOH} + \text{Aq}$  without decomp. (Cleve.)

**Chloroplatinic acid**,  $\text{H}_2\text{PtCl}_6 + 6\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohol, or ether.  
+  $4\text{H}_2\text{O}$ . Deliquescent. (Pigeon, C. R.  
112. 1218.)

$\text{PtCl}_4 \cdot \text{HCl} + 2\text{H}_2\text{O}$ . (Pigeon.)

**Aluminum chloroplatinate**,  $\text{AlCl}_3 \cdot \text{PtCl}_4 + 15\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  and alcohol. (Welkow, B.  
7. 304.)  
Insol. in ether.

**Ammonium chloroplatinate**,  $(\text{NH}_4)_2\text{PtCl}_6$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .  
(Fresenius.)  
100 pts.  $\text{H}_2\text{O}$  dissolve 0.666 pt. at ord.  
temp. and 12.5 pts. at  $100^\circ$ . (Crookes, C. N.  
9. 37.)

Insol. in cold HCl + Aq. Separates out on cooling from solution in hot HCl, HNO<sub>3</sub>, or H<sub>2</sub>SO<sub>4</sub>. (Fischer.)

Very sl. sol. in cold, easily in hot NH<sub>4</sub>OH + Aq. (Fresenius.)

Conc. NH<sub>4</sub>Cl + Aq ppts. it almost completely from aqueous solution. (Böttger.)

Sol. in NH<sub>4</sub> succinate + Aq. (Düpping.)

Less sol. in H<sub>2</sub>PtCl<sub>6</sub> + Aq than in H<sub>2</sub>O. (Rogojski, A. ch. (3) 41. 452.)

Sol. in SnCl<sub>2</sub> + Aq. (Fischer.)

Very sol. with decomp. in KCNS + Aq. (Claus.)

At 15–20°, sol. in 26,535 pts. 97.5% alcohol, in 1476 pts. 76% alcohol, and in 665 pts. 55% alcohol. If free HCl is present, it is sol. in 672 pts. 76% alcohol. (Fresenius, A. 59. 118.)

Insol. in absolute alcohol or ether.

**Barium chloroplatinate**, BaPtCl<sub>6</sub> + 6H<sub>2</sub>O.

Permanent; sol. in H<sub>2</sub>O; decomp. by alcohol. (v. Bonsdorff, Pogg. 17. 250.)

**Barium monochloroplatinate**, PtCl(OH)<sub>3</sub>Ba + H<sub>2</sub>O.

Insol. in H<sub>2</sub>O and in org. solvents. (Bellucci, C. C. 1903, I. 131.)

**Barium pentachloroplatinate**, OH.PtCl<sub>5</sub>Ba + H<sub>2</sub>O.

(Miolati, Chem. Soc. 1900, 78. (2) 732.)

**Cadmium chloroplatinate**, CdPtCl<sub>6</sub> + 6H<sub>2</sub>O.

Deliquescent, and easily sol. in H<sub>2</sub>O. (v. Bonsdorff.)

**Cesium chloroplatinate**, Cs<sub>2</sub>PtCl<sub>6</sub>.

100 pts. H<sub>2</sub>O dissolve at:

0°	10°	20°	30°
0.024	0.050	0.079	0.110
40°	50°	60°	70°
0.142	0.177	0.213	0.251
80°	90°	100°	
0.291	0.332	0.377	

pts. Cs<sub>2</sub>PtCl<sub>6</sub>. (Bunsen, Pogg. 113. 337.)

Sol. in 1308 pts. H<sub>2</sub>O at 15°, and 261 pts. at 100°. (Crookes, C. N. 9. 205.)

**Calcium chloroplatinate**, CaPtCl<sub>6</sub> + 8H<sub>2</sub>O.

Deliquescent; easily sol. in H<sub>2</sub>O. (v. Bonsdorff.)

**Calcium monochloroplatinate**, PtCl(OH)<sub>3</sub>Ca + H<sub>2</sub>O.

Insol. in H<sub>2</sub>O and in org. solvents. (Bellucci, C. C. 1903, I. 131.)

**Cerium chloroplatinate**, CeCl<sub>3</sub>, PtCl<sub>6</sub> + 13H<sub>2</sub>O.

Deliquescent; very sol. in H<sub>2</sub>O or alcohol; insol. in ether. (Marignac.)

4CeCl<sub>3</sub>, 3PtCl<sub>6</sub> + 8H<sub>2</sub>O. Deliquescent; easily sol. in H<sub>2</sub>O or alcohol; insol. in ether. (Holzmann, J. pr. 84. 80.)

**Chromium chloroplatinate**, CrCl<sub>3</sub>, PtCl<sub>6</sub> + 10½H<sub>2</sub>O.

Deliquescent. (Nilson, B. 9. 1056.)

+ 10H<sub>2</sub>O. Very sol. in H<sub>2</sub>O and alcohol. Nearly insol. in acetone. (Higley, J. Am. Chem. Soc. 1904, 26.617.)

**Cobalt chloroplatinate**, CoPtCl<sub>6</sub> + 6H<sub>2</sub>O.

Very deliquescent. (Jørgensen.)

**Copper chloroplatinate**, CuPtCl<sub>6</sub> + 6H<sub>2</sub>O.

Deliquescent in moist air. (v. Bonsdorff.)

**Didymium chloroplatinate**, DiCl<sub>3</sub>, PtCl<sub>6</sub> + 13H<sub>2</sub>O.

Less deliquescent than the cerium salt. (Marignac.)

+ 10½H<sub>2</sub>O. Deliquescent. (Cleve, Bull. Soc. (2) 43. 361.)

**Erbium chloroplatinate**, ErCl<sub>3</sub>, PtCl<sub>6</sub> + 11H<sub>2</sub>O.

Very deliquescent. (Cleve.)

**Gadolinium chloroplatinate**, GdCl<sub>3</sub>, PtCl<sub>6</sub> + 10H<sub>2</sub>O.

Ppt. (Benedicko, Z. anorg. 1900, 22. 204.)

**Glucinum chloroplatinate**, GlPtCl<sub>6</sub> + 8H<sub>2</sub>O.

Deliquescent in moist air. Very sol. in H<sub>2</sub>O, moderately in alcohol. Insol. in ether. (Welkow, B. 6. 1288.)

**Indium chloroplatinate**, 2InCl<sub>3</sub>, 5PtCl<sub>6</sub> + 36H<sub>2</sub>O.

Deliquescent. (Nilson.)

**Iron (ferrous) chloroplatinate**, FePtCl<sub>6</sub> + 6H<sub>2</sub>O.

Deliquescent. (Topsoë.)

**Iron (ferric) chloroplatinate**, FeCl<sub>3</sub>, PtCl<sub>6</sub> + 10½H<sub>2</sub>O.

Deliquescent. (Nilson.)

**Lanthanum chloroplatinate**, LaCl<sub>3</sub>, PtCl<sub>6</sub> + 13H<sub>2</sub>O.

Deliquescent; extremely sol. in H<sub>2</sub>O (Cleve.)

**Lead chloroplatinate**, PbPtCl<sub>6</sub> + 3H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O and alcohol (Topsoë), with decomp. (Birnbbaum, Zeit. Ch. 1867. 520.)

**Lead monochloroplatinate**, [PtCl(OH)<sub>3</sub>]Pb, Pb(OH)<sub>2</sub>.

Ppt. (Bellucci, Chem. Soc. 1902, 82, II. 155.)

**Lead pentachloroplatinate, basic**, PtCl<sub>5</sub>(OH)Pb, Pb(OH)<sub>2</sub>.

(Miolati, Chem. Soc. 1900, 78. (2) 732.)

**Lithium chloroplatinate**, Li<sub>2</sub>PtCl<sub>6</sub> + 6H<sub>2</sub>O.

Extremely deliquescent (Jørgensen); efflorescent. Easily sol. in H<sub>2</sub>O, alcohol, or ether-alcohol; insol. in ether. (Scheibler.)

**Lithium pentachloroplatinate**, OH.PtCl<sub>5</sub>Li.

Very hygroscopic. (Miolati, Chem. Soc. 1900, 78 (2) 732.)

esium chloroplatinate,  $\text{MgPtCl}_6 \cdot 6\text{H}_2\text{O}$ .  
in  $\text{H}_2\text{O}$  and abs. alcohol.  
 $2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

anese chloroplatinate,  $\text{MnPtCl}_6 \cdot 6\text{H}_2\text{O}$ .  
t deliquescent; sol. in  $\text{H}_2\text{O}$ .  
 $2\text{H}_2\text{O}$ . Sl. efflorescent.

l chloroplatinate,  $\text{NiPtCl}_6 \cdot 6\text{H}_2\text{O}$ .  
in  $\text{H}_2\text{O}$ .

ium chloroplatinate,  $\text{K}_2\text{PtCl}_6$ .

pts.  $\text{H}_2\text{O}$  dissolve at:

10°	20°	30°	40°	50°
0.90	1.12	1.41	1.76	2.17

pts.  $\text{K}_2\text{PtCl}_6$ ,  
70° 80° 90° 100°  
3.19 3.79 4.45 5.18 pts.  $\text{K}_2\text{PtCl}_6$ .

(Bunsen, Pogg. 113. 337.)

pts.  $\text{H}_2\text{O}$  dissolve 0.926 pt. at 15°, and  
pts. at 100°. (Crookes, C. N. 9. 205.)

g.  $\text{H}_2\text{O}$  dissolve at:

16°	25°	35°	48°
2	0.6718	0.8641	1.132

1.745 g.  $\text{K}_2\text{PtCl}_6$ ,  
9° 68° 78° 92°  
396 2.913 3.589 4.484 g.  $\text{K}_2\text{PtCl}_6$ .

ibald, J. Am. Chem. Soc. 1908, 30. 752.)

attacked by cold conc.  $\text{H}_2\text{SO}_4$ . (Las-  
e.)

sol. in cold, more easily in hot dil. acids.  
sol. in  $\text{KCl} + \text{Aq}$  than in  $\text{H}_2\text{O}$ , and nearly  
in sat.  $\text{KCl} + \text{Aq}$ . (Schrötter, W. A. B.  
268.)

#### Solubility in $\text{KCl} + \text{Aq}$ at 20°.

**Potassium pentachlorohydroplatinate,**  $K_2(PtCl_5OH)$ .

Easily sol. in  $H_2O$ . (Ruff, B. 1913. 46. 925.)

**Praseodymium chloroplatinate,**  $PrCl_3, PtCl_4 + 12H_2O$ .

Very sol. in  $H_2O$ . Sol. in conc.  $HCl$ . (von Scheele, Z. anorg. 1898, 18. 353.)

**Rubidium chloroplatinate,**  $Rb_2PtCl_6$ .

100 pts.  $H_2O$  dissolve at:

0°	10°	20°
0.184	0.154	0.141 pts. $Rb_2PtCl_6$ ,
30°	40°	50°
0.145	0.166	0.203 pts. $Rb_2PtCl_6$ ,
60°	70°	80°
0.253	0.329	0.417 pts. $Rb_2PtCl_6$ ,
90°	100°	
0.521	0.634	pts. $Rb_2PtCl_6$ .

(Bunsen, Pogg. 113. 337.)

Sol. in 740 pts.  $H_2O$  at 15°, and 157 pts. at 100°. (Crookes, C. N. 9. 205.)

Insol. in alcohol.

**Samarium chloroplatinate,**  $SmCl_3, PtCl_4 + 10\frac{1}{2}H_2O$ .

Deliquescent. Very sol. in  $H_2O$ . (Cleve, Bull. Soc. (2) 43. 165.)

**Silver chloroplatinate,**  $Ag_2PtCl_6$ .

Ppt. Gradually decomp. by  $H_2O$  into  $AgCl$  and  $PtCl_4$ . (Jørgensen, J. pr. (2) 16. 345.)

$Ag_2PtCl_6(OH)_2$ . Ppt.

**Silver monochloroplatinate,**  $[PtCl(OH)_2]Ag_2$ .

Ppt. (Bellucci, Chem. Soc. 1902, 82. (2). 155.)

**Silver pentachloroplatinate,**  $(OH)PtCl_5Ag_2$ .

Ppt.; stable in boiling  $H_2O$ . (Miolati, Chem. Soc. 1900, 78 (2). 732.)

**Silver chloroplatinate ammonia,**  $Ag_2PtCl_6, 2NH_3$ .

Insol. in  $H_2O$ . (Birnbaum.)

**Sodium chloroplatinate,**  $Na_2PtCl_6 + 6H_2O$ .

Easily sol. in  $H_2O$ . Sat. solution at 15° contains 39.77 g.  $Na_2PtCl_6$  and has sp. gr. of 1.368. Sol. in  $NaCl + Aq$ . More sol. in absolute alcohol than in 95% alcohol. Sat. solution in abs. alcohol contains 11.90%; 95% alcohol, 6.34%. Mixture of equal parts of alcohol and ether dissolve 2.43%. Insol. in ether. (Precht, Z. anal. 18. 502.)

**Sodium pentachloroplatinate,**  $(OH)PtCl_5Na_2$ .

Exists only in solution. (Miolati, l.c.)

**Strontium chloroplatinate,**  $SrPtCl_6 + 8H_2O$ .

Very sol. in  $H_2O$ .

**Strontium monochloroplatinate,**  $PtCl(OH) + H_2O$ .

Insol. in  $H_2O$  and org. solvents. (B. C. C. 1903, I. 131.)

**Thallium chloroplatinate,**  $Tl_2PtCl_6$ .

Very al. sol. in  $H_2O$ . Sol. in 15.5  $H_2O$  at 15°, and 1948 pts. at 100°. (Cr

**Thallium monochloroplatinate,**  $[PtCl(OH)]Ppt$ . (Bellucci, Chem. Soc. 1902, 155.)**Thallium pentachloroplatinate,**  $(OH)PtCl_5$  (Miolati, Chem. Soc. 1900, 78 (2). 732.)**Thorium chloroplatinate,**  $ThCl_4, 12H_2O$ .

Very deliquescent. (Cleve, Bull. S. 21. 118.)

**Tin (stannic) chloroplatinate,**  $SnCl_4, 12H_2O$ .

(Nilson, B. 9. 1142.)

**Ytterbium chloroplatinate,**  $2YbCl_3, 12H_2O$ , and  $+35H_2O$ .

Ppt. (Cleve, Z. anorg. 1902, 32. 13)

**Vanadyl chloroplatinate,**  $(VO)PtCl_4 + 10\frac{1}{2}H_2O$ .

Sol. in  $H_2O$ ; cryst. from  $PtCl_4$  (Brauner, M. 3. 58.)

**Yttrium chloroplatinate,**  $4YCl_3, 52H_2O$ .

Very deliquescent. (Cleve.)  $2YCl_3, 3PtCl_4 + 30H_2O$ . (Nilson, 1059.)

$2YCl_3, PtCl_4 + 21H_2O$ . (Nilson.)

**Zinc chloroplatinate,**  $ZnPtCl_6 + 6H_2O$ .

Deliquescent; sol. in  $H_2O$  and alcohol.

**Zinc tetrachloroplatinate,**  $ZnPt(OEt)_4 + 5H_2O$ .

Extremely sol. in  $H_2O$  and alcohol. (Miolati, Z. anorg. 1900, 22. 458.)

**Zirconyl chloroplatinate,**  $(ZrO)PtCl_6 + 6H_2O$  (Nilson.)**Chloroplatinocyanhydropyrophosphoric acid,**  $ClPtP_2O_6H_4 = ClPt \begin{matrix} \nearrow P(O) \\ \nearrow O \\ \searrow P(O) \end{matrix}$ 

Not deliquescent. Sol. in  $H_2O$ . (Schäfer, Bull. Soc. (2) 18. 164.)

**Chloroplatinocyanhydric acid,**  $H_2Pt(CN)_4Cl_4$ .

See Perchloroplatinocyanhydric acid

**ium chloroplatinocyanide**,  $5K_2Pt(CN)_4 \cdot Pt(CN)_4Cl_2 + 21H_2O$ .  
in  $H_2O$ ; insol. in alcohol.

**chloroplatinocyanide**,  
 $K_2(PtCl_2(CN)_4)_2$ .  
(Miolati, C. C. 1901, I. 500.)

**oplatinophosphoric acid**,  
 $H_2PtP(OH)_2$ .  
deliquescent, and sol. in  $H_2O$ .  
zenberger, Bull. Soc. (2) 17. 493.)

**chloroplatinophosphate**,  $Pb_2(Cl_2PtPO_3)_2 \cdot 8H_2O$ .

$Cl_2PtPO_3)_2 \cdot 2PbO + 4H_2O$ . Ppt.  
zenberger, Bull. Soc. (2) 17. 494.)

**chloroplatinophosphate**,  $Ag_2HPO_3 \cdot Cl_2$ .  
(Schützenberger, Bull. Soc. (2) 17.

**oplatinodiphosphoric acid**,  $PtCl_2 \cdot (OH)_2$ .  
deliquescent, and easily sol. in  $H_2O$ .  
zenberger, Bull. Soc. (2) 18. 153.)

**oplatinopyrophosphoric acid**,  
 $IPt \begin{matrix} \nearrow P(OH)_2 \\ \searrow P(OH)_2 \end{matrix}$ .  
deliquescent than chloroplatinodiphosphoric acid.

**oplatinous acid**,  $H_2PtCl_4$ .  
own only in solution.

**ium chloroplatinite**,  $AlPtCl_4 + 10\frac{1}{2}H_2O$ .  
deliquescent; sol. in  $H_2O$ . (Nilson, (2) 15. 260.)

**ium chloroplatinite**,  $(NH_4)_2PtCl_4$ .  
sol. in cold, easily in hot  $H_2O$ . Insol. in alcohol. (Peyrone, A. 55. 208.)

**ium chloroplatinite**,  $BaPtCl_4 + 3H_2O$ .  
deliquescent; sol. in  $H_2O$ . Very sl. 93% alcohol.

**ium chloroplatinite ammonia**,  $CdPtCl_4 \cdot NH_3$ .  
sol. in  $H_2O$  or  $NH_4OH + Aq$ . Sol. in Aq. (Thomsen, B. 2. 668.)

**ium chloroplatinite**,  $Cs_2PtCl_4$ .  
sol. in cold, easily in hot  $H_2O$ .  
pts.  $H_2O$  dissolve 3.4 pts. salt at 20°  
" " 6.73 " " 40°  
" " 8.68 " " 60°  
" " 10.92 " " 80°  
" " 12.10 " " 100°.

(Godeffroy, A. 181. 176.)

$Cs_2PtCl_4$ . Ppt. Very sensitive to sunlight. Decomp. by  $H_2O$  into the higher and lower chlorides. (Wöhler, B. 1909, 42. 4104.)

**Calcium chloroplatinite**,  $CaPtCl_4 + 8H_2O$ .  
Deliquescent; sol. in  $H_2O$ .

**Cerium chloroplatinite**,  $CeCl_3 \cdot 2PtCl_2 + 10\frac{1}{2}H_2O$ .  
Deliquescent; easily sol. in  $H_2O$ . (Nilson, B. 9. 1847.)

**Chromium chloroplatinite**,  $Cr_2Pt_2Cl_{12} + 18H_2O$ .  
Deliquescent.

**Cobalt chloroplatinite**,  $CoPtCl_4 + 6H_2O$ .  
Sl. deliquescent in moist, efflorescent in dry air.

**Copper chloroplatinite**,  $CuPtCl_4 + 6H_2O$ .  
Extremely deliquescent. (Topsøe.)

**Copper chloroplatinite ammonia** (cuprammonium chloroplatinite),  
 $Cu(NH_3)_4PtCl_4$ .  
Insol. in  $H_2O$  or  $NH_4OH + Aq$ ; easily sol. in  $H_2SO_4 + Aq$ . (Millon and Commaille, C. R. 57. 822.)

**Didymium chloroplatinite**,  $DiCl_3 \cdot 2PtCl_2 + 10H_2O$ .  
Deliquescent; very sol. in  $H_2O$ . (Nilson.)  
 $2DiCl_3 \cdot 3PtCl_2 + 18H_2O$ . As above. (Nilson.)

**Erbium chloroplatinite**,  $ErPtCl_4 + 13\frac{1}{2}H_2O$ .  
Deliquescent.  
 $Er_2Pt_2Cl_{12} + 24H_2O$ . Deliquescent in moist air.

**Glucinum chloroplatinite**,  $GlPtCl_4 + 5H_2O$ .  
Deliquescent in moist air. Sol. in  $H_2O$  in all proportions.

**Iron (ferrous) chloroplatinite**,  $FePtCl_4 + 7H_2O$ .  
Deliquescent. Rather sl. sol. in cold, very sol. in hot  $H_2O$ . (Nilson.)

**Lanthanum chloroplatinite**,  $La_2Pt_2Cl_{12} + 18$  and  $27H_2O$ .  
Deliquescent.

**Lead chloroplatinite**,  $PbPtCl_4$ .  
Insol. in cold  $H_2O$ .

**Lithium chloroplatinite**,  $Li_2PtCl_4 + 6H_2O$ .  
Sol. in  $H_2O$ .

**Magnesium chloroplatinite**,  $MgPtCl_4 + 6H_2O$ .  
Not very deliquescent; very sol. in  $H_2O$ .

**Manganese chloroplatinite,  $\text{MnPtCl}_4 + 6\text{H}_2\text{O}$ .**

As the Mg salt.

**Mercurous chloroplatinite.**

Ppt.

**Nickel chloroplatinite,  $\text{NiPtCl}_4 + 6\text{H}_2\text{O}$ .**

As the Co salt.

**Potassium chloroplatinite,  $\text{K}_2\text{PtCl}_4$ .**Moderately sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol.**Rubidium chloroplatinite,  $\text{Rb}_2\text{PtCl}_4$ .**Sl. sol. in cold; easily in hot  $\text{H}_2\text{O}$ .**Silver chloroplatinite,  $\text{Ag}_2\text{PtCl}_4$ .**Insol. in  $\text{H}_2\text{O}$ .  $\text{NH}_4\text{OH} + \text{Aq}$  dissolves out  $\text{AgCl}$ . (Lang.) $\text{AgCl}$ ,  $\text{PtCl}_2(?)$ . As above. (Commaille, Bull. Soc. (2) 6. 262.)**Silver chloroplatinite ammonia,  $\text{Ag}_2\text{PtCl}_4 \cdot 4\text{NH}_3$ .**

(Thomsen.)

**Sodium chloroplatinite,  $\text{Na}_2\text{PtCl}_4 + 4\text{H}_2\text{O}$ .**Deliquescent; very sol. in  $\text{H}_2\text{O}$ .**Strontium chloroplatinite,  $\text{SrPtCl}_4 + 6\text{H}_2\text{O}$ .**Deliquescent. Very sol. in  $\text{H}_2\text{O}$ .**Thallium chloroplatinite,  $\text{Tl}_2\text{PtCl}_4$ .**Very sl. sol. even in boiling  $\text{H}_2\text{O}$ .**Thorium chloroplatinite,  $\text{Th}_2\text{Pt}_2\text{Cl}_{14} + 24\text{H}_2\text{O}$ .**

Very deliquescent.

**Yttrium chloroplatinite,  $\text{Y}_2\text{Pt}_2\text{Cl}_{12} + 24\text{H}_2\text{O}$ .**

Deliquescent.

**Zinc chloroplatinite,  $\text{ZnPtCl}_4 + 6\text{H}_2\text{O}$ .**Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ ; insol. in alcohol.**Zinc chloroplatinite ammonia,  $\text{ZnPtCl}_4 \cdot 4\text{NH}_3$ .**Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl} + \text{Aq}$ . Insol. in alcohol. (Thomsen, J. B. 1868. 278.)**Zirconyl chloroplatinite,  $(\text{ZrO})\text{PtCl}_4 + 8\text{H}_2\text{O}$ .**

(Nilson.)

**Trichloroplatinous acid,  $\text{H}_2\text{Pt}(\text{OH})\text{Cl}_3$ .**Sol. in  $\text{H}_2\text{O}$ . (Miolati, Z. anorg. 1902, 33. 265.) $+ \text{H}_2\text{O}$ . (Nilson, J. pr. (2) 15. 260.)**Lead trichloroplatinite,  $\text{PbPt}(\text{OH})\text{Cl}_3$ .**

Ppt. (Miolati.)

**Silver trichloroplatinite,  $\text{Ag}_2\text{Pt}(\text{OH})\text{Cl}_3$ .**

Ppt. (Miolati.)

**Chloroplatosulphurous acid.****Ammonium chloroplatosulphite, acid,  $\text{NH}_4\text{PtClSO}_3, \text{H}_2\text{SO}_3 + 4\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ . (Birnbbaum, A. 152. 149.)**Ammonium chloroplatosulphite chloride sulphite,  $\text{NH}_4\text{PtClSO}_3, (\text{NH}_4)_2\text{SO}_3, \text{NH}_4\text{Cl}$ .**  
Very deliquescent. (Birnbbaum.)**Ammonium chloroplatosulphite sulphite,  $\text{NH}_4\text{ClPtSO}_3, (\text{NH}_4)_2\text{SO}_3 + 3\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ . (Birnbbaum.)**Barium chloroplatosulphite chloride ammonium chloride,  $\text{Ba}(\text{ClPtSO}_3)_2, \text{Ba}(\text{PtClSO}_3)\text{Cl}, 6\text{NH}_4\text{Cl} + 3\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ . (Birnbbaum.)**Potassium chloroplatosulphite ammonium chloride,  $\text{KPtClSO}_3, 2\text{NH}_4\text{Cl}$ .**

Very deliquescent. (Birnbbaum, A. 152. 142.)

**Potassium chloroplatosulphite chloride,  $\text{KPtClSO}_3, 2\text{KCl}$ .**Deliquescent; sol. in  $\text{H}_2\text{O}$ . (Birnbbaum, A. 152. 145.)**Potassium chloroplatosulphite ammonium potassium sulphite,  $\text{KPtClSO}_3, (\text{NH}_4)\text{KSO}_3 + 3\text{H}_2\text{O}$ .**

Very deliquescent. (Birnbbaum, A. 152. 120.)

**Sodium chloroplatosulphite ammonium chloride,  $\text{NaPtClSO}_3, 2\text{NH}_4\text{Cl}$ .**

Very deliquescent. (Birnbbaum, A. 152. 117.)

**Chloroplumbic acid,  $\text{H}_2\text{PbCl}_4$ .**

Decomp. in solution on standing. (Gutbier, J. pr. 1914, (2) 90. 497.)

**Ammonium chloroplumbate,  $(\text{NH}_4)_2\text{PbCl}_4$ .**Ppt. Difficultly sol. in a small amount of  $\text{H}_2\text{O}$ . Solution decomp. slowly when cold, more rapidly when warmed.Decomp. by a large amount of  $\text{H}_2\text{O}$ . Sol. without decomp. in 20%  $\text{HCl}$ . Decomp. by dil. acids and alkalis. (Elbs, Z. Elektrochem. 1903, 9. 778.)Difficultly sol. in small amount of  $\text{H}_2\text{O}$  and solution decomp. slowly in the cold, more rapidly when warmed. Decomp. by a large amount of  $\text{H}_2\text{O}$ . (Gutbier, J. pr. 1914, (2) 90. 498.)Sol. in cold  $\text{HNO}_3$  without decomp. (Friedrich, M. 1893, 14. 511.)Insol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Nikoljukin, B. 18. 370 R.) $5\text{NH}_4\text{Cl}, 2\text{PbCl}_4$ . Not hygroscopic. Decomp. by  $\text{H}_2\text{O}$  with pptn. of  $\text{PbO}_2$ . Sol. in  $\text{HCl} + \text{Aq}$  and in cold  $\text{HNO}_3 + \text{Aq}$  without

(Classen and Zahorski, Z. anorg. 4.  
 sition is  $2\text{NH}_4\text{Cl}$ ,  $\text{PbCl}_4$ . (Fried-  
 l. B. 102, 2b. 527.)

**chloroplumbate**,  $\text{Cs}_2\text{PbCl}_4$ .

absolutely insol. in conc.  $\text{CsCl} + \text{Aq}$   
 e of  $\text{Cl}$ . (Wells, Z. anorg. 4. 335.)  
 conc.  $\text{HCl} + \text{Aq}$  containing  $\text{PbCl}_4$  dis-  
 0049 g.  $\text{Cs}_2\text{PbCl}_4$ . (Wells, Z. anorg.

with  $\text{H}_2\text{O}$  as the corresponding am-  
 salt. (Gutbier, J. pr. 1914, (2)

**chloroplumbate**,  $\text{K}_2\text{PbCl}_4$ .

p. by  $\text{H}_2\text{O}$ ; sol. in  $\text{KCl} + \text{Aq}$ . (Wells,  
 4. 335.)  
 decomp. in the air. (Gutbier, J.  
 (2) 90. 499.)

**chloroplumbate**,  $\text{Rb}_2\text{PbCl}_4$ .

p. by  $\text{H}_2\text{O}$ ; sl. sol. in conc.  $\text{RbCl} +$   
 lla, Z. anorg. 4. 335.)  
 conc.  $\text{HCl} + \text{Aq}$  containing  $\text{PbCl}_4$   
 0.003 g.  $\text{Rb}_2\text{PbCl}_4$ . (Wells, Z.  
 341.)

with  $\text{H}_2\text{O}$  as the corresponding am-  
 salt. (Gutbier, J. pr. 1914, (2)

p. by conc.  $\text{H}_2\text{SO}_4$ . Insol. in 96%  
 (Erdmann, A. 1896, 294. 78.)

**purpureochromium bromide**,  
 $(\text{NH}_4)_2\text{Br}_2$ .

hat more easily sol. in  $\text{H}_2\text{O}$  than the  
 (Jörgensen, J. pr. (2) 20. 105.)

**ride**,  $\text{CrCl}(\text{NH}_3)_2\text{Cl}_2$ .

tly sol. in cold, and decomp. by hot

lissolves in 154 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ .  
 conc.  $\text{HCl} + \text{Aq}$ . More sol. in dil.  
 lq than in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} +$   
 it decomp. (Jörgensen, J. pr. (2) 20.

**curic chloride**,  $\text{CrCl}(\text{NH}_3)_2\text{Cl}_2$ ,  
 $\text{Cl}_2$ .

fficultly sol. in  $\text{H}_2\text{O}$ . (Jörgensen.)

**roplatinate**,  $\text{CrCl}(\text{NH}_3)_2(\text{PtCl}_6)$ .

ely difficultly sol. in  $\text{H}_2\text{O}$ . (Jörgen-

**mate**,  $\text{CrCl}(\text{NH}_3)_2(\text{CrO}_4)$ .

in  $\text{H}_2\text{O}$ ; sl. more sol. than chloro-  
 cobalt chromate. (Jörgensen.)

**ionate**,  $\text{CrCl}(\text{NH}_3)_2(\text{S}_2\text{O}_8)$ .

. sol. in cold, but much more easily  
 O. (Jörgensen.)

**Chloropurpureochromium ferrocyanide**,  
 $[\text{CrCl}(\text{NH}_3)_2]_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .

Very difficultly sol. in cold  $\text{H}_2\text{O}$ . (Jörgen-  
 sen.)

— **fluosilicate**,  $\text{CrCl}(\text{NH}_3)_2(\text{SiF}_6)$ .

Very difficultly sol. in  $\text{H}_2\text{O}$ . Insol. in  
 $\text{H}_2\text{SiF}_6 + \text{Aq}$ . (Jörgensen, J. pr. (2) 20. 105.)

— **mercuric iodide**,  $\text{CrCl}(\text{NH}_3)_2\text{I}_2$ ,  $2\text{HgI}_2$ .

Decomp. by  $\text{H}_2\text{O}$ ; sol. in alcohol and warm  
 $\text{KCN} + \text{Aq}$ .

$\text{CrCl}(\text{NH}_3)_2\text{I}_2$ ,  $\text{HgI}_2$ . Very difficultly sol.  
 in cold  $\text{H}_2\text{O}$ ; easily sol. in  $\text{KCN} + \text{Aq}$ . (Jör-  
 gensen, l.c.)

— **nitrate**,  $\text{CrCl}(\text{NH}_3)_2(\text{NO}_3)_2$ .

Sol. in 71 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$ . Insol. in  
 $\text{HNO}_3 + \text{Aq}$ . (Jörgensen.)

— **oxalate**,  $\text{CrCl}(\text{NH}_3)_2\text{C}_2\text{O}_4$ .

Very sl. sol. in cold  $\text{H}_2\text{O}$ . (Jörgensen, l.c.)

— **sulphate**,  $\text{CrCl}(\text{NH}_3)_2\text{SO}_4 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; precipitated by alcohol. (Jör-  
 gensen.)

— **sulphate, acid**,  $[\text{CrCl}(\text{NH}_3)_2]_2\text{SO}_4(\text{HSO}_4)_2$ .

Quite sol. in  $\text{H}_2\text{O}$ . (Jörgensen, J. pr. (2)  
 20. 185.)

— **pentasulphide**,  $\text{CrCl}(\text{NH}_3)_2\text{S}_5$ .

Very sl. sol. in cold, easily sol. in warm  
 $\text{H}_2\text{O}$ . Decomp. by dil.  $\text{HCl} + \text{Aq}$ . Insol. in  
 alcohol. (Jörgensen.)

**Chloropurpureocobaltic bromide**,

$\text{CoCl}(\text{NH}_3)_2\text{Br}_2$ .

Properties resemble the chloride very  
 closely. Sol. in 214 pts.  $\text{H}_2\text{O}$  at  $14.3^\circ$  (Jör-  
 gensen, J. pr. (2) 18. 205.)

— **mercuric bromide**,  
 $4\text{CoCl}(\text{NH}_3)_2\text{Br}_2$ ,  $9\text{HgBr}_2$ .

Ppt. (J.)

— **bromoplatinate**,  $\text{CoCl}(\text{NH}_3)_2\text{Br}_2$ ,  $\text{PtBr}_4$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . (J.)

— **carbonate**,  $\text{CoCl}(\text{NH}_3)_2\text{CO}_3 + 4\frac{1}{2}\text{H}_2\text{O}$ .

Efflorescent; very easily sol. in  $\text{H}_2\text{O}$ . (J.)

— **chloride**,  $\text{CoCl}(\text{NH}_3)_2\text{Cl}_2$ .

Very sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .  
 Sol. in 244 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$ . (Claudet, Phil.  
 Mag. J. (4) 2. 253.) In 287 pts.  $\text{H}_2\text{O}$  at  $10.2^\circ$   
 and 255 pts. at  $11.5^\circ$ . (Rose, Pogg. 20. 152.)  
 100 pts.  $\text{H}_2\text{O}$  dissolve 0.232 pt.  $\text{CoCl}_2$ ,  $5\text{NH}_3$ ,  
 at  $0^\circ$ , and 1.031 pts. at  $46.6^\circ$ . (Kurnakoff, J.  
 Russ. Soc. 24. 629.)

Sl. decomp. by cold, completely by boiling  
 $\text{H}_2\text{O}$ ; decomp. prevented by a little  $\text{HCl}$ .  
 Pptd. from aqueous solution by alcohol,  $\text{HCl}$ ,

or sat. KCl or NaCl + Aq; not decomp. by boiling HCl + Aq. (Claudet, *l.c.*) Nearly insol. in cold, but sol. in hot H<sub>2</sub>O, to which a few drops of HCl have been added. Less sol. in dil. HCl + Aq than luteocobaltic chloride. (Rogojaki, A. ch. (3) 41. 447.)

Insol. in alcohol. (Gibbs and Genth.)

**Chloropurpureocobaltic antimony chloride,**  
2CoCl(NH<sub>3</sub>)<sub>5</sub>Cl<sub>3</sub>, SbCl<sub>3</sub>.

Ppt. Decomp. by H<sub>2</sub>O. (Gibbs.)

— **bismuth chloride.**

Insol. in conc. HCl. Easily decomp. by H<sub>2</sub>O. (Gibbs.)

— **mercuric chloride, CoCl(NH<sub>3</sub>)<sub>5</sub>Cl<sub>3</sub>,**  
3HgCl<sub>2</sub>.

Insol. in cold, less sol. in hot H<sub>2</sub>O than chloropurpureocobaltic chloride. Insol. in cold fuming HCl + Aq; sl. sol. in hot HCl + Aq, separating on cooling; sl. sol. in hot aqua regia; moderately sol. in hot HNO<sub>3</sub> + Aq; partly sol. in cold conc. H<sub>2</sub>SO<sub>4</sub>, wholly on warming. Easily sol. in warm H<sub>2</sub>C<sub>2</sub>O<sub>4</sub> + Aq. Insol. in HgCl<sub>2</sub> + Aq.

Moderately sol. in NH<sub>4</sub>OH + Aq or (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq. (Carstanjen.)

CoCl(NH<sub>3</sub>)<sub>5</sub>Cl<sub>3</sub>, 2HgCl<sub>2</sub>. Sl. sol. in cold, but much more easily in hot H<sub>2</sub>O. (Gibbs, Proc. Am. Acad. 10. 33.)

— **chloropalladite, CoCl(NH<sub>3</sub>)<sub>5</sub>Cl<sub>3</sub>, PdCl<sub>2</sub>.**

Sl. sol. in cold, moderately sol. in hot H<sub>2</sub>O. (Carstanjen.)

— **chloroplatinate, CoCl(NH<sub>3</sub>)<sub>5</sub>Cl<sub>3</sub>, PtCl<sub>4</sub>.**

Nearly insol. in cold. Very sl. sol. in hot H<sub>2</sub>O. (Gibbs and Genth, Sil. Am. J. (2) 23. 319.)

— **chromate, CoCl(NH<sub>3</sub>)<sub>5</sub>CrO<sub>4</sub>.**

Very sl. sol. in H<sub>2</sub>O. (J.)

— **dichromate, CoCl(NH<sub>3</sub>)<sub>5</sub>Cr<sub>2</sub>O<sub>7</sub>.**

Much more easily sol. in H<sub>2</sub>O than the neutral salt. (J.)

— **dithionate, CoCl(NH<sub>3</sub>)<sub>5</sub>S<sub>2</sub>O<sub>8</sub>.**

Very sl. sol. in cold, more easily in hot H<sub>2</sub>O. (J.)

— **manganic fluoride.**

Ppt. Sl. sol. in dil. HF + Aq. (Christensen, J. pr. (2) 35. 161.)

— **fluosilicate, CoCl(NH<sub>3</sub>)<sub>5</sub>SiF<sub>6</sub>.**

Very sl. sol. in HF + Aq.

— **iodide, CoCl(NH<sub>3</sub>)<sub>5</sub>I<sub>3</sub>.**

Much more sol. in H<sub>2</sub>O than bromide or chloride. Sol. in 54.5 pts. H<sub>2</sub>O at 15.6°, and 50 pts. at 19.3°. (J.)

**Chloropurpureocobaltic mercuric**  
CoCl(NH<sub>3</sub>)<sub>5</sub>I<sub>3</sub>, 2HgI<sub>2</sub>.

Sl. sol. in H<sub>2</sub>O. (J.)

CoCl(NH<sub>3</sub>)<sub>5</sub>I<sub>3</sub>, HgI<sub>2</sub>. Very sl. sol. H<sub>2</sub>O. (J.)

— **nitrate, CoCl(NH<sub>3</sub>)<sub>5</sub>(NO<sub>3</sub>)<sub>3</sub>.**

Sol. in 80 pts. H<sub>2</sub>O at 15°. Rather sol. in hot H<sub>2</sub>O. (Jørgensen, J. pr. 209.)

— **oxalate, CoCl(NH<sub>3</sub>)<sub>5</sub>C<sub>2</sub>O<sub>4</sub>.**

Sl. sol. in H<sub>2</sub>O. (J.)

— **pyrophosphate, CoCl(NH<sub>3</sub>)<sub>5</sub>(H<sub>2</sub>P<sub>2</sub>O<sub>7</sub>)<sub>2</sub>.**

Sl. and very slowly sol. in cold, much more easily in warm H<sub>2</sub>O. (J.)

[CoCl(NH<sub>3</sub>)<sub>5</sub>]<sub>2</sub>P<sub>2</sub>O<sub>7</sub> + xH<sub>2</sub>O. Quite sol. in H<sub>2</sub>O.

— **diphosphopentamolybdate,**

[CoCl(NH<sub>3</sub>)<sub>5</sub>]<sub>2</sub>(5MoO<sub>3</sub>, 2HPO<sub>4</sub>).

Ppt. Nearly insol. in pure H<sub>2</sub>O; n in dil. H<sub>2</sub>SO<sub>4</sub> + Aq without decomp.

[CoCl(NH<sub>3</sub>)<sub>5</sub>]<sub>2</sub>(5MoO<sub>3</sub>, 2NH<sub>4</sub>PO<sub>4</sub>)  
As above.

— **sulphate, CoCl(NH<sub>3</sub>)<sub>5</sub>SO<sub>4</sub>.**

Anhydrous. Slowly sol. in 128–13 H<sub>2</sub>O at 16°.

+ 2H<sub>2</sub>O. Sol. in 133.4 pts. H<sub>2</sub>O; rather easily sol. in hot H<sub>2</sub>O, and much more rapidly than the anhydrous salt. (J.)

[CoCl(NH<sub>3</sub>)<sub>5</sub>]<sub>2</sub>SO<sub>4</sub>(SO<sub>4</sub>H)<sub>4</sub>. Deco H<sub>2</sub>O into neutral sulphate. Sol. in F

— **tartrate, CoCl(NH<sub>3</sub>)<sub>5</sub>(C<sub>4</sub>H<sub>4</sub>O<sub>6</sub>)<sub>2</sub> · 2½H<sub>2</sub>O.**

Moderately sol. in H<sub>2</sub>O; insol. in al

— **thiosulphate, CoCl(NH<sub>3</sub>)<sub>5</sub>S<sub>2</sub>O<sub>3</sub>.**

Nearly insol. in cold H<sub>2</sub>O; very sl boiling H<sub>2</sub>O with partial decomp. (J.)

**Chloropurpureoiridium comps.**

See Iridopentamine comps.

**Chloropurpureorhodium carbonate**  
ClRh(NH<sub>3</sub>)<sub>5</sub>CO<sub>3</sub> + H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O. (Jørgensen.)

— **chloride, ClRh(NH<sub>3</sub>)<sub>5</sub>Cl<sub>3</sub>.**

Sol. in 179 pts. H<sub>2</sub>O at 17°, and more in hot H<sub>2</sub>O. Sol. in conc. H<sub>2</sub>SO<sub>4</sub> or NaOH + Aq without decomp. Very sl cold dil. HCl + Aq (1 : 1). Sl. sol. in + Aq. Insol. in alcohol. (Jørgensen (2) 27. 433; 34. 394.)

— **rhodium chloride,**

3ClRh(NH<sub>3</sub>)<sub>5</sub>Cl<sub>3</sub>, 2RhCl<sub>3</sub>.

Ppt. (Jørgensen, Z. anorg. 8. 75.)

**pureorhodium chloroplatinate**,  
(NH<sub>4</sub>)<sub>2</sub>PtCl<sub>6</sub>.

1 cold H<sub>2</sub>O. (J.)

**silicate**, ClRh(NH<sub>4</sub>)<sub>2</sub>SiF<sub>6</sub>.

sol. in cold H<sub>2</sub>O. Sol. in NaOH +  
no salt. (J.)

**oxide**, ClRh(NH<sub>4</sub>)<sub>2</sub>(OH)<sub>2</sub>.

only in solution. (J.)

**nitrate**, ClRh(NH<sub>4</sub>)<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub>.

insol. in cold H<sub>2</sub>O, but more easily than  
de. Sol. in boiling NaOH + Aq as  
(J.)

**chlorosulfate**, ClRh(NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> + 2H<sub>2</sub>O.

insol. in cold, more easily in hot H<sub>2</sub>O. (J.)  
NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> + 3H<sub>2</sub>SO<sub>4</sub>. Sl. sol. in cold,  
ly in hot H<sub>2</sub>O. (J.)

**iodous acid**.

**rhodium chlororhodite**, (NH<sub>4</sub>)<sub>2</sub>RhCl<sub>5</sub> +

er, B. 1908, 41. 213.)

H<sub>2</sub>O; insol. in alcohol. (Wollaston.)  
nable. (Leidié, A. ch. (6) 17. 275.)  
RhCl<sub>5</sub> + 1½H<sub>2</sub>O. Sol. in H<sub>2</sub>O, but  
than Na salt; insol. in alcohol. Sol.  
H<sub>2</sub>Cl + Aq. (Claus, J. B. 1855. 423.)  
l. c.)

**rhodium chlororhodite nitrate**,

(NH<sub>4</sub>)<sub>2</sub>RhCl<sub>5</sub>, 2NH<sub>4</sub>NO<sub>3</sub>.

sl. in H<sub>2</sub>O. Decomp. by boiling with  
sol. in HNO<sub>3</sub> + Aq. (Leidié, C. R.  
)

**rhodium chlororhodite**, Ba<sub>2</sub>(RhCl<sub>5</sub>)<sub>2</sub>.

loses the Na salt. (Bunsen, A. 146.)

**rhodium chlororhodite**, Cs<sub>2</sub>RhCl<sub>5</sub> + H<sub>2</sub>O.

sl. sol. in H<sub>2</sub>O. (Gutbier, B. 1908,

**rhodium chlororhodite**, Pb<sub>2</sub>(RhCl<sub>5</sub>)<sub>2</sub>.

naol. in H<sub>2</sub>O. (Claus.) Not obtain-  
Leidié.)

**rhodium chlororhodite**, Hg<sub>2</sub>RhCl<sub>5</sub>.

naol. in H<sub>2</sub>O. (Claus.) Not obtain-  
Leidié.)

**rhodium chlororhodite**, K<sub>2</sub>RhCl<sub>5</sub> + H<sub>2</sub>O.

efflorescent. Sl. sol. in H<sub>2</sub>O. Sl. sol.  
Aq. (Gibbs.) Insol. or sl. sol. in  
(Berzelius.)

**anhydrous**. (Leidié.)

insol. in H<sub>2</sub>O. (Seubert and Kobbé, B.  
)

Can be cryst. from H<sub>2</sub>O containing a little  
HCl. (Gutbier, B. 1908, 41. 212.)

K<sub>2</sub>RhCl<sub>5</sub> + 3H<sub>2</sub>O. Efflorescent. Sl. sol. in  
H<sub>2</sub>O. Aqueous solution decomp. to above on  
standing. (Claus.)

Not obtainable. (Leidié.)

Also obtained by Seubert and Kobbé. (B.  
23. 2556.)

+ 1½H<sub>2</sub>O. (Leidié, C. R. 111. 106.)

**Rubidium chlororhodite**, Rb<sub>2</sub>RhCl<sub>5</sub> + H<sub>2</sub>O.

Difficulty sol. in H<sub>2</sub>O. (Gutbier, B. 1908,  
41. 214.)

**Silver chlororhodite**, Ag<sub>2</sub>RhCl<sub>5</sub>.

Ppt. Insol. in H<sub>2</sub>O. (Claus.)

Not obtainable. (Leidié.)

**Sodium chlororhodite**, Na<sub>2</sub>RhCl<sub>5</sub> + 18H<sub>2</sub>O.

Na<sub>2</sub>RhCl<sub>5</sub> + 9H<sub>2</sub>O.

Efflorescent. Sol. in 1.5 pts. H<sub>2</sub>O. Melts  
in crystal H<sub>2</sub>O at 50°. Insol. in alcohol.  
(Claus.)

+ 12H<sub>2</sub>O. (Gutbier, B. 1908, 41. 213.)

**Chlororuthenic acid**.

**Ammonium chlororuthenate**, (NH<sub>4</sub>)<sub>2</sub>RuCl<sub>6</sub>.

Easily sol. in H<sub>2</sub>O. (Claus.)

Formula is (NH<sub>4</sub>)<sub>2</sub>Ru(NO)Cl<sub>5</sub>. (Joly, C.  
R. 107. 994.)

Sol. in H<sub>2</sub>O with decomp. Sol. in HCl.  
(Howe, J. Am. Chem. Soc. 1904, 26. 549.)

**Ammonium aquochlororuthenate**,

(NH<sub>4</sub>)<sub>2</sub>Ru(H<sub>2</sub>O)Cl<sub>5</sub>.

Ppt. (Howe, J. Am. Chem. Soc. 1904, 26.  
548.)

**Cæsium chlororuthenate**, Cs<sub>2</sub>RuCl<sub>6</sub>.

Sl. sol. in H<sub>2</sub>O. Sol. in hot dil. HCl + Aq.  
(Howe, J. Am. Chem. Soc. 1901, 23. 784.)

**Potassium chlororuthenate**, K<sub>2</sub>RuCl<sub>6</sub>.

Very sol. in H<sub>2</sub>O. Very sl. sol. in conc.  
NH<sub>4</sub>Cl + Aq. Insol. in 70% alcohol. (Claus.)

Formula is K<sub>2</sub>Ru(NO)Cl<sub>5</sub>. (Joly.)

Very sl. sol. in cold H<sub>2</sub>O. Insol. in pres-  
ence of KCl.

Partially decomp. in hot aqueous solution.  
(Antony, Gazz. ch. it. 1899, 29. (2), 82.)

Easily sol. in H<sub>2</sub>O with rapid decomp.  
Sol. in HCl. (Howe, J. Am. Chem. Soc.  
1904, 26. 542.)

**Potassium aquochlororuthenate**,

K<sub>2</sub>Ru(OH<sub>2</sub>)Cl<sub>5</sub>.

Sol. in H<sub>2</sub>O. (Howe, J. Am. Chem. Soc.  
1904, 26. 547.)

**Rubidium chlororuthenate**, Rb<sub>2</sub>RuCl<sub>6</sub>.

Sl. sol. in H<sub>2</sub>O; sol. in hot dil. HCl + Aq.  
(Howe, J. Am. Chem. Soc. 1901, 23. 784.)

**Chlororuthenious acid.**

**Ammonium chlororuthenite**,  $(\text{NH}_4)_4\text{Ru}_2\text{Cl}_{10}$ .  
Sl. sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  or alcohol. (Claus, J. pr. 80. 282.)

**Cæsium chlororuthenite**,  $\text{Cs}_2\text{RuCl}_6 + \text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (Howe, J. Am. Chem. Soc. 1901, 23. 785.)

**Potassium chlororuthenite**,  $\text{K}_4\text{Ru}_2\text{Cl}_{10}$ .

Moderately sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Decomp. easily by heating. Insol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$ . Insol. in 80% alcohol.

**Rubidium chlororuthenite**,  $\text{Rb}_2\text{RuCl}_6 + \text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (Howe, J. Am. Chem. Soc. 1901, 23. 786.)

**Sodium chlororuthenite**,  $\text{Na}_4\text{Ru}_2\text{Cl}_{10}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$  or alcohol.

**Trichlorosilicomercaptane.**

See Silicon chlorohydrosulphide.

**Chlorosmic acid.**

**Ammonium chlorosmate**,  $(\text{NH}_4)_2\text{OsCl}_6$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol and  $\text{H}_2\text{O}$  containing  $\text{HCl}$ .

**Potassium chlorosmate**,  $\text{K}_2\text{OsCl}_6$ .

Properties as the  $\text{NH}_4$  salt.

**Potassium amino chlorosmate**,  
 $(\text{NH}_2)\text{OsCl}_5 \cdot 2\text{KCl}$ .

Ppt. (Brizard, A. ch. 1900, (7) 21. 375.)

**Potassium amino, chlorosmate hydrogen chloride**,  $(\text{NH}_2)\text{OsCl}_5 \cdot 2\text{KCl} \cdot \text{HCl}$ .

Ppt. (Brizard, A. ch. 1900, (7) 21. 378.)

**Silver chlorosmate**,  $\text{Ag}_2\text{OsCl}_6$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$ . (Claus and Jacoby.)

**Silver chlorosmate ammonia**,  $\text{Ag}_2\text{OsCl}_6 \cdot 2\text{NH}_3$ .

Sol. in much  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{KOH} + \text{Aq}$ . Easily sol. in  $\text{KCN} + \text{Aq}$ . (C. and J.)

**Sodium chlorosmate**,  $\text{Na}_2\text{OsCl}_6 + 2\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  or alcohol.

**Chlorosmious acid.**

**Ammonium chlorosmite**,  
 $(\text{NH}_4)_4\text{Os}_2\text{Cl}_{10} + 3\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  and alcohol; insol. in ether. (Claus and Jacoby, J. pr. 90. 65.)

**Potassium chlorosmite**,  $\text{K}_4\text{Os}_2\text{Cl}_{12} + 6\text{H}_2\text{O}$ .

Very easily sol. in  $\text{H}_2\text{O}$  or alcohol. Insol. in ether. (C. and J.)

**Chlorosmisulphurous acid.**

**Potassium hydrogen chlorosmisulphite**,  
 $\text{OsCl}_4(\text{SO}_2)_2 \cdot \text{K}_2\text{H}_2$ .

Ppt. (Rosenheim, Z. anorg. 1900, 24. 422.)

**Sodium chlorosmisulphite**,  
 $\text{OsCl}_4(\text{SO}_2)_2 \cdot \text{Na}_2 + 10\text{H}_2\text{O}$ .

Ppt. (Rosenheim, Z. anorg. 1900, 24. 420.)

**Chloropyroselenious acid.**

**Ammonium chloropyroselenite**,  $\text{NH}_4\text{Cl}$ ,  
 $2\text{SeO}_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Muthmann and Schäfer, B. 26. 1008.)

**Potassium chloropyroselenite**,  $\text{KCl}$ ,  $2\text{SeO}_2 + \text{H}_2\text{O}$ .

As  $\text{NH}_4$  salt. (M. and S.)

**Rubidium chloropyroselenite**,  $\text{RbCl}$ ,  
 $2\text{SeO}_2 + 2\text{H}_2\text{O}$ .

As  $\text{NH}_4$  salt. (M. and S.)

**Chlorostannic acid**,  $\text{SnO}(\text{OH})\text{Cl}$ .

(Mallet, Chem. Soc. 35. 524.)

$\text{H}_2\text{SnCl}_6 + 6\text{H}_2\text{O}$ . Extremely deliquescent; sol. in  $\text{H}_2\text{O}$ . (Seubert, B. 20. 793.)

**Ammonium chlorostannate**,  $(\text{NH}_4)_2\text{SnCl}_6$   
(pink salt).

Sol. in 3 pts.  $\text{H}_2\text{O}$  at  $14.5^\circ$ . Solution decomp. on boiling when dilute, but not when conc. (Bolley.)

**Barium chlorostannate**,  $\text{BaSnCl}_6 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Lewy, A. ch. (3) 16. 308.)

**Cæsium chlorostannate**,  $\text{Cs}_2\text{SnCl}_6$ .

Nearly insol. in conc.  $\text{HCl} + \text{Aq}$ . (Sharples, Sill. Am. J. (2) 47. 178.)

**Calcium chlorostannate**,  $\text{CaSnCl}_6 + 5\text{H}_2\text{O}$ .

Very deliquescent. (Lewy, A. ch. (3) 16. 308.)

**Cerium chlorostannate**,  $\text{CeSnCl}_6 + 9\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 31. 197.)

**Cobalt chlorostannate**,  $\text{CoSnCl}_6 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Jørgensen.)

**Didymium chlorostannate**,  $\text{DiCl}_2$ ,  $\text{SnCl}_4 + 10\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Glucinum chlorostannate**,  $\text{GlSnCl}_6 + 8\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Atterberg, Sv. V. A. Handl. 12. No. 4. 14.)

**Lanthanum chlorostannate**,  $4\text{LaCl}_3 \cdot 5\text{SnCl}_4 + 45\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Lithium chlorostannate**,  $\text{Li}_2\text{SnCl}_6 + 8\text{H}_2\text{O}$ .

Sol. in little  $\text{H}_2\text{O}$  without decomp., but decomp. by dilution. (Chassevant, A. ch. (6) 80. 42.)

**Magnesium chlorostannate**,  $\text{MgSnCl}_6 + 6\text{H}_2\text{O}$ .

Very deliquescent. (Lewy.)

**Manganous chlorostannate**,  $\text{MnSnCl}_6 + 6\text{H}_2\text{O}$ .

Deliquescent in moist, efflorescent in dry air. (Jørgensen.)

**Nickel chlorostannate**,  $\text{NiSnCl}_6 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Jørgensen.)

**Potassium chlorostannate**,  $\text{K}_2\text{SnCl}_6$ .

Sol. in  $\text{H}_2\text{O}$ .

**Sodium chlorostannate**,  $\text{Na}_2\text{SnCl}_6 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Topsoë, Gm. K. Handb. 6<sup>te</sup> auf. III. 149.)

**Strontium chlorostannate**,  $\text{SrSnCl}_6 + 8\text{H}_2\text{O}$ .

Sl. deliquescent, and easily sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Yttrium chlorostannate**,  $\text{YCl}_3 \cdot \text{SnCl}_4 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 31.197.)

**Zinc chlorostannate**,  $\text{ZnSnCl}_6 + 6\text{H}_2\text{O}$ .

(Biron, C. C. 1904, II. 410.)

**Chlorosulphobismuthous acid**.

**Cuprous chlorosulphobismuthite**,  $2\text{Cu}_2\text{S} \cdot \text{Bi}_2\text{S}_3 \cdot 2\text{BiSCl}$ .

Stable in air and insol. in  $\text{H}_2\text{O}$  at ord. temp.

Decomp. by boiling  $\text{H}_2\text{O}$ .

Decomp. by mineral acids with evolution of  $\text{H}_2\text{S}$ . (Ducatte, C. R. 1902, 134. 1212.)

**Lead chlorosulphobismuthite**,  $\text{PbS} \cdot \text{Bi}_2\text{S}_3 \cdot 2\text{BiSCl}$ .

Stable in the air. Insol. in  $\text{H}_2\text{O}$ ; decomp. by boiling  $\text{H}_2\text{O}$ ; sol. in dil. acids with decomp. and evolution of  $\text{H}_2\text{S}$ . (Ducatte.)

**Chlorosulphonic acid**,  $\text{HClSO}_3$ .

See Sulphuryl hydroxyl chloride.

**Chloropyrosulphonic acid**.

**Ammonium chloropyrosulphonate**,  $\text{Cl}_5\text{O}_6\text{NH}_4$ .

Fumes in the air.

Decomp. by  $\text{H}_2\text{O}$  and alcohol. (Traube, B. 1913, 46. 2519.)

**Sodium chloropyrosulphonate**,  $\text{Cl}_5\text{O}_6\text{Na}$ .

Fumes in the air.

Decomp. by  $\text{H}_2\text{O}$  and alcohol. (Traube.)

**Chlorosulphuric acid**,  $\text{HSO}_3\text{Cl}$ .

See Sulphuryl hydroxyl chloride.

$\text{SO}_2\text{Cl}_2$ . See Sulphuryl chloride.

**Aluminum chlorosulphate**,  $\text{Al}(\text{SO}_4)\text{Cl} + 6\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Nearly insol. in abs. alcohol. (Recoura, Bull. Soc. 1902, (3) 27. 1155.)

**Chromium chlorosulphate**,  $\text{CrClSO}_4 + 5\text{H}_2\text{O}$ .

Green. (Weinland, Z. anorg. 1905, 48. 253.) (Recoura, C. R. 1902, 135. 164.)

Violet. (Weinland, Z. anorg. 1905, 48. 254.)

Very sol. in  $\text{H}_2\text{O}$ . Insol. in a mixture of alcohol and acetone. (Recoura, C. R. 1902, 135. 164.)

+8 $\text{H}_2\text{O}$ . Two isomeric modifications:

(a) *Green needles*. Easily sol. in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1906, 48. 251.)

(b) *Violet plates*. Easily sol. in  $\text{H}_2\text{O}$ . (Weinland.)

**Chlorosulphurous acid**.

**Ammonium palladious trichlorosulphite**,  $(\text{NH}_4)_2\text{PdCl}_3\text{SO}_3 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1900, 23. 30.)

**Chlorotelluric acid**.

**Ammonium chlorotellurate**,  $(\text{NH}_4)_2\text{TeCl}_6$ .

Sol. without decomp. in a small amt. of  $\text{H}_2\text{O}$ , but decomp. by much  $\text{H}_2\text{O}$  or alcohol.

**Cæsium chlorotellurate**,  $\text{Cs}_2\text{TeCl}_6$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl} + \text{Aq}$ .

100 pts.  $\text{HCl} + \text{Aq}$  (sp. gr. 1.2) dissolve 0.05 pt. at 22°.

100 pts.  $\text{HCl} + \text{Aq}$  (sp. gr. 1.05) dissolve 0.78 pt. at 22°.

Insol. in alcohol. (Wheeler, Sill. Am. J. 145. 267.)

**Potassium chlorotellurate**,  $\text{K}_2\text{TeCl}_6$ .

Deliquescent; decomp. by  $\text{H}_2\text{O}$  and absolute alcohol. (Berzelius.)

The most sol. in  $\text{H}_2\text{O}$  of the chloro- or bromo-tellurates. Easily sol. in dil.  $\text{HCl} + \text{Aq}$ ; conc.  $\text{HCl} + \text{Aq}$  ppts.  $\text{KCl}$ . (Wheeler, Sill. Am. J. 145. 267.)

**Rubidium chlorotellurate**,  $\text{Rb}_2\text{TeCl}_6$ .

Decomp. by  $\text{H}_2\text{O}$ . Much more sol. in dil.  $\text{HCl} + \text{Aq}$  than  $\text{Cs}_2\text{TeCl}_6$ .

100 pts.  $\text{HCl} + \text{Aq}$  (sp. gr. 1.2) dissolve 0.34 pt. at 22°.

100 pts.  $\text{HCl} + \text{Aq}$  (sp. gr. 1.05) dissolve, 13.99 pts. at 22°.

Sl. sol. in alcohol. (Wheeler.)

**Chlorotetramine chromium bromide,**

Very easily sol. in  $\text{H}_2\text{O}$ . (Cleve, 1861, (Jørgensen, J. pr. (2) 42. 210.)

— **chloride**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{Cl}_2$ .

Sol. in  $\text{H}_2\text{O}$ , but decomp. by boiling. Sol. in  $\text{HCl} + \text{Aq}$ , and this solution may be boiled without decomp. (Cleve.)

Sol. in 15.7 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Jørgensen, J. pr. 42. 208.)

— **chromate**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{CrO}_4$ .

Precipitate. (Cleve.)

— **fluosilicate**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{SiF}_6$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 42. 218.)

— **hydroxide**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH})_2$ .

Known only in solution. (Cleve.)

— **iodide**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{I}_2$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

— **nitrate**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)(\text{NO}_3)_2$ .

Very easily sol. in  $\text{H}_2\text{O}$ . (Cleve); (Jørgensen, J. pr. (2) 42. 209.)

— **sulphate**,  $\text{ClCr}(\text{NH}_3)_4(\text{OH}_2)\text{SO}_4$ .

Very difficulty sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . (Cleve.)

**Chlorotetramine cobaltic bromide,**

More sol. in  $\text{H}_2\text{O}$  than chloride. Nearly insol. in  $\text{HBr} + \text{Aq}$  (1:1). (Jørgensen, J. pr. (2) 42. 215.)

— **chloride**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{Cl}_2$ .

Sol. in about 40 pts.  $\text{H}_2\text{O}$ , and is identical with octamine cobaltic purpureochloride of Vortmann. (Jørgensen, J. pr. (2) 42. 211.)

— **chloroplatinate**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{PtCl}_6 + 2\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Jørgensen.)

— **chromate**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{CrO}_4$ .

Easily sol. in cold  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 42. 216.)

— **fluosilicate**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{SiF}_6$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{SiF}_6 + \text{Aq}$ . (Jørgensen, J. pr. (2) 42. 219.)

— **sulphate**,  $\text{ClCo}(\text{NH}_3)_4(\text{OH}_2)\text{SO}_4$ .

Sol. in  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 42. 214.)

**Chlorotitanic acid,  $\text{TiCl}_4 \cdot 2\text{HCl} = \text{H}_2\text{TiCl}_6$ .**

Known only in solution. (Kowalewsky, Z. anorg. 1900, 25. 192.)

**Chlorous acid,  $\text{HClO}_2$ .**

Known only in aqueous solution. 100 g.  $\text{H}_2\text{O}$  at  $8.5^\circ$  and 753 mm. pressure dissolves 4.7 g.  $\text{Cl}_2\text{O}_2$ . Hydrate with 50.07–67.4%  $\text{H}_2\text{O}$ , perhaps  $\text{HClO}_2 + \text{H}_2\text{O}$ , separates out at  $0^\circ$ . (Brandan, A. 161. 340.)

Pure  $\text{HClO}_2$  is not known even in solution. (Garzarolli-Thurnlakh, A. 209. 184.)

**Chlorites.**

All chlorites are easily sol. in  $\text{H}_2\text{O}$  and alcohol, with gradual decomp.

**Ammonium chlorite.**

Known only in aqueous solution, which decomposes on evaporation or long standing.

**Barium chlorite,  $\text{Ba}(\text{ClO}_2)_2$ .**

Deliquescent; easily sol. in  $\text{H}_2\text{O}$ . Solution decomp. on evaporation. Easily sol. in alcohol. (Millon, A. ch. (3) 7. 298.)

**Lead chlorite,  $\text{Pb}(\text{ClO}_2)_2$ .**

Nearly insol. in cold  $\text{H}_2\text{O}$ , and only sl. sol. in hot  $\text{H}_2\text{O}$ . Sol. in  $\text{KOH} + \text{Aq}$ . (Garzarolli and Hayn, A. 209. 203.)

**Lead chlorite chloride,  $6\text{Pb}(\text{ClO}_2)_2 \cdot 4\text{PbCl}_2 \cdot \text{PbO}$ .**

Rather difficulty sol. in  $\text{H}_2\text{O}$ . (Schiel, A. 109. 317.)

**Potassium chlorite,  $\text{KClO}_2$ .**

Very deliquescent and sol. in  $\text{H}_2\text{O}$ . Sol. in alcohol of  $38^\circ$ . (Millon, A. ch. (3) 7. 323.) Sol. in  $\text{HClO}_2 + \text{Aq}$ .

**Silver chlorite,  $\text{AgClO}_2$ .**

Sol. in hot, less in cold  $\text{H}_2\text{O}$ . Easily decomp. by heating above  $100^\circ$ . Decomp. by weakest acids. (Millon, A. ch. (3) 7. 329.)

**Sodium chlorite,  $\text{NaClO}_2$ .**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ .

**Strontium chlorite,  $\text{Sr}(\text{ClO}_2)_2$ .**

Deliquescent and sol. in  $\text{H}_2\text{O}$ . Decomp. by slow evaporation. (Millon, A. ch. (3) 7. 327.)

**Chloroxyfulminoplatinum,**

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (v. Meyer, J. pr. (2) 18. 305.)

**Chloruranic acid,  $\text{H}_2\text{UO}_2\text{Cl} + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol. (Mylius, B. 1901, 34. 2776.)

**Chromacichloride,  $\text{Cr}(\text{O})_2\text{Cl}_2$ .**

See Chromyl chloride.

**Chromatiodic acid.**

See Chromiodic acid.

**Chromic acid,  $H_2CrO_4$ .**

Very sol. in  $H_2O$ . (Moissan, C. R. 98. 51.)

Does not exist except in solution. (Field, Chem. Soc. 61. 405.)

The composition of the hydrates formed by  $H_2CrO_4$  at different dilutions is calculated from determinations of the lowering of the  $\Delta t$  produced by  $H_2CrO_4$  and of the conductivity and sp. gr. of  $H_2CrO_4 + Aq$ . (Jones, Am. Ch. J. 1905, 34. 333.)

See also Chromium trioxide.

**Chromates.**

Chromates of the alkali metals and of Ca, Mg, and Sr are sol. in  $H_2O$ ; the others are generally insol. or sl. sol. in  $H_2O$ , but sol. in  $HNO_3 + Aq$ .

**Aluminum chromate, basic,  $Al_2O_3 \cdot CrO_3 + 7H_2O$ .**

Easily sol. in  $NH_4OH + Aq$ , alum, or acetic acid + Aq. Insol. in  $NH_4Cl + Aq$ . (Farrie, Chem. Soc. 4. 300.)

Insol. as such as  $H_2O$ , but easily decomp. into  $H_2CrO_4$  and a basic insol. comp. Sol. in alkaline solutions and acids. Decomp. by many salts. (Eliot and Storer, Proc. Am. Acad. 5. 214.)

**Aluminum sodium chromate silicate,  $4Al_2O_3 \cdot 5Na_2O \cdot CrO_3 \cdot 7SiO_2$ .**

(Weyberg, C. B. Miner, 1904. 727.)

**Ammonium chromate, basic,  $5(NH_4)_2O \cdot 4CrO_4(?)$ .**

Easily sol. in cold  $H_2O$ . (Pohl, W. A. B. 6. 592.)

**Ammonium chromate,  $(NH_4)_2CrO_4$ .**

Very sol. in  $H_2O$ ; pptd. from aqueous solution by alcohol. (Malaguti and Sarzeau.) 100 g.  $H_2O$  dissolve 40.46 g. at  $30^\circ$ . (Schreinemakers, Chem. Weekbl. 1905, 1. 395.)

Sol. in  $H_2O$  without decomp. (Schreinemakers, C. C. 1905, II. 1067.)

Sp. gr. of  $(NH_4)_2CrO_4 + Aq$  at  $t^\circ/4^\circ$ .

$t^\circ$	$13^\circ$	$13.7^\circ$	$19.6^\circ$
% $(NH_4)_2CrO_4$	10.52	19.75	28.04
Sp. gr.	1.0633	1.1197	1.1727

(Slotte, W. Ann. 1881, 14. 18.)

Sl. sol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 826.)

Difficulty sol. in acetone. (Naumann, B. 1904, 37. 4328.)

**Ammonium dichromate,  $(NH_4)_2Cr_2O_7$ .**

Less sol. in  $H_2O$  than  $(NH_4)_2CrO_4$ . (Moser.)

100 g.  $H_2O$  dissolve 47.17 g. at  $30^\circ$ .

(Schreinemakers, Chem. Weekbl. 1905, 1. 395.)

Sp. gr. of  $(NH_4)_2Cr_2O_7 + Aq$  at  $t^\circ/4^\circ$ .

$t^\circ$	$12^\circ$	$10.5^\circ$	$12^\circ$
% $(NH_4)_2Cr_2O_7$	6.85	13.00	19.93
Sp. gr.	1.0393	1.0782	1.1258

(Slotte, W. Ann. 1881, 14. 18.)

Sol. in alcohol. (Ranitzer, Zeit. angew. ch. 1913, 26. 456.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

**Ammonium trichromate,  $(NH_4)_2Cr_3O_{10}$ .**

Not deliquescent, but very sol. in  $H_2O$ . (Siewert.)

Decomp. by  $H_2O$  into chromic acid and dichromate. (Jäger and Krüss, B. 22. 2036.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

**Ammonium tetrachromate,  $(NH_4)_2Cr_4O_{11}$ .**

Deliquescent. Decomp. by  $H_2O$ . (Jäger and Krüss, B. 22. 2037.)

**Ammonium hexachromate,  $(NH_4)_2Cr_6O_{19} + 10H_2O(?)$** 

Very efflorescent. (Rammelsberg, Pogg. 94. 516.)

**Ammonium barium chromate,**

$BaCrO_4 \cdot (NH_4)_2CrO_4$ .

Ppt. Decomp. by  $H_2O$ . (Gröger, Z. anorg. 1908, 58. 414.)

**Ammonium cadmium chromate,  $(NH_4)_2O \cdot 4CdO \cdot 4CrO_3 + 3H_2O$ .**

Ppt. Decomp. by boiling  $H_2O$ . (Gröger, M. 1904, 25. 533.)

**Ammonium cadmium chromate ammonia,  $(NH_4)_2CrO_4 \cdot CdCrO_4 \cdot \frac{1}{2}NH_3 + 1\frac{1}{2}H_2O$ .**

Decomp. by  $H_2O$ . (Gröger, Z. anorg. 1908, 58. 418.)

$(NH_4)_2Cd(CrO_4)_2 \cdot 2NH_3$ . Insol. in cold, decomp. by hot  $H_2O$ .

Sol. in dil. acids or in  $NH_4OH + Aq$ . (Briggs, Chem. Soc. 1903, 83. 395.)

**Ammonium chromous chromate(?),**

$(NH_4)_2CrO_4 \cdot CrCrO_4 = (NH_4)_2Cr(CrO_4)_2$ .

Difficultly sol. in  $H_2O$ . Insol. in alcohol, ether, chloroform, or glacial acetic acid. Easily sol. in conc. acids, from which it is separated on dilution. Decomp. by  $NaOH + Aq$ . (Heintze, J. pr. (2) 4. 220.)

**Ammonium chromyl chromate,  $(3(NH_4)_2O \cdot 2CrO_2 \cdot 3CrO_3$ .**

Nearly insol. in  $H_2O$ . (Pascal, C. R. 1909, 148. 1465.)

**Ammonium cobaltous chromate.**

Ppt. Easily decomp. (Briggs, Z. anorg. 1907, **56**, 247.)

$(\text{NH}_4)_2\text{O}$ ,  $4\text{CoO}$ ,  $4\text{CrO}_3 + 3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in cold dil.  $\text{H}_2\text{SO}_4$ . (Gröger, Z. anorg. 1906, **49**, 202.)

**Ammonium cobaltous dichromate,**

Sl. hygroscopic; sol. in  $\text{H}_2\text{O}$ , insol. in alcohol. (Krüss, Z. anorg. 1895, **8**, 454.)

**Ammonium cobaltous chromate ammonia,**

Ppt.; decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, **58**, 422.)

**Ammonium cupric dichromate,**

Sol. in  $\text{H}_2\text{O}$ . (Krüss, Z. anorg. 1895, **8**, 455.)

**Ammonium cupric chromate ammonia,**

Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, **58**, 420.)

Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . Sol. in dil. acids or in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Briggs, Chem. Soc. 1903, **83**, 394.)

**Ammonium iron (ferric) chromate,**

More easily decomp. by  $\text{H}_2\text{O}$  than  $\text{K}_2\text{CrO}_4$ ,  $\text{Fe}_2(\text{CrO}_4)_3 + 4\text{H}_2\text{O}$ . (Hensgen, B. **12**, 1300.)  $6\text{CrO}_3$ ,  $5\text{Fe}_2\text{O}_3$ ,  $6(\text{NH}_4)_2\text{O}$ , and  $4\text{CrO}_3$ ,  $\text{Fe}_2\text{O}_3, (\text{NH}_4)_2\text{O} + 4\text{H}_2\text{O}$ . Ppts. (Lepierre, C. R. 1894, **119**, 1217.)

**Ammonium lithium chromate,  $\text{NH}_4\text{LiCrO}_4 + 2\text{H}_2\text{O}$ .**

Not deliquescent. (Rammelsberg.)

**Ammonium lead chromate,  $(\text{NH}_4)_2\text{CrO}_4$ ,  $\text{PbCrO}_4$ .**

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, **58**, 424.)

**Ammonium magnesium chromate,**

Much more sol. in  $\text{H}_2\text{O}$  than the corresponding sulphate. (v. Hauer.)

Sol. in  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, **58**, 416.)

**Ammonium manganous chromate,**

Sol. in  $\text{H}_2\text{O}$ . (Hensgen, R. t. c. **3**, 433.)

**Ammonium nickel chromate,  $(\text{NH}_4)_2\text{CrO}_4$ ,  $\text{NiCrO}_4 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, **51**, 353.)

Can be cryst. from  $\text{H}_2\text{O}$  under  $40^\circ$ . (Chem. Soc. 1903, **83**, 392.)

**Ammonium nickel chromate amm**

Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. 1906, **51**, 354.)

$(\text{NH}_4)_2\text{Ni}(\text{CrO}_4)_2$ ,  $2\text{NH}_3$ . Insol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . Sol. acids or in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Briggs, Soc. 1903, **83**, 393.)

$+ 6\text{H}_2\text{O}$ . (Briggs, Proc. Chem. Soc. 18, 254.)

**Ammonium potassium chromate,  $\text{NH}_4$** 

Sol. in  $\text{H}_2\text{O}$ . (E. Kopp, C. N. **1**  $+ \text{H}_2\text{O}$ . (Etard, C. R. **85**, 443.)

$2(\text{NH}_4)_2\text{CrO}_4$ ,  $3\text{K}_2\text{CrO}_4$ . Very sol. in (Zehenter, M. 1897, **18**, 51.)

**Ammonium silver chromate,  $(\text{NH}_4)$** 

Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. 1908, **58**, 423.)

**Ammonium sodium chromate,  $\text{NH}_4\text{Na}$** 

Very sol. in  $\text{H}_2\text{O}$ . (Zehenter, M. **18** 54.)

**Ammonium strontium chromate,  $(\text{NH}_4)$** 

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, **58**, 415.)

**Ammonium uranyl chromate,  $(\text{NH}_4)$** 

Decomp. by boiling with  $\text{H}_2\text{O}$ . acidulated  $\text{H}_2\text{O}$ . (Formánek, A. **257**  $+ 3\text{H}_2\text{O}$ . (Formánek.)

**Ammonium zinc chromate,  $(\text{NH}_4)_2\text{O}$ ,  $2\text{CrO}_3 + \text{H}_2\text{O}$ .**

Decomp. by hot  $\text{H}_2\text{O}$ . (Gröger, M. **25**, 520.)

**Ammonium zinc chromate ammon**

Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$  in dil. acids or in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Chem. Soc. 1903, **83**, 394.)

$4\text{ZnCrO}_4$ ,  $2(\text{NH}_4)_2\text{CrO}_4$ ,  $3\text{NH}_3 + 3\text{H}$  Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. 1908, **58**, 416.)

**Ammonium dichromate chloride m**

Ppt. Sol. in cold, more sol. in warm (Strömholm, Z. anorg. 1912, **75**, 280.)

**Ammonium dichromate chloride m**

(Strömholm, Z. anorg. 1913, **80**, 15)

**um chromate chromyl fluoride,**  
 $(\text{CrO}_3)_2\text{CrO}_4, \text{CrO}_3\text{F}_2$ .

$\text{H}_2\text{O}$ . (Varenne, C. R. 91. 989.)

**um chromate iodate.**

**romoiodate, ammonium.**

**um dichromate mercuric chloride,**  
 $(\text{Cr}_2\text{O}_7)_2, \text{HgCl}_2$ .

be recryst. from  $\text{H}_2\text{O}$  or  $\text{HgCl}_2 + \text{Aq}$ ,  
 a  $(\text{NH}_4)_2\text{Cr}_2\text{O}_7 + \text{Aq}$ . (Jäger and  
 22. 2044.)

(Richmond and Abel, Chem. Soc.  
 99.)

be made to crystallize with  $\text{H}_2\text{O}$ .  
 d Krüss.)

$(\text{Cr}_2\text{O}_7)_2, \text{HgCl}_2$ . Decomp. by  $\text{H}_2\text{O}$ .  
 K.)

$(\text{Cr}_2\text{O}_7)_2, \text{HgCl}_2$ . Decomp. by  $\text{H}_2\text{O}$ .  
 K.)

$\text{Cr}_2\text{O}_7, 3\text{HgCl}_2$ . (J. and K.)

$\text{Cr}_2\text{O}_7, 4\text{HgCl}_2$ . (J. and K.)

**um chromate phosphate.**

**osphochromate, ammonium.**

**um chromate tellurate.**

**romotellurate, ammonium.**

**hromate,  $\text{BaCrO}_4$ .**

ely sl. sol. in  $\text{H}_2\text{O}$ .

ted from electrical conductivity of  
 -Aq, 1 l.  $\text{H}_2\text{O}$  dissolves 3.8 mg.  
 at  $18^\circ$ . (Kohlrausch and Rose, Z.  
 12. 241.)

not ignited,  $\text{BaCrO}_4$  is sol. in 86,957  
 3; 22,988 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$  (0.5%

3670 pts.  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (5%  
 ); 1986 pts.  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (10%  
 ); 1813 pts.  $\text{H}_2\text{CrO}_4 + \text{Aq}$  (10%  
 ) When ignited, 160,000 pts.  $\text{H}_2\text{O}$  are  
 for solution. (Schweitzer, by Fre-  
 anal. 29. 414.)

23,000 pts. boiling  $\text{H}_2\text{O}$ . (Mescher-  
 anal. 21. 399.)

$\text{BaCrO}_4$  are dissolved in 1 l. of sat.  
 at  $18^\circ$ . (Kohlrausch, Z. phys. Ch.  
 168.)

sol. in  $\text{HNO}_3, \text{HCl}$ , or chromic acid +  
 which it is precipitated by  $\text{NH}_4\text{OH}$ ,  
 ition with  $\text{H}_2\text{O}$ . (Bahr.)

n  $\text{K}_2\text{Cr}_2\text{O}_7 + \text{Aq}$ . (Schweitzer.)

49,381 pts.  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  (0.75  
 %); in 23,355 pts.  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$   
 (t) at  $15^\circ$ ; in 45,162 pts.  $\text{NH}_4\text{NO}_3$ ,  
 % salt) at  $15^\circ$ . (Fresenius, Z. anal.

sol. in alkali tartrates, or citrates +  
 ischer, J. pr. (2) 5. 326.)

0.4 g. equiv.  $\text{BaCrO}_4$  are dissolved  
 15% alcohol at ord. temp. (Guerini,  
 912.)

n acetic acid and in  $\text{M}_2\text{Cr}_2\text{O}_7 + \text{Aq}$ .

sol. in a mixture of the two, except

in presence of  $\text{MC}_2\text{H}_3\text{O}_2$ . (Caron and Raquet,  
 Bull. Soc. 1906, (3) 35. 1064.)

Not completely insol. in acetic acid. (Bau-  
 bigny, Bull. Soc. 1907, (4) 1. 58.)

Insol. in acetone. (Naumann, B. 1904,  
 37. 4329.)

Insol. in methyl acetate. (Naumann, B.  
 1909, 42. 3790.)

**Barium dichromate,  $\text{BaCr}_2\text{O}_7 + 2\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  with separation of  
 $\text{BaCrO}_4$ . Sol. in  $\text{H}_2\text{CrO}_4 + \text{Aq}$ . (Bahr, J. B.  
 1853. 358.)

Sol. in cold  $\text{H}_2\text{O}$  with formation of  $\text{BaCrO}_4$   
 and  $\text{CrO}_3$ .

Insol. in glacial acetic acid. (Mayer, B.  
 1903, 36. 1742.)

**Barium calcium chromate,  $\text{BaCa}(\text{CrO}_4)_2$ .**

(Bourgeois Bull. Soc. Min. 1879, 2. 124.)

**Barium potassium chromate,  $\text{BaK}_2(\text{CrO}_4)_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg.  
 1907, 54. 186.)

Decomp. by  $\text{H}_2\text{O}$ . Stable in  $\text{K}_2\text{CrO}_4 + \text{Aq}$ ,  
 containing:

2.181	pts.	$\text{K}_2\text{CrO}_4$	per 100	pts.	$\text{H}_2\text{O}$	at	11.5°
3.395	"	"	"	"	"	"	27.5°
5.120	"	"	"	"	"	"	50.0°
7.119	"	"	"	"	"	"	76.0°
9.036	"	"	"	"	"	"	100.0°

(Barre, C. R. 1914, 158. 497.)

**Barium potassium trichromate,**

$\text{Ba}_2\text{K}_2(\text{Cr}_2\text{O}_7)_3 + 3\text{H}_2\text{O}$ .

Extremely deliquescent. (Bahr.)

**Bismuth chromates, basic.**

These comps. are insol. in  $\text{H}_2\text{O}$  even in  
 presence of  $\text{H}_2\text{CrO}_4$ ; sol. in  $\text{HCl}$  or  $\text{HNO}_3 +$   
 Aq. (Löwe, J. pr. 67. 288.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.00008 pt. "bis-  
 muth chromate"; 100 pts. acetic acid dis-  
 solve 0.00021 pt. "bismuth chromate"; 100  
 pts.  $\text{HNO}_3 + \text{Aq}$  (sp. gr.=1.038) dissolve  
 0.00024 pt. "bismuth chromate"; 100 pts.  
 $\text{KOH} + \text{Aq}$  (sp. gr.=1.33) dissolve 0.00016  
 pt. "bismuth chromate." (Pearson, Phil.  
 Mag. (4) 11. 206.)

Not insol. in dil.  $\text{HNO}_3 + \text{Aq}$  unless  $\text{K}_2\text{CrO}_4$   
 is present. Less sol. in hot  $\text{NaOH} + \text{Aq}$  than  
 $\text{PbCrO}_4$ . (Storer.)

"Bismuth chromate" is insol. in acetone.  
 (Naumann, B. 1904, 37. 4329.)

$3\text{Bi}_2\text{O}_3, 2\text{CrO}_3 = 2(\text{BiO})_2\text{CrO}_4, \text{Bi}_2\text{O}_3$ . Insol.

in  $\text{H}_2\text{O}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ .  
 $\text{Bi}_2\text{O}_3, \text{CrO}_3 = (\text{BiO})_2\text{CrO}_4$ . Insol. in  $\text{H}_2\text{O}$ ;  
 easily sol. in dil.  $\text{HCl} + \text{Aq}$ , less in dil.  $\text{HNO}_3$ ,  
 or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Muir.)

$\text{Bi}_2\text{O}_3, 2\text{CrO}_3 = (\text{BiO})_2\text{Cr}_2\text{O}_7$ . Insol. in  
 $\text{H}_2\text{O}$ .

+  $\text{H}_2\text{O}$ .

$5\text{Bi}_2\text{O}_3, 11\text{CrO}_3 + 6\text{H}_2\text{O}$ . (Muir, Chem.  
 Soc. 31. 24.)

$3\text{Bi}_2\text{O}_3, 7\text{CrO}_3$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol. in mineral acids, especially  $\text{HCl} + \text{Aq}$ . Partly sol. in  $\text{KOH} + \text{Aq}$ .

**Bismuth chromate, acid,  $\text{Bi}_2\text{O}_3, 4\text{CrO}_3 + \text{H}_2\text{O}$ .**

Insol. in hot or cold  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ . (Muir, Chem. Soc. **30**. 17.)

**Bismuth potassium chromate,  $\text{Bi}_2(\text{CrO}_4)_3, \text{K}_2\text{CrO}_4$ .**

Insol. in  $\text{H}_2\text{O}$ . Decomp. with hot  $\text{H}_2\text{O}$ .  $\text{Bi}_2\text{O}_3, \text{K}_2\text{O}, 6\text{CrO}_3 + \text{H}_2\text{O}$ . (Preis and Raymann, J. B. **1880**. 336.)

**Bromomolybdenum chromate.**

(Atterberg.)

**Cadmium chromate, basic,  $2\text{CdO}, \text{CrO}_3 + \text{H}_2\text{O}$ .**

Very sl. sol. in  $\text{H}_2\text{O}$ ; very slowly sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  with combination. (Malaguti and Sarzeau, A. ch. (3) **9**. 431.)

Composition as above. (Freese, B. **2**. 478.)

**Cadmium chromate,  $\text{CdCrO}_4$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in acids; decomp. by heating with  $\text{H}_2\text{O}$ . (Schulz, Z. anorg. **1895**, **10**. 153.)

Sol. in hot conc.  $\text{CdSO}_4 + \text{Aq}$ . (Briggs, Z. anorg. **1907**, **56**. 253.)

+  $2\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . (Schulz, Z. anorg. **1895**, **10**. 153.)

**Cadmium dichromate,  $\text{CdO}, 2\text{CrO}_3 + \text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$  without decomp; hygroscopic. (Schulz, Z. anorg. **1895**, **10**. 152.)

Easily sol. in  $\text{H}_2\text{O}$  but decomp. on evaporation. (Grüger, Z. anorg. **1910**, **66**. 11.)

**Cadmium trichromate,  $\text{CdCr}_2\text{O}_7 + \text{H}_2\text{O}$ .**

Deliquescent. (Grüger, Z. anorg. **1910**, **66**. 12.)

**Cadmium chromate ammonia,  $\text{CdCrO}_4, 4\text{NH}_3 + 3\text{H}_2\text{O}$ .**

Efflorescent. Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; insol. in alcohol and ether. (Malaguti and Sarzeau.)

**Cadmium potassium chromate,  $\text{CdK}_2(\text{CrO}_4)_2 + 2\text{H}_2\text{O}$ .**

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Grüger, Z. anorg. **1907**, **54**. 189.)

$3\text{CdO}, \text{K}_2\text{O}, 3\text{CrO}_3 + 3\text{H}_2\text{O}$ . Ppt. (Preis and Raymann, Sitzungsb. böhm. Gesell. **1880**.)

$4\text{CdO}, \text{K}_2\text{O}, 4\text{CrO}_3 + 3\text{H}_2\text{O}$ . Ppt. Slowly decomp. by  $\text{H}_2\text{O}$ . (Grogger, M. **1904**, **26**. 533.)

**Cadmium potassium dichromate,  $\text{CdCr}_2\text{O}_7, \text{K}_2\text{Cr}_2\text{O}_7 + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ ; sl. hygroscopic. (Kritts, Z. anorg. **1895**, **8**. 454.)

**Cadmium dichromate mercuric cy,  $\text{CdCr}_2\text{O}_7, 2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  without decomp. (F. Z. anorg. **1895**, **8**. 460.)

**Cæsium chromate,  $\text{Cs}_2\text{CrO}_4$ .**

(Chabrie, C. R. **1901**, **132**. 680.)

Aq. solution sat. at  $30^\circ$  contains (Schreinemakers, C. C. **1909**, **I**. 11.)

**Cæsium dichromate,  $\text{Cs}_2\text{Cr}_2\text{O}_7$ .**

(Chabrie, C. R. **1901**, **132**. 680.)

Much more sol. in hot  $\text{H}_2\text{O}$ , than in (Fraprie, Am. J. Sci. **1906**, (4) **21**. 309.)

Aq. solution sat. at  $30^\circ$  contains (Schreinemakers, C. C. **1909**, **I**. 11.)

**Cæsium trichromate,  $\text{Cs}_2\text{Cr}_3\text{O}_{10}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Schreinemakers, (Weekbl. **1908**, **5**. 811.)

Sol. in  $\text{H}_2\text{O}$ . (Fraprie, Am. J. Sci. (4) **21**. 315.)

**Cæsium tetrachromate,  $\text{Cs}_2\text{Cr}_4\text{O}_{11}$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp. (Schreinemakers, Chem. Weekbl. **1908**, **5**. 811.)

**Cæsium cobaltous chromate,**

$\text{Cs}_2\text{Co}(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$ .

(Briggs, Z. anorg. **1907**, **56**. 248.)

**Cæsium magnesium chromate,**

$\text{Cs}_2\text{Mg}(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$ .

(Briggs, Chem. Soc. **1904**, **85**, 680.)

**Cæsium nickel chromate,  $\text{Cs}_2\text{Ni}(\text{Cr}_2\text{O}_7) + 6\text{H}_2\text{O}$ .**

Sol. in cold  $\text{H}_2\text{O}$  without much change; decomp. by warm  $\text{H}_2\text{O}$ . (Briggs, Soc. **1904**, **85**. 679.)

**Calcium chromate basic,  $\text{Ca}_2\text{CrO}_3 + 3\text{H}_2\text{O}$ .**

Sol. in 230 pts.  $\text{H}_2\text{O}$  without d (Mylius and Wrochem, Gm. K. **3**. **I**, **1**)

**Calcium chromate,  $\text{CaCrO}_4$ .**

Anhydrous. Very sl. sol. in  $\text{H}_2\text{O}$ . (Mylius, J. B. **1862**. 148.)

Aq. solution sat. at  $18^\circ$  contains  $\text{CaCrO}_4$ ; sp. gr. = 1.023. (Mylius and Wrochem, B. **1900**, **33**. 3688.)

Insol. in acetone. (Naumann, B. **1843**, **29**.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . Aq. solution sat. at  $18^\circ$  contains 4.4%  $\text{CaCrO}_4$ ; sp. gr. = 1.044. (Mylius and Wrochem, B. **1900**, **33**. 3688.)

+  $\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	$0^\circ$	$8^\circ$	$13^\circ$	$18^\circ$
% $\text{CaCrO}_4$	11.5	10.8	10.3	9.6

$t^\circ$	$40^\circ$	$60^\circ$	$75^\circ$	$90^\circ$
% $\text{CaCrO}_4$	7.8	5.7	4.6	3.6

(Mylius and Wrochem, Gm.-K. **3**. **I**,

Sp. gr. of solution containing 9.6% by wt.  $\text{CaCrO}_4$  at  $18^\circ = 1.096$ . (Mylius and Wrochem, B. 1900, **33**, 3688.)

+ $2\text{H}_2\text{O}$ . Sol. in 241.3 pts.  $\text{H}_2\text{O}$  at  $14^\circ$ . (Siewert.)

Sol. in 34 pts.  $\text{H}_2\text{O}$ . (Schwarz, Dingl. 198. 59.)

Solubility of two modifications in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$\alpha$  modification.

	$0^\circ$	$20^\circ$	$30^\circ$	$45^\circ$
% $\text{CaCrO}_4$	14.75	14.22	13.89	12.53

$\beta$  modification.

	$0^\circ$	$14^\circ$	$18^\circ$	$19.5^\circ$	$30^\circ$	$40^\circ$
% $\text{CaCrO}_4$	9.8	10	10.3	10.4	10.4	10.4

(Mylius and Wrochem, Gm.-K. 3. I, 1387.)

$\alpha$  modification. Sp. gr. of the solution containing 14.3% by wt.  $\text{CaCrO}_4$  at  $18^\circ = 1.149$ . (Mylius and Wrochem, B. 1900, **33**, 3688.)

$\beta$  modification. Sp. gr. of the solution containing 10.3% by wt.  $\text{CaCrO}_4$  at  $18^\circ = 1.105$ . (Mylius and Wrochem, B. 1900, **33**, 3688.)

Easily sol. in  $\text{H}_2\text{O}$  containing  $\text{CrO}_3$ .

Insol. in absolute alcohol.

50 cc. of alcohol (29%) dissolve 0.608 g.  $\alpha\text{CrO}_4$ ; 50 cc. of alcohol (53%) dissolve 0.44 g.  $\text{CaCrO}_4$ . (Fresenius, Z. anal. **30**, 672.)

Sol. in acids and in dilute alcohol. (Caron and Raquet, Bull. Soc. 1906, (3) **35**, 1064.)

**Calcium dichromate**,  $\text{CaCr}_2\text{O}_7 \cdot 3\text{H}_2\text{O}$ .

Very deliquescent. (Bahr, J. pr. **60**, 60.)

In sat. solution at  $18^\circ$ , 61%  $\text{CaCr}_2\text{O}_7$  is present. (Mylius and Wrochem, Gm.-K. 3. 1387.)

Sol. in acetone. (Naumann, B. 1904, **37**, 28.)

**Calcium potassium chromate**,  $\text{CaCrO}_4 \cdot \text{K}_2\text{CrO}_4$ .

(Barre, C. R. 1914, **158**, 495.)

+ $\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Duncan.)

sol. in  $\text{H}_2\text{O}$  when ignited.

+ $2\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ , even after ignition. Insol. in alcohol. (Duncan, J. B. **10**, 313.)

Formed below  $45^\circ$ . (Barre, C. R. 1914, **1**, 495.)

Sol. in cold  $\text{H}_2\text{O}$ . Sl. sol. in sat.  $\text{K}_2\text{CrO}_4$  +  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1907, **54**, 187.)

Two modifications. Solubility of  $\alpha$  modification is somewhat less than that of  $\beta$  modification. (Wyrouboff, Bull. Soc. **a**, 1891, **14**, 255.)

Solubility of two modifications in  $\text{H}_2\text{O}$  at  $t^\circ$ .

	$t^\circ$	$0^\circ$	$15^\circ$
Solubility of $\alpha$		23.06	25.06
" $\beta$		23.01	24.45

(Rakowski, C. C. 1909, I. 133.)

$4\text{CaCrO}_4 \cdot \text{K}_2\text{CrO}_4$ .

$5\text{CaCrO}_4 \cdot \text{K}_2\text{CrO}_4$ . Sol. in much  $\text{H}_2\text{O}$ . (Bahr.)

**Calcium chromate potassium sulphate**,

$\text{CaCrO}_4 \cdot \text{K}_2\text{SO}_4 \cdot \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Hannay, Chem. Soc. **32**, 399.)

$\text{CaCrO}_4 \cdot \text{K}_2\text{SO}_4 \cdot \text{K}_2\text{CrO}_4$ . As above. (H.)

**Cerous chromate**.

Insol. in  $\text{H}_2\text{O}$ .

**Calcium strontium chromate**,  $\text{CaSr}(\text{CrO}_4)_2$ .

(Bourgeois, Bull. Soc. Min. 1879, **2**, 123.)

**Ceric dichromate**,  $\text{CeO}_2 \cdot 2\text{CrO}_3 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in acids; decomp. completely by boiling  $\text{H}_2\text{O}$ . (Bricout, C. R. 1894, **118**, 145.)

**Chromic chromate**,  $\text{CrO}_2 = \text{Cr}_2\text{O}_3, \text{CrO}_3$ .

Insol. as such in  $\text{H}_2\text{O}$ , but decomp. thereby into  $\text{CrO}_2$  and  $\text{Cr}_2\text{O}_3$ ; decomp. by alkaline and many saline solutions. Easily sol. in dil. acids if recently pptd, but with difficulty if dried at a high temp. (Eliot and Storer, Proc. Am. Acad. **5**, 207.)

$\text{Cr}_2\text{O}_3 = \text{Cr}_2\text{O}_3, 3\text{CrO}_3$ . Sol. in  $\text{HCl} + \text{Aq}$ . Very slowly sol. in  $\text{HNO}_3 + \text{Aq}$ . Slowly decomp. by  $\text{H}_2\text{SO}_4$  or  $\text{NH}_4\text{OH} + \text{Aq}$ . Easily decomp. by  $\text{KOH} + \text{Aq}$ .

Does not exist. (Eliot and Storer, l.c.)

$\text{Cr}_2\text{O}_3 = 3\text{Cr}_2\text{O}_3, 2\text{CrO}_3$ . Easily sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ ; difficulty sol. in acetic acid. Easily sol. in  $\text{KOH} + \text{Aq}$ . (Traube, A. **66**, 108.)

Existence doubtful.

$\text{Cr}_2\text{O}_3 = 2\text{Cr}_2\text{O}_3, \text{CrO}_3$ . Insol. in all acids, even aqua regia; slowly attacked by a boiling conc. solution of alkali hydroxides. (Geuther and Merz, A. **118**, 62.)  $\text{Cr}_2\text{O}_3$ , according to Wöhler.

**Chromic cupric chromate**,  $\text{CuCr}_2\text{O}_3 \cdot \text{Cr}_2\text{O}_3 + 12\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$ . Sol. in  $\text{HCl}$  and  $\text{HNO}_3$ . (Rosenfeld, B. 1879, **12**, 957.)

$6\text{CuO}, \text{Cr}_2\text{O}_3, \text{CrO}_3 + 9\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Rosenfeld, B. 1879, **12**, 958.)

**Chromic potassium chromate**,  $\text{Cr}_2\text{H}_2(\text{CrO}_4)_2 \cdot \text{K}_2\text{CrO}_4(?)$ .

Insol. in  $\text{H}_2\text{O}$ , alcohol, or acetic acid. Not attacked by cold  $\text{HNO}_3 + \text{Aq}$ ; sl. oxidized when hot. Insol. in cold, easily sol. in hot  $\text{H}_2\text{SO}_4$ . Sl. sol. in  $\text{SO}_2 + \text{Aq}$ . Sol. in conc.  $\text{HCl} + \text{Aq}$ . (Tommasi, Bull. Soc. (2) **17**, 396.)

**Chromous potassium chromate**,

$\text{K}_2\text{CrO}_4(\text{CrO}_2)_2 = \text{K}_2\text{Cr}(\text{CrO}_4)_2(?)$ .

Sat. cold solution in  $\text{H}_2\text{O}$  contains 9% of the salt. Insol. in alcohol and ether. (Heintze, J. pr. (2) **4**, 212.)

**Cobaltous chromate, basic**,  $3\text{CoO} \cdot \text{CrO}_3 + 4\text{H}_2\text{O}$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Malaguti and Sarzeau, A. ch. (3) 9. 431.)

True formula is  $2\text{CoO} \cdot \text{CrO}_3 + 2\text{H}_2\text{O}$ . (Freese, Pogg. 140. 252.)

$4\text{CoO} \cdot 3\text{CrO}_3 + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1906, 49. 203.)

**Cobaltous chromate**,  $\text{CoCrO}_4$ .

Much more sol. in  $\text{H}_2\text{O}$  than  $\text{NiCrO}_4$ . Easily sol. in hot dil.  $\text{HNO}_3 + \text{Aq.}$  (Briggs, Z. anorg. 1909, 63. 327.)

$+ 2\text{H}_2\text{O}$ . Ppt. (Briggs, Z. anorg. 1909, 63. 328.)

**Cobaltous dichromate**,  $\text{CoCr}_2\text{O}_7 + \text{H}_2\text{O}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (Briggs, Z. anorg. 1907, 56. 247.)

**Cobaltous potassium chromate, basic**.

$\text{K}_2\text{O} \cdot 4\text{CoO} \cdot 4\text{CrO}_3 + 3\text{H}_2\text{O}$ .

Sol. in cold dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Gröger, Z. anorg. 1906, 49. 199.)

**Cobaltous potassium chromate**,  $\text{K}_2\text{Co}(\text{CrO}_4)_2 + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1906, 49. 200.)

**Cupric chromate, basic**,  $3\text{CuO} \cdot \text{CrO}_3 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{HNO}_3 + \text{Aq.}$  and in  $\text{NH}_4\text{OH} + \text{Aq.}$  Decomp. by  $\text{KOH} + \text{Aq.}$  (Malaguti and Sarzeau, A. ch. (3) 9. 434.)

$7\text{CuO} \cdot 2\text{CrO}_3 + 5\text{H}_2\text{O}$ . Ppt. (Rosenfeld, B. 13. 1469.)

$7\text{CuO} \cdot \text{CrO}_3 + 5\text{H}_2\text{O}$ . Ppt. (R.)

**Cobaltous dichromate mercuric cyanide**,  $\text{CoCr}_2\text{O}_7 \cdot 2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$ .

Very stable. Sol. in  $\text{H}_2\text{O}$ . (Krüss, Z. anorg. 1895, 8. 458.)

**Cupric chromate**,  $\text{Cu}(\text{CrO}_4)$ .

Insol. in  $\text{H}_2\text{O}$ ; very sol. in chromic acid and in other acids; decomp. by boiling with  $\text{H}_2\text{O}$ . (Schulz, Z. anorg. 1895, 10. 152.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

**Cupric dichromate, basic**,  $\text{CuCr}_2\text{O}_7 \cdot 2\text{CuO}$ . (Stanley, C. N. 54. 194.)

**Cupric dichromate**,  $\text{CuCr}_2\text{O}_7 + 2\text{H}_2\text{O}$ .

Deliquescent. Very easily sol. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq.}$  and alcohol. (Drüge, A. 101. 39.)

Aqueous solution is decomp. by boiling. (Malaguti and Sarzeau, A. ch. (3) 9. 456.)

Very hygroscopic. Very sol. in  $\text{H}_2\text{O}$  without decomp. (Schulz, Z. anorg. 1895, 10. 150.)

**Cupric tetrachromate**,  $\text{CuCr}_4\text{O}_{13} + 2\text{H}_2\text{O}$ .

Deliquescent. Decomp. when its sol. in  $\text{H}_2\text{O}$  is concentrated. (Gröger, Z. 1910, 66. 15.)

**Cupric lead chromate**,  $2(\text{PbCrO}_4 \cdot 2\text{CuCrO}_4 \cdot \text{CuO})$ .

Min. *Vauquelinite*. Sol. in acids.

**Cupric potassium chromate, basic**,  $\text{KCu}_2(\text{OH})(\text{CrO}_4)_2 + \text{H}_2\text{O}$ .

Ppt. (Gröger, M. 1903, 24. 485.)

$3\text{CuO} \cdot \text{K}_2\text{O} \cdot 3\text{CrO}_3 + 2\text{H}_2\text{O}$ . Nearly in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$  or  $(\text{NH}_4)_2\text{CO}_3$  (Knop, A. 70. 52.)

Does not exist. (Rosenfeld, B. 12. 4CuO,  $\text{K}_2\text{O}$ ,  $4\text{CrO}_3 + \text{H}_2\text{O}$ . Decol.

boiling  $\text{H}_2\text{O}$ . (Gerhardt.)  $+ 3\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . ger, Dissert. 1880.)

**Cupric potassium chromate amorphous**,  $\text{K}_2\text{Cu}(\text{CrO}_4)_2 \cdot 2\text{NH}_3$ .

Very sol. in dil.  $\text{NH}_3 + \text{Aq.}$ ; decomp. (Briggs, Chem. Soc. 1904, 85. 672.)

**Cupric chromate ammonia**,  $\text{CuCrO}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq.}$  (Parravano and Pasta, Gazz. 1907, 37. (2). 255.)

$4\text{CuCrO}_4 \cdot 3\text{NH}_3 + 5\text{H}_2\text{O}$ . Sol. in  $\text{F}$ ,  $\text{NH}_4\text{OH} + \text{Aq.}$ ; insol. in organic solvent sol. in  $\text{AgNO}_3 + \text{Aq.}$  (Schuyten, C. (I. 399.)

$2\text{CuCrO}_4 \cdot 7\text{NH}_3 + \text{H}_2\text{O}$ . Decomp. (Briggs, Soc. 1904, 85. 673.)

$3\text{CuO} \cdot 2\text{CrO}_3 \cdot 10\text{NH}_3 + 2\text{H}_2\text{O}$ . I by  $\text{H}_2\text{O}$ ; sl. sol. or insol. in alcohol, e  $\text{NH}_4\text{OH} + \text{Aq.}$  (Malaguti and Sarzeau) Decomp. by hot  $\text{H}_2\text{O}$ ; insol. in (Böttger.)

**Cupric dichromate ammonia**,  $\text{C} \cdot 4\text{NH}_3 + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq.}$  (Parravano and Pasta, Gazz. 1907, 37. (2). 255.)

**Cupric dichromate mercuric cyanide**,  $\text{CuCr}_2\text{O}_7 \cdot \text{Hg}(\text{CN})_2 + 5\text{H}_2\text{O}$ .

Not hygroscopic. Sol. in  $\text{H}_2\text{O}$ . (K anorg. 1895, 8. 461.)

**Didymium chromate**,  $\text{Di}_2(\text{CrO}_4)_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ , easily in dil. acids. (Richs and Smith, A. 191. 353.)  $+ 7\text{H}_2\text{O}$ . (Cleve.)

**Didymium potassium chromate**,  $\text{Di}_2(\text{CrO}_4)_3 \cdot \text{K}_2\text{CrO}_4$ .

Precipitate. Decomp. by  $\text{H}_2\text{O}$ . (C

**chromate,  $Dy_2(CrO_4)_3$** 

sol. in  $H_2O$ . 1.0002 pt. is sol. in  $O$  at  $25^\circ$ . (Jantsch, B. 1911, 44.)

**chromate, basic,  $GlCrO_4$ ,  $13GlO +$** 

sol. in  $H_2O$ . (Creuzberg, Dingl. 6Gl(OH<sub>2</sub>). Ppt. Insol. in  $H_2O$ . i, B. 1907, 40. 2603.)

**chromate,  $GlCrO_4 + H_2O$ .**

by  $H_2O$  with separation of the mate. (Glassmann, B. 1907, 40.)

**chromate,  $Au_2(CrO_4)_3, CrO_3$ .**

loff, Ch. Z. 1907, 31. 1182.)

**chromate.**

yer.)

**chromate.**

in  $H_2O$ . Known only in solution.

**chromate, basic.**

by  $H_2O$ . (Maus.)

$CrO_3$ . Insol. in  $H_2O$ , but decomp. by saline solutions; easily sol. in l. in  $H_2CrO_4 + Aq$ . (Eliot and c. Am. Acad. 5. 216.)

**dichromate.**

$H_2O$  and alcohol. (Maus, Pogg. 9.)

**ic) potassium chromate, basic,**

$Fe_2O_3$ ,  $3K_2O$ .

$Fe_2O_3$ ,  $4K_2O$ .

$5Fe_2O_3$ ,  $7K_2O$ .

$3Fe_2O_3$ ,  $4K_2O + 9H_2O$ .

$Fe_2O_3$ ,  $6K_2O + 6H_2O$ .

$Fe_2O_3$ ,  $6K_2O + 10H_2O$ .

$3Fe_2O_3$ ,  $6K_2O + 5H_2O$ .

$Fe_2O_3$ ,  $2K_2O + 7H_2O$ .

$Fe_2O_3$ ,  $K_2O + 4H_2O$ .

$Fe_2O_3$ ,  $3K_2O$ .

$4Fe_2O_3$ ,  $5K_2O + 8H_2O$ .

Compounds are ppts, insol. in  $H_2O$ , ether. (Lepierre, C. R. 1894, 119,

**ic) potassium chromate,**

$O_4$ ,  $K_2CrO_4 + 4H_2O$ .

by much  $H_2O$ , conc.  $HCl$ , or lq. Not decomp. by alcohol. B. 12. 130C.)

**c) sodium chromate, basic,**

$7Fe_2O_3$ ,  $4Na_2O$ .

Lepierre, C. R. 1894, 119, 1217.)

**Lanthanum chromate,  $La_2(CrO_4)_3$ .**

Sl. sol. in cold, more easily in hot  $H_2O$ ; easily sol. in acids. (Frerichs and Smith, A. 191. 355.)

$+8H_2O$ . Ppt. (Cleve.)

**Lanthanum potassium chromate.**

(Cleve.)

**Lead chromate, basic,  $2PbO$ ,  $CrO_3$  (chrome red).**

Insol. in  $H_2O$ ; acetic acid dissolves out  $\frac{1}{2}$  the  $PbC$ . Sol. in  $KOH + Aq$ . (Badams, Pogg. 3. 221.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

$3PbO$ ,  $CrO_3$ . (Hermann, Pogg. 28. 162.)  $+H_2O$ . Ppt. (Strömholm, Z. anorg. 1904, 38. 443.)

Min. *Melanochroite*, *Phanicroite*. Sol. in acids.

$PbO$ ,  $PbCrO_4$ . Ppt. (S.)

**Lead chromate,  $PbCrO_4$ .**

Insol. in  $H_2O$ . Pptd. from  $Pb(NO_3)_2$  in presence of 70,000 pts.  $H_2O$ . (Harting.)

Calculated from electrical conductivity of  $PbCrO_4 + Aq$ , 1 l.  $H_2O$  dissolves 0.2 mg.  $PbCrO_4$  at  $18^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

1 l.  $H_2O$  dissolves  $1.2 \times 10^{-3}$  g.  $PbCrO_4$  at  $25^\circ$ . (Hevesy, Z. anorg. 1913, 82. 328.)

Sol. in dil.  $H_2SO_4 + Aq$  (Storer); sl. sol. in dil.  $HNO_3 + Aq$ .

Sol. in 560 pts.  $HNO_3 + Aq$  of 1.12 sp. gr.; in 150 pts.  $HNO_3 + Aq$  of 1.225 sp. gr.; in 130 pts.  $HNO_3 + Aq$  of 1.265 sp. gr.; in 80 pts.  $HNO_3 + Aq$  of 1.395 sp. gr. (Storer's Dict.)

Solubility of  $PbCrO_4$  in  $HNO_3 + Aq$ . at  $18^\circ$ .

(Millimols. per l.)

0.1N	0.2N	0.3N	0.4N
0.506	0.844	1.13	1.44

(Beck and Stegmüller, l.c.)

Easily decomp. by hot  $HCl + Aq$ . (Frese-inus.)

Solubility of  $PbCrO_4$  in  $HCl + Aq$ .

(Millimols. per l.)

$t^\circ$	0.1N	0.2N	0.3N	0.4N	0.5N	0.6N
18	0.186	0.393	0.654	1.07	1.56	2.25
25	0.239	0.485	0.839	1.32	4.06	2.95
37	0.357	0.744	1.31	2.10	3.28	4.69

(Beck and Stegmüller, Arb. K. Gesund. Amt. 1910, 34. 446.)

Insol. in  $HC_2H_3O_2 + Aq$ .

Easily sol. in  $KOH$ , or  $NaOH + Aq$ . 1 l.  $KOH + Aq$  ( $\frac{1}{2}$  normal) dissolves 11.9 g.  $PbCrO_4$  at  $15^\circ$ ; 16.2 g. at  $60^\circ$ ; 26.1 g. at  $80^\circ$ ;

38.5 g. at 102°. (Lachaud and Lepierre, Bull. Soc. (3) 6. 230.)

Insol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Brett, 1837.)

Sol. in  $\text{K}_2\text{Cr}_2\text{O}_7 + \text{Aq.}$ ; almost completely insol. in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq.}$

Not pptd. in presence of Na citrate. (Spiller.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Min. *Crocoide*. Sol. in hot  $\text{HCl} + \text{Aq.}$ ; difficultly sol. in  $\text{HNO}_3 + \text{Aq.}$ ; sol. in  $\text{KOH} + \text{Aq.}$

#### Lead dichromate, $\text{PbCr}_2\text{O}_7$ .

Decomp. by  $\text{H}_2\text{O}$ .

+  $2\text{H}_2\text{O}$ . As above. (Preis and Raymann, B. 13. 340.)

#### Lead lithium chromate, $\text{PbCrO}_4$ , $\text{Li}_2\text{CrO}_4$ .

(Lachaud and Lepierre, C. R. 110. 1035.)

#### Lead potassium chromate, $\text{PbCrO}_4$ , $\text{K}_2\text{CrO}_4$ .

Insol. in hot or cold  $\text{H}_2\text{O}$  or in alcohol. Dil. acids dissolve out  $\text{K}_2\text{CrO}_4$ . (Lachaud and Lepierre, C. R. 110. 1035.)

Decomp. by  $\text{H}_2\text{O}$ . Stable in contact with solutions containing:

8.950	pts.	$\text{K}_2\text{CrO}_4$	per	100	pts.	$\text{H}_2\text{O}$	at	10°
8.077	"	"	"	"	"	"	"	27.5°
7.629	"	"	"	"	"	"	"	37.5°
7.150	"	"	"	"	"	"	"	50.0°
6.145	"	"	"	"	"	"	"	76.0°
4.940	"	"	"	"	"	"	"	100.0°

(Barre, C. R. 1914, 158. 497.)

#### Lead sodium chromate, $\text{PbCrO}_4$ , $\text{Na}_2\text{CrO}_4$ .

Sol. in  $\text{H}_2\text{O} (?)$ . (Lachaud and Lepierre.)

$\text{PbCrO}_4$ ,  $2\text{PbO}$ ,  $\text{Na}_2\text{CrO}_4$ . (L. and L.)

#### Lithium chromate, $\text{Li}_2\text{CrO}_4$ .

100 cc. of solution sat. at 18° contain 85 g. anhydrous salt. (Kohlrausch, B. A. B. 1897. 90.)

99.94 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at 30°. (Schreinemakers, C. C. 1906. II, 1486.)

+  $2\text{H}_2\text{O}$ . Very easily sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 123. 323.)

100 g.  $\text{H}_2\text{O}$  dissolve 111 g. salt at 20°. (Von Weimarn, C. C. 1911. II, 1300.)

Sp. gr. of solution sat. at 18° = 1.574, and contains 52.6%  $\text{LiCrO}_4$ . (Mylius and Wrochem, B. 1897, 30. 1718.)

#### Lithium dichromate, $\text{Li}_2\text{Cr}_2\text{O}_7$ .

130.4 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at 30°. (Schreinemakers, C. C. 1906. II, 1486.)

+  $2\text{H}_2\text{O}$ . Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)

#### Lithium potassium chromate, $\text{K}_2\text{CrO}_4$ ,

$\text{Li}_2\text{CrO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .

Hydroscopic. (Zehenter, M. 1897, 18. 54.)

#### Magnesium chromate, $\text{MgCrO}_4$ .

Sol. in  $\text{H}_2\text{SO}_4$ , and  $\text{HCl}$ ; insol. in 1 (Dufau, C. R. 1896, 123. 888.)

Sp. gr. of $\text{MgCrO}_4 + \text{Aq}$ sat. at t°/t°		
t°	13.6°	14.5°
% $\text{MgCrO}_4$	12.31	21.86
Sp. gr.	1.0886	1.1641

(Slotte, W. Ann. 1881, 14. 19.)

Sol. in acetone. (Naumann, B. 18 4328.)

+  $7\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Vau. 100 cm. of solution sat. at 18° conta

$\text{MgCrO}_4$ . (Kohlrausch, B. A. B. 1897

Sp. gr. of solution sat. at 18 = 1.4 contains 42%  $\text{MgCrO}_4$ . (Mylius an chem, B. 1897, 30. 1718.)

+  $5\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Wyll. Bull. Soc. Min. 12. 60.)

#### Magnesium dichromate, $\text{Mg}_2\text{Cr}_2\text{O}_7$ .

Sol. in  $\text{H}_2\text{O}$ .

Sl. sol. in alcohol. (Reinitzer, Zeit. 1913, 26. 456.)

#### Magnesium potassium chromate, $\text{MgK}_2\text{CrO}_4 + 2\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 28.2 pts. at 2 pts. at 60°. (Schweitzer.)

Sol. in  $\text{H}_2\text{O}$ . Sl. sol. in sat.  $\text{K}_2\text{Cr}_2\text{O}_7$  (Gröger, Z. anorg. 1907, 54. 188.)

Insol. in alcohol.

+  $6\text{H}_2\text{O}$ . Efflorescent. (Briggs, Soc. 1904, 85. 679.)

#### Magnesium rubidium chromate,

$\text{MgRb}_2(\text{CrO}_4)_2 + 6\text{H}_2\text{O}$ .

(Briggs, Chem. Soc. 1904, 85. 679.) (Chem. Soc. 1911, 99. 1327.)

#### Magnesium sodium chromate.

(Stanley, C. N. 54. 194.)

#### Manganous chromate, $2\text{MnO}$ , $\text{CrO}_2$

Ppt. Sol. in dil.  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3$  (Warrington and Reinsch, Schw. J.

#### Manganous potassium chromate, $\text{MgK}_2\text{CrO}_4 + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil. (Gröger, Z. anorg. 1905, 44. 459.)

$2\text{MnCrO}_4$ ,  $\text{K}_2\text{CrO}_4 + 4\text{H}_2\text{O}$ . Sol. i (Hensgen, R. t. c. 3. 433.)

#### Mercurous chromate, basic, $4\text{Hg}_2\text{O}$ ,

Very sl. sol. in cold, more in boiling Sl. sol. in  $\text{HNO}_3 + \text{Aq.}$  Decomp. by

Aq. Sl. sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  or  $\text{NH}_4\text{NO}_3$  (Brett.)

Does not exist. (Richter, B. 18. 1 3 $\text{Hg}_2\text{O}$ ,  $\text{CrO}_2$ . Sol. in  $\text{HNO}_3 + \text{Aq.}$

ter.)

**CrO<sub>3</sub>.** Ppt. (Fichter, Z. anorg. 50.)

**chromate, Hg<sub>2</sub>CrO<sub>4</sub>.**

sol. in cold, more readily in hot l. in dil. HNO<sub>3</sub>+Aq; sol. in conc. in KCN+Aq; insol. in Hg<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub>, se, Pogg. 53. 124.)  
in K<sub>2</sub>CrO<sub>4</sub>+Aq. than in H<sub>2</sub>O. anorg. 1912, 76. 349.)  
acetone. (Naumann, B. 1904, 37.

**romate, basic, 2HgO, CrO<sub>3</sub>.**

l. and in HNO<sub>3</sub>+Aq. (Geuther.)  
rO<sub>3</sub>. Sl. sol. in H<sub>2</sub>O. (Millon.)  
true compound. All others are  
HgO or HgCrO<sub>4</sub> with this com-  
ox, Z. anorg. 1904, 40. 155.)  
O<sub>3</sub>. Sl. sol. in H<sub>2</sub>O. (Millon, A. 365.)

rO<sub>3</sub>. Easily sol. in warm HNO<sub>3</sub>,  
ly precipitated. Easily sol. in  
(Geuther, A. 106. 247.)  
exist. (Freese, B. 2. 477.)  
rO<sub>3</sub>. Easily sol. in HCl+Aq.  
l. in HNO<sub>3</sub>+Aq. Decomp. by  
O<sub>3</sub>. Insol. in H<sub>2</sub>O. (Jäger and 2. 2049.)

**romate, HgCrO<sub>4</sub>.**

by H<sub>2</sub>O and acids into basic  
her.)  
cids. Sol. in warm NH<sub>4</sub>Cl, or  
lq. Sol. in Hg(NO<sub>3</sub>)<sub>2</sub>, or HgCl<sub>2</sub>+  
ethyl acetate. (Naumann, B. 4.)

acetone. (Naumann, B. 1904,

**chromate, HgCr<sub>2</sub>O<sub>7</sub>.**

swalowski, C. C. 1906. II, 1307.)

**potassium chromate,**  
**CrO<sub>4</sub>)<sub>2</sub>.**

mp. by H<sub>2</sub>O. (Gröger, Z. anorg. 1.)

**romate, basic, ammonia, 12HgO,**  
**2NH<sub>3</sub>+3H<sub>2</sub>O.**  
Z. anorg. 1908, 58. 420.)

**chromate ammonia, HgCrO<sub>4</sub>,**  
**-H<sub>2</sub>O.**

Z. anorg. 1908, 58. 419.)

**romate sulphide, 2HgCrO<sub>4</sub>, HgS.**  
**ked by weak acids. (Palm, C. C.**

**mate, basic, 4NiO, CrO<sub>3</sub>+6H<sub>2</sub>O.**  
**H<sub>2</sub>O; easily sol. in NH<sub>4</sub>OH+Aq.**  
**nd Sarzeau, A. ch. (3) 9. 451.)**

3NiO, CrO<sub>3</sub>+6H<sub>2</sub>O. Insol. in H<sub>2</sub>O; sol. in  
NH<sub>4</sub>OH+Aq. (Freese, J. B. 1869. 271.)

2NiO, CrO<sub>3</sub>+6H<sub>2</sub>O. As above. (Schmidt,  
A. 156. 19.)

5NiO, 2CrO<sub>3</sub>+12H<sub>2</sub>O. As above.  
(Schmidt.)

**Nickel chromate, NiCrO<sub>4</sub>.**

Not attacked by boiling H<sub>2</sub>O.

Nearly insol. in hot dil. HNO<sub>3</sub>. Slowly sol.  
in conc. HNO<sub>3</sub> and aqua regia.

Somewhat sol. in NH<sub>3</sub>+Aq. (Briggs, Z.  
anorg. 1909, 63. 326.)

**Nickel dichromate, 2NiCr<sub>2</sub>O<sub>7</sub>+3H<sub>2</sub>O.**

Slowly sol. in cold, rapidly sol. in hot H<sub>2</sub>O.  
Deliquescent. (Briggs, Z. anorg. 1907, 56.  
246.)

**Nickel potassium chromate, NiCrO<sub>4</sub>, K<sub>2</sub>CrO<sub>4</sub>,**  
**+2H<sub>2</sub>O.**

Decomp. by H<sub>2</sub>O. (Gröger, Z. anorg. 1906,  
51. 353.)

+6H<sub>2</sub>O. Efflorescent. (Briggs, Chem.  
Soc. 1904, 85. 678.)

**Nickel rubidium chromate, NiRb(CrO<sub>4</sub>)<sub>2</sub>+6H<sub>2</sub>O.**

Sl. efflorescent at ord. temp. (Briggs,  
Chem. Soc. 1904, 85. 678.)

**Nickel chromate ammonia, NiCrO<sub>4</sub>, 6NH<sub>3</sub>+4H<sub>2</sub>O.**

Decomp. by H<sub>2</sub>O. Quite easily sol. in  
NH<sub>4</sub>OH+Aq of 0.96 sp. gr. (Schmidt.) In-  
sol. in alcohol or ether.

**Potassium chromate, K<sub>2</sub>CrO<sub>4</sub>, K<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub>, etc.**

Kremers, calculated by Gerlach, Z. anal. 8. 288.)

Sp. gr. of  $K_2Cr_2O_7 + Aq$  containing 4.71%  $K_2Cr_2O_7 = 1.0325$  at  $11^\circ/4^\circ$ ; containing 6.97%  $K_2Cr_2O_7 = 1.0493$  at  $10.6^\circ/4^\circ$ . (Slotte, W. an. 1881, 14. 18.)

Sat.  $K_2Cr_2O_7 + Aq$  boils at  $104^\circ$  (Kremers);  $3.4^\circ$ . (Alluard.)

Insol. in alcohol.

Sl. sol. in liquid  $NH_3$ . (Franklin, Am. Ch. 1898, 20. 829.)

Insol. in alcohol. (Reinitzer, Zeit. angew. 1. 1913, 26. 456.)

100 g. sat. solution in glycol contain 6 g.  $K_2Cr_2O_7$ . (de Coninck, Bull. acad. roy. 1906, 257.)

Insol. in benzonitrile. (Naumann, B. 14, 47. 1370.)

Insol. in acetone. (Naumann, B. 1904, 37. 29.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899. II, 1014.)

Potassium trichromate,  $K_2Cr_2O_{10}$ .

Easily sol. in  $H_2O$  and alcohol. (Bothe, J. pr. 46. 184.)

Not deliquescent; decomp. by  $H_2O$  in chromic acid and  $K_2Cr_2O_7$ . (Jäger and Krüss, B. 22. 2041.)

Potassium tetrachromate,  $K_2Cr_2O_{11}$ .

Very deliquescent, and easily sol. in  $H_2O$ . (Schwarz, Dingl. 186. 31.)

Not deliquescent. Decomp. by  $H_2O$ . (Jäger and Krüss, B. 22. 2042.)

Potassium samarium chromate,

$K_2Sm_2(CrO_4)_4 + 6H_2O$ .

Precipitate. (Cleve.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Potassium sodium chromate,  $3K_2CrO_4$ ,  $Na_2CrO_4$ .

Sol. in  $H_2O$ . (v. Hauer, J. pr. 83. 359.)

64.2 pts. are sol. in 100 pts.  $H_2O$  at  $14^\circ$ . (Zehenter, M. 1897, 18. 49.)

Potassium strontium chromate,  $K_2Sr(CrO_4)_2$ .

Ppt. Decomp. by  $H_2O$ . (Gröger, Z. anorg. 1907, 54. 187.)

Decomp. by  $H_2O$ . Stable in contact with solutions containing:

at  $11.5^\circ$ , 2.914 pts.  $K_2CrO_4$  per 100 pts.  $H_2O$ .

at  $27.5^\circ$ , 4.123 " " " " " "

at  $50^\circ$ , 5.942 " " " " " "

at  $76^\circ$ , 7.920 " " " " " "

at  $100^\circ$ , 9.784 " " " " " "

(Barre, C. R. 1914, 158. 496.)

Potassium thallium chromate,  $K_2CrO_4$ ,  $Tl_2CrO_4$ .

(Lachaud and Lepierre, Bull. Soc. (3) 6. 232.)

+  $2H_2O$ . Rapidly hydrolyzed by  $H_2O$  unless a large excess of the  $CrO_4$  ion is present.

Readily sol. in dil. mineral acids.

Difficulty sol. in  $K_2Cr_2O_7 + Aq$ . (Hawley, J. Am. Chem. Soc. 1907, 29. 304.)

Potassium uranyl chromate,  $K_2CrO_4$ ,  $2(UO_2)CrO_4 + 6H_2O$ .

Decomp. by boiling with  $H_2O$ . Sol. in acidified  $H_2O$ . (Formánek, A. 257. 103.)

$K_2CrO_4$ ,  $(UO_2)CrO_4 + H_2O$ ;  $2K_2CrO_4$ ,  $3(UO_2)CrO_4 + 7H_2O$ ;  $3K_2CrO_4$ ,  $4(UO_2)CrO_4 + 7H_2O$ ; and  $K_2CrO_4$ ,  $3(UO_2)CrO_4 + 14H_2O$ .

Precipitates. (Wiesner, C. C. 1882. 777.)

Potassium ytterbium chromate, basic,  $2KYb(CrO_4)_2 + Yb(OH)_3 + 15\frac{1}{2}H_2O$ .

Ppt. (Cleve, Z. anorg. 1902, 32. 151.)

**Potassium yttrium chromate**,  $K_2CrO_4$ ,  
 $Y_2(CrO_4)_3 \cdot xH_2O$ .  
Ppt. (Cleve.)

**Potassium zinc chromate, basic**,  $K_2O$ ,  $5ZnO$ ,  
 $4CrO_3 \cdot 6H_2O$ , or  $K_2O$ ,  $4ZnO$ ,  $3CrO_3$ ,  
 $+3H_2O$ .

Slightly sol. in cold, decomp. by hot  $H_2O$ .  
(Wöhler.)

$K_2O$ ,  $4ZnO$ ,  $3CrO_3 \cdot 3H_2O$ . Insol. in cold,  
decomp. by hot  $H_2O$ . (Gröger, M. 1904,  
25. 520.)

**Potassium zinc chromate**,  $K_2Zn(CrO_4)_2 + 2H_2O$ .

Ppt. Decomp. by  $H_2O$ . (Gröger, Z.  
anorg. 1907, 54. 189.)

**Potassium dichromate chloride mercuric chloride**,  $K_2Cr_2O_7 \cdot 2KCl \cdot 4HgCl_2 \cdot 2H_2O$ .

Solution in  $H_2O$  sat. at  $20.5^\circ$  contains  
6.78% salt. Salt is much more sol. in hot  
 $H_2O$ . (Strömholm, Z. anorg. 1912, 75. 278.)

**Potassium chromate iodate.**

See Chromoiodate, potassium.

**Potassium chromate magnesium sulphate**,  
 $K_2CrO_4$ ,  $MgSO_4 \cdot 9H_2O$ .

Sol. in  $H_2O$ . (Étard, C. R. 85. 443.)

**Potassium chromate (mercuric chloride,**  
 $K_2CrO_4$ ,  $2HgCl_2$ .

Easily sol. in  $H_2O$ . Sol. in dil.  $HCl + Aq$ .  
(Darby.)

**Potassium dichromate mercuric chloride**,  
 $K_2Cr_2O_7$ ,  $HgCl_2$ .

Ether or absolute alcohol dissolves out  
 $HgCl_2$ . (Millon, A. ch. (3) 13. 388.)

Can be crystallized from  $H_2O$ . (Jäger and  
Krüss, B. 22. 2046.)

**Potassium chromate mercuric cyanide**,  
 $2K_2CrO_4$ ,  $3Hg(CN)_2$ .

Easily sol. in  $H_2O$ .

$+H_2O$ . (Dexter.)

Formula is  $K_2CrO_4$ ,  $2Hg(CN)_2$ . (Clarke  
and Sterne, Am. Ch. J. 3. 352.)

**Potassium dichromate mercuric cyanide**,  
 $K_2Cr_2O_7$ ,  $Hg(CN)_2 \cdot 2H_2O$ .

Sol. in  $H_2O$ . (Wyrouboff, J. B. 1880. 309.)

**Potassium chromate phosphate.**

See Phosphochromate, potassium.

**Potassium chromate sulphate**,  $K_2CrO_4$ ,  
 $6K_2SO_4$ .

Easily sol. in  $H_2O$ . (Boutron-Chalard.)

**Potassium chromate tellurate.**

See Chromotellurate, potassium.

**Rubidium chromate**,  $Rb_2CrO_4$ .

Sol. in  $H_2O$ . (Piccard, J. pr. 86. 455.)

### Solubility in $H_2O$ at $t^\circ$ .

$t^\circ$	% $Rb_2CrO_4$
— 7	36.65
0	38.27
10.3	40.22
20	42.42
30	44.11
40	46.13
50	47.44
60.4	48.90

(Schreinemakers and Filippo, Chem. Wes  
1906, 3. 157.)

**Rubidium dichromate**,  $Rb_2Cr_2O_7$ .

Sol. in  $H_2O$ . (Grandeau, A. ch. (3)  
227.)

Very sl. sol. in  $H_2O$ ; 5% at  $10^\circ$ , 8%  
 $26^\circ$ , 35% at  $60^\circ$ . (Wyrouboff, Bull.  
Min. 1881, 4. 129.)

100 pts.  $H_2O$  dissolve 10.46 pts.  $Rb_2C$   
at  $30^\circ$ . The solution contains 9.47%  
(Schreinemakers and Filippo, Chem. Wes  
1906, 3. 157.)

Two forms of crystals. Figures denote  
salt per 100 pts.  $H_2O$ .

$t^\circ$	$14^\circ$	$26^\circ$	$43^\circ$
Monoclinic form	4.45	8.00	16.52
Triclinic form	4.40	7.91	16.57

(Wyrouboff, Bull. Soc. 1908, (4) 3. 7.)

Solubility of monoclinic and triclinic form

Temp.	Pts. of salt in 100 pts. $H_2O$		Temp.	Pts. of salt in 100 pts. $H_2O$	
	Monoclinic	Triclinic		Monoclinic	Triclinic
$18^\circ$	5.42	4.96	$40^\circ$	13.22	12
$24^\circ$	6.94	6.55	$50^\circ$	18.94	18
$30^\circ$	9.08	8.70	$60^\circ$	28.1	27

(Stortenbeker, C. C. 1907, II. 1588.)

**Rubidium dichromate chloride mercuric chloride**,  $Rb_2Cr_2O_7$ ,  $2RbCl$ ,  $4HgCl_2 \cdot 2H_2O$ .

Sol. in  $H_2O$ .

Solution sat. at  $20.5^\circ$  contains 5.35%  
(Strömholm, Z. anorg. 1912, 75. 284.)

**Silver (argentous) chromate**,  $Ag_2CrO_4$ .

Sol. in dil. acids. (Wöhler and Raaberg.)

Existence very doubtful.

**Silver chromate**,  $Ag_2CrO_4$ .

Absolutely insol. in  $H_2O$ . Sol. in a  
ammonia, and alkali chromates +  $Aq$ . (C  
ington, A. 27. 12.)

Appreciably sol. in cold, and still more  
hot  $H_2O$ . (Meineke, A. 261. 341.)

100 ccm.  $H_2O$  dissolve 0.064 grain  $Ag_2C$   
at  $100^\circ$ ; 100 ccm.  $H_2O$  containing 50 g

the following salts dissolve the given amts.  $\text{Ag}_2\text{CrO}_4$  at  $100^\circ$ :  $\text{NaNO}_3$ , 0.064 grain;  $\text{KNO}_3$ , 0.192 grain;  $\text{NH}_4\text{NO}_3$ , 0.320 grain;  $(\text{NO}_3)_2$ , 0.256 grain. (Carpenter, J. S. C. 5, 286.)

According to electrical conductivity of  $\text{CrO}_4 + \text{Aq}$ , 1 l.  $\text{H}_2\text{O}$  dissolves 28 mg.  $\text{CrO}_4$  at  $18^\circ$ . (Kohlrausch and Rose, Z. s. Ch. 12, 241.)

1.  $\text{H}_2\text{O}$  dissolves 25 mg.  $\text{Ag}_2\text{CrO}_4$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50, 356.)

5 mg. are contained in 1 l. of sat. solution at  $8^\circ$ . Solubility increases unusually rapidly with temp. (Kohlrausch, Z. phys. Ch. 1906, 168.)

sol. in 26,378 pts. cold  $\text{H}_2\text{O}$  and 9116 pts.  $\text{H}_2\text{O}$  at  $100^\circ$ . (Koninck and Nihoul, Zeit. anorg. Ch. 1891, 5, 295.)

1.  $\text{H}_2\text{O}$  dissolves  $1.2 \times 10^{-4}$  gram. atoms silver at  $25^\circ$ . (Abegg and Cox, Z. phys. Ch. 1903, 46, 11.)

1.  $\text{H}_2\text{O}$  dissolves 0.029 g.  $\text{Ag}_2\text{CrO}_4$  at  $25^\circ$ . (Mayer, Z. anorg. 1905, 45, 310.)

1.  $\text{H}_2\text{O}$  dissolves 0.0256 g.  $\text{Ag}_2\text{CrO}_4$  at  $0.0341$  g. at  $27^\circ$ ; 0.0534 g. at  $50^\circ$ . (Whitby and Russ, 1910, 67, 106.)

sol. in hot  $\text{NH}_4\text{OH} + \text{Aq}$  of sp. gr. 0.94 (63%  $\text{NH}_3$ ); sl. sol. in cold  $\text{NH}_4\text{OH} + \text{Aq}$  of sp. gr. 0.91 (24.99%  $\text{NH}_3$ ). (Margosches, Z. anorg. 1904, 41, 73.)

solubility of  $\text{Ag}_2\text{CrO}_4$  in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ .

obs. $\text{NH}_4\text{OH}$ per l.	Mols. $\times 10^3$ $\text{Ag}_2\text{CrO}_4$ per l.
0.01	2.004
0.02	4.169
0.04	8.595
0.08	17.58

Sherrill and Russ, J. Am. Chem. Soc. 1907, 29, 1662.)

sl. sol. in very conc.  $\text{K}_2\text{C}_2\text{O}_4 + \text{Aq}$ . Practically insol. in  $\text{AgNO}_3 + \text{Aq}$ . (Margosches.)

solubility of  $\text{Ag}_2\text{CrO}_4$  in  $\text{HNO}_3 + \text{Aq}$  at  $25^\circ$ .

ts. $\text{O}_2$ l.	Milliat. per l.		Solid Phase
	Cr	Ag	
	3.157	6.315	$\text{Ag}_2\text{CrO}_4$
5	3.730	...	"
	4.177	8.356	"
5	4.567	...	"
	5.200	...	"

	6.380	...	"
	6.833	...	"
	7.333	...	"
5	7.477	14.85	" + $\text{Ag}_2\text{Cr}_2\text{O}_7$
	7.260	15.45	"
	5.647	19.01	"
	4.293	23.89	"
	3.948	25.63	"

Sherrill and Russ, J. Am. Chem. Soc. 1907, 29, 1663.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 829.)

1 l. 65% alcohol dissolves 0.0129 g.  $\text{Ag}_2\text{CrO}_4$  at ord. temp. (Guerini, Dissert. 1912.)

Insol. in  $\text{H}_2\text{O}$  containing acetic acid in presence of large excess of  $\text{AgNO}_3$ . (Gooch and Weed, Am. J. Sci. 1908, (4) 26, 85.)

Practically insol. in glacial acetic acid but somewhat sol. in dil. acetic acid. It behaves in a similar manner toward propionic, lactic and other organic acids. The red modification is more sol. than the greenish-black. (Margosches, Z. anorg. 1906, 51, 233.)

Silver dichromate,  $\text{Ag}_2\text{Cr}_2\text{O}_7$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HNO}_3$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Warrington.)

Decomp. by boiling with  $\text{H}_2\text{O}$  into  $\text{CrO}_3$  and  $\text{Ag}_2\text{CrO}_4$ . (Jäger and Krüss, B. 22, 2050.)

Decomp. by cold  $\text{H}_2\text{O}$ . (Autenrieth, B. 1902, 35, 2061.)

1 pt. is sol. in 12,000 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Mayer, B. 1903, 36, 1741.)

Solubility in  $\text{H}_2\text{O}$  at  $25^\circ = 7.3 \times 10^{-3}$  atoms Ag per l. Decomp. by  $\text{HNO}_3 + \text{Aq}$  (less than 0.06 N) with separation of  $\text{Ag}_2\text{CrO}_4$ . (Sherrill and Russ, J. Am. Chem. Soc. 1907, 29, 1674.)

Solubility of  $\text{Ag}_2\text{Cr}_2\text{O}_7$  in  $\text{HNO}_3 + \text{Aq}$  at  $25^\circ$ .

Mols. $\text{HNO}_3$ per l.	Milliat. per l.		Solid Phase
	Cr	Ag	
0	32.20	5.390	$\text{Ag}_2\text{CrO}_4 + \text{Ag}_2\text{Cr}_2\text{O}_7$
0.01	25.06	6.131	"
0.02	20.21	7.148	"
0.04	13.59	9.529	"

0.08 + 0.1 $\text{AgNO}_3$	6.624	...	"

(Sherrill and Russ, J. Am. Chem. Soc. 1907, 29, 1664.)

Silver uranyl chromate,  $2\text{Ag}_2\text{CrO}_4 \cdot \text{UO}_2\text{CrO}_4$ . Ppt. (Formánek, A. 257, 110.)

Silver chromate ammonia,  $\text{Ag}_2\text{CrO}_4 \cdot 4\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in warm conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Mitscherlich, Pogg. 12, 141.)

Silver dichromate mercuric cyanide,  $\text{Ag}_2\text{Cr}_2\text{O}_7 \cdot \text{Hg}(\text{CN})_2$ .

Sol. in cold  $\text{H}_2\text{O}$ ; very sol. in hot  $\text{H}_2\text{O}$  without decomp. (Krüss, Z. anorg. 1895, 8, 456.)

$\text{Ag}_2\text{Cr}_2\text{O}_7 \cdot 2\text{Hg}(\text{CN})_2$ . Scarcely sol. in cold, more readily in hot  $\text{H}_2\text{O}$ . Sol. in hot  $\text{HNO}_3 + \text{Aq}$ , separating on cooling. (Darby, Chem. Soc. 1, 24.)

Sodium chromate, basic,  $\text{Na}_4\text{CrO}_6 \cdot 13\text{H}_2\text{O}$ .

Sol. without decomp. in  $\text{H}_2\text{O}$ .

Sat. solution at  $30^\circ$  contains 41.3%.

$\text{Na}_2\text{CrO}_4$ . (Schreinemakers, Z. phys. Ch. 1906, 55. 93.)

Deliquescent.

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	0°	10°	20.5°
% $\text{Na}_2\text{CrO}_4$	33.87	35.58	38.05

(Stanley, C. N. **54**. 194.)

Solubility in  $H_2O$  at t°

t°	% $Na_2Cr_2O_7$
0	61.98
17	63.82
34.5	67.36
52	71.76
72	76.90
81	79.80

ius and Funk, Gm.-K. **3**. I, 1380.)

$H_2O$  at 30° dissolve 197.6 g.  $Na_2Cr_2O_7$ , solution at 30° contains 66.4%  $Cr_2O_7$ . (Schreinemakers, Z. phys. Ch. **97**.)

100 cc. of a solution of sodium dichromate in alcohol contain 5.133 g.  $Na_2Cr_2O_7$  + 19.4°. The solution decomp. rapidly. (Zeit. angew. Ch. 1913, **26**. 456.) Composition of the hydrates formed by  $Cr_2O_7$  at different dilutions is calculated from the terminations of the lowering of the boiling point produced by  $Na_2Cr_2O_7$  and of the viscosity and sp. gr. of  $Na_2Cr_2O_7$  + Aq. (M. ch. J. 1905, **34**. 317.)

**Trichromate**,  $NaCr_2O_{10}$ .

**Deliquescent.** Very sol. in  $H_2O$ . (Stanley, C. N. **54**. 194.)

Sat. solution at 30° contains 100 pts.  $Cr_2O_{10}$ . (Schreinemakers, Z. phys. Ch. **55**. 94.)

Solubility in  $H_2O$  at t°.

	0°	15°	55°	99°
$Cr_2O_{10}$	80.03	80.44	82.68	85.78

ius and Funk, Gm.-K. **3**. I, 1380.)

100 cc. of sat. solution containing 80.6%  $Cr_2O_{10}$  at 18° = 2.059. (Mylilius and Funk, **33**. 3688.)

**Strochromate**,  $Na_2Cr_2O_{11} + 4H_2O$ .

Solubility in  $H_2O$  at t°.

	0°	16°	22°
$Cr_2O_{11}$	72.19	74.19	76.01

ius and Funk, Gm.-K. **3**. I, 1380.)

**Deliquescent.**

Sat. solution at 18° contains 74.6%  $Cr_2O_{11}$  and has sp. gr. = 1.926. (Mylilius and Funk, **33**. 3688.)

**Sodium uranyl chromate**,  $Na_2CrO_4$ ,  $2(UO_2)CrO_4 + 10H_2O$ .

Easily sol. in  $H_2O$ . (Formánek, A. **257**. 108.)

100 pts. of the solution in  $H_2O$  contain 52.52 pts. of the anhydrous salt at 20°. (Rimbach, B. 1904, **37**. 482.)

**Sodium chromate silicate**,  $Na_2O$ ,  $Cr_2O_3$ ,  $2SiO_2 + 14H_2O$ .

Not decomp. by HCl + Aq. (Singer, Dissert. **1910**.)

$2Na_2O$ ,  $3Cr_2O_3$ ,  $6SiO_2$ . Not decomp. by boiling conc. acids except HF. (Weyberg, C. B. Miner, **1908**. 519.)

$5Na_2O$ ,  $2Cr_2O_3$ ,  $11SiO_2$ . (Weyberg.)

$3Na_2O$ ,  $2Cr_2O_3$ ,  $9.5SiO_2$ . (Weyberg.)

**Strontium chromate**,  $SrCrO_4$ .

Somewhat sol. in  $H_2O$ . Sol. in 840 pts.  $H_2O$  (Meschezerski, Z. anal. **21**. 399); sol. in 831.8 pts.  $H_2O$  at 15°. (Fresenius, Z. anal. **29**. 419.)

100 cc.  $H_2O$  dissolve 0.4651% at 10°; 1% at 20°; 2.417% at 50°; 3% at 100°. (Reichard, Ch. Z. 1903, **27**. 877.)

Easily sol. in HCl,  $HNO_3$ , or  $H_2CrO_4$  + Aq.

Sol. in 512 pts. 0.5%  $NH_4Cl$  + Aq at 15°.

Sol. in 63.7 pts. 1%  $HC_2H_3O_2$  + Aq at 15°.

Sol. in 348.8 pts. solution containing 0.75%  $NH_4C_2H_3O_2$ , 4 drops  $HC_2H_3O_2$ , and 6 drops  $(NH_4)_2CrO_4$  + Aq. (Fresenius.)

100 ccm.  $NH_4Cl$  + Aq sat. at bpt. dissolve 1 g.  $SrCrO_4$ . (Dumesnil, A. ch. 1900, (7) **20**. 125.)

50 ccm. alcohol (29%) dissolve 0.0066 g.  $SrCrO_4$ .

50 ccm. alcohol (53%) dissolve 0.001 g.  $SrCrO_4$ . (Fresenius, Z. anal. **30**. 672.)

**Strontium dichromate**,  $SrCr_2O_7$ .

Easily sol. in  $H_2O$ .

**Strontium trichromate**,  $SrCr_2O_{10} + 3H_2O$ .

Very deliquescent, and sol. in  $H_2O$ . (Preis and Raymann, B. **13**. 340.)

**Strontium chromate mercuric hydrogen chloride**,  $SrCrO_4$ ,  $2HgCl_2$ , HCl.

According to Strömholm is  $SrCl_2$ ,  $SrCr_2O_7$ ,  $4HgCl_2 + H_2O$ .

Recryst. from  $H_2O$ . (Imbert and Belugon, Bull. Soc., 1897, (3) **17**. 471.)

$2SrCrO_4$ ,  $6HgCl_2$ , HCl. (Imbert and Belugon.)

**Thallos chromate**,  $TlCrO_4$ .

100 pts.  $H_2O$  dissolve 0.03 pt. at 60°. (Rupp and Zimmer, Z. anorg. **1902**, **33**. 157.)

Ppt. Insol. in cold moderately conc.  $HC_2H_3O_2$  + Aq, or in very dil.  $HNO_3$  + Aq, and very sl. sol. on boiling therewith. Dil.  $NH_4OH$ , and  $Na_2CO_3$  + Aq have the same action. Attacked by very dil. HCl + Aq.

Sol. in hot conc. HCl + Aq. Decomp. by dil.  $H_2SO_4$  + Aq. (Carstanjen.)

1 l. KOH + Aq (112 g. per l.) dissolves about 3.5 g.  $\text{Ti}_2\text{CrO}_4$  on boiling, which separates out on cooling.

Boiling conc. KOH + Aq (31% KOH) dissolves 18 g.  $\text{Ti}_2\text{CrO}_4$  per litre. (Lepierre and Lachaud, C. R. 113. 196.)

**Thalious dichromate,  $\text{Ti}_2\text{Cr}_2\text{O}_7$ .**

Insol. in  $\text{H}_2\text{O}$ , etc. Has the same properties as  $\text{Ti}_2\text{CrO}_4$ .

**Thalious trichromate,  $\text{Ti}_2\text{Cr}_3\text{O}_{10}$ .**

Sol. in 2814 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 438.7 pts. at  $100^\circ$ . (Crookes.)

**Thallic chromate.**

Ppt.

**Thorium chromate, basic,  $\text{Th}(\text{OH})_2\text{CrO}_4$ .**

Ppt.; unstable in solution. (Palmer, Am. Ch. J. 1895, 17. 278.)

**Thorium chromate,  $\text{Th}(\text{CrO}_4)_2 + \text{H}_2\text{O}$ .**

Ppt. Sol. in HCl and  $\text{NH}_4\text{Cl}$  + Aq. 1 pt. is sol. in 284 pts.  $\text{H}_2\text{O}$  at  $22^\circ$ . (Palmer, Am. Ch. J. 1895, 17. 375 and 278.)

+  $3\text{H}_2\text{O}$ . Ppt. (Haber, M. 1897, 18. 689.)  
+  $8\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Chydenius, Pogg. 119. 54.)

**Tin (stannous) chromate.**

Ppt. Sol. in dil. acids. (Berzelius.)

**Tin (stannic) chromate.**

Ppt. (Leykauf, J. pr. 19. 127.)

**Uranyl chromate, basic,  $\text{UO}_3 \cdot 2(\text{UO}_2)\text{CrO}_4 + 8\text{H}_2\text{O}$ .**

Ppt. (Orloff, Ch. Z. 1907, 31. 375.)  
 $\text{UO}_3 \cdot (\text{UO}_2)\text{CrO}_4 + 6\text{H}_2\text{O}$ . (Orloff.)

**Uranyl chromate,  $(\text{UO}_2)\text{CrO}_4 + 3\text{H}_2\text{O}$ .**

1 pt. is sol. in 13.3 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ ; slowly sol. in alcohol to give a solution which is decomp. on boiling. (Orloff, Ch. Z. 1907, 31. 375.)

+  $11\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Formánek, A. 257. 108.)

**Yttrium chromate.**

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (Berlin.)

**Zinc chromate, basic,  $4\text{ZnO}, \text{CrO}_3 + 3\text{H}_2\text{O}$ .**  
(Gröger, Z. anorg. 1911, 70. 135.)

+  $5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in hot  $\text{H}_2\text{CrO}_4$  + Aq; slowly sol. in  $\text{NH}_4\text{OH}$  + Aq. (Malaguti and Sarzeau, A. ch. (3) 9. 431.)

$3\text{ZnO}, \text{CrO}_3 + 2\text{H}_2\text{O}$ . (Gröger.)  
 $2\text{ZnO}, \text{CrO}_3 + \text{H}_2\text{O}$ . (Briggs, Z. anorg. 1907, 56. 254.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . Ppt. Insol. in  $\text{H}_2\text{O}$ . Sol. in hot  $\text{H}_2\text{CrO}_4$  + Aq. (Prüssen and Philipona, A. 149. 92.)

+  $2\text{H}_2\text{O}$ . Ppt. Not wholly insol. in  $\text{H}_2\text{O}$ . (Prüssen and Philipona.)

$3\text{ZnO}, 2\text{CrO}_3 + \text{H}_2\text{O}$ . (Gröger.)

**Zinc chromate,  $\text{ZnCrO}_4$ .**

Insol. in  $\text{H}_2\text{O}$ ; very sol. in acids; decomp. by boiling with  $\text{H}_2\text{O}$ . (Schulze, Z. anorg. 1895, 10. 154.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1911, 70. 135.)

**Zinc dichromate,  $\text{ZnCr}_2\text{O}_7 + 3\text{H}_2\text{O}$ .**

Hygroscopic.

Very sol. in  $\text{H}_2\text{O}$  and sl. decomp. by boiling. (Schulze, Z. anorg. 1895, 10. 153.)

**Zinc trichromate,  $\text{ZnCr}_3\text{O}_{10} + 3\text{H}_2\text{O}$ .**

Deliquescent; very sol. in  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1910, 66. 10.)

**Zinc chromate ammonia,  $\text{ZnCrO}_4, \text{NH}_3 + \text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Gröger, Z. anorg. 1908, 58. 417.)

$\text{ZnCrO}_4, 4\text{NH}_3 + 5\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$  + Aq. Insol. in alcohol and ether. (Malaguti and Sarzeau, A. ch. (3) 9. 431.)

+  $3\text{H}_2\text{O}$ . Efflorescent. Decomp. by  $\text{H}_2\text{O}$ . Easily sol. in dil. acids and  $\text{NH}_4\text{OH}$  + Aq. (Bieler, A. 151. 223.)

$2\text{ZnO}, 3\text{CrO}_3, 10\text{NH}_3 + 10\text{H}_2\text{O}$ . Ppt. (Malaguti and Sarzeau.)

**Zinc dichromate mercuric cyanide,  $\text{ZnCr}_2\text{O}_7, 2\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . Stable in aqueous solution at  $100^\circ$ . (Krüss, Z. anorg. 1895, 8. 460.)

**Perchromic acid**

See Perchromic acid.

**Chromicomolybdic acid,  $\text{Cr}_2\text{O}_3, 12\text{MoO}_3 + 28\text{H}_2\text{O}$ .**

Slowly sol. in  $\text{H}_2\text{O}$ . (Hall, J. Am. Chem. Soc. 1907, 29. 708.)

**Ammonium chromicomolybdate,  $3(\text{NH}_4)_2\text{O}, \text{Cr}_2\text{O}_3, 12\text{MoO}_3 + 20\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Strüve, J. pr. 61. 457; Hall, J. Am. Chem. Soc. 1907, 29. 695.)

+  $26\text{H}_2\text{O}$ . (Marckwald, Dissert, 1896.)

**Ammonium barium chromicomolybdate,  $(\text{NH}_4)_2\text{O}, 2\text{BaO}, \text{Cr}_2\text{O}_3, 12\text{MoO}_3 + 20\text{H}_2\text{O}$ .**

(Hall, J. Am. Chem. Soc. 1907, 29. 707.)

**Barium chromicomolybdate**,  $4\text{BaO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 15\text{H}_2\text{O}$ ;  $4\text{BaO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 18\text{H}_2\text{O}$ ;  $5\text{BaO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 16\text{H}_2\text{O}$ .

Ppts. (Hall, J. Am. Chem. Soc. 1907, 29. 705.)

**Lead chromicomolybdate**,  $4\text{PbO}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 22\text{H}_2\text{O}$ , and  $+24\text{H}_2\text{O}$ .

Ppts. (Hall, J. Am. Chem. Soc. 1907, 29. 706.)

**Mercurous chromicomolybdate**,  $8\text{Hg}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 16\text{H}_2\text{O}$ .

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29. 707.)

**Potassium chromicomolybdate**,  $\text{K}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $3\text{MoO}_3$ .

Sol. in  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$ . (Bradbury, Z. anorg. 1894, 7. 46.)

$3\text{K}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 20\text{H}_2\text{O}$ . Sol. in 38.51 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ . (Strüve; Hall.)

$+24\text{H}_2\text{O}$ . (Hall.)

$4\text{K}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 15\text{H}_2\text{O}$ . (Hall, J. Am. Chem. Soc. 1907, 29. 709.)

$7\text{K}_2\text{O}$ ,  $2\text{Cr}_2\text{O}_3$ ,  $24\text{MoO}_3 + 32\text{H}_2\text{O}$ . (Hall.)

**Silver chromicomolybdate**,  $5\text{Ag}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 17\text{H}_2\text{O}$ .

Ppt. (Hall.)

**Sodium chromicomolybdate**,  $3\text{Na}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ ,  $12\text{MoO}_3 + 21\text{H}_2\text{O}$ .

Efflorescent. Easily sol. in  $\text{H}_2\text{O}$ . (Strüve.)

**Chromic sulphuric acid**.

See Sulphochromic acid.

**Chromicyanhydric acid**,

$\text{H}_2\text{Cr}(\text{CN})_2(?)$ . Insol. in  $\text{H}_2\text{O}$ . (Kaiser, A. Suppl. 3. 163.)

**Ammonium chromicyanide**,  $(\text{NH}_4)_2\text{Cr}(\text{CN})_2$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Kaiser, A. Suppl. 3. 163.)

**Cupric chromicyanide**,  $\text{Cu}_2[\text{Cr}(\text{CN})_4]$ .

Ppt. Insol. in dil. or conc. acids, except on heating. Insol. in  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Kaiser.)

**Lead chromicyanide, basic**,  $3\text{Pb}(\text{CN})_2$ ,  $2\text{Cr}(\text{CN})_2$ ,  $\text{Pb}(\text{OH})_2$ .

Ppt. Sol. in  $\text{HNO}_3$ ,  $\text{NaOH} + \text{Aq}$ , or  $\text{Pb salts} + \text{Aq}$ . (Kaiser.)

**Potassium chromicyanide**,  $\text{K}_2\text{Cr}(\text{CN})_2$ .

Very sol. in  $\text{H}_2\text{O}$ . 100 pts. cold  $\text{H}_2\text{O}$  dissolve 30.9 pts. salt. Insol. in absolute alcohol, but somewhat sol. in dil. alcohol.

Sol. in conc.  $\text{H}_2\text{SO}_4$  without decomp. (Kaiser, A. Suppl. 3. 170.)

**Silver chromicyanide**,  $\text{Ag}_2\text{Cr}(\text{CN})_2$ .

Insol. in all solvents, excepting  $\text{KCN} + \text{Aq}$ . (Kaiser.)

Sol. in large excess of  $\text{HCl} + \text{Aq}$ . Sl. sol. in cold, easily sol. in hot conc.  $\text{HNO}_3$ . Very sol. in conc.  $\text{H}_2\text{SO}_4$ . Insol. in hot or cold acetic acid. (Cruser, Dissert. 1896.)

**Chromisulphocyanhydric acid**.

$\text{H}_2\text{Cr}(\text{SCN})_2$ .

Known only in aqueous solution.

**Ammonium chromisulphocyanide**,

$(\text{NH}_4)_2\text{Cr}(\text{SCN})_2 + 4\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Rössler, A. 141. 185.)

**Barium chromisulphocyanide**,  $\text{Ba}_2[\text{Cr}(\text{SCN})_4]$ ,  $+16\text{H}_2\text{O}$ .

Deliquescent, and sol. in  $\text{H}_2\text{O}$ . (R.)

**Lead chromisulphocyanide**,  $\text{Pb}_2[\text{Cr}(\text{SCN})_4]$ ,  $4\text{PbO}_2\text{H}_2 + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. thereby into— $\text{Pb}_2[\text{Cr}(\text{SCN})_4]$ ,  $4\text{PbO}_2\text{H}_2 + 5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ .

**Potassium chromisulphocyanide**,  $\text{K}_2\text{Cr}(\text{SCN})_2 + 4\text{H}_2\text{O}$ .

Sol. in 0.72 pt.  $\text{H}_2\text{O}$ , and 0.94 pt. alcohol.

**Silver chromisulphocyanide**,  $\text{Ag}_2\text{Cr}(\text{SCN})_2$ .

Insol. in  $\text{H}_2\text{O}$  or conc.  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol. in  $\text{KCN} + \text{Aq}$ .

**Sodium chromisulphocyanide**,  $\text{Na}_2\text{Cr}(\text{SCN})_2 + 7\text{H}_2\text{O}$ .

Deliquescent; sol. in  $\text{H}_2\text{O}$ .

**Chromium**,

*Two modifications*—(a) Not attacked by  $\text{H}_2\text{O}$ . Easily sol. in cold  $\text{HCl} + \text{Aq}$ . Sl. sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Deville.) Easily sol. in a hot mixture of 1 pt  $\text{H}_2\text{SO}_4$  and 20 pts.  $\text{H}_2\text{O}$ . (Regnault, A. ch. 62. 357.) Easily sol. in warm conc.  $\text{H}_2\text{SO}_4$ . (Gmelin.) Very slowly sol. in hot  $\text{HNO}_3 + \text{Aq}$ . (Vauquelin.) Insol. in dil. or conc.  $\text{HNO}_3 + \text{Aq}$ . (Deville.) Very slowly (Richter), not at all (Berzelius) sol. in hot aqua regia. Easily sol. in  $\text{HF} + \text{Aq}$ . (β) Insol. in all acids, even aqua regia (Fremy); probably contains Si.

Pure Cr is sol. in conc.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and dil.  $\text{HNO}_3$ ; sol. in  $\text{HgCl}_2 + \text{Aq}$ .

Insol. in fuming  $\text{HNO}_3$  and aqua regia. (Moissan, C. R. 1894. 119, 187.)

Cr prepared by aluminothermic method is sol. in haloid acids to form chromic and chromous salts, even in absence of air. (Doring, J. pr. 1902, (2) 66. 65; 1906, (2) 73. 393.)

Aluminothermic Cr is active in contact

with HCl, HBr, HI, HF,  $\text{H}_2\text{SO}_4$ ,  $\text{H}_2\text{C}_2\text{O}_4$ , *i. e.*, sol. in cold conc. or warm dil. acids. Is inactive in contact with conc.  $\text{HNO}_3$ ,  $\text{H}_2\text{Cr}_2\text{O}_7$ ,  $\text{HClO}_3$ ,  $\text{HClO}_4$ ,  $\text{H}_3\text{PO}_4$ , KOH, citric, formic, acetic and tartaric acids. Cause attributed to a different electric state. (Hittorff, Z. phys. Ch. 1898, 25. 729.)

#### Chromium ammonia compounds.

See—

**Bromotetramine chromium compounds,**  
 $\text{BrCr}(\text{NH}_3)_4\text{X}_2$ .

**Bromopurpleochromium compounds,**  
 $\text{BrCr}(\text{NH}_3)_4\text{X}_2$ .

**Chlorotetramine chromium compounds,**  
 $\text{ClCr}(\text{NH}_3)_4\text{X}_2$ .

**Chloropurpleochromium compounds,**  
 $\text{ClCr}(\text{NH}_3)_4\text{X}_2$ .

**Diamine chromium sulphocyanides,**  
 $\text{Cr}(\text{NH}_3)_2(\text{SCN})_4\text{M}$ .

**Erythrochromium compounds,**  
 $(\text{HO})\text{Cr}_2(\text{NH}_3)_{10}\text{X}_2$ .

**Iodopurpleochromium compounds,**  
 $\text{ICr}(\text{NH}_3)_4\text{X}_2$ .

**Iodotetramine chromium compounds,**  
 $\text{ICr}(\text{NH}_3)_4\text{X}_2$ .

**Luteochromium compounds,**  $\text{Cr}(\text{NH}_3)_6\text{X}_3$ .

**Rhodochromium compounds,**  
 $(\text{HO})\text{Cr}_2(\text{NH}_3)_{10}\text{X}_2$ .

**Rhodosechromium compounds,**  
 $(\text{HO})_2\text{Cr}_2(\text{NH}_3)_8\text{X}_2$ .

**Roseochromium compounds,**  
 $\text{Cr}(\text{NH}_3)_4(\text{OH})_2\text{X}_4$ .

**Xanthochromium compounds,**  
 $(\text{HO}_2)\text{Cr}(\text{NH}_3)_4\text{X}_2$ .

#### Chromium arsenide, $\text{CrAs}$ .

Insol. in mineral acids. (Dieckmann, Z. anorg. 1914, 86. 294.)

$\text{Cr}_3\text{As}_2$ . Insol. in mineral acids. (Dieckmann.)

#### Chromium azoimide, $\text{CrN}_3$ .

Pptd. by addition of alcohol and ether. Insol. in  $\text{H}_2\text{O}$ . (Curtius, J. pr. 1900, (2) 61. 410.)

#### Chromium boride, $\text{CrB}$ .

Insol. in HCl, dil.  $\text{H}_2\text{SO}_4$ , HF,  $\text{HF} + \text{HNO}_3$ . Sl. sol. in  $\text{HNO}_3$  and in aqua regia. (Wedekind, B. 1907, 40. 299.)

Sol. in cold dil. or conc. HCl, HF, and  $\text{H}_2\text{SO}_4$ . (Jassonneix, C. R. 1906, 143. 1151.)

$\text{Cr}_2\text{B}_3$ . Sol. in conc. or dil. HF, HCl,  $\text{H}_2\text{SO}_4$ ; insol. in  $\text{HNO}_3$  or alkalis + Aq. (Jassonneix.)

#### Chromous bromide, $\text{CrBr}_2$ .

Sol. in  $\text{H}_2\text{O}$ . Not deliquescent in dry air. (Moissan, C. R. 92. 1051.)

#### Chromic bromide, $\text{CrBr}_3$ .

*Anhydrous.* Insol. in  $\text{H}_2\text{O}$ , but d at once in presence of the least trace of (Bauck, A. 111. 382.)

+  $6\text{H}_2\text{O}$ . Deliquescent. Very sol.  $\text{H}_2\text{O}$  dissolves more than 2 pts. cry ord. temp. Very sol. in alcohol. 1 ether. (Recoura, C. R. 110. 1029.)

*Blue modification.* Insol. in (Recoura, C. R. 110. 1193.)

Very hygroscopic. Easily sol. in and acetone. Insol. in ether. (Wer 1902, 322. 343.)

+  $8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Varenne, C 727.)

#### Chromium molybdenyl bromide, $\text{CrMo}_2\text{O}_4\text{Br}_4$ .

Apparently wholly insol. in dil. Sol. in hot conc.  $\text{HCl} + \text{Aq}$  with d Insol. in  $\text{M}_2\text{CrO}_4 + \text{Aq}$ . (Atterberg, +  $2\text{H}_2\text{O}$ . Apparently wholly in dil. acids.

Sol. in hot conc.  $\text{HCl} + \text{Aq}$  with d Insol. in  $\text{M}_2\text{CrO}_4 + \text{Aq}$ . (Atterberg.)

#### Chromic rubidium bromide, $\text{CrBr}_3$ , + $\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Wer 1902, 322. 345.)

#### Chromic bromide ammonia.

See Bromotetramine chromium bro

#### Chromous bromide hydrazine, $\text{CrBr}_2 \cdot 2\text{N}_2\text{H}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. In alcohol, ether and similar solvents. (B. 1913, 46. 1507.)

#### Chromium carbide, $\text{Cr}_3\text{C}$ .

(Moissan, C. R. 1894, 119. 187.)

$\text{Cr}_3\text{C}_2$ . Does not decomp.  $\text{H}_2\text{O}$  at a temp. or at  $100^\circ$ ; insol. in conc. HCl, and aqua regia; sol. in dil. HCl (slowly) in fused KOH; sol. in fused  $\text{KNO}_3$ . (M Bull. Soc. 1894, (3) 117. 1016.)

#### Chromium iron carbide, $3\text{Fe}_3\text{C} \cdot 2\text{Cr}_3\text{C}$

Decomp. by  $\text{H}_2\text{O}$ ; sol. in gasco dracids; insol. in  $\text{HNO}_3$  and aqua regia. liams, C. R. 1898, 127. 484.)

#### Chromium tungsten carbide, $\text{CW}_2$ :

Not attacked by acids.

Slowly attacked by fused KOH or carbonates. Rapidly decomp. by alkali nitrates or  $\text{KClO}_3$ . (Moissan, 1903, 137. 294.)

#### Chromous chloride, $\text{CrCl}_2$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$  with tion of much heat. (Moberg, J. pr. 2

ally insol. in ether. Moderately soluble alcohol, methyl alcohol, and yde. (Rohland, Z. anorg. 1899, 21.

$\text{Cr}_2\text{O}_3$ . (Moissan, A. ch. (5) 25. 40.)

l. (Knight and Rich, Chem. Soc. 89.)

l. (Knight and Rich.)

hydrogen chloride,  $3\text{CrCl}_3 \cdot 2\text{HCl} + \text{O}$ .

p. by  $\text{H}_2\text{O}$ . (Recoura, C. R. 100.

in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 827.)

chloride,  $\text{CrCl}_3$ .

ous.—*Peach-blossom-colored modi-*

Insol. in pure  $\text{H}_2\text{O}$  (Peligot), but continued boiling of the finely divided  $\text{H}_2\text{O}$ , traces are dissolved with

Not decomp. by boiling conc. other acids, even aqua regia.

sol. with evolution of heat in  $\text{H}_2\text{O}$  g only  $1/10,000$  pt.  $\text{CrCl}_3$ . (Peligot, J. )).

Also sol. in presence of traces of mg.  $\text{SnCl}_2$  cause 1 g.  $\text{CrCl}_3$  to dissolve,  $\text{Cu}_2\text{Cl}_2$ ,  $\text{Na}_2\text{S}_2\text{O}_3$ , and other substances; chlorides without re-

properties have no effect. (Pelouze, A. 251).  $\text{TiCl}_3$  and  $\text{SO}_2$  have similar

tion. (Ebelmen, A. ch. (3) 20. 390); dil. acids. (Moberg.)

in dil. alkalies + Aq; very slowly by boiling conc. alkalies or alkali

s + Aq. (Fellenberg, Pogg. 60. 76.) lty sol. in methyl acetate. (Nau-

1909, 42. 3790.) n  $\text{CS}_2$ . (Arctowski, Z. anorg. 1894,

n acetone. (Eidmann, C. C. 1899.

ally insol. in absolute ethyl alcohol, alcohol, acetaldehyde and ether.

, Z. anorg. 1899, 21. 39.) Sl. sol. in benzonitrile. (Nau-

1914, 47. 1369.) modification. Very sol. in  $\text{H}_2\text{O}$  to

reen solution. (Moberg, J. pr. 44.

iolet mod. is almost insol. in  $\text{H}_2\text{O}$ ,  $10,000$  pt. chromous chloride is present, ly sol. (Rohland, Z. anorg. 1899, 21.

l. Sl. deliquescent. Very sol. in alcohol, and ethyl acetate. (Godeffroy, (2) 43. 229.)

l. Deliquescent. Sol. in  $\text{H}_2\text{O}$ , but decomp. to  $\text{CrOCl}_2$ .

ally insol. in ether. Moderately soluble ethyl alcohol, methyl alcohol

aldehyde. (Rohland, Z. anorg. 39.)

chlorochromic chloride" is sol. in l fuming  $\text{HCl}(1:1)$ . (Bjerrum, B. 1569.)

### Green modification.

Solubility in  $\text{H}_2\text{O}$  at  $25^\circ$ .

25 g. green  $\text{CrCl}_3 \cdot 6\text{H}_2\text{O}$  and 10 g.  $\text{H}_2\text{O}$ .

Time	Total Solubility in %	Composition of the sat. solution	
		% violet salt	% green salt
$\frac{1}{4}$ hr.	58.36	8.30	91.70
$\frac{1}{2}$ hr.	...	12.57	87.43
4 hrs.	63.27	24.80	75.20
1 day	68.50	37.64	62.36
2 days	...	40.90	59.10
3 "	68.95	42.78	57.22
11 "	...	42.84	57.16
13 "	...	42.39	57.61
19 "	68.58	42.62	57.38

(Olie, Z. anorg. 1906, 51. 55.)

Solubility of green  $\text{CrCl}_3 \cdot 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $32^\circ$ .

10 g.  $\text{CrCl}_3 \cdot 6\text{H}_2\text{O}$  and 4 g.  $\text{H}_2\text{O}$ .

Time	Total solubility in %	Composition of the dissolved substance		Solid phase
		% violet salt	% green salt	
7'	63.69	12.87	87.13	Almost all dissolved
45'	66.24	21.43	78.57	
2 <sup>h</sup> 5'	69.53	34.53	65.47	
48 <sup>h</sup>	69.33	45.27	54.73	
* 11 dys.	70.81	45.27	54.73	

\* First 8 days at  $35^\circ$ .

(Olie, Z. anorg. 1907, 53. 276.)

Solubility of green  $\text{CrCl}_3 \cdot 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $35^\circ$ .

10 g.  $\text{CrCl}_3 \cdot 6\text{H}_2\text{O}$  and 3.3 g.  $\text{H}_2\text{O}$ .

Time	Total solubility in %	Composition of the dissolved substance	
		% violet salt	% green salt
8'	65.85	16.47	83.53
38'	66.74	25.02	74.98
1 <sup>h</sup>	66.21	25.45	74.55

72 <sup>h</sup>	68.69	43.80	56.20	

(Olie, Z. anorg. 1907, **53**. 275.)

The composition of the hydrates by  $CrCl_3$  at different dilutions is calculated from determinations of the lowering fr. pt. produced by  $CrCl_3$  and of its conductivity and sp. gr. of  $CrCl_3 + Aq$ . Am. Ch. J. 1905, **34**. 310.)

**Chromic glucinum chloride,  $CrCl_3 \cdot 2H_2O$ .**

Sol. in  $H_2O$  with decomp. (Neumann, **244**. 329.)

**Chromic lithium chloride,  $CrCl_3 \cdot 2H_2O$ .**

Very hygroscopic. Sol. in ice water but solution soon decomp. Easily sol. in alcohol. (Werner, B. **34**. 1603.)

$[Cr(OH_2)Cl_3]Li_2 + 4H_2O$ . Very hygroscopic. Sol. in ice water and in alcohol. (Werner, B. **1901**, **34**.)

**Chromic magnesium chloride,  $CrCl_3 \cdot 2H_2O$ .**

Decomp. by  $H_2O$ . (Neumann.)

**Chromic phosphoric chloride,  $CrCl_3 \cdot 2H_2O$ .**

Decomp. by  $H_2O$ . (Cronander.)

**Chromium platinum chloride.**

See chloroplatinate, chromium.

**Chromic potassium chloride,  $CrCl_3 \cdot 2H_2O$ .**

Decomp. by  $H_2O$ .  $CrCl_3 \cdot 2KCl + H_2O$ . (Neumann, A. **329**.)

$CrCl_3 \cdot 3KCl$ . Easily sol. in  $H_2O$  with decomp. (Fremy, A. ch. (3) **12**. 361.)

**rubidium chloride,  $\text{CrCl}_3$ ,  $2\text{RbCl} +$**   
p. by  $\text{H}_2\text{O}$ . (Neumann, A. 244.)

sol. in cold, rapidly sol. in hot  $\text{H}_2\text{O}$   
mp. (Werner, B. 1901, 34. 1603.)  
 $3\text{RbCl} + 8\text{H}_2\text{O}$ . Unstable. Decomp.  
al. (Werner, B. 1906, 39. 1830.)

**sodium chloride,  $\text{CrCl}_3$ ,  $\text{NaCl}$ .**  
 $\text{H}_2\text{O}$ . (Berzelius.)  
 $3\text{NaCl}$ . Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**thallium chloride,  $\text{CrCl}_3$ ,  $3\text{TlCl}$ .**  
th decomp. in  $\text{H}_2\text{O}$ . (Neumann, A. )

**chloride ammonia.**  
**chlorotetramine chromium chloride.**

**is chloride hydrazine,  $\text{CrCl}_3$ ,**  
 $\text{H}_4$ .  
in  $\text{H}_2\text{O}$ . Sol. in acids. Insol. in  
ether and similar solvents. (Traube,  
46. 1506.)

**chloride ferric oxide.**  
is easily sol. in dil., difficultly sol.  
 $\text{CrCl}_3 + \text{Aq}$ . (Béchamp, A. ch. (3)

**is fluoride,  $\text{CrF}_3$ .**  
in  $\text{H}_2\text{O}$ , hot  $\text{H}_2\text{SO}_4$  or dil.  $\text{HNO}_3$ .  
a boiling  $\text{HCl}$ . Insol. in alcohol.  
(C. R. 1893, 116. 254.)

**fluoride,  $\text{CrF}_3$ .**  
tly sol. in  $\text{H}_2\text{O}$ . (Berzelius.)  
in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J.  
b. 827.)  
in methyl acetate. (Naumann, B.  
t. 3790); ethyl acetate. (Naumann,  
43. 314.)  
O. Insol. in  $\text{H}_2\text{O}$ . (Werner and  
scu, B. 1908, 41. 4243.)  
 $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Poulenc, C. R.  
5. 255.)  
O. Sl. sol. in  $\text{H}_2\text{O}$ . (Werner and  
scu, B. 1908, 41. 4242.)  
O. *Violet modification.* Very sl. sol.  
Insol. in alcohol. Sol. in  $\text{HCl}$ , and  
aq. (Fabris, Gazz. ch. it. 20. 582.)

**um hexafluoride,  $\text{CrF}_6$ .**  
op. by  $\text{H}_2\text{O}$  with evolution of heat.  
is.)  
composition is  $\text{CrO}_2\text{F}_2$ . (Oliveri,  
i. it. 16. 218.)

**cobaltous fluoride,  $\text{CrF}_3$ ,  $\text{CoF}_2 +$**   
 $\text{O}$ .  
sol. in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2)

**Chromic cupric fluoride,  $\text{CrCuF}_4 + 5\text{H}_2\text{O}$ .**  
Can be cryst. from  $\text{HF} + \text{Aq}$ . (Higley, J.  
Am. Chem. Soc. 1904, 26. 630.)

**Chromic nickel fluoride,  $\text{CrF}_3$ ,  $\text{NiF}_2 + 7\text{H}_2\text{O}$ .**  
Somewhat more sol. in  $\text{H}_2\text{O}$  than  $\text{CrF}_3$ .  
 $\text{CoF}_2 + 7\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 61.)

**Chromic potassium fluoride,  $\text{CrF}_3$ ,  $3\text{KF}$ .**  
Nearly insol. in  $\text{H}_2\text{O}$ . (Christensen, J.  
pr. (2) 35. 161.)  
 $\text{CrF}_3$ ,  $2\text{KF} + \text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ .  
Sol. in conc.  $\text{HCl} + \text{Aq}$ . (Christensen.)

**Chromic sodium fluoride,  $\text{CrF}_3$ ,  $2\text{NaF} + \text{H}_2\text{O}$ .**  
(Wagner, B. 19. 896.)

**Chromic thallous fluoride,  $2\text{CrF}_3$ ,  $3\text{TlF}$ .**  
Sol. in hot  $\text{H}_2\text{O}$ , less sol. in cold. Sl. sol.  
in  $\text{HF}$ . (Ephraim, Z. anorg. 1909, 61. 242.)

**Chromic zinc fluoride,  $\text{CrF}_3$ ,  $\text{ZnF}_2 + 7\text{H}_2\text{O}$ .**  
Can be cryst. from  $\text{HF} + \text{Aq}$ . (Higley, J.  
Am. Chem. Soc. 1904, 26. 630.)  
Colloidal solution is perfectly clear.  
(Biltz, B. 1902, 35. 4433.)

**Chromous hydroxide,  $\text{Cr}_2\text{H}_2$ .**  
Decomp. by  $\text{H}_2\text{O}$ , especially if hot. (Pe-  
ligot, A. ch. (3) 12. 539.)  
Slowly sol. in cold conc. acids, even aqua  
regia; almost insol. in dil. acids. (Moberg, J.  
pr. 43. 119.)

**Chromic hydroxide,  $\text{Cr}_2\text{O}_3$ ,  $x\text{H}_2\text{O}$ , probably**  
 $\text{Cr}_2\text{O}_3\text{H}_2$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids. Easily  
sol. in cold  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ ; much less  
sol. in cold  $\text{NH}_4\text{OH} + \text{Aq}$ ; the presence of  
 $\text{NH}_4\text{Cl}$  has no influence upon solubility  
in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Fresenius.) Insol. in  
 $\text{NH}_4\text{OH} + \text{Aq}$  if it has been thoroughly  
washed.

Insol. in  $\text{KCN} + \text{Aq}$ , but sl. sol. in  $\text{KCN} +$   
 $\text{HCN} + \text{Aq}$ . (Rodgers, 1834.)

Gradually sol. in dil.  $\text{FeCl}_3 + \text{Aq}$ ; after three  
months, 2 mols.  $\text{Cr}_2\text{O}_3\text{H}_2$  are dissolved by 1  
mol.  $\text{FeCl}_3$  without pptn. of  $\text{Fe}_2\text{O}_3\text{H}_2$ . (Bé-  
champ, A. ch. (3) 57. 296.)

Alsl sol. in  $\text{CrCl}_3 + \text{Aq}$ ; in four months,  $1\frac{1}{2}$   
mols.  $\text{Cr}_2\text{O}_3\text{H}_2$  are dissolved by 1 mol.  $\text{CrCl}_3$ .  
(Béchamp.)

Sol. in  $\text{Cr}(\text{NO}_3)_3 + \text{Aq}$ , and clear solution  
formed as long as 3 mols.  $\text{HNO}_3$  are present  
for 8 mols.  $\text{Cr}_2\text{O}_3$ . (Ordway, Sill. Am. J. (2)  
27. 197.)

Chromic hydroxide, pptd. by alkalis is  
easily sol. in excess of the reagent; after being  
dried in a vacuum, however, it is insol. in  
alkalis. (Herz, Z. anorg. 1901, 28. 344.)

Freshly pptd. it is sol. in aq. alkali, but it  
is readily changed into a modification which is  
insol. (Herz, Z. anorg. 1902, 31. 352.)

The solubility of chromic hydroxide in an

aqueous solution of red chromic chloride is not directly proportional to the concentration of the latter—a basic chloride is probably formed. (Fischer, Z. anorg. 1904, 40: 43.)

Not pptd. in presence of Na citrate. (Spiller.)

Insol. in amylamine + Aq; not pptd. in presence of alkali tartrates, sugar, etc.

$\text{Cr}_2\text{O}_3\text{H}_2 + 4\text{H}_2\text{O}$ . Difficultly sol. in acids.

$\text{Cr}_2\text{O}_3\text{H}_2 + \text{H}_2\text{O}$ . Extremely hygroscopic.

Exists in a soluble modification, obtained by dialysis; solution can be diluted with pure  $\text{H}_2\text{O}$ , but gelatinizes with traces of salts. (Graham, Roy. Soc. Trans. 1861. 183.)

$\text{Cr}_2\text{O}_3(\text{OH})_2$ . Insol. in boiling dil.  $\text{HCl}$  + Aq.

$\text{Cr}_2\text{O}(\text{OH})_3$  (Guignet's green). Scarcely sol. in boiling  $\text{HCl}$  + Aq. (Salvétat, C. R. 48. 295.)

Guignet gave formula as  $2\text{Cr}_2\text{O}_3 + 3\text{H}_2\text{O}$ .

#### Chromochromic hydroxide, $\text{Cr}_2\text{O}_4, \text{H}_2\text{O}(?)$ .

Slightly attacked by acids. (Peligot, A. ch. (3) 12. 539.)

#### Chromous iodide, $\text{CrI}_2$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Moissan, A. ch. (5) 25. 401.)

#### Chromic iodide, $\text{CrI}_3(?)$ .

Insol. in cold, sol. in hot  $\text{H}_2\text{O}$ , but no separation occurs on cooling. (Berlin.)

+  $9\text{H}_2\text{O}$ . Hygroscopic. Sol. in alcohol and acetone. Insol. in  $\text{CHCl}_3$ . (Higley, J. Am. Chem. Soc. 1904, 26. 628.)

#### Chromous iodide hydrazine, $\text{CrI}_2, 2\text{N}_2\text{H}_4$ . (Traube, B. 1913, 48. 1507.)

#### Chromium nitride, $\text{CrN}$ .

Insol. in dil. acids and alkalies, conc.  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{HF}$  + Aq, even on heating. Slowly sol. in hot aqua regia or cold  $\text{H}_2\text{SO}_4$ . Sol. in cold solutions of alkali hypochlorites. (Ufer, A. 112. 281.)

Insol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , and aqua regia. (Féree, Bull. Soc. 1901, (3) 25. 618.)

Unacted upon by acids at ordinary temperatures. (Smits, Chem. Soc. 1897, 72. (2) 33.)

$\text{Cr}_2\text{N}_3$ . Slowly attacked by conc.  $\text{HNO}_3$ , and by  $\text{HNO}_3 + \text{HCl}$ . All other reagents are without action. (Henderson and Galletly, J. Soc. Chem. Ind. 1908, 27. 387.)

$\text{CrN}_2$ . See Chromium azoimide.

#### Chromous oxide, $\text{CrO}$ .

Insol. in  $\text{HNO}_3$  and dil.  $\text{H}_2\text{SO}_4$  + Aq.

Sol. in  $\text{HCl}$ . (Féree, Bull. Soc. 1901, (3) 25. 619.)

#### Chromic oxide, $\text{Cr}_2\text{O}_3$ .

When ignited is nearly insol. in a dissolves in  $\text{H}_2\text{SO}_4$  by long boiling in liquid  $\text{HCl}$ . (Gore.)

Insol. in acetone. (Fidmann, C. II, 1014.)

Solubility in (calcium sucrate + Aq.

1 l. solution containing 418.6 g. 34.3 g.  $\text{CaO}$  dissolves 1.07 g.  $\text{Cr}_2\text{O}_3$ ; solution containing 296.5 g. sugar and 2 dissolves 0.56 g.  $\text{Cr}_2\text{O}_3$ ; 1 l. solution containing 174.4 g. sugar and 14.1 g.  $\text{CaO}$  0.20 g.  $\text{Cr}_2\text{O}_3$ . (Bodenbender, J. 600.)

See also Chromic hydroxide.

+  $\text{H}_2\text{O}$ . The compound to which gave the formula  $\text{Cr}_2\text{O}_4$ . Insol. in easily attacked by  $\text{HNO}_3$ . (Féree, 1901, (3) 25. 620.)

#### Chromochromic oxide, $\text{Cr}_2\text{O}_4 = \text{Cr}$

Known only in form of hydrox see.

+  $3\text{H}_2\text{O}$ . Stable in dry air. D moist air. (Baugé, C. R. 1898, 127.

$\text{Cr}_2\text{O}_3$ , or  $\text{Cr}_2\text{O}_4$  (?). Insol. in aqua regia. (Bunsen, Pogg. 91. 6

Not obtainable. (Geuther, A. 11

Formula is  $\text{Cr}_2\text{O}_3 + \text{H}_2\text{O}$ . (Féree

#### Chromium trioxide, $\text{CrO}_3$ .

Deliquescent, and very sol. in form solution of  $\text{H}_2\text{CrO}_4$  or  $\text{H}_2\text{Cr}_2\text{O}_7$

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	0°	15°	50

(Koppel and Blumenthal, Z. anorg. 1907, 63. 254.)

Sol. in  $H_2SO_4$ ; the solubility is least when the acid contains 66%  $H_2SO_4$  (Schrötter); 84.5%  $H_2SO_4$  (Bolley).

Very sol. in  $H_2SO_4$  of 1.85 sp. gr. Sl. sol. in cold  $KHSO_4$ +Aq. (Fritzsche.)

The statement that  $CrO_3$  is insol. in acids is incorrect. 2.85 g. (ignited) are sol. in  $HNO_3$  to the extent of 2.58 g. 0.81 g. (ignited) are sol. in  $HNO_3$  to the extent of 0.77 g. (Jovitschitsch, M. 1909, 30. 48.)

Practically insol. in  $POCl_3$ . (Walden, Z. anorg. 1910, 68. 312.)

Sl. sol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Sol. in alcohol with decomp.

Sol. in anhydrous ether.

Sol. in acetic anhydride. (Fry, J. Am. Chem. Soc. 1911, 33. 702.)

Sol. in acetone. (Naumann, B. 1904, 4328.)

Sol. in benzonitrile. (Naumann, B. 1914, 47, 1369.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Chromium oxide,  $Cr_2O_3=2Cr_2O_3$ ,  $CrO_3$ .

$Cr_2O_3=3Cr_2O_3$ ,  $2CrO_3$ .

$CrO_3=Cr_2O_3$ ,  $CrO_3$ .

$Cr_2O_3=Cr_2O_3$ ,  $3CrO_3$ .

$Cr_2O_3=Cr_2O_3$ ,  $4CrO_3$ .

See Chromate, chromium.

Chromium peroxide,  $Cr_2O_7(?)$ 

More sol. in ether than in  $H_2O$ . Ether solution is somewhat more stable than aqueous solution. (Aschoff, J. pr. 81. 401.)

Formula is  $CrO_3$ ,  $H_2O_2$ . (Moissan, C. R. 97. 96.)

Chromium peroxide ammonia,  $CrO_4$ ,  $3NH_3$ .

Sol. in  $H_2O$  with partial decomp.

Sl. sol. in  $NH_4OH$ +Aq.

Sol. with decomp. in 20% acetic acid. (Hofmann, B. 1905, 38. 3060.)

## Chromium tetroxide potassium cyanide,

$CrO_4$ ,  $3KCN$ .

Sol. in  $H_2O$ . Insol. in other ordinary solvents. (Wiede, B. 1899, 32, 381.)

**Chromic oxychloride.**

From  $\text{Cr}_2\text{O}_3$ . Sol. in  $\text{H}_2\text{O}$  as long as 1 mol.  $\text{CrCl}_3$  is present for  $2\frac{1}{2}$  mols.  $\text{Cr}_2\text{O}_3\text{H}_4$ . (Ordway, *Sill. Am. J.* (2) **27**. 197.)

$\text{Cr}_2\text{O}_3$ ,  $2\text{CrCl}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Kletsinsky, *Zeit. Ch.* **1886**. 277.)

$\text{Cr}_2\text{O}_3$ ,  $\text{CrCl}_3 = \text{CrOCl}$ . *Anhydrous*. Only partly sol. in  $\text{H}_2\text{O}$ .

+  $3\text{H}_2\text{O}$ . Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Peligot.)

$\text{Cr}_2\text{O}_3$ ,  $4\text{CrCl}_3 + 6\text{H}_2\text{O} = \text{Cr}_2\text{OCl}_4 + 2\text{H}_2\text{O}$ . (Peligot, *J. pr.* **37**. 38.)

+  $9\text{H}_2\text{O} = \text{Cr}_2\text{OCl}_4 + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Moberg);  $= \text{Cr}_2(\text{OH})_2\text{Cl}_4 + 2\text{H}_2\text{O}$ . (Schiff, *A.* **124**. 157.)

$\text{Cr}_2\text{O}_3$ ,  $7\text{CrCl}_3 = \text{Cr}_2\text{OCl}_7$ . Very sol. in  $\text{H}_2\text{O}$  with decomp. (Besson and Fournier, *C. R.* **1909**, **148**. 1194.)

$\text{Cr}_2\text{O}_3$ ,  $8\text{CrCl}_3 + 24\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Moberg);  $= \text{Cr}_2(\text{OH})_2\text{Cl}_8 + 4\text{H}_2\text{O}$ . (Schiff, *l. c.*)

$(\text{CrO}_2)_2\text{Cl}_2$ . (Pascal, *C. R.* **1909**, **148**. 1464.)

$\text{Cr}_2\text{O}_3\text{Cl}_4$ . Insol. in  $\text{H}_2\text{O}$ . (Pascal, *C. R.* **1909**, **148**. 1464.)

From  $\text{CrO}_3$ .

See **Chromyl chloride**.

**Chromic oxychloride potassium chloride,  $\text{CrOCl}_3$ ,  $2\text{KCl}$ .**

Decomp. in the air.

Sol. in conc.  $\text{HCl}$  without decomp. (Weinland, *B.* **1906**, **39**. 4043.)

**Chromic oxychloride rubidium chloride,  $\text{CrOCl}_3$ ,  $2\text{RbCl}$ .**

Decomp. in the air.

Sol. in conc.  $\text{HCl}$  without decomp. (Weinland, *B.* **1906**, **39**. 4045.)

**Chromium oxyfluoride,  $\text{CrO}_2\text{F}_2$ .**

See **Chromyl fluoride**.

**Chromium phosphide,  $\text{CrP}$ .**

Insol. in acids, but a trace dissolves in aqua regia. Insol. in  $\text{HF} + \text{Aq}$ . (Berzelius.)

Not attacked by acids or by aqua regia. (Granger, *C. N.* **1898**, **77**. 228.)

Insol. in all acids except a mixture of  $\text{HNO}_3$  and  $\text{HF}$ . (Maronneau, *C. R.* **1900**, **130**. 658.)

Insol. in mineral acids. (Dieckmann, *Z. anorg.* **1914**, **86**. 295.)

Insol. in aqua regia. (Granger, *C. R.* **1897**, **124**, 191.)

$\text{Cr}_2\text{P}_3$ . Insol. in mineral acids. (Dieckmann, *Z. anorg.* **1914**, **86**. 295.)

**Chromous selenide,  $\text{CrSe}$ .**

(Moissan, *C. R.* **90**. 817.)

**Chromic selenide,  $\text{Cr}_2\text{Se}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . (Moissan, *C. R.* **90**. 817.)

**Chromic potassium selenide,  $\text{K}_2\text{Cr}_2\text{Se}_4$ .**

Insol. in  $\text{HCl}$ . Easily sol. in conc.  $\text{H}$  (Milbauer, *Z. anorg.* **1904**, **42**. 451.)

**Chromium silicide,  $\text{Cr}_3\text{Si}$ .**

Sol. in fused  $\text{KNO}_3$ ; insol. in cold  $\text{HCl}$  aqua regia.

Insol. in  $\text{HF} + \text{Aq}$ . (Moissan, *C. R.* **121**. 625.)

$\text{Cr}_3\text{Si}_2$ . Sol. in  $\text{HF}$ . Insol. in  $\text{HCl}$  aqua regia. (Chalmot, *Am. Ch. J.* **189**. 69.)

$\text{Cr}_3\text{Si}_2$ . Insol. in dil.  $\text{HCl}$ ; sol. in conc.  $\text{HCl}$  and in  $\text{HF}$ ; insol. in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ . (Lebeau, *C. R.* **1903**, **136**. 133.)

$\text{Cr}_3\text{Si}$ . Sol. in  $\text{HF}$ ; insol. in other sol. in fused  $\text{KOH}$  and fused alkali nit and carbonates. (Zettel, *C. R.* **1898**, **834**.)

**Chromous sulphide,  $\text{CrS}$ .**

Insol. in  $\text{H}_2\text{O}$  or  $\text{K}_2\text{S} + \text{Aq}$ . (Peligot. Easily sol. in acids. (Moissan, *C. R.* **817**.)

Sol. in cold conc. acids.

Sol. in molten alkalis. (Mourlot, *C. R.* **1895**, **121**. 944.)

Min. *Daubrelite*.

**Chromic sulphide,  $\text{Cr}_2\text{S}_3$ .**

Insol. in  $\text{H}_2\text{O}$  or alkali sulphides +  $\text{Ac}$  attacked by  $\text{HCl} + \text{Aq}$ . (W. Müller, *B.* **127**. 404.)

$\text{HNO}_3 + \text{Aq}$  decomposes or not acco to method of preparation. Easily dec by aqua regia.

Insol. in caustic alkalis +  $\text{Aq}$ .

Insol. in  $\text{K}_2\text{S} + \text{Aq}$ . (Berzelius.)

**Chromochromic sulphide,  $\text{Cr}_2\text{S}_4 = \text{Cr}_2\text{S}_3$ .**

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ , or dil.  $\text{H}_2\text{SO}_4$ . Easily sol. in  $\text{HNO}_3 + \text{Aq}$ . (Gröger, *W.* **81**. (2) 531.)

**Chromic zinc sulphide,  $\text{Cr}_2\text{ZnS}_4$ .**

(Gröger, *W. A. B.* **1880**, **81**. 534.)

**Chromicyanhydric acid.****Cadmium chromicyanide,  $\text{Cd}_2(\text{Cr}(\text{CN})_6)_2$** 

Readily sol. in an excess of  $\text{KCN}$  +  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by conc.  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Slowly decomp. by rapidly by hot dil.  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{F}$ . Quickly dissolved by aqua regia. Dec by boiling with  $\text{Na}_2\text{O}_2$ , by  $\text{NaOH} + \text{A}$ , by  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . Slowly decomp. by  $\text{t}$  acetic acid. (Cruser and Miller, *J. Chem. Soc.* **1906**, **28**. 1136.)

**Cobaltous chromicyanide,  $\text{Co}_2[\text{Cr}(\text{CN})_6]$** 

Sol. in cold, readily sol. in hot conc or  $\text{H}_2\text{SO}_4$ . Sl. sol. even in boiling

Slowly sol. in cold dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  or  $\text{HNO}_3$ . Readily sol. in boiling dil.  $\text{HCl}$  or  $\text{HNO}_3$ . Decomp. but not entirely dissolved in aqua regia. Readily sol. in an excess of  $\text{HCl}$ . Decomp. by  $\text{NH}_4\text{OH}$ ,  $\text{NaOH}$  or  $\text{KOH}$ . + Aq. Decomp. by boiling with  $\text{H}_2\text{SO}_4$ . Insol. in cold or boiling acetic acid. (Cruser and Miller.)

**chromicyanide**,  $\text{Cu}_2\text{Cr}(\text{CN})_6$ .

in  $\text{KCN}$ , cold conc. or boiling dil. - Aq. Slowly sol. in cold conc.  $\text{H}_2\text{SO}_4$ , re slowly sol. in dil.  $\text{H}_2\text{SO}_4$  but rapidly hot dil. and conc.  $\text{H}_2\text{SO}_4$ . Readily sol. by aqua regia. Decomp. by dil.  $\text{HCl}$ , slowly going into solution in  $\text{H}_2\text{O}$ , but quickly on boiling. (Cruser and Miller.)

**chromicyanide**,  $\text{Cu}_2[\text{Cr}(\text{CN})_6]$ .

sol. in cold dil.  $\text{HCl}$ ,  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ : the first two readily dissolve it,  $\text{H}_2\text{SO}_4$  dissolves it only slowly. Sol. in aqua regia or cold conc.  $\text{H}_2\text{SO}_4$ . Readily cold or hot conc.  $\text{HCl}$ . Decomp. by  $\text{HNO}_3$  or boiling  $\text{HNO}_3$ . Decomp. by  $\text{Na}_2\text{O}_2$  + Aq. Decomp. by  $\text{NH}_4\text{OH}$ , or  $\text{Na}_2\text{CO}_3$  + Aq. Readily sol. in  $\text{KCN}$  + Aq. Insol. in cold acetic acid. (Cruser and Miller.)

**chromicyanide**,  $\text{Ni}_2[\text{Cr}(\text{CN})_6]$ .

sol. in cold, readily sol. in hot dil.  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . Slowly sol. in cold, sol. in hot conc.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  or  $\text{HNO}_3$ . Slowly decomp. by cold, rapidly in aqua regia. Readily sol. in excess  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$  + Aq. Decomp. by  $\text{Na}_2\text{CO}_3$  + Aq or  $\text{Na}_2\text{O}_2$  + Aq. Insol. in cold, sol. in boiling acetic acid. (Cruser and Miller.)

**chromous chromicyanide**,  $\text{TiCr}(\text{CN})_6$ .

and Benzian, Ch. Z. 1902, 26. 50.)

**chromicyanide**,  $\text{Ti}_2\text{Cr}(\text{CN})_6$ .

sol. in  $\text{H}_2\text{O}$ . (Fischer and Benzian, 1902, 26. 50.)

**chromicyanide**,  $\text{Zn}_2[\text{Cr}(\text{CN})_6]$ .

in  $\text{H}_2\text{O}$ . Sol. in excess of  $\text{NH}_4\text{OH}$ , and  $\text{KCN}$  + Aq. Decomp. by  $\text{Na}_2\text{CO}_3$ . Sol. in cold dil.  $\text{HCl}$ . Slowly sol.  $\text{H}_2\text{SO}_4$ , and in dil.  $\text{HNO}_3$ . By boiling in dil. acids a clear solution is quickly obtained. (Cruser, Dissert. 1906.)

**chromosulphocyanhydric acid**.

**chromisulphocyanide**,  $\text{Li}_2\text{Cr}(\text{SCN})_6 + 2\text{H}_2\text{O}$ .

sol. in  $\text{H}_2\text{O}$  than K salt. (Osann, 1907.)

**Lithium chromisulphocyanide**,  $\text{Li}_2\text{Cr}(\text{SCN})_6 + \text{H}_2\text{O}$ .

Extremely deliquescent. (Osann.)

**Rubidium chromisulphocyanide**,  $\text{Rb}_2\text{Cr}(\text{SCN})_6 + 4\text{H}_2\text{O}$ .

Appreciably less sol. in  $\text{H}_2\text{O}$  and alcohol than the K salt. (Osann.)

**Chromocyanidic acid**,  $\text{H}_4\text{Cr}(\text{CN})_6$ .

Decomp. rapidly on air. Sol. in  $\text{H}_2\text{O}$  (Moissan, A. ch. (6) 4. 144.)

**Potassium chromocyanide**,  $\text{K}_4\text{Cr}(\text{CN})_6$ .

Very sol. in  $\text{H}_2\text{O}$ ; 100 pts.  $\text{H}_2\text{O}$  dissolve 32.33 pts. at  $20^\circ$ . Much more sol. in hot  $\text{H}_2\text{O}$ . Insol. in alcohol, ether, benzene, or chloroform. (Moissan, A. ch. (6) 4. 136.)

Above salt was  $\text{K}_3\text{Cr}(\text{CN})_6$ . (Christensen.) +  $3\text{H}_2\text{O}$ . (Christensen, J. pr. (2) 31. 166.)

**Chromiodic acid**,  $\text{CrO}_3$ ,  $\text{HIO}_3 + 2\text{H}_2\text{O}$ .

Deliquescent. (Berg, C. R. 104. 1514.)

**Ammonium chromiodate**,  $\text{CrO}_3$ ,  $\text{NH}_4\text{IO}_3 + \text{H}_2\text{O}$ .

Moderately sol. in  $\text{H}_2\text{O}$ . (Berg.)

**Lithium chromiodate**,  $\text{CrO}_3$ ,  $\text{LiIO}_3 + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Berg.)

**Magnesium chromiodate**.

Sol. in  $\text{H}_2\text{O}$ . (Berg.)

**Potassium chromiodate**,  $\text{CrO}_3$ ,  $\text{KIO}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Berg.)

+  $\text{H}_2\text{O} = \text{KCrIH}_2\text{O}_7$ . Sl. decomp. by  $\text{H}_2\text{O}$ . (Blomstrand, J. pr. (2) 40. 331.)

**Silver chromiodate**,  $\text{CrO}_3$ ,  $\text{AgIO}_3$ .

Sl. attacked by cold, rapidly decomp. by hot  $\text{H}_2\text{O}$ . (Berg, C. R. 111. 42.)

**Sodium chromiodate**,  $\text{CrO}_3$ ,  $\text{NaIO}_3 + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Berg.)

**Chromosulphocyanhydric acid**.

**Sodium chromosulphocyanide**,

$\text{Na}_2\text{Cr}(\text{SCN})_6 + 10$ , or  $11\text{H}_2\text{O}$ .

Unstable.

Decomp. by  $\text{H}_2\text{O}$ . (Koppel, Z. anorg. 1905, 45. 360.)

**Chromosulphuric acid**,  $\text{H}_2\text{Cr}_2(\text{SO}_4)_4$ .

Sol. in  $\text{H}_2\text{O}$  in all proportions, but solution is easily decomp. on standing or boiling. (Recoura, Bull. Soc. (3) 9. 586.)

$\text{H}_4\text{Cr}_2(\text{SO}_4)_6$ . As above.

$\text{H}_6\text{Cr}_2(\text{SO}_4)_8$ . As above.

- Ammonium chromosulphate**,  
 $(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 + 5\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$  after a few minutes. (Recoura.)
- Chromium potassium chromosulphate**,  
 $[\text{Cr}_2(\text{SO}_4)_3\text{CrO}_3]\text{K}_2$ ,  $[\text{Cr}_2(\text{SO}_4)_3(\text{CrO}_4)_2]\text{K}_4$ ,  
 and  $[\text{Cr}_2(\text{SO}_4)_3(\text{CrO}_4)]\text{K}_4$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Recoura, Bull. Soc. 1897, (3) 17. 934.)
- Potassium chromosulphate**,  $\text{K}_2\text{Cr}_2(\text{SO}_4)_4 + 4\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$  in a few minutes. (Recoura, Bull. Soc. (3) 9. 590.)
- Sodium chromosulphate**,  $\text{Na}_2\text{Cr}_2(\text{SO}_4)_4 + 10\text{H}_2\text{O}$ .  
 As K salt. (Recoura.)
- Chromotelluric acid**.
- Ammonium chromotellurate**,  
 $2(\text{NH}_4)_2\text{O}$ ,  $4\text{CrO}_3$ ,  $\text{TeO}_3$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Berg, C. R. 1911, 152. 1588.)
- Potassium chromotellurate**,  
 $2\text{K}_2\text{O}$ ,  $4\text{CrO}_3$ ,  $\text{TeO}_3$ .  
 Sl. sol. in cold  $\text{H}_2\text{O}$  without decomp.  
 Sol. in boiling  $\text{H}_2\text{O}$ . (Berg, Bull. Soc. 1911, (4) 9. 583.)
- Chromous acid**,  $\text{H}_2\text{Cr}_2\text{O}_4 = \text{Cr}_2\text{O}_3$ ,  $\text{H}_2\text{O}$ .  
 Chromic hydroxide shows slightly acid properties, and salts corresponding to the above acid are known.
- Aluminum ferrous magnesium chromite**  
 (chrome iron ore),  $(\text{Fe}, \text{Mg})\text{O}$ ,  
 $(\text{Cr}_2, \text{Al}_2)\text{O}_3$ .  
 Insol. in  $\text{H}_2\text{O}$  or acids, even a mixture of  $\text{H}_2\text{SO}_4$  and  $\text{HF}$ . (Ebelmen.)
- Barium chromite**,  $\text{BaCr}_2\text{O}_4$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Gerber, Bull. Soc. (2) 27. 436.)
- Barium tetrachromite**,  $\text{BaO}$ ,  $4\text{Cr}_2\text{O}_3$ .  
 Undecomp. by steam at red heat; insol. in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ ; sol. in fused  $\text{KOH} + \text{KNO}_3$ ; decomp. in the air. (Dufau, C. R. 1896, 122. 1126.)
- Cadmium chromite**,  $\text{CdCr}_2\text{O}_4$ .  
 Not attacked by acids. (Viard, C. R. 109. 142.)
- Calcium chromite**,  $\text{CaCr}_2\text{O}_4$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Gerber, Bull. Soc. (2) 27. 436.)  
 Insol. in  $\text{HCl}$ ,  $\text{HF}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ ; sol. in gaseous  $\text{HCl}$  and  $\text{HF}$  at red heat; sol. in fused  $\text{KOH}$ ,  $\text{KNO}_3$ ,  $\text{KClO}_3$ ,  $\text{K}_2\text{CO}_3$ . (Dufau, C. R. 1895, 121. 690.)
- $2\text{CaO}$ ,  $\text{Cr}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ ,  $\text{KOH}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ ; slowly decomp. by  $\text{H}_2\text{C}$  or  $\text{M}_2\text{CO}_3 + \text{Aq}$ ; insol. in sugar solut (Pelouse, A. ch. (3) 33. 9.)  
 $4\text{CaO}$ ,  $\text{Cr}_2\text{O}_3$ . Attacked by  $\text{H}_2\text{O}$ . (3) san, C. R. 1894, 119. 188.)
- Cobaltous chromite**,  $\text{CoCr}_2\text{O}_4$ .  
 (Elliot, Dissert, Göttingen, 1862.)
- Cuprous chromite**,  $\text{Cu}_2\text{O}$ ,  $\text{Cr}_2\text{O}_3$ .  
 Insol. in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.4). (W Z. phys. Ch. 1908, 62. 445.)
- Cupric chromite basic**,  $5\text{CuO}$ , 4  
 (Wöhler, Z. phys. Ch. 1908, 62. 445.)
- Cupric chromite**,  $\text{CuCr}_2\text{O}_4$ .  
 Not attacked by  $\text{HNO}_3 + \text{Aq}$ . (Per ch. (3) 25. 283.)  
 Not attacked by conc.  $\text{HCl}$ .  
 Insol. in dil. acids. (Wöhler, Z. Ch. 1908, 62. 446.)  
 $\text{CuO}$ ,  $3\text{Cr}_2\text{O}_3$ . (Rosenfeld, B. 187 958.)
- Glucinum chromite**,  $\text{GlCr}_2\text{O}_4$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Mallard, C. R. 105.)
- Iron (ferrous) chromite** (chrome iron ore)  
 See Chromite, aluminum ferrous chromite.
- Iron (ferroferric) chromite**,  $\text{FeO}$ ,  $\text{Fe}_2\text{O}_3$ .  
 Not attacked by  $\text{HCl} + \text{Aq}$ . (Ebe
- Iron (ferrous) magnesium chromite**.  
 Insol. in  $\text{HCl} + \text{Aq}$ . Scarcely attack  $\text{H}_2\text{SO}_4$ .
- Lead chromite**,  $\text{PbCr}_2\text{O}_4$ .  
 Ppt. Insol. in  $\text{KOH} + \text{Aq}$ . (Cl C. R. 43. 927.)
- Lithium chromite**,  $\text{Li}_2\text{Cr}_2\text{O}_4$ .  
 Very sl. sol. in acids. (Weyberg, 1906, II. 1659.)
- Magnesium chromite**,  $\text{MgO}$ ,  $2\text{Cr}_2\text{O}_3$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Nichols, Sill. Am. 47. 16.)  
 $\text{MgCr}_2\text{O}_4$ . Insol. in acids or alkali except boiling  $\text{H}_2\text{SO}_4$ . (Schweitzer, J. 1 259.)  
 Could not be obtained. (Viard, Bul (3) 5. 934.)  
 Easily attacked by boiling  $\text{H}_2\text{SO}_4$ .  
 Less easily by  $\text{HCl}$  or  $\text{HF} + \text{Aq}$  n tacked by boiling  $\text{HNO}_3$ . (Dufau, 1896, 123. 886.)  
 $2\text{MgO}$ ,  $\text{Cr}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$  or (Nichols.)  
 $5\text{MgO}$ ,  $4\text{Cr}_2\text{O}_3$ . Insol. in acids. ( C. R. 112. 1003.)  
 $3\text{MgO}$ ,  $2\text{Cr}_2\text{O}_3$ . As above. (V.)

**chromite**,  $\text{MnCr}_2\text{O}_4$ .  
insol. in acids. (Ebelmen, A. 44.)

**ite**,  $\text{ZnCr}_2\text{O}_4$ .  
acids and alkalis. (Viard, C. R.

(Chancel, C. R. 43. 927.)  
 $\text{Cr}_2\text{O}_3$ . As above. (Viard, C. R.

$\text{Cr}_2\text{O}_3$ . As above. (V.)  
 $\text{Cr}_2\text{O}_3$ . (Gröger, M. 1904, 25,

**madic acid**.

**chromovanadate**,  $2(\text{NH}_4)_2\text{O}$ ,  
 $\text{V}_2\text{O}_5 + 7\text{H}_2\text{O}$ .  
 $\text{H}_2\text{O}$ . (Ditte, C. R. 102. 1105.)

**amide**,  $\text{CrO}_2(\text{NH}_2)_2$ .  
 $\text{H}_2\text{O}$ . (Ohly, C. N. 1899, 80. 134.)

**trichloride**,  $(\text{CrO}_2)_3\text{Cl}_4$ .  
cent. sol. in  $\text{H}_2\text{O}$  with decomp.,  
dry ether. (Pascal, C. R. 1909,

**chloride (chlorochromic acid)**:  
 $\text{H}_2$ .

by  $\text{H}_2\text{O}$  with evolution of much  
in glacial acetic acid without de-  
n.  
 $\text{Cl}_4$ ,  $\text{C}_6\text{H}_6$  (mol. wt. det.). (Oddo,  
it. 1899, 29. (2) 318; Chem. Soc.  
(2) 75.)

**trichloride**,  $\text{Cr}_2\text{O}_3\text{Cl}_3$ .  
cent. Sol. in  $\text{H}_2\text{O}$  with gradual  
tion. Sol. in conc.  $\text{HCl} + \text{Aq}$ .  
Chem. Soc. (2) 8. 31.)  
sol. in  $\text{CS}_2$ .  
alcohol and ether. (Rawson, C. N.  
185.)

**halides**.

$\text{H}_2\text{O}_2$ .  
**amium oxychlorides**.

**trichloride nitrogen tetroxide**,  
 $\text{O}_2$ ,  $2\text{NO}_2$ .  
 $\text{H}_2\text{O}$  with decomp. (Thomas, C. R.  
828.)

**fluoride**,  $\text{CrO}_2\text{F}_2$ .  
by  $\text{H}_2\text{O}$  with evolution of heat.  
ass. ch. it. 16. 218.)

**silicate**, aluminum,  $\text{Al}_2\text{O}_3$ ,  $\text{SiO}_2 +$

**Cobalt, Co.**

Not attacked by  $\text{H}_2\text{O}$ .  
Sol. in dil.  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3 + \text{Aq}$ .  
Conc. hot  $\text{H}_2\text{SO}_4$ , and  $\text{HNO}_3$  decomp. with  
evolution of  $\text{SO}_2$  or  $\text{NO}$  gas.  
Exists also in passive state. *See Iron*.  
(Nickles, J. pr. 61. 186.)  
Sol. in conc.  $\text{KOH} + \text{Aq}$  when in finely  
divided state. (Winkler, J. pr. 91. 211.)  
Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  in presence of air.  
(Hodgkinson and Bellairs, C. N. 1895, 71. 73.)

**Cobalt ammonia compounds.**

*See—*

**Anhydrooxycobaltamine compounds,**

$[\text{Co}(\text{NH}_3)_4]_2 \left[ \begin{smallmatrix} \text{Cl} \\ \text{O}(\text{OH}) \end{smallmatrix} \right] \text{X}_4$ .

**Bromotetramine cobaltic compounds,**  
 $\text{BrCo}(\text{NH}_3)_4\text{X}_2$ .

**Bromopurpureocobaltic compounds,**  
 $\text{BrCo}(\text{NH}_3)_4\text{X}_2$ .

**Carbonatotetramine cobaltic compounds,**  
 $(\text{CO}_2)\text{Co}(\text{NH}_3)_4\text{X}$ .

**Chlorotetramine cobaltic compounds,**  
 $\text{ClCo}(\text{NH}_3)_4\text{X}_2$ .

**Chloropurpureocobaltic compounds,**  
 $\text{ClCo}(\text{NH}_3)_4\text{X}_2$ .

**Croceocobaltic compounds,**  
 $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{X}$ .

**Decamine cobaltic sulphite,**  
 $\text{Co}_2(\text{NH}_3)_{10}(\text{SO}_3)_2$ .

**Diamine cobaltic nitrites,**  
 $\text{Co}(\text{NH}_3)_2(\text{NO}_2)_4\text{M}$ .

**Dichrocobaltic compounds,**  $\text{Co}(\text{NH}_3)_2\text{X}_2$ .

**Flavocobaltic compounds,**  
 $(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4\text{X}$ .

**Fusocobaltic compounds,**  
 $(\text{OH})\text{Co}(\text{NH}_3)_4\text{X}_2$ .

**Iodotetramine cobaltic compounds,**  
 $\text{ICo}(\text{NH}_3)_4\text{X}_2$ .

**Luteocobaltic compounds,**  $\text{Co}(\text{NH}_3)_2\text{X}_2$ .

**Melanocobaltic compounds,**  
 $[\text{Co}(\text{NH}_3)_2\text{Cl}_2]_2, \text{NH}_2\text{Cl}$ .

**Nitratetetramine cobaltic compounds,**  
 $(\text{NO}_2)\text{Co}(\text{NH}_3)_4\text{X}_2$ .

**Nitratopurpureocobaltic compounds,**  
 $(\text{NO})_2\text{Co}(\text{NH}_3)_4\text{X}_2$ .

**Nitritocobaltic compounds,**  
 $(\text{NO}_2)\text{Co}(\text{NH}_3)_4\text{X}_2$ .

**Octamine cobaltic compounds,**  
 $\text{Co}_2(\text{NH}_3)_8\text{X}_4$ .

(= Tetramine cobaltic compounds,  
 $\text{Co}(\text{NH}_3)_4\text{X}_2$ .

**Oxycobaltamine compounds,**  
 $\text{Co}_2(\text{NH}_3)_{10}(\text{OOH})\text{X}_4$ .

**Praseocobaltic compounds,**  $\text{Co}(\text{NH}_3)_2\text{X}_2$ .

**Purpureocobaltic compounds,**  
 $\text{Co}(\text{NH}_3)_4\text{X}_2$ .

**Roseocobaltic compounds,**  
 $\text{Co}(\text{NH}_3)_4(\text{OH})_2\text{X}_2$ .

**Sulphatotetramine cobaltic compounds,**  
 $(\text{SO}_4)\text{Co}(\text{NH}_3)_4\text{X}$ .

**Sulphatopurpureocobaltic compounds,**  
 $(\text{SO}_4)\text{Co}(\text{NH}_3)_4\text{X}$ .

"Tetramine cobaltic" compounds,  
 $\text{Co}(\text{NH}_3)_4\text{X}_3$ .

Xanthocobaltic compounds,  
 $(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4\text{X}_2$ .

**Cobalt arsenide,  $\text{CoAs}_2$ .**

As  $\text{Co}_2\text{As}_2$ . (Ducelliez, C. R. 1908, 147. 425.)

$\text{CoAs}_2$ . As  $\text{Co}_2\text{As}_2$ . (Ducelliez, C. R. 1908, 147. 425.)

$\text{Co}_2\text{As}_2$ . As  $\text{Co}_2\text{As}_2$ . (Ducelliez, C. R. 1908, 147. 425.)

$\text{Co}_2\text{As}_2$ . Very sl. attacked by hot conc.  $\text{HCl}$ , less by  $\text{H}_2\text{SO}_4$ . Easily sol. in  $\text{HNO}_3$  and aqua regia. Sl. attacked by fused alkalis and alkali carbonates. (Ducelliez, C. R. 1908, 147. 425.)

$\text{CoAs}_2$ . Min. *Skutterudite*. Sol. in  $\text{HNO}_3$  + Aq, with separation of  $\text{As}_2\text{O}_3$ .

**Cobalt arsenide sulphide,  $\text{CoAs}_2\text{S}$ ,  $\text{CoS}_2$ .**

Min. *Cobaltite*. Sol. in  $\text{HNO}_3$  + Aq, with separation of S and  $\text{As}_2\text{O}_3$ .

*Glauco-dote*. Completely sol. in  $\text{HNO}_3$  + Aq.

**Cobalt azoimide, basic,  $\text{Co}(\text{OH})\text{N}_3$ .**

Insol. in  $\text{H}_2\text{O}$ .

Sol. in  $\text{HN}_3$  + Aq. (Curtius, J. pr. 1898, (2) 58. 300.)

**Cobalt potassium azoimide,  $\text{KN}_3$ ,  $\text{Co}(\text{N}_3)_2$ .**

Sol. in  $\text{H}_2\text{O}$ ; Aq. solution decomp. on boiling. (Curtius, J. pr. 1898, (2) 58. 301.)

**Cobalt boride,  $\text{Co}_2\text{B}$ .**

Attacked by  $\text{HNO}_3$ . (Jassonneix, C. R. 1907, 145. 240.)

$\text{CoB}$ . Decomp. by moist air and by alkali nitrates, chlorates, hydroxides and carbonates; decomp. by steam at red heat and by acids. (Moissan, C. R. 1896, 122. 425.)

Not attacked by  $\text{HCl}$ ; rapidly attacked by  $\text{HNO}_3$ . Not attacked by dil. but decomp. by conc.  $\text{H}_2\text{SO}_4$ . Rapidly attacked by aqua regia. (Moissan, A. ch. 1896, (7) 9. 272.)

$\text{CoB}_2$ . (Jassonneix, C. R. 1907, 145. 241.)

**Cobaltous bromide,  $\text{CoBr}_2$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohol, and ether.

Sat.  $\text{CoBr}_2$  + Aq contains at:

59° 75° 97°  
 86.7 66.8 68.1%  $\text{CoBr}_2$ .

(Étard, A. ch. 1894, (7) 2. 542.)

Nearly insol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 374.)

Sol. in  $\text{SO}_2\text{Cl}(\text{OH})$ . (Walden.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

lg.  $\text{CoBr}_2$  is sol. in 9.74g. methyl acetate at 18°. Sp. gr. 18°/4° of sat. solution = 1.013. (Naumann, B. 1909, 42. 3792.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol. in acetone. (Eidmann, C. C. 1904, II. 1014; Naumann, B. 1904, 37. 4328.)

Mol. weight determined in pyridine. (Werner, Z. anorg. 1897, 15. 24.)

+2, and  $6\text{H}_2\text{O}$ . (Hartley, Chem. Soc. (2) 12. 214.)

**Cobaltous hydrazine bromide hydrazine,  $2\text{CoBr}_2 \cdot 4\text{N}_2\text{H}_4\text{HBr} \cdot \text{N}_2\text{H}_4(?)$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp. (Ferratini, C. A. 1912. 1613.)

**Cobaltous mercuric bromide, basic,  $\text{CoBr}_2 \cdot \text{HgBr}_2 \cdot 6\text{CoO} + 20\text{H}_2\text{O}$ .**

(Mailhe, A. ch. 1902, (7) 27. 369.)

**Cobalt stannic bromide.**

See Bromostannate, cobalt.

**Cobaltous bromide ammonia,  $\text{CoBr}_2 \cdot 6\text{NH}_3$ .**

Sol. in  $\text{H}_2\text{O}$  with residue of cobalt hydride. (Rammelsberg, Pogg. 55. 245.)

**Cobaltous bromide hydrazine,  $\text{CoBr}_2 \cdot 2\text{N}_2\text{H}_4$ .**

Decomp. by boiling with  $\text{H}_2\text{O}$ . (Fransen, Z. anorg. 1908, 60. 270.)

**Cobalt carbonyl,  $\text{Co}(\text{CO})_4$ .**

Insol. in  $\text{H}_2\text{O}$ . More or less sol. in  $\text{CS}_2$ , ether, alcohol and  $\text{Ni}(\text{CO})_4$ . Relatively stable with non-oxidizing acids. Quickly decomp. by oxidizing acids. (Mond, Hirtz and Cowap, C. N. 1908, 98. 165.)

**Cobaltous chloride,  $\text{CoCl}_2$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$  with evolution of heat. 100 pts.  $\text{H}_2\text{O}$  dissolve 43.3 pts.  $\text{CoCl}_2$  at 0°. (Engel, A. ch. (6) 17. 355.)

100 pts. sat.  $\text{CoCl}_2$  + Aq at t° contain pts  $\text{CoCl}_2$ .

(Engel, A. ch. (6) 17. 355.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Sol. in alcohol.

Sat. solution in alcohol (0.792 sp. gr.) contains 23.66 %  $\text{CoCl}_2$  and has sp. gr. = 1.0107. (Winkler, J. pr. 91. 209.)

Very sol. in ether.

100 pts. absolute ether dissolve only 0.021 g.  $\text{CoCl}_2$ . (Böttker, Z. phys. Ch. 1897, 22. 511.)

100 g. formic acid (95%) dissolve 6.2 g.  $\text{CoCl}_2$  at 20.2°. (Aschan, Ch. Z. 1913, 37. 1117.)

1g.  $\text{CoCl}_2$  is sol. in 271g. methyl acetate at 18°. Sp. gr.  $18^\circ/4^\circ$  of sat. solution = 0.938. (Naumann, B. 1909, 43. 3791.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

100 pts. acetone dissolve 8.62 pts. anhydrous  $\text{CoCl}_2$ . (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

0.08 pts. sol. in 100 pts. ethyl acetate at 14°.

0.26 " " " 100 " " " 79°.

9.11 " " " 100 " acetone " 0°.

9.28 " " " 100 " " " 22.5°.

(Lasscsynaki, B. 1894, 27, 2286.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

1 g.  $\text{CoCl}_2$  is sol. in 36.4 g. acetone at 18°. Sp. gr. of sat. solution  $18^\circ/4^\circ$  = 0.825. (Naumann, B. 1904, 37. 4334.)

100 g. acetonitrile dissolve 4.08 g.  $\text{CoCl}_2$  at 18°. (Naumann and Schier, B. 1914, 97. 249.)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Solubility in pyridine at t°.

t°	G. $\text{CoCl}_2$ sol. in 100 g. pyridine	Solid phase

(Pearce and Moore, Am. Ch. J. 1913, 50. 226.)

Mol. weight determined in piperidine, and pyridine. (Werner Z. anorg. 1897, 15. 18 and 23.)

Sol. in urethane. (Castoro, Z. anorg. 1899, 20. 61.)

+ $\text{H}_2\text{O}$ .

+2H<sub>2</sub>O. Very deliquescent. (Bersch, J. B. 1867, 291.)  
17.16 pts. sol. in 100 pts. acetone at 0°.  
17.06 " " 100 " " 25°.

(Lasscsynski, B. 1894, 27, 2287.)

+4H<sub>2</sub>O. Deliquescent. (Bersch.)

+6H<sub>2</sub>O. Not deliquescent. Easily sol. in H<sub>2</sub>O.

Solubility of CoCl<sub>2</sub>·6H<sub>2</sub>O in ethyl alcohol +Aq at 11.5° under addition of increasing amounts of CoCl<sub>2</sub>.

P = Percent of alcohol by volume.

G = Grams of CoCl<sub>2</sub> added.

C<sub>c</sub> = Grams of CoCl<sub>2</sub> in 5 cc. of the solution.

C<sub>w</sub> = Grams of water in 5 cc. of the solution, calculated from

(1) the water content of the alcohol.

(2) the water of crystallization which had gone into solution.

(3) the water held mechanically in CoCl<sub>2</sub>·6H<sub>2</sub>O.

(Bödtker, Z. phys. Ch. 1897, 22, 508.)

Easily soluble in absolute ethyl alcohol. 100 pts. absolute alcohol dissolve at room temperature 56.20 pts. CoCl<sub>2</sub>. Water precipitates CoCl<sub>2</sub>·6H<sub>2</sub>O from a solution of CoCl<sub>2</sub> in absolute alcohol. (Bödtker.)

100 pts. absolute ether dissolve 0.291g. CoCl<sub>2</sub>·6H<sub>2</sub>O. (Bödtker, Z. phys. Ch. 1897, 22, 511.)

Anhydrous ethylene glycol dissolves 10.6% CoCl<sub>2</sub>·6H<sub>2</sub>O at 16.4°. (de Coninck, Chem. Soc. 1904, 86, (2) 741.)

**Cobaltous hydrazine chloride,**  
CoCl<sub>2</sub>·2N<sub>2</sub>H<sub>4</sub>·HCl+2½H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Ferratini, C. A. 1912, 1613.)

**Cobaltous iodine chloride,** CoCl<sub>2</sub>·2ICl<sub>3</sub>+8H<sub>2</sub>O.

Hygroscopic. Decomp. by H<sub>2</sub>O. CCl<sub>4</sub> separates ICl<sub>3</sub>. (Weinland and Schlegelmilch, Z. anorg. 1902, 30, 137.)

**Cobalt lithium chloride,** CoCl<sub>2</sub>·LiCl+3H<sub>2</sub>O.

Very deliquescent. Sol. in H<sub>2</sub>O with decomp. Sol. in LiCl+Aq without decomp. Sol. in alcohol without decomp. (Chassevant, A. ch. (6) 30, 27.)

**Cobaltous mercuric chloride basic,** CoCl<sub>2</sub>·HgCl<sub>2</sub>·6CoO+20H<sub>2</sub>O.

(Mailhe, A. ch. 1902, (7) 27, 369.)

**Cobaltous mercuric chloride,** CoCl<sub>2</sub>·HgCl<sub>2</sub>.  
Very deliquescent. (v. Bonsdorff.)

**Cobaltous thallic chloride,** 2TlCl<sub>3</sub>·CoCl<sub>2</sub>+8H<sub>2</sub>O.

Hydroscopic; can be cryst. from H<sub>2</sub>O. (Gewecke, A. 1909, 366, 222.)

**Cobaltous tin (stannic) chloride,** CoCl<sub>2</sub>·SnCl<sub>4</sub>+6H<sub>2</sub>O.

See Chlorostannate, cobaltous.

**Cobaltous chloride ammonia,** CoCl<sub>2</sub>·2NH<sub>3</sub>.

Decomp. by H<sub>2</sub>O. (F. Rose.)

CoCl<sub>2</sub>·4NH<sub>3</sub>. Decomp. by H<sub>2</sub>O. (H. Rose.)

CoCl<sub>2</sub>·6NH<sub>3</sub>. Decomp. by H<sub>2</sub>O. Sol. in dil. NH<sub>4</sub>OH+Aq with ease, but difficulty in conc. NH<sub>4</sub>OH+Aq. Insol. in absolute alcohol. (Fremy.)

**Cobaltous chloride hydrazine,** CoCl<sub>2</sub>·2N<sub>2</sub>H<sub>4</sub>.

Insol. in cold H<sub>2</sub>O.

Slowly decomp. by cold, rapidly by hot H<sub>2</sub>O.

Easily sol. in dil. acids and NH<sub>4</sub>OH+Aq. (Fransen, Z. anorg. 1908, 60, 270.)

**Cobaltous chloride hydroxylamine,**  
CoCl<sub>2</sub>·2NH<sub>2</sub>OH.

Decomp. in the air; sol. in H<sub>2</sub>O. (Feldt, B. 1894, 27, 403.)

**Cobaltic chloride hydroxylamine,**  
CoCl<sub>3</sub>·6NH<sub>2</sub>OH.

Insol. in alcohol.

Sol. in acidified H<sub>2</sub>O without decomp.; sol. in conc. H<sub>2</sub>SO<sub>4</sub> without decomp. (Feldt, B. 1894, 27, 404.)

**Cobaltous fluoride,** CoF<sub>2</sub>.

Sl. sol. in H<sub>2</sub>O; insol. in alcohol and ether; slowly attacked by cold HCl, H<sub>2</sub>SO<sub>4</sub>, or HNO<sub>3</sub>+Aq. (Poulenc, C. R. 114, 1429.)

Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 29, 827.)

+2H<sub>2</sub>O. Sol. in a little H<sub>2</sub>O without decomp. Decomp. into oxyfluoride by boiling with much H<sub>2</sub>O. Sol. in HF+Aq. (Berzelius.)

+4H<sub>2</sub>O. Two modifications.

Solubility of a mod. at t° = 2.2328 %

" " " " " " = 2.3203 %.

(Costachescu, Ann. Sci. Univ. Jassy, 1912, 7, 1, 10.)

**Cobaltic fluoride,** CoF<sub>3</sub>.

Sol. in conc. H<sub>2</sub>SO<sub>4</sub>. (Barbieri, Chem. Soc. 1905, 88, (2) 393.)

as hydrogen fluoride,  $\text{CoF}_2$ ,  $5\text{HF} + \text{O}$ .

r sol. in  $\text{H}_2\text{O}$  and dil. acids.

1  $\text{NH}_4\text{OH} + \text{Aq}$  with decomp. (Böhm, *g.* 1905, **43**, 330.)

columbium fluoride.

luocolumbate, cobalt.

us iron (ferric) fluoride,

$\text{F}_3$ ,  $\text{FeF}_3 + 7\text{H}_2\text{O}$ .

1 dil.  $\text{HF} + \text{Aq}$ . (Weinland, *Z. anorg.* **2**, 269.)

us manganic fluoride,  $2\text{CoF}_2$ ,  $\text{Mn}_2\text{F}_8$ ,  $\text{H}_2\text{O}$ .

stensen, *J. pr.* (2) **34**, 41.)

molybdenyl fluoride.

tuoxymolybdate, cobalt.

us potassium fluoride,  $\text{CoF}_2$ ,  $\text{KF}$ .

ol. in  $\text{H}_2\text{O}$ ; less in ethyl or methyl; insol. in amyl alcohol or benzene. p. by hot  $\text{H}_2\text{SO}_4$ . (Poulenc, *C. R.* **114**.

O. Sl. sol. in  $\text{H}_2\text{O}$ . (Wagner, *B.* **19**.

, 2KF.

us sodium fluoride,  $\text{CoF}_2$ ,  $\text{NaF} + \text{H}_2\text{O}$ . in  $\text{H}_2\text{O}$ . (Wagner, *B.* **19**, 896.)

us stannic fluoride.

Fluostannate, cobaltous.

vanadium fluoride.

tuovanadate, cobalt.

us hydroxide,  $\text{CoO} \cdot \text{H}_2\text{O}$ .

l. in  $\text{H}_2\text{O}$ . Sol. in acids. Insol. in -Aq. Sol. in ammonium sulphate, e, nitrate, or succinate + Aq. (Brett.) in warm acetic acid; insol. in  $\text{NH}_4\text{OH}$  and cold  $\text{NH}_4\text{Cl} + \text{Aq}$ , but sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (de Schulten, *C. R.* **109**.

l. in  $\text{H}_2\text{O}$  and dil.  $\text{KOH} + \text{Aq}$ ; some-ol. in conc.  $\text{KOH} + \text{Aq}$ ; easily sol. in salts + Aq. (Fresenius.)

ly sol. in  $\text{KCN} + \text{Aq}$ . (Rodgers, **1834**.) in conc.  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Gmelin.)

pptd. by  $\text{KOH} + \text{Aq}$  in presence of  $\text{O}_2$  or  $\text{NH}_4$  citrate. (Spiller.) in large amt. in boiling  $\text{NH}_4\text{SCN} + \text{Aq}$ . mann, *Z. anorg.* **1908**, **58**, 269.)

l. in methyl, or amyl amine + Aq. t.)

y non-volatile organic substances pre-s pptn.

ic hydroxide,  $3\text{Co}_2\text{O}_3$ ,  $2\text{H}_2\text{O}$ .

h, *Phil. Mag.* (4) **35**, 257.)

),  $2\text{H}_2\text{O}$ . Decomp. by  $\text{HCl} + \text{Aq}$ ;

gives brown solutions with cold  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ , which soon decomp. (Wernicke, *Pogg.* **141**, 120.)

$\text{Co}_2\text{O}_3 \cdot \text{H}_2\text{O} = \text{Co}_2\text{O}_3$ ,  $3\text{H}_2\text{O}$ . Sol. in warm  $\text{HCl}$ ,  $\text{HNO}_3$ , and  $\text{H}_2\text{SO}_4$ , with decomp. (Proust.)

Sol. in cold  $\text{H}_3\text{PO}_4$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ , but decomp. on standing or warming. (Winkelblech.)

Sol. in racemic, tartaric, oxalic, or citric acid as cobaltous salt.

Sol. in conc. acetic acid without immediate decomp. (Remele). Solution is not decomp. by boiling. Sol. in warm sat.  $(\text{NH}_4)_2\text{C}_2\text{O}_4 + \text{Aq}$  with decomp.

Not attacked by cold or hot  $\text{NH}_4\text{OH} + \text{Aq}$ .

Insol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$ .

Sol. when freshly pptd. in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ . (Geuther, *A.* **128**, 157.)

Cobaltocobaltic hydroxide,  $\text{Co}_2\text{O}_3$ ,  $3\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in oxalic acid; solution decomp. by heat. Sol. in  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$ . (Gibbs and Genth, *Sill. Am. J.* (2) **23**, 257.)

$\text{Co}_2\text{O}_3$ ,  $7\text{H}_2\text{O}$ . Sol. in weak acids, especially  $\text{HC}_2\text{H}_3\text{O}_2$ , without decomp. (Fremy.)

$\text{Co}_2\text{O}_3$ ,  $6\text{H}_2\text{O}$ . Min. *Heterogenite*. Sol. in dil.  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$ .

Cobaltous iodide,  $\text{CoI}_2$ .

Deliquescent, and very sol. in  $\text{H}_2\text{O}$ .

100 pts. sat.  $\text{CoI}_2 + \text{Aq}$  at  $t^\circ$  contain  
pts.  $\text{CoI}_2$ .

$t^\circ$	Pts. $\text{CoI}_2$	$t^\circ$	Pts. $\text{CoI}_2$	$t^\circ$	Pts. $\text{CoI}_2$
-22	52.4	14	61.6	60	79.2
-8	56.7	25	66.4	82	80.7
-2	58.7	34	73.0	111	80.9
+9	61.4	46	79.0	156	83.1

(Étard, *C. R.* **113**, 699.)

Sol. in  $\text{SO}_2(\text{OCH}_3)_2$ . (Walden, *Z. anorg.* **1902**, **29**, 388.)

Sol. in  $\text{SOCl}_2$ . (Walden, *Z. anorg.* **1900**, **25**, 216.)

Sol. in  $\text{POCl}_3$ . (Walden, *Z. anorg.* **1900**, **25**, 212.)

Sol. in  $\text{S}_2\text{Cl}_2$ . (Walden, *Z. anorg.* **1900**, **25**, 217.)

Nearly insol. in  $\text{AsBr}_3$ . (Walden, *Z. anorg.* **1902**, **29**, 374.)

Sol. in  $\text{AsCl}_3$ . (Walden, *Z. anorg.* **1900**, **25**, 214.)

Easily sol. in alcohol.

Sol. in acetone. (Eidmann, *C. C.* **1899**, **II**, 1014.) (Naumann, *B.* **1904**, **37**, 4328.)

Sol. in quinoline. (Beckmann and Gabel, *Z. anorg.* **1906**, **51**, 236.)

Sol. in methylacetate. (Naumann, *B.* **1909**, **42**, 3790.)

+  $2\text{H}_2\text{O}$ .

+  $4\text{H}_2\text{O}$ . Very deliquescent. (Étard.)

+6H<sub>2</sub>O. (Hartley, Chem. Soc. (2) 12. 214.)

+9H<sub>2</sub>O. Very hygroscopic. (Bolschakoff, C. C. 1898, II. 660.)

**Cobaltous lead iodide**, 2 CoI<sub>2</sub>, PbI<sub>2</sub>+3H<sub>2</sub>O.

Decomp. by H<sub>2</sub>O. (Mosnier, A. ch. 1897, (7) 12. 412.)

**Cobaltous mercuric iodide**, CoI<sub>2</sub>, HgI<sub>2</sub>+6H<sub>2</sub>O.

Partially decomp. by H<sub>2</sub>O.

Sol. in alcohol and acetone. (Dobroserdoff, C. C. 1901, II. 332.)

CoI<sub>2</sub>, 2HgI<sub>2</sub>+6H<sub>2</sub>O. Decomp. by H<sub>2</sub>O; sol. in alcohol and acetone. (Dobroserdoff, C. C. 1901, II. 332.)

**Cobaltous iodide ammonia**, CoI<sub>2</sub>, 4NH<sub>3</sub>.

Decomp. by H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH+Aq. (Rammelsberg, Pogg. 48. 155.)

CoI<sub>2</sub>, 6NH<sub>3</sub>. Insol. in NH<sub>4</sub>OH+Aq. (Rammelsberg.)

**Cobaltous iodide hydrazine**, CoI<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>.

Sl. sol. in H<sub>2</sub>O. Easily sol. in acids. (Franzen, Z. anorg. 1911, 70. 147.)

**Cobaltic octamine compounds.**

See Octamine cobaltic compounds.

**Cobaltous oxide**, CoO.

Insol. in H<sub>2</sub>O. Easily sol. in dil. or conc. HCl or HNO<sub>3</sub>+Aq. Slowly sol. in cold, but easily in hot dil. H<sub>2</sub>SO<sub>4</sub>+Aq, acetic, or tartaric acid+Aq. Insol. in NH<sub>4</sub>OH+Aq. Sol. in hot NH<sub>4</sub>Cl+Aq, KOH, or NaOH+Aq. (Rose.)

Insol. in NH<sub>4</sub>Cl or NH<sub>4</sub>NO<sub>3</sub>+Aq. (Brett, 1834.)

Insol. in K<sub>2</sub>CO<sub>3</sub>+Aq. Sol. in boiling Ce and Ni nitrates+Aq, with pptn. of the oxides. (Persoz.)

Easily sol. in dil. acids, even tartaric, acetic, and oxalic acids. Not attacked by NH<sub>4</sub>OH+Aq. Sol. in 13% NH<sub>4</sub>Cl+Aq with evolution of NH<sub>3</sub>; also in NH<sub>4</sub>SCN+Aq. Sol. in warm conc. NaOH, and KOH+Aq. (Zimmerman, A. 232. 324.)

Solubility in (calcium succate+sugar)+Aq. 1 l. solution containing 418.6 g. sugar and 34.3 g. CaO dissolves 1.56 g. CoO; 1 l. solution containing 296.5 g. sugar and 24.2 g. CaO dissolves 0.29 g. CoO. (Bodenbender, J. B. 1865. (60).)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 827.)

See also Cobaltous hydroxide.

**Cobaltic oxide**, Co<sub>2</sub>O<sub>3</sub>.

Decomp. by most acids, even in the cold, with formation of cobaltous salts. Sol. in acetic acid without immediate decomp.

See also Cobaltic hydroxide.

**Cobaltocobaltic oxide**, Co<sub>2</sub>O<sub>4</sub>=CoO, Co<sub>2</sub>O<sub>3</sub>.

Insol. in boiling conc. HCl, HNO<sub>3</sub>, or aqua regia. Sol. by long standing with H<sub>2</sub>SO<sub>4</sub>. (Gibbs and Genth, Sill. Am. J. (2) 23. 287.)

See also Cobaltocobaltic hydroxide.

Co<sub>2</sub>O<sub>4</sub>=2CoO, Co<sub>2</sub>O<sub>3</sub>.

Co<sub>2</sub>O<sub>7</sub>=4CoO, Co<sub>2</sub>O<sub>3</sub>. Not attacked by boiling dil. HNO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub>+Aq. (Beetz.) Co<sub>2</sub>O<sub>4</sub>=6CoO, Co<sub>2</sub>O<sub>3</sub>+20H<sub>2</sub>O. Sol. in dil. acids, with residue of Co<sub>2</sub>O<sub>3</sub>, which dissolves on warming. (Gentile, J. pr. 69. 131.)

+8H<sub>2</sub>O. As above. (Gentile.)

**Cobaltous oxychloride**, CoCl<sub>2</sub>, 3CoO+3½H<sub>2</sub>O.

Ppt. Very sl. sol. in H<sub>2</sub>O. (Habermann, M. 5. 432.)

**Cobaltous oxychloride hydroxylamine**,

CoOCl, 2NH<sub>2</sub>OH.

Insol. in H<sub>2</sub>O; unstable; insol. in alcohol. (Feldt, B. 1894, 27. 404.)

**Cobaltous oxyfluoride**, CoO, CoF<sub>2</sub>+H<sub>2</sub>O.

Ppt. (Berzelius, Pogg. 1. 26.)

**Cobaltous oxyiodide**, CoO, CoI<sub>2</sub>.

Insol. in H<sub>2</sub>O. (Rammelsberg.)

**Cobaltous oxysulphide**, CoO, CoS.

Cold HCl+Aq dissolves out CoO; hot HCl+Aq decomp. with evolution of H<sub>2</sub>S. (Arfvedson, Pogg. 1. 64.)

**Cobalt phosphide**, Co<sub>2</sub>P.

Sol. in conc. HNO<sub>3</sub>. Slowly attacked by HCl and H<sub>2</sub>SO<sub>4</sub>. (Maronneau, C. R. 1900, 130. 658.)

Sol. in HNO<sub>3</sub>, aqua regia, and in fused alkalis. (Granger, Bull. Soc. 1896, (3) 15. 1089.)

Co<sub>2</sub>P<sub>3</sub>. Insol. in HNO<sub>3</sub> and aqua regia; stable in the air even when heated. (Granger, Bull. Soc. 1896, (3) 15. 1087.)

Co<sub>3</sub>P<sub>2</sub>. Insol. in conc. HCl+Aq. Sol. in HNO<sub>3</sub>+Aq. (Rose, Pogg. 24. 332.)

**Cobalt subselenide**, Co<sub>2</sub>Se.

Sol. in bromine water.

Only sl. attacked by boiling fuming HCl. (Fonzen-Diacon, C. R. 1900, 131. 704.)

**Cobalt monoselenide**, CoSe.

(Little, A. 112. 211.)

**Cobalt diselenide** CoSe<sub>2</sub>.

Sol. in Br<sub>2</sub>+Aq.

Only sl. attacked by boiling fuming HCl. (Fonzen-Diacon, C. R. 1900, 131. 705.)

**Selenide,  $\text{Co}_2\text{Se}_3$ .**

$\text{Br}_2 + \text{Aq.}$   
sl. attacked by boiling fuming  $\text{HCl}$ .  
Diacon, C. R. 1900, 131. 704.)

**Selenide,  $\text{Co}_2\text{Se}_4$ .**

$\text{Br}_2 + \text{Aq.}$   
sl. attacked by boiling fuming  $\text{HCl}$ .  
Diacon, C. R. 190, 131. 704.)

**Silicide,  $\text{Co}_2\text{Si}$ .**

HF and aqua regia. Insol. in cold  
decomp. by steam at red heat. Sol.  
d alkali carbonates. (Vigouroux,  
195, 121. 687.)

Insol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . Sol.  
regia and  $\text{HCl}$ , and in fused  $\text{KOH}$ .  
, C. R. 1901, 132. 557.)  
attacked by dil. or conc.  $\text{HNO}_3$ , or  
 $\text{SO}_4$ . Sol. in aqua regia and in conc.

attacked by dil. alkali hydroxides +  
acked by fused alkali. (Lebau, Bull.  
11, (3), 25. 540.)

Sl. sol. in hot conc.  $\text{HCl}$  and hot  
kali +  $\text{Aq.}$  Sol. in  $\text{HF}$ ; insol. in  
nd  $\text{H}_2\text{SO}_4$ . (Lebeau, C. R. 1902, 135.

**Sulphide,  $\text{CoS}$ .**

trous. Easily sol. in acids, even  
 $\text{H}_2$ , but only slowly in the latter case.  
ahl, C. R. 65. 75.)

ttacked by cold dil.  $\text{HCl} + \text{Aq.}$  (Ebel-  
ch. (3) 25. 94.)

**Seypoorite.**

O. 1 l.  $\text{H}_2\text{O}$  dissolve  $41.62 + 10^{-4}$   
CoS at  $18^\circ$ . (Weigel, Z. phys. Ch.  
1, 294.)

1 conc. mineral acids; very sl. sol. in  
acids; scarcely sol. in acetic acid.  
roder.)

then still moist in  $\text{SO}_2 + \text{Aq.}$  (Ber-

sol. in  $\text{HNO}_3$ , but only very sl. sol.  
+  $\text{Aq.}$  Not pptd. from very dil.  
tions by  $\text{H}_2\text{S}$ .

in  $\text{H}_2\text{O}$ , alkalies, and alkali carbon-  
sulphides +  $\text{Aq.}$  (Fresenius.)  
in  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4\text{NO}_3 + \text{Aq.}$

pptd. by  $(\text{NH}_4)_2\text{S} + \text{Aq.}$  shows a  
colour in presence of 200,000 pts.  $\text{H}_2\text{O}$ .

ric acid, etc. does not hinder the  
 $(\text{NH}_4)_2\text{S} + \text{Aq.}$  (Rose.)

in potassium thiocarbonate +  $\text{Aq.}$   
ladt, Z. anal. 26. 15.)

n  $\text{Na}_2\text{S}_2$  or  $\text{K}_2\text{S}_2 + \text{Aq.}$  (de Koninck,  
gew. Ch. 1891. 202.)

**Sulphide,  $\text{Co}_2\text{S}_3$ .**

ally decomp. by  $\text{HCl} + \text{Aq.}$ ; sol. in  
- $\text{Aq.}$  with decomposition.

ttacked by  $\text{HCl} + \text{Aq.}$ ; and slowly even  
regia. (Schneider, J. pr. (2) 9. 209.)

**Min. Cobalt pyrite.**

+  $x\text{H}_2\text{O}$ . Insol. in  $\text{KCN} + \text{Aq.}$  (Fleck,  
J. pr. 97. 303.) More sol. in  $\text{HCl} + \text{Aq.}$  than  
 $\text{CoS}_2$ . (Dingler, Berz, J. B. 10. 139.)

**Cobaltocobaltic sulphide,  $\text{Co}_2\text{S}_4$ .**

Min. *Linnarite*. Sol. in warm  $\text{HNO}_3 + \text{Aq.}$   
with residue of S.

**Cobalt disulphide,  $\text{CoS}_2$ .**

Not attacked by alkalies or acids except  
 $\text{HNO}_3$  and aqua regia. (Setterberg, Pogg. 7.  
40.)

**Cobalt sulphide,  $\text{Co}_2\text{S}_3$ .**

Easily sol. in hot  $\text{HCl}$  with evolution of  
 $\text{H}_2\text{S}$  (and  $\text{H}_2$ ?). (Proust.)

**Cobalt potassium sulphide,  $\text{K}_2\text{Co}_{11}\text{S}_{10}$ .**

Slowly sol. in cold  $\text{HCl}$  and aqua regia.  
Quickly sol. in warm aqua regia.

Sol. in  $\text{HF}$  and  $\text{H}_2\text{SO}_4$  only on warming.

Insol. in  $(\text{NH}_4)_2\text{S}$ , organic acids, alkalies,  
12%  $\text{HCl} + \text{Aq.}$  and  $\text{KCN} + \text{Aq.}$  (Milbauer,  
Z. anorg. 1904, 42. 447.)

**Cobalt telluride,  $\text{CoTe}$ .**

(Fabre, C. R. 105. 673.)

**Cobalt decamine sulphurous acid.**

See Decamine cobaltisulphurous acid.

**Cobaltic acid.****Potassium cobaltate,  $\text{K}_2\text{Co}_2\text{O}_8 + 2\text{H}_2\text{O}$ , or  $3\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  (Pebal, A. 100. 262), but de-  
comp. by long boiling. Sol. in conc. acids.

$\text{K}_2\text{O}$ ,  $x\text{CoO}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Winkler, J.  
pr. 91. 351.)

Does not exist. (Donath, W. A. B. 102, 2b.  
71.)

**Cobalticyanhydric acid,  $\text{H}_2\text{Co}(\text{CN})_6 + \frac{1}{2}\text{H}_2\text{O}$ .**

Deliquescent. Very sol. in  $\text{H}_2\text{O}$  and only  
sl. decomp. on boiling.

Sol. in  $\text{HCl} + \text{Aq.}$  without decomp. even on  
boiling. Sl. sol. in conc., more sol. in dil.

$\text{HNO}_3 + \text{Aq.}$  Not decomp. by boiling conc.  
 $\text{HNO}_3 + \text{Aq.}$  or aqua regia. Insol. in conc.,

sl. sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  Sol. in alcohol.  
Insol. in ether. (Zwenger, A. 162. 157.)

**Ammonium cobalticyanide,  $(\text{NH}_4)_3\text{Co}(\text{CN})_6 + \frac{1}{2}\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol.

**Ammonium barium cobalticyanide,**

$\text{NH}_4\text{BaCo}(\text{CN})_6 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Weselsky.)

**Ammonium calcium cobalticyanide,**

$\text{NH}_4\text{CaCo}(\text{CN})_6 + 10\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

<p><b>Ammonium lead cobalticyanide</b>,  <math>\text{NH}_4\text{PbCo}(\text{CN})_6 + 3\text{H}_2\text{O}</math>.  Sol. in 8.31 pts. <math>\text{H}_2\text{O}</math> at <math>18^\circ</math>, and sl. sol. in 93% alcohol. (Schuler.)</p> <p><b>Ammonium mercuric cobalticyanide</b>,  <math>(\text{NH}_4)_6\text{Co}_2\text{Hg}(\text{CN})_{14} + \text{H}_2\text{O}</math>.  Sol. in <math>\text{H}_2\text{O}</math> with decomp.  Insol. in alcohol. (Soenderop, Dissert. 1899.)</p> <p><b>Ammonium sodium cobalticyanide</b>,  <math>\text{NH}_4\text{Na}_2\text{Co}(\text{CN})_6</math>.  Only sl. sol. in <math>\text{H}_2\text{O}</math>. (Weselsky, B. 2. 598.)</p> <p><b>Ammonium strontium cobalticyanide</b>,  <math>\text{NH}_4\text{SrCo}(\text{CN})_6 + 9\text{H}_2\text{O}</math>.  Sol. in <math>\text{H}_2\text{O}</math>. (W.)</p> <p><b>Barium cobalticyanide, basic</b>, <math>\text{Ba}_2[\text{Co}(\text{CN})_6]_2</math>,  <math>\text{BaO}_2\text{H}_2</math>.  Not very stable. Cannot be recryst. without partial decomp. (W.)</p> <p><b>Barium cobalticyanide</b>, <math>\text{Ba}_2[\text{Co}(\text{CN})_6]_2 + 10\text{H}_2\text{O}</math>.  Sl. efflorescent. Very sol. in <math>\text{H}_2\text{O}</math>. Insol. in alcohol.</p> <p><b>Barium cobalticyanide chloride</b>,  <math>\text{Ba}_2[\text{Co}(\text{CN})_6]_2</math>, <math>\text{BaCl}_2 + 16\text{H}_2\text{O}</math>.  Sol. in <math>\text{H}_2\text{O}</math> without decomp. (W.)</p> <p><b>Barium lithium cobalticyanide</b>, <math>\text{BaLiCo}(\text{CN})_6 + 15\text{H}_2\text{O}</math>.  The most. sol. of the double cobalticyanides. (Weselsky.)</p> <p><b>Barium potassium cobalticyanide</b>,  <math>\text{BaKCo}(\text{CN})_6 + 11\text{H}_2\text{O}</math>.  Sol. in <math>\text{H}_2\text{O}</math>. (W.)</p> <p><b>Bismuth cobalticyanide</b> <math>\text{BiCo}(\text{CN})_6</math>.  Ppt. (Mathews, J. Am. Chem. Soc. 1900, 22. 275.)  <math>+ 5\text{H}_2\text{O}</math>. Moderately stable with dil. min. acids; more stable with conc. acids than Cd or Zn comp.  Decomp. by <math>\text{NH}_3</math> and alkalis. (Fischer and Cuntze, Ch. Z. 1902, 26. 872.)</p> <p><b>Cadmium cobalticyanide</b>, <math>\text{Cd}_2[\text{Co}(\text{CN})_6]_2 + 7\frac{1}{2}\text{H}_2\text{O}</math>.  Attacked by strong min. acids only when hot. Behaves as Zn salt, toward conc. <math>\text{H}_2\text{SO}_4</math> and dil. and conc. <math>\text{HCl}</math>.  Insol. in <math>\text{K}_2\text{Co}(\text{CN})_6 + \text{Aq}</math>. Sol. in <math>\text{NH}_4\text{OH}</math> and <math>\text{NH}_4\text{Cl} + \text{Aq}</math>. (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)</p> <p><b>Cadmium potassium cobalticyanide</b>,  <math>\text{KCdCo}(\text{CN})_6</math>.  Not attacked by <math>\text{H}_2\text{O}</math>. (Fischer and Cuntze, Ch. Z. 1902, 26, 873.)</p>	<p><b>Cadmium sodium cobalticyanide</b>,  <math>\text{NaCdCo}(\text{CN})_6</math>.  (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)</p> <p><b>Cadmium cobalticyanide ammonia</b>,  <math>\text{Cd}_2[\text{Co}(\text{CN})_6]_2</math>, <math>4\text{NH}_3 + 2\text{H}_2\text{O}</math>.  (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)  <math>\text{Cd}_2[\text{Co}(\text{CN})_6]_2</math>, <math>5\text{NH}_3 + 3\text{H}_2\text{O}</math>.  and Cuntze, Ch. Z. 1902, 26. 873.)  <math>\text{Cd}_2[\text{Co}(\text{CN})_6]_2</math>, <math>7\text{NH}_3</math>. (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)  <math>\text{Cd}_2[\text{Co}(\text{CN})_6]_2</math>, <math>9\text{NH}_3 + 2\text{H}_2\text{O}</math>.  and Cuntze, Ch. Z. 1902, 26. 873.)</p> <p><b>Calcium potassium cobalticyanide</b>,  <math>\text{CaKCo}(\text{CN})_6 + 9\text{H}_2\text{O}</math>.  Sol. in <math>\text{H}_2\text{O}</math>. (W.)</p> <p><b>Cobaltous cobalticyanide</b>, <math>\text{Co}_2[\text{Co}(\text{CN})_6]_2 + 14\text{H}_2\text{O}</math>.  Insol. in <math>\text{H}_2\text{O}</math> and acids. Sl. sol. in <math>+ \text{Aq}</math>. Decomp. by <math>\text{KOH} + \text{Aq}</math>.</p> <p><b>Cupric cobalticyanide</b>, <math>\text{Cu}_2[\text{Co}(\text{CN})_6]_2 + 7\text{H}_2\text{O}</math>.  Insol. in <math>\text{H}_2\text{O}</math> and acids. Sol. in <math>\text{N} + \text{Aq}</math>.</p> <p><b>Cupric cobalticyanide ammonia</b>,  <math>\text{Cu}_2[\text{Co}(\text{CN})_6]_2</math>, <math>4\text{NH}_3 + 7\text{H}_2\text{O}</math>.  Sol. in <math>\text{H}_2\text{O}</math>. (Zwenger.)</p> <p><b>Lead cobalticyanide, basic</b>, <math>\text{Pb}_2[\text{Co}(\text{CN})_6]_2 + 11\text{H}_2\text{O}</math>.  Insol. in <math>\text{H}_2\text{O}</math> or alcohol; somewhat hot <math>\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}</math>. (Schuler.)</p> <p><b>Lead cobalticyanide</b>, <math>\text{Pb}_2[\text{Co}(\text{CN})_6]_2 + 7\text{H}_2\text{O}</math>.  Very sol. in <math>\text{H}_2\text{O}</math>. Insol. in alc. (Zwenger.)  Sol. in 1.77 pts. <math>\text{H}_2\text{O}</math> at <math>19^\circ</math>. Insol. in absolute <math>\text{H}_2\text{O}</math>. Sl. sol. in 93% alcohol. (Schuler, V 79. 302.)</p> <p><b>Lead potassium cobalticyanide</b>, <math>\text{PbK}(\text{CN})_6 + 3\text{H}_2\text{O}</math>.  Sol. in 6.74 pts. <math>\text{H}_2\text{O}</math> at <math>18^\circ</math> and mu easily in hot <math>\text{H}_2\text{O}</math>. Insol. in abs. sol. in 93% alcohol. (Schuler.)</p> <p><b>Lead cobalticyanide nitrate</b>, <math>\text{Pb}_2[\text{Co}(\text{CN})_6]_2 + 12\text{H}_2\text{O}</math>.  Sol. in 16.91 pts. <math>\text{H}_2\text{O}</math> at <math>18^\circ</math>, 14 at <math>19^\circ</math>, and much less hot <math>\text{H}_2\text{O}</math>.  Nearly insol. in 93% alcohol. (Schuler.)</p> <p><b>Mercurous cobalticyanide</b>, <math>\text{Hg}_2\text{Co}(\text{CN})_6</math>.  Ppt. Decomp. by <math>\text{HCl}</math>. Not att. cold, but by hot conc. <math>\text{H}_2\text{SO}_4</math>. Not by <math>\text{HNO}_3</math>, acetic or oxalic acid. Dec. by alkalis <math>+ \text{Aq}</math>. (Miller and Mathews, Chem. Soc. 1900, 22. 64.)</p>
---	---

**Mercuric cobalticyanide,  $\text{Hg}_2[\text{Co}(\text{CN})_6]_2$ .**

Sl. sol. in  $\text{H}_2\text{O}$ , decomp. by boiling.  
Insol. in alcohol and ether. Not attacked by  $\text{HCl}$ . (Soenderop, Dissert, 1899.)

**Mercuric potassium cobalticyanide,**

Sol. in  $\text{H}_2\text{O}$  with decomp. Insol. in alcohol. Sl. sol. in ether. (Soenderop, Dissert, 1899.)

$\text{K}_2\text{Hg}_2\text{Co}_4(\text{CN})_{14}$ . (Soenderop, Dissert, 1899.)

**Mercuric sodium cobalticyanide,**

Extremely deliquescent. (Soenderop, Dissert, 1899.)

**Nickel cobalticyanide,  $\text{Ni}_2[\text{Co}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  and acids. Not attacked by boiling  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by  $\text{KOH} + \text{Aq}$ .

**Nickel cobalticyanide ammonia,**

Insol. in  $\text{H}_2\text{O}$ .

**Potassium cobalticyanide,  $\text{K}_3\text{Co}(\text{CN})_6$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol.

**Potassium strontium cobalticyanide,**

Sol. in  $\text{H}_2\text{O}$ . (Weselsky.)

**Potassium thallium cobalticyanide,**

More sol. in  $\text{H}_2\text{O}$  than corresponding K salt. (Fischer and Benzian, Ch. Z. 1902, 26. 49.)

**Potassium zinc cobalticyanide,**

(Fischer and Cuntze, Ch. Z. 1902, 26. 873.)

**Potassium cobalticyanide mercuric chloride,**

(Soenderop, Dissert. 1899.)

**Potassium cobalticyanide mercuric iodide,**

Sol. in  $\text{H}_2\text{O}$  with subsequent decomp. Sol. in alcohol and ether with decomp. (Soenderop, Dissert, 1899.)

**Silver cobalticyanide,  $\text{Ag}_3\text{Co}(\text{CN})_6$ .**

Insol. in  $\text{H}_2\text{O}$  and acids. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

**Silver cobalticyanide ammonia,  $\text{Ag}_3\text{Co}(\text{CN})_6$ ,**

Insol. in  $\text{H}_2\text{O}$ . (Zwenger.)

**Sodium cobalticyanide,  $\text{Na}_3\text{Co}(\text{CN})_6 + 2\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol.

**Sodium zinc cobalticyanide,  $\text{NaZnCo}(\text{CN})_6 + \text{H}_2\text{O}$ .**

(Fischer and Cuntze, Ch. Z. 1902, 26. 873.)

**Strontium cobalticyanide,  $\text{Sr}_2[\text{Co}(\text{CN})_6]_2 + 10\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Weselsky.)

**Thallium cobalticyanide,  $\text{Tl}_3\text{Co}(\text{CN})_6$ .**

100 pts.  $\text{H}_2\text{O}$  dissolve 3.6 pts. at  $0^\circ$ , 5.86 pts. at  $9.5^\circ$ , 10.04 pts. at  $19.5^\circ$ . (Fronmüller, B. 11. 91.)

**Yttrium cobalticyanide,  $\text{YCo}(\text{CN})_6 + 2\text{H}_2\text{O}$** 

Nearly insol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Zinc cobalticyanide,  $\text{Zn}_2[\text{Co}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$ .**

Sol. in  $\text{HCl} + \text{Aq}$  and salt is pptd. by dilution with  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{SO}_4$ . Insol. in  $\text{K}_2\text{Co}(\text{CN})_6 + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH}$  and  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)

**Zinc cobalticyanide ammonia,**

Decomp. by  $\text{H}_2\text{O}$  and acids. (Fischer and Cuntze, Ch. Z. 1902, 26. 873.)

$\text{Zn}_2[\text{Co}(\text{CN})_6]_2 \cdot 6\text{NH}_3$ . (Fischer and Cuntze.)

$+ 3\text{H}_2\text{O}$ . (Fischer and Cuntze.)

$\text{Zn}_2[\text{Co}(\text{CN})_6]_2 \cdot 10\text{NH}_3 + 9\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Fischer and Cuntze.)

**Cobaltimolybdic acid.****Ammonium barium cobaltous cobaltimolybdate,  $\frac{1}{2}(\text{NH}_4)_2\text{O}$ ,  $1\frac{1}{2}\text{BaO}$ ,  $\text{CoO}$ ,  $\text{CoO}_2$ ,  $10\text{MoO}_3 + 18\frac{1}{2}\text{H}_2\text{O}$ .**

Difficultly sol. in  $\text{H}_2\text{O}$ . (Friedheim and Keller, B. 1906, 39. 4306.)

**Ammonium cobaltous cobaltimolybdate,**

Much more sol. in  $\text{H}_2\text{O}$  than  $3(\text{NH}_4)_2\text{O}$ ,  $\text{CoO}$ ,  $\text{CoO}_2$ ,  $12\text{MoO}_3 + 20\text{H}_2\text{O}$ . Sp. gr. of cold sat. solution = 1.096. (Friedheim and Keller.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{CoO}$ ,  $\text{CoO}_2$ ,  $12\text{MoO}_3 + 20\text{H}_2\text{O}$ . 100 cc. cold sat. aqueous solution contain 3 g. of the salt. Sp. gr. of the solution = 1.0234. Sol. in conc.  $\text{HCl}$ .

Decomp. by conc.  $\text{H}_2\text{SO}_4$ , by  $\text{KOH} + \text{Aq}$  and by  $\text{NaOH} + \text{Aq}$ . (Friedheim and Keller.)

**Barium cobaltous cobaltimolybdate,**

Sl. sol. in  $\text{H}_2\text{O}$ . (Friedheim and Keller.)

**Cobaltous potassium cobaltimolybdate,**  
 $\text{CoO}, 3\text{K}_2\text{O}, \text{CoO}_2, 10\text{MoO}_3 + 10\text{H}_2\text{O}$ .  
 (Kurnakoff, Ch. Z. 1890, 14. 113.)

+  $11\text{H}_2\text{O}$ . Sol. in conc. HCl. Decomp. by KOH + Aq. and by NaOH + Aq. (Friedheim and Keller.)

$3\text{K}_2\text{O}, \text{CoO}, \text{CoO}_2, 12\text{MoO}_3 + 15\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in conc. HCl. Decomp. by KOH + Aq. and by NaOH + Aq. (Friedheim and Keller.)

+  $20\text{H}_2\text{O}$ . (Kurnakoff, Ch. Z. 1890, 14. 113.)

**Potassium cobaltimolybdate,**

$3\text{K}_2\text{O}, \text{CoO}_2, 9\text{MoO}_3 + 6\frac{1}{2}\text{H}_2\text{O}$ .

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29. 703.)

**Cobaltinitrocyanhydric acid.**

**Potassium cobaltinitrocyanide,**

$\text{K}_3\text{Co}_2(\text{CN})_5\text{NO}_2 + 3\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  but quickly decomp. Insol. in alcohol. (Rosenheim and Koppel, Z. anorg. 1898, 17. 68.)

**Silver cobaltinitrocyanide,**

$\text{Co}_2\text{Ag}_3\text{NO}_2(\text{CN})_{10} + 6\text{H}_2\text{O}$ , and +  $21\text{H}_2\text{O}$ .

(Rosenheim and Koppel.)

**Sodium cobaltinitrocyanide,**

$\text{Na}_3\text{Co}_2(\text{NO}_2)(\text{CN})_{10} + 11\text{H}_2\text{O}$ .

Very deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Rosenheim and Koppel.)

**Cobaltisulphurous acid,  $\text{H}_2\text{Co}_2(\text{SO}_3)_4$ .**

Not obtained in a solid state. (Berglund, Acta Lund. 1872.)

**Cobaltisulphites.**

The cobaltisulphites are insol. or at least very sl. sol. in  $\text{H}_2\text{O}$ . (Berglund, Acta Lund. 1872. 23.)

**Ammonium cobaltous cobaltisulphite,**

$(\text{NH}_4)_2\text{SO}_3, 2\text{CoSO}_3, \text{Co}_2(\text{SO}_3)_2 + 14\text{H}_2\text{O} = (\text{NH}_4)_2\text{Co}_2\text{Co}_2(\text{SO}_3)_6 + 14\text{H}_2\text{O}$ .

Scarcely sol. in  $\text{H}_2\text{O}$ , but decomp. thereby. Easily sol. in acids, when finely divided; also in  $\text{H}_2\text{SO}_3$  + Aq. (Berglund.)

$2(\text{NH}_4)_2\text{SO}_3, \text{CoSO}_3, \text{Co}_2(\text{SO}_3)_2 + 8\text{H}_2\text{O} = (\text{NH}_4)_4\text{CoCo}_2(\text{SO}_3)_6 + 8\text{H}_2\text{O}$ . As above. (Berglund.)

**Barium cobaltisulphite,  $3\text{BaSO}_3, \text{Co}_2(\text{SO}_3)_2 + 12\text{H}_2\text{O} = \text{Ba}_3\text{Co}_2(\text{SO}_3)_6 + 12\text{H}_2\text{O}$ .**

Ppt. Insol. in  $\text{H}_2\text{O}$ . Not attacked by cold acids even  $\text{H}_2\text{SO}_4$ , but is decomp. by boiling therewith. (Berglund, Acta Lund. 1872.)

**Bismuth cobaltisulphite,  $\text{Bi}_2\text{Co}_2(\text{SO}_3)_4$ .**

Insol. in  $\text{H}_2\text{O}$ , dil.  $\text{HNO}_3$ , or HCl + Aq. (Berglund, Acta Lund. 1872. 31.)

**Calcium cobaltisulphite,  $\text{Ca}_2\text{Co}_2(\text{SO}_3)_4$ .**

Ppt. Insol. in  $\text{H}_2\text{O}$  or HCl + Aq. (Berglund, Acta Lund. 1872. 30.)

**Cobaltous cobaltisulphite,  $\text{Co}_2\text{Co}_2(\text{SO}_3)_4$ .**

Ppt. (Berglund, B. 7. 470.)

**Cobaltous potassium cobaltisulphite,**  
 $\text{CoK}_4\text{Co}_2(\text{SO}_3)_6$ .

Insol. in  $\text{H}_2\text{O}$ . (Berglund.)

**Silver cobaltisulphite,  $\text{Co}_2(\text{SO}_3)_2, 3$ .**

Properties as the following comp. (Berglund.)

**Silver cobaltous cobaltisulphite,  $\text{Co}_2(\text{SO}_3)_2, 2\text{Ag}_2\text{SO}_3 + 9\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{HNO}_3$  + A. comp. by HCl or  $\text{H}_2\text{S}$  + Aq. (Berglund.)

**Sodium cobaltous cobaltisulphite.**

Decomp. by  $\text{H}_2\text{O}$ , so that it has not been obtained pure. (Berglund, Acta Lund. 29.)

**Cobaltoctamine sulphurous acid.**

See Octamine cobaltisulphurous acid.

**Cobaltocobalticyanhydric acid,**

$\text{H}_2\text{Co}_2(\text{CN})_{11}$ .

Unstable. (Jackson and Comey, A. J. 1897. 19, 277.)

**Barium cobaltocobalticyanide,**

$\text{BaHCo}_2(\text{CN})_{11} + 1\frac{1}{2}\text{H}_2\text{O}$ .

Somewhat sol. in  $\text{H}_2\text{O}$  when pure. The crude salt is insol. even in hot (Jackson and Comey.)

**Cupric cobaltocobalticyanide,  $\text{Cu}_2\text{Co}_2 + 4\text{H}_2\text{O}$ .**

Ppt. (Jackson and Comey.)

**Potassium hydrogen cobaltocobalticyanide,  $\text{K}_2\text{HCo}_2(\text{CN})_{11} + 2\text{H}_2\text{O}$ .**

Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$ . Insol. in alcohol. (Jackson and Comey.)  
 $\text{K}_2\text{H}_2\text{Co}_2(\text{CN})_{11} + \text{H}_2\text{O}$ . Insol. in hot  $\text{H}_2\text{O}$  when impure.

The pure salt is slowly sol. in cold  $\text{H}_2\text{O}$ . More sol. in warm  $\text{H}_2\text{O}$ . (Jackson and Comey.)

**Silver cobaltocobalticyanide,  $\text{Ag}_2\text{Co}_2 + \text{H}_2\text{O}$ .**

Ppt. (Jackson and Comey, B. 18. 1021.)

**Zinc cobaltocobalticyanide,  $\text{ZnHCo}_2 + 3\text{H}_2\text{O}$ .**

Ppt. (Jackson and Comey.)

**ocyanhydric acid**,  $\text{H}_2\text{Co}(\text{CN})_6$ .  
unstable. Sol. in  $\text{H}_2\text{O}$ . Insol. in

**potassium cobaltocyanide**,  
 $\text{K}_3\text{Co}(\text{CN})_6$ .

us, Z. anorg. 1895, 9. 17.)

**um cobaltocyanide**,  $\text{K}_4\text{Co}(\text{CN})_6$ .

mp. on air. Very deliquescent, and  
 $\text{H}_2\text{O}$ . Insol. in alcohol and ether.  
nps, Zeit. Ch. 1868. 952.)

**ous acid**.

**cobaltite**,  $\text{BaCoO}_3$ .

. in  $\text{H}_2\text{O}$  or dil.  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . Sol.  
+ Aq. (Rousseau, C. R. 109. 64.)  
 $\text{H}_2\text{O}_2$ . As above. (Rousseau.)

**us potassium cobaltite**,  $3\text{CoO}_2$ ,  $\text{CoO}$ ,  
O.

dly hydrolysed by  $\text{H}_2\text{O}$ .  
in conc.  $\text{HCl}$ . (Bellucci, Chem. Soc.  
2, (2) 354.)

**sium cobaltite**,  $\text{MgCoO}_3$ .

. in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ .  
sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ , from which it is  
by  $\text{KOH} + \text{Aq}$ . (Berzelius, Pogg. 33.

in  $\text{HF}$ ,  $\text{HCl}$ ,  $\text{HNO}_3 + \text{H}_2\text{SO}_4$ ; decomp.  
tially dissolved by  $\text{NH}_4\text{OH} + \text{Aq}$ ; quite  
when heated. (Dufau, C. R. 1896,  
0.)

**um cobaltite**.

rding to Bellucci and Dominici the  
nds formerly described are more or  
comp. by hydrolysis. (C. C. 1907.  
)

**cobaltite**.

n  $\text{NaOH} + \text{Aq}$ , but pptd. by diluting  
tion.

**bic acid (Niobic acid)**,  $3\text{Cb}_2\text{O}_5$ ,  
 $\text{H}_2\text{O}$ , or  $3\text{Cb}_2\text{O}_5$ ,  $7\text{H}_2\text{O}$ .

y sol. in  $\text{HF}$ ; very al. sol. in  $\text{HCl} + \text{Aq}$ ,  
sol. in  $\text{H}_2\text{O}$  after being treated with  
Aq. Sol. in conc.  $\text{H}_2\text{SO}_4$ . Sol. in  
Aq. Insol. in  $\text{NaOH} + \text{Aq}$ , but be-  
sol. in  $\text{H}_2\text{O}$  by being treated with  
+ Aq. Sol. in boiling  $\text{Na}_2\text{CO}_3 + \text{Aq}$ .  
Pogg. 113. 109.)

. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J.  
). 830.)

,  $4\text{H}_2\text{O}$ .

,  $7\text{H}_2\text{O}$ . (Santesson, Bull. Soc. (2)

**um columbate**,  $\text{Al}_2\text{O}_3$ ,  $3\text{Cb}_2\text{O}_5 + 12\text{H}_2\text{O}$ .

(E. F. Smith, J. Am. Chem. Soc.  
). 1652.)

**Barium columbate**,  $7\text{BaO}$ ,  $6\text{Cb}_2\text{O}_5 + 18\text{H}_2\text{O}$ .  
Ppt. (Bedford, J. Am. Chem. Soc. 1905,  
27. 1218.)

**Cadmium columbate**,  $\text{CdO}$ ,  $\text{Cb}_2\text{O}_5$ .

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most  
acids; decomp. by  $\text{HKSO}_4$  at red heat. (Lars-  
son, Z. anorg. 1896, 12. 199.)

+  $3\frac{1}{2}\text{H}_2\text{O}$ . Ppt. (E. F. Smith, J. Am.  
Chem. Soc. 1908, 30. 1652.)

**Cesium columbate**,  $4\text{Cs}_2\text{O}$ ,  $3\text{Cb}_2\text{O}_5 + 14\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (E. F. Smith, J. Am.  
Chem. Soc. 1908, 30. 1654.)

$7\text{Cs}_2\text{O}$ ,  $6\text{Cb}_2\text{O}_5 + 30\text{H}_2\text{O}$ . Ppt. (E. F.  
Smith, J. Am. Chem. Soc. 1908, 30. 1655.)

**Calcium columbate**,  $2\text{CaO}$ ,  $\text{Cb}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 81. 266.)

$\text{CaO}$ ,  $\text{Cb}_2\text{O}_5$ . Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ;  
insol. in most acids; decomp. by  $\text{HKSO}_4$  at  
red heat. (Larsson, Z. anorg. 1896, 12. 198.)

**Cobalt columbate**,  $\text{CoO}$ ,  $\text{Cb}_2\text{O}_5$ .

Sol. in conc. boiling  $\text{H}_2\text{SO}_4$ ; insol. in most  
acids; decomp. by  $\text{HKSO}_4$  at red heat. (Lars-  
son.)

**Copper columbate**,  $\text{CuO}$ ,  $\text{Cb}_2\text{O}_5$ .

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most  
acids; decomp. by  $\text{HKSO}_4$  at red heat. (Lars-  
son.)

+  $3\frac{1}{2}\text{H}_2\text{O}$ . Ppt. (E. F. Smith, J. Am.  
Chem. Soc. 1908, 30. 1652.)

**Iron (ferrous) columbate**,  $\text{Fe}(\text{CbO}_3)_2$ .

Min. *Columbite*. Insol. in acids.

**Iron (ferrous) columbate tantalate**,

$x\text{Fe}(\text{TaO}_3)_3$ ,  $y\text{Fe}(\text{CbO}_3)_2$ .

Min. *Tantalite*. Not attacked by acids.

$\text{Fe}(\text{CbO}_3)_2$ ,  $4\text{Fe}(\text{TaO}_3)_3$ . Min. *Tapiolite*.

**Lithium columbate**,  $7\text{Li}_2\text{O}$ ,  $6\text{Cb}_2\text{O}_5 + 26\text{H}_2\text{O}$ .

Ppt. (E. F. Smith, J. Am. Chem. Soc.  
1908, 30. 1655.)

**Magnesium columbate**,  $\text{MgO}$ ,  $\text{Cb}_2\text{O}_5$ .

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most  
acids; decomp. by  $\text{KHSO}_4$  at red heat. (Lars-  
son, Z. anorg. 1896, 12. 196.)

+  $4\text{H}_2\text{O}$ . Precipitate. (Rammelsberg.)

+  $7\text{H}_2\text{O}$ . Ppt. (E. F. Smith, J. Am.  
Chem. Soc. 1908, 30. 1651.)

$4\text{MgO}$ ,  $\text{Cb}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ . (Joly, C. R.  
81. 266.)

$3\text{MgO}$ ,  $\text{Cb}_2\text{O}_5$ . As above.

**Manganous columbate**.

Insol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 81. 266.)

$3\text{MnO}$ ,  $5\text{Cb}_2\text{O}_5$ . Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ;  
insol. in most acids; decomp. by  $\text{HKSO}_4$  at  
red heat. (Larsson, Z. anorg. 1896, 12. 201.)

**Potassium columbate,  $\text{KCbO}_3$ .**

Sol. in  $\text{H}_2\text{O}$ . (Joly, in *Fremy's Encyc. Ch.*)  
 $\text{K}_2\text{Cb}_2\text{O}_7 + 5\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Santesson.)

$\text{K}_2\text{Cb}_2\text{O}_{16} + 5\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ .  
 $\text{K}_2\text{Cb}_2\text{O}_7 + 11\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Santesson, *Bull. Soc.* (2) **24**, 53.)

$\text{K}_2\text{Cb}_2\text{O}_{12} + 11\text{H}_2\text{O}$ . (Santesson.)  
 $\text{K}_2\text{Cb}_2\text{O}_{13} + 13\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

$\text{K}_2\text{Cb}_2\text{O}_{16} + 16\text{H}_2\text{O}$ . Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Marignac, *A. ch.* (4) **8**, 20.)

Very sol. in  $\text{H}_2\text{O}$ . (E. F. Smith, *J. Am. Chem. Soc.* 1908, **30**, 1652.)

$\text{K}_2\text{Cb}_2\text{O}_{17} + 27\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (E. F. Smith.)

$\text{K}_{16}\text{Cb}_{14}\text{O}_{48} + 32\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

**Potassium sodium columbate,  $3\text{K}_2\text{O}, \text{Na}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 9\text{H}_2\text{O}$ .**

Very slightly sol. in  $\text{H}_2\text{O}$ . Insol. in alkalis. (Marignac.)

**Rubidium columbate,  $3\text{Rb}_2\text{O}, 4\text{Cb}_2\text{O}_5 + 9\frac{1}{2}\text{H}_2\text{O}$ .**

(E. F. Smith, *J. Am. Chem. Soc.* 1908, **30**, 1655.)

$4\text{Rb}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 14\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (E. F. Smith.)

**Silver columbate,  $\text{Ag}_2\text{O}, \text{Cb}_2\text{O}_5 + 2\text{H}_2\text{O}$ .**

Ppt. (E. F. Smith.)

$7\text{Ag}_2\text{O}, 6\text{Cb}_2\text{O}_5 + 5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Bedford, *J. Am. Chem. Soc.* 1905, **27**, 1218.)

**Sodium columbate,  $\text{NaCbO}_3 + 3\frac{1}{2}\text{H}_2\text{O}$ .**

Completely sol. in  $\text{H}_2\text{O}$ . (Rose.)

Ppt. (E. F. Smith, *J. Am. Chem. Soc.* 1906, **30**, 1651.)

$+ 2\frac{1}{2}\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . Insol. in  $\text{NaOH} + \text{Aq}$ . (Santesson.)

$2\text{Na}_2\text{O}, 3\text{Cb}_2\text{O}_5 + 9\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  or  $\text{NaOH} + \text{Aq}$ . (Santesson.)

$8\text{Na}_2\text{O}, 7\text{Cb}_2\text{O}_5$ . 1 pt. is sol. in 195–200 pts.  $\text{H}_2\text{O}$  at 14–20°; in ether 75–80 pts. or in 103 pts. boiling water. (Rose.)

$7\text{Na}_2\text{O}, 6\text{Cb}_2\text{O}_5 + 32\text{H}_2\text{O}$ . Very stable. Sol. in  $\text{H}_2\text{O}$ . (Bedford, *J. Am. Chem. Soc.* 1905, **27**, 1217.)

**Thorium columbate,  $5\text{Th}_2\text{O}_3, 16\text{Cb}_2\text{O}_5$ .**

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{H}_2\text{SO}_4$  at red heat. (Larson, *Z. anorg.* 1896, **12**, 202.)

**Yttrium columbate,  $\text{Y}_2\text{O}_3, \text{Cb}_2\text{O}_5$ .**

Insol. in  $\text{H}_2\text{O}$ . (Joly, *C. R.* **81**, 1261.)

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{H}_2\text{SO}_4$  at red heat. (Larson.)

**Zinc columbate,  $\text{ZnO}, \text{Cb}_2\text{O}_5$ .**

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{H}_2\text{SO}_4$  at red heat. (Larson.)

$7\text{ZnO}, 6\text{Cb}_2\text{O}_5 + 25\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Bedford, *J. Am. Chem. Soc.* 1905, **27**, 1218.)

**Zirconium columbate,  $\text{ZrO}_2, 5\text{Cb}_2\text{O}_5$ .**

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ ; insol. in most acids; decomp. by  $\text{H}_2\text{SO}_4$  at red heat. (Larson.)

**Percolumbic acid.**

See Percolumbic acid.

**Columbium (Niobium),  $\text{Cb}$ .**

Scarcely attacked by  $\text{HCl}$ ,  $\text{HNO}_3$ , or aqua regia. Conc.  $\text{H}_2\text{SO}_4$  dissolves easily on warming.

Sol. in fused oxidizing agents; sol. in hot conc.  $\text{H}_2\text{SO}_4$  and in  $\text{HF}$ ; also in  $\text{HF} + \text{HNO}_3$ ; insol. in other acids. (Moissan, *C. R.* 1901, **133**, 24.)

**Columbium pentabromide,  $\text{CbBr}_5$ .**

(Rose, *Pogg.* **104**, 422.)

**Columbium carbide nitride,  $3\text{CbC}, 2\text{CbN}$ .**

(Joly, *Bull. Soc.* (2) **25**, 506.)

**Columbium trichloride,  $\text{CbCl}_3$ .**

Not deliquescent; not attacked by  $\text{H}_2\text{O}$ , but easily oxidised by  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Roscoe, *C. N.* **27**, 25.)

**Columbium pentachloride,  $\text{CbCl}_5$ .**

Decomp. by  $\text{H}_2\text{O}$  with separation of a hydrate of  $\text{Cb}_2\text{O}_5$ . Sol. in cold  $\text{HCl} + \text{Aq}$ , forming a solution which soon gelatinises, and separates out  $\text{Cb}_2\text{O}_5$  by heat or dilution; with hot  $\text{HCl} + \text{Aq}$ , forms a cloudy solution which does not gelatinise. Sol. in  $\text{H}_2\text{SO}_4$  to form a clear liquid which gelatinises on heating. Sol. in  $\text{KOH} + \text{Aq}$ . Sol. in alcohol with slight residue. (Rose, *Pogg.* **104**, 432.)

**Columbium pentafluoride,  $\text{CbF}_5$ .**

Very hygroscopic; sol. in  $\text{H}_2\text{O}$  without separation of columbic acid. (Ruff, *B.* 1906, **42**, 492.)

**Columbium fluoride with MF.**

See Fluocolumbate, M.

**Columbium hydride,  $\text{CbH}(\text{?})$ .**

Insol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , and dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , even on boiling. Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ , and in fused  $\text{KHSO}_4$ . Sol. in cold  $\text{HF} + \text{Aq}$  if not too dilute. Also attacked by  $\text{KOH} + \text{Aq}$ . (Marignac, *N. Arch. Phys. Nat.* **31**, 89.)

Not attacked by boiling  $\text{H}_2\text{O}$ , or boiling  $\text{HCl}$ .

Oxidized by hot  $\text{H}_2\text{SO}_4$ . Insol. in boiling  $\text{HNO}_3$ . (Muthmann, *A.* 1907, **355**, 90.)

**Columbium hydroxide  $\text{Cb}_2\text{O}_5, x\text{H}_2\text{O}$ .**

See Columbic acid.

**nitride.**

cked by boiling nitric acid or aqua ol. in a cold mixture of  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . (Pogg. 111. 428.)

Not attacked by boiling  $\text{H}_2\text{O}$  or l. in conc.  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ .

by fused  $\text{KOH}$ . Not attacked by h  $\text{KOH} + \text{Aq.}$  (Muthmann, A. 34.)

**dioxide,  $\text{Cb}_2\text{O}_3$ .**

n still moist in boiling dil.  $\text{HCl} + \text{H}_2\text{O}$  in hot  $\text{HNO}_3$ ; less sol. in aqua in  $\text{HCl} + \text{Aq.}$  Sol. in conc.  $\text{H}_2\text{SO}_4$  heating. (Rose.)

$\text{H}_2\text{O}$ ,  $\text{KOH}$ , or conc. acids, even ag. (Delafontaine.)

**trioxide,  $\text{Cb}_2\text{O}_3$ .**

acids except  $\text{HF}$ . (Smith, Z. 7. 28.)

**tetroxide,  $\text{Cb}_2\text{O}_4$ .**

acked by cold or hot  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{SO}_4$ , or aqua regia. Slightly at-boiling  $\text{KOH} + \text{Aq.}$  (Delafon-

**pentoxide,  $\text{Cb}_2\text{O}_5$ .**

mitted insol. in hot conc.  $\text{H}_2\text{SO}_4$ . is not been ignited it forms a clear irth  $\text{H}_2\text{SO}_4$ , which can be diluted orming any precipitate. (Rose, 549.)

ised  $\text{KHSO}_4$ , which can be diluted without causing pptn. Insol. in

**oxybromide,  $\text{CbOBr}_2$ .**

by  $\text{H}_2\text{O}$  into  $\text{Cb}_2\text{O}_3$  and  $\text{HBr}$ . Sol.  $\text{SO}_4$  and conc.  $\text{HCl} + \text{Aq.}$  (Rose, 442.)

$\text{b}_2\text{O}_4$ ,  $\text{HBr}(\text{?})$ . Easily sublimed. anorg. 1894, 7. 97.)

**oxybromide rubidium bromide,  $\text{r}_3, 2\text{RbBr}$ .**

in moist air. Decomp. by  $\text{H}_2\text{O}$ . B. 1903, 39. 3059.)

**oxychloride,  $\text{CbOCl}_2$ .**

$\text{H}_2\text{O}$  from air without deliquescing posed. Decomp. with  $\text{H}_2\text{O}$  with heat. Insol. in hot or cold  $\text{HCl} + \text{Aq.}$  by long contact with  $\text{H}_2\text{SO}_4$ , to a ud, which clears up on warming, eparates out  $\text{Cb}_2\text{O}_3$ . Sol. in cold and hot  $\text{K}_2\text{CO}_3 + \text{Aq.}$  (Rose.)cohol, from which it is precipitated (Blomstrand.)

$\text{b}_2\text{O}_4$ ,  $\text{HCl}$ . Sublimate. (Smith, 894, 7. 97.)

**oxychloride rubidium chloride,  $\text{r}_3, 2\text{RbCl}$ .**

by  $\text{H}_2\text{O}$ . (Weinland, B. 1906,

**Columbium oxyfluoride,  $\text{CbOF}_3$ .**

(Joly, C. R. 81. 1266.)

**Columbium oxyfluoride with MF.**

See Fluoxycolumbate, and Fluoxyhypo-columbate, M.

**Columbium oxysulphide,  $\text{Cb}_2\text{OS}_2$ .**

Insol. in boiling  $\text{HCl} + \text{Aq.}$  Slowly decomp. into  $\text{Cb}_2\text{O}_3$  by boiling with  $\text{HNO}_3$  or aqua regia. Insol. in boiling dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  Converted into columbic sulphate, sol. in  $\text{H}_2\text{O}$ , by boiling conc.  $\text{H}_2\text{SO}_4$ . Sl. sol. in hot  $\text{HF}$ . Insol. in boiling  $\text{K}_2\text{S} + \text{Aq.}$  (Rose, Pogg. 111. 193.)

**Copper, Cu.**

Copper is not attacked by distilled  $\text{H}_2\text{O}$ , or by  $\text{NH}_4\text{NO}_3$ ,  $\text{KNO}_3$ , or  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq.}$  or by a mixture of those salts in solution. (Muir, cited by Carnelly, Chem. Soc. 30. 1.)

Distilled  $\text{H}_2\text{O}$  has slight action on Cu. 100 ccm.  $\text{H}_2\text{O}$  dissolved from 2 sq. decm. Cu from 0.035 mg. Cu in one hour up to 0.280 mg. in 72 hours. 100 ccm.  $\text{H}_2\text{O}$  dissolved 0.44 mg. from 6 sq. decm. in 48 hours. Presence of solder diminishes solubility about one-half. At 90–100° the amount dissolved is about one-half that at ord. temp. (Carnelley, Chem. Soc. 30. 1.)

100 ccm. distilled  $\text{H}_2\text{O}$  dissolved only 1 mg. Cu from 11.8 sq. cm. during a week, while air free from  $\text{CO}_2$  was conducted through the solution. When the air contained  $\text{CO}_2$ , 3 mg. were dissolved. (Wagner, Dingl. 221. 259.)

100 l. sea water dissolved 12.96 g. Cu from 1 sq. m. (Calvert and Johnson, C. N. 11. 171.)

**Solubility in  $\text{H}_2\text{SO}_4$ .**

Not attacked by dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Vogel, Schw. J. 32. 301.)

Action of  $\text{H}_2\text{SO}_4$  at ordinary temp. is very slight even after a long time. (Barruel, J. Pharm. 20. 13 [1834].)

$\text{H}_2\text{SO}_4$  has no action below 130°. (Calvert and Johnson, Chem. Soc. 19. 438.)

$\text{H}_2\text{SO}_4$  acts slightly even at 20°.

16.3 g.  $\text{H}_2\text{SO}_4$  (1.843 sp. gr.) dissolved the following amts. from 3 g. Cu, having a surface of 65 sq. cm. at the given temp.

Temp.	Time	% Cu dissolved
19°	14 days	About 6
60	120 min.	2.5
80	30 "	1.5
100	30 "	3.1
124	30 "	22.7
130	30 "	32.6
137	30 "	35.0
150	30 "	69.2
170	10 "	51.92
195	2 "	53.5
220	1/2 "	70.57
270	few seconds	nearly 100

With dilute acid the action was much less violent, as is seen in the following table—

Tem.	Time	Acid	Sp. gr.	% Cu dissolved
100°	30 min.	H <sub>2</sub> SO <sub>4</sub>	1.843	2.380
100	30 "	2H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1.8295	0.585
100	30 "	H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1.780	0
100	30 "	H <sub>2</sub> SO <sub>4</sub> , 2H <sub>2</sub> O	1.620	0
130	30 "	H <sub>2</sub> SO <sub>4</sub>	1.843	32.6
130	30 "	H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1.780	1.18
130	30 "	H <sub>2</sub> SO <sub>4</sub> , 2H <sub>2</sub> O	1.620	0
165	15 "	H <sub>2</sub> SO <sub>4</sub>	1.843	70
165	30 "	H <sub>2</sub> SO <sub>4</sub> , H <sub>2</sub> O	1.780	16.5
165	30 "	H <sub>2</sub> SO <sub>4</sub> , 2H <sub>2</sub> O	1.620	2.7

(Pickering, Chem. Soc. **33**. 112.)

Cu is very sl. attacked by cold HCl + Aq of 1.12 sp. gr., but somewhat more on warming. Even less sol. in dil. HCl + Aq. (Löwe, Z. anal. **4**. 361.)

Sol. in warm conc. HI + Aq. (Rose.)

Slowly attacked by H<sub>2</sub>SO<sub>4</sub> + Aq. (Causse, Bull. Soc. (2) **45**. 3.)

More or less sol. in all dil. mineral acids and also in organic acids, as acetic, tartaric, etc., when supply of air is afforded; but absolutely insol. in the latter acids when air is wholly excluded. The importance of this fact in the use of Cu cooking utensils is manifest.

Easily attacked by ord. HNO<sub>3</sub> + Aq.

With very conc. HNO<sub>3</sub> + Aq (sp. gr. 1.52) it becomes passive, as in the case of Fe.

Pure dil. HNO<sub>3</sub> + Aq of 1.07 sp. gr. or less does not attack Cu at 20°, but if NO<sub>2</sub> or KNO<sub>3</sub> is added the action begins at once. If HNO<sub>3</sub> + Aq is more conc. the Cu is attacked. HNO<sub>3</sub> + Aq of 1.108 sp. gr. begins to act at -2°, and of 1.217 sp. gr. at -10°.

HNO<sub>3</sub> + Aq of 1.512 sp. gr. attacks Cu violently at 20°, but action soon ceases on account of formation of a crust of Cu(NO<sub>3</sub>)<sub>2</sub>, insol. in pure HNO<sub>3</sub>. (Millon, A. ch. (3) **6**. 95.)

Easily sol. in 2N-HClO<sub>4</sub> + Aq at 50°. (Hendrixson, J. Am. Chem. Soc. 1904, **26**. 756.)

Not appreciably sol. in anhydrous HF. (Poulenc, A. ch. 1894, (7) **2**. 12.)

When in contact with the air, Cu is soon oxidised by acids, alkalies (especially NH<sub>4</sub>OH + Aq), and many fatty bodies.

Sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq. (Traube, B. **18**. 1887.)

Slowly sol. in NH<sub>4</sub>OH + Aq. (Schönbein, B. A. B. **1856**. 580.)

Sol. in KI + Aq when warm and conc. (Rose.)

When finely divided, Cu is easily sol. in hot FeCl<sub>3</sub> + Aq.

Action of dilute solutions of salts on solubility of Cu in H<sub>2</sub>O.

100 ccm. solution of the following salts dissolve the amts. of Cu given below, from surface of 1 sq. dcm. in 48 hours.

Salts	G. salt dissolved in 100 ccm. H <sub>2</sub> O	Mg. Cu dissolved
H <sub>2</sub> O	....	0.11
KNO <sub>3</sub>	0.01 0.05 5.00	0.07 0.13 0.16
NaNO <sub>3</sub>	0.05 5.00	0.18 0.19
CaSO <sub>4</sub>	0.05	0.11
K <sub>2</sub> SO <sub>4</sub>	0.05 5.00	0.12 0.28
MgSO <sub>4</sub>	0.05 5.00	0.16 0.34
Na <sub>2</sub> CO <sub>3</sub>	0.01 0.05 5.00	0.05 0.11 2.80
K <sub>2</sub> CO <sub>3</sub>	0.05 5.00	0.14 2.35
NaCl	0.01 0.05 5.00	0.05 0.18 7.50
KCl	5.00	8.17
(NH <sub>4</sub> ) <sub>2</sub> SO <sub>4</sub>	0.05 5.00	0.66 28.50
NH <sub>4</sub> NO <sub>3</sub>	0.01 0.05 5.00	0.17 0.66 60.00
NH <sub>4</sub> Cl	0.05 5.00	0.92 158.75

At 100° the action of KNO<sub>3</sub>, K<sub>2</sub>SO<sub>4</sub>, and NH<sub>4</sub>NO<sub>3</sub> is diminished, while that of (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>, Na<sub>2</sub>CO<sub>3</sub>, and NaCl is increased.

Tables are also given for mixtures of the above salts. (Carnelley, Chem. Soc. **30**. 1.

Solubility of Cu in dilute salt solutions

11.8 sq. cm. Cu were used, and the action continued one week, while air with or without CO<sub>2</sub> was passed through the solution continually.

ccm. solution of the following salts dissolved the given amts. Cu.

	G. salt dissolved in 100 ccm. H <sub>2</sub> O	Mg. Cu dissolved without CO <sub>2</sub>	Mg. Cu dissolved with CO <sub>2</sub>
I	0.50	4	118
I <sub>2</sub>	0.50	4	115
I <sub>2</sub>	0.83	5	112
Cl	1.00	904	138
Cl <sub>2</sub>	1.00	0	4
Cl <sub>2</sub>	1.00	0	3
Cl <sub>2</sub>	1.00	0	...
H	0.923	0	...
H <sub>2</sub>	sat.	0	...

(Wagner, Dingl. 221. 260.)

illed H<sub>2</sub>O dissolved no Cu from 420 sq. d. 150 hours at ord. temp.

NO<sub>2</sub> + Aq with less than 0.4 g. per litre dissolved the same result.

O<sub>2</sub> + Aq or (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> + Aq contained 0.2 g. per litre dissolved no Cu.

containing carbonates + nitrates, carboxylates + sulphates, or chlorides + nitrates dissolved no Cu.

NO<sub>2</sub> + Aq containing 0.4 g. per litre dissolved 3 mg. per litre after 150 hours.

on a surface of 2100 sq. m. of Cu, H<sub>2</sub>O dissolved with CO<sub>2</sub> at ord. pressure, and containing the following salts in solution, dissolved the given amts. Cu. in 120 hours.

Salt	G. salt dissolved in 1 l. H <sub>2</sub> O	Mg. Cu dissolved
I <sub>2</sub> O	.....	1.0
CO <sub>2</sub>	0.2	0.2
Cl <sub>2</sub>	0.2	1.80
I <sub>2</sub> NO <sub>2</sub>	0.02	1.40
I <sub>2</sub> NO <sub>2</sub>	0.04	1.40
CO <sub>2</sub> + NO <sub>2</sub>	0.1	1.00
CO <sub>2</sub> + NO <sub>2</sub>	0.02	
CO <sub>2</sub> + NO <sub>2</sub>	0.2	
NO <sub>2</sub>	0.04	0.1
NO <sub>2</sub> + Cl <sub>2</sub>	0.2	3.6
Cl <sub>2</sub>	0.2	

on a surface of 2100 sq. m., H<sub>2</sub>O charged with O<sub>2</sub> at pressure of 6 atmos. dissolved 0.6 g. in 48 hours.

when charged with CO<sub>2</sub> at 6 atmos. and containing:

1 g. NH<sub>4</sub>NO<sub>3</sub> per litre, dissolved 0.8 mg. in 48 hours.

1 mg. NH<sub>4</sub>NO<sub>3</sub> per litre, dissolved 1.4 g. in 48 hours.

1 mg. K<sub>2</sub>CO<sub>3</sub> per litre, dissolved 1.2 mg. in 48 hours. (Muir, Proc. Soc. Manchester, 1897.)

in KCN + Aq. (Goyder, C. N. 1894, 2.)

solution of (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub> containing 0.829 g.

in 110 cc. dissolves 0.2050-0.2279 g. Cu. (Turrentine, J. phys. Chem. 1907, 11. 625.)

Sl. attacked by liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 827.)

Amts. Cu dissolved by action of various oils on 8 sq. in. Cu by 10 days' exposure and subsequent 67 days—

	Amt. Cu dissolved in 10 days	Amt. Cu dissolved in subsequent 67 days
Linseed oil	0.3000 grain	0.2435 grain
Olive oil	0.2200 "	0.0200 "
Colza oil	0.0170 "	0.1230 "
Almond oil	0.1030 "	0.1170 "
Seal oil	0.0485 "	0.0315 "
Sperm oil	0.0030 "	0.0575 "
Castor oil	0.0065 "	0.0035 "
Neatsfoot oil	0.1100 "	...
Sesame oil	0.1700 "	0.0015 "
Paraffine oil	0.0015 "	...

(Watson, C. N. 36. 200.)

Qualitative results of the action of various oils on Cu are also given by Thompson. (C. N. 34. 176, 200, 219.)

½ ccm. oleic acid dissolves 0.0157 g. Cu in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Sol. in an alkaline solution of gelatine (3.54 %) copper gauze dissolved in 48 hours. (Lidoff, C. C. 1899, II. 471.)

#### Cuprous acetylde, Cu<sub>2</sub>C<sub>2</sub>.

Decomp. by heating with H<sub>2</sub>O or KCN + Aq. Decomp. by HNO<sub>3</sub>. (Keiser, Am. Ch. J. 1892, 14. 289.)

Not decomp. by H<sub>2</sub>SO<sub>4</sub>, NH<sub>4</sub>OH, KOH + Aq or acetic acid, even on warming. The dry salt is sol. in very dil. HCl + Aq without evolution of gas. Sol. in conc. KCN + Aq. (Böttger, A. 1859, 109. 356.)

#### Cupric acetylde, CuC<sub>2</sub>.

Easily sol. in HCl. Turns brown in the air, and becomes insol. in acids. (Phillips, Z. anorg. 1894, 6. 241.)

3Cu<sub>2</sub>C<sub>2</sub>O + 2H<sub>2</sub>O. Solubility as that of Cu<sub>2</sub>C<sub>17</sub>H<sub>4</sub>O<sub>3</sub>. (Söderbaum, B. 1897, 30. 764.)

Cu<sub>2</sub>C<sub>17</sub>H<sub>4</sub>O<sub>3</sub>. Insol. in H<sub>2</sub>O. When dry is violently decomp. by conc. H<sub>2</sub>SO<sub>4</sub> or not too dil. HNO<sub>3</sub>. Rapidly decomp. by warming with dil. acids, especially HCl.

Insol. in NH<sub>4</sub>OH + Aq in absence of air, partially sol. in presence of air.

Insol. in organic solvents. (Söderbaum, B. 1897, 30. 762.)

#### Cuprous acetylde iodide, Cu<sub>2</sub>C<sub>2</sub>I, CuI.

Ppt. (Berthelot and Delépine, A. ch. 1900, (7) 19. 54.)

**Cupric arsenide,  $\text{Cu}_3\text{As}_2$ .**

(Reinsch, J. pr. **24**. 244.)  
 $\text{Cu}_3\text{As}_2$ . (Gehlen.)  
 $\text{Cu}_3\text{As}_2$ . Ppt. Decomp. by acids. (Kane, Pogg. **44**. 471.)  
 $\text{Cu}_3\text{As}_2$ . Min. *Domeykite*. Insol. in  $\text{HCl}$  + Aq; sol. in  $\text{HNO}_3$ .  
 $\text{Cu}_3\text{As}_2$ . Min. *Algodonite*.  
 $\text{Cu}_3\text{As}_2$ . Min. *Darwinite*.

**Cuprous azoimide,  $\text{CuN}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . (Curtius.)  
 Sensitive to sunlight. (Wöhler, B. 1913, **46**. 2053.)

**Cupric azoimide, basic,  $\text{CuO}$ ,  $\text{CuN}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . (Wöhler, B. 1913, **46**. 2055.)

**Cupric azoimide,  $\text{CuN}_3$ .**

Very explosive.  
 Very sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$ . (Curtius, J. pr. 1898, (2) **58**. 296.)

**Copper azoimide ammonia,  $\text{CuN}_3$ ,  $2\text{NH}_3$ .**

Ppt. Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Dennis, J. Am. Chem. Soc. **1907**. **29**, 19.)

**Copper boride,  $\text{Cu}_3\text{B}_2$ .**

(Marsden, J. B., **1880**. 330.)

**Cuprous bromide,  $\text{Cu}_2\text{Br}_2$ .**

1 l.  $\text{H}_2\text{O}$  dissolves at  $18^\circ$ – $20^\circ$ :

0.4320 millimols bromine.  
 0.3157 " cupric copper.  
 0.1061 " cuprous copper.

(Bodländer, Z. anorg. **1902**, **31**. 460.)

Sol. in  $\text{HBr}$ ,  $\text{HCl}$  without decomp., or  $\text{HNO}_3$  + Aq with decomp., also in  $\text{NH}_4\text{OH}$  + Aq. Insol. in boiling conc.  $\text{H}_2\text{SO}_4$  or  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq. (Berthelot, A. ch. **44**. 385.)  
 Sol. in  $\text{H}_2\text{SO}_3$  + Aq. (Lean and Whatmough, Chem. Soc. **1898**, **73**. 151.)

Sol. in  $\text{NaCl}$ , and  $\text{Na}_2\text{S}_2\text{O}_3$  + Aq. (Re-nault, C. R. **59**. 319.)

Solubility of  $\text{Cu}_2\text{Br}_2$  in  $\text{KBr}$  + Aq.

All values recorded in millimols per litre.

KBr	Total copper	Cupric copper	Cuprous copper
25	0.119	0.012	0.107
40	0.200	0.013	0.187
60	0.310	0.025	0.285
80	0.423	0.012	0.411
100	0.5836	...	0.5836
120	0.6934	...	0.6934
500	8.719	...	8.719

(Bodländer and Storbeck, Z. anorg. **1902**, **31**. 462.)

Difficultly sol. in methyl acetate. (Naumann, B. **1909**, **42**. 3790.)

Sol. in ethyl acetate. (Naumann, B. **1904**, **43**. 314.)

Insol. in acetone. (Naumann, B. **1904**, **43**. 329; Eidmann, C. C. **1897**, II. 1014.)

100 g. acetonitrile dissolve 3.86 g.  $\text{Cu}_2\text{Br}_2$  at  $18^\circ$ . (Naumann and Schier, B. **1914**, **47**. 249.)

Sol. in pyridine. (Naumann, B. **1904**, **43**. 4609.)

Mol. weight determined in pyridine, methyl and ethyl sulphides. (Werner, Z. anorg. **1897**, **15**. 19, 26, and 28.)

**Cupric bromide,  $\text{CuBr}_2$ .**

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . Insol. in benzene. (Franchimont, B. **16**. 387.)

Very sl. attacked by cold or even hot  $\text{H}_2\text{SO}_4$ . (Viard, C. R. **1902**, **135**. 169.)

Moderately sol. in liquid  $\text{NH}_3$ . (Hon, Am. Ch. J. **1908**, **39**. 219.)

100 g. 95% formic acid dissolve 0.16 g.  $\text{CuBr}_2$  at  $21^\circ$ . (Aschan, Ch. Z. **1913**, **37**. 1117.)

100 g. acetonitrile dissolve 24.43 g.  $\text{CuBr}_2$  at  $18^\circ$ . (Naumann and Schier, B. **1914**, **47**. 249.)

Sol. in benzonitrile. (Naumann, B. **1914**, **47**. 1369.)

Sol. in methyl acetate. (Naumann, B. **1909**, **42**. 3790.)

Sol. in acetone. (Naumann, B. **1904**, **43**. 328.)

Sol. in acetone with a brown color. (Eidmann, C. C. **1899**, II. 1014.)

+  $2\text{H}_2\text{O}$  (?). (Berthelot, A. ch. **1839**, **44**. 385.)

+  $4\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Sabatier, Bull. Soc. **1894**, (3) **11**. 677.)

**Cupric hydrogen bromide,  $\text{CuBr}_2$ ,  $\text{HBr}$  +  $2\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Sabatier, Bull. Soc. **1894**, (3) **11**. 681.)

+  $10\text{H}_2\text{O}$ . (Weinland and Knöll, Z. anorg. **1905**, **44**. 116.)

**Cupric lithium bromide,  $\text{CuBr}_2$ ,  $2\text{LiBr}$  +  $6\text{H}_2\text{O}$ .**

Very hygroscopic. (Sementschenko, Z. anorg. **1899**, **19**. 336.)

Very hygroscopic; decomp. by  $\text{H}_2\text{O}$ . (Kurnakoff, C. C. **1899**, I. 16.)

**Cupric potassium bromide,  $\text{CuBr}_2$ ,  $\text{KBr}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Sabatier, Bull. Soc. **1894**, (3) **11**. 683.)

**Cuprous bromide ammonia,  $\text{Cu}_2\text{Br}_2$ ,  $2\text{NH}_3$ .**

Stable when dry.

Easily sol. in  $\text{HNO}_3$  and  $\text{NH}_4\text{OH}$  + Aq. Other mineral acids and acetic acid separate  $\text{Cu}_2\text{Br}_2$ . (Richards, Z. anorg. **1898**, **17**. 245.)

$\text{Cu}_2\text{Br}_2$ ,  $6\text{NH}_3$ . (Lloyd.)

$\text{Cu}_2\text{Br}_2$ ,  $3\text{NH}_3$ . (Lloyd, J. phys. Chem. **1908**, **12**. 399.)

romide ammonia,  $\text{CuBr}_2 \cdot 2\text{NH}_3$ .  
in  $\text{NH}_4\text{Br} + \text{Aq}$  without decomp.  
ds, B. 23. 3790.)  
 $\text{r}_2$ ,  $10\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$ .  
ds, Am. Ch. J. 15. 651.)  
 $\text{r}_2$ ,  $3\text{NH}_3$ . Completely sol. in a little  
it is decomp. by dilution. Insol. in  
(Rammelsberg, Pogg. 55. 246.)  
 $\text{r}_2$ ,  $4\text{NH}_3 + \text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dis-  
.03 pts.  $\text{CuBr}_2$ ,  $4\text{NH}_3$  at  $25^\circ$ . (Pud-  
Dissert.)  
 $\text{r}_2$ ,  $5\text{NH}_3$ . As above. (Rammels-  
 $\text{r}_2$ ,  $6\text{NH}_3$ . Sol. in small amts. of  $\text{H}_2\text{O}$ ,  
omp. on dilution. (Richards.)

romide nitric oxide,  $\text{CuBr}_2 \cdot \text{NO}$ .  
np. by  $\text{H}_2\text{O}$ . (Manchot, B. 1914,  
.)

chloride,  $\text{Cu}_2\text{Cl}_2$ .

g.  $\text{Cu}_2\text{Cl}_2$  dissolve in 100 g.  $\text{H}_2\text{O}$  at  
.55 g. at  $26.5^\circ$ . (Kremann and Noss,  
, 33. 1206.)

y of  $\text{Cu}_2\text{Cl}_2$  in  $\text{H}_2\text{O}$  in an atmosphere  
of hydrogen.  
ility is recorded in mg-atoms per l.

Total Cu	$\text{Cu}_2\text{Cl}_2$ by analysis	Cl	$\text{Cu}_2\text{Cl}_2$ calc.	$\text{Cu}_2\text{Cl}_2$ by analysis

(Engel, l. c.)

Freshly pptd.  $\text{Cu}_2\text{Cl}_2$  is sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ .  
(Lean and Whatmough, Chem. Soc. 1898,  
73. 150.)

Sl. sol. in normal  $\text{NH}_4\text{OH} + \text{Aq}$  only by  
shaking several hours, a 0.02 normal solution  
of cuprous copper being obtained. (Gaus,  
Z. anorg. 1900, 25. 258.)

Insol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ . (Siewert, Gm. K.  
5. 1, 893.)

Sol. in alkyl triphosphites. (Arbusoff,  
C. C. 1906, II. 750.)

Solubility in  $\text{FeCl}_3$ ,  $4\text{H}_2\text{O} + \text{Aq}$  at  $21.5^\circ$ .

See also under  $\text{CuCl}_2 + 2\text{H}_2\text{O}$ .

1 g.  $\text{CuCl}_2$  is sol. in 181 g. methyl acetate at  $18^\circ$ . Sp. gr.  $18^\circ/4^\circ$  of the sat. solution = 0.939. (Naumann, B. 1909, **42**, 3793.)

1 g.  $\text{CuCl}_2$  is sol. in 249 g. ethyl acetate at  $18^\circ$ . Sp. gr. of sat. solution  $18^\circ/4^\circ$  = 0.9055. (Naumann, B. 1904, **37**, 3603.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, **43**, 314.)

1 pt. sol. in 249.3 pts. ethyl acetate at 10°. (Alexander, Dissert. 1899.)

Solubility in acetone.

34.7 g. acetone dissolve 1 g.  $\text{CuCl}_2$  at 18°. Sp. gr. of sat. solution  $18^\circ/4^\circ = 0.8154$ . (Naumann, B. 1904, 57, 4329.)

1.40 pts. are sol. in 100 pts. acetone at 56°. (Laszcynski, B. 1894, 27, 2287.)

Sol. in acetone and methylal. 1 gram. dissolves in 34.08 grams of acetone at 18°. (Eidmann, C. C. 1899, II, 1014.)

100 pts. absolute ether dissolve 0.043 g.  $\text{CuCl}_2$ . (Bödtker, Z. phys. Ch. 1897, 22, 511.)

Mol. weight determined in pyridine and methyl sulphide. (Werner, Z. anorg. 1897, 15, 20 and 25.)

100 g. sat. solution in acetonitrile contains 1.57 g.  $\text{CuCl}_2$ . (Naumann and Schier, B. 1914, 47, 249.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47, 1369.)

Sol. in boiling dipropylamine. (Werner, Z. anorg. 1897, 15, 34.)

Sol. in urethane. (Ley, Z. phys. Ch. 1897, 22, 81); (Castoro Z. anorg. 1899, 20, 61.)

+ $\text{H}_2\text{O}$ . (Ditte, A. ch. (5) 22, 551.)

Sol. in  $\text{H}_2\text{O}$  with slight decomp. (Sabatier, Bull. Soc. 1895, (3) 13, 601.)

+ $2\text{H}_2\text{O}$ . Deliquescent. 100 g.  $\text{H}_2\text{O}$  dissolve 121.4 g.  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  at  $16.1^\circ$ . (Rüddorff.)

Aq. sol. at  $35^\circ$  contains 9.689 Mol. %  $\text{CuCl}_2$ .  
" 15° " 8.934 " % "

(Schreinemakers, C. C. 1911, II, 349.)

$\text{CuCl}_2 + 2\text{H}_2\text{O} + \text{Aq}$ . sat. at  $30^\circ$  contains 43.95%  $\text{CuCl}_2$ . (Meerburg, C. C. 1904, II, 1362.)

43.95 g. anhydrous  $\text{CuCl}_2$  are dissolved in 100 g.  $\text{CuCl}_2 + \text{Aq}$  at  $30^\circ$ . (Schreinemakers, Arch. neer. Sc. 1910 [2], 15, 117.)

44.47% by weight anhydrous  $\text{CuCl}_2$  is dissolved in  $\text{H}_2\text{O}$  at  $35^\circ$ . (Schreinemakers and Thonus, Verh. k. Akad. Wet. Amst. 1912, 21, 333.)

Solubility of  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  in ethyl alcohol +  $\text{Aq}$  at  $11.5^\circ$ .

Percent of ethyl alcohol by volume	Grams $\text{CuCl}_2$ dissolved in 5 cc.
99.3	1.175
98.3	1.116
96.3	1.097
95.3	1.070
94.3	1.059

Anhydrous salt dissolves readily in absolute ethyl alcohol;  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  is precipitated by  $\text{H}_2\text{O}$ .

Solubility of  $\text{CuCl}_2 + 2\text{H}_2\text{O}$  in ethyl alcohol Aq at  $11.5^\circ \text{C}$ . under addition of creasing amounts of  $\text{CuCl}_2$ .

P = Percent of ethyl alcohol by volume

G = Grams of  $\text{CuCl}_2$  added.

$\text{C}_0$  = Grams of  $\text{CuCl}_2$  in 5 cc. of the solut

$\text{C}_w$  = Grams of water in 5 cc. of the solut calculated from

(1) the water content of the alcohol.

(2) the water of crystallization which gone into solution.

(3) the water held mechanically in  $\text{C} + 2\text{H}_2\text{O}$ .

**Cuprous hydrogen chloride,  $\text{CuCl} \cdot \text{HCl}$ .**Sol. in  $\text{H}_2\text{O}$ . (Neumann, M. 1894, 15. 493.)**Cupric hydrogen chloride,  $\text{CuCl}_2 \cdot \text{HCl} + 3\text{H}_2\text{O}$** Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$  below 0° (Engel, C. R. 106. 273.)

$\text{CuCl}_2 \cdot 2\text{HCl}$ . Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (Alexander, Dissert. 1899.)  
+  $5\text{H}_2\text{O}$ . Properties as above. (Sabbatier, C. R. 106. 1724.)

$\text{CuCl}_2 \cdot 3\text{HCl}$ . Sol. in  $\text{H}_2\text{O}$ . (Neumann M. 1894, 15. 493.)

**Cupric gold (auric) chloride,  $\text{CuCl}_2 \cdot 2\text{AuCl}_3 + 6\text{H}_2\text{O}$ .**10% is sol. in  $\text{H}_2\text{O}$  at 18°. (Mylus, Z. anorg. 1911, 70. 210.)**Cupric lithium chloride,  $\text{CuCl}_2 \cdot \text{LiCl} + 2\frac{1}{2}\text{H}_2\text{O}$ .**

Decomp. on air. Decomp. by dissolving in  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{LiCl} + \text{Aq}$  without decomp. Decomp. by alcohol. (Chassevant, A. ch. (6) 30. 33.)  
+  $2\text{H}_2\text{O}$ . (Meyerhoffer, W. A. B. 100, 2b. 621.)

**Cupric mercuric chloride.**Easily sol. in  $\text{H}_2\text{O}$ . (v. Bonsdorff.)**Cupric mercuric potassium chloride,  $\text{CuCl}_2 \cdot 3\text{HgCl}_2 + 6\text{KCl} + 2\text{H}_2\text{O}$ .**

Deliquescent in moist air. Sol. in boiling  $\text{H}_2\text{O}$  without decomp., and recrystallises if cooled slowly. Insol. in absolute alcohol. (v. Bonsdorff, Pogg. 33. 81.)

**Cuprous nitrosyl chloride,  $\text{Cu}_2\text{Cl}_2 \cdot 2\text{NOCl}$ .**

Very deliquescent and sol. in  $\text{H}_2\text{O}$  with immediate decomp. (Sudborough, Chem. Soc. 59. 658.)

**Cuprous potassium chloride,  $\text{Cu}_2\text{Cl}_2 \cdot 4\text{KCl}$ .**Sol. in  $\text{H}_2\text{O}$ . (Mitscherlich, A. ch. 73. 384.)For solubility data, see  $\text{Cu}_2\text{Cl}_2 + \text{KCl}$  under cuprous chloride.**Cupric potassium chloride.**

$\text{CuCl}_2 \cdot \text{KCl}$ . (Meyerhoffer, Z. phys. Ch. 3. 336.)

Sol. in  $\text{H}_2\text{O}$ ; only sl. sol. in conc.  $\text{HCl} + \text{Aq}$ . (Gröger, Z. anorg. 1899, 19. 330.)

$\text{CuCl}_2 \cdot 2\text{KCl} + 2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and alcohol. (Berzelius, Pogg. 13. 458.)

The composition of the hydrates formed by this salt at different dilutions is calculated from determinations of the lowering of the fr. pt. produced by the salt and of the conductivity and sp. gr. of its aqueous solutions. (Jones, Am. Ch. J. 1905, 34. 322.)

For solubility data, see  $\text{CuCl}_2 + \text{KCl}$  under cupric chloride.**Cupric rubidium chloride,  $\text{CuCl}_2 \cdot 2\text{RbCl}$ .**Easily sol. in  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq}$ . (Godefroy, B. 8. 9.)+  $2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Wyrouboff, J. B. 1887. 538.)**Cuprous sodium chloride.**Very sol. in  $\text{H}_2\text{O}$ .

**Cupric sodium chloride.**

Easily sol. in conc.  $\text{NaCl} + \text{Aq.}$  Sol. in alcohol of 0.837 sp. gr.

No double salt exists. (Schreinemakers and de Baat, Z. phys. Ch. 1909, **65**, 586.)

**Cupric thallic chloride,  $\text{CuCl}_2, 2\text{TlCl}_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Willm, A. ch. (4) **5**, 55.)  
 $+6\text{H}_2\text{O}$ . Can be cryst. from  $\text{H}_2\text{O}$ . (Gewecke, A. 1909, **366**, 225.)

**Cuprous chloride ammonia,  $\text{Cu}_2\text{Cl}_2, \text{NH}_3$ .**

(Lloyd, J. phys. Chem. 1908, **12**, 399.)  
 $\text{Cu}_2\text{Cl}_2, 2\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$  or acids, not by alcohol. (Ritthausen, J. pr. **59**, 369.)  
 $\text{Cu}_2\text{Cl}_2, 3\text{NH}_3$ . (Lloyd, J. phys. Chem. 1908, **12**, 399.)  
 $\text{Cu}_2\text{Cl}_2, 6\text{NH}_3$ . (Lloyd, J. phys. Chem. 1908, **12**, 399.)

**Cupric chloride ammonia,  $\text{CuCl}_2, 2\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Kane, A. ch. **72**, 273.)  
 $\text{CuCl}_2, 4\text{NH}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Bouzat, C. R. 1902, **135**, 294.)  
 $+ \text{H}_2\text{O}$  (*Cuprammonium chloride*). Sol. in  $\text{H}_2\text{O}$  and hot  $\text{NH}_4\text{OH} + \text{Aq.}$   
 $+ 2\text{H}_2\text{O}$ . Sol. in small amt. of  $\text{H}_2\text{O}$ .  
 $\text{Cu}(\text{OH})_2$  is pptd. by dilution. (Bouzat, A. ch. 1903, (7) **29**, 350.)  
 $\text{CuCl}_2, 5\text{NH}_3$ . (Bouzat, A. ch. 1903, (7) **29**, 350.)

$+ 1\frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . On dilution  $\text{Cu}(\text{OH})_2$  is pptd. Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$ ; solubility decreases as  $\text{NH}_3$  concentration increases. (Bouzat, A. ch. 1903, (7) **29**, 350.)  
 $\text{CuCl}_2, 6\text{NH}_3$ . Completely sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. **20**, 55.)

Sol. in  $\text{H}_2\text{O}$  but decomp. by great dilution with pptn. of  $\text{Cu}(\text{OH})_2$ .  
 Insol. in liquid  $\text{NH}_3$ . (Bouzat, A. ch. 1903, (7) **29**, 350.)

**Cuprocupric chloride ammonia,  $\text{Cu}_2\text{Cl}_2, \text{CuCl}_2, 4\text{NH}_3 + \text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  or alcohol. Abundantly sol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  but with partial decomposition. (Ritthausen.)

**Cupric chloride ammonia platinous chloride,  $\text{CuCl}_2, 4\text{NH}_3, \text{PtCl}_2$ .**

See Platodiamine cupric chloride.

**Cuprous chloride carbon monoxide,  $\text{Cu}_2\text{Cl}_2, 2\text{CO} + 4\text{H}_2\text{O}$ .**

Very sol. in  $\text{HCl}$  (sp. gr. 1.19) with evolution of  $\text{CO}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Manchot and Friend, A. 1908, **359**, 110.)  
 $2\text{Cu}_2\text{Cl}_2, \text{CO} + 2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Berthelot, A. ch. 1856, (3) **46**, 488.)  
 $4\text{Cu}_2\text{Cl}_2, 3\text{CO} + 7\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , but decomp. therewith very quickly. Sol. in  $\text{Cu}_2\text{Cl}_2 + \text{HCl}$ .

**Cupric chloride hydrazine,  $\text{CuCl}_2, 2\text{N}_2\text{H}_4$ .**

Easily decomp. (Hofmann and Marburg, A. 1899, **305**, 222.)

**Cuprous chloride mercuric sulphide,  $\text{Cu}_2\text{Cl}_2, 2\text{HgS}$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in conc. hot  $\text{HCl} + \text{Aq.}$  not decomp. by boiling dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  but decomp. by conc.  $\text{H}_2\text{SO}_4$ . (Heumann, B. **1**, 1390.)

**Cuprous fluoride,  $\text{Cu}_2\text{F}_2$ .**

Insol. in  $\text{H}_2\text{O}$  or  $\text{HF}$ . Sol. in conc.  $\text{HCl} + \text{Aq.}$  from which it is precipitated by  $\text{H}_2\text{O}$ . Insol. in alcohol. (Berzelius, Pogg. **1**, 28.)  
 Decomp. by  $\text{H}_2\text{O}$  into sol.  $\text{CuF}_2$ . Sol. in boiling  $\text{HCl} + \text{Aq.}$  and in  $\text{HNO}_3 + \text{Aq.}$  Only sl. attacked by warm  $\text{H}_2\text{SO}_4$ . (Poulenc, C. R. **116**, 1447.)

**Cupric fluoride,  $\text{CuF}_2$ .**

Easily takes up  $\text{H}_2\text{O}$  to form  $\text{CuF}_2 + 2\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{HF} + \text{Aq.}$  (Poulenc, C. R. **116**, 1448.)

Solubility at  $25^\circ$  in  $\text{HF} + \text{Aq.}$

Normality of $\text{HF} + \text{Aq.}$	g. atoms Cu in 1000 c.c. of solution
0.12	0.0307
0.28	0.1164
0.57	0.2494
1.08	0.388
2.28	0.463

Solubility is decreased by presence of  $\text{KF}$ . (Jaeger, Z. anorg. 1901, **27**, 29.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, **20**, 827.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790); ethyl acetate. (Naumann, B. 1910, **43**, 314.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, **37**, 4329.)  
 $+ 2\text{H}_2\text{O}$ . Sl. sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . (Berzelius.)

**Cupric hydrogen fluoride,  $\text{CuF}_2, 5\text{HF} + 5\text{H}_2\text{O}$ .**

Deliquescent.  
 Easily sol. in  $\text{H}_2\text{O}$  and dil. acids.  
 Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  with decomp. (Böhm, Z. anorg. 1905, **43**, 329.)

**Cupric potassium fluoride,  $\text{CuF}_2, 2\text{KF}$ .**

Easily sol. in  $\text{H}_2\text{O}$ .  
 $\text{CuF}_2, \text{KF}$ . Very sl. sol. in  $\text{H}_2\text{O}$ ; sl. sol. in dil. acids. (Helmholtz, Z. anorg. **3**, 115.)

**Cupric rubidium fluoride,  $\text{CuF}_2, \text{RbF}$ .**

As the K salt. (Helmholtz.)

**Cupric silicon fluoride.**

See Fluosilicate, cupric.

annic fluoride.  
stannate, copper.

antalum fluoride.  
tantalum, copper.

anion fluoride.  
titanate, copper.

ngstyl fluoride.  
xytungstate, copper.

conium fluoride.  
zirconate, copper.

uoride ammonia,  $\text{CuF}_2$ ,  $4\text{NH}_3$  +

p. rapidly in the air.  
sol. in  $\text{H}_2\text{O}$ .

p. by boiling with  $\text{H}_2\text{O}$  with evolu-  
 $\text{H}_2$ .  
sol. in dil. acids. (Böhm, Z. anorg.  
333.)

ydride,  $\text{CuH}$ .

n  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$  + Aq. (Wurtz,  
102.)

warm conc.  $\text{HCl}$  with decomp.  
Am. Ch. J. 1895, 17. 187.)

dride,  $\text{CuH}_2$ .

95, 17. 187.)

ydrosulphide,  $7\text{CuS}$ ,  $\text{H}_2\text{S}$ .

r and Picton, Chem. Soc. 1892, 61.

$\text{H}_2\text{S}$ . (Linder and Picton.)

$\text{H}_2\text{S}$ . (Linder and Picton.)

hydroxide,  $\text{Cu}_2\text{O}$ ,  $x\text{H}_2\text{O}$ .

acids as cupric salt. Insol. in  $\text{NaOH}$ ,  
+ Aq.

$\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3$  + Aq; sol.  
 $\text{O}_2$  + Aq.

ric hydroxide,  $\text{CuOH}$ ,  $3\text{Cu}(\text{OH})_2$ ,  
 $\text{I}_2\text{O}$ .

acids. (Francke, Dissert. 1907.)

ydroxide,  $3\text{CuO}$ ,  $\text{H}_2\text{O}$ .

in  $\text{H}_2\text{O}$  or dil. alkalies. Easily sol.  
 $\text{NH}_4\text{Cl}$  + Aq. (Rose.)

more difficultly sol. than  $\text{CuO}$ ,  $\text{H}_2$  in  
aq. (Chodnew, J. pr. 28. 220.)

omposition is  $6\text{CuO}$ ,  $\text{H}_2\text{O}$ .

o Cupric oxide.

$\text{I}_2$ . Insol. in  $\text{H}_2\text{O}$ , but decomp. into  
 $\text{I}_2\text{O}$  by being boiled therewith.

ely easily sol. in acids.

$\text{NH}_4\text{OH}$ , and  $\text{NH}_4$  salts + Aq.

### Solubility in $\text{NH}_4\text{OH}$ + Aq at $25^\circ$ .

$\text{NH}_3$ in cm.	g. Cu per l.	equiv. $\text{CuO}_2\text{H}_2$ per l.
2.63	3.05	0.006
2.00	2.12	0.067
1.32	1.08	0.034
2.540	6.26	0.197
1.965	6.28	0.166
1.280	4.13	0.129
0.973	3.36	0.106
0.870	3.08	0.097
0.540	2.36	0.074
0.391	2.04	0.064
3.176	8.06	0.253
2.070	5.72	0.180
1.272	4.75	0.149
0.451	2.54	0.080
0.320	2.13	0.067

The non-agreement of the results is due to  
the presence of different modifications of  
 $\text{CuO}_2\text{H}_2$ .

(Bonsdorff, Z. anorg. 1904, 41. 182.)

### Solubility in $\text{NH}_4\text{OH}$ + Aq at $18^\circ$ .

$\text{NH}_3$ mols per l.	Cu g. atoms per l.
0.20	0.00054
0.50	0.0033
1.0	0.0109
1.5	0.0204
2.0	0.0314
2.5	0.0442
3.0	0.0548
4.0	0.0784
5.0	0.1041
6.0	0.1254
8.0	0.1599
9.96	0.1787

(Dawson, Z. phys. Ch. 1909, 69. 111.)

Sol. in cold  $\text{NaOH}$ , or  $\text{KOH}$  + Aq (Proust);  
but  $\text{CuO}$  is pptd. on boiling (Berthollet); is  
not pptd. (Chodnew, J. pr. 28. 220.)

Insol. in  $\text{NaOH}$  or  $\text{KOH}$  + Aq unless they  
contain organic matter (Berzelius). This is  
contradicted by Volcker (A. 59. 34).

Entirely sol. in conc.  $\text{KOH}$  + Aq, but solu-  
tion is decomp. by heating. (Fremy, A. ch.  
(3) 12. 510.)

Sol. in  $\text{NaOH}$  + Aq (70%  $\text{NaOH}$ ). (Lfw,  
Z. anal. 9. 463.)

The solubility in  $\text{NaOH}$  of  $\text{CuO}_2\text{H}_2$ , pre-  
pared either from  $\text{CuSO}_4$  or  $\text{Cu}(\text{NO}_3)_2$ , de-  
creases with decrease in concentration of the  
base. The solubility of  $\text{CuO}_2\text{H}_2$  in  $\text{NaOH}$   
is only very slightly affected by the addition  
of sodium or potassium carbonate. (Fischer,  
Z. anorg. 1904, 40. 41.)

Solubility of crystalline  $\text{CuO}_2\text{H}_2$  in ammoniacal  $\text{Ba}(\text{OH})_2$  and  $\text{NaOH}$  solutions at  $18^\circ$ .

22.0	4-N	7.1263
22.0	4-N	6.9768

The solutions undergo change in the course  
of a few days, iodine being set free; the sol-  
ubility of the cuprous iodide is not markedly  
affected thereby.

(Kohn, Z. anorg. 1909, 63. 337.)

1 l. of a 0.2N solution of  $\text{KI}$  dissolves  
0.000157 g. mol.  $\text{Cu}_2\text{I}_2$ . (Bodländer, Z.  
anorg. 1902, 31. 475.)

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am.  
Ch. J. 1898, 20. 827.)

Insol. in  $\text{CS}_2$ . (Arctowski, Z. anorg. 1894, 6. 257.)

Practically insol. in methylene iodide. (Retgers, Z. anorg. 1893, 3. 347.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in acetone (Naumann, B. 1904, 37. 4329); (Eidmann, C. C. 1899, II. 1014.)

100 g. acetonitrile dissolve 3.52 g.  $\text{Cu}_2\text{I}_2$  at  $18^\circ$ . (Naumann and Schier, B. 1914, 47. 249.)

Min. *Marshite*. (Gm.—K. 5. 1, 945.)

### Cupric iodide, $\text{CuI}_2$ .

Exists only in very dil. aqueous solution. (Traube, B. 17. 1064.)

### Copper periodide, $\text{CuI}$ .

Sol. in  $\text{H}_2\text{O}$ . (Walker and Dover, Chem. Soc. 1905, 87. 1588.)

### Copper ammonium iodide ammonia.

See Cupriammonium iodide ammonia.

### Cuprous mercuric iodide, $\text{Cu}_2\text{I}_2, \text{HgI}_2$ .

$\text{KI} + \text{Aq}$  dissolves out  $\text{HgI}_2$ .

### Cuprous mercuric iodide ammonia, $\text{CuI}_2, 2\text{HgI}_2, 4\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$  or acids. Sol. in a mixture of acetic acid and alcohol.

$\text{CuI}_2, \text{HgI}_2, 4\text{NH}_3$ . As above. (Jørgensen, J. pr. (2) 2. 347.)

### Cupric nitrogen iodide, $\text{CuI}_2, \text{N}_2\text{H}_4\text{I}_2$ .

Decomp. by  $\text{H}_2\text{O}$ ; or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Guyard, C. R. 97. 526.)

### Cupric thallic iodide ammonia, $\text{CuI}_2, 2\text{THI}_2, 4\text{NH}_3$ .

Decomp. slowly by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  with decomp. Sol. in alcohol.

### Cuprous iodide ammonia, $\text{Cu}_2\text{I}_2, \text{NH}_3$ .

Ppt. (Anderline, Gazz. ch. it. 1912, 42. I, 321.)

$+4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Silberrad, Chem. Soc. 1905, 37. 67.)

$\text{Cu}_2\text{I}_2, 3\text{NH}_3$ . (Lloyd, J. phys. Chem. 1908, 12. 399.)

$\text{Cu}_2\text{I}_2, 4\text{NH}_3$ . (Levol, J. Pharm. 4. 328.)

$+ \text{H}_2\text{O}$ . (Saglier, C. R. 104. 1440.)

$\text{Cu}_2\text{I}_2, 6\text{NH}_3$ . (Lloyd.)

### Cupric iodide ammonia, $\text{CuI}_2, 4\text{NH}_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp. Not attacked by cold

alcohol or ether. (Berthemon 15. 445.) (Pozzi-Escot, C. R. I

$\text{CuI}_2, 6\text{NH}_3$ . Sol. in liquid. Am. Ch. J. 1908, 39. 205.)

$3\text{CuI}_2, 10\text{NH}_3$ . Decomp. by ards, Am. Ch. J. 1895, 17. 302.

Sol. in liq.  $\text{NH}_3$ . (Horn, Am 39. 204.)

### Cupriammonium iodide amm $3\text{Cu}(\text{NH}_3)_2\text{I}_2, 4\text{NH}_3$ .

Decomp. by air and by  $\text{H}_2\text{O}$ . Am. Ch. J. 1895, 17. 302.

### Copper periodide ammonia, $2\text{CuI} + \text{H}_2\text{O}$ .

Because of its insolubility recryst from any solvent. (Sill Soc. 1905, 87. 66.)

### Copper tetraiodide, ammonia, C (Jørgensen, J. pr. (2) 2. 353.)

### Copper hexaiodide ammonia, C

Not decomp. in  $\text{H}_2\text{O}$  in c (Jørgensen.)

### Copper mercuric iodide an $\text{CuHg}_2\text{I}_4, 5\text{NH}_3$ .

$\text{CuHgI}_2, 2\text{NH}_3$ . Ppt. Dec and by alcohol.

$\text{CuHg}_2\text{I}_4, 3\text{NH}_3$ . Ppt. Dec washing with  $\text{H}_2\text{O}$ .

$\text{CuHg}_2\text{I}_4, 4\text{NH}_3$ . Ppt. Dec Sl. attacked by abs. alcohol.

$\text{CuI}_2, \text{HgI}_2, 4\text{NH}_3$ . Ppt. (A ch. it. 1912, 42, (1) 321; C. C.

### Copper nitride, $\text{Cu}_4\text{N}_2$ .

Decomp. by dil. or conc. acid Easily decomp. by  $\text{H}_2\text{O}$  wh dered. (Rossel, C. R. 1895, 12

### Copper suboxide, $\text{Cu}_2\text{O}$ .

Not attacked by  $\text{H}_2\text{O}$ . De  $\text{H}_2\text{SO}_4 + \text{Aq}$  into  $\text{Cu}$  and  $\text{CuSO}_4$  has similar action. Not attack

$+ \text{Aq}$  or  $\text{NH}_4\text{OH} + (\text{NH}_4)_2\text{CO}_3$  Pogg. 120. 1.)

$\text{Cu}_2\text{O}$ . Not attacked by dil. acids, even aqua regia. Slowly

$\text{Aq}$ . (Bailey and Hopkins, Ch 57. 272.)

Is a solution of oxide in Zeit. angew. Ch. 1908, 21. 51.

### Cuprous oxide, $\text{Cu}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_3\text{PO}_4 + \text{Aq}$ , or cold very dil. H

a cupric salt and  $\text{Cu}$ . Conves  $\text{Aq}$  into cuprous chloride.

1  $\text{Cu}_2\text{O}$  in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ .

Total Cu G. mol. in 1000 g. of solution	Conc. of total $\text{NH}_3$

1 Thomas, Chem. Soc. 1911, 99, 1791.)

ng  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose.)  
cess of  $\text{KOH} + \text{Aq}$ . (Chodnew.)  
nc.  $\text{MgCl}_2$ , and  $\text{FeCl}_3 + \text{Aq}$ .  
69, 1357.)  
1 by liquid  $\text{NH}_3$ . (Gore, Am.  
10, 827.)  
ite. Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , and

$\text{CuO}$ .

o. Easily sol. in acids. Sol.  
1. Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , but  
ddition of a few drops of acid  
+  $\text{Aq}$ . Insol. in dil., but sol. in  
iaOH, and  $\text{KOH} + \text{Aq}$ . (Low,  
,.)  
ed at a low temp. is easily sol.  
out when ignited is slowly sol.  
2. acids, but moderately rapidly  
ure of  $\text{NH}_4\text{I} + \text{HCl}$ . (Joannis,  
12, 1161.)  
2 N- $\text{HNO}_3$ . 1 l. of the solution  
2 g. atoms Cu at  $25^\circ$ . (Jaeger,  
, 27, 33.)

Solubility of  $\text{CuO}$  in  $\text{HF} + \text{Aq}$  at  $25^\circ$ .

	Time	G. $\text{CuO}$ in 10 ccm. of the solution

(Deussen, Z. anorg. 1905, 44, 421.)

Solubility of  $\text{CuO}$  in  $\text{HF}$  at  $25^\circ$ .

$\text{Cu} = \text{g-atoms Cu}$  in 1 l. of the solution.

HF normality	Cu
0.12	0.0307
0.28	0.1164
0.57	0.2494
1.08	0.388
2.28	0.463

(Jaeger, Z. anorg. 1901, 27, 29.)

Solubility of  $\text{CuO}$  in  $\text{HF} + \text{KF}$  at  $25^\circ$ .

$\text{Cu} = \text{g-atoms Cu}$  in 1 l. of the solution.

HF normality	Cu
0.12	0.0356
0.28	0.06437
0.57	0.1442
1.11(1.08)	0.2451
2.17(2.28)	0.2517

(Jaeger, l. c.)

Sl. sol. in large excess of  $\text{KOH} + \text{Aq}$ . (de  
Coninck, C. C. 1904, II, 65.)

Slowly sol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$ . and  
less easily in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Rose.)

Sol. in boiling  $\text{H}_2\text{O}$  solutions of  $\text{Al}$ ,  $\text{Ga}$ ,  
 $\text{U}$ ,  $\text{Cr}$ ,  $\text{Fe}$ , or  $\text{Bi}$  nitrates and chlorides,  
 $\text{Hg}(\text{NO}_3)_2$ ,  $\text{Hg}_2(\text{NO}_3)_2$ ,  $\text{SbCl}_3$ ,  $\text{SnCl}_4$ , and  
 $\text{SnCl}_4$ , with pptn. of oxides of the bases of  
those salts. Unacted upon by boiling  $\text{H}_2\text{O}$   
solutions of  $\text{Mn}$ ,  $\text{Mg}$ ,  $\text{Ni}$ ,  $\text{Co}$ ,  $\text{Zn}$ ,  $\text{Ce}$ , or

Fe nitrates or chlorides,  $\text{AgNO}_3$ ,  $\text{Pb}(\text{NO}_3)_2$ ,  $\text{Cd}(\text{NO}_3)_2$ , and  $\text{HgCl}_2$ . (Persoz.)

Pure  $\text{CuO}$  is very sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  but the solution is greatly increased by the addition of  $\text{NH}_4$  salts. (Muthmann, C. C. 1904. II, 410.)

Sol. in hot  $(\text{NH}_4)_2\text{SO}_4$  or  $(\text{NH}_4)_2\text{SO}_3 + \text{Aq}$ . (Jumau, Electrochem. Ind. 1908, 6. 258.)

15% dissolves in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  in 24 hrs. (Schnabel, Z. B. H. Sal. 1880, 28. 282.)

Sl. attacked by liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Solubility in N-acetic acid. 1 l. of the solution contains 0.1677 g-atoms Cu at  $25^\circ$ . (Jaeger, Z. anorg. 1902, 27. 33.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

Sl. sol. in benzamide. (Dessaigues, A. ch. 1852, (3), 34. 146.)

Insol. in piperidine. (Cahours, C. R. 1852, 34. 481.)

Sol. in acid amines as asparagin. (Piria, A. ch. 1848, (3), 22. 160.)

Sol. in amines alone or mixed with  $\text{NH}_3$ . (Lance, Dissert. 1905.)

Slowly sol. in Ca or any other alkali succate + Aq, but not in cane sugar + Aq. (Hunton.)

Solubility in (calcium succate + sugar) + Aq. 1 l. solution containing 418.6 g. sugar and 34.3 g.  $\text{CaO}$  dissolves 10.26 g.  $\text{CuO}$ .

1 l. solution containing 296.5 g. sugar and 24.2 g.  $\text{CaO}$  dissolves 5.68 g.  $\text{CuO}$ .

1 l. solution containing 174.4 g. sugar and 14.1 g.  $\text{CaO}$  dissolves 3.47 g.  $\text{CuO}$ . (Bodenbender, J. B. 1865. 600.)

Polypeptides in aqueous solution dissolve  $\text{CuO}$  by short boiling. (Fischer, B. 1906, 39. 576.)

$+ \frac{1}{2} \text{H}_2\text{O} = 6\text{CuO} + \text{H}_2\text{O}$ . Insol. in dil., but sol. in conc.  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ .

Sol. in volatile oils.

See also Cupric hydroxide.

Min. *Melaconite*. Sol. in  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ .

**Cuprocupric oxide**,  $\text{Cu}_2\text{O}_2 = 2\text{Cu}_2\text{O}$ ,  $\text{CuO}$ .

(Favre and Maumené.)

$\text{Cu}_2\text{O}_2 + \text{H}_2\text{O} = \text{Cu}_2\text{O}$ ,  $\text{CuO} + \text{H}_2\text{O}$ . When freshly pptd., sol. in  $\text{HCl} + \text{Aq}$ , but insol. after drying. (Siewert, J. B. 1866. 257.)

$\text{Cu}_2\text{O}_2 = \text{Cu}_2\text{O}$ ,  $2\text{CuO}$ . (Siewert.)

All oxides of Cu except  $\text{Cu}_2\text{O}$ ,  $\text{Cu}_2\text{O}$ ,  $\text{CuO}$ , and  $\text{CuO}$  are mixtures. (Osborne, Sill. Am. J. (3) 32. 33; Debray, C. R. 99. 583.)

**Copper dioxide**,  $\text{CuO}_2 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by acids with formation of cupric salt and  $\text{H}_2\text{O}_2$ . (Weltzien, A. 140. 207.)

**Cuprous oxide ammonia** (cuprosammonium oxide).

Known only in solution. (Wagner, C. C. 1863. 239.)

**Cupric oxide ammonia** (cuprammonium dioxido),  $3\text{CuO}$ ,  $4\text{NH}_3 + 6\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Kane, A. ch. 72. 2  $\text{CuO}$ ,  $4\text{NH}_3 + 4\text{H}_2\text{O}$ . Very deliq. Decomp. in the air and by  $\text{H}_2\text{O}$ . (and Sarzeau, A. ch. (3) 9. 438.)

**Cuprous oxybromide**,  $\text{Cu}_2\text{Br}_2$ ,  $\text{CuO} +$  (Spring and Lucion, Bull. Ac. F. 24. 21.)

**Cupric oxybromide**,  $\text{CuBr}_2$ ,  $3\text{CuO} + 3$

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Brun, C. R. 109. 66.

Insol. in  $\text{H}_2\text{O}$  but decomp. by boiling. Sol. in conc. acetic acid, a conc.  $\text{CuBr}_2 + \text{Aq}$ . Insol. in dil. K (Richards, Proc. Am. Acad. 1890, 25.

**Cupric oxybromide ammonia**,  $2\text{CuO}$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$ .

(Kohlschütter and Pudschies, B. 1 1159.)

**Cuprous oxychloride**,  $\text{Cu}_2\text{Cl}_2$ ,  $\text{CuO} +$  (Spring and Lucion, Bull. Ac. F. 24. 21.)

**Cupric oxychloride**,  $\text{CuO}$ ,  $\text{CuCl}_2 + \text{H}_2$ , Decomp. by  $\text{H}_2\text{O}$ . (Rousseau, C. 110. 1263.)

$2\text{CuO}$ ,  $\text{CuCl}_2$ . Insol. in  $\text{H}_2\text{O}$ . Sol. + Aq, from which it is reprecipitated with  $\text{H}_2\text{O}$ .

+  $\text{H}_2\text{O}$ . (Kane, A. ch. 72. 277.) +  $4\text{H}_2\text{O}$ . (Gladstone, Chem. Soc.  $3\text{CuO}$ ,  $\text{CuCl}_2 + 2\text{H}_2\text{O}$ . (Miller a rick, Trans. Roy. Soc. Can. 1901, (1 35.)

+  $3\text{H}_2\text{O}$ . (Dupont and Janse Soc. 1893, (3), 9. 193.)

+  $3\frac{1}{2}\text{H}_2\text{O}$ . Insol. in cold  $\text{H}_2\text{O}$ , sl. by boiling. (Reindel, J. pr. 106. 378. Insol. in boiling  $\text{H}_2\text{O}$ . (Haberman B. 90. 2. 268.)

+  $4\text{H}_2\text{O}$ . Sol. in alkaline solution tartrate. (Gröger, Z. anorg. 1902, (Brunswick green). Insol. in  $\text{H}_2\text{O}$  sol. in acids.

Min. *Atacamite*. Sol. in acids, and + Aq.

Sol. in cold sat. citric acid + Aq. B. 1880, 13. 732.)

$4\text{CuO}$ ,  $\text{CuCl}_2 + 6\text{H}_2\text{O}$ . (Kane, ( 5. 1, 919.)

+  $8\text{H}_2\text{O}$ . Min. *Tallingite*. (Chun — K. 5. 1, 919.)

$5\text{Cu}(\text{OH})_2$ ,  $\text{Cu}_2\text{Cl}_2\text{Cl}(\text{OH})$ . Insol. Decomp. by hot  $\text{H}_2\text{O}$ . (Kühling, 34. 2852.)

$7\text{CuO}$ ,  $2\text{CuCl}_2 + 9\text{H}_2\text{O}$ . (Reindel  $6\text{CuO}$ ,  $\text{CuCl}_2 + 9\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$

acetic acid. (Neumann, Repert, 37

$8\text{CuO}$ ,  $\text{CuCl}_2 + 12\text{H}_2\text{O}$ . Min. (König, Zeit. Kryst. 1891, 19. 601.)

**inc oxychloride**,  $\text{ZnO}$ ,  $2\text{ZnCl}_2$ ,  $5\text{CuO}$ ,  $\text{H}_2\text{O}$ .

*ib.*, C. R. 1888, 106. 855.)

**xychloride ammonia**,  $2\text{CuO}$ ,  $\text{CuCl}_2$ ,  $\text{I}_2 + 3\text{H}_2\text{O}$ .

*rain*, Gm.—K. 5. 1, 932.)

**xyfluoride**,  $\text{CuO}$ ,  $\text{CuF}_2 + \text{H}_2\text{O}$ .

in  $\text{H}_2\text{O}$ . (Berzelius.) (Balbiano, *ib.* 14. 74.)

**xyfluoride ammonia (cuprammonium fluoride)**,  $\text{Cu}(\text{OH})\text{F}$ ,  $2\text{NH}_3$ .

*ano*, Gazz. ch. *it.* 14. 74.)

$\text{CuI}_2 + z\text{H}_2\text{O}$ . (Tschiriwinski, Gm. 1, 1584.)

**oxyiodide**,  $\text{Cu}_2\text{I}_2$ ,  $\text{CuO} + \text{H}_2\text{O}$ .

*g* and Lucion, Bull. Ac. Belg. (3)

**ryiodide**,  $2\text{CuI}_2$ ,  $\text{CuO} + 4\text{H}_2\text{O}$ .

decomp. by  $\text{H}_2\text{O}$ . (Carnegie, Watts' 257.)

**xysulphide**,  $2\text{Cu}_2\text{S}$ ,  $\text{CuO}$ .

in  $\text{H}_2\text{O}$ . (Maumené, A. ch. (3) 18.

$\text{CuO}$ . Ppt. (Pelouze.)

$\text{CuO}$ . Insol. in  $\text{H}_2\text{O}$ .

$\text{CuO}$ . Insol. in  $\text{H}_2\text{O}$ .

comps. do not exist. (Pickering, *oc.* 33. 136.)

**hosphide**,  $\text{Cu}_3\text{P}_2$ .

sol. in  $\text{HNO}_3$  or aqua regia; insol. in *q.* (Rose, Pogg. 6. 209.)

$\text{HNO}_3$  and  $\text{Br}_2 + \text{Aq}$ . Decomp. by  $\text{H}_2\text{SO}_4$ . (Rubénovitch, C. R. 1899, 9.)

Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Granger, 998, (7), 14. 64.)

*Used*. Completely sol. in hot  $\text{HNO}_3$ , *ia* and  $\text{HF} + \text{HNO}_3$ . Slowly sol. in or  $\text{H}_2\text{SO}_4$ . Not attacked by hot or or acetic acid. (Maronneau, C. R. 8. 939.)

Easily sol. in  $\text{HNO}_3$ . Sol. in hot  $\text{SO}_4$ . Sol. in conc.  $\text{HCl} + \text{Aq}$  before phide has been heated. (Rose, Pogg.

Easily sol. in  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq}$ .  $\text{NH}_4\text{OH} + \text{Aq}$ . (Granger, Bull. Soc. 1.)

Decomp. by  $\text{HNO}_3$ ; not readily *Cl*. Easily attacked by  $\text{Cl}_2$  or  $\text{Br}_2 + \text{ranger}$ , C. R. 1895, 120. 924.)

(Granger, C. N. 1898, 77. 229.)

sol. in  $\text{HNO}_3$  and  $\text{Br}_2 + \text{Aq}$ . Decomp. conc.  $\text{H}_2\text{SO}_4$ . (Rubénovitch, C. R. 9. 333.)

**Cupric zinc phosphide**,  $10\text{Cu}_3\text{P}_2$ ,  $\text{Zn}_3\text{P}_2(?)$ .

(Hvoslef, A. 100. 99.)

**Copper phosphoselenide**,  $\text{CuSe}$ ,  $\text{P}_2\text{Se}_3$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ . Insol. in cold alkalis, but decomp. slowly when heated therewith. (Hahn, J. pr. 93. 436.)

$2\text{CuSe}$ ,  $\text{P}_2\text{Se}_3$ . Attacked only by fuming  $\text{HNO}_3$ . (Hahn.)

$2\text{CuSe}$ ,  $\text{P}_2\text{Se}_3$ . Sol. only in  $\text{HNO}_3 + \text{Aq}$ . (Hahn.)

**Copper phosphosulphide**,  $2\text{Cu}_2\text{S}$ ,  $\text{P}_2\text{S}_5$ .

$\text{Cu}_2\text{S}$ ,  $\text{P}_2\text{S}_5$ . (Berzelius.)

$2\text{Cu}_2\text{S}$ ,  $\text{P}_2\text{S}_5$ . (Berzelius.)

$\text{CuS}$ ,  $\text{P}_2\text{S}_5$ . Insol. in  $\text{H}_2\text{O}$  and dil.  $\text{HCl} + \text{Aq}$ . Sol. in conc.  $\text{HCl} + \text{Aq}$ , from which it is precipitated by  $\text{H}_2\text{O}$ . (Berzelius, A. 46. 252.)

$8\text{CuS}$ ,  $\text{P}_2\text{S}_5$ . (Berzelius.)

$\text{Cu}_4\text{PS}_2$ . Sol. in conc.  $\text{HNO}_3$  and in aqua regia. Insol. in  $\text{HCl}$ . Not attacked by hot  $\text{H}_2\text{SO}_4$  or conc.  $\text{NaOH} + \text{Aq}$ . (Ferrand, A. ch. 1899, (7), 17. 407.)

**Cuprous selenide**,  $\text{Cu}_2\text{Se}$ .

Ppt. Sol. in  $\text{HCl}$  and in  $\text{H}_2\text{SO}_4$ .

Decomp. by  $\text{HNO}_3$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Fonzes-Diacon, C. R. 1900, 131. 1207.)

Sol. in  $\text{KCN} + \text{Aq}$ . (Heyn and Bauer, Metall. 1903, 3. 84.)

Min. *Berzelianite*.

**Cupric selenide**,  $\text{CuSe}$ .

(Little, A. 112. 211.)

Ppt. Sol. in  $\text{HCl}$  and in  $\text{H}_2\text{SO}_4$ . Decomp. by  $\text{HNO}_3$ . (Fonzes-Diacon, C. R. 1900, 131. 1207.)

**Cuprocupric selenide**,  $\text{Cu}_2\text{Se}_2$ .

Min. *Umangite*. Sol. in  $\text{HNO}_3$ . (Klockmann, Zeit. Kryst. 1891, 19, 270.)

**Cuprous lead selenide**,  $3\text{Cu}_2\text{Se}$ ,  $\text{PbSe}$ .

Min. *Zorgite*. Sol. in cold conc.  $\text{HNO}_3 + \text{Aq}$  with separation of *Se*.

**Cupric lead selenide**,  $\text{CuSe}$ ,  $\text{PbSe}$ .

Sol. in cold conc.  $\text{HNO}_3$  with separation of *Se*. (Karsten.)

$\text{CuSe}$ ,  $2\text{PbSe}$ . As above.

$\text{CuSe}$ ,  $4\text{PbSe}$ . As above.

**Cuprous silver selenide**,  $\text{Cu}_2\text{Se}$ ,  $\text{Ag}_2\text{Se}$ .

Min. *Eucainite*. Sol. in hot  $\text{HNO}_3$  with decomp. (Berzelius.)

**Cuprous silicide**,  $\text{Cu}_3\text{Si}$ .

Sol. in warm dil. or conc.  $\text{HNO}_3$ . Only sl. sol. in  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and  $\text{HF}$ . Sol. in a mixture of  $\text{HNO}_3$  and  $\text{HF}$ . Not attacked by solutions of alkalis. (Vigouroux, C. R. 1906, 142. 88.)

$\text{Cu}_2\text{Si}_2$ . Sol. in aqua regia and fused sodium potassium carbonate. (de Chalmot, Am. Ch. J. 1896, 18, 95.)

$\text{Cu}_2\text{Si}$ . Decomp. by water and moist air, and by acids and fused alkali. (Vigouroux, C. R. 1896, 122, 319.)

#### Cuprous sulphide, $\text{Cu}_2\text{S}$ .

More sol. in  $\text{H}_2\text{O}$  than  $\text{Ag}_2\text{S}$ , but much less than  $\text{PbS}$ . (Bodländer, Z. phys. Ch. 1898, 27, 64.)

1 l.  $\text{H}_2\text{O}$  dissolves  $3.1 \times 10^{-4}$  moles  $\text{Cu}_2\text{S}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58, 294.)

Very slowly decomp. by dil.  $\text{H}_2\text{SO}_4$  in presence of oxygen. (Thompson, Electrochem. Ind. 1904, 2, 225.)

Decomp. by conc.  $\text{H}_2\text{SO}_4$ . (Pickering, C. N. 1878, 37, 37.)

Cold  $\text{HNO}_3$  + Aq dissolves out Cu and leaves CuS; hot  $\text{HNO}_3$  dissolves with separation of S. Sl. sol. in boiling conc.  $\text{HCl}$  + Aq. Insol. in  $(\text{NH}_4)_2\text{S}$  + Aq.

5N-HCl dissolves  $\text{Cu}_2\text{S}$  very slightly (0.0038 g. Cu in  $7\frac{1}{2}$  hrs.) but it is more sol. in presence of Cl, when 0.672 g. are dissolved in  $7\frac{1}{2}$  hours. (Egli, Z. anorg. 1902, 30, 46.)

Sol. with exclusion of air in  $\text{NH}_4\text{OH}$  + Aq. (Malzac, Pat. 1904.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014.)

Min. *Chalcocite*. Completely sol. in warm  $\text{HNO}_3$  with separation of S.

#### Cupric sulphide, $\text{CuS}$ .

Almost absolutely insol. in  $\text{H}_2\text{O}$ ; sol. in 950,000 pts.  $\text{H}_2\text{O}$ . When exposed to the air, dissolves in  $\text{H}_2\text{O}$  as  $\text{CuSO}_4$ . Easily sol. in boiling  $\text{HNO}_3$  with separation of S. Difficultly sol. in hot conc.  $\text{HCl}$  + Aq. Insol. in dil.  $\text{H}_2\text{SO}_4$  + Aq (1:6). (Hoffmann, A. 115, 286.)

Pptd. by  $\text{H}_2\text{S}$  or  $(\text{NH}_4)_2\text{S}$  + Aq in presence of 100,000 pts.  $\text{H}_2\text{O}$  (Pfaff), 200,000 pts.  $\text{H}_2\text{O}$  (Lassaigne), 15,000 pts.  $\text{H}_2\text{O}$  and 7500 pts.  $\text{HCl}$ , but with 40,000 pts.  $\text{H}_2\text{O}$  and 20,000 pts.  $\text{HCl}$  no colour is visible (Reinsch).

1 l.  $\text{H}_2\text{O}$  dissolves  $3.51 \times 10^{-6}$  moles  $\text{CuS}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58, 294.)

Insol. in  $\text{H}_2\text{SO}_4$  + Aq. (Guerout, C. R. 1872, 75, 1276.)

Decomp. by conc.  $\text{H}_2\text{SO}_4$ . (Kliche, J. B. 1890, 593.)

Sol. in  $(\text{NH}_4)_2\text{CO}_3$  + Aq. (Berzelius.) Sol. in alkali bicarbonates + Aq.

Insol. in  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4\text{Cl}$  + Aq. (Brett.)

Insol. in acidified conc. alkali chlorides + Aq. (Cushman, Am. Ch. J. 1895, 17, 382.)

Sol. in  $\text{FeCl}_3$  + Aq with separation of S. (Cumenge and Wimmer, Dingl. 1883, 260, 123.)

Decomp. by boiling  $\text{CuCl}_2$  + Aq in presence of  $\text{HCl}$  or  $\text{NaCl}$ . (Raschig, Gm.—K. 5, 1, 819.)

Sol. in  $\text{Fe}_2(\text{SO}_4)_3$  + Aq in presence of large excess of air. (Thompson, Electrochem. Ind. 1904, 2, 228.)

Insol. in  $\text{KOH}$ , or  $\text{K}_2\text{S}$  + Aq, especial boiling; appreciably sol. in colourless even more readily in hot yellow  $(\text{NH}_4)_2\text{S}$  + Aq. (Becker, Sill. Am. J. (3) 33, 199.)

100 cc. sat.  $\text{Na}_2\text{S}$  + Aq (sp. gr. = 1.1) dissolve 0.0032 g.  $\text{CuS}$ . (Holland, Chim. Anal. 1897, 2, 243.)

Sol. in K polysulphides (3-64%). (Ph. Bull. Soc. Belg. Chim. 1897, 103.)

Appreciably sol. in alkali polysulphide Aq. (Rösing, Z. anal. 1902, 41, 1.)

Sol. in considerable quantity in alkaline arsenates, sulphatimonates, and stannates + Aq. Therefore when a ppt. of  $\text{CuS}$  and  $\text{As}_2\text{S}_3$ ,  $\text{Sb}_2\text{S}_3$ , or  $\text{SnS}$  is treated with  $\text{K}_2\text{S}$ , a portion of the  $\text{CuS}$  is dissolved (Wöhler, A. 34, 236.)

Sol. in alkali sulphovandates, or tungstates + Aq. (Storch, B. 16, 2015.)

Sol. in alkali sulphomolybdates + (Debray, C. R. 96, 1616.)

Insol. in K thiocarbonate + Aq. (Ro. bladt, Z. anal. 26, 15.)

Sol. in  $\text{KCN}$  + Aq.

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. J. 1898, 20, 827.)

Insol. in methyl acetate (Naumann, 1909, 42, 3790); ethyl acetate. (Naum B. 1910, 43, 314.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014.)

Insol. in Na xanthogenate. (Ragg, Z. 1908, 32, 677.)

#### Solubility of $\text{CuS}$ in sugar + Aq at $t^\circ$ . g. $\text{CuS}$ per l. of solution.

$t^\circ$	10% sugar	30% sugar	50% su
17.5	0.5672	0.8632	0.907
45	0.3659	0.7220	1.05
75	1.1345	1.2033	1.29

(Stolle, Z. Ver. Zuckerind. 1900, 50, 33)

#### Min. *Corvellite*.

*Colloidal*. Aqueous solution is stable; it contains 5 g.  $\text{CuS}$  in a litre; when it cools 4 or 5 times that amount it is decomposed in an hour.

Solutions of salts of the following concentration cause a precipitate in the above solution. Salts of univalent elements—

#### Salts of univalent elements—

$\text{K}_2\text{Fe}(\text{CN})_6$	1 : 62

and de Boeck, Bull. Soc. (2) 58. 165.)

**polysulphide,  $Cu_2S_8$ .**

*rhous.* Ppt. Decomp. by boiling (Rössing, Z. anorg. 1900, 25. 413.)

*Amorphous.* Ppt. can be boiled without decomposition. (Rössing, Z. 1900, 25. 4, 11.)

Ppt.; insol. in alkali sulphides; by conc.  $HNO_3$ . (Bodroux, C. R. 0. 1398.)

not be obtained. (Rössing, Z. 900, 25. 414.)

Ppt. Decomp. by  $H_2O$ . Sol. i and barium polysulphides + Aq. by colorless alkali sulphides + Aq. Z. anorg. 1900, 25. 407.)

**iron (ferric) sulphide,  $Cu_2S, Fe_2S_3$ .**  
ip. by conc.  $HCl$  + Aq. Sol. in boiling Aq of 1.2 sp. gr. (Schneider, J. pr. 569.)

*Chalcopyrite.* Insol. in  $HCl$  + Aq. ated in a sealed tube with  $H_2S$  + Aq, 1 of it dissolves with difficulty and nt deposition of S. (Senarmont, A. l. 168.)

**ric iron (ferric) sulphide,  $Cu_2S, CuS$ ,**

*Bornite.* Sol. in  $HCl$  + Aq with a f S.

**Cupric iron (ferric) sulphide,  $CuS, Fe_2S_3$ .**

Min. *Cubanite*.

**Copper iron potassium sulphide,  $K_2FeCu_2S_4$ .**

Sl. attacked by cold dil.  $HCl$  + Aq. Decomp. by warming. (Schneider, Pogg. 138. 318.)

**Copper iron sodium sulphide,  $Na_2FeCu_2S_4$ .**

Sl. attacked by cold dil., easily decomp. by hot  $HCl$  + Aq. (Schneider, Pogg. 138. 318.)

**Cuprous lead sulphide,  $9Cu_2S, 2PbS$ .**

$3Cu_2S, 2PbS$ .

$2Cu_2S, 2PbS$ . Min. *Cuprophumbite*.

**Copper phosphorus sulphide.**

See Copper phosphosulphide.

**Cupric platinum sulphide.**

See Sulphoplatinate, cupric.

**Cuprous potassium sulphide,  $4Cu_2S, K_2S$ .**

(Ditte, C. R. 98. 1429.)

**Cuprocupric potassium sulphide,  $3Cu_2S, 2CuS, K_2S$ .**

Not decomp. by very dil.  $HCl$  + Aq, but easily by conc.  $HCl$  + Aq on warming. (Schneider, Pogg. 138. 311.)

**Copper potassium polysulphide,  $KCuS_4$ .**

Sl. sol. in cold  $H_2O$ . Decomp. by hot  $H_2O$ . Decomp. by conc. and dil.  $HCl$ ,  $H_2SO_4$  and  $HNO_3$ . Sl. sol. in alcohol. (Biltz and Herms, B. 1907, 40. 977.)

$2CuS_2, K_2S$ . Decomp. by  $H_2O$ ,  $NH_4OH$ , or  $NH_4SH$  + Aq. (Priwoznik, B. 5. 1291.)

$K_2Cu_2S_{10}$ . Easily sol. in  $H_2O$ . 1 g. is sol. in less than 5 ccm.  $H_2O$ . Rapidly decomp. by dil. acids, slowly by conc. acids. Sl. sol. in alcohol. (Biltz and Herms, B. 1907, 40. 983.)

**Cupric rubidium polysulphide,  $RbCuS_4$ .**

As K salt. (Biltz and Herms, B. 1907, 40. 978.)

$Rb_2Cu_2S_{10}$ . Easily sol. in  $H_2O$ . Decomp. by acids. Sl. sol. in alcohol. (Biltz and Herms, B. 1907, 40. 985.)

**Cuprous silver sulphide,  $Cu_2S, Ag_2S$ .**

Min. *Stromeyerite*. Sol. in  $HNO_3$  + Aq with separation of S.

$Cu_2S, 3Ag_2S$ . Min. *Jalpaite*. As above.

**Cuprous sodium sulphide,  $Na_2S, Cu_2S$ .**

(Bodländer, Z. Elektrochem. 1905, 11. 181.)

$Na_2S, 2Cu_2S$ . (Bodländer, Z. Elektrochem. 1905, 11. 181.)

**Cuprocupric sodium sulphide**,  $\text{Cu}_2\text{S}$ ,  $\text{CuS}$ ,  $\text{Na}_2\text{S}$ .

Scarcely decomp. by cold dil.  $\text{HCl} + \text{Aq}$ ; conc.  $\text{HCl} + \text{Aq}$  decomp. easily on warming, without, however, dissolving all the  $\text{Cu}_2\text{S}$ . Completely decomp. by warm  $\text{HNO}_3 + \text{Aq}$ . (Schneider, Pogg. 138. 315.)

**Copper zinc sulphide**,  $\text{CuS}$ ,  $3\text{ZnS}$ .

**Copper sulphophosphide**.

See Copper phosphosulphide.

**Cupric telluride**,  $\text{CuTe}$ .

$\text{Cu}_2\text{Te}_2$ . Insol. in  $\text{H}_2\text{O}$ . (Parkmann, Sill. Am. J. (2) 3. 335.)

$\text{Cu}_2\text{Te}$ . (Brauner, M. 1889. 423.)

**Croceocobaltic bromide**,

$\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Br}$ .

Very sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Gibbs, Proc. Am. Acad. 10. 1.)

— **chloraurate**,  $2\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$ ,  $\text{AuCl}_3$ .

Difficultly sol. in  $\text{H}_2\text{O}$ .

— **chloride**,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$ .

Very sl. sol. in cold easily in hot  $\text{H}_2\text{O}$ , but more sol. than the sulphate. (Gibbs.)

— **chloroplatinate**,  $2\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{Cl}$ ,  $\text{PtCl}_4$ .

Can be recrystallised without decomp. with difficulty. (Gibbs and Genth, Sill. Am. J. (2) 24. 91.)

— **chromate**,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]\text{CrO}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

— **dichromate**,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]\text{Cr}_2\text{O}_7$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

— **periodide**,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{I}$ ,  $\text{I}_2$ .

Difficultly sol. in cold  $\text{H}_2\text{O}$  and alcohol. Decomp. by hot  $\text{H}_2\text{O}$ . (Gibbs.)

— **nitrate**,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2\text{NO}_3$ .

Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$  or dil. acids. Much more sol. than the sulphate. (Gibbs.)

Sol. in about 400 pts. cold  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 5. 163.)

— **nitrite cobaltic nitrite**,  $3\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2$ ,  $\text{Co}(\text{NO}_2)_2$ .

Somewhat sol. in  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 5. 178.)

— **nitrite diamine cobaltic nitrite**,  $\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2$ ,  $(\text{NO}_2)_2(\text{NH}_3)_2\text{Co}(\text{NO}_2)_2$ .

Nearly insol. in cold, very sl. sol. in boiling  $\text{H}_2\text{O}$ . (Jørgensen.)

**Croceocobaltic phosphomolybdate**,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{O}$ ,  $24\text{MoO}_3\text{P}_2\text{O}_7$ .

Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 3. 317.)

— **sulphate**,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{SO}_4$ .

Very sl. sol. in cold or hot  $\text{H}_2\text{O}$ ; more easily in hot dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

**Cuprammonium compounds**.

See Copper compounds, ammonia.

**Cuprotetrammonium tetraiodide**.

See Cupric tetraiodide ammonia.

**Cupric acid**.

Known only in solution. (Krüger, Pogg. 62. 445.)

**Calcium cuprate**.

Decomp. by  $\text{H}_2\text{O}$  with evolution of oxygen. (Krüger and Crum, A. 55. 213.)

**Cyanhydric acid**,  $\text{HCN}$ .

Miscible with  $\text{H}_2\text{O}$ , alcohol, and ether with absorption of heat.

Sp. gr. of  $\text{HCN} + \text{Aq}$ .

% HCN	Sp. gr.	% HCN	Sp. gr.
1.60	0.9979	4.0	0.9940
1.68	0.9978	4.6	0.9930
1.77	0.9975	5.0	0.9923
2.0	0.9974	5.3	0.9914
2.1	0.9973	5.8	0.9900
2.3	0.9970	6.4	0.9890
2.5	0.9967	7.3	0.9870
2.7	0.9964	8.0	0.9860
3.0	0.9958	9.1	0.9815
3.2	0.9952	10.6	0.9768
3.6	0.9945	16.0	0.9570

(Ure, Quar. J. Sci. 13. 321.)

$2\text{HCN}$  mixed with  $3\text{H}_2\text{O}$  causes a diminution of temp. of  $9.75^\circ$ . (Bussy and Buignet, A. ch. (4) 3. 231.)

Miscible with volatile oils and other organic compounds.

**Cyanhydric iodhydric acid**,  $\text{HI}$ ,  $\text{HCN}$ .

Easily sol. in  $\text{H}_2\text{O}$  or alcohol, with rapid decomp. Sl. sol. in ether. (Gal, A. 128. 38.)

**Cyanides**.

The alkali cyanides are easily sol. in  $\text{H}_2\text{O}$ ; those of the alkali-carths are less sol., while all others are insol. with the exception of  $\text{Hg}(\text{CN})_2$ . All cyanides are sol. in  $\text{KCN} + \text{Aq}$ .

**Ammonium cyanide**,  $\text{NH}_4\text{CN}$ .

Unstable; easily sol. in  $\text{H}_2\text{O}$  and alcohol.

**m cobaltic mercuric cyanide.**  
**alticyanide, ammonium mercuric.**

**m cuprous cyanide,  $\text{NH}_4\text{CN}$ ,  $(\text{CN})_2$ .**

Decomp. by acids.

Sol. in  $\text{H}_2\text{O}$ , less sol. in alcohol. by acids and alkalis. (Treadwell and Wald, *Z. anorg.* 1904, **39**, 90.)

$\text{N}$ ,  $\text{Cu}_2(\text{CN})_2$ . Sl. sol. in  $\text{H}_2\text{O}$ , but by long boiling therewith. Sol. in  $\text{q}$ . (Dufau, *A.* **88**, 278.)

**m cuprous cyanide ammonia,  $\text{CN}$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $\text{NH}_3$ .**

decomp. (Treadwell and Girse-morg, 1904, **39**, 90.)

$\text{I}$ . Insol. in cold, decomp. by boiling in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Fleurent, *C. R.* 191.)

$\text{I}$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $3\text{NH}_3$ . Insol. in cold, boiling  $\text{H}_2\text{O}$  without decomp. Sol.  $\text{I} + \text{Aq}$ . (Fleurent, *C. R.* 1891, 113.)

$\text{I}$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $2\text{NH}_3 + 2\text{H}_2\text{O}$ . (Fleu-5, 498R.)

**m gold (aurous) cyanide  $\text{NH}_4\text{CN}$ ,**

sol. in cold or warm  $\text{H}_2\text{O}$  or in al-  
sol. in ether.

**m gold (auric) mercuric cyanide,**  
 $3\text{NH}_4\text{CN}$ ,  $2\text{Au}_2\text{O}$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$ .  
dt, *Ch. Z.* 1896, **20**, 633.)

**m mercuric silver cyanide, basic,**  
 $\text{I}$ ,  $2\text{Ag}_2\text{O}$ ,  $3\text{AgCN}$ ,  $4\text{Hg}(\text{OH})\text{CN} + \text{O}$ .

dt, *Z. anorg.* 1895, **9**, 431.)

**m nickel cyanide,  $2\text{NH}_4\text{CN}$ ,  $(\text{N})_2$ .**

decomposed.

**m tungsten cyanide.**

**ngstocyanide, ammonium.**

**m zinc cyanide,  $2\text{NH}_4\text{CN}$ ,  $\text{Zn}(\text{CN})_2$ ,  $\text{H}_2\text{O}$ .**

**m cyanide mercuric nitrate silver**  
**ide basic,  $2\text{Hg}(\text{OH})\text{NO}_2$ ,  $3\text{NH}_4\text{CN}$ ,  $\text{CN}$ .**

dt, *Z. anorg.* 1895, **9**, 431.)

**ricyanide,  $\text{As}(\text{CN})_3$ .**

p. by  $\text{H}_2\text{O}$ . Not attacked by cold  $\text{O}_2$ . Decomp. on heating. (Guenez, **2**, 114, 1188.)

**Barium cyanide,  $\text{Ba}(\text{CN})_2$ .**

Rather al. sol. in  $\text{H}_2\text{O}$ , more easily in  $\text{KCN} + \text{Aq}$ . (Schuls, *J. pr.* **68**, 257.)

10 pts.  $\text{H}_2\text{O}$  dissolve 8 pts., and 10 pts. 70% alcohol dissolve 1.8 pts.  $\text{Ba}(\text{CN})_2$  at 14.° (Joannis, *A. ch.* (5) **26**, 489.)

Insol. in methyl acetate. (Naumann, *B.* 1909, **42**, 3790.)

+  $2\text{H}_2\text{O}$ . Very deliquescent.

$\text{Ba}(\text{CN})_2$ ,  $\text{BaO}$ . (Drechsel, *J. pr.* (2) **21**, 84.)

**Barium cadmium cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Cd}(\text{CN})_2 + \text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ .

Sl. sol. in alcohol. (Loebe, *Dissert.*, 1902.)

$2\text{Ba}(\text{CN})_2$ ,  $3\text{Cd}(\text{CN})_2 + 10\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Weselsky, *B.* **2**, 590.)

**Barium cobaltous cobaltic cyanide.**

See Cobaltocobalticyanide, barium.

**Barium cuprous cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ .**

Sol. in  $\text{H}_2\text{O}$  without decomp. (Traube, *Z. anorg.* 1894, **8**, 21.)

+  $\text{H}_2\text{O}$ . (Weselsky, *B.* **2**, 590.)

Could not be obtained. (Grossmann, *Z. anorg.* 1905, **43**, 101.)

+  $4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Grossmann, *Z. anorg.* 1905, **43**, 101.)

$2\text{Ba}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2 + 6\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Grossmann, *Z. anorg.* 1905, **43**, 105.)

**Barium gold (aurous) cyanide,  $\text{Ba}(\text{CN})_2$ ,  $2\text{AuCN} + 2\text{H}_2\text{O}$ .**

Sl. sol. in cold but easily sol. in hot  $\text{H}_2\text{O}$ .

Sl. sol. in alcohol. (Lindbom, *Lund Univ. Arsk.* **12**, No. 6.)

**Barium iridium cyanide.**

See Iridicyanide, barium.

**Barium manganous cyanide,  $\text{Ba}(\text{CN})_2$ ,  $2\text{Mn}(\text{CN})_2$ .**

Ppt. (Descamps.)

See also Manganocyanide and Mangani-  
cyanide, barium.

**Barium mercuric cyanide,  $(\text{Ba}(\text{CN})_2$ ,  $\text{Hg}(\text{CN})_2 + 3\text{H}_2\text{O}$ .**

Very hygroscopic. Very sol. in  $\text{H}_2\text{O}$ . (Grossmann, *B.* 1904, **37**, 4142.)

**Barium mercuric cyanide iodide,  $\text{Ba}(\text{CN})_2$ ,  $\text{HgI}_2 + 6\text{H}_2\text{O}$ .**

(Varet, *C. R.* 1895, **121**, 499.)

**Barium palladium cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Pd}(\text{CN})_2 + 4\text{H}_2\text{O}$ .**

See Palladocyanide, barium.

**Barium nickel cyanide,  $\text{Ba}(\text{CN})_2$ ,  $\text{Ni}(\text{CN})_2 + 3\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ ; decomp. by acids with pptn. of  $\text{Ni}(\text{CN})_2$ . (Weselsky, *B.* **2**, 590.)

**Barium silver cyanide**,  $\text{Ba(CN)}_2$ ,  $2\text{AgCN} + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Weselsky, B. 2. 589.)

**Barium zinc cyanide**,  $\text{Ba(CN)}_2$ ,  $\text{Zn(CN)}_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

**Cadmium cyanide, basic**,  $\text{CdO}_2\text{H}_2$ ,  $2\text{Cd(CN)}_2 + 4\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Loebe, Dissert., 1902.)

**Cadmium cyanide**,  $\text{Cd(CN)}_2$ .

Sl. sol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 1.7 pts.  $\text{Cd(CN)}_2$  at  $15^\circ$ . (Joannis.)

Easily sol. in acids; sol. in  $\text{KCN} + \text{Aq}$ . Sol. in warm  $\text{NH}_4\text{OH} + \text{Aq}$ , but insol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Wittstein.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

**Cadmium calcium cyanide**,  $\text{Cd(CN)}_2$ ,  $4\text{Ca(CN)}_2 + 20\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Loebe, Dissert., 1902.)

**Cadmium chromic cyanide.**

See Chromicyanide, cadmium.

**Cadmium cobaltic cyanide.**

See Cobalticyanide, cadmium.

**Cadmium cuprous cyanide**,  $2\text{Cd(CN)}_2$ ,  $\text{Cu}_2(\text{CN})_2$ .

Permanent. Insol. in  $\text{H}_2\text{O}$ . Sl. sol. in cold, easily in warm  $\text{HCl} + \text{Aq}$  without decomp., except by long boiling. Insol. in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts +  $\text{Aq}$ . (Schüler.)

**Cadmium cupric cyanide**,  $\text{Cd(CN)}_2$ ,  $\text{Cu(CN)}_2$ .

Very unstable.

**Cadmium gold (aurous) cyanide**,  $\text{Cd(CN)}_2$ ,  $2\text{AuCN}$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ . Sl. sol. in boiling  $\text{H}_2\text{O}$ . Insol. in alcohol. (Lindbom.)

**Cadmium mercuric cyanide**,  $2\text{Cd(CN)}_2$ ,  $3\text{Hg(CN)}_2$ .

Permanent. Readily sol. in cold  $\text{H}_2\text{O}$ . (Schüler.)

**Cadmium mercuric cyanide mercuric iodide**,  $\text{Cd(CN)}_2$ ,  $\text{Hg(CN)}_2$ ,  $\text{HgI}_2 + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Varet, Bull. Soc. (3) 5. 8.)  
+  $7\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, C. R. 1890, 111, 679.)

**Cadmium mercuric cyanide mercuric iodide**,  $\text{Cd(CN)}_2$ ,  $\text{Hg(CN)}_2$ ,  $\text{HgI}_2 + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Varet, Bull. Soc. (3) 5. 8.)

+  $7\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH}$  (Varet, C. R. 1890, 111, 679.)

**Cadmium mercuric cyanide mercuric ammonia**,  $\text{Cd(CN)}_2$ ,  $\text{Hg(CN)}_2$ ,  $4\text{NH}_3$ .

Very easily decomp. (Varet, Bull. S. 6. 22.)

**Cadmium molybdenum cyanide.**

See Molybdocyanide, cadmium.

**Cadmium potassium cyanide**,  $\text{Cd(CN)}_2$ ,  $2\text{KCN}$ .

Sol. in 3 pts. cold, and 1 pt. boiling. Insol. in absolute alcohol. (Rammelsberg.)

**Cadmium sodium cyanide**,  $\text{Na}_2\text{Cd(CN)}_2$ ,  $+3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Loebe, Dissert., 1902.)

**Cadmium strontium cyanide**,  $\text{Cd(CN)}_2$ ,  $2\text{Sr(CN)}_2 + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Loebe, Dissert., 1902.)

**Cadmium tungsten cyanide**,  $\text{Cd}_2\text{W(CN)}_8$ ,  $8\text{H}_2\text{O}$ .

Nearly insol. in  $\text{H}_2\text{O}$ .

Sl. sol. in dil.  $\text{HCl}$ . Sol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ .

Insol. in organic solvents. (Olsson, anorg. 1914, 88. 68.)

**Cadmium cyanide dihydrazine**,  $\text{Cd(CN)}_2$ ,  $(\text{N}_2\text{H}_4)_2$ .

Easily sol. in dil. acids. (Franke, anorg. 1911, 70. 152.)

**Cæsium cuprous cyanide**,  $\text{CsCN}$ ,  $\text{Cu}_2\text{CN}$ ,  $1\frac{1}{2}\text{H}_2\text{O}$ .

$\text{H}_2\text{O}$  separates  $\text{CuCN}$ . (Grossmann, anorg. 1905, 43. 98.)

$2\text{CsCN}$ ,  $\text{CuCN} + \text{H}_2\text{O}$ . Sol. in (Grossmann, Z. anorg. 1905, 43. 98.)

$2\text{CsCN}$ ,  $3\text{CuCN}$ . Insol. in, and not comp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 43. 98.)

**Cæsium tungsten cyanide.**

See Tungstocyanide, cæsium.

**Calcium cyanide**,  $\text{Ca(CN)}_2$ .

Sol. in  $\text{H}_2\text{O}$ , but the solution is very unstable. (Schulz.)

$\text{Ca(CN)}_2$ ,  $3\text{CaO} + 15\text{H}_2\text{O}$ . Decomp. in  $\text{H}_2\text{O}$ . (Joannis, A. ch. (5) 26. 496.)

**Calcium cuprous cyanide**,  $\text{Ca(CN)}_2$ ,  $\text{Cu}_2\text{CN}$ ,  $4\text{H}_2\text{O}$ .

Easily decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, 43. 106.)

$\text{Ca(CN)}_2$ ,  $3\text{CuCN} + 8\text{H}_2\text{O}$ . Immed.

decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, **43**. 99.)

**Calcium gold (aurous) cyanide**,  $\text{Ca}(\text{CN})_2$ ,  $2\text{AuCN} + 3\text{H}_2\text{O}$ .

Easily sol. in hot or cold  $\text{H}_2\text{O}$  or in alcohol. (Lindbom.)

**Calcium manganous cyanide**,  $\text{Ca}(\text{CN})_2$ ,  $2\text{Mn}(\text{CN})_2$ .

Ppt. (Descamps.)

See also **Manganocyanide, calcium**.

**Calcium mercuric cyanide**,  $\text{Ca}(\text{CN})_2$ ,  $2\text{Hg}(\text{CN})_2 + 8\text{H}_2\text{O}$ .

Very deliquescent. (Grossmann, B. 1904, **37**. 4143.)

$2\text{Ca}(\text{CN})_2$ ,  $3\text{Hg}(\text{CN})_2 + 6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Grossmann, B. 1904, **37**. 4143.)

**Calcium mercuric cyanide iodide**,  $\text{Ca}(\text{CN})_2$ ,  $\text{HgI}_2$ ,  $\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$ .

(Varet, C. R. 1895, **121**. 499.)

**Calcium nickel cyanide**,  $\text{Ca}(\text{CN})_2$ ,  $\text{Ni}(\text{CN})_2 + x\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

**Calcium tungsten cyanide**.

See **Tungstocyanide, calcium**.

**Calcium zinc cyanide**,  $(\text{Ca}(\text{CN})_2, \text{Zn}(\text{CN})_2 + 3\frac{1}{2}\text{H}_2\text{O})$ .

Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Loebe, Dissert. 1902.)

**Cerous cyanide (?)**.

Ppt. Very easily decomp. (Behringer, A. **42**. 139.)

**Chromic cyanide, with MCN**.

See **Chromicyanide, M**.

**Chromous potassium cyanide**.

See **Chromocyanide, potassium**.

**Cobaltous cyanide**,  $\text{Co}(\text{CN})_2 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , and  $\text{KCN} + \text{Aq}$ ; also in  $(\text{NH}_4)_2\text{CO}_3$ , or  $\text{NH}_4$  succinate +  $\text{Aq}$ ; insol. in  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Wittstein.)

**Cobaltous cyanide with 4MCN**.

See **Cobaltocyanide, M**.

**Cobaltic cyanide with 3MCN**.

See **Cobaltocyanide, M**.

**Cobalt gold (aurous) cyanide**,  $\text{Co}(\text{CN})_2$ ,  $2\text{AuCN}$ .

Insol. in  $\text{H}_2\text{O}$  or cold  $\text{HCl} + \text{Aq}$ .

**Cobalt hydrazine cyanide**,  $(\text{N}_2\text{H}_4)_4\text{Co}(\text{CN})_6$ .

Deliquescent. (Franzen, Z. anorg. 1911, **70**. 155.)

**Cobaltous cyanide ammonia**,  $\text{Co}(\text{CN})_2$ ,  $2\text{NH}_3$ .

Unstable. (Peters, B. 1908, **41**. 3178.)

**Cuprous cyanide**,  $\text{Cu}_2(\text{CN})_2$ .

Insol. in  $\text{H}_2\text{O}$  and dil. acids. Sol. in  $\text{NH}_4\text{OH}$ ,  $(\text{NH}_4)_2\text{SO}_4$ , or  $\text{NH}_4$  succinate +  $\text{Aq}$ , and in hot  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . Sol. in conc.  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{KCN} + \text{Aq}$ .

Easily sol. in conc.  $\text{NH}_4\text{SCN}$  or  $\text{KSCN} + \text{Aq}$ . Sl. sol. in  $\text{NaSCN} + \text{Aq}$ . (Grossmann, Z. anorg. 1903, **37**. 408.)

Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, **20**. 827.)

Very sl. sol. in pyridine. (Schroeder, Dissert. 1902.)

Mol. weight determined in pyridine. (Werner, Z. anorg. 1897, **15**. 20.)

**Cupric cyanide**,  $\text{Cu}(\text{CN})_2$ .

Easily decomp. Insol. in  $\text{H}_2\text{O}$ .

Sol. in pyridine. (Schroeder, Dissert. 1901.)

Insol. in methyl acetate. (Naumann, B. 1909, **42**. 3790.)

**Cuprocupric cyanide**,  $\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2 + 5\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. by boiling. Sol. in cold conc.  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , and in hot  $\text{NH}_4$  salts +  $\text{Aq}$ . Easily sol. in  $\text{KCN} + \text{Aq}$ .

+  $\text{H}_2\text{O}$ . Ppt. (Dufau.)

+  $\text{Cu}(\text{CN})_2$ ,  $2\text{Cu}_2(\text{CN})_2 + \text{H}_2\text{O}$ . Ppt.

**Cuprous hydrazine cyanide**,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{N}_2\text{H}_4\text{CN}$ .

Insol. in alcohol and  $\text{H}_2\text{O}$ . (Ferratini, C. C. 1912, I. 1281.)

**Cupric iridium cyanide**.

See **Iridicyanide, cupric**.

**Cuprous lithium cyanide**,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{LiCN} + \text{H}_2\text{O}$ .

Gradually decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, **43**. 97.)

**Cuprous magnesium cyanide**,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{Mg}(\text{CN})_2 + 11\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, **43**. 103.)

**Cuprous mercuric cyanide bromide**,  $\text{Cu}(\text{CN})_2$ ,  $2\text{Hg}(\text{CN})_2$ ,  $\text{HgBr}_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Varet, C. R. 1890, **110**. 148.)

**Cupric molybdenum cyanide ammonia**.

See **Molybdocyanide ammonia, cupric**.

**Cuprous potassium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{KCN}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ , with partial decomp. Decomp. by acids, but not by alkalies.

Decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Fleurent, C. R. 1893, 116. 191.)

Sol. without decomp. in conc.  $\text{KSCN}$ . (Grossmann, Z. anorg. 1903, 37. 407.)

Sol. without decomp. in  $\text{KCN} + \text{Aq.}$  (Treadwell and Girsfeld, Z. anorg. 1904, 38. 94.)

$\text{Cu}_2(\text{CN})_2$ ,  $\text{KCN} + \text{H}_2\text{O}$ . Almost insol. in cold  $\text{H}_2\text{O}$ . 100 cc.  $\text{H}_2\text{O}$  dissolve 0.0594 g. at  $15^\circ$ . Decomp. by much hot  $\text{H}_2\text{O}$  with separation of  $\text{Cu}_2(\text{CN})_2$ . Sol. in  $\text{KCN} + \text{Aq.}$  or in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Treadwell and Girsfeld, Z. anorg. 1904, 38. 93.)

$3\text{Cu}_2(\text{CN})_2$ ,  $4\text{KCN}$ . Sol. in  $\text{H}_2\text{O}$ .

$\text{Cu}_2(\text{CN})_2$ ,  $6\text{KCN}$ . Sol. in  $\text{H}_2\text{O}$ .

**Cuprous potassium cyanide ammonia,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{KCN}$ ,  $\text{NH}_3$ .**

(Treadwell and Girsfeld, Z. anorg. 1904, 39. 88.)

**Cuprous potassium cyanide potassium sulphocyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $4\text{KCN}$ ,  $2\text{KSCN}$ ,  $\text{H}_2\text{O}$ .**

Easily sol. in cold  $\text{H}_2\text{O}$ . (Itzig, B. 1902, 35. 108.)

**Cupric potassium cyanide,  $\text{Cu}(\text{CN})_2$ ,  $2\text{KCN}$ .**

Sol. in  $\frac{3}{4}$  pt.  $\text{H}_2\text{O}$  at  $15^\circ$  and  $\frac{1}{2}$  pt. at  $100^\circ$ . (Buignet, J. Pharm. 1859, (3), 35. 168.)

**Cuprocupric potassium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{Cu}(\text{CN})_2$ ,  $2\text{KCN}$ .**

(Straus, Z. anorg. 1895, 9. 15.)

**Cuprous rubidium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{RbCN}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . Pure  $\text{H}_2\text{O}$  separates  $\text{CuCN}$ . (Grossmann, Z. anorg. 1905, 43. 100.)

$3\text{Cu}_2(\text{CN})_2$ ,  $4\text{RbCN}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Pure  $\text{H}_2\text{O}$  separates  $\text{CuCN}$ . (Grossmann, Z. anorg. 1905, 43. 98.)

**Cuprous silver cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{AgCN}$ .**

Ppt.

$\text{Cu}_2(\text{CN})_2$ ,  $6\text{AgCN}$ . Sol. in excess of  $\text{Cu}_2(\text{CN})_2$ ,  $\text{KCN} + \text{Aq.}$  (Rammelsberg.)

**Cuprous sodium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{NaCN}$ .**

(Traube, Z. anorg. 1894, 8. 21.)

$+ 4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in excess of  $\text{NaCN} + \text{Aq.}$  (Grossmann, Z. anorg. 1905, 43. 96.)

$\text{Cu}_2(\text{CN})_2$ ,  $\text{NaCN} + 2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1905, 43. 96.)

$\text{Cu}_2(\text{CN})_2$ ,  $4\text{NaCN} + 6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  without decomp. (Grossmann, Z. anorg. 1905, 43. 96.)

$\text{Cu}_2(\text{CN})_2$ ,  $6\text{NaCN} + 6\text{H}_2\text{O}$ . Very sol. in

$\text{H}_2\text{O}$  without decomp. (Grossmann, Z. anorg. 1905, 43. 96.)

**Cuprous strontium cyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{Sr}(\text{CN})_2 + 8\text{H}_2\text{O}$ .**

$\text{H}_2\text{O}$  separates  $\text{Cu}_2(\text{CN})_2$ . (Grossmann, Z. anorg. 1905, 43. 103.)

**Cuprous cyanide ammonia,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{NH}_3$ .**

Nearly insol. in cold  $\text{H}_2\text{O}$ . Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  in absence of oxygen. Insol. in alcohol and ether. Decomp. by hot  $\text{H}_2\text{O}$  and acids. (Treadwell and Girsfeld, Z. anorg. 1904, 39. 87.)

**Cuprocupric cyanide ammonia,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{Cu}(\text{CN})_2$ ,  $2\text{NH}_3$ .**

(Malmberg, Arch. Pharm. 1898, 236. 256.)  $+ \text{H}_2\text{O}$ . Sl. sol. in cold, decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Dufau, A. 96. 278.)

$\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $3\text{NH}_3$ . (Mills, Z. Ch. 1867. 545.)

Sl. decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  and can be recryst. therefrom. Insol. in alcohol and ether. Decomp. by alkalies and acids. (Treadwell and Girsfeld, Z. anorg. 1904, 39. 96.)

$\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $4\text{NH}_3$ . Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  (Treadwell and Girsfeld, Z. anorg. 1904, 39. 92.)

$2\text{Cu}_2(\text{CN})_2$ ,  $\text{Cu}(\text{CN})_2$ ,  $2\text{NH}_3$ . Insol. in  $\text{H}_2\text{O}$ , alcohol and ether. Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  Decomp. by boiling acids and alkalies. (Treadwell and Girsfeld, Z. anorg. 1904, 39. 92.)

$+ \text{H}_2\text{O}$ . (Monthier, J. Pharm. 11. 257.)

$\text{Cu}(\text{CN})_2$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $4\text{NH}_3$ . (Hilkenkamp, A. 97. 218.)

$\text{Cu}(\text{CN})_2$ ,  $2\text{Cu}_2(\text{CN})_2$ ,  $6\text{NH}_3$ . (Schiff and Becchi, A. 134. 33.)

$2\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$ .

(Fleurent, C. R. 114. 1060.)

$2\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $4\text{NH}_3 + \text{H}_2\text{O}$ . Correct formula for  $\text{Cu}(\text{CN})_2$ ,  $\text{Cu}_2(\text{CN})_2$ ,  $4\text{NH}_3$ . (Bouveault, Bull. Soc. (3) 4. 641.)

**Cuprous cyanide ammonium sulphocyanide,  $\text{Cu}_2(\text{CN})_2$ ,  $3\text{NH}_4\text{SCN}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1903, 37. 409.)

**Cupric cyanide hydrazine,  $\text{Cu}(\text{CN})_2(\text{N}_2\text{H}_4)$ .**

Insol. in  $\text{H}_2\text{O}$  and cold dil. acids.

Sol. in warm dil. acids. (Fransen, Z. anorg. 1911, 70. 154.)

**Cuprous cyanide mercuric iodide,  $\text{Cu}_2(\text{CN})_2$ ,  $\text{HgI}_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Varet, Bull. Soc. (3) 4. 484.)

**Cuprous cyanide potassium sulphocyanide,**  $\text{Cu}_2(\text{CN})_2, 3\text{KSCN}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 903, 37. 409.)

**Sold (aurous) cyanide,  $\text{AuCN}$ .**

Insol. in  $\text{H}_2\text{O}$ , alcohol, or ether. Not attacked by dil., or conc. acids, even boiling *qua regia*.

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , also in soluble cyanides +  $\text{Aq}$ .

Slowly decomp. by boiling  $\text{KOH} + \text{Aq}$ , also by  $(\text{NH}_4)_2\text{S} + \text{Aq}$ .

Sol. in  $\text{K}_2\text{Fe}(\text{CN})_6 + \text{Aq}$ . (Bentel, Z. anorg. 1912, 78. 152.)

**Sold (auric) cyanide with  $\text{MCN}$ .**

See Auricyanide, M.

**Sold (auroauric) mercuric cyanide auric mercuric chloride,  $4\text{AuCN}, \text{Au}(\text{CN})_3, 5\text{Hg}(\text{CN})_2, 7\text{AuCl}_3, 5\text{HgCl}_2$ .**

(Schmidt, Ch. Z. 1896, 20. 633.)

**Gold (aurous) potassium cyanide,  $\text{AuCN}, \text{KCN}$ .**

Sol. in 7 pts. cold, and less than 0.5 pt. boiling  $\text{H}_2\text{O}$ . Sl. sol. in cold, and somewhat more sol. in boiling alcohol. Insol. in ether. (Himly, A. 42. 160.)

Decomp. by warm acids, even tartaric, and acetic acids.

**Gold (aurous) sodium cyanide,  $\text{AuCN}, \text{NaCN}$ .**

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Sl. sol. in alcohol. (Lindbom.)

**Gold (aurous) strontium cyanide,  $2\text{AuCN}, \text{Sr}(\text{CN})_2 + 3\text{H}_2\text{O}$ .**

As the Na salt.

**Gold (aurous) zinc cyanide,  $2\text{AuCN}, \text{Zn}(\text{CN})_2$ .**

Nearly insol. in hot or cold  $\text{H}_2\text{O}$ .

Insol. in cold  $\text{HCl} + \text{Aq}$ .

**Gold (auric) cyanide auric mercuric chloride,  $\text{Au}(\text{CN})_3, \text{AuCl}_3, 2\text{HgCl}_2$ .**

(Schmidt, Ch. Z. 1896, 20. 633.)

**Gold (auroauric) cyanide aurous mercuric chloride,  $12\text{AuCN}, 3\text{Au}(\text{CN})_3, 4\text{AuCl}_3, 2\text{HgCl}_2$ .**

(Schmidt, Ch. Z. 1896, 20. 633.)

**Gold (auroauric) cyanide mercuric chloride,  $15\text{AuCN}, 2\text{Au}(\text{CN})_3, 5\text{HgCl}_2$ .**

(Schmidt, Ch. Z. 1896, 20. 633.)

**Iridium cyanide,  $\text{Ir}(\text{CN})_3$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCN} + \text{Aq}$ .

**Iridium cyanide with  $\text{MCN}$ .**

See Iridicyanide, M

**Lanthanum cyanide,  $\text{La}(\text{CN})_3$ .**

Ppt. (Frerichs and Smith, B. 11. 910, 1151.)

**Lead cyanide,  $\text{Pb}(\text{CN})_2$ .**

Sl. sol. in cold, more in hot  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ , and  $\text{KCN} + \text{Aq}$ . Partially sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , and  $\text{NH}_4$  salts +  $\text{Aq}$ . Not pptd. in presence of Na citrate.

Above compound is  $2\text{PbO}, \text{Pb}(\text{CN})_2 + \text{H}_2\text{O}$ . (Joannis, A. ch. (5) 26. 204.)

$2\text{PbO}, \text{Pb}(\text{CN})_2 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ .

**Lead tungsten cyanide.**

See Tungstocyanide, lead.

**Lead zinc cyanide,  $\text{Pb}(\text{CN})_2, 2\text{Zn}(\text{CN})_2$ .**

Ppt. (Rammelsberg.)

**Lead cyanide chloride,  $2\text{Pb}(\text{CN})_2, \text{PbCl}_2$ .**

Insol. in  $\text{H}_2\text{O}$ . (Grissom and Thorp, Am. Ch. J. 10. 229.)

**Lithium mercuric cyanide mercuric iodide,  $2\text{Li}(\text{CN})_2, \text{Hg}(\text{CN})_2, \text{HgI}_2 + 7\text{H}_2\text{O}$ .**

Deliquescent; sol. in  $\text{H}_2\text{O}$ . (Varet, C. R. 111. 526.)

**Magnesium cyanide,  $\text{Mg}(\text{CN})_2$ .**

Known only in aqueous solution which decomposes on evaporation. (Schulz.)

**Magnesium mercuric cyanide,  $2\text{Mg}(\text{CN})_2, 3\text{Hg}(\text{CN})_2 + 5\text{H}_2\text{O}$ .**

(Grossmann, B. 1904, 37. 4143.)

**Magnesium mercuric cyanide mercuric bromide,  $\text{Mg}(\text{CN})_2, \text{Hg}(\text{CN})_2, \text{HgBr}_2 + 8\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Varet, Bull. Soc. (3) 7. 170.)

**Magnesium mercuric cyanide mercuric iodide,  $\text{Mg}(\text{CN})_2, \text{Hg}(\text{CN})_2, \text{HgI}_2 + 8\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Varet, Bull. Soc. (3) 7. 170.)

**Magnesium platinum cyanide.**

See Platinocyanide, magnesium.

**Magnesium tungsten cyanide.**

See Tungstocyanide, magnesium.

**Manganous and manganic cyanides.**

See Manganocyanhydric, and Mangani-cyanhydric acids.

**Manganous strontium cyanide,  $2\text{Mn}(\text{CN})_2, \text{Sr}(\text{CN})_2$ .**

Ppt. (Descamps.)

See also Manganocyanide, strontium.

**Manganous tungsten cyanide.**

See Tungstocyanide, manganous.

**Manganic cyanide, with MCN.**

See Manganicyanide, M.

**Manganous cyanide with MCN.**

See Manganocyanide, M.

**Mercuric cyanide, basic,  $\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$ .**

Sl. sol. in cold, moderately sol. in hot  $\text{H}_2\text{O}$ . Sol. with decomp. in  $\text{KOH}$ ,  $\text{KCN}$ , or  $\text{KCl} + \text{Aq}$ . (Johnston.)

Decomp. by  $\text{H}_2\text{O}$  over  $80^\circ$ . (Holdermann, Arch. Pharm. 1906, 244. 135.)

Cold  $\text{H}_2\text{O}$  dissolves about 1%, boiling  $\text{H}_2\text{O}$  about 5%. (Borelli, Gazz. ch. it. 1908, 38. (1), 361.)

1.1% dissolves in  $\text{H}_2\text{O}$  at ord. temp. (Richard, J. Chim. Phys. (6) 18. 555.)

At  $0^\circ$  1/100 mol. dissolve in 1 l.  $\text{H}_2\text{O}$ .

At  $25^\circ$  1/32 " " " " "

At  $90^\circ$  1/10 " " " " "

(Borelli, Gazz. ch. it. 1908, 38. (1), 361.)

1000 cc. cold  $\text{H}_2\text{O}$  dissolve 1.35g. (Holdermann, Arch. Pharm. 1906, 244. 135.)

Less sol. in cold  $\text{H}_2\text{O}$  than  $\text{Hg}(\text{CN})_2$ . (Pieverling, J. B. 1899, 783.)

Somewhat sol. in dil. alcohol.

Practically insol. in alcohol, ether,  $\text{C}_6\text{H}_6$ , and all organic solvents. (Borelli, Gazz. ch. it. 1908, 38. (1), 361.)

Sol. in 110 pt. alcohol of  $90^\circ$  Bé. (Richard, J. Chim. Phys. (6), 18. 555.)

$3\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$ . (Joannis, A. ch. (5) 26. 469.)

Moderately sol. in  $\text{H}_2\text{O}$ . (Barthe, J. Pharm. 1896, (6), 3. 186.)

Very sol. in hot, less sol. in cold  $\text{H}_2\text{O}$ . (Holdermann, Arch. Pharm. 1904, 242. 32.)

Easily sol. in  $\text{HCl}$ . (Joannis, A. ch. 1882, (5) 26. 511.)

$\text{Hg}(\text{CN})_2$ ,  $3\text{HgO}$ . More sol. in  $\text{H}_2\text{O}$  than  $\text{Hg}(\text{CN})_2$ ,  $\text{HgO}$ .

**Mercuric cyanide,  $\text{Hg}(\text{CN})_2$ .**

Moderately sol. in  $\text{H}_2\text{O}$ .

100 pts.  $\text{Hg}(\text{CN})_2 + \text{Aq}$  sat. at  $101.1^\circ$  contain 35 pts.  $\text{Hg}(\text{CN})_2$ , or 100 pts.  $\text{H}_2\text{O}$  dissolve 53.85 pts.  $\text{Hg}(\text{CN})_2$  at  $101.1^\circ$ . (Griffiths.)

Sol. in 8 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Abl.)

Sol. in 11 pts. cold, and 2.5 pts. boiling  $\text{H}_2\text{O}$ . (Wittstein.)

8 g. are sol. in 100 g.  $\text{H}_2\text{O}$  at  $-0.45^\circ$ . (Guthrie, Phil. Mag. 1878, (5) 6. 40.)

100 g.  $\text{H}_2\text{O}$  dissolve 9.3 g. at  $13.5^\circ$ . (Timofeev, Dissert. 1894.)

100 cc. sat. solution contain 9.3 g. at  $20^\circ$ . (Konowalow, J. russ. Soc. 1898, (4) 30. 367.)

Solubility in  $\text{H}_2\text{O}$  at  $25^\circ = 0.44$  mol. l. (Sherrill, Z. phys. Ch. 1903, 43. 735.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.3956 mol. (Hofmann and Wagner, Z. Elektrochem. 1909, 15. 444.)

100 g.  $\text{H}_2\text{O}$  dissolve 12.5 g. at  $15^\circ$ . (Mann and Struthers, Chem. Soc. 1905, 87. 1879.)

100 g.  $\text{H}_2\text{O}$  dissolve 11.27 g. at  $25^\circ$ . Sp. g. of solution = 1.0813. (Herz and Anders, Z. anorg. 1907, 52. 164.)

$\text{Hg}(\text{CN})_2 + \text{Aq}$  containing 7.23%  $\text{Hg}(\text{CN})_2$  has sp. gr.  $20^\circ/20^\circ = 1.0572$ .

$\text{Hg}(\text{CN})_2 + \text{Aq}$  containing 9.07%  $\text{Hg}(\text{CN})_2$  has sp. gr.  $20^\circ/20^\circ = 1.0743$ .

(Le Blanc and Rohland, Z. phys. Ch. 1896, 12. 282.)

Sp. gr. at  $16^\circ/4^\circ$  of  $\text{Hg}(\text{CN})_2 + \text{Aq}$  containing 7.8921%  $\text{Hg}(\text{CN})_2 = 1.06376$ ; containing 5.4037% = 1.04246; containing 7.5009% = 1.06049. (Schönrock, Z. phys. Ch. 1893, 11. 770.)

Not decomp. by acids except hot conc.  $\text{H}_2\text{SO}_4$ .

Sol. without decomp. in  $\text{HNO}_3 + \text{Aq}$ . (Berzelius.)

1 l.  $\text{NH}_4\text{OH} + \text{Aq}$  (5.2%  $\text{NH}_3$ ) dissolves 204.3 g. at about  $25^\circ$ . (Konowalow.)

Solubility in bases.

1 l.  $\text{H}_2\text{O}$  containing 0.3286 mols.  $\text{KOH}$  dissolves 0.5179 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.2350 mols.  $\text{NaOH}$  dissolves 0.4840 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.4775 mols.  $\text{NaOH}$  dissolves 0.5977 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.9475 mols.  $\text{NaOH}$  dissolves 0.79603 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.970 mols.  $\text{LiOH}$  dissolves 0.6543 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.480 mols.  $\text{LiOH}$  dissolves 0.5500 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.243 mols.  $\text{LiOH}$  dissolves 0.4840 mols.  $\text{Hg}(\text{CN})_2$ .

(Hofmann and Wagner, Z. Elektrochem. 1909, 15. 444.)

**Solubility in  $\text{KCN} + \text{Aq}$  at  $25^\circ$ .**

Concentration of $\text{KCN}$ Mols. per litre	Solubility of $\text{Hg}(\text{CN})_2$ Mols. per litre
0.0493	0.4855
0.0985	0.5350
0.1970	0.627.

(Sherrill, Z. phys. Ch. 1903, 43. 719.)

**Solubility in  $\text{Na}_2\text{CO}_3 + \text{Aq}$ .**

1 l.  $\text{H}_2\text{O}$  containing 0.4923 mols.  $\text{Na}_2\text{CO}_3$  dissolves 0.4956 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.2443 mols.  $\text{Na}_2\text{CO}_3$  dissolves 0.4464 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.1250 mols.  $\text{Na}_2\text{CO}_3$  dissolves 0.4147 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.0000 mols.  $\text{Na}_2\text{CO}_3$  dissolves 0.3952 mols.  $\text{Hg}(\text{CN})_2$ .

(Hofmann and Wagner, Z. Elektrochem. 1909, 15. 444.)

**Solubility in  $\text{KNO}_3$  + Aq at  $25^\circ$ .**

1 l.  $\text{H}_2\text{O}$  containing 0.9574 mols.  $\text{KNO}_3$  dissolves 0.5383 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.4614 mols.  $\text{KNO}_3$  dissolves 0.4619 mols.  $\text{Hg}(\text{CN})_2$ .

1 l.  $\text{H}_2\text{O}$  containing 0.0000 mols.  $\text{KNO}_3$  dissolves 0.3956 mols.  $\text{Hg}(\text{CN})_2$ .

Iofmann and Wagner, Z. Elektrochem. 1909, 15. 444.)

Insol. in liquid  $\text{CO}_2$ . (Büchner, Z. phys. Ch. 1906, 54. 674.)

Very easily sol. in liquid  $\text{NH}_3$ . (Franklin, m. Ch. J. 1898, 20. 829.)

**Solubility of  $\text{Hg}(\text{CN})_2$  in ethyl alcohol at  $t^\circ$ .**

$t^\circ$	% $\text{HgCl}_2$
0	8.3
10	8.8
20	9.25
30	9.8
40	10.3

(Timofeiev, Dissert. 1894.)

**Solubility of  $\text{Hg}(\text{CN})_2$  in methyl alcohol at  $t^\circ$ .  
 $\text{Hg}(\text{CN})_2 = \text{g. Hg}(\text{CN})_2$  in 100 g. of the solution.**

$t^\circ$	$\text{Hg}(\text{CN})_2$
0.0	26.10
14.7	29.17

(Herz and Kuhn, l. c.)

Sp. gr. at 16°/4° of Hg(CN)<sub>2</sub>+alcohol, containing 8.2206 % Hg(CN)<sub>2</sub> = 0.85273; containing 5.8652% = 0.8348+.

Sp. gr. of 16°/4° of Hg(CN)<sub>2</sub>+pyridine containing 29.6018% Hg(CN)<sub>2</sub> = 1.28155; containing 23.2275% = 1.20198.

(Schönrock, Z. phys. Ch. 1893, 11. 771.)

1 l. ether dissolves 0.01 mol. at 25°. (Sherrill, Z. phys. Ch. 1903, 43. 735.)

Easily sol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 84.)

100 g. glycerol dissolve 27 g. Hg(CN)<sub>2</sub> at 15.5°. (Ossendowski, Pharm. J. 1907, 79. 575.)

Nearly insol. in C<sub>6</sub>H<sub>6</sub>. (Sherrill, Z. phys. Ch. 1903, 43. 735.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

100 g. boiling methyl acetate dissolve 3.2 g. (Steiner, Dissert, 1906.)

Solubility of Hg(CN)<sub>2</sub> in ethyl acetate+Ag at 25°.

P = g. ethyl acetate in 100 g. ethyl acetate + Ag.

Hg(CN)<sub>2</sub> = millimols Hg(CN)<sub>2</sub> in 10 cc. of the solution.

P	Hg(CN) <sub>2</sub>	Sp. gr.
0	4.34	1.0810
4.39	4.295	1.0797
96.76	1.056	1.9374
100	0.714	0.09097

(Herz and Anders, Z. anorg. 1907, 52. 165.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Solubility in organic solvents at 18-20°.

100 g. tetrachlormethane dissolve 0.001 g. Hg(CN)<sub>2</sub>.

100 g. bromoform dissolve 0.005 g. Hg(CN)<sub>2</sub>.

100 g. ethyl bromide dissolve 0.013 g. Hg(CN)<sub>2</sub>.

100 g. ethylene dibromide dissolve 0.001 g. Hg(CN)<sub>2</sub>.

(Sule, Z. anorg. 1900, 25. 401.)

100 g. acetonitrile dissolve 9.58 g. Hg(CN)<sub>2</sub> at 18°. (Naumann and Schier, B. 1914, 249.)

Solubility in benzonitrile at 18° = 1.06 in 100 g. (Naumann, B. 1914, 47. 1370.)

Sl. sol. in ethyl amine. (Shinn, J. p. Chem. 1907, 11. 538.)

Very sol. in liquid methyl amine. (G. J. Am. Chem. Soc. 1906, 28. 1419.)

Sol. in paratoluidine. (Werner, Z. anorg. 1897, 15. 7.)

Mol. weight determined in pyridine benzonitrile. (Werner, Z. anorg. 1897, 20 and 32.)

100 g. pyridine dissolve 64.8 g. Hg(CN)<sub>2</sub> at 18°. (Schroeder, Z. anorg. 1905, 44. 1.)

Solubility in pyridine.

Mols. per 100 Hg(CN) <sub>2</sub>	Temp. of Solidification	Mols. per 100 Hg(CN) <sub>2</sub>	Temp. of Solidification
7.1	9	22.9	45

(Staronka, l. c.)

Mercuric nickel cyanide ammonia, 2Hg(CN)<sub>2</sub>·4Ni(CN)<sub>2</sub>·5NH<sub>3</sub>+2H<sub>2</sub>O.

(Papiermeister, Dissert. 1898.)

5Hg(CN)<sub>2</sub>·18Ni(CN)<sub>2</sub>·8NH<sub>3</sub>+15H<sub>2</sub>O (Papiermeister, Dissert. 1898.)

- potassium cyanide**,  $\text{Hg}(\text{CN})_2$ ,  
pts. cold  $\text{H}_2\text{O}$ ; sl. sol. in alcohol;  
acids.  
O dissolve 22.7 g. (Fronmüller,  
92.)  
y sol. in liquid  $\text{NH}_3$ . (Frank-  
Ch. 1909, 69. 295.)
- silver cyanide, basic**,  $\text{Hg}(\text{CN})_2$ ,  
 $\text{AgCN}$ .  
exam, B. 16. 2669.)
- silver cyanide mercuric sulphate**,  
 $2\text{AgCN}$ ,  $\text{HgSO}_4 + \text{H}_2\text{O}$ .
- sodium cyanide**,  $\text{Hg}(\text{CN})_2$ ,  $\text{NaCN}$   
O.  
O. (Grossmann, B. 1904, 37.)
- strontium cyanide**,  
 $2\text{Sr}(\text{CN})_2 + 5\text{H}_2\text{O}$ .  
oscopic. Sol. in  $\text{H}_2\text{O}$ . (Gross-  
M, 37. 4142.)
- strontium cyanide iodide**,  $\text{Sr}(\text{CN})_2$ ,  
 $\text{Hg}(\text{CN})_2 + 7\text{H}_2\text{O}$ .  
R. 1895, 121. 499.)
- thallium cyanide**,  $\text{Hg}(\text{CN})_2$ ,  $2\text{TlCN}$ .  
in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve  
, and 10.3 pts. at  $10^\circ$ . (Fron-  
92.)
- zinc cyanide**,  $4\text{Zn}(\text{CN})_2$ ,  $\text{Hg}(\text{CN})_2$ .  
 $\text{I}_2\text{O}$ . (Dunstan, Chem. Soc. 6.)
- zinc cyanide mercuric bromide**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2$ ,  $\text{HgBr}_2$ ,  
y  $\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{NH}_4\text{OH}$   
t, C. R. 1889, 109. 810.)
- zinc cyanide ammonia**,  $\text{Hg}(\text{CN})_2$ ,  $\text{NH}_3$ .  
 $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ , and alcohol.  
1889, 109. 903.)  
 $\text{H}_2\text{O}$ . (Schmidt, B. 1894, 27.  
 $2\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$ . Easily de-  
t, Bull. Soc. (3) 6. 221.)
- zinc cyanide bromide**,  $\text{Hg}(\text{CN})_2$ ,  
even in boiling  $\text{H}_2\text{O}$ . (Prussia,  
1898, 28, (2), 114.)
- zinc cyanide barium bromide**,  $2\text{Hg}(\text{CN})_2$ ,  
 $\text{BaBr}_2 + 8\text{H}_2\text{O}$ .  
especially in hot  $\text{H}_2\text{O}$  and al-  
t, C. R. 1895, 121. 398.)
- Mercuric cyanide cadmium bromide**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{CdBr}_2 + 3\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet,  
Bull. Soc. (3) 5. 8.)  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CdBr}_2 + 4.5 \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$   
and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, C. R. 1890,  
111. 680.)
- Mercuric cyanide cadmium bromide ammonia**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CdBr}_2$ ,  $4\text{NH}_3 + 2\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ .  
Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet, C. R.  
1891, 112. 535.)
- Mercuric cyanide calcium bromide**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CaBr}_2 + 5\text{H}_2\text{O}$ .  
Sol. in 1 pt. cold, and 0.25 pt. boiling  $\text{H}_2\text{O}$ ;  
also in 2 pts. cold, and 1 pt. boiling 90%  
alcohol. (Custer.)  
 $+7\text{H}_2\text{O}$ . (Varet, C. R. 1895, 121. 399.)
- Mercuric cyanide cupric bromide ammonia**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{CuBr}_2$ ,  $4\text{NH}_3$ .  
Decomp. by  $\text{H}_2\text{O}$ ; sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
(Varet, Bull. Soc. (3) 6. 221.)
- Mercuric cyanide lithium bromide**,  $2\text{Hg}(\text{CN})_2$ ,  
 $2\text{LiBr} + 7\text{H}_2\text{O}$ .  
Deliquescent. (Varet, C. R. 111. 526.)
- Mercuric cyanide magnesium bromide**.  
See Magnesium mercuric cyanide mercuric  
bromide.  
 $\text{Hg}(\text{CN})_2$ ,  $2\text{KBr}$ . Very sol. in  $\text{H}_2\text{O}$ .  
(Harth, Z. anorg. 1897, 14. 351.)
- Mercuric cyanide potassium bromide**,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{KBr} + 2\text{H}_2\text{O}$ .  
Sol. in 13.34 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ , and less than  
1 pt. boiling  $\text{H}_2\text{O}$ . (Brett.)  
Sol. without decomp. in hot dil.  $\text{H}_2\text{SO}_4$ ,  
 $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ . (Brett.)  
Contains  $1\frac{1}{2}\text{H}_2\text{O}$ . (Berthelot, A. ch. (5)  
29. 226.)
- Mercuric cyanide sodium bromide**,  $\text{Hg}(\text{CN})_2$ ,  
 $\text{NaBr} + 1\frac{1}{2}\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and alcohol.
- Mercuric cyanide strontium bromide**,  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{SrBr}_2 + 6\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Varet, C. R.  
1895, 121. 399.)
- Mercuric cyanide zinc bromide**,  $\text{HgBr}_2$ ,  
 $\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2 + 8\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet,  
Bull. Soc. (3) 5. 8.)
- Mercuric cyanide zinc bromide ammonia**,  
 $\text{HgBr}_2$ ,  $\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{CN})_2$ ,  $4\text{NH}_3$ .  
As the corresponding chloride. (Varet.)

**Mercuric cyanide chloride**,  $\text{Hg}(\text{CN})_2, \text{HgCl}_2$ .  
Sol. in  $\text{H}_2\text{O}$ . Decomp. by alcohol, which dissolves out  $\text{HgCl}_2$ .

**Mercuric cyanide ammonium chloride**,  
 $\text{Hg}(\text{CN})_2, \text{NH}_4\text{Cl}$ .  
Sol. in  $\text{H}_2\text{O}$  and alcohol. (Poggiale.)  
 $\text{Hg}(\text{CN})_2, 4\text{NH}_4\text{Cl}$ .

**Mercuric cyanide barium chloride**,  $2\text{Hg}(\text{CN})_2, \text{BaCl}_2 + 4\text{H}_2\text{O}$ .  
Efflorescent. Easily sol. in  $\text{H}_2\text{O}$  and alcohol +  $6\text{H}_2\text{O}$ . (Dexter.)

**Mercuric cyanide barium chloride ammonia**,  
 $2\text{Hg}(\text{CN})_2, \text{BaCl}_2, 4\text{NH}_3$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
(Varet, Bull. Soc. (3) 6. 221.)

**Mercuric cyanide cadmium chloride**,  
 $\text{Hg}(\text{CN})_2, \text{CdCl}_2 + 2\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet,  
Bull. Soc. (3) 5. 8.)

**Mercuric cyanide calcium chloride**,  
 $2\text{Hg}(\text{CN})_2, \text{CaCl}_2 + 6\text{H}_2\text{O}$ .  
Efflorescent. Very sol. in  $\text{H}_2\text{O}$ . (Varet,  
C. R. 1895, 121. 349.)

**Mercuric cyanide cerium chloride**,  $3\text{Hg}(\text{CN})_2, \text{CeCl}_3 + 8\text{H}_2\text{O}$ .  
Very sol. in  $\text{H}_2\text{O}$ . (Ahlén, Bull. Soc. (2)  
27. 365.)

**Mercuric cyanide cobaltous chloride**,  
 $\text{Hg}(\text{CN})_2, 2\text{CoCl}_2 + 4\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Poggiale.)  
 $2\text{Hg}(\text{CN})_2, \text{CoCl}_2 + 7\text{H}_2\text{O}$ . (Dexter.)

**Mercuric cyanide cupric chloride**,  $\text{Hg}(\text{CN})_2, \text{CuCl}_2 + 6\text{H}_2\text{O}$ .  
Efflorescent.  
Sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet,  
C. R. 1888, 107. 1002.)  
 $2\text{Hg}(\text{CN})_2, \text{CuCl}_2 + 6\text{H}_2\text{O}$ . Efflorescent.  
Very sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
(Varet, C. R. 1888, 107. 1002.)

**Mercuric cyanide cupric chloride ammonia**,  
 $2\text{Hg}(\text{CN})_2, \text{CuCl}_2, 4\text{NH}_3$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{NH}_4\text{OH}$   
+  $\text{Aq}$ . (Varet, Bull. Soc. (3) 6. 221.)

**Mercuric cyanide didymium chloride**,  
 $3\text{Hg}(\text{CN})_2, \text{DiCl}_2 + 8\text{H}_2\text{O}$ .  
Very sol. in  $\text{H}_2\text{O}$ . (Ahlén.)

**Mercuric cyanide erbium chloride**,  $3\text{Hg}(\text{CN})_2, \text{ErCl}_3 + 8\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$ . (Ahlén.)

**Mercuric cyanide hydrazine chloride**,  
 $\text{Hg}(\text{CN})_2, \text{N}_2\text{H}_4, \text{HCl}$ .  
Very sol. in  $\text{H}_2\text{O}$ .

Nearly insol. in alcohol and ether  
ratini, Gazz. ch. it. 1912, 42. (1), 154

**Mercuric cyanide ferric chloride**,  $2\text{H}$   
 $\text{FeCl}_3 + 3\frac{1}{2}\text{H}_2\text{O}$ .  
(Dexter.)

**Mercuric cyanide lanthanum chlor**  
 $3\text{Hg}(\text{CN})_2, \text{LaCl}_3 + 8\text{H}_2\text{O}$ .  
Very sol. in  $\text{H}_2\text{O}$ . (Ahlén.)

**Mercuric cyanide magnesium chlor**  
 $2\text{Hg}(\text{CN})_2, \text{MgCl}_2 + 2\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$  and dil. alcoho  
giale.)

**Mercuric cyanide manganous**  
 $\text{Hg}(\text{CN})_2, \text{MnCl}_2 + 3\text{H}_2\text{O}$ .  
Efflorescent. Very sol. in  $\text{H}_2\text{O}$ . (P

**Mercuric cyanide nickel chloride**,  $\text{E}$   
 $\text{NiCl}_2 + 6\text{H}_2\text{O}$ .  
Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (P  
 $2\text{Hg}(\text{CN})_2, \text{NiCl}_2 + 7\text{H}_2\text{O}$ . (Dext

**Mercuric cyanide chloride nickel**  
**oxychloride**,  $11\text{Hg}(\text{CN})_2, 8\text{HgCl}_2$   
 $8\text{Ni}(\text{OH})\text{Cl} + 76\text{H}_2\text{O}$ .  
(Papiermeister, Dissert. 1896.)

**Mercuric cyanide potassium chlor**  
 $\text{Hg}(\text{CN})_2, \text{KCl} + \text{H}_2\text{O}$ .  
Sol. in 6.75 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ .  
Sol. in alcohol.

**Mercuric cyanide sodium chloride**,  $\text{H}$   
 $\text{NaCl}$ .  
Easily sol. especially in hot  $\text{H}_2\text{O}$ ;  
alcohol. (Poggiale.)

**Mercuric cyanide strontium chlor**  
 $2\text{Hg}(\text{CN})_2, \text{SrCl}_2 + 6\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$  and dil. alcohol.  
C. R. 1895, 121. 349.)

**Mercuric cyanide yttrium chloride**,  $3\text{I}$   
 $\text{YCl}_3 + 8\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$ . (Ahlén, Bull.  
27. 365.)

**Mercuric cyanide zinc chloride**,  $2\text{E}$   
 $\text{ZnCl}_2 + 6\text{H}_2\text{O}$ .  
Efflorescent. Sol. in  $\text{H}_2\text{O}$ . ( $\text{K}_2$   
 $\text{HgCl}_2, \text{Hg}(\text{CN})_2, \text{Zn}(\text{CN})_2 + 7\text{H}_2$   
fiorescent. Very sol. in  $\text{H}_2\text{O}$ . (Var  
Soc. (3) 5. 8.)

**Mercuric cyanide zinc chloride a**  
 $\text{HgCl}_2, \text{Hg}(\text{CN})_2, \text{ZnCl}_2, 4\text{NH}_3$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4$   
(Varet, Bull. Soc. (3) 6. 221.)  
 $\text{Hg}(\text{CN})_2, \text{Zn}(\text{CN})_2, \text{HgCl}_2, 6\text{NH}_3$ .  
C. R. 106. 1080.)

**cyanide potassium chromate.**  
**mate mercuric cyanide, potassium.**

**cyanide potassium ferrocyanide,**  
 $(CN)_2, K_4Fe(CN)_6 + 4H_2O$ .  
sol. in  $H_2O$ .

**cyanide hydrazine,  $Hg(CN)_2$ ,**  
ol. in  $H_2O$  with partial decomp.  
and Marburg, A. 1899, 305. 215.)  
 $_2, N_2H_4$ . Ppt. (Franzen, Z. anorg.  
154.)

**cyanide potassium hydroxide,**  
 $(N)_2, KOH$ .  
nn and Wagner, B. 1908, 41. 321.)  
 $_2O$ . (Hofmann and Wagner, B.  
1630.)  
 $_2, KOH + H_2O$ . Very sol. in  $H_2O$ .  
nn and Wagner, B. 1908, 41. 320.)

**cyanide sodium hydroxide,**  
 $(N)_2, NaOH + 1\frac{1}{2}H_2O$  or  $H_2O$ .  
and Wagner, B. 1908, 41. 1631.)

**cyanide barium iodide,  $2Hg(CN)_2$ ,**  
 $+4H_2O$ .  
deliquescent. Sol. in 16.5 pts. cold,  
t. boiling  $H_2O$ . Sol. in 22.5 pts.  
1.6 pts. hot 90% alcohol. Solution  
on boiling. (Custer.)

**cyanide cadmium iodide,  $Hg(CN)_2$ ,**  
 $(N)_2, HgI_2 + 8H_2O$ .  
**dmium mercuric cyanide mercuric**

**cyanide caesium iodide,  $Hg(CN)_2$ ,**  
t. from  $H_2O$  without decomp.  
p. by acids. (Mathewson and  
n. Ch. J. 1903, 30. 433.)

**cyanide calcium iodide,  $2Hg(CN)_2$ ,**  
 $+6H_2O$ .  
orescent. More sol. in  $H_2O$  than  
iding Sr. comp. (Custer.)

**cyanide lithium iodide,  $Hg(CN)_2$ ,**  
 $(CN)_2, HgI_2 + 7H_2O$ .  
**yanide, lithium mercuric mercuric**

**cyanide magnesium iodide,**  
 $(CN)_2, Mg(CN)_2, HgI_2 + 8H_2O$ .  
**anide, magnesium mercuric mercuric**

**cyanide potassium iodide,  $Hg(CN)_2$ ,**

16 pts. cold, and less hot  $H_2O$ . Sol.  
cold alcohol of 34° Baumé. (Cail-  
sol. in ether. Decomp. by acids.  
 $(N)_2, 2KI + \frac{1}{2}H_2O$ . (Berthelot.)

**Mercuric cyanide sodium iodide,  $Hg(CN)_2$ ,**  
 $NaI + 2H_2O$ .

Sol. in  $4\frac{1}{2}$  pts.  $H_2O$  at 18°, and  $\frac{1}{2}$  pt.  
boiling  $H_2O$ .

Sol. in 2 pts. boiling, and  $6\frac{1}{2}$  pts. cold  
90% alcohol. (Custer.)

**Mercuric cyanide strontium iodide,**  
 $2Hg(CN)_2, SrI_2 + 6H_2O$ .

Sol. in 7 pts.  $H_2O$  at 18°, and  $\frac{1}{2}$  pt. at b.-pt.  
Sol. in 4 pts. 90% alcohol at 18°, and  $\frac{1}{2}$  pt.  
at b.-pt. (Custer.)

**Mercuric cyanide zinc iodide,  $2Hg(CN)_2$ ,**  
 $ZnI_2 + 6H_2O$ .

Efflorescent; sol. in  $H_2O$ .

**Mercuric cyanide iodide potassium cyanide,**  
 $HgI_2, Hg(CN)_2, 2KCN$ .

Easily decomp. by dil. acids. (Rupp.  
Apoth. Ztg., 23. 374.)

**Mercuric cyanide cadmium nitrate,**  
 $2Hg(CN)_2, Cd(NO_3)_2 + 7H_2O$ .

Decomp. by  $H_2O$ , not by alcohol. (Ny-  
lander, J. B. 1859 271.)

**Mercuric cyanide cobalt nitrate,  $2Hg(CN)_2$ ,**  
 $Co(NO_3)_2 + 7H_2O$ .

Decomp. by  $H_2O$ , not by alcohol. (Ny-  
lander.)

**Mercuric cyanide copper nitrate,  $Hg(CN)_2$ ,**  
 $Cu(NO_3)_2 + 5H_2O$ .

Decomp. by  $H_2O$ , not by alcohol. (Ny-  
lander.)

**Mercuric cyanide ferrous nitrate,  $2Hg(CN)_2$ ,**  
 $Fe(NO_3)_2 + 7H_2O$ .

Decomp. by  $H_2O$ , not by alcohol. (Ny-  
lander.)

**Mercuric cyanide manganous nitrate,**  
 $Hg(CN)_2, Mn(NO_3)_2 + 5H_2O$ .

Decomp. by  $H_2O$ , not by alcohol. (Ny-  
lander.)

$2Hg(CN)_2, Mn(NO_3)_2 + 7H_2O$ . As above.

**Mercuric cyanide nickel nitrate,  $2Hg(CN)_2$ ,**  
 $Ni(NO_3)_2 + 7H_2O$ .

Decomp. by  $H_2O$ , not by alcohol. (Ny-  
lander.)

**Mercuric cyanide silver nitrate,  $2Hg(CN)_2$ ,**  
 $AgNO_3 + 2H_2O$ .

Sl. sol. in cold, more readily in hot  $H_2O$ .  
Sol. with decomp. in  $HNO_3 + Aq$ .

As sol. in alcohol as in  $H_2O$ .

**Mercuric cyanide zinc nitrate,  $2Hg(CN)_2$ ,**  
 $Zn(NO_3)_2 + 7H_2O$ .

Sol. in  $H_2O$  with decomp. Not decomp. by  
alcohol. (Nylander, J. B. 1859. 271.)

- Mercuric cyanide nitrate silver cyanide, basic,**  
 $\text{Hg}(\text{NO}_3)_2\text{CN}$ ,  $10\text{AgCN}$ ,  $\text{Hg}(\text{OH})\text{NO}_2$ .  
 (Schmidt, Z. anorg. 1895, 9. 431.)
- Mercuric cyanide potassium selenocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{KSeCN}$ .  
 Sl. sol. in cold, much more easily sol. in hot  $\text{H}_2\text{O}$  or alcohol. Traces dissolve in ether.  
 (Cameron and Davy, C. N. 44. 63.)
- Mercuric cyanide nickel sulphate,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NiSO}_4 \cdot 9\text{H}_2\text{O}$ .  
 (Papiermeister, Dissert. 1898.)
- Mercuric cyanide ammonium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NH}_4\text{SCN}$ .  
 Easily sol. in hot  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 23. 71.)
- Mercuric cyanide barium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Ba}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Permanent. Sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)
- Mercuric cyanide cadmium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Cd}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Permanent. Sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)
- Mercuric cyanide calcium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Ca}(\text{SCN})_2 \cdot 8\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Cleve.)
- Mercuric cyanide cerium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Ce}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$ .  
 Easily sol. in hot  $\text{H}_2\text{O}$ . (Jolin.)
- Mercuric cyanide didymium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Di}(\text{SCN})_3 \cdot 6\text{H}_2\text{O}$ .  
 Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Cleve.)
- Mercuric cyanide erbium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $2\text{Er}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$ .  
 Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Cleve.)
- Mercuric cyanide lanthanum sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{La}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . (Cleve.)
- Mercuric cyanide magnesium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Mg}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Permanent. Easily sol. in hot  $\text{H}_2\text{O}$ . (Cleve.)
- Mercuric cyanide potassium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{KSCN}$ .  
 Permanent. Easily sol. in hot  $\text{H}_2\text{O}$ .  
 $+2\text{H}_2\text{O}$ . (Philip, Z. Ch. 1867. 552.)
- Mercuric cyanide rubidium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{Rb}(\text{SCN})$ .  
 Sol. in hot  $\text{H}_2\text{O}$  without decomp. (Grossmann, B. 1904, 37. 1259.)
- Mercuric cyanide samarium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Sm}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)
- Mercuric cyanide sodium sulphocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{NaSCN} \cdot 2\text{H}_2\text{O}$ .  
 Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Cleve, Soc. (2) 23. 71.)
- Mercuric cyanide strontium sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Sr}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Efflorescent. (Cleve.)
- Mercuric cyanide yttrium sulphocyanide,**  
 $3\text{Hg}(\text{CN})_2$ ,  $\text{Y}(\text{SCN})_3 \cdot 12\text{H}_2\text{O}$ .  
 Sl. sol. in warm, much less in cold (Cleve.)
- Mercuric cyanide zinc sulphocyanide,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)
- Mercuric cyanide zinc sulphocyanide monia,**  
 $2\text{Hg}(\text{CN})_2$ ,  $\text{Zn}(\text{SCN})_2$ ,  $3\text{N}$   
 Not efflorescent. Decomp. by  $\text{H}_2\text{O}$ .
- Mercuric cyanide potassium thioisocyanide,**  
 $\text{Hg}(\text{CN})_2$ ,  $\text{K}_2\text{S}_2\text{O}_3$ .  
 Permanent. Sol. in  $\text{H}_2\text{O}$ . (Kessler.)  
 $+ \text{H}_2\text{O}$ . (Fock and Klüss, B. 24. 13.)
- Molybdenum hydroxyl potassium cyanide,**  
 $\text{K}_2\text{Mo}(\text{OH})_2(\text{CN})_2$ .  
 (Rosenheim and Koss, Z. anorg. 1901 155.)  
 $\text{K}_2\text{Mo}(\text{OH})_2(\text{CN})_2$ . Very sol. in (Rosenheim and Koss.)
- Molybdenum cyanide with KCN.**  
 See Molybdocyanide M.
- Molybdenyl potassium cyanide,**  
 $\text{MoO}_2(\text{CN})_2$ ,  $2\text{KCN}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . Aqueous solution stable in presence of alkalis.  
 Insol. in alcohol. (Péchar, C. R. 118. 805.)  
 $\text{MoO}_2(\text{CN})_2$ ,  $3\text{KCN}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Hofmann, Z. anorg. 1896 287.)  
 $+ \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alk (Hofmann.)  
 $+ 4\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alk (Hofmann.)
- Nickel cyanide,  $\text{Ni}(\text{CN})_2 \cdot x\text{H}_2\text{O}$ .**  
 Insol. in  $\text{H}_2\text{O}$ . Insol. in conc.  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $+ \text{Aq}$ , but decomp. by heating with. Sol. in  $\text{NH}_4\text{OH}$ , warm ( $\text{NH}_4$  or  $\text{NH}_4$  succinate  $+ \text{Aq}$ ; also in  $\text{KCN}$  Sl. sol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (stein.)  
 Insol. in methyl acetate. (Naumann 1909, 42. 3790.)

- $+3\frac{1}{4}\text{H}_2\text{O} + 3\frac{3}{4}\text{H}_2\text{O} + 4\frac{1}{4}\text{H}_2\text{O}$ ,  $\frac{1}{2}\text{H}_2\text{O}$ . (Papiermeister, Dissert.)
- ium cyanide**,  $\text{Ni}(\text{CN})_2$ , 2KCN  
O.  
 $\text{I}_2\text{O}$ . Decomp. by acids with residue  $\text{Ni}(\text{CN})_2$ .  
O. (Rammelsberg.)
- ium cyanide**,  $\text{Ni}(\text{CN})_2$ , 2NaCN +  
 $\text{I}_2\text{O}$ ; decomp. by acids with residue  
O.  
 $\text{I}_2\text{O}$ . (Handl, J. B. 1859. 273.)
- umide ammonia**,  $\text{Ni}(\text{CN})_2$ ,  $\text{NH}_3$  +  
O.  
attacked by  $\text{H}_2\text{O}$  or dil. acids.  
conc.  $\text{H}_2\text{SO}_4$ . Sol. in  $(\text{NH}_4)_2\text{CO}_3$  +  
 $\text{NH}_4\text{OH} + \text{Aq}$ .  $(\text{NH}_4)_2\text{C}_2\text{O}_4 + \text{Aq}$ ,  
 $\text{Aq}$ , and KCN +  $\text{Aq}$ . Decomp.  
with NaOH or KOH. (Bernoulli  
er, Ch. Z. 1901, 25. 436.)
- anide trihydrazine**,  $\text{Ni}(\text{CN})_2$ ,  
O.  
Zanzen, Z. anorg. 1911, 70. 155.)
- yanide**,  $\text{Os}(\text{CN})_2$ (?).  
 $\text{H}_2\text{O}$ ; not attacked by acids.  
Osmocyanhydric acid.
- otassium cyanide**.  
ocyanide, potassium.
- yanide**,  $\text{Pd}(\text{CN})_2$ .  
in  $\text{H}_2\text{O}$ . Insol. in dil. acids. Sol.  
 $\text{NH}_4\text{OH} + \text{Aq}$ , also in conc. HCN
- yanide**,  $\text{Pt}(\text{CN})_2$ .  
 $\text{H}_2\text{O}$ , alkalies, or acids. Sol. in  
When freshly pptd., sol. in  
aq.
- yanide with MCN**.  
nocyamide, M.
- cyanide**, KCN.  
sent. Very sol. in  $\text{H}_2\text{O}$ .  
KCN +  $\text{Aq}$ , sat. at b.-pt. 103.3°  
pts. KCN, i. e. 100 pts.  $\text{H}_2\text{O}$  dis-  
pts. KCN at 103.3° (Griffiths.)  
q containing 3.25% KCN has  
154; 6.5% KCN, 1.0316. (Kohl-  
ann. 1879. 1.)  
q containing 9.64% KCN has  
20° = 1.0514.
- KCN +  $\text{Aq}$  containing 14.42% KCN has  
sp. gr. 20°/20° = 1.0768. (Le Blanc and Roh-  
land, Z. phy. ch. 1896, 19. 278.)  
Moderately sol. in liquid  $\text{NH}_3$ . (Franklin,  
Am. Ch. J. 1898, 20. 829.)  
Almost insol. in absolute alcohol.  
Sol. in 80 pts. 95% alcohol when boiling,  
and easily sol. in 35% alcohol. (Geiger, A. I.  
50.)  
100 pts. absolute methyl alcohol dissolve  
4.91 pts. at 19.5°; 100 pts. absolute ethyl  
alcohol dissolve 0.87 pt. at 19.5°. (de Bruyn,  
Z. phys. Ch. 10. 783.)  
Insol. in methyl acetate (Naumann,  
B. 1909, 42. 3790); ethyl acetate. (Naumann,  
B. 1904, 37. 3601.)  
100 g. glycerol dissolve 32 g. KCN at 15.5°.  
(Ossendowski, Pharm. J. 1907, 79. 575.)  
Sol. in  $\text{CS}_2$  when pure. (Loughlin, J. B.  
1875. 234.)  
Wholly insol. in  $\text{CS}_2$ . (Moldenhauer, Z.  
anal. 16. 199.)  
Sl. sol. in benzonitrile. (Naumann, B.  
1914, 47. 1369.)
- Potassium chromium tetroxide pentacyanide**,  
 $\text{K}_3[(\text{CrO}_4)_2(\text{CN})_5] + 5\text{H}_2\text{O}$ .  
Very hygroscopic.  
Sol. in  $\text{H}_2\text{O}$ . (Riesenfeld, B. 1908, 41.  
3548.)
- Potassium chromium tetroxide dicyanide**  
**ammonia**,  $\text{K}_2[\text{CrO}_4(\text{CN})_2]\text{NH}_3 + 5\text{H}_2\text{O}$ .  
Hygroscopic in the air.  
Easily sol. in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
(Riesenfeld, B. 1908, 41. 3545.)
- Potassium rhodium cyanide**.  
See Rhodocyanide, potassium.
- Potassium ruthenium cyanide**.  
See Ruthenocyanide, potassium.
- Potassium silver cyanide**, KCN, AgCN.  
Sol. in 4.7 pts.  $\text{H}_2\text{O}$  at 15°, 4 pts. at 20°,  
and in much less at higher temp. Sol. in 25  
pts. 85% alcohol. (Baup, A. ch. (3) 53. 464.)
- Potassium silver sodium cyanide**, 2KCN,  
NaCN, 3AgCN.  
Sol. in 4.4 pts.  $\text{H}_2\text{O}$  at 15°, and 22 pts. 85%  
alcohol at 17°. (Baup.)
- Potassium tungsten cyanide**.  
See Tungstocyanide, potassium.
- Potassium uranyl cyanide**,  
 $(\text{UO}_2)(\text{CN})_2$ , 2KCN.  
Ppt. Sol. in  $\text{H}_2\text{O}$ . Sl. sol. in presence of  
large excess of KCN. (Aloy, A. ch. 1901, (7)  
24. 417.)
- Potassium vanadium cyanide**,  $\text{K}_3\text{V}(\text{CN})_6$ .  
Readily sol. in  $\text{H}_2\text{O}$ ; decomp. slowly in neu-  
tral aq. solution, rapidly in acid aq. solution;

insol. in alcohol. (Locke, Am. Ch. J. 1898, 20. 601.)

$K_4V(CN)_6 + 3H_2O$ . Sol. in  $H_2O$ .

Insol. in alcohol and ether. (Petersen, Z. anorg. 1904, 38. 345.)

**Potassium zinc cyanide**,  $2KCN, Zn(CN)_2$ .

100 pts.  $H_2O$  dissolve 11 pts. at  $20^\circ$ . (Sharwood, Eng. Min. J. 1904, 77. 845.)

**Potassium cyanide molybdenum dioxide**,  $4KCN, MoO_3 + 5H_2O$ .

Sol. in  $H_2O$ . Insol. in alcohol. (Hofmann, Z. anorg. 1896, 12. 287.)

$+6H_2O$ . "Potassium dioxotetracyanomolybdate."

Very sol. in  $H_2O$ . (Winkler, Dissert. 1909.)

$+8H_2O$ . (Rosenheim, Kohn and Garfunkel, Z. anorg. 1910, 65. 174.)

$+10H_2O$ . Decomp. by conc.  $HCl, HNO_3$  and  $H_2SO_4$ .

Not acted upon by cold dil. acids. (v. der Heide and Hofmann, Z. anorg. 1896, 12. 285.)

$5KCN, MoO_3 + 8H_2O$ . Sol. in  $H_2O$ . Insol. in alcohol. (Kalischer, Dissert. 1902.)

**Potassium cyanide molybdenum dioxide hydroxylamine**,  $4KCN, MoO_3, NH_2OH + H_2O$ .

Sol. in  $H_2O$ .

Decomp. by dil. acids. (v. der Heide and Hofmann, Z. anorg. 1896, 12. 282.)

**Potassium cyanide molybdenum sulphide**,  $6KCN, Mo_2S_3 + 5H_2O$ .

Easily sol. in  $H_2O$ . Decomp. by dil. acids. (Hofmann, Z. anorg. 1896, 12. 289.)

Very sol. in  $H_2O$ . Slowly decomp. in the cold by dil. mineral acids. (v. der Heide and Hofmann, Z. anorg. 1896, 12. 289.)

**Potassium cyanide molybdenum sulphocyanide**,  $2KCN, MoS_2(CN)_2$ .

(Péchar, C. R. 1894, 118. 806.)

$5KCN, Mo_2S_4(CN)_2 + 7H_2O$ . Sol. in  $H_2O$ . Stable toward dil. acids and alkalis. (Hofmann, Z. anorg. 1896, 12. 289.)

**Potassium cyanide molybdenum sulphonycyanide**,  $4KCN, Mo_2SO(CN)_2 + 4H_2O$ .

Sol. in  $H_2O$ . Stable toward dil. acids. (Hofmann, Z. anorg. 1896, 12. 289.)

**Potassium cyanide nitrite**,  $KCN, KNO_2 + \frac{1}{2}H_2O$ .

Sol. in  $H_2O$ ; decomp. slowly by  $H_2O_2$ ; explosive. (Hofmann, Z. anorg. 1895, 10. 260-261.)

**Potassium cyanide sulphur dioxide**,  $KCN, SO_2 + H_2O$ .

Much more sol. in hot than cold  $H_2O$ . (Étard, C. R. 88. 649.)

$KCN, HCN, 2SO_2 + 3H_2O$ . Very sl. in cold  $H_2O$ ; decomp. by hot  $H_2O$ . (Étard)

**Rubidium tungsten cyanide**.

See Tungstocyanide, rubidium.

**Rhodium cyanide**,  $Rh(CN)_3$ .

Ppt. Not decomp. by acids. Sol. in  $KCN + Aq.$  (Martius, A. 117. 361.)

**Rhodium cyanide with 3KCN**.

See Rhodicyanide, potassium.

**Ruthenium cyanide with 4MCN**.

See Ruthenocyanide, M.

**Silver cyanide**,  $AgCN$ .

Sl. sol. in  $H_2O$ .

$2.2 + 10^{-4}$  g. sol. in 1 liter of  $H_2O$  at  $1^\circ$  (Böttger, Z. phys. ch. 1903, 46. 603.)

1 l. solution in  $H_2O$  contains 0.000  $AgCN$  at  $17.5^\circ$ . (Abegg and Cox, Z. Ch. 1903, 46. 11.)

Solubility in  $H_2O$  at  $25^\circ = 2.22$  mol. per l. (Lucas, Z. anorg. 1904, 41. 1)

Insol. in dil. acids. Decomp. by acids. Not sol. to any extent in  $HCN$

Freshly pptd.  $AgCN$  is not dissol. in cold dil.  $HNO_3$ , but is attacked by  $v$

$HNO_3$  on boiling. From dry  $AgCN$  solved 5% by boiling 1 hour with 1%

$+Aq.$  Conc.  $HNO_3$  dissolves more. (E. B. 1901, 34. 1605.)

Sol. in  $NH_4OH + Aq.$  Sol. in  $KCl, NaCl, CaCl_2, BaCl_2$ , or  $MgCl_2 + Aq.$

very slowly sol. therein at ord. temp.  $Na_2S_2O_3, K_4Fe(CN)_6, (NH_4)_2CO_3, (NH_4)_2NO_3$ , and  $NH_4$  succinate  $+Aq.$

large amt. of hot  $NH_4Cl + Aq.$  (Wittig, Z. anorg. 1907, 11. 538.)

Sol. in  $KCN, NaCN, Ba(CN)_2, Ca(CN)_2$ , or  $Sr(CN)_2 + Aq.$  Insol. in  $KOH$ , or  $+Aq.$  Sol. in conc. boiling  $AgNO_3$

(Wöhler.)

Sol. in 431.7 pts. 5%  $NH_4OH + Aq.$  (gr. 0.998) at  $12^\circ$ ; in 184.5 pts. 10%  $NH_4OH$  (sp. gr. 0.96) at  $18^\circ$ . (Long, G. it. 13. 87.)

Sl. sol. in  $Na$  citrate  $+Aq.$

Sol. in  $Hg(NO_3)_2 + Aq.$

1 l. of a 3-N solution of  $AgNO_3$  dissolves 1.216 g.  $AgCN$  at  $25^\circ$ . (Hellwig, Z. 1900, 25. 177.)

Very sol. in  $(NH_4)_2S_2O_8 + Aq.$  (Rosenheim and Steinhäuser, Z. anorg. 1905, 10. 105.)

Moderately sol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Sl. sol. in liquid  $HF$ . (Franklin, Z. 1905, 46. 2.)

Abundantly sol. in quinoline at  $60^\circ$ . (C. R. 1893, 116. 60.)

Sl. sol. in ethyl amine. (Shinn, J. Chem. 1907, 11. 538.)

Insol. in methyl acetate. (Besold, Z. 1906; Naumann, B. 1909, 42. 3790)

Hamers, Dissert. 1906; Naumann, B. 314.)

rogen cyanide,  $\text{AgCN}$ ,  $\text{HCN}$ .  
B. 1903, 36. 1859.)

ium cyanide,  $\text{AgCN}$ ,  $\text{NaCN}$ .  
100 pts.  $\text{H}_2\text{O}$  at  $20^\circ$  and in much less  
Sol. in 24 pts. 85% alcohol at  
up, A. ch. (3) 53. 468.)

lous cyanide,  $\text{AgCN}$ ,  $\text{TlCN}$ .  
Sol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve  
at  $0^\circ$ , and 7.4 pts. at  $16^\circ$ . (Fron-  
11. 92.)

gsten cyanide.  
gustocyanide, silver.

nide ammonia,  $\text{AgCN}$ ,  $\text{NH}_3$ .  
Decomp. on air.  
Sol. in ammonia at  $-10^\circ$ . (Joannis,  
118. 1151.)

nide hydrazine,  $\text{AgCN}$ ,  $\text{N}_2\text{H}_4$ .  
Sol. in the air.  
Sol. by  $\text{H}_2\text{O}$ . (Franzen, Z. anorg.  
153.)

nide nitrate,  $2\text{AgCN}$ ,  $\text{AgNO}_3$ .  
Sol. by  $\text{H}_2\text{O}$ .

nide,  $\text{NaCN}$ .  
Sol. in  $\text{H}_2\text{O}$  and 75% alcohol.  
Sol. in  $2\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ ; sl.  
sol. (Joannis, A. ch. (5) 26. 484.)

ngsten cyanide.  
gustocyanide, sodium.

inc cyanide,  $\text{NaCN}$ ,  $\text{Zn}(\text{CN})_2 + \text{O}$ .  
More sol. in  $\text{H}_2\text{O}$  than the correspond-  
salt. (Rammelsberg.)  
(Loebe, Dissert. 1902.)

cyanide molybdenum dioxide,  
 $\text{N}$ ,  $\text{MoO}_3 + 6\text{H}_2\text{O}$ .

r, Dissert. 1909.)  
Sol. in  $\text{H}_2\text{O}$ . (Rosenheim,  
and Kohn, Z. anorg. 1910, 66. 174.)

yanide molybdenum dioxide hy-  
amine,  $4\text{NaCN}$ ,  $\text{MoO}_3$ ,  $\text{NH}_4\text{OH}$   
(Winkler, Dissert. 1909.)

cyanide,  $\text{Sr}(\text{CN})_2 + 4\text{H}_2\text{O}$ .  
Stable; very deliquescent, and sol.  
Joannis, A. ch. (5) 26. 496.)

tungsten cyanide.  
gustocyanide, strontium.

Strontium zinc cyanide,  $2\text{Sr}(\text{CN})_2$ ,  
 $3\text{Zn}(\text{CN})_2 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Loebe, Dissert.  
1902.)

Thallous cyanide,  $\text{TlCN}$ .  
100 pts.  $\text{H}_2\text{O}$  dissolve 16.8 pts. at  $28.5^\circ$ .  
(Fronmüller, B. 6. 1178.)

Thallothallic cyanide,  $\text{Tl}_2(\text{CN})_4 = \text{TlCN}$ ,  
 $\text{Ti}(\text{CN})_3$ .

Easily sol. in  $\text{H}_2\text{O}$ .  
100 pts.  $\text{H}_2\text{O}$  dissolve 27.3 pts. at  $30^\circ$ , 15.3  
pts. at  $12^\circ$ , 9.7 pts. at  $0^\circ$ . (Fronmüller, B. 11.  
92.)

Thallous tungsten cyanide.  
See Tungstocyanide, thallous.

Thallous zinc cyanide,  $2\text{TlCN}$ ,  $\text{Zn}(\text{CN})_2$ .  
Easily sol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve  
8.7 pts. at  $0^\circ$ ; 15.2 pts. at  $14^\circ$ ; and 29.6 pts.  
at  $31^\circ$ . (Fronmüller, B. 11. 92.)

Tungsten cyanide with  $\text{MCN}$ .  
See Tungstocyanide, M.

Zinc cyanide,  $\text{Zn}(\text{CN})_2$ .  
Insol. in  $\text{H}_2\text{O}$  and alcohol. Sol. in alkalies.  
Easily sol. in  $\text{KCN} + \text{Aq}$ . Sol. in hot  $\text{NH}_3$ ,  
salts +  $\text{Aq}$ . (Wittstein.)

Easily sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Gore.)  
Sol. in  $\text{KOH} + \text{Aq}$ . Solution is stable  
when less than 1 mol.  $\text{Zn}(\text{CN})_2$  to 2 mols.  
 $\text{KOH}$  is present. When proportion is 1:1,  
 $\text{ZnO}_2\text{H}_2$  soon separates.

Sol. in dil.  $\text{KCN} + \text{Aq}$ . (Sharwood, J.  
Am. Chem. Soc. 1903, 25. 587.)

Sl. sol. in conc.  $\text{Zn}$  salts +  $\text{Aq}$ . 1 l. conc.  
 $\text{Zn}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$  dissolves 4 g., and 1 l.  
conc.  $\text{ZnSO}_4 + \text{Aq}$  dissolves 2 g.  $\text{Zn}(\text{CN})_2$ .  
Insol. in  $\text{HCN} + \text{Aq}$ . Easily sol. in dil.  
acids. (Joannis.)

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am.  
Ch. J. 1898, 20. 830.)

Insol. in methyl acetate. (Naumann, B.  
1909, 42. 3790); ethyl acetate. (Naumann,  
B. 1910, 43. 314.)

Zinc cyanide ammonia,  $\text{Zn}(\text{CN})_2$ ,  $2\text{NH}_3$ .  
Decomp. on air. (Varet, C. R. 106. 1070.)  
 $+ \text{H}_2\text{O}$ . Decomp. on air. Decomp. by  
 $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Varet.)

Zinc cyanide dihydrazine,  $\text{Zn}(\text{CN})_2$ ,  $2\text{N}_2\text{H}_4$ .  
Decomp. by  $\text{H}_2\text{O}$ . (Franzen, Z. anorg  
1911, 70. 153.)

Cyanogen,  $\text{CN}$ .

$\text{H}_2\text{O}$  absorbs  $4\frac{1}{2}$  vols.  $\text{CN}$  gas at  $20^\circ$ . Alco-  
hol absorbs 23 vols., and ether 5 vols. at the  
same temperature. (Gay-Lussac.)

The solution gradually decomposes, but  
this is prevented by traces of acids.

0.221 mol. litre are dissolved in  $H_2O$  at  $0^\circ$ . (Naumann, Z. Electrochem. 1910, 16. 177.)

Oil of turpentine absorbs 5 vols. (Gay-Lussac.) Absorbed by many essential oils. Very sol. in  $CuCl_2 + Aq$ .

Absorbed with decomp. by  $NH_4OH + Aq$  and other alkaline liquids.

Absorbed by aniline. (Jacquemain, C. R. 100. 1006.)

### Cyclotriborene, $B_3H_3$ .

Insol. in  $H_2O$ . (Ramsay and Hatfield, Proc. Chem. Soc. 1901, 17. 152.)

### Decamine cobaltic sulphite,

Sol. in  $H_2O$ . (Vortmann and Magdeburg, B. 22. 2636.)

### Decamine cobaltisulphurous acid.

#### Cobaltic decamine cobaltisulphite,

Ppt. (Vortmann and Magdeburg, B. 22. 2635.)

#### Sodium decamine cobaltisulphite,

Sol. in  $H_2O$ . (Vortmann and Magdeburg, B. 22. 2635.)

### Diamide, $N_2H_4$ .

See Hydrazine.

### Diamine chromium sulphocyanhydric acid, $Cr(NH_3)_3(SCN)_3, HSCN + H_2O$ .

Sol. in  $H_2O$ . (Nordenskiöld, Z. anorg. 1. 130.)

### Diamine chromium diaquo sulphocyanide, $Cr(NH_3)_2(SCN)_2 + 2H_2O$ .

Sol. in  $H_2O$ , from which it is pptd. by con.  $HCl + Aq$ . (Nordenskiöld, Z. anorg. 1. 137.)

### Ammonium diamine chromium sulphocyanide, $Cr(NH_3)_2(SCN)_2, NH_4SCN$ .

(Reinecke's salt.) Quite easily sol. in  $H_2O$ , less in alcohol, and insol. in benzene. Slowly decomp. by boiling  $H_2O$  or dil. acids. (Nordenskiöld, Z. anorg. 1. 130.)

+  $H_2O$ . Insol. in absolute ether. (Christensen, J. pr. (2) 45. 218.)

### Ammonium diamine chromium sulphocyanide iodide, $Cr(NH_3)_2(SCN)_2, NH_4SCN, I$ .

### Barium ———, $[Cr(NH_3)_2(SCN)_2]_2, Ba(SCN)_2$ .

Sol. in  $H_2O$  and alcohol. (N.)

### Cadmium diamine chromium sulphocyanide, $Cd(SCN)_2, [Cr(NH_3)_2(SCN)_2]_2 + H$

Nearly insol. in cold, sl. sol. in hot sl. sol. in boiling alcohol. (Christensen, pr. (2) 45. 371.)

### Cupric ———, $Cu(SCN)_2, [Cr(NH_3)_2(SCN)_2]_2$ .

Insol. in  $H_2O$  or dil. acids. (Reinecke 126. 116.)

### Ferric ———, $[Cr(NH_3)_2(SCN)_2]_2, Fe(SCN)_3$ . (N.)

### Luteocobaltic ———, $Co(NH_3)_6(SCN)_3, [Cr(NH_3)_2(SCN)_2]_2$

As good as insol. in cold  $H_2O$ . Sl. sol. in hot  $H_2O$  and alcohol. (Christensen, J. pr. (2) 45. 370.)

### Mercuric ———, $[Cr(NH_3)_2(SCN)_2]_2, Hg(SCN)_2$ .

Insol. in  $H_2O$ . (N.)

Insol. in  $H_2O$  and dil. acids. (Reinecke 126. 116.)

### Potassium ———, $Cr(NH_3)_2(SCN)_2, KSCN$ .

Properties as the  $NH_4$  salt. (N.)

$Cr(NH_3)_2(SCN)_2, KSCN, I$ . As the salt. (N.)

### Sodium ———, $NaSCN, Cr(NH_3)_2(SCN)_2$ .

Sol. in  $H_2O$ , alcohol, and ether. (Reinecke 126. 116.)

### Diamine cobaltic nitrite ammonium nitrite, $Co(NH_3)_2(NO_2)_2, NH_4NO_2$ .

Sol. in  $H_2O$ . (Erdmann.)

### ——— nitrite lead nitrite,

Sol. in hot  $H_2O$  with partial decomp.

### ——— nitrite mercurous nitrite,

Ppt. Not sol. in hot  $H_2O$  without decomp.

### ——— nitrite potassium nitrite,

Sol. in  $H_2O$ . (Erdmann, J. pr. 97.)

### ——— nitrite silver nitrite,

Ppt. Crystallises out of hot  $H_2O$ . (Erdmann.)

### ——— nitrite thallium nitrite,

Crystallises out of hot  $H_2O$  without comp.

**obaltic carbonate**,  $(\text{H}_2)_2(\text{OH})\text{CO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .  
 $\text{H}_2\text{O}$ . (Vortmann, B. 15. 1901.)

**baltic chloride**,  $\text{Co}(\text{NH}_3)_2\text{Cl}_2 + \text{H}_2\text{O}$ .  
 sol. in cold  $\text{H}_2\text{O}$ , dil. acids, conc. dil. alcohol.  
 solution in conc.  $\text{H}_2\text{SO}_4$ , the salt is red by much  $\text{HCl} + \text{Aq}$ . Composition  $(\text{NH}_3)_2(\text{OH}_2)\text{Cl}_2$ . (Jorgensen, Z. 189.)

**ate**,  $\text{Co}(\text{NH}_3)_2(\text{NO}_3)_2 + 4\text{H}_2\text{O}$ .  
 escent. Sol. in  $\text{H}_2\text{O}$ . More sol. in  $\text{H}_2\text{O} + \text{Aq}$  than praseocobaltic nitrate. (Vortmann, B. 15. 1897.)  
 ous. Insol. in  $\text{H}_2\text{O}$  as such, but into above salt thereby. (Jorgensen, Z. 189.)

**ite**,  $\text{Co}(\text{NH}_3)_2(\text{NO}_3)_2$ .  
 tly sol. in cold, but rather easily sol. O.

**phate**,  $[\text{Co}(\text{NH}_3)_2]_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$ .  
 sol. in  $\text{H}_2\text{O}$ . (Vortmann, B. 15.)

**hite**,  $[\text{Co}(\text{NH}_3)_2]_2(\text{SO}_4)_3 + \text{H}_2\text{O}$ .  
 insol. in cold, slowly decomp. by hot comp. by acids or  $\text{KOH} + \text{Aq}$ . Insol. in warm  $\text{NH}_4\text{OH} + \text{Aq}$ . (Kunzel, Z. 209.) According to Geuther (A. 189.) is a double salt—  
 $[\text{Co}(\text{NH}_3)_2]_2(\text{SO}_4)_3, \text{Co}_2(\text{SO}_4)_3 + 2\text{H}_2\text{O}$ .

**m, Di**.  
 decomp. by  $\text{H}_2\text{O}$ . Insol. in cold  $\text{O}_4$ . Sol. in dil. acids.  
 und of two elements, neodymium and didymium. (v. Welsbach, W. A. 7.)

**n bromide**,  $\text{DiBr}_2 + 6\text{H}_2\text{O}$ .  
 deliquescent, and sol. in  $\text{H}_2\text{O}$ .

**n nickel bromide**,  $2\text{DiBr}_2, 3\text{NiBr}_2 + 3\text{H}_2\text{O}$ .  
 escent. Very sol. in  $\text{H}_2\text{O}$ . (Frerichs, Z. 191. 342.)

**n zinc bromide**,  $\text{DiBr}_2, 3\text{ZnBr}_2 + 3\text{H}_2\text{O}$ .  
 ely deliquescent. (Cleve, Bull. 13. 361.)  
 $3\text{ZnBr}_2 + 36\text{H}_2\text{O}$ . (F. and S.)

**n chloride**,  $\text{DiCl}_2$ .  
 ous. Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (Marignac.)  
 Deliquescent. Easily sol. in alcohol. (Marignac.)

**Didymium mercuric chloride**,  $2\text{DiCl}_2, 9\text{HgCl}_2 + 24\text{H}_2\text{O}$ .

More sol. in  $\text{H}_2\text{O}$  than the corresponding La salt. (Marignac.)

$\text{DiCl}_2, 4\text{HgCl}_2 + 11\text{H}_2\text{O}$ . Not deliquescent. Easily sol. in  $\text{H}_2\text{O}$ .

**Didymium stannic chloride**.

See Chlorostannate, didymium.

**Didymium fluoride**,  $\text{DiF}_2 + \frac{1}{2}\text{H}_2\text{O}$ .

Precipitate. (Cleve.)

**Didymium hydrogen fluoride**,  $2\text{DiF}_2, 3\text{HF}$ .

Precipitate. (Smith.)

Does not exist. (Cleve.)

**Didymium potassium fluoride**,  $\text{DiF}_2, \text{KF} + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Brauner, B. 15. 114.)

$+ \frac{1}{2}\text{H}_2\text{O}$ . As above. (B.)

$2\text{DiF}_2, 3\text{KF} + \text{H}_2\text{O}$ . As above. (B.)

**Didymium hydroxide**,  $\text{Di}_2\text{O}_3\text{H}_2$ .

Insol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ , but is sl. sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose.)

See also  $\text{Di}_2\text{O}_3$ .

**Didymium penthydroxide**,  $\text{Di}_2\text{O}_3\text{H}_2 = \text{Di}_2\text{O}_3, 3\text{H}_2\text{O}$ .

Precipitate. (Brauner, B. 15. 113.)

**Didymium zinc iodide**,  $2\text{DiI}_2, 3\text{ZnI}_2 + 24\text{H}_2\text{O}$ .

Very deliquescent. (Frerichs and Smith.)

**Didymium oxide**,  $\text{Di}_2\text{O}_3$ .

With  $\text{H}_2\text{O}$  slowly forms  $\text{Di}_2\text{O}_3\text{H}_2$ .

Sol. in conc., or dil. mineral acids (Marignac), and in acetic acid (Hermann). Sol. in ammonium salts +  $\text{Aq}$ .

Slightly more slowly sol. in conc.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  than  $\text{La}_2\text{O}_3$ . (Damour and Deville.)

A solution of  $\text{NH}_4\text{NO}_3$  in  $\text{H}_2\text{O}$  that can dissolve 2.9 mols.  $\text{La}_2\text{O}_3$  dissolves 1 mol.  $\text{Di}_2\text{O}_3$ . (Brauner, B. 15. 114.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

**Didymium peroxide**,  $\text{Di}_4\text{O}_9$ .

Sol. in acids with decomp. (Frerichs, B. 7. 799.)

Not obtained by Cleve. (B. 11. 910.)

The contradictory statements concerning the composition of Di peroxide are owing to the fact that praseodidymium is the only one of the constituents of Di which easily forms a peroxide. (v. Welsbach.)

**Didymium pentoxide**,  $\text{Di}_2\text{O}_5$ .

Sol. in dil.  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  in the cold without evolution of gas, but gas is evolved if treated with conc. acids. Insol. in  $\text{HF} + \text{Aq}$ . Sl. sol. in cold  $\text{NH}_4\text{NO}_3 + \text{Aq}$ .  $= \text{Di}_2\text{O}_5$ . (Cleve.)

**Didymium oxybromide, DiOBr.**

(Frerichs and Smith.)

**Didymium oxychloride, DiOCl.**

*Anhydrous.* Insol. in  $H_2O$ . (Smith.)  
 $+3H_2O$ . Sol. in cold dil.  $HNO_3$  + Aq.  
 (Marignac.) Sl. sol. in  $HCl$  + Aq. (Hermann.)

**Didymium oxysulphide,  $Di_2O_3S$ .**

Insol. in  $H_2O$ . Sol. in  $HCl$  + Aq without residue. (Marignac.)

**Didymium sulphide,  $Di_2S_3$ .**

Insol. in  $H_2O$ . Decomp. by dil. acids.  
 (Marignac, A. ch. (3) 38, 159.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

**Disulphuric acid,  $H_2S_2O_7$ .**

See Disulphuric acid.

**Dithionic acid (Hyposulphuric acid),  $H_2S_2O_6$ .**

Known only in aqueous solution, which is stable only when dil. Can be evaporated in vacuo until sp. gr. = 1.347, but decomp. upon further evaporation. (Welter and Gay-Lussac, A. ch. 10, 312.)

**Dithionates.**All dithionates are sol. in  $H_2O$ .**Aluminum dithionate,  $Al_2(S_2O_6)_3 + 18H_2O$ .**

Extremely deliquescent. Easily sol. in  $H_2O$  or absolute alcohol. (Klüss, A. 246, 218.)

**Aluminum ammonium dithionate,  $Al_2(S_2O_6)_3, (NH_4)_2S_2O_6 + 27H_2O$ .**

Sl. deliquescent. Sol. in  $H_2O$ . (Klüss, A. 246, 303.)

**Ammonium dithionate,  $(NH_4)_2S_2O_6$ .**

Very sol. in  $H_2O$ . Sol. in 0.79 pt.  $H_2O$  at  $16^\circ$  with reduction of temp. Not decomp. on boiling. Insol. in absolute alcohol. (Heeren, Pogg. 7, 172.)

Contains  $\frac{1}{2}H_2O$ . Sol. in 0.56 pt.  $H_2O$  at  $19^\circ$ . (Klüss, A. 246, 194.)

**Ammonium cadmium dithionate,  $2(NH_4)_2S_2O_6, CdS_2O_6 + 4\frac{1}{2}H_2O$ .**

Sol. in  $H_2O$ . (Klüss, A. 246, 298.)

**Ammonium cobalt dithionate,  $9(NH_4)_2S_2O_6, 2CoS_2O_6 + 16\frac{1}{2}H_2O$ .**

Sol. in  $H_2O$ . (Klüss.)

**Ammonium cupric dithionate,  $(NH_4)_2S_2O_6, 2CuS_2O_6 + 8H_2O$ .**

Sol. in  $H_2O$ .

**Ammonium ferrous dithionate,  $3(NH_4)_2FeS_2O_6 + 6H_2O$ .**

Sol. in  $H_2O$ . (Klüss, A. 246, 300.)  
 $9(NH_4)_2S_2O_6, 2Fe_2S_2O_6 + 16\frac{1}{2}H_2O$  in  $H_2O$ . (Klüss.)

**Ammonium manganous dithionate,  $9(NH_4)_2S_2O_6, 2MnS_2O_6$ .**

Sol. in  $H_2O$ . (Klüss, A. 246, 301.)

**Ammonium nickel dithionate,  $9(NH_4)_2NiS_2O_6 + 16\frac{1}{2}H_2O$ .**

Sol. in  $H_2O$ . (Klüss.)

**Ammonium zinc dithionate,  $5(NH_4)_2ZnS_2O_6 + 9H_2O$ .**

Easily sol. in  $H_2O$ . (Klüss, A. 246, 302.)  
 $9(NH_4)_2S_2O_6, 2ZnS_2O_6 + 16\frac{1}{2}H_2O$  sol. in  $H_2O$ . (Klüss.)

**Ammonium dithionate chloride,  $(NH_4)_2S_2O_6Cl$ .**

Sol. in  $H_2O$ . (Fock and Klüss, 3017.)

**Barium dithionate,  $BaS_2O_6 + 2H_2O$ .**

Not efflorescent. Sol. in 7.17 pts.  $H_2O$  at  $18^\circ$ , 4.04 pts. at  $18^\circ$ , and 1.1 pts.  $H_2O$  in alcohol. (Gay-Lussac, 1807.)  
 Sol. in 0.994 pt.  $H_2O$  at  $102^\circ$ , the point of the sat. solution. (Bake Soc. (2) 44, 166.)

Insol. in methyl acetate. (Naumann, 1909, 42, 3790.)  
 $+4H_2O$ . Very efflorescent. (Heeren.)

**Barium magnesium dithionate,  $BaMgS_2O_6 + 4H_2O$ .**

Sol. in  $H_2O$ . (Schiff, A. 118, 97.)

**Barium rubidium dithionate,  $BaRbS_2O_6 + H_2O$ .**

Sol. in  $H_2O$ . Solubility is diminished by presence of excess of  $Rb_2SO_4$ , but increases with excess of  $BaS_2O_6$ . (Bodlander, Chem. Ztg. 14, 1881.)

**Barium sodium dithionate,  $BaNa_2S_2O_6 + 4H_2O$ .**

Sol. in  $H_2O$ . Decomp. by recrystallization. (Kraut, A. 118, 95.)  
 $+6H_2O$ . (Schiff.)

**Barium dithionate chloride,  $BaS_2O_6Cl + 4H_2O$ .**

(Fock and Klüss, B. 23, 3001.)

**Bismuth dithionate, basic,  $Bi_2O_3 + 5H_2O$ .**

Efflorescent. Insol. in  $H_2O$ , but thereby into the following salt. Easily sol. in dil. acids, especially  $HCl$  + Aq. (Klüss, A. 246, 183.)

$4Bi_2O_3, 3S_2O_6 + 5H_2O$ . Insol. in  $H_2O$  in dil. acids. (Klüss.)

- dithionate.**  
 scint in moist air; very sol. in  $H_2O$ .  
 Pogg. 7. 183.)
- dithionate ammonia,  $CdS_2O_6$ ,**  
 . by alcohol; sol. in  $NH_4OH + Aq$ ,  
 sp. on heating. (Rammelsberg,  
 298.)
- thionate,  $Cs_2S_2O_6$ .**  
 ol. in  $H_2O$ . (Chabrie, C. R. 1901,
- lithionate,  $CaS_2O_6 + 4H_2O$ .**  
 .46 pts.  $H_2O$  at  $19^\circ$ ; 0.8 pt. at  $100^\circ$ .  
 coh. (Heeren, Pogg. 7. 178.)  
 i acetone. (Naumann, B. 1904,
- lithionate,  $Ce_2(S_2O_6)_3 + 24H_2O$ .**  
 . in  $H_2O$ . (Jolin.)  
 .  $5H_2O$ . (Wyruboff.)
- lithionate,  $Cr_2(S_2O_6)_3 + 18H_2O$ .**  
 $I_2O$  and alcohol. (Klüss, A. 246.
- $4S_2O_6 + 24H_2O$ . Easily sol. in  $H_2O$**   
 Insol. in ether. (Klüss.)
- dithionate,  $CoS_2O_6 + 6H_2O$ .**  
 liquescent. Very sol. in  $H_2O$ .  
 Sol. in 0.49 pt.  $H_2O$  at  $19^\circ$ . Sol.  
 : alcohol. (Klüss, A. 246. 203.)
- tionate basic,  $4CuO, S_2O_6 + 4H_2O$ .**  
 sol. in  $H_2O$ . (Heeren, Pogg. 7.
- i  $H_2O$ ; easily sol. in dil. acids.**  
 246. 208.)  
 Insol. in  $H_2O$  and  $NaC_2H_3O_2 +$   
 in traces in conc.  $CuS_2O_6 + Aq$ .  
 in dil. acids, even  $HCl, H_2SO_4$ , or  
 q. (Klüss.)
- tionate,  $CuS_2O_6 + 4H_2O$ .**  
 rescent. Very sol. in  $H_2O$ . Insol.  
 (Heeren.)  
 (Efflorescent. Sol. in 0.64 pt.  
 $5^\circ$  (Klüss, A. 246. 204.)
- tionate ammonia,  $CuS_2O_6, 4NH_3$ .**  
 ly sol. in cold  $H_2O$ , moderately sol.  
 $40^\circ$ . Decomp. by much  $H_2O$  or by  
 : solution above  $60^\circ$ . Decomp. by  
 (Heeren.)  
 recryst. from  $NH_4OH + Aq$ .  
 liquid  $NH_3$ . (Horn, Am. Ch. J.  
 13.)  
 $9NH_3$ . Decomp. at ord. temp.
- liquid  $NH_3$ . (Horn, Am. Ch. J.**  
 213.)
- Didymium dithionate,  $Di_2(S_2O_6)_3 + 24H_2O$ .**  
 Extremely sol. in  $H_2O$ . (Cleve.)
- Erbium dithionate,  $Er_2(S_2O_6)_3 + 18H_2O$ .**  
 Very sol. in  $H_2O$  or alcohol; insol. in ether.  
 (Höglund.)
- Glucinum dithionate, basic,  $5GIO, 2S_2O_6 +$**   
 $14H_2O$ .  
 Easily sol. in  $H_2O$  and absolute alcohol.  
 (Klüss, A. 246. 196.)
- Iron (ferrous) dithionate,  $FeS_2O_6 + 5H_2O$ .**  
 Very sol. in  $H_2O$ . Insol. in alcohol. De-  
 comp. in aqueous solution into  $FeSO_4$  by  
 boiling. (Heeren, Pogg. 7. 181.)  
 +  $7H_2O$ . Sol. in 0.59 pt.  $H_2O$  at  $18.5^\circ$ .  
 (Klüss, A. 246. 198.)
- Iron (ferric) dithionate, basic,  $8Fe_2O_3, S_2O_6 +$**   
 $20H_2O$ .  
 Insol. in  $H_2O$  or alcohol. Very sl. sol. in  
 $H_2S_2O_6 + Aq$ ; easily sol. in  $HCl + Aq$ .  
 (Heeren.)  
 Contains  $14H_2O$ . (Klüss, A. 246. 200.)  
 $3Fe_2O_3, S_2O_6 + 8H_2O$ . Insol. in  $H_2O$ .  
 Easily sol. in acids. (Klüss, A. 246. 201.)
- Lanthanum dithionate,  $La_2(S_2O_6)_3 + 16H_2O,$**   
 and  $24H_2O$ .  
 Sol. in  $H_2O$ . (Cleve.)
- Lead dithionate, basic,  $2PbO, S_2O_6 + 2H_2O$ .**  
 Very difficultly sol. in  $H_2O$ . (Heeren,  
 Pogg. 7. 171.)  
 $10PbO, S_2O_6 + 2H_2O$ . Sl. sol. in  $H_2O$ .  
 (Heeren.)
- Lead dithionate,  $PbS_2O_6 + 4H_2O$ .**  
 Easily sol. in  $H_2O$ . (Heern.)  
 Sol. in 0.869 pt.  $H_2O$  at  $20.5^\circ$ . (Baker,  
 C. N. 36. 203.)
- Lead strontium dithionate,  $(Pb, Sr)S_2O_6 +$**   
 $4H_2O$ .  
 (Rammelsberg.)
- Lithium dithionate,  $Li_2S_2O_6 + 2H_2O$ .**  
 Sl. deliquescent, and easily sol. in  $H_2O$ .  
 Insol. in alcohol. (Rammelsberg.)
- Magnesium dithionate,  $MgS_2O_6 + 6H_2O$ .**  
 Sol. in 0.85 pt.  $H_2O$  at  $13^\circ$ . Solution can  
 be boiled without decomp. (Heeren, Pogg.  
 7. 179.)  
 Sol. in 0.692 pt.  $H_2O$  at  $17^\circ$ . (Baker, C. N.  
 36. 203.)
- Manganous dithionate,  $MnS_2O_6 + 3H_2O$ .**  
 Sol. in  $H_2O$ . (Kraut, A. 118. 98.)  
 +  $6H_2O$ . Efflorescent. Sol. in  $H_2O$ . (Mar-  
 ignac, J. B. 1855. 380.)

**Mercurous dithionate,  $\text{Hg}_2\text{S}_2\text{O}_6$ .**

Sl. sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . (Rammelsberg.)

**Mercuric dithionate, basic,  $5\text{HgO}$ ,  $2\text{S}_2\text{O}_6$ .**

Sl. sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HNO}_3 + \text{Aq}$ . (Rammelsberg, Pogg. 59. 472.)

**Mercuric dithionate,  $\text{HgS}_2\text{O}_6 + 6\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  or on standing. (Klüss, A. 246. 216.)

**Nickel dithionate,  $\text{NiS}_2\text{O}_6 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Topsøe.)  
Sol. in 0.897 pt.  $\text{H}_2\text{O}$  at  $12^\circ$ . (Baker, C. N. 36. 203.)

**Nickel dithionate ammonia,  $\text{NiS}_2\text{O}_6$ ,  $6\text{NH}_3$ .**

Can be recryst. from warm  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 58. 295.)

**Nickel dithionate hydrazine,  $\text{NiS}_2\text{O}_6$ ,  $3\text{N}_2\text{H}_4$ .**

Unstable.  
Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Franzen, Z. anorg. 1908, 60. 267.)

**Potassium dithionate,  $\text{K}_2\text{S}_2\text{O}_6$ .**

Not deliquescent. Sol. in 16.5 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , and 1.58 pts. at  $100^\circ$ . Insol. in alcohol. (Heeren.)

Sol. in 2.65 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ . (Dumas.)  
Sol. in 16.5 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ ; in 1.58 pts. boiling  $\text{H}_2\text{O}$ .

Insol. in alcohol. (Heeren, Pogg. 1826, 7. 72.)

**Praseodymium dithionate,  $\text{Pr}_2(\text{S}_2\text{O}_6)_3 + 12\text{H}_2\text{O}$ .**

Deliquescent; very sol. in  $\text{H}_2\text{O}$ . (von Schule, Z. anorg. 1898, 18. 361.)

**Rubidium dithionate,  $\text{Rb}_2\text{S}_2\text{O}_6$ .**

Sol. in  $\text{H}_2\text{O}$ . (Topsøe and Christiansen.)

**Ruthenium dithionate,  $\text{RuS}_2\text{O}_6$ .**

Ppt. from aq. sol. by alcohol. (Antony, Gazz. ch. it. 1898, 28. 139-142.)

**Silver dithionate,  $\text{Ag}_2\text{S}_2\text{O}_6 + 2\text{H}_2\text{O}$ .**

Sol. in 2 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Heeren, Pogg. 7. 191.)

**Silver sodium dithionate,  $\text{Ag}_2\text{S}_2\text{O}_6$ ,  $\text{Na}_2\text{S}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Kraut, A. 118. 96.)

**Silver dithionate ammonia,  $\text{Ag}_2\text{S}_2\text{O}_6$ ,  $4\text{NH}_3$ .**

Sol. in  $\text{H}_2\text{O}$  without decomp. (Rammelsberg, Pogg. 58. 298.)

**Sodium dithionate,  $\text{Na}_2\text{S}_2\text{O}_6 + 2\text{H}_2\text{O}$ .**

Sol. in 2.1 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , and in 1.1 pt. boiling  $\text{H}_2\text{O}$ . Insol. in alcohol.

Fuming  $\text{HCl} + \text{Aq}$  precipitates the salt from aqueous solution. (Heeren, Pogg. 7. 76.)

$+6\text{H}_2\text{O}$ . (Kraut, A. 117. 97.)

**Strontium dithionate,  $\text{SrS}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Sol. in 4.5 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , 1.5 pts. boiling  $\text{H}_2\text{O}$ . Insol. in alcohol. (Heeren, Pogg. 7. 177.)

**Thallous dithionate,  $\text{Tl}_2\text{S}_2\text{O}_6$ .**

Very easily sol. in  $\text{H}_2\text{O}$ . (Werther.)

**Thallous dithionate sulphate,  $3\text{Tl}_2\text{S}_2\text{O}_6$ ,  $\text{Tl}_2\text{SO}_4$ .**

Sol. in  $\text{H}_2\text{O}$ . (Wyruboff, Ann. Phys. Beibl. 8. 802.)

**Thorium dithionate,  $\text{Th}(\text{S}_2\text{O}_6)_2 + 4\text{H}_2\text{O}$  (?)**

Very unstable. (Klüss, A. 246. 188.)

**Tin (stannous) dithionate,  $\text{SnS}_2\text{O}_6$ .**

Known only in solution.  
 $8\text{SnO}$ ,  $\text{S}_2\text{O}_6 + 9\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. acids, even dithionic acid  $+ \text{Aq}$ . (Klüss, A. 246. 186.)

**Uranous dithionate,  $6\text{UO}_2$ ,  $\text{S}_2\text{O}_6 + 10\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in warm  $\text{HCl} + \text{Aq}$  (Klüss, A. 246. 191.)

$7\text{UO}_2$ ,  $\text{S}_2\text{O}_6 + 8\text{H}_2\text{O}$ . As above.  
 $8\text{UO}_2$ ,  $\text{S}_2\text{O}_6 + 21\text{H}_2\text{O}$ . As above.

**Divanadyl dithionate,  $(\text{VO}_2)_2\text{S}_2\text{O}_6$ .**

Sol. in  $\text{H}_2\text{O}$ . (Bevan, C. N. 38. 294.)

**Yttrium dithionate,  $\text{Y}_2(\text{S}_2\text{O}_6)_3 + 18\text{H}_2\text{O}$ .**

Not deliquescent. Easily sol. in  $\text{H}_2\text{O}$ , but difficultly sol. in alcohol. Insol. in ether (Cleve, Bull. Soc. (2) 21. 344.)

**Zinc dithionate,  $\text{ZnS}_2\text{O}_6 + 6\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ ; decomp. on boiling (Heeren, Pogg. 7. 183.)

**Zinc dithionate ammonia,  $\text{ZnS}_2\text{O}_6$ ,  $4\text{NH}_3$ .**

Decomp. with  $\text{H}_2\text{O}$ ; sol. in warm, less so in cold  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rammelsberg, Pogg. 58. 297.)

$+ \text{H}_2\text{O}$ . Ppt. (Ephraim, B. 1915, 4. 640.)

**Dysprosium, Dy.**

(Lecoq de Boisbaudran, C. R. 102. 1006)

**Dysprosium chloride,  $\text{DyCl}_2 + 6\text{H}_2\text{O}$ .**

Deliquescent, sol. in  $\text{H}_2\text{O}$ . (Urbain, C. R. 1908, 146. 129.)

m.

chloride,  $\text{EuCl}_2$ .

$\text{H}_2\text{O}$ . Stable in very dil. aqueous but decomp. when the solution is heated at  $100^\circ$ . (Urbain, C. R. 1911, .)

Er.

poses  $\text{H}_2\text{O}$ . (Höglund.)  
 -called element "erbium" can be decomp. into simple substances. *anorg.* **3**. 353.)

eromide,  $\text{ErBr}_3 \cdot 9\text{H}_2\text{O}$ .

deliquescent.

chloride,  $\text{ErCl}_3 \cdot 6\text{H}_2\text{O}$ .

escent. Sol. in  $\text{H}_2\text{O}$  and alcohol. .)

mercuric chloride,  $\text{ErCl}_3 \cdot 5\text{HgCl}_2 +$ 

escent. (Cleve.)

luoride,  $\text{ErF}_3$ .

in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{HF} + \text{Aq.}$ , Bull. Soc. (2) **18**. 193.)

ydroxide,  $\text{Er}_2\text{O}(\text{OH})_4$ .

n  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq.}$   
 sol. in acids. Decomp. ammonium  
 oiling therewith.

xide,  $\text{ErI}_3$ .

deliquescent. Very sol. in  $\text{H}_2\text{O}$  and  
 Insol. in ether. (Höglund.)

xide,  $\text{Er}_2\text{O}_3$ .

ltly but completely sol. in warm  
 $\text{H}_2\text{SO}_4$ , or  $\text{HCl} + \text{Aq.}$  Decomp.  $\text{NH}_4$   
 oiling therewith.

eroxide,  $\text{Er}_2\text{O}_3$ .tate. (Cleve, Bull. Soc. (2) **43**.)

ulphide.

p. in moist air and with acids.

chromium bromide,

 $\text{Cr}_2(\text{NH}_3)_{10}\text{Br}_3 + \text{H}_2\text{O}$ .

asily sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{HBr} +$   
 in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Jörgensen, J.  
 . 398.)

xide, basic,  $\text{HOCr}_2(\text{NH}_3)_{10}(\text{OH})\text{Br}_4$ 

O.

l. in  $\text{H}_2\text{O}$ . (Jörgensen.)

roiodide,  $\text{HOCr}_2(\text{NH}_3)_{10}\text{ClI}_4 + \text{H}_2\text{O}$ .  
 $\text{H}_2\text{O}$  and in alcohol. (Jörgensen.)

Erythrochromium chloroplatinate,

 $[\text{HOCr}_2(\text{NH}_3)_{10}]_2(\text{PtCl}_6)_4 + 10\text{H}_2\text{O}$ .Nearly insol. in  $\text{H}_2\text{O}$ . (Jörgensen.)

— dithionate, basic,

 $\text{HOCr}_2(\text{NH}_3)_{10}(\text{S}_2\text{O}_6)_2(\text{OH}) + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in very dil.  
 $\text{HNO}_3$ ,  $\text{HBr}$ ,  $\text{HCl} + \text{Aq.}$  Sol. in conc.  $\text{NH}_4\text{Cl}$   
 $+ \text{Aq.}$  (Jörgensen.)

— nitrate,  $\text{HOCr}_2(\text{NH}_3)_{10}(\text{NO}_3)_2 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in dil.  $\text{HNO}_3 +$   
 $\text{Aq.}$  Sol. in conc.  $\text{HNO}_3$  with decomp. Very  
 sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq.}$  Insol. in alcohol.  
 (Jörgensen.)

— nitrate, basic,  $\text{HOCr}_2(\text{NH}_3)_{10}(\text{NO}_3)_4\text{OH}$  $+ 3\frac{1}{2}\text{H}_2\text{O}$ .Sol. in cold  $\text{H}_2\text{O}$ . (Jörgensen.)— sulphate,  $[\text{HOCr}_2(\text{NH}_3)_{10}]_2(\text{SO}_4)_2$ .Nearly insol. in  $\text{H}_2\text{O}$ . (Jörgensen.)Tetraferriammonium,  $\text{Fe}_3\text{N}$ .

See Iron nitride.

Ferric acid.

Barium ferrate,  $\text{BaFeO}_4 + \text{H}_2\text{O}$ .

Ppt. Can be boiled for some time with  $\text{H}_2\text{O}$   
 without decomp. Decomp. by mineral acids.  
 Sol. in dil. acetic acid. (Freymy, A. ch. (3)  
**12**. 373.)

Insol. in  $\text{H}_2\text{O}$ ; not readily acted upon by  
 acids when dry. (Rosen, J. Am. Chem.  
 Soc. 1895, **17**. 766.)

Ppt. Easily decomp. by acids. (Moeser,  
 Arch. Pharm. 1895, **233**. 526.)

Insol. in acetone. (Naumann, B. 1904, **37**.  
 4329.)

Calcium ferrate,  $\text{CaFe}_2\text{O}_4$ .

Sol. in  $\text{H}_2\text{O}$ . (Rosell, J. Am. Chem. Soc.  
 1895, **17**. 760-69.)

Potassium ferrate,  $\text{K}_2\text{FeO}_4$ .

Very deliquescent. Easily sol. in cold  $\text{H}_2\text{O}$   
 with evolution of much heat. Decomp. by  
 standing or warming. Decomp. by acids or  
 alkalis. (Freymy, A. ch. (3) **12**. 369.)

Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Moeser,  
 Arch. Pharm. 1895, **233**. 524.)

Quickly decomp. by potassium tartrate or  
 racemate, sugar, or albumen without separa-  
 tion of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ , by alcohol with separation  
 of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Potassium oxalate, acetate,  
 formate, and benzoate, also citrate decomp.  
 much more slowly. Insol. in conc.  $\text{KOH} +$   
 $\text{Aq.}$  (Wackenroder, A. **33**. 41.)

Sodium ferrate,  $\text{Na}_2\text{FeO}_4$ .

Sol. in  $\text{H}_2\text{O}$  and in conc.  $\text{NaOH} + \text{Aq.}$   
 (Freymy, l. c.)

**Strontium ferrate,  $\text{SrFeO}_4$ .**

Sl. sol. in  $\text{H}_2\text{O}$  by which it is decomp.

Decomp. by acids.

Sol. in aqueous solutions of Na and K salts with partial decomp.

Insol. in sat.  $\text{SrBr}_2 + \text{Aq.}$ , alcohol and ether. (Eidmann, B. 1903, **36**, 2290.)

**Ferricomolybdic acid.**

**Ammonium ferricomolybdate,  $3(\text{NH}_4)_2\text{O}, \text{Fe}_2\text{O}_3, 12\text{MoO}_3 + 19\text{H}_2\text{O}$ .**

Ppt. (Hall, J. Am. Chem. Soc. 1907, **29**, 697.)

**Ferricyanhydric acid,**

$\text{H}_2\text{Fe}(\text{CN})_5$ , (or  $\text{H}_2\text{Fe}_2(\text{CN})_{12}$ ).

Easily sol. in  $\text{H}_2\text{O}$  or alcohol. Solution decomposes slowly by standing, more rapidly by heating. Insol. in ether.

**Ferricyanides.**

The alkali, and alkaline-earth ferricyanides are sol. in  $\text{H}_2\text{O}$ ; the others are insol. The ferricyanides of metals, the oxides of which are sol. in  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq.}$ , are themselves sol. in those reagents.

**Ammonium ferricyanide,  $(\text{NH}_4)_3\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .**

Permanent. Readily sol. in  $\text{H}_2\text{O}$  (and alcohol?).

**Ammonium ferrous ferricyanide,**

$\text{NH}_4\text{FeFe}(\text{CN})_6 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and not pptd. by alcohol from aqueous solution. More stable than the corresponding K salt.

**Ammonium lead ferricyanide,**

$\text{NH}_4\text{PbFe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

**Ammonium potassium ferricyanide,**

$(\text{NH}_4)_2\text{KFe}(\text{CN})_6$ .

Sol. in  $\text{H}_2\text{O}$ . (Schaller, Bull. Soc. (2) 1. 275.)

**Barium ferricyanide,  $\text{Ba}_3[\text{Fe}(\text{CN})_6]_2 + 20\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Schuler, W. A. B. **77**, 692.)

**Barium potassium ferricyanide,  $\text{BaKFe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .**

Permanent. Easily sol. in  $\text{H}_2\text{O}$ , less in alcohol.

**Barium ferricyanide bromide,  $\text{Ba}_3[\text{Fe}(\text{CN})_6]_2 \cdot 2\text{BaBr}_2 + 20\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Boiling alcohol does not dissolve out  $\text{BaBr}_2$ . (Rammelsberg, J. pr. (2) **39**, 463.)

**Bismuth ferricyanide,  $\text{Bi}_3[\text{Fe}(\text{CN})_6]_2$ .**

Insol. in  $\text{H}_2\text{O}$ , but decomp. by 1 therewith. (Muir, Chem. Soc. **33**, 40.)

**Cadmium ferricyanide ammonia,**

$\text{Cd}_3[\text{Fe}(\text{CN})_6]_2, 6\text{NH}_3 + 3\text{H}_2\text{O}$ .

Effloresces to form—

$\text{Cd}_3[\text{Fe}(\text{CN})_6]_2, 4\text{NH}_3 + 2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Wyruboff, A. hc. (5) **10**, 413.)

**Calcium ferricyanide,  $\text{Ca}_3[\text{Fe}(\text{CN})_6]_2$  or  $12\text{H}_2\text{O}$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and dil. a

**Calcium potassium ferricyanide,**

$\text{CaKFe}(\text{CN})_6$ .

Sol. in  $\text{H}_2\text{O}$ .

**Cerous ferricyanide,  $\text{CeFe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ ; easily decomp. (Jolin.)

**Chromic ferricyanide (?)**

Ppt.

**Cobaltous ferricyanide,  $\text{Co}_3[\text{Fe}(\text{CN})_6]_2$ .**

Insol. in  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq.}$  8  $\text{NH}_4\text{OH} + \text{Aq.}$

**Cobaltous ferricyanide ammonia,**

$\text{Co}_3[\text{Fe}(\text{CN})_6]_2, 4\text{NH}_3 + 6\text{H}_2\text{O}$ .

**Cobaltic ferricyanide ammonia.**

See Luteo, - purpureo, - etc. cobaltic cyanide.

**Cuprous ferricyanide,  $(\text{Cu}_2)_3[\text{Fe}(\text{CN})_6]_2$ .**

Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$ ; insol. in  $\text{NH}_4\text{Aq.}$  (Wittstein.)

**Cupric ferricyanide,  $\text{Cu}_3[\text{Fe}(\text{CN})_6]_2$ .**

Insol. in  $\text{H}_2\text{O}$  or  $\text{NH}_4$  salts +  $\text{Aq.}$  1  $\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  (Wittstein.) Insol. in  $\text{HCl} + \text{Aq.}$

**Iron (ferrous) ferricyanide,  $\text{Fe}_3[\text{Fe}(\text{CN})_6]_2 \cdot x\text{H}_2\text{O}$ .**

(Turnbull's blue.) Properties as ferrocyanide (Prussian blue), with white perhaps identical. (Gintl, Z. anal. **21**

**Iron (ferrosoferric) ferricyanide,**

$\text{Fe}_{12}(\text{CN})_{24} = \text{Fe}^{\text{III}}_4\text{Fe}^{\text{II}}_8[\text{Fe}(\text{CN})_6]_4$ .

(Prussian green.) Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq.}$ , but slowly decomp. by 1 therewith.

$\text{Fe}_3(\text{CN})_6 + 4\text{H}_2\text{O} = \text{Fe}^{\text{II}}_4\text{Fe}^{\text{III}}_8[\text{Fe}(\text{CN})_6]_4 + 12\text{H}_2\text{O}$ . Properties as above. (Reich, Chem. Soc. **54**, 767.)

**Iron (ferrous) potassium ferricyanide,**

$\text{KFe}_2(\text{CN})_6 = \text{KFeFe}(\text{CN})_6 + 4$ , or

(Soluble Prussian blue.) Sol. in  $\text{H}_2\text{O}$  insol. in salts +  $\text{Aq.}$  or alcohol.

the same composition, called "Wil-  
lue," is insol. in  $H_2O$ .

**ferrocyanide, basic**,  $Pb_3[Fe(CN)_6]_2$ ,  
 $H_2+11H_2O$ .  
)

**ferrocyanide**,  $Pb_3[Fe(CN)_6]_2+16H_2O$ .  
1  $H_2O$ ; more sol. in hot, than cold  
decomp. on boiling. (Gmelin.)  
Easily sol. in  $H_2O$ ; sl. sol. in  
Schuler, W. A. B. 77. 692.)

**potassium ferricyanide**,  $PbKFe(CN)_6$ .  
O.  
75 pts.  $H_2O$  at  $16^\circ$ , and the solu-  
p. on standing. (Schuler.)  
O. Efflorescent. Much more sol.  
in the Pb salt. Insol. in alcohol.  
(.)

**ferrocyanide nitrate**,  $Pb_3[Fe(CN)_6]_2$ ,  
 $O_3+12H_2O$ .

3.31 pts.  $H_2O$  at  $16^\circ$ . (Schuler.)  
(Joannis, A. ch. (5) 26. 528.)

**1 ferricyanide**,  $Mg_2[Fe(CN)_6]_2$ .  
 $I_2O$ .

**1 potassium ferricyanide**,  
 $Fe(CN)_6$ .  
, J. pr. 103. 166.)

**1 ferricyanide**,  $Mn_2[Fe(CN)_6]_2$ .  
 $H_2O$ , acids,  $NH_4OH$ , or  $NH_4$  salts

**1 ferricyanide**,  $Hg_2Fe(CN)_6$ .  
Bernekes, J. Am. Chem. Soc. 1906,

**1 ferricyanide**,  $Hg_2[Fe(CN)_6]_2$ .  
in  $H_2O$ . Solution quickly decomp.  
J. Am. Chem. Soc. 1906, 28. 603.)

**1 cyanide ammonia**,  $Ni_2[Fe(CN)_6]_2$ ,  
 $+H_2O$ .  
 $[H_2OH+Aq]$ . (Reynoso, A. ch.(3)

**1 cyanide**,  $Ni_2[Fe(CN)_6]_2(?)$ .  
sol. in  $HCl+Aq$ .

**1 ferricyanide**,  $K_2Fe(CN)_6$ , (or  
 $(CN)_{11}$ ).  
mt. Easily sol. in  $H_2O$ .

$H_2O$  dissolve pts.  $K_2Fe(CN)_6$  at  $t^\circ$ .

s. lit	$t^\circ$	Pts. salt	$t^\circ$	Pts. salt
0	15.6	40.8	100	77.5
0.6	37.8	58.8	104.4	82.6

Wallace, Chem. Soc. 7. 80.)

100 pts.  $H_2O$  at  $13^\circ$  dissolve 38 pts., and the  
solution has sp. gr. = 1.1630. (Schiff, A. 113.  
350.)

1 l. sat. solution in  $H_2O$  at  $25^\circ$  contains  
385.5 g.  $K_2Fe(CN)_6$ . (Grube, Z. Electrochem.  
1914, 20. 342.)

Sp. gr. of  $K_2Fe(CN)_6+Aq$  at  $13^\circ$ .

% salt	Sp. gr.	% salt	Sp. gr.	% salt	Sp. gr.
1	1.0051	11	1.0595	21	1.1202
2	1.0103	12	1.0653	22	1.1266

0.9628	275.3	55.19
1.949	200.8	35.95

(Grube.)

Solubility in  $KOH+Aq$  at  $25^\circ$ .

KOH Normality	g. $K_2Fe(CN)_6$ per l.
0.4687	342.7
0.9628	302.3
1.949	215.1

(Grube, Z. Electrochem, 1914, 20. 342.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch.  
J. 1898, 20. 828.)

Insol. in absolute alcohol, and only sl. sol. in dil. alcohol.

Sol. in acetone. (Naumann, B. 1904, **37**, 4328.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790); ethyl acetate. (Naumann, B. 1910, **43**, 314.)

Insol. in benzonitrile. (Naumann, B. 1914, **47**, 1370.)

**Potassium sodium ferricyanide,**  
 $\text{KNa}_2\text{Fe}(\text{CN})_6$ .

Sol. in  $\text{H}_2\text{O}$ .

$\text{K}_2\text{NaFe}(\text{CN})_6$ . Sol. in  $\text{H}_2\text{O}$ .

$\text{K}_2\text{Na}_2\text{Fe}(\text{CN})_6$ . Sol. in  $\text{H}_2\text{O}$ .  
+  $3\text{H}_2\text{O}$ .

**Potassium ferricyanide iodide,**  $\text{K}_3\text{Fe}(\text{CN})_6$ ,  
 $\text{KI}$ .

Very unstable.

**Silver ferricyanide,**  $\text{Ag}_3\text{Fe}(\text{CN})_6$ .

1 l.  $\text{H}_2\text{O}$  dissolves 0.00066 g.  $\text{Ag}_3\text{Fe}(\text{CN})_6$  at  $20^\circ$ . (Whitby, Z. anorg. 1910, **67**, 108.)

Sol. in  $\text{NH}_4\text{OH}$ , and hot  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , but insol. in  $\text{NH}_4$  salts +  $\text{Aq}$ .

Insol. in  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$ . (Wackenroder, A. **41**, 317.)

**Silver ferricyanide ammonia,**  $2\text{Ag}_3\text{Fe}(\text{CN})_6$ ,  
 $3\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Gintl.)

$2\text{Ag}_3\text{Fe}(\text{CN})_6$ ,  $5\text{NH}_3$ . (Carlo, Gazz. ch. it. 1910, **40**, (2) 477.)

**Sodium ferricyanide,**  $\text{Na}_3\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$ .

Deliquescent. Sol. in 5.3 pts. cold, and 1.5 pts. boiling  $\text{H}_2\text{O}$ . Insol. in alcohol, but not pptd. thereby from aqueous solution. (Bette.)

**Ferrinitrososulphydic acid.**

See *Ferroheptanitrososulphydic acid*.

**Ferrocyanhydric acid,**  $\text{H}_4\text{Fe}(\text{CN})_6$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol.

100 pts.  $\text{H}_2\text{O}$  dissolve 15 pts. acid at  $14^\circ$ . (Joannis, A. ch. (5) **26**, 514.)

Insol. in ether, and much less sol. in ether-alcohol than in alcohol. Insol. in conc.  $\text{HCl} + \text{Aq}$ .

**Ferrocyanides.**

The ferrocyanides of the alkali and alkaline-earth metals are sol. in  $\text{H}_2\text{O}$ ; the others are insol., but sol. in alkalies +  $\text{Aq}$  in case the base is sol. therein.

**Aluminum ferrocyanide,**  $\text{Al}_4[\text{Fe}(\text{CN})_6]_3 + 17\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ .

Sl. sol. in  $\text{HCl} + \text{Aq}$  with partial decomp. (Wyruboff, A. ch. (5) **8**, 446.)

**Ammonium ferrocyanide,**  $(\text{NH}_4)_4\text{Fe}(\text{CN})_6$ ,  
 $3\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol.  
+  $\text{H}_2\text{O}$ . (Berzelius.)

**Ammonium cadmium ferrocyanide ammu**  
 $(\text{NH}_4)_2\text{Cd}_2[\text{Fe}(\text{CN})_6]_3$ ,  $2\text{NH}_3 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wyruboff, A. ch. (5) 413.)

**Ammonium calcium ferrocyanide,**  
 $(\text{NH}_4)_2\text{CaFe}(\text{CN})_6$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Kunheim and Zimman, Dingl. **252**, 478.)

100 g. sat. solution in  $\text{H}_2\text{O}$  contain 0 g. at  $16^\circ$ . (Brown, J. phys. Ch. 1898, **2**

**Ammonium cuprous ferro cyanide,**  
 $(\text{NH}_4)_2\text{Cu}_2\text{Fe}(\text{CN})_6$ .

Insol. in  $\text{H}_2\text{O}$  and alcohol.

Decomp. in the air. (Messner, Z. an 1895, **8**, 382.)

**Ammonium cupric ferrocyanide,**  
 $(\text{NH}_4)_2\text{CuFe}(\text{CN})_6$ .

Ppt.

+  $x\text{H}_2\text{O}$ . Very unstable. Insol. in l decomp. by boiling  $\text{H}_2\text{O}$ . (Messner, Z. an 1895, **8**, 384.)

**Ammonium lithium ferrocyanide,**  
 $(\text{NH}_4)_2\text{Li}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wyruboff, A. ch. (4) 270.)

**Ammonium magnesium ferrocyanide,**  
 $(\text{NH}_4)_2\text{MgFe}(\text{CN})_6$ .

1 l. sat. solution at  $17^\circ$  contains 2.4  $(\text{NH}_4)_2\text{MgFe}(\text{CN})_6$ . (Robinson, Chem. 1909, **95**, 1353.)

**Ammonium manganous ferrocyanide,**  
 $(\text{NH}_4)_2\text{MnFe}(\text{CN})_6$ .

Ppt. (Blum, Z. anal. **30**, 284.)

**Ammonium potassium ferrocyanide,**  
 $\text{NH}_4\text{K}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

Easily sol. in cold, more easily in hot l Insol. in alcohol.

$(\text{NH}_4)_2\text{K}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ . Sol. in l

**Ammonium potassium ferrocyanide am**  
nium chloride,  $(\text{NH}_4)_4\text{KFe}(\text{CN})_6$ ,  
 $2\text{NH}_4\text{Cl}$ .

Sol. in  $\text{H}_2\text{O}$ . (Étard, J. pr. (2) **31**, 43)

**Ammonium ferrocyanide bromide,**  
 $(\text{NH}_4)_4\text{Fe}(\text{CN})_6$ ,  $2\text{NH}_4\text{Br}$ .

Permanent. Very sol. in  $\text{H}_2\text{O}$ .

**Ammonium ferrocyanide chloride,**  
 $(\text{NH}_4)_4\text{Fe}(\text{CN})_6$ ,  $2\text{NH}_4\text{Cl} + 3\text{H}_2\text{O}$ .

Permanent. Very sol. in  $\text{H}_2\text{O}$ , but less than  $\text{NH}_4\text{Cl}$ . (Bunsen.)

**ferrocyanide**,  $\text{Sb}_4[\text{Fe}(\text{CN})_6]_3 + 3\text{H}_2\text{O}$ . (Atterberg.)

**ferrocyanide**,  $\text{Ba}_2\text{Fe}(\text{CN})_6 + 6\text{H}_2\text{O}$ .  
 ent. Sl. sol. in  $\text{H}_2\text{O}$ .  
 184 pts. cold, and 116 pts. boiling  
 los, 1833; sol. in 1800 pts. cold  
 ett, 1814; sol. in 1920 pts. cold,  
 100 pts. boiling  $\text{H}_2\text{O}$  (Thomson);  
 10 pts. cold, and 100 pts. boiling  
 e's Dict.)  
 1000 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 100 pts. at  
 rouboff, A. ch. (4) 16. 292.)  
 $\text{HNO}_3$ ,  $\text{HCl}$ , or conc.  $\text{H}_2\text{SO}_4 + \text{Aq.}$

**pric ferrocyanide**,  $\text{BaCuFe}(\text{CN})_6$ .  
 1  $\text{H}_2\text{O}$ . (Messner, Z. anorg. 1895,

**potassium ferrocyanide**,  
 $\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .  
 8 pts. cold, and 9.5 pts. boiling  $\text{H}_2\text{O}$   
 833; in 36.4 pts.  $\text{H}_2\text{O}$  at  $14^\circ$ , and  
 t b.-pt. (Mosander.)  
 re sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  than in  $\text{H}_2\text{O}$ .  
 , insol. in conc.  $\text{HCl} + \text{Aq.}$  (Rose.)  
 ff.) Sol. in 300 pts.  $\text{H}_2\text{O}$  at ord. temp.

**ferrocyanide**,  $\text{Bi}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .  
 (?).  
 in pure  $\text{H}_2\text{O}$ . (Wyruboff.)  
 $2\text{N})_6]_2$ . Ppt. (Muir, Chem. Soc.

**potassium ferrocyanide**,  
 $\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$ , or  $4\text{H}_2\text{O}$ .

**potassium ferrocyanide**,  
 $\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$ .  
 1  $\text{H}_2\text{O}$ .  
 1 given by Wyruboff is  
 $(\text{CN})_6]_4 + 11\text{H}_2\text{O} (?)$ .

**ferrocyanide**,  $\text{Ca}_2\text{Fe}(\text{CN})_6 + 12\text{H}_2\text{O}$ .  
 l. in  $\text{H}_2\text{O}$ . Sol. in 0.66 pt.  $\text{H}_2\text{O}$  at  
 not pptd. by cooling, and is ap-  
 ess sol. in warm than cold  $\text{H}_2\text{O}$ .  
 ff, A. ch. (4) 16. 280.)

**cuprous ferrocyanide**,  
 $\text{Fe}(\text{CN})_6$ . (Messner, Z. anorg.  
 37.)

**pric ferrocyanide**,  $\text{CaCuFe}(\text{CN})_6$ .  
 1  $\text{H}_2\text{O}$ . (Messner, Z. anorg. 1895

**potassium ferrocyanide**,  
 $\text{Fe}(\text{CN})_6$ .  
 in  $\text{H}_2\text{O}$ . (Kunheim and Zimmer-  
 gl. 252. 478.)

+  $3\text{H}_2\text{O}$ . Sol. in 795 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and  
 145 pts. at b.-pt., with decomp. in the latter  
 case.

Sol. in dil., insol. in conc.  $\text{HCl} + \text{Aq.}$  Sol.  
 in  $\text{HNO}_3$  of 1.2 sp. gr. (Mosander.)  
 Insol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$

**Calcium sodium ferrocyanide**,  
 $\text{CaNa}_4[\text{Fe}(\text{CN})_6]_2$ .  
 Sol. in  $\text{H}_2\text{O}$ .

**Calcium strontium ferrocyanide**,  
 $\text{CaSrFe}(\text{CN})_6 + 10\text{H}_2\text{O}$ .  
 Efflorescent. Sol. in about 3 pts.  $\text{H}_2\text{O}$ .  
 (Wyruboff, A. ch. (4) 21. 278.)

**Cerium ferrocyanide**,  $\text{Ce}_4[\text{Fe}(\text{CN})_6]_3 + 30\text{H}_2\text{O}$ .  
 Ppt. (Wyruboff.)

**Cerium potassium ferrocyanide**,  
 $\text{CeKFe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .  
 Ppt. (Jolin.)  
 +  $4\text{H}_2\text{O}$ . (Wyruboff.)

**Chromic ferrocyanide**,  $\text{Cr}_2[\text{Fe}(\text{CN})_6]_3 + 20\text{H}_2\text{O}$ .  
 Ppt.

**Cobaltous ferrocyanide**,  $\text{Co}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$ .  
 Wholly insol. in  $\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{SO}_4$  with decomp. Insol. in  
 $\text{HCl} + \text{Aq.}$  Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  Sol. in  
 $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  Insol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  Sol.  
 in  $\text{KCN} + \text{Aq.}$

**Cobaltous ferrocyanide ammonia**,  
 $\text{Co}_2\text{Fe}(\text{CN})_6 + 8\text{NH}_3 + 10\text{H}_2\text{O}$ .  
 Ppt. Decomp. on standing. (Curda, Z.  
 Ch. 1869. 369.)  
 $\text{Co}_2\text{Fe}(\text{CN})_6 + 12\text{NH}_3 + 9\text{H}_2\text{O}$ . As above.  
 (Curda.)

**Cobaltous potassium ferrocyanide**,  
 $\text{CoK}_2\text{Fe}(\text{CN})_6$ .  
 Ppt. (Wyruboff.)  
 $\text{Co}_2\text{K}_4[\text{Fe}(\text{CN})_6]_3 (?)$ . Ppt. Insol. only in  
 presence of an excess of  $\text{K}_4\text{Fe}(\text{CN})_6$ . (Wy-  
 ruboff.)

**Columbium potassium ferrocyanide**,  
 $\text{Cb}_{15}\text{K}[\text{Fe}(\text{CN})_6]_2 + 67\text{H}_2\text{O} (?)$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Wyruboff.)  
 $\text{Cb}_{12}\text{K}_2\text{Fe}(\text{CN})_6 + 39\text{H}_2\text{O} (?)$ . Sol. in  
 $\text{H}_2\text{O}$ . (W.)  
 $(\text{CbO})_3\text{K}_3[\text{Fe}(\text{CN})_6]_3 + 10\text{H}_2\text{O} (?)$ . Ppt. (At-  
 terberg.)

**Cuprous ferrocyanide**,  $\text{Cu}_4\text{Fe}(\text{CN})_6$ .  
 Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$ ; insol.  
 in  $\text{NH}_4\text{Cl} + \text{Aq.}$

**Cupric ferrocyanide, basic,  $\text{CuFe}(\text{OH})_2(\text{CN})_4$ .**  
Ppt. (Bong, Bull. Soc. 23. 231.)

**Cupric ferrocyanide,  $\text{Cu}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  or acids. Insol. in  $\text{NH}_4$  salts + Aq. Sol. in  $\text{NH}_4\text{OH}$  + Aq. Sol. in  $(\text{NH}_4)_2\text{C}_2\text{O}_4$  + Aq and in  $\text{KCN}$  + Aq.

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 827.)

+  $10\text{H}_2\text{O}$ . Sol. in excess of  $\text{K}_4\text{Fe}(\text{CN})_6$  + Aq, especially if hot. (Wyruboff.)

**Cupric ferrocyanide ammonia (cuprammonium ferrocyanide),  $\text{Cu}_2\text{Fe}(\text{CN})_6 \cdot 4\text{NH}_3 + \text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  or alcohol. Sol. in  $\text{NH}_4\text{OH}$  + Aq. (Bunsen.)

$\text{Cu}_2\text{Fe}(\text{CN})_6 \cdot 8\text{NH}_3 + \text{H}_2\text{O}$ .

**Cuprous magnesium ferrocyanide,  $\text{Cu}_2\text{MgFe}(\text{CN})_6$ .**

Very unstable. Decomp. in air.

Insol. in  $\text{H}_2\text{O}$ . (Messner, Z. anorg. 1895, 8. 385.)

**Cupric magnesium ferrocyanide,  $\text{CuMgFe}(\text{CN})_6$ .**

Insol. in  $\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . Very unstable. (Messner, Z. anorg. 1895, 8. 387.)

**Cuprous potassium ferrocyanide,  $\text{Cu}_2\text{K}_2\text{Fe}(\text{CN})_6$ .**

Insol. in  $\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . Decomp. by acids. Insol. in alcohol. (Messner, Z. anorg. 1895, 8. 378.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , alcohol, or ether. Decomp. by acids. Sol. in  $\text{KCN}$  + Aq.

$\text{K}_2\text{Cu}_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .

+  $5\text{H}_2\text{O}$ . (Wonfor.)

+  $6\text{H}_2\text{O}$ . (Wyruboff.)

**Cupric potassium ferrocyanide,  $\text{K}_2\text{CuFe}(\text{CN})_6 + \text{H}_2\text{O}$ .**

Insol. in cold, sl. decomp. by boiling  $\text{H}_2\text{O}$ .  $\text{K}_2\text{Cu}_2[\text{Fe}(\text{CN})_6]_2 + 12\text{H}_2\text{O}$ . Ppt.

**Cuprous sodium ferrocyanide,  $\text{Cu}_2\text{Na}_2\text{Fe}(\text{CN})_6$ .**

Decomp. by boiling  $\text{H}_2\text{O}$ ; insol. in alcohol; insol. in  $\text{H}_2\text{O}$ ; decomp. by acids. (Messner, Z. anorg. 1895, 8. 373.)

**Cupric sodium ferrocyanide,  $\text{CuNa}_2\text{Fe}(\text{CN})_6$ .**

Insol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . (Moissan, Z. anorg. 1895, 8. 376.)

**Cupric strontium ferrocyanide,  $\text{CuSrFe}(\text{CN})_6$ .**

Insol. in  $\text{H}_2\text{O}$ . (Messner, Z. anorg. 1895, 8. 389.)

**Didymium potassium ferrocyanide,  $\text{DiKFe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .**

Ppt. (Cleve.)

+  $2\text{H}_2\text{O}$ . (Wyruboff.)

**Erbium potassium ferrocyanide,  $\text{ErK} + \text{H}_2\text{O}$ .**

(Häglund.)

**Gallium ferrocyanide.**

Sol. in boiling  $\text{HCl}$  + Aq. (de Bois C. R. 99.526.)

**Glucinum ferrocyanide,  $\text{Gl}_2\text{Fe}(\text{CN})_6 + 7\text{H}_2\text{O}$  (?)**

Sol. in  $\text{H}_2\text{O}$ . (Atterberg.)

**Iron (ferric) ferrocyanide,  $\text{Fe}_7(\text{CFe}_4[\text{Fe}(\text{CN})_6]_3 + \text{H}_2\text{O}$ .**

(Prussian blue.) Insol. in  $\text{H}_2\text{O}$ , ether, or oils. Decomp. slowly by  $\text{H}_2\text{O}$ . Insol. in dil. mineral acids. conc.  $\text{HCl}$  + Aq, and conc.  $\text{H}_2\text{SO}_4$  will comp. Sol. in  $\text{H}_2\text{C}_2\text{O}_4$  or  $\text{NH}_4$  tart. Insol. in  $\text{NH}_4\text{OH}$  + Aq. Decomp. b or  $\text{KOH}$  + Aq. Not pptd. in presen trates or citrates.

**Iron (ferrous) potassium ferrocya:  $\text{FeK}_2\text{Fe}(\text{CN})_6$ .**

Insol. in  $\text{H}_2\text{O}$ . Decomp. on air.

**Iron (ferric) potassium ferrocya:  $\text{FeKFe}(\text{CN})_6$ .**

Is probably ferrous potassium fer which see.

**Iron (ferric) ferrocyanide ammon:  $\text{Fe}_4[\text{Fe}(\text{CN})_6]_3 \cdot 6\text{NH}_3 + 9\text{H}_2\text{O}$ .**

Insol. in  $\text{NH}_4$  tartrate + Aq.

**Lanthanum potassium ferrocyanide,  $\text{LaKFe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .**

Ppt.

**Lead ferrocyanide,  $\text{Pb}_2\text{Fe}(\text{CN})_6 + 3$**

Insol. in  $\text{H}_2\text{O}$ , acids, or  $\text{NH}_4$

(Wyruboff, A. ch. (5) 8. 480.) Sl. sol. in conc.  $\text{H}_2\text{SO}_4$ , from w pptd. by  $\text{H}_2\text{O}$ . (Berzelius.)

Sol. in hot  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4$  succin insol. in other  $\text{NH}_4$  salts + Aq. (Wi

Insol. in  $\text{NH}_4\text{Cl}$  + Aq. (Brett.)

Not pptd. in presence of Na citra (Spiller.)

**Lithium ferrocyanide,  $\text{Li}_2\text{Fe}(\text{CN})_6$  -**  
Deliquescent. Very sol. in  $\text{H}_2\text{O}$ .

**Lithium potassium ferrocyanide,  $\text{Li}_2\text{K}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . Sol. in 1.5 pt ord. temp. (Wyruboff, A. ch. (4)

**m ferrocyanide**,  $\text{Mg}_2\text{Fe}(\text{CN})_6 + 3 \text{ pts. cold H}_2\text{O}$ . (Bette, A. 22.)

**m potassium ferrocyanide**,  $\text{K}_4\text{Fe}(\text{CN})_6$ .  
575 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 238 pts. at solution is decomp. by boiling. (Dict.)  
solution at  $17^\circ$  contains 1.95 g.  $\text{K}_4\text{Fe}(\text{CN})_6$ . (Robinson, Chem. Soc. 353.)

**s ferrocyanide**,  $\text{Mn}_2\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . Insol. in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ .

**ferrocyanide**,  $\text{Mn}_2\text{Fe}_3(\text{CN})_{15}$ .  
 $\text{H}_2\text{O}$ . Easily decomp. in the air. (Straus, Z. anorg. 1895, 9. 8.)

**s potassium ferrocyanide**,  $\text{K}_4\text{Fe}(\text{CN})_6$ .  
Berzelius.)  
 $(\text{CN})_6$ ,  $4\text{K}_4\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O} (?)$ .  
in dil.  $\text{HCl} + \text{Aq}$ . (Wyruboff.)

**potassium ferrocyanide**,  $\text{Fe}(\text{CN})_6$ .  
in  $\text{H}_2\text{O}$ . Appreciably sol. in  $\text{Aq}$ . (Fernekas, J. Am. Chem. 28. 87.)

**um ferrocyanide**,  $\text{Mo}_4\text{Fe}(\text{CN})_6 + (?)$ .  
l. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Wyruboff.)  
 $\text{CN})_6 + 8\text{H}_2\text{O} (?)$ . (W.)  
) (?). Very sol. in  $\text{H}_2\text{O}$ ; insol. in W.)

**um potassium ferrocyanide**,  $\text{K}_4\text{Fe}(\text{CN})_6 + 40\text{H}_2\text{O} (?)$ .  
boff.)  
 $\text{K}_4\text{Fe}(\text{CN})_6$ ,  $2\text{MoO}_3 + 20\text{H}_2\text{O} (?)$ .  
)  
 $\text{Fe}(\text{CN})_6$ ,  $2\text{MoO}_3 + 12\text{H}_2\text{O} (?)$ .  
)

**rocyanide**,  $\text{Ni}_2\text{Fe}(\text{CN})_6 + 11\text{H}_2\text{O}$ , or )

sol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{Aq}$ ; insol. in  $\text{NH}_4$  salts +  $\text{Aq}$ . Sol.  $\text{Aq}$ .

**rocyanide ammonia**,  $\text{Ni}_2\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$ .

ely insol. in  $\text{H}_2\text{O}$  and not attacked  
l. in  $\text{NH}_4\text{OH} + \text{Aq}$  to form—  
 $\text{N})_6$ ,  $10\text{NH}_3 + 4\text{H}_2\text{O}$ . Decomp. by  
(Reynoso, A. ch. (3) 30. 252.)  
 $\text{N})_6$ ,  $2\text{NH}_3 + 4$ , and  $9\text{H}_2\text{O}$ . Hygro-

scopic. Easily decomp. (Gintl, J. B. 1868. 304.)

$\text{Ni}_2\text{Fe}(\text{CN})_6$ ,  $8\text{NH}_3 + 4\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (G.)  
 $\text{Ni}_2\text{Fe}(\text{CN})_6$ ,  $12\text{NH}_3 + 9\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , but less so than the above compounds. (G.)

**Nickel potassium ferrocyanide**,  $\text{NiK}_4\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

Ppt. (Wyruboff.)

**Osmium ferrocyanide**,  $\text{Os}_2\text{Fe}(\text{CN})_6$ .

Ppt. (Martius, A. 117. 368.)

**Potassium ferrocyanide**,  $\text{K}_4\text{Fe}(\text{CN})_6$ .

Permanent. Easily sol. in cold, and more easily in hot  $\text{H}_2\text{O}$ .

Sol. in 4.23 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , or 100 pts.  $\text{H}_2\text{O}$  dissolve 23.6 pts. salt at  $15^\circ$ . (Schiff, A. 113. 350.)

100 pts.  $\text{H}_2\text{O}$  dissolve 27.8 pts. at  $12.2^\circ$ ; 65.8 pts. at  $37.7^\circ$ ; 87.6 pts. at  $65.5^\circ$ ; and 90.6 pts. at  $96.3^\circ$ . (Thomson.)

Sol. in 4 pts. cold, and 2 pts. boiling  $\text{H}_2\text{O}$ . (Wittstein.)

100 pts.  $\text{H}_2\text{O}$  dissolve 29.2 pts. salt at  $15^\circ$ , and solution has sp. gr. = 1.1441. (Michel and Kraft, A. ch. (3) 41. 478.)

Solubility of  $\text{K}_4\text{Fe}(\text{CN})_6$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$-2^\circ$	$+7^\circ$	$14^\circ$	$30^\circ$	$56^\circ$

(Wagner, Z. phys. Ch. 1890, 5. 37.)

Solubility in KOH + Aq at 25°.	
KOH Normality	g. $K_4Fe(CN)_6 + 3H_2O$ per l.
0.09984	308.5
0.2496	283.5
0.4963	247.1
0.7036	217.4
0.9415	184.8
1.395	132.1
1.883	86.12

(Grube, Z. Electrochem, 1914, 20. 342.)

$K_4Fe(CN)_6 + NaCl + Aq$  sat. at 20° contains 26.6 g. NaCl and 17.8 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ ; sat. at 93° it contains 27.4 g. NaCl and 35.9 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ . (Conroy, J. Soc. Chem. Ind. 1898, 17. 105.)

$K_4Fe(CN)_6 + KCl + Aq$  sat. at 21° contains 27.2 g. KCl and 4.2 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ ; sat. at 99° it contains 39.6 g. KCl and 17.0 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ . (Conroy.)

$K_4Fe(CN)_6 + Na_2CO_3 + Aq$  sat. at 22° contains 29.9 g.  $Na_2CO_3$  and 26.7 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ ; sat. at 97° it contains 42.0 g.  $Na_2CO_3$  and 27.5 g.  $K_4Fe(CN)_6$  per 100 g.  $H_2O$ . (Conroy.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol even when dilute.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

+  $3H_2O$ . 1 l. sat. solution in  $H_2O$  contains 319.4 g.  $K_4Fe(CN)_6 + 3H_2O$ . (Grube, Electrochem. Z. 1914, 20. 342.)

Two modifications with different solubilities.

25.0 g. of  $\alpha$  modification are contained in 100 g. of solution at 20°.

24.6 g. of  $\beta$  modification are contained in 100 g. of solution at 20°. (Briggs, Chem. Soc. 1911, 99. 1024.)

32.0 g.  $K_4Fe(CN)_6$  (anhydrous) are dissolved in 100 g.  $H_2O$  at 25°. (Wagner, Z. phys. Ch. 1910, 71. 428.)

#### Potassium samarium ferrocyanide,

Precipitate. (Cleve.)

#### Potassium sodium ferrocyanide,

Sol. in  $H_2O$ .

$K_2Na_2Fe(CN)_6 + 8H_2O$ . Easily sol. in  $H_2O$ .

$K_2NaFe(CN)_6 + 3H_2O$ . Permanent. Easily sol. in  $H_2O$ ; insol. in alcohol.

#### Potassium sodium ferrocyanide nitrate,

Sol. in  $H_2O$ . (Martius.)

#### Potassium strontium ferrocyanide,

Easily decomp. Sol. in  $H_2O$ ; sl. sol. alcohol. (Wyruboff, A. ch. (4) 21. 276.)

#### Potassium stannic ferrocyanide,

Ppt. (Wyruboff.)

$K_2Sn_{10}[Fe(CN)_6]_{11} + 230H_2O$  (?). (Atterberg.)

#### Potassium titanium ferrocyanide,

Ppt. Sol. in  $K_4Fe(CN)_6 + Aq$ . (Wyruboff.)

$K_4Fe(CN)_6$ , 11  $Ti_2Fe(CN)_6 + 43H_2O$  Ppt. (Wyruboff.)

$K_2(TiO)_2[Fe(CN)_6]_2 + 23H_2O$  (?). (Atterberg.)

$K_2(TiO)_2[Fe(CN)_6]_2 + 110H_2O$  (?). (Atterberg.)

#### Potassium tungsten ferrocyanide,

Sol. in  $H_2O$ . (Wyruboff.)

$K_2W_2Fe(CN)_6 + 20H_2O$  (?). Sol. in (W.)

#### Potassium uranium ferrocyanide,

Ppt. (Wyruboff.)

$K_2(UO_2)_2[Fe(CN)_6]_2 + 6H_2O$ . Ppt. (Atterberg.)

$K_4(UO_2)_4[Fe(CN)_6]_4 + 12H_2O$ . Sol. in (Atterberg.)

#### Potassium vanadium ferrocyanide,

Ppt. Sl. sol. in  $H_2O$ . (Wyruboff.)

$K_4(VO)_4[Fe(CN)_6]_4 + 60H_2O$  (?). Ppt. (Atterberg.)

#### Potassium ytterbium ferrocyanide,

Ppt. Sol. in excess  $K_4Fe(CN)_6$  (Cleve, Z. anorg. 1902, 32. 140.)

#### Potassium yttrium ferrocyanide,

Ppt. (Wyruboff, A. ch. (5) 8. 444.)

#### Potassium zinc ferrocyanide,

Absolutely insol. in  $H_2O$ . (Wyruboff, ch. (5) 8. 485.)

#### Potassium ferrocyanide carbonyl,

See Carbonyl ferrocyanide, potassium

#### Rubidium ferrocyanide, $Rb_2Fe(CN)_6 +$

Sol. in less than 1 pt.  $H_2O$  at ord. with great absorption of heat. (Wyn A. ch. (4) 16. 307.)

**Mer ferrocyanide**,  $\text{Ag}_3\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$  or dil. acids. Insol. in  $\text{LiOH}$ , or  $\text{NH}_4$  salts + Aq. Sol. in KCN Aq.  
 Decomp. by warm  $\text{NH}_4\text{OH} + \text{A-}$ . (Weith, Ch. (2) 5. 381.)

**Mer ferrocyanide ammonia**,  
 $\text{Ag}_3\text{Fe}(\text{CN})_6 + 2\text{NH}_3 + \text{H}_2\text{O}$ .  
 (Wyruboff.)  
 $+ 6\text{H}_2\text{O}$ . (Gintl.)

**Sodium ferrocyanide**,  $\text{Na}_4\text{Fe}(\text{CN})_6 + 12\text{H}_2\text{O}$ .  
 Efflorescent. Less sol. in  $\text{H}_2\text{O}$  than  $\text{Fe}(\text{CN})_6$ . Sol. in 4.5 pts.  $\text{H}_2\text{O}$  at  $12^\circ$ .  
 (ohn.)  
 100 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 22 pts. (Fe's Dict.)

100 pts.  $\text{H}_2\text{O}$  dissolve at:

20°	42°	53°	
7 17.875	30.2	37.1	pts. $\text{Na}_4\text{FeCN}_6$ ,
60°	77°	80°	
7 42.5	54.8	59.2	pts. $\text{Na}_4\text{FeCN}_6$ ,
96°	98°	98.5°	
62.1	61.6	6.30	pts. $\text{Na}_4\text{FeCN}_6$ .

(Conroy, J. Soc. Chem. Ind. 1898, 17. 104.)

$+ 10\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve at:

20°	42°	
45 31.85	58.5	pts. $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$ ,
58°	60°	
9 88.4	90.2	pts. $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$ ,
80°	96°	
15 146.0	157.0	pts. $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$ ,
98.5°		
15 161.0		pts. $\text{Na}_4\text{Fe}(\text{CN})_6 + 10\text{H}_2\text{O}$ .

(Conroy.)

**Sodium ferrocyanide**,  $\text{Sr}_2\text{Fe}(\text{CN})_6 + 15\text{H}_2\text{O}$ .  
 Efflorescent. Sol. in 2 pts. cold, and less in 1 pt. boiling  $\text{H}_2\text{O}$ . (Bette.)  
 Excessively sol. in  $\text{H}_2\text{O}$ . (Wyruboff, A. (4) 16. 280.)  
 $+ 8\text{H}_2\text{O}$ . (Wyruboff.)

**Alloys ferrocyanide**,  $\text{Ti}_2\text{Fe}(\text{CN})_6 + 2\text{H}_2\text{O}$ .  
 100 pts.  $\text{H}_2\text{O}$  dissolve 0.37 pt. at  $18^\circ$ , and 3 pts. at  $101^\circ$ . (Lamy.)  
 Sol. in KCN + Aq. (Kühlmann.)

**Thorium ferrocyanide**,  $\text{ThFe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .  
 Ppt. (Cleve, Bull. Soc. (2) 24. 355.)

**(stannous) ferrocyanide**,  $\text{Sn}_2\text{Fe}(\text{CN})_6 + 4\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$  or acids; sl. sol. in  $\text{NH}_4\text{OH} +$  (Wyruboff.)

**(stannic) ferrocyanide**,  $\text{Sn}_2[\text{Fe}(\text{CN})_6]_2 + 18\frac{1}{2}\text{H}_2\text{O}$  (?).  
 (Wyruboff.)

**Titanium ferrocyanide**,  $\text{Ti}_7[\text{Fe}(\text{CN})_6]_2$  (?).  
 Ppt. (Wyruboff.)

**Uranium ferrocyanide**,  $\text{UFe}(\text{CN})_6 + 10\text{H}_2\text{O}$ .  
 Ppt. (Wyruboff.)

**Vanadyl ferrocyanide**,  $(\text{VO})_2\text{Fe}(\text{CN})_6 + 11\text{H}_2\text{O}$ .  
 Ppt. (Atterberg.)

**Yttrium ferrocyanide**,  $\text{Y}_4[\text{Fe}(\text{CN})_6]_3$ .  
 Easily sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Popp, A. 131. 179.)

**Zinc ferrocyanide**,  $\text{Zn}_2\text{Fe}(\text{CN})_6 + 3\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$  or acids.  
 Insol. in  $\text{HCl} + \text{Aq}$ . (Lea, Sill. Am. J. (2) 31. 191.)  
 Sol. in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4$  salts + Aq. (Wittstein.)

Insol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO} + \text{Aq}$ . (Brett.)  
 Sl. sol. in boiling  $\text{K}_4\text{Fe}(\text{CN})_6$ , or  $\text{K}_3\text{Fe}(\text{CN})_6 + \text{Aq}$ . (Gore.)  
 $\text{Na}_4\text{Fe}(\text{CN})_6 + \text{NaCl} + \text{Aq}$  sat. at  $21^\circ$  contains 29.0 g.  $\text{NaCl}$  and 5.8 g.  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g.  $\text{H}_2\text{O}$ ; sat. at  $90^\circ$  it contains 24.7 g.  $\text{NaCl}$  and 21.3 g.  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g.  $\text{H}_2\text{O}$ . (Conroy, J. Soc. Chem. Ind. 1898, 17. 105.)

$\text{Na}_4\text{Fe}(\text{CN})_6 + \text{Na}_2\text{CO}_3 + \text{Aq}$  sat. at  $22^\circ$  contains 22.6 g.  $\text{Na}_2\text{CO}_3$  and 6.5 g.  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g.  $\text{H}_2\text{O}$ ; sat. at  $95^\circ$  it contains 29.8 g.  $\text{Na}_2\text{CO}_3$  and 36.8 g.  $\text{Na}_4\text{Fe}(\text{CN})_6$  per 100 g.  $\text{H}_2\text{O}$ . (Conroy.)  
 Very sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830.)

Insol. in alcohol.  
 $+ 4\text{H}_2\text{O}$ . Absolutely insol. in  $\text{H}_2\text{O}$ . (Wyruboff, A. ch. (5) 8. 485.)  
 $+ 8\text{H}_2\text{O}$ . (Weith, A. 147. 329.)  
 $+ 10\text{H}_2\text{O}$ . (Pebal, A. 233. 165.)

**Ferrotetranitrososulphydic acid**,  
 $\text{H}_2\text{S}_2(\text{NO})_4\text{Fe}_2$ .

Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol; more easily in ether; very sol. in  $\text{CS}_2$  or  $\text{CHCl}_3$ .  
 Not obtained in a pure state. (Pawel, B. 15. 2600.)

**Ethyl ferrotetranitrososulphide**,  
 $(\text{C}_2\text{H}_5)_2\text{S}_2(\text{NO})_4\text{Fe}_2$ .

Insol. in  $\text{H}_2\text{O}$ , difficultly sol. in alcohol, more easily in ether, and very easily in  $\text{CS}_2$ ,  $\text{CHCl}_3$ ,  $\text{C}_2\text{H}_5\text{I}$ , or  $\text{C}_6\text{H}_6$ . (Pawel, B. 15. 2609.)

**Ferrous** —,  $\text{FeS}_2(\text{NO})_4\text{Fe}_2$ .

More difficultly sol. in  $\text{H}_2\text{O}$  and alcohol than the *hepta* salt.  
 Sol. in ether.

**Potassium** —,  $\text{K}_2\text{S}_2(\text{NO})_4\text{Fe}_2 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Easily sol. in alcohol; insol. in ether. (Pawel, B. 15. 2600.)  
 True composition of "nitrosulphide of

iron and potassium" of Roussin. (A. ch. (3) 52. 297.) (Pawel, B. 13. 1949.)

**Sodium ferrotetranitrososulphide,**  
 $\text{Na}_4\text{S}_2(\text{NO})_4\text{Fe}_2 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; easily sol. in alcohol; insol. in ether. (Pawel.)

True composition of "nitrosulphide of iron and sodium" of Roussin. (Pawel.)

**Thallium —**,  $\text{Tl}_2\text{S}_2(\text{NO})_4\text{Fe}_2$ .

Insol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Pawel.)

**Ferroheptanitrososulphydic acid,**  
 $\text{HS}_2(\text{NO})_7\text{Fe}_4$ .

Insol. in  $\text{H}_2\text{O}$ , alcohol, and ether. Easily sol. in  $\text{CS}_2$  or  $\text{CHCl}_3$ . (Pawel, B. 15. 2604.)

May be called Ferrinitrososulphydic acid.

**Ammonium ferroheptanitrososulphide,**  
 $\text{NH}_4\text{S}_2(\text{NO})_7\text{Fe}_4 + \text{H}_2\text{O}$ .

Less easily sol. in  $\text{H}_2\text{O}$  than the K compound. (Pawel, B. 15. 2600.)

"Binitrosulphide of iron" of Roussin. Sol. in about 2 pts. boiling  $\text{H}_2\text{O}$ ; very sl. sol. in cold  $\text{H}_2\text{O}$ . Very sol. in alcohols, methyl, ethyl, or amyl, and in  $\text{HC}_2\text{H}_3\text{O}_2$ . Miscible with ether. Insol. in  $\text{CS}_2$  or  $\text{CHCl}_3$ .

Decomp. by conc.  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4$ .

Not attacked by  $\text{H}_2\text{C}_2\text{O}_4$ , or  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ .

Insol. in  $\text{NH}_4\text{OH}$ , and  $\text{KOH} + \text{Aq}$ . (Roussin, A. ch. (3) 52. 286.)

Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Hofmann, Z. anorg. 1895, 9. 299.)

**Barium —**.

Easily sol. in  $\text{H}_2\text{O}$ . (Pawel.)

**Cæsium —**,  $\text{Fe}_4(\text{NO})_7\text{S}_2\text{Cs} + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Difficultly sol. in alcohol and ether. (Pawel.)

Sparingly sol. in  $\text{H}_2\text{O}$ . (Hofmann, Z. anorg. 1895, 9. 298.)

**Calcium —**.

Easily sol. in  $\text{H}_2\text{O}$ . (Pawel.)

**Ferrous —**,  $\text{Fe}(\text{S}_2(\text{NO})_7\text{Fe}_4)_2 + 8\text{H}_2\text{O}$ .

More easily sol. in  $\text{H}_2\text{O}$  than Na salt. (Pawel.)

**Lead —**.

Difficultly sol. in  $\text{H}_2\text{O}$ . (Pawel.)

**Magnesium —**.

Easily sol. in  $\text{H}_2\text{O}$ . (Pawel.)

**Potassium —**,  $\text{KS}_2(\text{NO})_7\text{Fe}_4$ .

Sol. in  $\text{H}_2\text{O}$ , alcohol, and very sol. in ether with slight decomp. (Pawel, B. 15. 2600.)

**Rubidium ferroheptanitrososulphide,**  
 $\text{RbS}_2(\text{NO})_7\text{Fe}_4$ .

Less soluble in  $\text{H}_2\text{O}$  than the  $\text{NH}_4$  salt. (Pawel.)

+  $\text{H}_2\text{O}$ . Ppt. (Hofmann, Z. anorg. 11. 9. 298.)

**Sodium —**,  $\text{NaS}_2(\text{NO})_7\text{Fe}_4 + 2\text{H}_2\text{O}$ .

More sol. in  $\text{H}_2\text{O}$  than the potassium salt. (Pawel.)

**Thallium —**,  $\text{TlS}_2(\text{NO})_7\text{Fe}_4 + \text{H}_2\text{O}$ .

Very difficultly sol. in  $\text{H}_2\text{O}$ . More sol. in alcohol. (Pawel.) (Hofmann, anorg. 1895, 9. 297.)

**Ferrodinitrosothiosulphonic acid.**

**Ammonium ferrodinitrosothiosulphonate,**  
 $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_2\text{NH}_4 + \text{H}_2\text{O}$ .

Can be cryst. from warm  $\text{H}_2\text{O}$  without comp. (Hofmann, Z. anorg. 1895, 8. 321)

**Cæsium —**,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_2\text{Cs}$ .

Sparingly sol. in  $\text{H}_2\text{O}$ . (Hofmann.)

**Potassium —**,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_2\text{K} + \text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  without decomp. at 17°

Sol. in 50% alcohol.

Sol. in  $\text{H}_2\text{SO}_4$  without decomp. (Hofmann.)

**Rubidium —**,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_2\text{Rb} + \text{H}_2\text{O}$ .

Less sol. in  $\text{H}_2\text{O}$  than the corresponding Na salt. (Hofmann.)

**Sodium —**,  $\text{Fe}(\text{NO})_2\text{S}_2\text{O}_2\text{Na} + 2\text{H}_2\text{O}$ .

Closely resembles K salt, but is more in  $\text{H}_2\text{O}$  and alcohol. (Hofmann.)

**Ferrotungstic acid.**

Sol. in  $\text{H}_2\text{O}$ . (Laurent, C. R. 31. 603.)

**Ammonium manganous ferrotungstate,**  
 $12(\text{NH}_4)_2\text{O}, 6\text{MnO}, 2\text{Fe}_2\text{O}_3, 3\text{H}_2\text{O}, 45\text{WO}_3 + 81\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Laurent.)

**Barium ferrotungstate, 21BaO, 2Fe,**  
 $45\text{WO}_3 + 27\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Laurent.)

**Potassium ferrotungstate, 9K\_2O, 2Fe,**  
 $12\text{H}_2\text{O}, 45\text{WO}_3 + 54\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Laurent.)

$18\text{K}_2\text{O}, 2\text{Fe}_2\text{O}_3, 3\text{H}_2\text{O}, 45\text{WO}_3 + 54\text{H}_2\text{O}$  (Laurent.)

**Ferrous acid.**

**Barium ferrite, BaO, Fe\_2O\_3.**

Ppt. (List, B. 11. 1512.)

**ferrite,  $4\text{CaO}, \text{Fe}_2\text{O}_3$ .**

in  $\text{H}_2\text{O}$ , or sugar +  $\text{H}_2\text{O}$ . Decomp. weakest acids, but not by boiling aq. (Pelouze, A. ch. (3) 33. 5.)

**$\text{Fe}_2\text{O}_3$ . (List.)**

$\text{Fe}_2\text{O}_3$ . Much less readily attacked and acids than the silicates. (Hilpert, 42. 4581.)

$2\text{Fe}_2\text{O}_3$ . As above. (Hilpert, B. 4581.)

**ferrite chloride,  $\text{CaO}, \text{Fe}_2\text{O}_3, \text{CaCl}_2$ .**  
decomp. by  $\text{H}_2\text{O}$ . (Chatelier, C. R. 99.)

**ferrite,  $\text{CuO}, \text{Fe}_2\text{O}_3$ .**

(List.)

O. (List.)

**argentous ferrite,  $2\text{FeO}, \text{Ag}_2\text{O}, \text{O}_2$  (?)**

decomp. by  $\text{HCl} + \text{Aq}$ . Not comol. in dil.  $\text{HNO}_3 + \text{Aq}$ . Easily sol. in  $\text{HNO}_3$ . Decomp. by acetic acid. (Pogg. 10. 323.)

**alum ferrite,  $\text{MgO}, \text{Fe}_2\text{O}_3$ .**

in  $\text{H}_2\text{O}$ . Not attacked by boiling  $\text{NO}_3$ . (Deville, C. R. 52. 1264.)

**Magnesioferrite.** Difficultly sol. in aq. (Rammelsberg, Pogg. 107. 451.)

O. Ppt. (List, B. 11. 1512.)

$\text{Fe}_2\text{O}_3 + 9\text{H}_2\text{O}$ . Ppt.

$\text{Fe}_2\text{O}_3$ . Min. *Pyroaurite*.

**ous ferrite,  $\text{MnO}, \text{Fe}_2\text{O}_3$ .**

(List.)

**ferrite,  $\text{NiO}, \text{Fe}_2\text{O}_3$ .**

(List.)

**m ferrite,  $3\text{K}_2\text{O}, 4\text{Fe}_2\text{O}_3$ .**

np. by  $\text{H}_2\text{O}$ ,  $\text{KOH} + \text{Aq}$ ,  $\text{NaOH} + \text{Aq}$ , only slowly by  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Salmour, J. pr. 55. 349.)

$\text{O}_4$ . Decomp. by  $\text{H}_2\text{O}$ . (Rousseau aheim, C. R. 107. 240.)

**argentous) ferrite,  $\text{Ag}_2\text{O}, \text{Fe}_2\text{O}_3$  (?)**

np. by dil.  $\text{HNO}_3 + \text{Aq}$ . (Rose, Pogg.

**ferrite,  $\text{Na}_2\text{O}, \text{Fe}_2\text{O}_3$ .**

is dissolved out by  $\text{H}_2\text{O}$ . Easily sol.  $\text{HCl} + \text{Aq}$ . Not easily decomp. by -Aq. (Salm-Horstmar.)

**ite,  $\text{ZnO}, \text{Fe}_2\text{O}_3$ .**

a boiling conc.  $\text{HCl} + \text{Aq}$ . (Ebelch. (3) 33. 47.)

*Franklinite*.

**baltic compounds.**

**so Xanthocobaltic compounds.**

**Flavocobaltic chloraurate,**

$(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4\text{AuCl}_4$ .

More easily sol. than the chloroplatinate. Not wholly insol. in absolute alcohol. (Jörgensen, Z. anorg. 5. 159.)

— **chloroplatinate,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{PtCl}_4$**   
As the chloroplatinite. (Jörgensen.)

— **chloroplatinite,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{PtCl}_4$ .**  
Somewhat sol. in  $\text{H}_2\text{O}$ , and not insol. in 50% alcohol. (Jörgensen.)

— **chromate,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{Cr}_2\text{O}_7$ .**  
Ppt. (Jörgensen.)

— **nitrate,  $\text{Co}(\text{NO}_2)_2(\text{NH}_3)_4\text{NO}_3$ .**  
Sol. in about 33 pts. cold  $\text{H}_2\text{O}$ ; insol. in  $\text{HNO}_3$ . (Jörgensen.)  
 $\text{Co}(\text{NO}_2)_2(\text{NH}_3)_4\text{NO}_3$ ,  $\text{HNO}_3$ . Decomp. by  $\text{H}_2\text{O}$  or alcohol. (Jörgensen.)

— **cobaltic nitrite,  $3(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4$ ,  $\text{Co}_3(\text{NO}_2)_4 + 2\text{H}_2\text{O}$ .**  
Sl. sol. in  $\text{H}_2\text{O}$ . (Jörgensen, Z. anorg. 5. 179.)

— **diamine cobaltic nitrite,**  
 $(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4$ ,  
 $(\text{NO}_2)_2(\text{NH}_3)_2\text{Co}(\text{NO}_2)_2$ .  
Very sl. sol. in  $\text{H}_2\text{O}$ . (Jörgensen.)

— **sulphate,  $[(\text{NO}_2)_2\text{Co}(\text{NH}_3)_4]_2\text{SO}_4$ .**  
Sl. sol. in  $\text{H}_2\text{O}$ , more easily in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Jörgensen.)

**Fluoborhydric acid,  $\text{HBF}_4$ .**

Decomp. by  $\text{H}_2\text{O}$  very rapidly. (Landolph, C. R. 86. 603.)

**Aluminum fluoboride,  $2\text{AlF}_3, 3\text{BF}_3$ .**

Sol. in  $\text{H}_2\text{O}$  only when acidulated; sol. in acids. (Berzelius.)

**Ammonium fluoboride,  $\text{NH}_4\text{BF}_4$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Sol. in 4 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , and 1.02–1.05 pts. boiling  $\text{H}_2\text{O}$ . (Stolba, Chem. techn. Cent. Anz. 7. 459.) Sl. sol. in alcohol.

**Barium fluoboride,  $\text{Ba}(\text{BF}_4)_2 + 2\text{H}_2\text{O}$ .**

Deliquescent; easily sol. in  $\text{H}_2\text{O}$ ; decomp. by alcohol. (Berzelius.)

**Cæsium fluoboride,  $\text{CsBF}_4$ .**

100 pts.  $\text{H}_2\text{O}$  dissolve 0.92 pt.  $\text{CsBF}_4$  at  $20^\circ$ , and 0.04 pt. at  $100^\circ$ . (Godeffroy, B. 9. 1367.)  
0.02 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . (Erdmann, Arch. Pharm. 1894, 232. 21.)

**Calcium fluoboride,  $\text{Ca}(\text{BF}_4)_2$ .**

Decomp. by  $\text{H}_2\text{O}$ , with formation of a sol. acid salt and an insol. basic salt. (Berzelius.)

**Cupric fluoboride,  $\text{Cu}(\text{BF}_4)_2$ .**

Deliquescent, and very sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Lead fluoboride,  $\text{Pb}(\text{BF}_4)_2$ .**

Sol. in  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$  or alcohol into an acid soluble, and a basic insoluble salt. (Berzelius.)

**Lithium fluoboride,  $\text{LiBF}_4$ .**

Hygroscopic. Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Magnesium fluoboride.**

Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Potassium fluoboride,  $\text{KBF}_4$ .**

Sol. in 223 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . (Stolba.)

Sol. in 70.4 pts. cold  $\text{H}_2\text{O}$ . (Berzelius.)

Sol. in 15.94 pts.  $\text{H}_2\text{O}$  at  $100^\circ$ . (Stolba.)

1.43 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . (Erdmann, Arch. Pharm. 1894, 232. 21.)

Not more sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  than in  $\text{H}_2\text{O}$ ; sol. in hot  $\text{KOH}$ ,  $\text{NaOH}$ , or  $\text{M}_2\text{CO}_3 + \text{Aq}$ . (Berzelius.) More sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Rose, Pogg. 80. 276.) Insol. in 20%  $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Stromeyer.) Insol. in cold, sl. sol. in boiling alcohol.

**Rubidium fluoboride,  $\text{RbBF}_4$ .**

100 pts.  $\text{H}_2\text{O}$  dissolve 0.55 pt. at  $20^\circ$ , and 1.0 pt. at  $100^\circ$ . (Godeffroy, B. 9. 1337.)

0.55 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . (Erdmann, Arch. Pharm. 1894, 232. 21.)

**Sodium fluoboride,  $\text{NaBF}_4$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in alcohol. (Berzelius.)

**Yttrium fluoboride.**

Sol. in  $\text{H}_2\text{O}$  with excess of acid. (Berzelius.)

**Zinc fluoboride,  $\text{Zn}(\text{BF}_4)_2$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Fluoboric acid,  $\text{HBF}_4$ .**

See Fluoborhydric acid.

$\text{H}_2\text{B}_2\text{O}_7$ ,  $3\text{HF}$  and  $\text{H}_2\text{B}_2\text{O}_5$ ,  $2\text{HF}$  (?). Fume on air, and are decomp. with  $\text{H}_2\text{O}$ . (Laudolph, B. 12. 1583.)

$\text{HBO}_3$ ,  $3\text{HF}$ . Decomp. by  $\text{H}_2\text{O}$ . (Berzelius, Pogg. 59. 644.)

Is either a mixture, or a solution of  $\text{HBO}_3$  in  $\text{HF}$ , and is decomp. by distillation, and the salts are decomp. by recrystallisation. (Basarow, C. R. 78. 1698.)

**Potassium fluoborate,  $\text{K}_2\text{B}_2\text{O}_5\text{F}_2$  (?).**

Sl. deliquescent. Scarcely sol. in boiling alcohol. (Schiff, A. Suppl. 5. 175.)

See Boron trioxide potassium fluoride,  $\text{B}_2\text{O}_3$ ,  $2\text{KF}$ .

**Fluochromic acid.****Ammonium fluochromate,  $\text{NH}_4\text{CrO}_5\text{F}$** 

Sol. in  $\text{H}_2\text{O}$ . (Varenne, C. R. 91.

**Potassium fluochromate,  $\text{KCrO}_5\text{F}$ .**

Efflorescent. Sol. in  $\text{H}_2\text{O}$ , with decomp. (Streng, A. 129. 225.)

**Fluocolumbic acid.**

See also Fluoxycolumbic acid.

**Ammonium fluocolumbate fluoxycol**

$(\text{NH}_4)_2\text{CbF}_2$ ,  $2\text{CbOF}_2$ ,  $\text{NH}_4\text{F}$ .

**Cadmium fluocolumbate,  $\text{Cd}_2\text{H}_2\text{Cl}$** 

$28\text{H}_2\text{O}$ .

Insol. in, and decomp. by  $\text{H}_2\text{O}$ . (

**Cobalt fluocolumbate,  $\text{Co}_2\text{H}_2\text{Cb}_2\text{F}_2$ .**

Insol. in, and decomp. by  $\text{H}_2\text{O}$ . (

**Copper fluocolumbate,  $\text{Cu}_2\text{H}_2\text{Cb}_2\text{F}_2$ .**

Insol. in, and decomp. by  $\text{H}_2\text{O}$ .

**Ferrous fluocolumbate,  $\text{Fe}_2\text{H}_2\text{Cb}_2\text{F}_2$ .**

As above.

**Manganous fluocolumbate,  $\text{Mn}_2\text{H}_2$** 

$28\text{H}_2\text{O}$ .

**Mercuric fluocolumbate,  $\text{Hg}_2\text{Cb}_2\text{F}_2$ .**

As above.

**Nickel fluocolumbate,  $\text{Ni}_2\text{H}_2\text{Cb}_2\text{F}_2$ .**

As above.

**Potassium fluocolumbate,  $\text{K}_2\text{Cb}_2\text{F}_2$ .**

Decomp. by solution in  $\text{H}_2\text{O}$ . (I A. ch. (4) 8. 34.)

**Rubidium fluocolumbate,  $\text{Rb}_2\text{Cb}_2\text{F}_2$ .**

Sol. in  $\text{H}_2\text{O}$  and  $\text{HF} + \text{Aq}$ . Insol. in alcohol. (Pennington, J. Am. Chem. Soc. 1896, 18. 58.)

**Zinc fluocolumbate,  $\text{Zn}_2\text{H}_2\text{Cb}_2\text{F}_2 + 2$** 

Insol. in cold  $\text{H}_2\text{O}$ ; decomp. by  $\text{H}_2\text{O}$ . (Santesson, Bull. Soc. (2) 24. 52.)

**Fluodithionic acid.****Cesium monofluodithionate,**

$\text{S}_2\text{O}_5(\text{OH})\text{FCs}_2 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  with decomp.

Sol. in  $\text{HF}$ ; very unstable. (Wei anorg. 1899, 21. 66.)

**Potassium difluodithionate,  $\text{S}_2\text{O}_5\text{F}_2\text{K}$** 

Easily sol. in  $\text{H}_2\text{O}$  with decomp.

Sol. in  $\text{HF}$ ; very unstable. (Wei

**1 difuodithionate**,  $S_2O_3F_2Rb_2 +$   
J.  
sol. in  $H_2O$  with decomp.  
HF; very unstable. (Weinland.)

**manic acid**,  $H_2GeF_6$ .

only in solution. (Winkler, J. pr. 77.)

**m fluogermanate**,  $K_2GeF_6$ .

173.98 pts.  $H_2O$  at  $18^\circ$ . (Winkler.)  
184.61 pts.  $H_2O$  at  $18^\circ$ . (Krüss and  
3. 20. 1896.)  
34.07 pts.  $H_2O$  at  $100^\circ$ . (Winkler.)  
38.76 pts.  $H_2O$  at  $100^\circ$ . (Krüss and

in alcohol.

**dic acid**.

**um difluoiodate**,  $NH_4IO_3F_2$ .

salt.  
n 40% HF + Aq. (Weinland, Z.  
399, 20. 30.)  
1  $H_2O$ . Easily decomp. (Weinland,  
30. 868.)

**difluoiodate**,  $CaIO_3F_2$ .  
land, Z. anorg. 1899, 20. 36.)

**hydrogen difluoiodate**,  
 $O_3F_2, HIO_3F_2 + 2H_2O$ .

acent. Sol. in  $H_2O$  with decomp.  
ad, Z. anorg. 1899, 22. 257.)

**m difluoiodate**,  $KIO_3F_2$ .

in  $H_2O$ . Decomp. in moist air.  
nd, B. 1897, 30. 867.  
np. in air. Sol. in  $H_2O$  with decomp.  
out decomp. in 40% HF + Aq.  
nd, Z. anorg. 1899, 20. 31.

**m difluoiodate**,  $RbIO_3F_2$ .

ables K salt. Sol. in HF + Aq.  
nd, Z. anorg. 1899, 20. 35.)

**m hydrogen difluoiodate**,  
 $IO_3F_2, HIO_3F_2 + 2H_2O$ .

n 40-60% HF + Aq. (Weinland, Z.  
899, 22. 260.)

**difluoiodate**,  $NaIO_3F_2$ .

np. by  $H_2O$ . (Weinland, B. 1897, 30.

1 HF. (Weinland, Z. anorg. 1899, 20.

**organic acid**,  $H_2MnF_6$ .

np. by  $H_2O$ . Sol. in alcohol and ether  
see of  $H_2O$ . (Nicklès, C. R. 65. 107.)

**Ammonium fluomanganate**,  $(NH_4)_2MnF_6$ .

More sol. than the K salt. (Nicklès, C. R.  
65. 107.)

True composition is  $(NH_4)_4Mn_2F_{10} =$   
 $4NH_4F, Mn_2F_6$ . (Christensen, J. pr. (2) 34.  
41.)

**Cobalt fluomanganate**,  $2CoF_2, Mn_2F_6 +$   
 $8H_2O$ .

Sol. in  $H_2O$ . (Christensen.)

**Nickel fluomanganate**,  $2NiF_2, Mn_2F_6 +$   
 $8H_2O$ .

Sol. in  $H_2O$ . (Christensen.)

**Potassium fluomanganate**,  $K_2MnF_6$ .

Difficultly sol. in  $H_2O$ . Decomp. by much  
 $H_2O$ . (Nicklès, C. R. 65. 107.)

Composition is  $K_4Mn_2F_{10} = 4KF, Mn_2F_6$ .  
Also with  $2H_2O$ . (Christensen, J. pr. (2) 34.  
41.)

Decomp. by  $H_2O$ . Sol. in  $HCl, H_2SO_4$  and  
 $HNO_3$  with decomp. Can be recryst. from  
40% HF + Aq. Insol. in acetic acid. (Wein-  
land and Lauenstein, Z. anorg. 1899, 20. 41.)

**Rubidium fluomanganate**,  $Rb_2MnF_6 + 2H_2O$ .

As the K salt. (Weinland and Lauenstein,  
Z. anorg. 1899, 20. 44.)

**Silver fluomanganate**,  $Ag_2Mn_2F_{10} + 14H_2O$ .

(Christensen, J. pr. (2) 34. 41.)

**Sodium fluomanganate**,  $4NaF, Mn_2F_6$ .

Decomp. by much  $H_2O$ . (Christensen.)

**Zinc fluomanganate**,  $2ZnF_2, Mn_2F_6 + 8H_2O$ .

Sol. in  $H_2O$ . (Christensen.)

**Fluomolybdic acid**.

See Fluoxyhypomolybdic, and Fluoxymolyb-  
dic acids.

**Fluopalladous acid**.

**Potassium fluopalladite**,

Sl. sol. in  $H_2O$ .

**Sodium fluopalladite**.

Sl. sol. in  $H_2O$ . (Berzelius.)

**Fluoperboric acid**.

**Ammonium fluoperborate**,

$NH_4OOb(F)OOb(F)OONH_4$ .

Ppt. Insol in ether. (Petrenko, C. C.  
1902, I. 1191.)

**Potassium fluoperborate**,  $K_4B_4F_{10} + H_2O$ .

Dry salt is rather stable.

Easily sol. in  $H_2O$ . Aqueous solution  
decomp. rapidly when warmed; at ordinary

temp. the decomp. proceeds slowly. Insol. in alcohol. (Melikoff, B. 1899, **32**, 3350.)  
 $\text{KOOB(F)OOB(F)OK} + 1\frac{1}{2}\text{H}_2\text{O}$ . Ppt.  
 Insol. in ether. (Petrenko, C. C. 1902, I. 1191; J. Russ, phys. chem. Soc. **34**, 37.)

### Fluoperuranic acid.

**Potassium fluoperuranate**,  $\text{K}_4\text{U}_2\text{F}_{10}\text{O}_{18} + 4\text{H}_2\text{O} = 3\text{UO}_4\text{KF}, \text{UO}_2\text{F}_2, \text{KF} + 4\text{H}_2\text{O}$ .  
 Ppt. (Lordkipanidse, C. C. 1900, II. 525.)

**Sodium fluoperuranate**,  $\text{UO}_4\text{NaF} + 5\text{H}_2\text{O}$ .  
 Ppt. (Lordkipanidse, C. C. 1900, II. 525.)

### Fluophosphamide, $\text{PF}_3(\text{NH}_3)_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Poulenc, A. ch. (6) **24**, 566.)

### Fluophosphoric acid.

**Monocassium monofluophosphate**,  
 $\text{P}(\text{OH})_2(\text{OCs})\text{F}$ .

Like the K salt. (Weinland, Z. anorg. 1899, **21**, 48.)

**Monopotassium monofluophosphate**,  
 $\text{P}(\text{OH})_2(\text{OK})\text{F}$ .

Sol. in 40% HF + Aq; decomp. in the air. (Weinland, Z. anorg. 1899, **21**, 44.)

**Potassium monofluophosphate**,  
 $\text{KHF.PO}_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ ; unstable. (Weinland, B. 1898, **31**, 124-125.)

**Monorubidium monofluophosphate**,  
 $\text{P}(\text{OH})_2(\text{ORb})\text{F}$ .

Sol. in 40% HF + Aq. (Weinland, Z. anorg. 1899, **21**, 47.)

**Rubidium monofluophosphate**,  
 $\text{RbHFPO}_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1898, **31**, 124.)

### Fluoplatinic acid.

**Ammonium fluoplatinate**.

Decomp. by  $\text{H}_2\text{O}$  to a sol. acid, and an insol. basic salt. Insol. in alcohol. (Berzelius.)

**Potassium fluoplatinate**.

Deliquescent. Insol. in alcohol. Decomp. by  $\text{H}_2\text{O}$ . (Berzelius.)

**Sodium fluoplatinate**.

Decomp. by  $\text{H}_2\text{O}$ . (Berzelius.)

### Fluor- and Fluoro-

See Fluor-

**Fluorhydric (Hydrofluoric) acid**, HF or  $\text{H}_2\text{F}_2$ .

Attracts  $\text{H}_2\text{O}$  from air with great avidity. Very sol. in  $\text{H}_2\text{O}$  with evolution of much heat. Sat. solution has sp. gr. 1.25. (H. Davy.)

On boiling the aqueous solution an acid of constant composition is obtained, which boils at  $120^\circ$ , has sp. gr. 1.15, and contains 35.3% HF (Bineau, A. ch. (3) **7**, 257.) The residual acid after boiling contains 36 to 38% HF, and by standing over  $\text{CaO}$  gives off HF until an acid containing 32.5 to 32.7% HF is formed. Weaker acids increase their strength to 32.3 to 32.4% HF, while an acid containing 32.5% HF remains unchanged. (Roscoe, A. 118, 218.)

Does not attack gutta-percha. Sol. in  $\text{H}_2\text{SO}_4$ .

Sp. gr. of HF + Aq at  $15^\circ$ .

Sp. gr.	% HF	Sp. gr.	% HF	Sp. gr.	% HF

24.47	1.087
29.83	1.103

(Hill.)

Aq. solution of sp. gr. 1.138 at 18° contains 43.2% HF and has a constant bpt. of 111° at 750 mm. (Deussen, Z. anorg. 1906, **49**, 297.)

The strongest acid that can be obtained by distillation contains 48.17% HF and boils at 125–125.5°. (Gore.)

### Fluorides.

The alkali fluorides, also AgF and SnF<sub>4</sub>, are sol. in H<sub>2</sub>O; the fluorides of Fe, Sr, and Cd are sl. sol.; the others are insol. in H<sub>2</sub>O. Most fluorides are sol. in acids, especially HF + Aq.

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, **20**, 822.)

See under each element.

### Fluorine, F<sub>2</sub>.

Decomposes H<sub>2</sub>O and all organic solvent with great violence. (Moissan, C. R. 103, 202 and 256.)

Liquified at –185° to a yellowish liquid which does not dissolve glass nor ignite cooled Si, B, C, S, P, or Fe. (Moissan, C. R. 1897, **124**, 1202–1204.)

### Fluomolybdic acid.

Ammonium fluomolybdate, (NH<sub>4</sub>)MoF<sub>6</sub> + H<sub>2</sub>O.

Somewhat more sol. in H<sub>2</sub>O than the K salt. Hydrolysed by H<sub>2</sub>O. (Rosenheim, Z. anorg. 1905, **46**, 321.)

(NH<sub>4</sub>)<sub>2</sub>Mo<sub>2</sub>F<sub>7</sub> + 2H<sub>2</sub>O. (Rosenheim.)

Potassium fluomolybdate, KMoF<sub>6</sub> + H<sub>2</sub>O.

Nearly insol. in H<sub>2</sub>O. (Rosenheim.)

### Fluoselenic acid.

Ammonium monofluoselenate,

SeO<sub>3</sub>(OH)F(NH<sub>4</sub>)<sub>2</sub>.

Not hygroscopic.

Easily sol. H<sub>2</sub>O with decomp.

Sol. in HF. (Weinland, Z. anorg. 1899, **21**, 58.)

Tripotassium difluodiselenate, Se<sub>2</sub>O<sub>7</sub>F<sub>2</sub>K<sub>3</sub>H + H<sub>2</sub>O.

Decomp. in the air; sol. in H<sub>2</sub>O with decomp.; sol. in HF. (Weinland.)

Trirubidium difluodiselenate, Se<sub>2</sub>O<sub>7</sub>F<sub>2</sub>Rb<sub>3</sub>H + H<sub>2</sub>O.

Decomp. in the air; sol. in H<sub>2</sub>O with decomp.; sol. in HF. (Weinland, Z. anorg. 1899, **21**, 57.)

**Fluosilicic acid,  $\text{H}_2\text{SiF}_6$ .**

Sp. gr. of  $\text{H}_2\text{SiF}_6 + \text{Aq}$  at  $17.5^\circ$  ( $\text{H}_2\text{O}$  at  $17.5^\circ = 1.000$ ).

$\% \text{H}_2\text{SiF}_6$	Sp. gr.	$\% \text{H}_2\text{SiF}_6$	Sp. gr.
2	1.0161	20	1.1748
4	1.0324	22	1.1941
6	1.0491	24	1.2136
8	1.0661	26	1.2335
10	1.0834	28	1.2537
12	1.1011	30	1.2742
14	1.1190	32	1.2951
16	1.1373	34	1.3162
18	1.1559	...	...

(Stolba, J. pr. 90. 193.)

+2 $\text{H}_2\text{O}$ . Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Kessler, C. R. 90. 1285.) Solution decomp. into HF and  $\text{SiF}_4$  on evaporation, when it becomes concentrated.

**Fluosilicates.**

Most of the fluosilicates are sol. in  $\text{H}_2\text{O}$ , but the alkali salts (especially K) and the Ba salt are only sl. sol. in  $\text{H}_2\text{O}$ .

**Aluminum fluosilicate,  $\text{Al}_2(\text{SiF}_6)_3$ .**

Easily sol. in  $\text{H}_2\text{O}$ . After evaporating to dryness, the residue is slowly but completely sol. in  $\text{H}_2\text{O}$ . (Deville, A. ch. (3) 61. 327.)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

**Aluminum fluosilicate silicate,  $\text{Al}_2\text{SiF}_{10}$ ,  $5\text{Al}_2\text{SiO}_4$ .**

Min. Topaz. Insol. in acids.

**Ammonium fluosilicate,  $(\text{NH}_4)_2\text{SiF}_6$ .**

Sol. in 5.38 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$  to form a solution of 1.0961 sp. gr.; sol. in 1.8 pts. hot  $\text{H}_2\text{O}$ ; sol. in 45.5 pts. alcohol of 31%. (Stolba, C. C. 1877. 418.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

$3\text{NH}_4\text{F}$ ,  $\text{SiF}_4 = (\text{NH}_4)_2\text{SiF}_6$ ,  $\text{NH}_4\text{F}$ . Sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 221.)

**Barium fluosilicate,  $\text{BaSiF}_6$ .**

Sol. in 3802 pts. cold  $\text{H}_2\text{O}$ . (Fresenius, A. 59. 120.)

Sol. in 3731 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$ ; in 3315 pts. at  $21^\circ$ ; in 1175 pts. at  $100^\circ$ . (Stolba, J. pr. 96. 22.)

Sol. in 640-733 pts.  $\text{H}_2\text{O}$  containing a little HCl. (Fresenius.)

488 pts.  $\text{HCl} + \text{Aq}$  containing 4.25% HCl dissolve 1 pt. at  $22^\circ$ . (Stolba.)

More sol. in  $\text{HNO}_3 + \text{Aq}$  than in  $\text{H}_2\text{O}$ . (Fresenius.)

272 pts.  $\text{HNO}_3 + \text{Aq}$ , containing 8%  $\text{N}_2\text{O}_5$ , dissolve 1 pt. at  $22^\circ$ . (Stolba.)

1 pt.  $\text{BaSiF}_6$  dissolves in 428 pts. sat.  $\text{NH}_4\text{Cl} + \text{Aq}$ ; in 589 pts. sat.  $\text{NH}_4\text{Cl} + \text{Aq} + 2$  vols.  $\text{H}_2\text{O}$ . (Mallet, Sill. Am. J. (2) 28. 48.)

1 pt.  $\text{BaSiF}_6$  dissolves in 306 pts. sat.  $\text{NH}_4\text{Cl} + \text{Aq}$  at  $22^\circ$ ; in 361 pts. 15% solution of  $\text{NH}_4\text{Cl}$ ; in 563 pts. sat. boiling  $\text{NaCl} + \text{Aq}$  in 349 pts. 10% solution of  $\text{NaCl}$  at boiling temp.; in 2185 pts. 10% solution of  $\text{NaCl}$  at  $20^\circ$ ; in 1140 pts. 5% solution of  $\text{NaCl}$  at  $20^\circ$ . (Stolba.)

Nearly absolutely insol. in alcohol. (Fresenius.)

Solubility in a mixture of  $\text{H}_2\text{O}$ , alcohol (96%),  $\text{HCl} + \text{Aq}$  (20%),  $\text{H}_2\text{SiF}_6 + \text{Aq}$  (3.7%). 1 pt.  $\text{BaSiF}_6$  is sol. in pts. of solutions of given composition.

$\text{H}_2\text{O}$	Alcohol	$\text{HCl} + \text{Aq}$	$\text{H}_2\text{SiF}_6 + \text{Aq}$	$\text{BaSiF}_6$
50	50	0	0	37.219

77.95	20	0.9	1.15	39.061
73.0	25	0.9	1.1	70.679
97.09	0	1.25	1.66	3.247
75.0	25	0	0	16.914

(Fresenius, Z. anal. 29. 143.)

**Cadmium fluosilicate,  $\text{CdSiF}_6 + 6\text{H}_2\text{O}$ .**

Extremely sol. in  $\text{H}_2\text{O}$ . Easily sol. in 50% alcohol. (Engelskirchen, Dissert. 1903.)

**Cæsium fluosilicate,  $\text{Cs}_2\text{SiF}_6$ .**

Sol. in 166 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ , and much less hot  $\text{H}_2\text{O}$ . Insol. in alcohol. (Preis, J. pr. 103. 410.)

**Calcium fluosilicate,  $\text{CaSiF}_6 + 2\text{H}_2\text{O}$ .**

Sl. sol. in, and partly decomp. by  $\text{H}_2\text{O}$ . Sol. in HF and  $\text{HCl} + \text{Aq}$ . Sol. in fluosilicic acid without decomp. Easily sol. in 60% alcohol. (Fleischer.)

**Cerium fluosilicate.**

Very difficulty sol. in  $\text{H}_2\text{O}$ , acetic, or fluosilicic acids. Insol. in alcohol. (Stolba, C. C. 1874. 130.)

**Chromium fluosilicate.**

Deliquescent. (Berzelius.)

Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Berlin.)

**Cobaltous fluosilicate,  $\text{CoSiF}_6 + 6\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Cuprous fluosilicate,  $\text{Cu}_2\text{SiF}_6$ .**

Insol. in  $\text{H}_2\text{O}$ . (Berzelius, Pogg. 1. 199.)

**Cupric fluosilicate,  $\text{CuSiF}_6 + 6\text{H}_2\text{O}$ .**

Deliquescent in moist, efflorescent in dry air.

Sol. in 0.428 pt.  $\text{H}_2\text{O}$  at  $17^\circ$ . Sp. gr. of solution sat. at  $17^\circ = 1.6241$ .

Sol. in 17.5 pts. alcohol of 62 vol. % at  $20^\circ$ ; in 150 pts. of 85% at  $20^\circ$ ; in 617 pts. of 92% at  $20^\circ$ . (Stolba, J. pr. 102. 7.)

- Insol. in methyl acetate.** (Naumann, B. 1909, 42. 3790.)  
Contains  $6\frac{1}{2}$  H<sub>2</sub>O. (Stolba.)  
+  $5\frac{1}{2}$  H<sub>2</sub>O. (Knop and Wolf.)
- Cupric fluosilicate phosphate, CuSiF<sub>6</sub>, Cu<sub>3</sub>(PO<sub>4</sub>)<sub>2</sub>.**  
Insol. in H<sub>2</sub>O, but easily sol. in dil. HCl + Aq. (Thorpe and Rodger, Chem. Soc. 55. 220.)
- Glucinum fluosilicate.**  
Known only in solution.
- Iron (ferrous) fluosilicate, FeSiF<sub>6</sub> + 6H<sub>2</sub>O.**  
Easily sol. in H<sub>2</sub>O. (Berzelius.)
- Iron (ferric) fluosilicate, Fe<sub>2</sub>(SiF<sub>6</sub>)<sub>3</sub>.**  
Sol. in H<sub>2</sub>O. (Berzelius.)
- Lead fluosilicate, PbSiF<sub>6</sub> + 2H<sub>2</sub>O.**  
Deliquescent. Easily sol. in H<sub>2</sub>O.  
Insol. in acetone. (Naumann, B. 1904, 37. 4329.)  
+ 4H<sub>2</sub>O. (Marignac.)
- Lithium fluosilicate, Li<sub>2</sub>SiF<sub>6</sub> + 2H<sub>2</sub>O.**  
100 pts. H<sub>2</sub>O at 17° dissolve 73 pts. crystalline salt. (Marignac.)  
100 pts. cold H<sub>2</sub>O dissolve 52.6 pts. crystals.  
Sol. in dil. alcohol. (Stolba, J. pr. 91. 456.)  
100 pts. alcohol of 46 vol. % dissolve about 4 pts., and 100 pts. alcohol of 79 vol. % dissolve about 0.4 pt. crystals. (Stolba, Z. anal. 3. 311.)  
Insol. in ether or benzene.  
Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)  
Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)  
Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)
- Magnesium fluosilicate, MgSiF<sub>6</sub> + 6H<sub>2</sub>O.**  
Efflorescent. Sol. in 1534 pts. cold H<sub>2</sub>O, forming a solution of 1.235 sp. gr. at 17.5°. Separates out SiO<sub>2</sub> on warming, which nearly all redissolves on cooling. (Stolba, C. C. 1877. 578.)
- Magnesium fluosilicate silicate, Mg<sub>2</sub>Si<sub>2</sub>F<sub>12</sub>, xMg<sub>2</sub>Si<sub>2</sub>O<sub>7</sub>.**  
Min. *Humite*; *Chondrodite*. Gelatinises with HCl, or H<sub>2</sub>SO<sub>4</sub> + Aq.
- Manganous fluosilicate, MnSiF<sub>6</sub> + 6H<sub>2</sub>O.**  
Sol. in H<sub>2</sub>O. (Marignac, J. pr. 83. 202.)  
100 pts. dissolve in 71.4 pts. H<sub>2</sub>O at 17.5°, and sp. gr. of solution = 1.44825. Much more sol. in hot H<sub>2</sub>O, and less sol. in alcohol, the stronger the alcohol. (Stolba, C. C. 1883. 292.)
- Mercurous fluosilicate, Hg<sub>2</sub>SiF<sub>6</sub>.**  
Sl. sol. in H<sub>2</sub>O without decomp. (Lemaire, C. C. 1897, I. 1046.)  
+ 2H<sub>2</sub>O. Sl. sol. in H<sub>2</sub>O. More easily sol. in acidified H<sub>2</sub>O, but precipitated by HCl + Aq. (Berzelius.)
- Mercuric fluosilicate, basic, HgSiF<sub>6</sub>, HgO + 3H<sub>2</sub>O.**  
Decomp. by H<sub>2</sub>O, but sol. in weakest acids. (Berzelius, Pogg. 1. 200.)
- Mercuric fluosilicate, HgSiF<sub>6</sub> + 6H<sub>2</sub>O.**  
Deliquescent, and easily sol. in H<sub>2</sub>O. (Finkener, Pogg. 111. 246.)
- Nickel fluosilicate, NiSiF<sub>6</sub> + 6H<sub>2</sub>O.**  
Easily sol. in H<sub>2</sub>O. (Marignac, Ann. Min. (5) 15. 262.)
- Potassium fluosilicate, K<sub>2</sub>SiF<sub>6</sub>.**  
Sol. in 833.1 pts. H<sub>2</sub>O at 17.5°, and 104.8 pts. at 100°. (Stolba, J. pr. 103. 396.) Sol. in 3800 pts. cold, and more easily sol. in hot H<sub>2</sub>O. (Fresenius.)  
More sol. in HCl + Aq than in H<sub>2</sub>O.  
Sol. in 337 pts. HCl + Aq of 26.5% at 14°; in 307 pts. of 25.7% at 15°; in 340 pts. of 14.1% at 14°; in 303 pts. of 13.6% at 15°; in 327 pts. of 9.6% at 14°; in 313 pts. of 9.2% at 15°; in 376 pts. of 2.7% at 14°; in 319 pts. of 2.4% at 15°; in 409 pts. of 1.8% at 14°. (Stolba, l. c.)  
Sol. in 428 pts. sat., and 589 pts. dil. NH<sub>4</sub>Cl + Aq. (Mallet.)  
Much less sol. in K<sub>2</sub>SO<sub>4</sub>, KNO<sub>3</sub>, or KCl + Aq, but more sol. in NH<sub>4</sub>Cl + Aq than in H<sub>2</sub>O. (Stolba.)  
Sol. in 24,066 pts. K<sub>2</sub>SO<sub>4</sub> + Aq containing 9.92% K<sub>2</sub>SO<sub>4</sub> at 17°; in 17,858 pts. containing 6% at 18°; in 19,530 pts. containing 5% at 17°; in 10,721 pts. containing 1% at 17°.  
Sol. in 125,000 pts. KNO<sub>3</sub> + Aq containing 18.4% KNO<sub>3</sub> at 15°; in 43,478 pts. containing 8.7% at 15°; in 1735 pts. containing 8.8% at 100°; in 35,814 pts. containing 4.3% at 15°; in 10,203 pts. containing 1.00% at 15°.  
Sol. in 40,070 pts. KCl + Aq containing 25% KCl at 17°; in 38,352 pts. containing 18.4% at 17°; in 41,254 pts. containing 13.4% at 14°; in 24,032 pts. containing 6.7% at 12°; in 1200 pts. containing 0.65% at 17°; in 1095 pts. containing 0.45% at 18°.  
Sol. in 358 pts. NH<sub>4</sub>Cl + Aq containing 26.3% NH<sub>4</sub>Cl at 17°; in 306 pts. containing 15% at 15°; in 339 pts. containing 10% at 15°; in 436 pts. containing 5% at 15°. (Stolba, J. pr. 103. 306.)  
Insol. in liquid CO<sub>2</sub>. (Büchner, Z. phys. Ch. 1906, 54. 674.)  
Insol. in liquid NH<sub>3</sub>. (Gore, Am. ch. J. 1898, 20. 829.)  
Completely pptd. from aqueous solution by an equal vol. of alcohol.

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)  
Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

#### Rubidium fluosilicate, $\text{Rb}_2\text{SiF}_6$ .

Sol. in 625 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ , and 73.05–74.5 pts. at  $100^\circ$ . More sol. in acidified water. Insol. in alcohol. (Stolba, J. pr. 101. 1.)  
Insol. in  $\text{H}_2\text{O}$ . (Eggeling, Z. anorg. 1905, 46. 175.)  
Less sol. in  $\text{H}_2\text{O}$  than  $\text{K}_2\text{SiF}_6$ . (Gossner, Zeit. Kryst. 1904, 38. 149.)

#### Silver fluosilicate, $\text{Ag}_2\text{SiF}_6 + 4\text{H}_2\text{O}$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 221.)

#### Sodium fluosilicate, $\text{Na}_2\text{SiF}_6$ .

Much more sol. in  $\text{H}_2\text{O}$  than  $\text{K}_2\text{SiF}_6$ , especially in hot  $\text{H}_2\text{O}$ . Addition of acid does not increase solubility. (Berzelius.)

Sol. in 153.3 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$ , and 40.66 pts. at  $100^\circ$ . Easily forms supersaturated solutions. (Stolba, Z. anal. 11. 199.)

Much less sol. in  $\text{NaCl} + \text{Aq}$  than in  $\text{H}_2\text{O}$ . (Stolba, J. pr. 1865 (1) 96. 26.)

Precipitated completely from aqueous solution by alcohol. (Rose.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

#### Strontium fluosilicate, $\text{SrSiF}_6 + 2\text{H}_2\text{O}$ .

Sol. in cold  $\text{H}_2\text{O}$ , but decomp. somewhat on heating. Sol. in 31.06 pts.  $\text{H}_2\text{O}$ . (Fresenius.)

Easily sol. in acidified  $\text{H}_2\text{O}$  without decomp. Sol. in alcohol.

Solubility in a mixture of  $\text{H}_2\text{O}$ , alcohol (96%),  $\text{HCl} + \text{Aq}$  (20%),  $\text{H}_2\text{SiF}_6 + \text{Aq}$  (3.7%).  
1 pt.  $\text{SrSiF}_6$  is sol. in pts. of solutions of given composition.

$\text{H}_2\text{O}$	Alcohol	$\text{HCl} + \text{Aq}$	$\text{H}_2\text{SiF}_6 + \text{Aq}$	$\text{SrSiF}_6$
50	50	0	0	15.29
74.1	25	0	0	82.93
70.8	25	4.2	0	50.9
77.95	20	0.9	1.15	55.0
73	25	0.9	1.1	82.97
75	25	0	0	147.4
95.24	0	2.04	2.72	7.3

(Fresenius, Z. anal. 29. 143.)

#### Thallous fluosilicate, $\text{Tl}_2\text{SiF}_6 + 2\text{H}_2\text{O}$ .

Very easily sol. in  $\text{H}_2\text{O}$ . (Kuhlmann.)

#### Thorium fluosilicate, $\text{Th}(\text{OH})_2\text{SiF}_6$ (?).

(Cleve.)

#### Tin stannic fluosilicate, $\text{SnF}_4 \cdot \text{SiF}_4$ .

Very easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

#### Uranyl fluosilicate.

Very sl. sol. in acids. (Berzelius.)

Sol. in alcohol. (Stolba, Z. anal. 3. 71.)

#### Vanadium fluosilicate.

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Guyard, Bull. Soc. (2) 25. 352.)

#### Yttrium fluosilicate.

Insol. in pure, sol. in acidified  $\text{H}_2\text{O}$ . (Berzelius.)

#### Zinc fluosilicate, $\text{ZnSiF}_6 + 6\text{H}_2\text{O}$ .

Very easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

#### Zirconium fluosilicate.

Sol. in  $\text{H}_2\text{O}$ . Solution clouds up on boiling. (Berzelius.)

#### Fluostannic acid.

#### Ammonium fluostannate, $(\text{NH}_4)_2\text{SnF}_6$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 224.)

$4\text{NH}_4\text{F} \cdot \text{SnF}_4$ . Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

#### Barium fluostannate, $\text{BaSnF}_6$ .

Slowly sol. in  $\text{H}_2\text{O}$ .

$+ 3\text{H}_2\text{O}$ . Sol. in 18 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Marignac, Ann. Min. (5) 15. 246.)

Decomp. by warming with  $\text{H}_2\text{SO}_4$ , with evolution of  $\text{HF}$ . (Emich, M. 1904, 28. 1912.)

#### Calcium fluostannate, $\text{CaSnF}_6 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 250.)

#### Cadmium fluostannate, $\text{CdSnF}_6 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

#### Cobaltous fluostannate, $\text{CoSnF}_6 + 6\text{H}_2\text{O}$ .

(Gossner, Zeit. Kryst. 1907, 42. 482.)

#### Cupric fluostannate, $\text{CuSnF}_6 + 4\text{H}_2\text{O}$ .

Not deliquescent. (Marignac, Ann. Min. (5) 15. 291.)

#### Lithium fluostannate, $\text{Li}_2\text{SnF}_6 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 242.)

#### Magnesium fluostannate, $\text{MgSnF}_6 + 6\text{H}_2\text{O}$ .

Not deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 256.)

#### Manganous fluostannate, $\text{MnSnF}_6 + 6\text{H}_2\text{O}$ .

Slowly efflorescent. (Marignac.)

#### Nickel fluostannate, $\text{NiSnF}_6 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 262.)

**Potassium fluostannate**,  $K_2SnF_6 + H_2O$ .

*Two modifications*—(a) *Thin plates*. Sol. in 23 pts.  $H_2O$  at  $100^\circ$ , and in 15–16 pts. at  $18^\circ$ . (Marignac.)

(b) *Octahedra*. Sol. in 3 pts.  $H_2O$  at  $100^\circ$ , and 27 pts. at  $18^\circ$ . (Marignac.)

Sol. in hot  $H_2O$ . Can be cryst. from hot  $H_2O$ . With conc.  $H_2SO_4$ , HF is evolved. (Emich, M. 1904, 25. 911.)

**Potassium hydrogen fluostannate**,  $3KF, HF, SnF_4$ .

Sol. in  $H_2O$ . (Marignac.)

**Silver fluostannate**,  $Ag_2SnF_6 + 4H_2O$ .

Sl. deliquescent. Easily sol. in  $H_2O$ . (Marignac.)

**Sodium fluostannate**,  $Na_2SnF_6$ .

Sol. in 18–19 pts.  $H_2O$  at  $20^\circ$ . (Marignac.)

**Strontium fluostannate**,  $SrSnF_6 + 2H_2O$ .

Sol. in 5.5 pts.  $H_2O$  at  $18^\circ$ . (Marignac.)

**Zinc fluostannate**,  $ZnSnF_6 + 6H_2O$ .

Sol. in  $H_2O$ . (Marignac.)

**Fluosulphonic acid**,  $HSO_3F$ .

See Sulphuryl hydroxyl fluoride.

**Ammonium fluosulphonate**,  $FSO_2NH_4$ .

Easily sol. in  $H_2O$  from which it can be cryst.

Sol. in ethyl alcohol, more sol. in methyl alcohol. Can be cryst. from abs. alcohol. (Traube, B. 1913, 46. 2528.)

**Sodium fluosulphonate**,  $FSO_2Na$ .

Hydroscopic.

Sol. in alcohol and acetone. (Traube.)

**Fluosulphuric acid**.

**Tricassium difluodisulphate**,  $S_2O_7F_2Cs_3H + H_2O$ .

As the K salt. (Weinland, Z. anorg. 1899, 21. 53.)

**Tripotassium difluodisulphate**,

$S_2O_7F_2K_3H + H_2O$ .

Sol. in HF; quite stable in air; sol. in  $H_2O$  with decomp. (Weinland, Z. anorg. 1899, 21. 51.)

**Trirubidium difluodisulphate**,  $S_2O_7R_3Tb_3H + H_2O$ .

Sol. in HF. (Weinland, Z. anorg. 1899, 21. 53.)

**Fluotantallic acid**.

**Ammonium fluotantalate**,  $(NH_4)_2TaF_7$ .

Very sol. in  $H_2O$ . (Marignac, A. ch. (4) 9. 272.)

$(NH_4)_2TaF_7$ . (Balke, J. Am. Chem. Soc. 1905, 27. 1151.)

**Cæsium fluotantalate**,  $CsTaF_6$ .

Can be recryst. from HF + Aq. (Balke.)

$Cs_2TaF_7$ . Can not be recryst. from  $H_2O$  as it tends to go into  $CsF, TaF_5$ . (Balke, J. Am. Chem. Soc. 1905, 27. 1151.)

$15CsF, TaF_5$ . Sl. sol. in  $H_2O$ . (Pennington, J. Am. Chem. Soc. 1896, 18. 59.)

**Calcium fluotantalate**.

Difficulty sol. in  $H_2O$  (Berzelius.)

**Cupric fluotantalate**,  $CuTaF_6 + 4H_2O$ .

Deliquescent. Easily sol. in  $H_2O$ . (Marignac, A. ch. (4) 9. 294.)

**Lead fluotantalate**.

Difficulty sol. in  $H_2O$ . (Berzelius.)

**Lithium fluotantalate**,  $LiF, TaF_5 + 2H_2O$ .

Can be recryst. from conc. HF. (Balke, J. Am. Chem. Soc. 1905, 27. 1143.)

**Potassium fluotantalate**,  $K_2TaF_7$ .

Sl. sol. in cold, much more easily in hot  $H_2O$ . Decomposes, with formation of a white precipitate on boiling. (Berzelius.)

Much more sol. in HF + Aq. 1 pt. of the salt is sol. in 200 pts.  $H_2O$  containing a trace of HF, and in 150–160 pts. of  $H_2O$  containing a little more HF. (Marignac, A. ch. (4) 9. 267.)

**Potassium hydrogen fluotantalate**,  $KF, HF, TaF_5$  (?).

Sol. in  $H_2O$ . (Berzelius.)

**Rubidium fluotantalate**,  $Rb_2TaF_7$ .

Sol. in HF + Aq. (Pennington, J. Am. Ch. Soc. 1896, 18. 58.)

$3RbF, 2TaF_5$ . (Balke, J. Am. Chem. Soc. 1905, 27. 1151.)

**Sodium fluotantalate**,  $3NaF, TaF_5$ .

Easily sol. in  $H_2O$ .

$Na_2TaF_7 + H_2O$ . Sol. in  $H_2O$ . (Marignac.)

**Thallous fluotantalate**,  $Tl_2TaF_7$ .

Sol. in  $H_2O$ . On boiling the aqueous solution tantalic acid separates.

Decomp. by conc.  $H_2SO_4$ . Difficultly sol. in cold, easily sol. in hot HF. (Ephraim. B. 1909, 42. 4461.)

**Zinc fluotantalate**,  $ZnTaF_6 + 7H_2O$ .

Very deliquescent. Sol. in  $H_2O$ . (Marignac, A. ch. (4) 9. 249.)

**Fluotelluric acid**.

**Ammonium fluotellurate**,  $NH_4TeF_6 + H_2O$ .

Decomp. by  $H_2O$ . (Hügbom, Bull. Soc. (2) 35. 60.)

**Barium fluotellurate**,  $\text{Ba}(\text{TeF}_6)_2 + \text{H}_2\text{O}$ .

As above.

**Potassium fluotellurate**,  $\text{KTeF}_6$ .

As above.

$\text{TeO}_2\text{F}_2\text{K}_2 + 3\text{H}_2\text{O}$ . Stable in dry air; only sl. sol. in  $\text{H}_2\text{O}$  with decomp.; sol. in  $\text{HF}$ . (Weinland, Z. anorg. 1899, 21. 61.)

**Rubidium difluotellurate**,  $\text{TeO}_2\text{F}_2\text{Rb}_2 + 3\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in  $\text{HF}$ . (Weinland, Z. anorg. 1899, 21. 62.)

**Fluotitanic acid**.

Known only in solution as titanium hydrogen fluoride.

**Ammonium fluotitanate**,  $(\text{NH}_4)_2\text{TiF}_6$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

$3\text{NH}_4\text{F}$ ,  $\text{TiF}_4$ . Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

**Ammonium fluosequititanate**,  $6\text{NH}_4\text{F}$ ,  $\text{Ti}_2\text{F}_6$ .

Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{NH}_4\text{F} + \text{Aq}$ . (Petersen, J. pr. (2) 40. 54.)

Insol. in  $\text{NH}_4\text{F} + \text{Aq}$ . (Piccini, C. R. 97. 1064.)

$4\text{NH}_4\text{F}$ ,  $\text{Ti}_2\text{F}_6$ . Properties as the corresponding K salt. (Piccini, B. 18. 257 R.)

**Barium fluotitanate**,  $\text{BaTiF}_6$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . More easily sol. in dil.  $\text{HNO}_3$  or  $\text{HCl}$ . (Engelskirchen, Dissert. 1903.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . (Emich, M. 1904, 25. 907.)

**Cadmium fluotitanate**,  $\text{CdTiF}_6 + 6\text{H}_2\text{O}$ .

Extremely sol. in  $\text{H}_2\text{O}$ . Easily sol. in 50% alcohol. (Engelskirchen, Dissert. 1903.)

**Cæsium fluotitanate**,  $\text{Cs}_2\text{TiF}_6$ .

More sol. in hot than cold  $\text{H}_2\text{O}$  and much more sol. than the Rb comp. (Engelskirchen, Dissert. 1903.)

$4\text{CsF}$ ,  $\text{TiF}_4$ . More sol. in  $\text{H}_2\text{O}$  than  $\text{Cs}_2\text{TaF}_7$ , and is not decomp. by pure  $\text{H}_2\text{O}$ . (Pennington, J. Am. Chem. Soc. 1896, 18. 60.)

**Calcium fluotitanate**,  $\text{CaTiF}_6 + 3\text{H}_2\text{O}$ .

Decomp. by pure  $\text{H}_2\text{O}$ . Sol. without decomp. in acidified  $\text{H}_2\text{O}$ . (Berzelius.)

Separates a precipitate with cold  $\text{H}_2\text{O}$ , which dissolves on heating. (Marignac, Ann. Min. (5) 15. 250.)

**Cupric fluotitanate**,  $\text{CuTiF}_6 + 4\text{H}_2\text{O}$ .

Sol. in pure  $\text{H}_2\text{O}$  with partial decomp.; easily and completely sol. in acidified  $\text{H}_2\text{O}$ . (Berzelius.)

**Cupric fluotitanate ammonium fluoride**,

$\text{CuTiF}_6$ ,  $\text{NH}_4\text{F} + 4\text{H}_2\text{O}$ .

Efflorescent. Easily sol. in  $\text{H}_2\text{O}$ . (Marignac, Ann. Min. (5) 15. 267.)

**Cupric fluotitanate potassium fluoride**,  $\text{CuTiF}_6$ ,  $\text{KF} + 4\text{H}_2\text{O}$ .

As the above salt. (Marignac.)

**Ferrous fluotitanate**,  $\text{FeTiF}_6 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Weber, Pogg. 120. 2)

**Ferric fluotitanate**.

Decomp. by  $\text{H}_2\text{O}$ . (Berzelius.)

**Lead fluotitanate**.

Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Lithium fluotitanate**,  $\text{Li}_2\text{TiF}_6 + 2\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Engelskirchen, Di 1903.)

**Magnesium fluotitanate**,  $\text{MgTiF}_6 + 6\text{H}_2\text{O}$ .

Easily sol. in cold  $\text{H}_2\text{O}$ . (Marignac, Min. (5) 15. 257.)

**Nickel fluotitanate**,  $\text{NiTiF}_6 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Weber, Pogg. 282.)

**Potassium fluotitanate**,  $\text{K}_2\text{TiF}_6$ .

Difficultly sol. in cold, much more easily in hot  $\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve at:

0° 3° 6° 10° 14° 20°

0.556 0.667 0.775 0.909 1.042 1.28 pts. K,  
(Marignac, A. ch. (4) 8. 65.)

Sol. in 78.6 pts.  $\text{H}_2\text{O}$  at 21°. Sol. in (Piccini, Gazz. ch. it. 1836, 16. 104.)

Sol. in 78 pts.  $\text{H}_2\text{O}$  at 20°; 9.4 pts. at

By addition of small amount of  $\text{HF}$  solubility is increased. (Weiss and K

Z. anorg. 1910, 65. 354.)

Sol. in  $\text{HF}$ . (Marchetti, Z. anorg. 10. 66.)

+  $\text{H}_2\text{O}$ . Much less sol. in  $\text{H}_2\text{O}$  in presence of  $\text{KBr}$  or  $\text{KI}$ . (Hall, J. Am. Chem. 1904, 26. 1246.)

Sol. in  $\text{H}_2\text{O}$  or  $\text{HF}$  with decomp. (Marchetti, Z. anorg. 1895, 10. 66.)

**Potassium fluosequititanate**,  $4\text{KF}$ ,  $\text{Ti}_2\text{F}_6$ .

Scarcely sol. in  $\text{H}_2\text{O}$ ; sol. in dil. (Piccini, B. 18. 257 R.)

**Rubidium fluotitanate**,  $\text{Rb}_2\text{TiF}_6$ .

Very sl. sol. in cold, somewhat more sol. in hot  $\text{H}_2\text{O}$ . (Engelskirchen, Dissert. 1

**Silver fluotitanate**.

Very deliquescent. (Marignac.)

**Sodium fluotitanate**,  $\text{Na}_2\text{TiF}_6$ .

Much more sol. in  $\text{H}_2\text{O}$  than the corresponding potassium salt. (Marignac, Min. (5) 15. 238.)

hydrogen fluotitanate,  $\text{Na}_2\text{TiF}_6$ ,  $\text{TiF}_3$ .

$\text{H}_2\text{O}$ . (Marignac.)

n fluotitanate,  $\text{SrTiF}_6 + 2\text{H}_2\text{O}$ .

in cold  $\text{H}_2\text{O}$ . Solution clouds up on (Marignac.)

titianate,  $\text{ZnTiF}_6 + 6\text{H}_2\text{O}$ .

in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (3) 60.

adic acid.

um fluovanadate,  $3\text{NH}_4\text{F}$ ,  $\text{VF}_3$ .

ately sol. in  $\text{H}_2\text{O}$ . More easily sol. in acids. Nearly insol. in alcohol or MF (Petersen, J. pr. (2) 40. 52.)

$\text{F}$ ,  $\text{VF}_3 + \text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . in alcohol. (Petersen.)

,  $\text{VF}_3 + 2\text{H}_2\text{O}$ . As above. (Peter-

n fluovanadate,  $\text{CdF}_2$ ,  $\text{VF}_3 + 7\text{H}_2\text{O}$ .

sl. sol. in  $\text{H}_2\text{O}$ . (Piccini and Giorgis, it. 22, 1. 89.)

fluovanadate,  $\text{CoF}_2$ ,  $\text{VF}_3 + 2\text{H}_2\text{O}$ .

in  $\text{H}_2\text{O}$  without decomp. (Petersen,

fluovanadate,  $\text{NiF}_2$ ,  $\text{VF}_3 + 2\text{H}_2\text{O}$ .

Co salt. (Petersen.)

m fluovanadate,  $2\text{KF}$ ,  $\text{VF}_3 + \text{H}_2\text{O}$ .

in  $\text{H}_2\text{O}$ ; easily sol. in acids. Insol. Aq. (Petersen, J. pr. (2) 40. 51.)

m fluovanadate fluoxyvanadate,  $\text{F}$ ,  $\text{VF}_3$ ,  $\text{VOF}_2$ .

sol. in  $\text{H}_2\text{O}$ , and still more easily in  $\text{F}$ . Sl. sol. in  $\text{KF} + \text{Aq}$ . (Petersen, J. U. 274.)

fluovanadate,  $5\text{NaF}$ ,  $2\text{VF}_3 + \text{H}_2\text{O}$ .

potassium salt. (Petersen.)

fluovanadate,  $\text{TlF}$ ,  $\text{VF}_3 + 2\text{H}_2\text{O}$ .

sol. in  $\text{H}_2\text{O}$ .

with decomp. in conc.  $\text{H}_2\text{SO}_4$ , dil. or cold dil.  $\text{HCl}$ .

in  $\text{NaOH} + \text{Aq}$ . (Ephraim, B. 1909, U.)

$\text{VF}_3 + \text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ .

conc.  $\text{H}_2\text{SO}_4$ , dil.  $\text{HNO}_3$ , or cold dil. with decomp.

in cold or hot  $\text{NaOH} + \text{Aq}$ .

n, B. 1909, 42. 4461.)

vanadate,  $\text{ZnF}_2$ ,  $\text{VF}_3 + 7\text{H}_2\text{O}$ .

in cold  $\text{H}_2\text{O}$ . Decomp. on heating. and Giorgis.)

Fluoxycolumbic acid.

Ammonium fluoxycolumbate,  $3\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$ .

Cubic salt. Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (4) 8. 38.)

$2\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$ . Lamellar salt. Much more sol. in  $\text{H}_2\text{O}$  than  $2\text{KF}$ ,  $\text{CbOF}_3$ . (M.)

$5\text{NH}_4\text{F}$ ,  $3\text{CbOF}_3 + \text{H}_2\text{O}$ . Hexagonal salt. (M.)

$\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$ . Rectangular salt. (M.)

Ammonium fluoxycolumbate columbium fluoride,  $3\text{NH}_4\text{F}$ ,  $\text{CbOF}_3$ ,  $\text{CbF}_3$ .

(Marignac.)

Cupric fluoxycolumbate,  $\text{CuF}_2$ ,  $\text{CbOF}_3 + 4\text{H}_2\text{O}$ .

Sl. deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (4) 8. 42.)

Potassium fluoxycolumbate,  $2\text{KF}$ ,  $\text{CbOF}_3 + \text{H}_2\text{O}$ .

Sol. in 12.5-13 pts.  $\text{H}_2\text{O}$  at 17-21°. Much more sol. in hot  $\text{H}_2\text{O}$ , or  $\text{H}_2\text{O}$  containing  $\text{HF}$ . (Marignac.)

$3\text{KF}$ ,  $\text{CbOF}_3$ . Decomp. by  $\text{H}_2\text{O}$  into above salt. (M.)

$5\text{KF}$ ,  $3\text{CbOF}_3 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (M.)

$4\text{KF}$ ,  $3\text{CbOF}_3 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (M.)

$3\text{KF}$ ,  $2\text{Cb}_2\text{O}_3 + 5\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 287.)

$\text{KF}$ ,  $\text{Cb}_2\text{O}_3 + 3\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Petersen.)

$2\text{KF}$ ,  $3\text{Cb}_2\text{O}_3\text{F}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HF}$ . (Krüss and Nilson, B. 20. 1689.)

See also Fluoxypercolumbate, potassium.

Potassium hydrogen fluoxycolumbate,  $3\text{KF}$ ,  $\text{HF}$ ,  $\text{CbOF}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

Sodium fluoxycolumbate,  $2\text{NaF}$ ,  $\text{CbOF}_3 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

$\text{NaF}$ ,  $\text{CbOF}_3 + \text{H}_2\text{O}$ . (Marignac.)

Zinc fluoxycolumbate,  $\text{ZnF}_2$ ,  $\text{CbOF}_3 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Marignac, A. ch. (4) 8. 41.)

Fluoxyhypomolybdic acid.

Ammonium fluoxyhypomolybdate,  $\text{MoOF}_3$ ,  $2\text{NH}_4\text{F}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Mauro, Gazz. ch. it. 19. 179.)

$3\text{MoOF}_3$ ,  $5\text{NH}_4\text{F} + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Mauro.)

Cupric fluoxyhypomolybdate,  $\text{CuF}_2$ ,  $\text{MoOF}_3 + 4\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Mauro, Real. Ac. Linc. 1892, 1. 194.)

- Potassium fluoxyhypomolybdate**,  $\text{MoOF}_3$ ,  $2\text{KF} + \text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  with decomp.  
Sol. in  $\text{HF}$  or  $\text{HCl} + \text{Aq}$ . (Mauro and Panabianco, *Gazz. ch. it.* 12. 80.)  
 $3\text{MoOF}_3$ ,  $5\text{KF} + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp. (Mauro, *Gazz. ch. it.* 19. 179.)
- Thallous fluoxyhypomolybdate**,  $2\text{TlF}$ ,  $\text{MoOF}_3$ .  
(Mauro, B. 1894, 27R. 109.)
- Zinc fluoxyhypomolybdate**,  $\text{ZnF}_2$ ,  $\text{MoOF}_3 + 6\text{H}_2\text{O}$ .  
Rapidly deliquescent. Sol. in  $\text{H}_2\text{O}$ .  
(Mauro, *Real. Ac. Linc.* 1892. 1. 194.)
- Fluoxyhypovanadic acid**.  
See Fluoxyvanadic acid.
- Fluoxymanganic acid**.
- Ammonium fluoxymanganate**,  $(\text{NH}_4)_2\text{MnOF}_4$ .  
Precipitate. (Nicklès.)
- Potassium fluoxymanganate**,  $\text{K}_2\text{MnOF}_4$ .  
Precipitate. (Nicklès, C. R. 65. 107.)
- Sesquifluoxymanganic acid**.
- Potassium sesquifluoxymanganate**,  $\text{K}_2\text{Mn}_2\text{OF}_7 = 4\text{KF}$ ,  $\text{Mn}_2\text{OF}_4$ .  
Precipitate. (Nicklès.)
- Fluoxymolybdic acid**.  
See also Fluoxyhypomolybdic, and fluoxypermolybdic acids.
- Ammonium fluoxymolybdate**,  $\text{NH}_4\text{F}$ ,  $\text{MoO}_3\text{F}_2$ .  
Sol. in  $\text{H}_2\text{O}$ . (Mauro, *Gazz. ch. it.* 20. 109.)  
 $+ \text{H}_2\text{O}$ . More sol. in  $\text{H}_2\text{O}$  than  $2\text{NH}_4\text{F}$ ,  $\text{MoO}_3\text{F}_2$ . (Delafontaine, N. Arch. Sci. ph. nat. 30. 250.)  
Correct formula is  $3\text{NH}_4\text{F}$ ,  $\text{MoO}_3\text{F}_2$ . (Mauro, *Gazz. ch. it.* 18. 120.)  
 $2\text{NH}_4\text{F}$ ,  $\text{MoO}_3\text{F}_2$ . Much more sol. than  $2\text{KF}$ ,  $\text{MoO}_3\text{F}_2$ . (Delafontaine.)  
 $3\text{NH}_4\text{F}$ ,  $\text{MoO}_3\text{F}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Mauro.)  
 $5\text{NH}_4\text{F}$ ,  $3\text{MoO}_3\text{F}_2 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Mauro, *Gazz. ch. it.* 20. 109.)
- Ammonium fluoxymolybdate molybdate**,  $\text{MoO}_3\text{F}_2$ ,  $4\text{NH}_4\text{F}$ ,  $(\text{NH}_4)_2\text{MoO}_4$ .  
Sol. in  $\text{H}_2\text{O}$ , but with decomp. (Mauro, *Gazz. ch. it.* 18. 120.)
- Cadmium fluoxymolybdate**,  $\text{CdF}_2$ ,  $\text{MoO}_3\text{F}_2 + 6\text{H}_2\text{O}$ .  
Sl. efflorescent. (Delafontaine, J. B. 1867. 236.)
- Cobaltous fluoxymolybdate**,  $\text{CoF}_2$ ,  $3\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Delafontaine, J. 236.)
- Cupric fluoxymolybdate**,  $\text{CuF}_2$ ,  $3\text{H}_2\text{O}$ .  
Deliquescent. (Mauro, *Real. Ac. Linc.* 1892. 1. 194.)
- Nickel fluoxymolybdate**,  $\text{NiF}_2$ ,  $3\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Delafontaine, J. 236.)
- Potassium fluoxymolybdate**,  $2\text{KF}$ ,  $3\text{H}_2\text{O}$ .  
Easily sol. in boiling  $\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. (Marchetti, Z. anorg. 1895, 10. 68.)  
 $\text{KF}$ ,  $\text{MoO}_3\text{F}_2 + \text{H}_2\text{O}$ . Gradually cent. (Delafontaine.)
- Rubidium fluoxymolybdate**,  $2\text{RbF}$ ,  $+ 2\text{H}_2\text{O}$ .  
Sol. in cold, more sol. in hot  $\text{H}_2\text{O}$  (fontaine.)
- Sodium fluoxymolybdate**,  $\text{NaF}$ ,  $3\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Delafontaine.)
- Thallous fluoxymolybdate**,  $2\text{TlF}$ ,  $3\text{H}_2\text{O}$ .  
Sol. in hot  $\text{H}_2\text{O}$ . (Delafontaine.)
- Zinc fluoxymolybdate**,  $\text{ZnF}_2$ ,  $\text{MoO}_3\text{F}_2$ .  
Sol. in  $\text{H}_2\text{O}$ . (Delafontaine.)
- Fluoxypercolumbic acid**.
- Potassium fluoxypercolumbate**,  $2\text{KF}$ ,  $+ \text{H}_2\text{O}$ .  
(Piccini, Z. anorg. 2. 21.)  
Sol. in  $\text{H}_2\text{O}$  with decomp.  
Sol. in  $\text{HF}$ . (Marchetti, Z. anorg. 10. 67.)
- Fluoxypermolybdic acid**.
- Ammonium fluoxypermolybdate**,  $3\text{NH}_4\text{F}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Piccini, Z. anorg. 1.)
- Cæsium fluoxypermolybdate**,  $\text{MoO}_3\text{F}_2 + \text{H}_2\text{O}$ .  
(Piccini.)
- Potassium fluoxypermolybdate**,  $3\text{KF}$ ,  $+ \text{H}_2\text{O}$ .  
Not very sol. in  $\text{H}_2\text{O}$ ; more sol. in  $\text{Aq}$  without decomp. (Piccini.)

<p>n fluoxypermolybdate, <math>\text{MoO}_3\text{F}_3</math>, <math>\text{F} + \text{H}_2\text{O}</math>.          That more sol. in <math>\text{H}_2\text{O}</math> than K salt.          Sol. in <math>\text{HF} + \text{Aq.}</math> (Piccini.)</p>	<p><math>\text{NH}_4\text{F}</math>, <math>\text{WO}_3\text{F}_2 + \text{H}_2\text{O}</math>. Decomp. by <math>\text{H}_2\text{O}</math>.          Crystallises unchanged from <math>\text{H}_2\text{O}</math> containing <math>\text{HF}</math>. (Marignac.)</p>
<p>ertantalic acid.</p>	<p>Ammonium fluoxytungstate tungstate,  <math>4\text{NH}_4\text{F}</math>, <math>\text{WO}_3\text{F}_2</math>, <math>(\text{NH}_4)_2\text{WO}_4</math>.          Incompletely sol. in <math>\text{H}_2\text{O}</math>. Residue dis-          solves in <math>\text{NH}_4\text{OH} + \text{Aq.}</math> (Marignac.)</p>
<p>m fluoxypertantalate, <math>2\text{KF}</math>, <math>\text{TaO}_3\text{F}_2</math>,  <math>\text{H}_2\text{O}</math>. (Piccini, Z. anorg. 2. 21.)</p>	<p>Cadmium fluoxytungstate.          Very sol. in <math>\text{H}_2\text{O}</math>. (Marignac.)</p>
<p>ertitanic acid, <math>\text{TiO}_3\text{F}_2</math>, <math>\text{HF}</math>.          Only in solution. (Piccini, B. 18.)</p>	<p>Cupric fluoxytungstate, <math>\text{CuF}_2</math>, <math>\text{WO}_3\text{F}_2 + 4\text{H}_2\text{O}</math>.          Very sol. in <math>\text{H}_2\text{O}</math>. (Marignac, C. R. 55. 888.)</p>
<p>um fluoxypertitanate, <math>\text{TiO}_3\text{F}_2</math>,  <math>\text{H}_2\text{F}</math>.          Instable. (Piccini, Gazz. ch. it. 17.)</p>	<p>Cupric fluoxytungstate ammonium fluoride,  <math>\text{CuF}_2</math>, <math>\text{WO}_3\text{F}_2</math>, <math>\text{NH}_4\text{F} + 4\text{H}_2\text{O}</math>.          Sol. in <math>\text{H}_2\text{O}</math>. (Marignac.)</p>
<p><math>3\text{NH}_4\text{F}</math>. Sol. in <math>\text{H}_2\text{O}</math>.  <math>\text{H}_2\text{O}_2</math>. (Piccini, Z. anorg. 1895, 10)</p>	<p>Manganese fluoxytungstate.          Very sol. in <math>\text{H}_2\text{O}</math>. (Marignac.)</p>
<p><math>\text{F}_2</math>, <math>3\text{NH}_4\text{F}</math>. Sol. in <math>\text{H}_2\text{O}</math>. (Piccini,          8 R.)</p>	<p>Nickel fluoxytungstate, <math>\text{NiF}_2</math>, <math>\text{WO}_3\text{F}_2 +</math>  <math>10\text{H}_2\text{O}</math>.          Deliquescent. Very sol. in <math>\text{H}_2\text{O}</math>. (Marig-          nac.)</p>
<p>fluoxypertitanate, <math>\text{TiO}_3\text{F}_2</math>, <math>\text{BaF}_2</math>.          itate. Easily sol. in acids. (Piccini,          8 R.)</p>	<p>Potassium fluoxytungstate, <math>\text{KF}</math>, <math>\text{WO}_3\text{F}_2 +</math>  <math>\text{H}_2\text{O}</math>.          Can be recrystallised without decomp. only          from <math>\text{H}_2\text{O}</math> containing <math>\text{HF}</math>. (Marignac, A. ch.          (3) 69. 70.)</p>
<p><math>\text{F}_2</math>, <math>3\text{BaF}_2</math>. Insol. in <math>\text{H}_2\text{O}</math>; sol. in dil.          Piccini, Gazz. ch. it. 17. 479.)</p>	<p><math>2\text{KF}</math>, <math>\text{WO}_3\text{F}_2 + \text{H}_2\text{O}</math>. Difficultly sol. in          cold, more easily in hot <math>\text{H}_2\text{O}</math>. (Berzelius.)          Sol. in 17 pts. <math>\text{H}_2\text{O}</math> at <math>15^\circ</math>. (Marignac.)          Can be recrystallised without decomp.          from <math>\text{H}_2\text{O}</math>, or <math>\text{H}_2\text{O}</math> containing <math>\text{HF}</math>. (Marig-          nac.)</p>
<p>n fluoxypertitanate, <math>\text{TiO}_3\text{F}_2</math>, <math>2\text{KF}</math>.  <math>\text{H}_2\text{O}</math>. (Piccini, B. 21. 1391.)  <math>\text{H}_2\text{O}_2</math>. (Piccini, Z. anorg. 1895, 10.)</p>	<p>Sol. in <math>\text{H}_2\text{O}</math> with decomp. Sol. in <math>\text{HF}</math>.          (Marchetti, Z. anorg. 1895, 10. 71.)          See also Fluoxypertungstate, potassium.</p>
<p>ertungstic acid.</p>	<p>Silver fluoxytungstate.          Very easily sol. in <math>\text{H}_2\text{O}</math>. (Marignac.)</p>
<p>n fluoxypertungstate, <math>2\text{KF}</math>, <math>\text{WO}_3\text{F}_2 +</math>  <math>\text{H}_2\text{O}</math>. (Z. anorg. 2. 11.)</p>	<p>Sodium fluoxytungstate, <math>2\text{NaF}</math>, <math>\text{WO}_3\text{F}_2</math>.          More sol. in <math>\text{H}_2\text{O}</math> than the corresponding K          compound. (Berzelius.)</p>
<p>intalic acid.</p>	<p>Thallous fluoxytungstate, <math>\text{TlF}</math>, <math>\text{WO}_3\text{F}_2</math>.          Insol. in <math>\text{H}_2\text{O}</math>. Decomp. by <math>\text{H}_2\text{O}</math>.          (Ephraim and Heymann, B. 1909, 42. 4463.)</p>
<p>o Fluoxypertantalic acid.</p>	<p><math>2\text{TlF}</math>, <math>\text{WO}_3\text{F}_2</math>. Insol. in <math>\text{H}_2\text{O}</math> but decomp.          thereby. (Ephraim and Heymann, B. 1909,          42. 4462.)</p>
<p>um fluoxytantalate, <math>3\text{NH}_4\text{F}</math>, <math>\text{TaOF}_3</math>.          sol. in <math>\text{H}_2\text{O}</math>. The solution clouds up          on or on warming. (Joly, C. R. 81.)</p>	<p><math>3\text{TlF}</math>, <math>2\text{WO}_3\text{F}_2</math>. Insol. in <math>\text{H}_2\text{O}</math>. Decomp.          by acids. (Ephraim and Heymann, B. 1909,          42. 4462.)</p>
<p>tanic acid.</p>	<p>Zinc fluoxytungstate, <math>\text{ZnF}_2</math>, <math>\text{WO}_3\text{F}_2 + 10\text{H}_2\text{O}</math>.          Very sol. in <math>\text{H}_2\text{O}</math>. (Marignac.)</p>
<p>o Fluoxypertitanic acid.</p>	
<p>uoxytitanate, <math>\text{TiOF}_2</math>, <math>\text{BaF}_2</math>.          in <math>\text{H}_2\text{O}</math>; sol. in dil. acids. (Piccini,          it. 17. 479.)</p>	
<p>ingstic acid.</p>	
<p>um fluoxytungstate, <math>2\text{NH}_4\text{F}</math>, <math>\text{WO}_3\text{F}_2</math>.          Sol. in <math>\text{H}_2\text{O}</math>. (Marignac, A. ch. (3) 69.)</p>	

**Fluoxururic acid.****Ammonium fluoxururate**,  $3\text{NH}_4\text{F}$ ,  $\text{UO}_2\text{F}_2$ .Easily sol. in  $\text{H}_2\text{O}$ , less in  $\text{HF}$ . Insol. in alcohol. (Bolton.)100 g. solution sat. at  $27^\circ$  contain 10.11 g. salt.100 g. solution sat. at  $81.3^\circ$  contain 20.71 g. salt.

(Bürger, Dissert. 1904.)

**Barium fluoxururate**,  $3\text{BaF}_2$ ,  $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$ .Traces dissolve in hot  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Bolton.)**Potassium fluoxururate**,  $3\text{KF}$ ,  $\text{UO}_2\text{F}_2$ .Sol. in 8 pts.  $\text{H}_2\text{O}$  at  $21^\circ$ . Insol. in alcohol and ether. (Bolton, J. pr. 99. 269.)

Does not exist. (Smithells, Chem. Soc. 43. 125.)

 $4\text{KF}$ ,  $\text{UO}_2\text{F}_2$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Ditte, C. R. 91. 115.) $5\text{KF}$ ,  $2\text{UO}_2\text{F}_2$ . (Baker, Chem. Soc. 35. 760.) $3\text{KF}$ ,  $2\text{UO}_2\text{F}_2 + 2\text{H}_2\text{O}$ . (Baker.)**Sodium fluoxururate**,  $\text{NaF}$ ,  $\text{UO}_2\text{F}_2$ . $+2\text{H}_2\text{O}$ . Not efflorescent. $+4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  and dil. acids. Sl. sol. in conc.  $\text{HCl} + \text{Aq}$ . Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Bolton, J. B. 1866. 212.) $4\text{NaF}$ ,  $\text{UO}_2\text{F}_2$ . (Ditte.)

Does not exist. (Smithells, Chem. Soc. 43. 125.)

**Fluoxovanadic acid.****Ammonium fluoxovanadate**,  $12\text{NH}_4\text{F}$ ,  $\text{V}_2\text{O}_5$ ,  $2\text{VOF}_3$ .Easily sol. in  $\text{H}_2\text{O}$ , and not attacked by cold conc.  $\text{H}_2\text{SO}_4$ . (Baker, Chem. Soc. 33. 388.)Formula is  $3\text{NH}_4\text{F}$ ,  $\text{VO}_2\text{F}$ . (Petersen, J. pr. (2) 40. 289.) $3\text{NH}_4\text{F}$ ,  $\text{VO}_2\text{F}$ . Sol. in  $\text{H}_2\text{O}$ . (Petersen, l. c.)Much less sol. in  $\text{H}_2\text{O}$  in presence of  $\text{NH}_4\text{F}$ . (Piccini and Giorgis, Gazz. ch. it. 27. 1. 65.) $+ \text{H}_2\text{O}$ . (Piccini and Giorgis, Gazz. ch. it. 1892. 23. 55.) $3\text{NH}_4\text{F}$ ,  $\text{VOF}_3$ . "Hypovanadate." Quite sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{MF} + \text{Aq}$ . Less sol. in alcohol than in  $\text{H}_2\text{O}$ . (Petersen, J. pr. (2) 40. 195.) $2\text{NH}_4\text{F}$ ,  $\text{VOF}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Petersen.) $+ \text{H}_2\text{O}$ . (Piccini and Giorgis.) $7\text{NH}_4\text{F}$ ,  $4\text{VOF}_3 + 5\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Petersen.) $3\text{NH}_4\text{F}$ ,  $2\text{VO}_2\text{F}$ . Sol. in  $\text{H}_2\text{O}$  without decomp. Sol. in conc.  $\text{HF} + \text{Aq}$ . (Piccini and Giorgis, Gazz. ch. it. 24. 1. 68.) $3\text{NH}_4\text{F}$ ,  $2\text{VOF}_3 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp. $\text{V}_2\text{O}_5$ ,  $2\text{NH}_4\text{F}$ . (Ditte, C. R. 106. 270.) $\text{V}_2\text{O}_5$ ,  $8\text{NH}_4\text{F} + 4\text{H}_2\text{O}$ . As above. $\text{V}_2\text{O}_5$ ,  $4\text{NH}_4\text{F} + 4\text{H}_2\text{O}$ . As above. $\text{H}_2\text{O}$ .**Ammonium hydrogen fluodioxy**  
 $7\text{NH}_4\text{F}$ ,  $\text{HF}$ ,  $4\text{VO}_2\text{F}$ .Very sol. in  $\text{H}_2\text{O}$ . (Petersen, J. p 284.)**Ammonium hydrogen trifluoxyva**  
 $3\text{HF}$ ,  $9\text{NH}_4\text{F}$ ,  $5\text{VOF}_3$ .Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{M}$ ! (Petersen, J. pr. (2) 40. 280.) $3\text{NH}_4\text{F}$ ,  $3\text{HF}$ ,  $2\text{VOF}_3$ . Sol. in (Baker, Chem. Soc. 33. 388.)Identical with  $3\text{HF}$ ,  $9\text{NH}_4\text{F}$ , 5 (Petersen.)**Barium fluoxovanadate**,  $\text{BaF}_2$ ,  $\text{VO}_2$ .

Ppt. (Ephraim, Z. anorg. 1903

**Cadmium fluoxovanadate**,  $\text{CdF}_2$ ,  $7\text{H}_2\text{O}$ .

"Hypovanadate." As the Co and Giorgis.)

Sol. in  $\text{HBr}$ . (Benedicks, Z. anorg. 1900, **22**, 403.)

**Gadolinium chloride,  $\text{GdCl}_3 + 6\text{H}_2\text{O}$ .**

Somewhat deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Benedicks.)

**Gadolinium platinum chloride.**

See *Chloroplatinate, gadolinium*.

**Gadolinium fluoride,  $\text{GdF}_3$ .**

Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in hot  $\text{HF}$ . (Popovici, B. 1908, **41**, 635.)

**Gadolinium hydroxide,  $\text{Gd}(\text{OH})_3$ .**

Ppt. (Benedicks, Z. anorg. 1900, **22**, 402.)

**Gadolinium oxide,  $\text{Gd}_2\text{O}_3$ .**

Sol. in acids. (de Boisbaudran, C. R. **111**, 304.)

Somewhat hygroscopic; easily sol. in acids. (Benedicks.)

**Gallium, Ga.**

Not decomp. by  $\text{H}_2\text{O}$ ; easily sol. in cold  $\text{HCl} + \text{Aq}$ . Slowly sol. in warm dil.  $\text{HNO}_3 + \text{Aq}$ . Not attacked by conc.  $\text{HNO}_3$  free from

$\text{N}_2\text{O}_5$ , below  $40-50^\circ$ , and only slowly presence of  $\text{N}_2\text{O}_5$ . (Dupré, C. R. **88**, 72)  
Easily sol. in cold or warm  $\text{KOH} +$  (de Boisbaudran, A. ch. (5) **10**, 100.)

**Gallium bromide,  $\text{GaBr}_3$ .**

Deliquescent, and sol. in  $\text{H}_2\text{O}$ .

**Gallium dichloride,  $\text{GaCl}_3$ .**

Deliquescent, and decomp. by  $\text{H}_2\text{O}$ . (son and Petersen, C. R. **107**, 527.)

**Gallium chloride,  $\text{GaCl}_3$ .**

Deliquescent, and very sol. in little  $\text{H}_2\text{O}$ . Decomp. by much  $\text{H}_2\text{O}$ , with formative basic salt, which is slowly sol. in dil.  $\text{H}_2\text{O}$ .

**Gallium hydroxide.**

Sol. in acids; sol. in  $\text{KOH}$  or  $\text{NaOH}$  less easily in  $\text{NH}_4\text{OH} + \text{Aq}$ , even in presence of ammonium salts.

**Gallium iodide,  $\text{GaI}_3$ .**

Deliquescent, and sol. in  $\text{H}_2\text{O}$ . (de Boisbaudran and Jungfleisch, C. R. **86**, 578.)

**Gallium suboxide,  $\text{Ga}_2\text{O}_3$  (?).**

Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Dupré.)

Sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

**Gallium oxide,  $\text{Ga}_2\text{O}_3$ .**

Sol. in acids.

**Germanium, Ge.**

Insol. in  $\text{HCl} + \text{Aq}$ . Easily sol. in regia. Decomp. by  $\text{HNO}_3 + \text{Aq}$  to conc.  $\text{H}_2\text{SO}_4$ , decomp. to sulphate. In boiling  $\text{KOH} + \text{Aq}$ . (Winkler, J. pr. (C) **177**; **36**, 177.)

**Germanium tetrabromide,  $\text{GeBr}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Winkler.)

**Germanium dichloride,  $\text{GeCl}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Winkler.)

**Germanium tetrachloride,  $\text{GeCl}_4$ .**

Sinks in  $\text{H}_2\text{O}$ , and is gradually decomposed thereby. (Winkler, J. pr. **34**, 177.)

Insol. in and not attacked by hot  $\text{H}_2\text{SO}_4$ . (Friedrich, W. A. B. **102**, 2b.)

**Germanium chloroform,  $\text{GeHCl}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ . (Winkler.)

**Germanium tetrafluoride,  $\text{GeF}_4$ .**

Deliquescent, and sol. in  $\text{H}_2\text{O}$ .  $+ 3\text{H}_2\text{O}$ . Deliquescent. Melts in crystal  $\text{H}_2\text{O}$  when warmed. (Winkler.)

ium potassium fluoride.  
luogermanate, potassium.

ium hydride,  $\text{GeH}_4$ .

l. in hot  $\text{HCl}$ . Sol. in  $\text{NaOCl} + \text{Aq}$ .  
n, Z. anorg. 1902, 30. 327.)

ium tetraiodide,  $\text{GeI}_4$ .

rescent, and sol. in  $\text{H}_2\text{O}$  with decomp.  
.)

um monoxide,  $\text{GeO}$ .

ppreciably sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ .  
ol. in  $\text{HCl} + \text{Aq}$ . Insol. in alkalis.  
, J. pr. (2) 34. 177.)

hat sol. in  $\text{H}_2\text{O}$ ; insol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ ,  
n hot and conc. (van Bemmelen, R.  
15.)

um dioxide,  $\text{GeO}_2$ .

ry difficultly sol. in  $\text{H}_2\text{O}$ .

247.1 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ ; in 93.3 pts.  
(Winkler.)

sol. in alkali carbonates or hydrates  
sol. in acids.

um oxychloride,  $\text{GeOCl}_2$ .

in  $\text{H}_2\text{O}$ ; sol. in acids. (Winkler, J.  
177.)

um monosulphide,  $\text{GeS}$ .

402.9 pts.  $\text{H}_2\text{O}$ . Sol. in conc. hot  
Sol. in  $\text{KOH} + \text{Aq}$ . Sol. in  
+  $\text{Aq}$  when precipitated. Insol. in  
+  $\text{Aq}$  if crystalline. Also exists in a  
state. (Winkler.)

um disulphide,  $\text{GeS}_2$ .

221.9 pts.  $\text{H}_2\text{O}$ . Easily sol. in  
 $\text{q}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in acids.  
o in a colloidal state. (Winkler.)

ous and extensive researches have  
e on the action of  $\text{H}_2\text{O}$  and various  
on glass. The older work has a cer-  
rical interest, but only a brief state-  
ome of the more important results  
iven here. For a very thorough  
f the work before the year 1861,  
Dictionary, p. 555, should be con-

s is more or less attacked by  $\text{H}_2\text{O}$ ,  
easily the greater the amount of  
sent, the finer it is powdered, and  
the temperature.

hat of a flask, is decomposed to a consid-  
y several days' boiling with  $\text{H}_2\text{O}$ , a portion  
alkali being dissolved, but when powdered  
ed with distilled  $\text{H}_2\text{O}$  in a mortar, the  $\text{H}_2\text{O}$   
and exhibits no alkalinity. (Scheele.)  
lembles is partially dissolved by long boil-  
) (Lavoisier.)

cts potash or soda from glass together with

a portion of the silica, the decomposition taking place  
the more easily in proportion as the glass is richer in  
alkalis, more minutely divided, or the temperature of  
the water higher. (Blaschhof, Kastn. Arch. 1. 443.)

Powdered crown glass and some varieties of window  
glass render cold  $\text{H}_2\text{O}$  alkaline when in contact there-  
with. (Dumas.)

100 pts. finely divided flint glass lose 7 pts. potash  
when boiled one week with  $\text{H}_2\text{O}$ . (Griffiths, Q. J. Sci.  
20. 258.)

Retorts of ordinary or flint glass are partially dis-  
solved by  $\text{H}_2\text{O}$  when it is evaporated therein. (Chev-  
reuil, 1811.)

Finely powdered plate-glass (Faraday, Pogg. 18. 569),  
and Thuringian potash glass (Ludwig, Arch. Pharm. 91.  
47) reddens moistened turmeric paper.

The alkaline reaction disappears by continued wash-  
ing, but reappears when the glass is freshly rubbed.  
(Griffiths.)

Cold  $\text{H}_2\text{O}$  takes up  $\text{SiO}_2$  as well as alkali from glass  
powder. (Fuchs.)

Powdered lead glass gives up appreciable amounts of  
 $\text{PbO}$  to weakly acidified  $\text{H}_2\text{O}$ . (Pelouze.)

When powdered white glass, containing 12.4%  $\text{Na}_2\text{O}$ ,  
15.5%  $\text{CaO}$ , and 72.1%  $\text{SiO}_2$ , is treated repeatedly with  
 $\text{H}_2\text{O}$ , more than 3% of the glass is dissolved, and the  
undissolved part gives up 1.5%  $\text{CaO}$  to  $\text{HCl} + \text{Aq}$  with  
effervescence. A glass containing more alkali, i. e.  
16.3%  $\text{Na}_2\text{O}$ , 6.4%  $\text{CaO}$ , 77.3%  $\text{SiO}_2$ , lost with the same  
treatment 18.2%, and the residue gave up 2%  $\text{CaO}$  to  
 $\text{HCl} + \text{Aq}$ . (Pelouze, C. R. 43. 117.)

In the above case the fineness of the glass has an  
influence as well as its composition. When the same  
sample of glass was boiled 1 hour with  $\text{H}_2\text{O}$ , amounts  
were dissolved in the proportion 1 : 4 : 28, according as  
the glass was in form of a coarse, fine, or very fine  
powder. Glass of the composition of the above samples,  
as given by Pelouze, lost 10 and 32% respectively.

If powdered glass is boiled with  $\text{H}_2\text{O}$  and  $\text{CO}_2$  con-  
ducted into the solution, it is absorbed; if boiled with  
 $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$  is dissolved. (Pelouze.)

Glass tubes are converted into a white crystalline  
mass by heating with  $\text{H}_2\text{O}$  several months to  $75-150^\circ$ ;  
lead glass and Bohemian glass most easily, English  
crown glass least. A little  $\text{H}_2\text{O}$  attacks glass more  
than much  $\text{H}_2\text{O}$ .

The action of  $\text{H}_2\text{O}$  is greatly increased by  
finely pulverising the glass.

$\text{H}_2\text{O}$  dissolved 10% of a glass containing  
12%  $\text{Na}_2\text{O}$ , 15.5%  $\text{CaO}$ , and 72.5%  $\text{SiO}_2$ , and  
32% of another glass containing 16.3%  $\text{Na}_2\text{O}$ ,  
6.4%  $\text{CaO}$ , and 77.3%  $\text{SiO}_2$ . (Vogel, B. A.  
Munchen, 1867. 437.)

Action of  $\text{H}_2\text{O}$  on a glass containing 74%  
 $\text{SiO}_2$ , 8.6%  $\text{CaO}$ , 14%  $\text{Na}_2\text{O}$ , 0.6%  $\text{K}_2\text{O}$ , with  
traces of  $\text{Al}_2\text{O}_3$ ,  $\text{Fe}_2\text{O}_3$ ,  $\text{MnO}$ , and  $\text{MgO}$ .

By boiling with  $\text{H}_2\text{O}$  a decrease of 3.9 mg.  
was observed for the first hour, which soon  
became constant at 2.2 mg. per hour. The  
action was then proportional to the time, and  
also to the surface in contact with the liquid,  
but independent of the amount of liquid  
evaporating.

The action decreases rapidly with the tem-  
perature, so that at  $90-100^\circ$  only  $\frac{1}{4}$  as much  
glass is dissolved as by boiling  $\text{H}_2\text{O}$ . (Emmer-  
ling, A. 150. 257.)

When steam condenses in tubes of Na glass,  
they are so strongly attacked that the  $\text{H}_2\text{O}$   
has an alkaline reaction, but tubes of hard or  
Bohemian K glass are not so strongly at-  
tacked. (Tollens, B. 9. 1540.)

The effect of  $\text{H}_2\text{O}$  is so great as to impart a  
distinctly alkaline reaction to water condensa-  
ing in a tube of ordinary glass. By condensing  
water in long tubes of various kinds of glass  
the following results were obtained.

I. Easily fusible Thuringian glass. Surface exposed = 324 sq. cm.

After 2 hours, 62.0 mg. KOH were dissolved.

After 3 hours more, 36.0 mg. KOH were dissolved.

After 3 hours more, 33.2 mg. KOH were dissolved.

After 3 hours more, 20.8 mg. KOH were dissolved.

After 3 hours more, 20.8 mg. KOH were dissolved.

Or, in 14 hours, 172.8 mg. KOH were dissolved.

II. Less easily fusible Thuringian glass. Surface exposed = 499 sq. cm.

After 3 hours, 19.2 mg. KOH were dissolved.

After 3 hours more, 15.2 mg. KOH were dissolved.

After 3 hours more, 12.4 mg. KOH were dissolved.

After 3 hours more, 11.2 mg. KOH were dissolved.

Or, after 12 hours, 58.0 mg. KOH were dissolved.

III. Combustion tubing of very difficultly fusible Bohemian glass. Surface exposed = 1130 sq. cm.

After 3 hours 4.16 mg. KOH were dissolved.

After 3 hours more 4.16 mg. KOH were dissolved.

After 3 hours more 4.16 mg. KOH were dissolved.

After 3 hours more 4.16 mg. KOH were dissolved.

Or, after 12 hours, 16.64 mg. KOH were dissolved.

IV. Easily fusible Bohemian glass. Surface exposed = 1394 sq. cm.

After 3 hours, 7.88 mg. KOH were dissolved.

After 3 hours more, 8.56 mg. KOH were dissolved.

After 3 hours more, 1.97 mg. KOH were dissolved.

Or, after 9 hours, 24.32 mg. KOH were dissolved. (Kreusler and Hensold, B. 17. 34.)

From the above the following table has been calculated.

50 ccm. H<sub>2</sub>O dissolves from a surface of 1000 sq. m. in 1 hour:—

96.0 mg. from easily fusible Thuringian glass.

12.8 mg. from less fusible Thuringian glass.

1.2 mg. from combustion tube of Bohemian glass.

2.0 mg. from harder tube of Bohemian glass.

(Kreusler and Hensold, B. 17. 34.)

100 ccm. H<sub>2</sub>O dissolves so much glass from a flask every 2 seconds when in contact therewith that 0.1 ccm.  $\frac{1}{2}$  normal oxalic acid is neutralised thereby. (Bohlig, Z. anal. 23. 518.)

Action of H<sub>2</sub>O on various kinds of Na glass  
1 g. of finely powdered glass was boiled 10-15 minutes in a silver dish with 100 ccm. H<sub>2</sub>O, and the per cent of Na<sub>2</sub>O (or K<sub>2</sub>O) in the solution was determined.

	% Na <sub>2</sub> O (K <sub>2</sub> O)
Orthoclase feldspar	0.17
Glass of a Bohemian combustion tube	0.84
“ flask (German manuf.)	0.80
“ champagne bottle	1.7
Natrolite	1.25
Glass of a wine bottle (Hungarian)	2.55
Glass which was attacked by H <sub>2</sub> O under pressure	3.1
Lead glass	3.8
Glass that broke easily	4.8
Glass tubing that became rough when fused	6.1
Glass tubing that became opaque by fusing	14.35
Solid water glass	26.97

(Wartha, Z. anal. 24. 220.)

The relative ease by which various kinds of glass are attacked by H<sub>2</sub>O is shown by the following table. The glass was powdered and heated on a water bath with exclusion of atmospheric CO<sub>2</sub>.

Potassium water glass	291
Sodium water glass	196
Yellow glass rich in alkali	34
Thuringian glass	19
Ditto from Tittel and Co.	8
Window glass	8
Lead glass from Jena	6
Bohemian glass from Kavalier	2.4
Lead crystal glass	1.4
Thermometer glass, 16IV, from Jena	1.0
Zinc glass, 362, from Jena	0.8
Lead glass, 434, from Jena	0.6
Lead glass, 483, from Jena	0.2
Heaviest lead silicate, from Jena.	0.0

(Mylius, C. C. 1888. 1313.)

Solubility of various kinds of glass in H<sub>2</sub>O.

The amounts dissolved from various kinds of glass by heating 5 hours with H<sub>2</sub>O were as follows.

Yellow glass rich in alkali (13% K <sub>2</sub> O, 15% Na <sub>2</sub> O)	249 mg.
Poor Thuringian glass (6.6% K <sub>2</sub> O, 16.5% Na <sub>2</sub> O)	91.4 "
Glass from Tittel and Co. (7.1% K <sub>2</sub> O, 14.3% Na <sub>2</sub> O)	30.4 "
Bottle glass from Schilling (4.2% K <sub>2</sub> O, 11.9% Na <sub>2</sub> O)	13.0 "
Bohemian glass from Kavalier (13.3% K <sub>2</sub> O, 11.4% Na <sub>2</sub> O)	10.1 "
Rhenish window glass (13.5% Na <sub>2</sub> O)	8.4 "
Lead crystal glass from Ehrenfeld (12.1% K <sub>2</sub> O)	8.5 "
Green bottle glass (1.3% K <sub>2</sub> O, 9.5% Na <sub>2</sub> O)	6.5 "

**Stability of various kinds of glass in H<sub>2</sub>O—**  
*Continued.*

thermometer glass 16III from Jena (14.0% Na <sub>2</sub> O, 7% ZnO)	6.4 mg.
and glass, No. 483, from Jena (47% PbO, 7.3% K <sub>2</sub> O).	3.3 "
and silicate	0.6 "

(Mylius and Forster, B. 22. 1100.)

By calculation from the electrical conductivity of the solutions formed, various data were obtained by Kohlrausch (B. 24. 3565), which showed that different varieties of glass were attacked in very different degree by cold H<sub>2</sub>O, and, moreover, the amount dissolved was proportionately much greater during the first few minutes of treatment with H<sub>2</sub>O than afterwards, and, furthermore, the rate of decrease was much faster for good glass than poor. Increase of temperature increased the rate of solubility to a very great degree, the increase for 1° C. being about 17%. In 7 hours at 80° half as much was dissolved as in 6 months at 18°. Extensive tables are given. (Kohlrausch, B. 24. 3651.) See also Kohlrausch (W. Ann. 44. 77).

A very extensive research on the action of H<sub>2</sub>O on glass, with a historical review of the work previously done on the subject, has been published by Mylius and Forster. (Z. anal. 1. 241.) The general results may be summed up as follows:—

1. The solution of glass in H<sub>2</sub>O is caused by decomposition, by which free alkali is freed.
2. The silicic acid of the glass is brought to solution by a secondary reaction of the free alkali in the solution.
3. The constituents of the solution change according to the conditions of the digestion.
4. The amount of alkali going into solution on a given surface under certain conditions is a measure for the resistance of a glass under these conditions.
5. The rate of attack of glass surfaces by cold H<sub>2</sub>O decreases rapidly with the length of time of digestion, and finally approaches a constant value.
6. The solubility increases very rapidly with increase of temperature.
7. The ratio of the solubility of several kinds of glass is dependent on the temperature.
8. From glasses which show the same ease of attack unequal amounts of substance may be dissolved.
9. The solubility of a glass is influenced by the condition of the surface from "weathering" by prolonged exposure to the CO<sub>2</sub> and H<sub>2</sub>O of the air.
10. The poorer a glass is the less will its solubility decrease by prolonged treatment with H<sub>2</sub>O.
11. A good glass is essentially less easily

attacked after having been previously treated with H<sub>2</sub>O.

12. After treatment with H<sub>2</sub>O, glass surfaces have the property of fixing alkali from the solutions formed, and giving it up again by a subsequent treatment with H<sub>2</sub>O.

13. Potassium glass is much more sol. than sodium glass (contrary to previous researches), but the difference decreases as the glass becomes richer in CaO.

14. In glass flasks which are to be only slightly attacked by cold or hot H<sub>2</sub>O, the CaO, alkalis, and SiO<sub>2</sub> must stand in a fixed relation to each other.

15. Of the more common varieties of glass, lead flint glass is least sol. in H<sub>2</sub>O, but its surface is corroded, and it is easily decomposed by acids.

(Mylius and Forster, Z. anal. 31. 241.)

Bottle glass containing much Al<sub>2</sub>O<sub>3</sub> is easily attacked by acids.

From powdered flint glass, boiling HCl + Aq extracts K, but no Pb. (Griffiths.)

Bottles of flint glass with (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq became so fragile that on shaking pieces of glass were detached. (Griffiths.)

All glass is decomp. by HF.

Conc. H<sub>3</sub>PO<sub>4</sub> also attacks all glass.

Glass containing small amounts of SiO<sub>2</sub> are attacked by H<sub>2</sub>SO<sub>4</sub>; poorer glass by boiling HCl, HNO<sub>3</sub>, and aqua regia. (Berzelius.)

Conc. HNO<sub>3</sub> does not act on flint glass at 145–150°. (Sorby, C. R. 50. 990.)

Glass of ordinary chemical apparatus gives up traces of metals to HCl and HNO<sub>3</sub> + Aq, but hard Bohemian glass consisting of 75% SiO<sub>2</sub>, 15% K<sub>2</sub>O, 10% CaO, resists the action of warm conc. acids; also an easily fusible Na K glass with 77 % SiO<sub>2</sub>, 7.7% K<sub>2</sub>O, 5% Na<sub>2</sub>O, 10.3% CaO, is not easily attacked. (Stas.)

KOH, and NaOH + Aq dissolve SiO<sub>2</sub> from glass the more easily the hotter and the more conc. the solutions are. (Müller.) NH<sub>4</sub>OH, and (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq attack many kinds of glass, especially flint glass. CaO<sub>2</sub>H<sub>2</sub> attacks glass appreciably at 45° and lower; still more strongly on boiling. (Lamy, A. ch. (5) 14. 155.)

The action of various solvents on the glass mentioned on page 359 in Emmerling's experiments is as follows:

The action of HCl + Aq containing 0.2 to 3% HCl is practically null, but is increased either by dilution or concentration. A very small quantity (0.02%) HCl added to H<sub>2</sub>O almost wholly prevents its action on glass. With HCl + Aq (11% HCl) a decrease of 4.2 mg. was noticed in the first hour, and only 3–4 mg. afterwards. The same is the case for HNO<sub>3</sub> + Aq in still greater degree, 0.008% HNO<sub>3</sub> sufficing to nearly counteract the solvent action of H<sub>2</sub>O.

H<sub>2</sub>SO<sub>4</sub> + Aq has about double the solvent effect possessed by H<sub>2</sub>O.

Oxalic and acetic acids both diminish the solvent action of H<sub>2</sub>O.

The addition of even traces (0.04%) of

$\text{Na}_2\text{CO}_3$  increases the solvent action, and this is further rapidly increased by an increase in the amount of  $\text{Na}_2\text{CO}_3$ .  $\text{Na}_2\text{CO}_3 + \text{Aq}$  containing 1%  $\text{Na}_2\text{CO}_3$  dissolves about 10 times as much as pure  $\text{H}_2\text{O}$ , i. e. about 35 mg. per hour.

The above is also the case with  $\text{KOH} + \text{Aq}$ , but in even greater degree.  $\text{KOH} + \text{Aq}$  containing 0.025%  $\text{KOH}$  dissolved three times as much as pure  $\text{H}_2\text{O}$ .

$(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  has about the same action as  $\text{H}_2\text{O}$ .

With  $\text{NH}_4\text{OH} + \text{Aq}$  (9%  $\text{NH}_3$ ) 7 mg. decrease for the first hour, and 3 mg. afterwards was noticed. The concentration of the  $\text{NH}_4\text{OH} + \text{Aq}$  was apparently without effect.

The addition of  $\text{NH}_4\text{Cl}$  decreases the solvent action of  $\text{H}_2\text{O}$  proportionately to the amount added, but with new flasks large amounts are dissolved.

With  $\text{NH}_4\text{Cl} + \text{Aq}$  (7%  $\text{NH}_4\text{Cl}$ ) 4.2 mg. were dissolved in the first hour, and the amount dissolved gradually decreased to null after 24 hours on account of the liberation of  $\text{HCl}$  by the decomp. of  $\text{NH}_4\text{Cl}$ .

$\text{NaCl}$ ,  $\text{KCl}$ ,  $\text{KNO}_3$ , and  $\text{Na}_2\text{SO}_4$  show a similar behaviour to that of  $\text{NH}_4\text{Cl}$ .

$\text{Na}_2\text{HPO}_4 + \text{Aq}$  containing 0.4%  $\text{Na}_2\text{HPO}_4$

has six times the solvent action of pure  $\text{H}_2\text{O}$  but the action is not increased by further concentration.

In general, those salts the acids of which form insol. Ca salts, as  $\text{Na}_2\text{CO}_3$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{Na}_2\text{HPO}_4$ ,  $(\text{NH}_4)_2\text{C}_2\text{O}_4$ , increase the solvent action of  $\text{H}_2\text{O}$ , and this effect is greater the more concentrated the solution.  $\text{HCl}$ ,  $\text{KNO}_3$ ,  $\text{NH}_4\text{Cl}$ , and  $\text{CaCl}_2$  decrease the effect, and the stronger the solution the less is the action.

All Na glass with approximately the above composition has the same power of resistance against  $\text{H}_2\text{O}$ ; Bohemian K glass shows a greater resistance, especially against acids (Emmerling, A. 150, 257.)

Action of various reagents on hard Bohemian glass. 100 ccm. substance dissolved in glass in 6 days at  $100^\circ$ .

$\text{H}_2\text{O}$	10.0
$\text{H}_2\text{S} + \text{Aq}$	8.7
Dil. $(\text{NH}_4)_2\text{S} + \text{Aq}$	52.5
Conc. $(\text{NH}_4)_2\text{S} + \text{Aq}$	47.2
Conc. $\text{NH}_4\text{OH} + \text{Aq}$	42.5
Dil. $\text{NH}_4\text{OH} + \text{Aq}$	7.7
$\text{NH}_4\text{SH} + \text{Aq}$	51.2

(Cowper, Chem. Soc. 41, 254.)

Action of various solutions on glass of different composition. (The figures denote decrease in weight in mg. of a 100 ccm. flask.)

	Time	1	2	3	4	5	6	7	8	9	10
$\text{H}_2\text{O}$	5 hrs.	62	31	29	17	13	9	7	7	5	4

$\text{Na}_2\text{HPO}_4 + \text{Aq}$ (12% $\text{Na}_2\text{HPO}_4$ )	3 "	..	..	81	64	40	35	34	30	15	12
$\text{Na}_2\text{CO}_3 + \text{Aq}$ (2% $\text{Na}_2\text{CO}_3$ )	3 "	283	160	130	124	50	45	42	42	26	25

Composition of above varieties of glass.

	1	2	3	4	5	6	7	8	9	10
$\text{SiO}_2$	76.22	74.09	76.39	68.56	74.48	74.69	66.75	74.12	77.07	74.40
$\text{Al}_2\text{O}_3$	..	0.40	0.50	1.85	0.50	0.45	1.31	0.50	0.30	0.70
$\text{CaO}$	4.27	5.85	5.50	7.60	7.15	7.85	13.37	8.55	8.10	8.85
$\text{K}_2\text{O}$	..	7.32	4.94	2.24	6.64	8.64	05.50	4.86	3.75	4.40
$\text{Na}_2\text{O}$	19.51	12.34	12.67	19.75	11.23	8.37	3.07	11.97	10.78	11.65

It is seen that glass which resists the attack of  $\text{H}_2\text{O}$  also resists acids and alkalis, and that the relative resistance of all varieties to any of the solutions is the same. Therefore the action of  $\text{H}_2\text{O}$  may be accepted as a criterion for judging of the resistance of a glass to all solvents. Glass No. 10, in which the molecular ratio of  $\text{SiO}_2 : \text{CaO} : \text{K}_2\text{O} : (\text{Na}_2\text{O})$  is 8 : 1 : 1.5, is recommended as best suited for chemical uses. (Weber and Sauer, B. 25, 70.)

Mylius and Förster (B. 25, 97) recommend a glass in which the molecular ratio of  $\text{SiO}_2 : \text{CaO} : \text{K}_2\text{O} : (\text{Na}_2\text{O})$  is 7.2 : 1 : 1.1 as the best suited for chemical apparatus.

In an exhaustive research on the action of aqueous solutions on glass, which cannot be given in full on account of its great length, the following conclusions are reached:—

1. Solutions of caustic alkalis act on glass much more strongly than  $\text{H}_2\text{O}$ , dissolving all the constituents of the glass—that is, the glass as such. Very dilute solutions form an exception.

2. Of the caustic alkalis,  $\text{NaOH} + \text{Aq}$  has the strongest action, then come  $\text{KOH}$ ,  $\text{NH}_4\text{OH}$ , and  $\text{BaO}_2\text{H}_2 + \text{Aq}$  in the order named.

3. Increase in temperature increases the

length of the attack of alkalis very considerably.

2. At high temperatures, the ease with which glass is attacked increases at first rapidly with the concentration of the alkali, afterwards more slowly.

3. At ordinary temperatures very concentrated alkali solutions have less action on glass than dil. solutions.

4. Solutions of pure alkalis, if not too concentrated, act less on glass than when contaminated with small amounts of  $\text{SiO}_2$ .

5. Alkali carbonates + Aq. attack glass much more than  $\text{H}_2\text{O}$ , even when they are very dilute. The action corresponds less to that of the caustic alkalis than to that of other salts. With equivalent concentration,  $\text{Na}_2\text{CO}_3$  + Aq. has a stronger action than  $\text{K}_2\text{CO}_3$  + Aq.

6. The action of salt solutions on glass is a compound one, depending both on the concentration and the kind of salt dissolved, and is made up of the action of the  $\text{H}_2\text{O}$  and the salt in solution.

7. Each kind of attack is differently influenced by the composition of the glass.

8. Solutions of those salts, the acids of which form insol. Ca salts, have a stronger action than  $\text{H}_2\text{O}$ , and the action increases with the concentration.

9. Solutions of those salts, the acids of which form sol. Ca salts, have less action than  $\text{H}_2\text{O}$ , and the action decreases with the concentration. (Fürster, B. 25. 2494.)

Data on this subject published since the first edition of this work have not been considered.

### Glucinic acid.

**Potassium glucinate**,  $\text{K}_2\text{GluO}_2$ .

Very deliquescent. Sol. in  $\text{H}_2\text{O}$  and acids. (Krüss and Moraht, B. 23. 733.)

**Glucinum (Beryllium)**,  $\text{Gl}$ .

Not attacked by hot or cold  $\text{H}_2\text{O}$ . Sol. in cold dil.  $\text{HNO}_3$  + Aq. (Wöhler, Pogg. 13. 577.)

Sol. only in boiling conc.  $\text{HNO}_3$  + Aq. (Debray, A. ch. (3) 44. 5.)

Sol. in dil.  $\text{HCl}$  + Aq. dil. and conc.  $\text{H}_2\text{SO}_4$  + Aq. and  $\text{KOH}$  + Aq. but insol. in  $\text{NH}_4\text{OH}$  + Aq. (Wöhler, Debray.)

Sol. in hot  $\text{HCl}$ , hot conc.  $\text{HNO}_3$ , and hot conc.  $\text{H}_2\text{SO}_4$ . (Lebeau, A. ch. 1899, (7), 16. 474.)

**Glucinium azotimide**,  $\text{GluN}_3$ .

Decomp. by hot  $\text{H}_2\text{O}$ . (Curtius, J. pr. 1898, (2), 58. 292.)

**Glucinium borocarbide**,  $3\text{Glu}_2\text{C}_2\text{B}_2$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in mineral acids especially  $\text{HNO}_3$ . (Lebeau, A. ch. 1899, (7) 16. 481.)

$\text{C}_4\text{B}_2\text{Gl}_4$ . Stable in air.

Easily sol. in mineral acids, conc. and dil. (Lebeau, C. R. 1898, 126. 1349.)

**Glucinum bromide**,  $\text{GluBr}_2$ .

Sol. in  $\text{H}_2\text{O}$  with evolution of much heat. (Wöhler.)

Sol. in abs. alcohol. (Lebeau, A. ch. 1899, (7) 16. 484.)

**Glucinum carbide**,  $\text{Glu}_2\text{C}$ .

Decomp. by  $\text{H}_2\text{O}$ . Slowly attacked by cold or hot conc.  $\text{HCl}$  and  $\text{HNO}_3$ . Gradually but completely sol. in dil. acids. (Lebeau, A. ch. 1899, (7), 16. 476.)

$\text{GluC}_2$ . Not easily decomp. by strong acids. Easily sol. with decomp. in dil. acids. (Lebeau, C. R. 1895, 121. 497.)

**Glucinum chloride**,  $\text{GluCl}_2$ .

*Anhydrous*. Fumes and deliquesces in air. Sol. in  $\text{H}_2\text{O}$  with hissing and evolution of much heat. Easily sol. in alcohol.

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 828.)

Sol. in alcohol and ether. Sl. sol. in  $\text{C}_2\text{H}_5$ ,  $\text{CHCl}_3$ ,  $\text{Cl}_4$  and  $\text{CS}_2$ . (Lebeau, A. ch. 1899, (7) 16. 493.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

+  $4\text{H}_2\text{O}$ . Very hygroscopic.

Easily sol. in  $\text{H}_2\text{O}$  and in alcohol. (Mieleitner, Z. anorg. 1913, 80. 73.)

**Glucinum chloride ammonia**,  $\text{GluCl}_2 \cdot 4\text{NH}_3$ .

(Mieleitner, Z. anorg. 1913, 80. 73.)

**Glucinum chloride iodine trichloride**,  $2\text{ICl}_3 \cdot \text{GluCl}_2 + 8\text{H}_2\text{O}$ .

Hygroscopic. (Weinland, Z. anorg. 1902, 30. 140.)

**Glucinum ferric chloride**,  $\text{GluCl}_2 \cdot \text{FeCl}_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Neumann, A. 244. 329.)

**Glucinum mercuric chloride**,  $\text{GluCl}_2 \cdot 3\text{HgCl}_2 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Atterberg, B. 6. 1288.)

**Glucinum thallic chloride**,  $3\text{GluCl}_2 \cdot 2\text{TlCl}_3$ .

Cryst. from  $\text{HCl}$  solution. (Neumann, A. 244. 348.)

**Glucinum stannic chloride**.

See Chlorostannate, glucinum.

**Glucinum fluoride, basic, 2GfO, 5GfF<sub>3</sub>.**

Sol. in H<sub>2</sub>O. (Lebeau, A. ch. 1899, (7) 16. 484.)

**Glucinum fluoride, GfF<sub>3</sub>.**

Deliquescent. Sol. in H<sub>2</sub>O. Insol. in anhydrous HF. Sol. in alcohol. (Lebeau, C. R. 1898, 126. 1421.)

Sol. in H<sub>2</sub>O in all proportions. Somewhat sol. in abs. alcohol. Easily sol. in 90% alcohol, also in a mixture of alcohol and ether. Insol. in anhydrous HF. (Lebeau, A. ch. 1899, (7) 16. 484.)

**Glucinum potassium fluoride, GfF<sub>3</sub>, KF.**

Sl. sol. in H<sub>2</sub>O. (Awdejew.) Much more sol. in hot than cold H<sub>2</sub>O. (Berzelius.)

GfF<sub>3</sub>, 2KF. Sol. in about 50 pts. H<sub>2</sub>O at 20°, and 19 pts. boiling H<sub>2</sub>O. (Marignac.)

**Glucinum sodium fluoride, GfF<sub>3</sub>, 2NaF.**

Sol. in 34 pts. H<sub>2</sub>O at 100°, and 68 pts. at 18°. (Marignac.)

**Glucinum hydroxide, GfO<sub>2</sub>H<sub>2</sub>.**

Easily sol. in acids. Sol. in H<sub>2</sub>SO<sub>4</sub>+Aq. Sol. in CO<sub>2</sub>+Aq; 100 ccm. sat. CO<sub>2</sub>+Aq dissolve 0.0185 g. GfO. (Sestini, Gazz. ch. it. 20. 313.)

Also sol. in KOH, NaOH, NH<sub>4</sub>OH, or (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq, especially when freshly precipitated; also in Na<sub>2</sub>CO<sub>3</sub>, or K<sub>2</sub>CO<sub>3</sub>+Aq. (Debray.)

Insol. in NH<sub>4</sub>OH+Aq containing NH<sub>4</sub>Cl+Aq.

Very sl. sol. in Li<sub>2</sub>CO<sub>3</sub>+Aq. (Gmelin.)

Sol. in H<sub>2</sub>SO<sub>4</sub>+Aq. (Berthier.)

Sol. in BaO<sub>2</sub>H<sub>2</sub>+Ao, from which it is pptd. by NH<sub>4</sub> salts, but not by boiling. Sol. in boiling NH<sub>4</sub>Cl+Aq when freshly pptd.

Sol. in NH<sub>4</sub>F+Aq. (Helmholtz, Z. anorg. 3. 130.)

**Solubility of GfO<sub>2</sub>H<sub>2</sub> in NaOH+Aq.**

G. Na in 20 ccm.	G. Gl. in 20 ccm.
0.3358	0.0358
0.6717	0.0882
0.8725	0.1175
1.7346	0.2347

(Rubenbauer, Z. anorg. 1902, 30. 334.)

When glucinum hydroxide is treated with alkali, more dissolves at first than corresponds with the true equilibrium under the prevailing conditions, for such solutions spontaneously deposit more or less glucinum hydroxide according to the concentration. (Rubenbauer.)

**Solubility of freshly pptd. GfO<sub>2</sub>H<sub>2</sub> in NaOH Aq at room temperature.**

millimols Na per l.	G. GfO dissolved in l
649	3.6
540	2.92
540	2.53
483	1.69
383	1.64
388	1.53
386	1.45
390	1.24

In the first two cases the values were attained by adding to GfCl<sub>3</sub>+Aq at 0° ice NH<sub>4</sub>OH and treating the ppt. with NaO Aq. In the remaining cases by dissolving basic GfCO<sub>3</sub> in HCl and pouring into NaO Aq. (Haber, Z. anorg. 1904, 33. 386.)

**Solubility of GfO<sub>2</sub>H<sub>2</sub>, which is one week in NaOH+Aq at t°.**

NaOH	t°	G. GfO in
1½-N	20-23°	0.06
1-N	20-23°	0.17

(Haber.)

#### Glucinum iodide, $\text{GlI}_2$ .

Sol. in  $\text{H}_2\text{O}$  with evolution of much heat. (Wöhler.)

Decomp. in moist air and by  $\text{H}_2\text{O}$ .

Sol. in abs. alcohol. Insol. in most neutral organic solvents, as benzene, toluene, etc. (Lebeau, C. R. 1898, 126. 1273.)

Insol. in  $\text{C}_6\text{H}_6$ ,  $\text{C}_7\text{H}_8$ , and oil of turpentine. Easily sol. in  $\text{CS}_2$ . Sol. in anhydrous alcohols without evolution of heat. (Lebeau, A. ch. 1899, (7) 16. 490.)

#### Glucinum iodide ammonia, $2\text{GlI}_2, 3\text{NH}_3$ .

Ppt. (Lebeau, A. ch. 1899, (7) 16. 492.)

#### Glucinum oxide, $\text{GlO}$ .

*Crystalline.* Insol. in acids except conc.  $\text{H}_2\text{SO}_4$ . (Ebelmen, C. R. 32. 710.)

*Amorphous.* Absolutely insol. in  $\text{H}_2\text{O}$ . The higher the temp. to which the substance has been heated the more insol. is it in acids. Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Insol. in conc.  $\text{NH}_4\text{Cl} + \text{Aq}$ , or KOH, and  $\text{NaOH} + \text{Aq}$ . (Rose.)

When obtained by ignition of  $\text{GlSO}_4$ , it is very slowly but completely sol. in HCl, and  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Rose.)

Insol. in hydracids. Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Lebeau, C. R. 1896, 123. 819.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. ch. J. 1898, 20. 828.)

#### Glucinum peroxide basic, $2\text{GlO}_2, 3\text{GlO}$ .

+  $8\frac{1}{2}\text{H}_2\text{O}$ . (Komarovski, Chem. Soc. 1913, 104 (2) 707.)

#### Glucinum oxybromides.

Sol. in  $\text{H}_2\text{O}$  if three or less equivalents of base are present to one of acid; insol. if more of the base is present. (Ordway, Am. J. Sci. (2) 26. 207.)

#### Glucinum oxychloride, $\text{Gl}_2\text{OCl}_2 = \text{GlO}, \text{GlCl}_2$ .

Insol. in  $\text{H}_2\text{O}$ .

$3\text{GlCl}_2, 2\text{GlO} + 2\text{H}_2\text{O}$  (?). Sol. in  $\text{H}_2\text{O}$ . (Atterberg.)

$\text{GlCl}_2, 3\text{GlO} + 3\text{H}_2\text{O}$  (?). Sol. in  $\text{H}_2\text{O}$ , but solution soon becomes cloudy and deposits a fine ppt. By boiling the solution it is decomp. into above salt, and  $\text{GlCl}_2, 12\text{GlO}_2\text{H}_2 + 10\text{H}_2\text{O}$ , which is insol. in  $\text{H}_2\text{O}$ ; decomp. into  $\text{GlO}_2\text{H}_2$  by washing. Sol. in acids. (Atterberg.)

#### Glucinum oxyfluoride, $5\text{GlF}_2, 2\text{GlO}$ .

Readily sol. in  $\text{H}_2\text{O}$ . (Lebeau, C. R. 1898, 126. 1419.)

#### Glucinum phosphide.

Decomp. by  $\text{H}_2\text{O}$ . (Wöhler.)

#### Glucinum selenide.

Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Glucinum sulphide.**

Slowly sol. without decomp. in  $H_2O$ , but easily decomp. by acids. (Wöhler.)

**Gold, Au.**

Gold which has been pptd. from  $AuCl_3 + Aq$  by  $FeSO_4$  is sl. sol. in  $HCl$ . (Awerkiew, Z. anorg. 1909, 61. 10.)

Not attacked by  $H_2O$ . Insol. in  $HNO_3$  or  $HCl + Aq$ . Easily sol. in aqua regia or any mixture evolving  $Cl$  or  $Br$ . Sol. in selenic acid, or antimoniac acid +  $Aq$ ; less easily in arsenic acid +  $Aq$ . Sol. in mixtures of  $HCl$  and nitrates, or  $HNO_3$  and chlorides; also in  $(NaCl + KNO_3 + K_2Al_2(SO_4)_4) + Aq$  (?). Insol. in  $H_2SO_4$ , except in presence of  $KMnO_4$ ,  $HNO_3$ , or  $HIO_3$ . Sol. in a solution of  $I$  in ether in direct sunlight.

Sol. in solutions of ferric, and cupric salts.

Sol. in  $HCl + Aq$  containing  $H_2CrO_4$ ,  $H_2MnO_4$ ,  $H_2SeO_4$ ,  $H_3AsO_4$ , or  $FeCl_3$ . (Wurtz.)

Attacked by fuming  $HCl$  (sp. gr. 1.178) at ord. temp. in direct light, especially in the presence of a trace of  $MnCl_2$ , but not attacked in the dark even in the presence of this salt. (Berthelot, C. R. 1904, 138. 1298.)

100 ccm. hot conc.  $HCl$  dissolve 0.008 g. yellow  $Au$  powder in 4 hours. (Hanriot and Raoult, C. R. 1912, 155. 1086.)

Upon boiling 25 and 50 cc.  $HCl + Aq$  (sp. gr. 1.178), dil. to 125 cc. with 250 mg. sheet  $Au$   $\frac{1}{4}$  in. square, 0.009 in. thick, weighing 250 mg. for several hours, there was no loss of weight of  $Au$ . (McCaughy, J. Am. Chem. Soc. 1909, 31. 1263.)

From 5 g. finely divided ordinary yellow gold; 100 cc.  $HNO_3$  of 22° B. dissolve 0.002 g. in 2 hrs.

100 cc.  $HNO_3$  of 32° B. dissolve 0.0119 g. in 2 hrs.

100 cc.  $HNO_3$  of 36° B. dissolve 0.028 g. in 2 hrs.

100 cc.  $HNO_3$  monohydrate dissolve 0.076 g. in 2 hrs. (Hanriot and Raoult, C. R. 1912, 155. 1085.)

From 5 g. brown gold:

100 ccm.  $HNO_3$  of 22° Baume dissolve 0.006 g. in 2 hrs.

100 ccm.  $HNO_3$  of 32° Baume dissolve 0.039 g. in 2 hrs.

100 ccm.  $HNO_3$  of 36° Baume dissolve 0.078 g. in 2 hrs.

100 ccm.  $HNO_3$  monohydrate dissolve 1.540 g. in 2 hrs. (Hanriot and Raoult.)

Sl. sol. in boiling  $HNO_3$  (sp. gr. = 1.42). The solution deposits  $Au$  by standing several days. (Dewey, J. Am. Chem. Soc. 1910, 32. 320.)

Best composition of aqua regia for dissolving  $Au$  is 200 cc.  $HCl$  (sp. gr. 1.1946) 45 cc.  $HNO_3$  (sp. gr. 1.4) and 245 cc.  $H_2O$ . 1 pt.  $Au$  is sol. in 4.3 pts. of such a mixture. (Priwoznik, C. C. 1910, II. 1743.)

Sol. in 1 pt.  $HNO_3 + 4$  pts.  $HCl$  as representing the most economical mixture. (Priwoznik, Chem. Soc. 1911, 100. (2), 484.)

Easily sol. in nitrosulphonic acid from sulphuric acid manufacture, when mixed with equal parts conc.  $HCl + Aq$ . (Borntrager, Rep. anal. Ch. 1887. 741.)

Sol. in hot conc.  $H_2SO_4$  in the presence of  $MnO_2$ ,  $Mn_2O_3$ ,  $Mn_3O_4$ ,  $PbO_2$ ,  $Pb_2O_3$ ,  $Pb_3O_4$ ,  $CrO_3$ ,  $CrO_4$  and  $Ni_2O_3$ . Solution also takes place slowly in the cold. Sol. in hot  $H_2SO_4 + KMnO_4$ . Slowly sol. in cold, more rapidly in hot  $H_2SO_4 + HNO_3$ . (Lenher, J. Am. Chem. Soc. 1904, 26. 550.)

Sol. in a hot solution of crystalline telluric acid in  $H_2SO_4$  or  $H_3PO_4$ .

Sol. in hot  $H_3PO_4$  in the presence of  $MnO_2$ ,  $Mn_2O_3$ ,  $Mn_3O_4$ , the higher oxides of lead,  $CrO_3$ , chromium tetroxide and nickelous oxide. Solution takes place more slowly in the cold. Sol. in hot  $H_3PO_4$  in the presence of  $KMnO_4$ . Slowly sol. in a cold, more rapidly sol. in a hot mixture of  $H_3PO_4$  and  $HNO_3$ .

Sol. in hot arsenic acid in the presence of  $MnO_2$ ,  $Mn_2O_3$  and  $Mn_3O_4$ . (Lenher, J. Am. Chem. Soc. 1904, 26. 550.)

Gold leaf is not attacked by cold conc.  $H_2SeO_4$ , when completely free from halogens, but is dissolved by conc.  $H_2SeO_4$  at 300°. (Lenher, J. Am. Chem. Soc. 1902, 24. 354.)

Solubility of thin sheet  $Au$  in  $HCl$  solution of iron alum.

Colloidal gold is sol. in dil. alkali B. 1902, 35. 2236.)

Rather quickly sol. in 10-15% I in KI+Aq.

Very slowly sol. in 5% solution of Aq.

Scarcely sol. in more dil. solution KI+Aq.

Easily sol. in 10% NH<sub>4</sub>I+I. 1 sol. in 5% NH<sub>4</sub>I+I. (Döring.)Sol. in cold Na<sub>2</sub>S+Aq when Na<sub>2</sub>S in proportion of 843 pts. Na<sub>2</sub>S to (Becker, Sill. Am. J. (3) 33. 199.)

In finely divided state Au is sol. KCN+Aq. Not attacked by boil +Aq. (Vogel, J. pr. 20. 366.)

## Solubility of Au (disks) in KCN-

(A) oxygen passed through sol.  
(B) agitated with oxygen.

% KCN	g. Au dissolved in 24 h	
	A	
1	0.00845	0
5	0.01355	0
20	0.0115	0
50	0.00505	0

(Maclaurin, Chem. Soc. 1893, 61)

The solution of Au in KCN+essentially hastened by sunlight. (Proc. Chem. Soc. 1904, 20. 199.)

sence of oxygen is necessary for n of Au in KCN+Aq. The rate of Au in KCN+Aq varies with h of the solution, being small for tions, increasing as the solution ore dilute, reaching a maximum at N, and then again diminishing. Chem. Soc. 1895, 67. 211.)

of Au (strips) in dil. KCN+Aq.

, Elektrochem. Z. 1901, 7. 205.)

divided metallic gold is completely ord. temp. in solutions of potassium cyanide. Solution takes place even when the potassium ferro-solution is boiling. (Beutel, Z. 2. 78. 158.)

RbCl<sub>2</sub>I+Aq. (Erdmann, Arch. 4. 232, 30.)

acked by FeCl<sub>2</sub>+Aq when air is ut very energetically attacked in f HCl and oxygen. (McIlhiney, 1896, (4), 2. 293.)

acked by several days heating at 150°. At 200° there is sl. 10 days. (North, J. Am. Chem. 34. 892.)

n excess dissolves pulverulent Au hours heating at 160°. (North, 4), 9. 647.)

Cl<sub>2</sub>. (Baudrimont, A. ch. (4) 2.

ol. in acid solutions of thiocar-pially in presence of suitable compounds. (Moir, Chem. Soc 145.)

ide, AuAs.

leohol slowly extracts As; HNO<sub>3</sub>+ ts into Au and H<sub>2</sub>AsO<sub>4</sub>. Sol. in

Not attacked by cold, decomp. H<sub>2</sub>SO<sub>4</sub>. (Tivoli, C. C. 1887. 778; 610.)

thide, Au<sub>2</sub>Bi.

ldonite. Sol. in aqua regia.

mide, AuBr.

H<sub>2</sub>O. (Thomsen, C. C. 1860.

Insol. in H<sub>2</sub>O, HNO<sub>3</sub>, H<sub>2</sub>SO<sub>4</sub>.

Sol. in NH<sub>4</sub>OH+Aq. with decomp.

Decomp. by HBr and KBr+Aq. Sol. in KCN+Aq without decomp. Slowly decomp. by alcohol, ether, acetone and moist CHCl<sub>3</sub>. (Lengfeld, Am. Ch. J. 1901, 26. 325.)

Gold (auroauric) bromide, Au<sub>2</sub>Br<sub>4</sub>.

Not deliquescent. H<sub>2</sub>O or ether dissolves out AuBr<sub>3</sub>. (Thomsen, C. C. 1860. 606.)

Does not exist. (Krüss, B. 30. 640.)

Existence is maintained by Petersen. (J. pr. (2) 46. 334.)

Auric bromide, AuBr<sub>3</sub>.

Not deliquescent. Slowly sol. in H<sub>2</sub>O, more readily in ether.

Can be recryst. from AsBr<sub>3</sub>, SbBr<sub>3</sub>, TiBr<sub>3</sub>, or SnBr<sub>3</sub>. (Lindet, Bull. Soc. 1886, (2) 45. 149.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Aurous phosphorus tribromide, AuBr, PBr<sub>3</sub>.

Decomp. by H<sub>2</sub>O. (Lindet, J. pr. (2) 32. 494.)

Auric phosphorus pentabromide, AuBr<sub>3</sub>, PBr<sub>5</sub>.

Decomp. by H<sub>2</sub>O. (Lindet.)

Aurous bromide phosphorus trichloride, AuBr, PCl<sub>3</sub>.

Decomp. by H<sub>2</sub>O. (Lindet.)

Auric praseodymium bromide, PrBr<sub>3</sub>, AuBr<sub>3</sub>+10H<sub>2</sub>O.

Very sol. in H<sub>2</sub>O; sol. in conc HBr. (Von Schule, Z. anorg. 1898, 18. 355.)

Aurous bromide ammonia, AuBr, 2NH<sub>3</sub>.

Decomp. by H<sub>2</sub>O and dil. HCl.

Sol. in aqua regia. (Meyer, C. R. 1906, 143. 281.)

Gold carbide, Au<sub>2</sub>C<sub>2</sub>.

Ppt. Decomp. by boiling H<sub>2</sub>O without evolution of C<sub>2</sub>H<sub>2</sub>. Decomp. by HCl with evolution of C<sub>2</sub>H<sub>2</sub>. (Mathews, J. Am. Chem. Soc. 1900, 22. 110.)

Aurous chloride, AuCl.

Insol. in H<sub>2</sub>O, but gradually decomp. thereby into Au and AuCl<sub>3</sub>. (Thomsen, J. pr. (2) 13. 341.)

Insol. in H<sub>2</sub>O and dil. HNO<sub>3</sub>.

Decomp. by conc. HNO<sub>3</sub> to Au and AuCl<sub>3</sub>.

Sol. in HCl, HBr and in sol. of alkali chloride and bromides, with decomp.

Decomp. by alcohol, ether and acetone. (Lengfeld, Am. Ch. J. 1901, 26. 324.)

**Gold (auric) chloride, AuCl<sub>3</sub>.**

Deliquescent. Very sol. in H<sub>2</sub>O. Sol. in 1.47 pts. H<sub>2</sub>O. (Abl.) Sol. in conc. HCl, or HNO<sub>3</sub>+Aq without decomp.

AsCl<sub>3</sub> dissolves about 22% at 160° and 2.5% at 15°. Solubility in SbCl<sub>3</sub> is about the same. Much less sol. in SnCl<sub>4</sub> or TiCl<sub>4</sub>, SnCl<sub>4</sub> dissolving 4% at 160° and hardly a trace at 0°. Very sl. sol. in hot or cold SiCl<sub>4</sub>. (Lindet, Bull. Soc. (2) 45. 149.)

Sl. sol. in liquid NH<sub>3</sub>. (Franklin and Kraus, Am. Ch. J. 1898, 20. 829.)

Sol. in alcohol with gradual decomp. (Gmelin.) Sol. in ether with decomp. in light or on long standing. Ether extracts AuCl<sub>3</sub> from AuCl<sub>3</sub>+Aq (Proust). Sol. in volatile oils with gradual decomp.

Sol. in ether. (Mylius, Z. anorg. 1911, 70. 207.)

Very sol. in ether. (Willstätter, B. 1903, 36. 1830.)

Completely sol. in ether. (Frank, C. C. 1913, II. 541.)

Insol. in or decomp. by alcohol, ether, CS<sub>2</sub>, C<sub>6</sub>H<sub>6</sub>, oil of turpentine, pentane, hexane, CHCl<sub>3</sub>, CCl<sub>4</sub>, ethyl nitrate, nitrobenzol, ethyl acetate, ethyl propionate and pyridine. (Lenher, J. Am. Chem. Soc. 1903, 25. 1138.)

+2H<sub>2</sub>O. (Thomsen.)

**Auroauric chloride, Au<sub>2</sub>Cl<sub>4</sub>.**

Decomp. by H<sub>2</sub>O into AuCl<sub>3</sub> and AuCl. (Thomsen, J. pr. (2) 13. 357.)

Does not exist. (Krüss and Schmidt, J. pr. (2) 38. 77.)

Existence is maintained by Christensen. (J. pr. (2) 46. 328.)

**Auric chloride with MCl.**

See Chloraurate, M.

**Auric nitrosyl chloride, AuCl<sub>3</sub>, NOCl.**

Sol. in H<sub>2</sub>O with decomp. (Sudborough, Chem. Soc. 59. 662.)

**Aurous phosphorus trichloride, AuCl, PCl<sub>3</sub>.**

Decomp. by H<sub>2</sub>O. Sol. in about 100 pts. PCl<sub>3</sub> at 15°, and about 8 pts. at 120°. Sol. in AsCl<sub>3</sub>. (Lindet, C. R. 101. 1492.)

**Auric phosphorus pentachloride, AuCl<sub>3</sub>, PCl<sub>5</sub>.**

Decomp. by H<sub>2</sub>O. Nearly insol. in PCl<sub>5</sub>. Sol. in AsCl<sub>3</sub>. (Lindet.)

**Aurous potassium chloride, AuCl, KCl.**

Decomp. by H<sub>2</sub>O or HCl+Aq into KCl, KAuCl<sub>4</sub>, and Au. (Berzelius.)

**Auric potassium chloride.**

See Chloraurate, potassium.

**Auric selenium chloride, AuCl<sub>3</sub>, SeCl<sub>4</sub>.**

Decomp. by H<sub>2</sub>O. Sol. in AsCl<sub>3</sub>. (Lindet, C. R. 101. 1492.)

**Gold (aurous) sodium chloride, AuCl**

Insol. in H<sub>2</sub>O. Sol. in alcohol. (J. Pharm. 3. 447.)

Formula is 4NaCl, AuCl, AuCl<sub>3</sub>. (sen.)

**Auric sodium chloride.**

See Chloraurate, sodium.

**Auric sulphur chloride, AuCl<sub>3</sub>, SCl<sub>2</sub>.**

Easily decomp. by H<sub>2</sub>O. (Lindet, 101. 1492.)

**Aurous chloride ammonia, AuCl, NH<sub>3</sub>.**

Ppt. Unstable. (Diemer, J. Am. Soc. 1913, 35. 554.)

AuCl, 3NH<sub>3</sub>. Decomp. by H<sub>2</sub>O : acids.

Sol. in aqua regia. Sol. in conc with decomp. (Meyer, C. R. 1906, 1. AuCl, 12NH<sub>3</sub>. (Meyer.)

**Auric fluoride, AuF<sub>3</sub>.**

Very unstable.

Is incapable of existence not only enceph of H<sub>2</sub>O but under the ordinary cimet with in the laboratory and in (Lenher, J. Am. Chem. Soc. 1903, 2

**Auric hydroxide, AuO<sub>2</sub>H<sub>3</sub>.**

Nearly insol. in most acids. Easi very conc. HNO<sub>3</sub>+Aq (Proust), fro all AuO<sub>2</sub>H<sub>3</sub> is separated by dilution. Extremely sl. sol. in fuming HNO<sub>3</sub> dil. HNO<sub>3</sub>+Aq when pure (Krüss, 281). Not attacked by H<sub>3</sub>PO<sub>4</sub>. Insol. in HCl, or HBr+Aq (Fremy).

Sol. in H<sub>2</sub>SeO<sub>4</sub>+Aq. (Mitscherlich) Sl. sol. in conc. H<sub>2</sub>SO<sub>4</sub>; somewhat HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>+Aq. (Rose.)

Nearly insol. in cold KOH+Aq, solved on boiling. Insol. in NH<sub>4</sub>OH alkali carbonates + Aq (Rose). S boiling CaCl<sub>2</sub>+Aq, NaCl+Aq, Br (Pelletier). Sol. in NH<sub>4</sub>CN, and K (Himly).

Sl. sol. in KCl, or NaCl+Aq. (F Sol. in K<sub>2</sub>Fe(CN)<sub>6</sub>+Aq at ord rapidly on boiling. (Beutel, Z. anorg 78. 154.)

AuO, OH = Au<sub>2</sub>O<sub>3</sub>, H<sub>2</sub>O. (Krüss.)

**Auroauric hydroxide, Au<sub>2</sub>O<sub>3</sub>(OH)<sub>3</sub>·+2H<sub>2</sub>O.**

Insol. in boiling conc. KOH+Aq. by conc. HCl or HNO<sub>3</sub>+Aq into Au<sub>2</sub>O<sub>3</sub>, which dissolves. (Schüttlin 217. 336.)

**Aurous iodide, AuI.**

Insol. in cold, decomp. by hot H<sub>2</sub>O HCl, or HNO<sub>3</sub>+Aq, with separatio Decomp. immediately by ether, mo by alcohol.

ly sol. in KI, FeI<sub>2</sub>, or HI+Aq.  
(Sl. attacked by NH<sub>4</sub>OH, or  
aq at 35° (Fordos). Instantly de-  
com. by KOH+Aq.)

(auric) iodide, AuI<sub>3</sub>.

in H<sub>2</sub>O. Sol. in alkali iodides, and  
Decomp. on air or by alkalies.  
(Phil. Mag. J. 9. 266.)

Ammonia, AuI, NH<sub>3</sub>.

precip. by H<sub>2</sub>O or dil. acids. (Meyer,  
J. 143. 281.)

aqua regia.

NH<sub>3</sub>. (Meyer.)

Oxide, Au<sub>2</sub>O.

insol. in H<sub>2</sub>O or alcohol. Decomp. by boil-  
ing in HCl+Aq into Au and AuCl<sub>3</sub>.  
HNO<sub>3</sub>, or HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>+Aq do not  
Sol. in cold aqua regia. Sol. in HI  
sol. in KOH, or NaOH+Aq when  
recipitated. (Berzelius.)

According to Krüss (A. 237. 281) all hitherto  
Au<sub>2</sub>O is impure. Pure Au<sub>2</sub>O is sol.  
in H<sub>2</sub>O when freshly precipitated, from  
Au<sub>2</sub>S when freshly precipitated by boiling.  
Sol. in HCl, or HBr+Aq. Sol. in  
NaOH+Aq when freshly precipi-  
tated. Not affected by any other acid or  
(Krüss.)

Colloidal solution of Au<sub>2</sub>O in H<sub>2</sub>O is  
a colloidal suspension. (Vanino, B.  
462.)

Hydroxide, Au<sub>2</sub>O<sub>3</sub>.

Auric hydroxide.

Oxide, Au<sub>2</sub>O<sub>3</sub>.

cold HCl+Aq; forms insol. comp.  
(Prat, C. R. 70. 842.)

Obtained pure by Krüss (A. 237. 296.)

Sulphide, Au<sub>2</sub>S<sub>3</sub>.

Attacked by HCl+Aq. HNO<sub>3</sub> forms  
and leaves undissolved Au. (Schröt-  
ter, 1849. 247.)

Decomp. on air or with H<sub>2</sub>O. (Ca-  
ssius, ch. it. 15. 40.)

Readily attacked by aqua regia  
aq. (Granger, C. R. 1897, 124. 498.)

Amalgam (mixture of Au and SnO<sub>2</sub>).

insol. in H<sub>2</sub>O. Easily sol. in aqua regia.  
Aq dissolves all Sn and leaves Au.  
HNO<sub>3</sub>+Aq dissolves a little Sn.  
in boiling KOH+Aq (Berzelius).  
Aq extracts excess of SnO<sub>2</sub>, and the  
remains sol. in H<sub>2</sub>O, from which it is  
precipitated by NH<sub>4</sub>Cl+Aq. (Figuier, A. ch. (3)

When still moist, in NH<sub>4</sub>OH+Aq, but  
it has been dried.

Obtained in colloidal state in aqueous solu-  
tion containing 0.58 g. Au. and 5.41 g. SnO<sub>2</sub>,

in a litre. This solution may be concentrated  
without coagulation. The solution is coag-  
ulated by dil. HNO<sub>3</sub>, or HCl+Aq, more easily  
by dil. H<sub>2</sub>SO<sub>4</sub>+Aq; also by KCl, HgCl<sub>2</sub>,  
FeSO<sub>4</sub>+Aq, and many other salts. Not  
coagulated by alcohol, but easily when ether  
is added to the alcohol. (Schneider, Z. anorg.  
5. 80.)

Gold (auric) selenide, Au<sub>2</sub>Se<sub>3</sub>.

HNO<sub>3</sub>+Aq dissolves out Se. Sol. in aqua  
regia or alkali sulphides + Aq. (Uelsmann,  
J. B. 1860. 90.)

Aurous sulphide, Au<sub>2</sub>S.

Easily sol. in H<sub>2</sub>O when freshly prepared,  
but precipitated from aqueous solution by  
HCl, KCl, or NaCl+Aq. When dried is  
insol. in H<sub>2</sub>O.

Insol. in boiling dil. or conc. HCl, or H<sub>2</sub>SO<sub>4</sub>,  
+Aq. Easily sol. in aqua regia, HCl+Aq  
with KClO<sub>3</sub>, etc. Slowly sol. in alkali mono-  
sulphides+Aq. Easily sol. in polysulphides  
+Aq.

Insol. in KOH+Aq. Sol. in KCN+Aq.  
(Krüss, B. 20. 2369.)

Known also in colloidal state in aqueous  
solution containing 1.74 g. Au<sub>2</sub>S per l.  
(Schneider, B. 24. 2241.)

Auric sulphide, Au<sub>2</sub>S<sub>3</sub>.

Insol. in H<sub>2</sub>O and acids except aqua regia;  
sol. in alkali sulphides, or KOH+Aq. (Ber-  
zelius.)

Does not exist (Krüss, B. 22. 2369), but  
has since been made by Antony and Luchesi  
(Gazz. ch. it. 20. 601). Insol. in HCl, or dil.  
HNO<sub>3</sub>+Aq. Decomp. by conc. HNO<sub>3</sub>, KOH,  
or NaOH+Aq with separation of Au. Sl.  
decomp. by NH<sub>4</sub>OH+Aq. Easily sol. in  
KCN+Aq; decomp. by (NH<sub>4</sub>)<sub>2</sub>S+Aq. Sol.  
in cold Na<sub>2</sub>S or K<sub>2</sub>S+Aq; decomp. on boil-  
ing. (Antony and Luchesi, Gazz. ch. it. 21,  
2. 209.)

Insol. in ether. (Hofmann, B. 1904, 37.  
246.)

Auroauric sulphide, Au<sub>2</sub>S<sub>2</sub>.

Insol. in H<sub>2</sub>O or acids except aqua regia.  
Sl. sol. in cold alkali monosulphides + Aq,  
but easily sol. on warming. Sol. in cold  
polysulphides + Aq, but less in ammonium  
polysulphide than the other alkali poly-  
sulphides.

Not attacked by cold, but easily sol. in hot  
KOH+Aq. Sol. in KCN+Aq. (Hoffmann  
and Krüss, B. 20. 2704.)

Obtained also in colloidal state in aqueous  
solution containing 0.8 g. per l. (Schneider.)

Insol. in Na<sub>2</sub>S+Aq. sat. with S. (Ditte,  
A. ch. 1907, (8) 12. 273.)

Aurous potassium sulphide, Au<sub>2</sub>S, 3K<sub>2</sub>S.

(Antony and Lucchesi, Gazz. ch. it. 1896,  
26. (2) 350.)

$\text{Au}_2\text{S}$ ,  $4\text{K}_2\text{S}+12\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 1895, 120. 322.)

**Gold silver sulphide**,  $\text{Ag}_3\text{AuS}_2$ .

Ppt. (Lucchesi, Gazz. ch. it. 1896, 26. 350-53.)

**Aurous sodium sulphide**,  $\text{NaAuS}+4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Yorke, Chem. Soc. Q. J. 1. 236.)

$+5\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 1895, 120. 321.)

$\text{Na}_3\text{AuS}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Lucchesi, Gazz. ch. it. 1896, 26. 350-53.)

$\text{Au}_2\text{S}$ ,  $2\text{Na}_2\text{S}+20\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 1895, 120. 321.)

**Gold telluride**.

Ppt. (Berzelius, Pogg. 8. 178.)

**Gold silver telluride**,  $\text{Au}_2\text{Te}_3$ ,  $\text{Ag}_2\text{Te}$ .

Min. *Sylvanite*. Sol. in  $\text{HNO}_3$  + Aq with separation of Au, in aqua regia with separation of AgCl.

$3\text{Ag}_2\text{Te}$ ,  $\text{Au}_2\text{Te}$ . Min. *Petzite*.

**Hartshorn, salts of.**

See Carbonate carbamate, ammonium hydrogen.

**Helium, He.**

Coefficient of absorption for  $\text{H}_2\text{O}$  at  $18.2^\circ = 0.0073$ . (Ramsay, Z. phys. Ch. 1906, 55. 347.)

(Antropoff, Roy. Soc. Proc. 1910, 83. A 480.)

Completely insol. in benzene and in alk. (Ramsay, Chem. Soc. 1895, 67. 684.)

**Hexamine chromium compounds.**

See Luteochromium compounds.

**Hexamine cobaltic compounds,**

$\text{Co}_2(\text{NH}_3)_6\text{X}_4$ .

See Dichrocoaltic compounds.

$\text{Co}(\text{NH}_3)_6\text{X}_3$ .

See Luteocobaltic compounds.

**Hexamine iridium chloride**,  $\text{Ir}_3(\text{NH}_3)_4$

See Iridotriamine chloride.

**Hexathionic acid**,  $\text{H}_2\text{S}_6\text{O}_4$ .

Known only in aqueous solution, & decomposes rapidly, even in presence of sulphuric acid. (Debus, A. 244. 76.)

**Potassium hexathionate**,  $\text{K}_2\text{S}_6\text{O}_4$ .

Sol. in  $\text{H}_2\text{O}$ , with rapid decomp. obtained in pure state. (Debus, A. 244.

**Holmium, Ho.**

**Holmium oxide**,  $\text{Ho}_2\text{O}_3$ .

(Cleve, C. R. 89. 478; 91. 328.)

Consists of at least two elements. (de Boisbaudran, C. R. 102. 1005.)

Consists of seven elements. (Krö Nilson.)

**Sesqui-hydraurylamine**,  $(\text{AuOH})_2\text{N}_2$ ,  $\text{Au}_2\text{N}_2+3\text{H}_2\text{O}$ .

Decomp. by boiling with  $\text{H}_2\text{O}$ . (R. A. 235. 341.)

**Hydrazidophosphoric acid.**

**Barium hydrazidophosphate,**

$\text{OP}(\text{N}_2\text{H}_2)_2\text{O}_2\text{Ba}$ .

(Ephraim, B. 1911, 44. 3420.)

**Lead hydrazidophosphate**,  $\text{OP}(\text{N}_2\text{H}_2)_2\text{O}$

Easily sol. in  $\text{HNO}_3$ . (Ephraim.)

**Potassium hydrazidophosphate,**

$\text{OP}(\text{N}_2\text{H}_2)_2(\text{OK})_2$ . (Ephraim.)

**Sodium hydrazidophosphate,**

$\text{OP}(\text{N}_2\text{H}_2)_2(\text{ONa})_2$ .

Can be cryst. from dil. alcohol. (Ephraim.)

**Hydrazine**,  $\text{N}_2\text{H}_4 = \text{NH}_2 - \text{NH}_2$ .

Very sol. in  $\text{H}_2\text{O}$ . (Curtius, B. 20.

Very hygroscopic; decomp. by  $\text{H}_2\text{O}$  ent for sulphur, KCl, KBr,  $\text{KNO}_3$ , Bruyn, R. t. c. 1894, 13. 433-40; Chem 1895, 68 (2) 347.)

Mixes in all proportions with al. sol. in organic solvents. (Lobry de Chem. Soc. 1897, 73 (2) 22.)

**amidosulphonate,**  
 $\text{HSO}_3, \text{NH}_2$ .

in  $\text{H}_2\text{O}$ . (Sabanejeff, Z. anorg. 2.)

**azoimide,**  $\text{N}_2\text{H}_4, \text{HN}_3$ .

cent. Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. and can be crystallised therefrom. 24. 2344.)

**borate,**  $(\text{N}_2\text{H}_4)_2(\text{B}_2\text{O}_3)_2$ .

$\text{H}_2\text{O}$ . (Dschawachow, C. C. 1902,

$\text{H}_2\text{B}_4\text{O}_7$ ). Sol. in  $\text{H}_2\text{O}$ . (Dschawachow, C. 1902, I. 1394.)

Sol. in  $\text{H}_2\text{O}$ . (Dschawachow, I. 1394.)

Ppt. (Dschawachow, C. C. 4.)

**cuprous bromide chloride,**

$\text{I}, \text{N}_2\text{H}_4, \text{Br}, 3\text{CuBr}$ .

i, Real Ac. Linc. 1906 (5) 15, II,

**mercuric bromide,**

$2(\text{N}_2\text{H}_4, \text{HBr}) + \text{H}_2\text{O}$ .

in  $\text{H}_2\text{O}$ , sol. in alcohol and acetone. cetic ether.

ethyl ether. (Ferratini, C. A. )

**zinc bromide,**  $2\text{N}_2\text{H}_4, \text{HBr}, \text{ZnBr}_2$

in  $\text{H}_2\text{O}$ ; sol. in alcohol and acetone. C. A. 1912. 1612.)

**carbonate.**

quescent, but only sl. sol. in  $\text{H}_2\text{O}$ . n alcohol. (Curtius and Jay, J. ) 39. 41.)

**zinc carbonate hydrazine,**

$\frac{1}{2}, \text{NH}_3, \text{NH}_2)_2, 2\text{N}_2\text{H}_4$ .

sl. in  $\text{H}_2\text{O}$ . (Ebler and Schott, J. ) 79, 72.)

**chlorate,**  $\text{N}_2\text{H}_4, \text{HClO}_3$ .

in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol. Insol.  $\text{CHCl}_3$  and benzol. (Salvadori, .. 1907, 37, (2) 32.)

**dichlorate,**  $\text{N}_2\text{H}_4, 2\text{HClO}_3$ .

comp. in aq. solution. (Turrentine, m. Soc. 1915, 37. 1123.)

**cupric chloride,**  $\text{N}_2\text{H}_4, \text{Cl}, \text{CuCl}_2 +$

by  $\text{H}_2\text{O}$ . (Ranfaldi, Real. Ac. (5) 15, II. 95.)

Decomp. by  $\text{H}_2\text{O}$ . (Ranfaldi.)

**Hydrazine mercuric chloride,**  $\text{N}_2\text{H}_4, \text{Cl}, \text{HgCl}_2$ .

(Hoffmann and Marburg, A. 1899, 305. 221.)

**Hydrazine dithionate,**  $\text{N}_2\text{H}_4, \text{H}_2\text{S}_2\text{O}_6$ .

Sol. in  $\text{H}_2\text{O}$ ; decomp. on standing in aq. solution. (Sabanejeff, Z. anorg. 1899, 20. 21.)  $2\text{N}_2\text{H}_4, \text{H}_2\text{S}_2\text{O}_6$ . Sol. in  $\text{H}_2\text{O}$ . (Sabanejeff.)

**Hydrazine fluosilicate,**  $\text{N}_2\text{H}_4, \text{H}_2\text{SiF}_6$ .

Easily sol. in  $\text{H}_2\text{O}$ .

Difficultly sol. in ethyl and methyl alcohol. (Ebler, J. pr. 1910, (2) 81. 552.)

**Hydrazine fluotitanate,**  $(\text{N}_2\text{H}_4)_2, \text{H}_2\text{TiF}_6 + 2\text{H}_2\text{O}$ .

Ppt. Sol. in  $\text{H}_2\text{O}$ . (Ebler, J. p r. 1910, (2) 81. 555.)

**Hydrazine monohydrobromide,**  $\text{N}_2\text{H}_4, \text{HBr}$ .

Very easily sol. in  $\text{H}_2\text{O}$  or hot alcohol. (Curtius and Schultz, J. pr. (2) 42. 537.)

**Hydrazine dihydrobromide,**  $\text{N}_2\text{H}_4, 2\text{HBr}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. in alcohol. (Curtius and Schulz, J. pr. (2) 42. 535.)

**Hydrazine monohydrochloride,**  $\text{N}_2\text{H}_4, \text{HCl}$ .

Extremely sol. in  $\text{H}_2\text{O}$ . Sl. sol. in boiling absolute alcohol. (Curtius and Jay, J. pr. (2) 39. 38.)

**Hydrazine dihydrochloride,**  $\text{N}_2\text{H}_4, 2\text{HCl}$ .

Easily sol. in cold  $\text{H}_2\text{O}$ ; sl. sol. in hot alcohol. (Curtius, l. c.)

Sol. in 2.67 pts.  $\text{H}_2\text{O}$  at  $23^\circ$ . Sp. gr. of sat. solution at  $20^\circ/4^\circ = 1.4226$ . (Schiff, Z. phys. Ch. 1896, 21. 292.)

Sp. gr. of aqueous solution at  $20^\circ$ .

% salt	Sp. gr.
25	1.1183
20	1.0923
15	1.0675
10	1.0436
5	1.0206

(Schiff, Z. phys. Ch. 1896, 21. 292.)

Nearly insol. in hot absolute alcohol. (Curtius and Jay, J. pr. (2) 39. 37.)

**Hydrazine dihydrofluoride,**  $\text{N}_2\text{H}_4, 2\text{HF}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Nearly insol. in alcohol. (Curtius and Schulz, J. pr. (2) 42. 533.)

**Hydrazine monohydroiodide,**  $\text{N}_2\text{H}_4, \text{HI}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Curtius and Schulz.)

**Hydrazine dihydroiodide,**  $\text{N}_2\text{H}_4, 2\text{HI}$ .

Very deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . Sl. sol. in alcohol. (Curtius and Schulz, J. pr. (2) 42. 536.)

**Trihydrazine dihydroiodide,  $3\text{N}_2\text{H}_4, 2\text{HI}$ .**

Easily sol. in  $\text{H}_2\text{O}$  and alcohol. (Curtius and Schulz, J. pr. (2) 42. 540.)

**Hydrazine hydroxide,  $\text{N}_2\text{H}_4, \text{H}_2\text{O}$ .**

Miscible with  $\text{H}_2\text{O}$  or alcohol, but not with ether, chloroform, or benzene. (Curtius and Schulz, J. pr. (2) 42. 530.)

**Hydrazine hypophosphate,  $\text{N}_2\text{H}_4, \text{H}_4\text{P}_2\text{O}_6$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . 1.5 pts. dissolve in 100 pts.  $\text{H}_2\text{O}$ . (Sabanejeff, Z. anorg. 1898, 17. 490.)

**Hydrazine hypophosphate ammonia,  $\text{N}_2\text{H}_4, \text{H}_4\text{P}_2\text{O}_6, \text{NH}_3$ .**

Sol. in  $\text{H}_2\text{O}$ . (Sabanejeff, Z. anorg. 1899, 20. 23.)

**Hydrazine mercuric iodide,  $2\text{N}_2\text{H}_4\text{I}, \text{HgI}_2 + \text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ , alcohol, acetone, acetic ether.

Insol. in ether. Excess of  $\text{H}_2\text{O}$  decomp. (Ferratini, Gazz. ch. it. 1912, 42. (1), 172.)

**Hydrazine zinc iodide,  $\text{ZnI}_2, 2\text{N}_2\text{H}_4, \text{HI} + \frac{1}{2}\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ ; sol. in alcohol and acetone. (Ferratini, C. A. 1912. 1612.)

**Hydrazine nitrate,  $\text{N}_2\text{H}_4, \text{HNO}_3$ .**

Very sol. in  $\text{H}_2\text{O}$ ; sl. sol. in abs. alcohol. (Sabanejeff, Z. anorg. 1899, 20. 24.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	g. $\text{N}_2\text{H}_4, \text{HNO}_3$ per 100 g.	
	Sat. solution	$\text{H}_2\text{O}$
10	63.63	174.9
15	68.47	217.2
20	72.70	266.3
25	76.61	327.5
30	80.09	402.2
35	83.06	490.3
40	85.86	607.2
45	88.06	737.6
50	91.18	1034.
55	93.58	1458.
60	95.51	2127.

(Sommer, Z. anorg. 1914, 86. 85.)

$\text{N}_2\text{H}_4, 2\text{HNO}_3$ . Very unstable.

Sol. in  $\text{H}_2\text{O}$  but solution cannot be concentrated beyond 30% without decomp.

Decomp. by abs. alcohol.

Very sol. in hydrazine hydroxide + Aq. (Sabanejeff, Z. anorg. 1898, 20. 25.)

**Hydrazine nitrite,  $\text{N}_2\text{H}_4, \text{HNO}_2$ .**

Very sol. in  $\text{H}_2\text{O}$ . IPttd. by ether from solution in alcohol; insol. in ether.

Very hygroscopic. (Sommer, Z. anorg. 1913, 83. 125.)

**Hydrazine perchlorate,  $\text{N}_2\text{H}_4, \text{HClO}_4$ .**

Sol. in 1.48 pts.  $\text{H}_2\text{O}$  at  $30^\circ$  and alcohol; crystallizes from boiling alcohol. (Salvadori, Ch. Z. 31. 680.)

+  $3\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	% $\text{N}_2\text{H}_4, \text{HClO}_4$	Sp.
18	41.72	1.2
35	66.9	1.3

(Carlson, Dissert. 1910.)

**Hydrazine diperchlorate,  $\text{N}_2\text{H}_4, 2\text{H}_2\text{O}$ .**

Efflorescent.

Deliquescent.

102 pts. salt sol. in 100 pts.  $\text{H}_2\text{O}$  at  $2.8$  pts. salt sol. in 100 pts. alc  
1.0 pt. " " " 100 " eth

(Turrentine, J. Am. Chem. Soc. 1123.)

**Hydrazine phosphate,  $\text{N}_2\text{H}_4, \text{H}_2\text{PO}_4$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Sabanejeff, 1898, 17. 488.)

$\text{N}_2\text{H}_4, 2\text{H}_2\text{PO}_4$ . Sol. in  $\text{H}_2\text{O}$ . (Sa

**Hydrazine phosphite,  $\text{N}_2\text{H}_4, \text{H}_2\text{PO}_3$ .**

Sol. in  $\text{H}_2\text{O}$ . (Sabanejeff, Z. anorg. 468.)

**Hydrazine hydrogen phosphite,**

$\text{N}_2\text{H}_4, 2\text{H}_3\text{PO}_3$ .

Less sol. in  $\text{H}_2\text{O}$  than the nor (Sabanejeff.)

**Hydrazine selenate,  $\text{N}_2\text{H}_4, \text{H}_2\text{SeO}_4$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp. (Rimini 1907, I. 86.)

**Hydrazine zinc selenate,**

$(\text{N}_2\text{H}_4)_2\text{SeO}_4, \text{ZnSeO}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$  but more sol. than (Rimini and Malagnini, Gazz. ch. 37. (1), 265.)

**Hydrazine sulphocyanide,  $\text{N}_2\text{H}_4, \text{H}$** 

Very deliquescent. Sol. in  $\text{H}_2\text{O}$  as (Curtius and Herdenreich, J. pr. 181 488.)

**Hydrazine sulphate,  $\text{N}_2\text{H}_4, \text{H}_2\text{SO}_4$ .**

Sol. with difficulty in cold, cool  $\text{H}_2\text{O}$ . Insol. in alcohol. (Curtius, 1 100 pts.  $\text{H}_2\text{O}$  dissolve 3.055 pts. as (Curtius and Jay, J. pr. (2) 89. 39.)

$2\text{N}_2\text{H}_4, \text{H}_2\text{SO}_4$ . Very deliquescent

Insol. in alcohol. (Curtius, J. 11.)

ulphite,  $(\text{N}_2\text{H}_4)_2\text{H}_2\text{SO}_3$ .

[Z. anorg. 1899, 20, 24.)

rosulphite,  $2\text{N}_2\text{H}_4, \text{H}_2\text{S}_2\text{O}_3$ .

) with decomp.; insol. in alcohol. Z. anorg. 1899, 20, 23.)

iosulphate,  $(\text{N}_2\text{H}_4)_2\text{H}_2\text{S}_2\text{O}_3$ .

t pure.) (Ferratini, Gazz. ch. 1) 138.)

ad thiosulphate,  $2(\text{N}_2\text{H}_4)_2\text{H}_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$ .

[ $\text{H}_2\text{O}$  and alcohol.

[Cl + Aq and in  $\text{HNO}_3$  + Aq. A. 1912. 1612.)

ver thiosulphate,

$(\text{N}_2\text{H}_4)_2\text{H}_2\text{S}_2\text{O}_3$ .

, $\text{O}$ ; sol. in  $\text{NH}_4\text{OH}$  + Aq and in atini.)

ulphinic acid.

azine disulphate,  $\text{O}_2$ .

$\text{I}_2\text{O}$ ; sol. in acids. (Ephraim, 190.)

ulphonic acid,  $\text{N}_2\text{H}_4\text{SO}_3\text{OH}$ .

at 24 pts.  $\text{H}_2\text{O}$  at ord. temp. De- mineral acids; nearly insol. in ther organic solvents. (Traube, 1941.)

hydrazinesulphonate,  $\text{NH}_4$ .

it; decomp. by acids. (Traube.)

azinesulphonate,

$\text{O}_2\text{Ba} + 2\text{H}_2\text{O}$ .

; pptd. by alcohol; decomp. by be.)

azinesulphonate,

$\text{O}_2\text{Ca} + \text{H}_2\text{O}$ .

. Decomp. by acids. Insol. in ube.)

irazinesulphonate,  $\text{N}_2\text{H}_4\text{SO}_3\text{K}$ .

acids. (Traube.)

nesulphonate,  $\text{N}_2\text{H}_4\text{SO}_3\text{Ag}$ .

zinesulphonate,  $\text{Na} + \text{H}_2\text{O}$ .

acids. (Traube.)

Strontium hydrazinesulphonate,  $(\text{N}_2\text{H}_4\text{SO}_3)_2\text{Sr} + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Decomp. by acids. Insol. in alcohol. (Traube.)

Hydriodic acid,  $\text{HI}$ .

See Iodhydric acid.

Hydrobromic acid,  $\text{HBr}$ .

See Bromhydric acid.

Hydrochloric acid,  $\text{HCl}$ .

See Chlorhydric acid.

Hydrofluorboric acid,  $\text{HBF}_4$ .

See Fluoborhydric acid.

Hydrofluoric acid,  $\text{HF}$ .

See Fluorhydric acid.

Hydrogen,  $\text{H}_2$ .

Sl. absorbed by  $\text{H}_2\text{O}$ .

Sol. in 150 pts.  $\text{H}_2\text{O}$ ; 1 vol.  $\text{H}_2\text{O}$  absorbs 0.016 vol.  $\text{H}_2$ . Recently boiled  $\text{H}_2\text{O}$  absorbs 1.53%  $\text{H}_2$ . (Henry, 1903.) 100 vols.  $\text{H}_2\text{O}$  at  $18^\circ$  absorb 4.6 vols.  $\text{H}_2$ . (de Saussure, 1814.)

1 vol.  $\text{H}_2\text{O}$  absorbs 0.0193 vol.  $\text{H}_2$  at 760 mm. and all temperatures between  $0^\circ$  and  $23.6^\circ$ . (Bunsen.)

Later work does not confirm the above statement.

Absorption of  $\text{H}_2$  by  $\text{H}_2\text{O}$  at  $t$  and 760 mm.  $\beta$  = coefficient of absorption;  $\beta_1$  = "solubility" (see under Oxygen).

(Just, Z. phys. Ch. 1901, **37**, 359.)

Extended investigations have been made by Findlay and Shen. (Chem. Soc. 1912, **101**, 1465) on the effect of colloids on solubility of  $H_2$  in  $H_2O$ . See original article.

**Hydrogen arsenide.**

See Arsenic hydride.

**Hydrogen peroxide,  $H_2O_2$ .**

Miscible with  $H_2O$ . Not stable in conc. solution. Aqueous solution gives up its  $H_2O_2$  to ether. Ethereal solution is more stable than an aqueous solution of the same strength, and may be distilled without decomp. Miscible with alcohol.

Very stable in aq. solution of various conc. if perfectly free from impurity such as compds. of heavy metals, etc. (Woffenstein, B. 1894, **27**, 3307.)

Coefficient of distribution between ether and  $H_2O$  determined at  $3^\circ$ ,  $7^\circ$ , and  $17.5^\circ$  with varying quantities (1.7-5%) of  $H_2O_2$ . (Osipoff, C. C. **1903**, **11**, 1265.)

As sol. in ether as in  $H_2O$ . A 50% solution in  $H_2O$  still contained about 25%  $H_2O_2$  after

being shaken 6 times with large quantities of fresh ether.

Insol. in petroleum ether. (Brühl, B. 1895, 28. 2855.)

+H<sub>2</sub>O, and +2H<sub>2</sub>O. Does not solidify at -20°. (Wolfenstein, B. 1894, 27. 3311.)

### Hydrogen phosphide, gaseous (Phosphine), PH<sub>3</sub>.

Very slightly absorbed by H<sub>2</sub>O.

Statements as to solubility in H<sub>2</sub>O vary considerably.

(a) *Difficultly inflammable gas*—

1 vol. H<sub>2</sub>O absorbs 0.1122 vol. PH<sub>3</sub>. (Dyb-kowsky, J. B. 1866. 735.)

1 vol. H<sub>2</sub>O absorbs 0.125 vol. PH<sub>3</sub>. (H. Davy.)

(b) *Easily inflammable gas*—

1 vol. H<sub>2</sub>O absorbs 0.018 vol. PH<sub>3</sub>. (Gengembre, Crell. Ann. 1. 450.)

1 vol. H<sub>2</sub>O absorbs 0.0214 vol. PH<sub>3</sub>. (Henry.)

1 vol. H<sub>2</sub>O absorbs 0.025 vol. PH<sub>3</sub>. (Davy.)

1 vol. H<sub>2</sub>O absorbs 0.125 vol. PH<sub>3</sub>. (Dalton, Ann. Phil. 11. 7.)

1 vol. H<sub>2</sub>O absorbs 0.255 vol. PH<sub>3</sub>. (Raymond, Scher. J. 5. 389.)

1 vol. H<sub>2</sub>O dissolves 0.26 vols. PH<sub>3</sub> at 17°. (Stock, Böttger and Lenger, B. 1909, 42. 2855.)

Sol. in conc. H<sub>2</sub>SO<sub>4</sub> without immediate decomp. (Buff, Pogg. 16. 363.)

1 vol. 50% H<sub>2</sub>SO<sub>4</sub> dissolves 0.05 vol. PH<sub>3</sub>. (S. B. and L.)

Absorbed by CuSO<sub>4</sub>+Aq and by Br. (Berthelot.)

Absorbed rapidly by Cu<sub>2</sub>Cl<sub>2</sub>+Aq with formation of Cu<sub>2</sub>Cl<sub>2</sub>, 2PH<sub>3</sub>, and Cu<sub>2</sub>Cl<sub>2</sub>, 4PH<sub>3</sub>. (Riban, C. R. 88. 581.)

1 vol. alcohol of 0.85 sp. gr. absorbs 0.5 vol.; 1 vol. ether absorbs 2 vols. (Graham.)

Sol. in volatile oils; 1 vol. oil of turpentine absorbs 3.25 vols. (Graham.)

Several varieties of blood absorb PH<sub>3</sub>.

### Hydrogen phosphide, liquid, P<sub>2</sub>H<sub>4</sub>.

Insol. in H<sub>2</sub>O. Apparently sol. in alcohol and oil of turpentine, but solution is very quickly decomp. (Thénard, A. ch. (3) 145.)

### Hydrogen phosphide, solid, P<sub>4</sub>H<sub>2</sub>.

Insol. in H<sub>2</sub>O and alcohol. (Leverrier, A. ch. 60. 174.)

Insol. in all liquids except liquid PH<sub>3</sub>. (Thénard, A. ch. (3) 14. 5.)

Instantly decomp. by HNO<sub>3</sub>, or H<sub>2</sub>SO<sub>4</sub>+Aq. Sol. with decomp. in alcoholic solution of KOH. (Thénard.)

Somewhat sol. in liquid phosphorus. (Buck, Dissert. 1904.)

P<sub>4</sub>H<sub>2</sub>. Insol. in all solvents. (Stock, Böttger and Lenger, B. 1909, 42. 2851.)

P<sub>2</sub>H<sub>4</sub>. Sol. in liquid hydrogen phosphide and molten P. There are no other solvents which appreciably dissolve it. Insol. in liquid PH<sub>3</sub>. (S. B. and L.)

### Hydrogen selenide, H<sub>2</sub>Se.

More sol. in H<sub>2</sub>O than hydrogen sulphide (Berzelius.)

#### Solubility coefficient of H<sub>2</sub>Se at t°.

t°	Sol. Coeff.
4	3.77 vols.
9.65	3.43
13.2	3.31
22.5	2.70

(Forcrand and Fonzes-Diacon, C. R. 1902, 134. 171.)

Sol. in cold COCl<sub>2</sub>. (Besson, C. R. 1902, 122. 140.)

### Hydrogen silicide.

See Silicon hydride.

### Hydrogen sulphide, H<sub>2</sub>S.

(a) *Liquid*. Dissolves S on warming, which separates on cooling.

(b) *Gas*.

1 vol. H<sub>2</sub>O absorbs 1.06 vols. H<sub>2</sub>S at 10°. (Henry, 1803.)

1 vol. H<sub>2</sub>O absorbs 2.53 vols. H<sub>2</sub>S at 15°. (de Saussure, Ann. Phil. 6. 340.)

1 vol. H<sub>2</sub>O absorbs 3 vols. H<sub>2</sub>S at 11°. (Gay-Lussac and Thénard.)

1 vol. H<sub>2</sub>O absorbs 3.66 vols. H<sub>2</sub>S at ord. temp. (Thompeon.)

1 vol. H<sub>2</sub>O absorbs 2.5 vols. H<sub>2</sub>S at ord. temp. (Dalton.)

1 vol. H<sub>2</sub>O absorbs 4.3706-0.083687t+0.0005213t<sup>2</sup> vols. H<sub>2</sub>S at temperatures between 2 and 43.3°. (Bunsen and Schönfeld, A. 93. 26.)

At 0° and about 820 mm. pressure, 1 cm. H<sub>2</sub>O absorbs 100 cm. H<sub>2</sub>S, while only about 4 cm. are absorbed at ord. pressure. (de Forcrand and Villard, C. R. 106. 1402.)

1 vol. H<sub>2</sub>O at 760 mm. pressure and t° absorbs V vols. H<sub>2</sub>S, reduced to 0° and 760 mm.

* (100)	0	2.16)

\* Carius.

(McLauchlan.)

Sol. in methyl acetate (Marchand), ether (Higgins).

Insol. in caoutchouin.

Sol. in glycerine in less amount than in  $\text{H}_2\text{O}$ . If a certain vol. of  $\text{H}_2\text{O}$  dissolves 100 pts.  $\text{H}_2\text{S}$ , the same vol. of glycerine (1 pt. glycerine + 1pt.  $\text{H}_2\text{O}$ ) dissolves only 60 pts.  $\text{H}_2\text{S}$ , but the solution is very stable. After standing a year there is no appreciable decomp. (Lapage, J. Pharm. (4) 5. 256.)

According to Lindo (C. N. 57. 173), the solution in glycerine is no more stable than that in  $\text{H}_2\text{O}$ .

Sol. in  $\text{CS}_2$ .

Solubility in organic substances + Aq  
l = value of  $\text{H}_2\text{S}$  dissolved in organic  
stance + Aq as determined by titration.  
lo = value of  $\text{H}_2\text{S}$  dissolved in  $\text{H}_2\text{O}$  +  
termined by titration.  
 $t^\circ = 25^\circ$ .

Solution	l/lo
$\text{N-NH}_4\text{C}_2\text{H}_3\text{O}_2$	1.09
$\text{N-C}_2\text{H}_5\text{O}_2$	0.944
$3\text{-N-C}_2\text{H}_5\text{O}_2$	0.858
$\text{N-(NH}_4)_2\text{CO}$	1.02
pure $\text{C}_2\text{H}_5(\text{OH})_2$	0.863

(McLauchlan, Z. phys. Ch. 1903, 44. 1)

Solubility in acetic acid + Aq at  $25^\circ$

Molecules of $\text{CH}_3\text{COOH}$ in 100 molecules $\text{CH}_3\text{COOH} + \text{H}_2\text{O}$	Molecules of $\text{H}_2\text{O}$ in 100 molecules $\text{CH}_3\text{COOH} + \text{H}_2\text{O}$	l

(McLauchlan.)

Hydrogen persulphide,  $\text{H}_2\text{S}_2$ , or  $\text{H}_2\text{S}_4$ .

Decomp. by contact with  $\text{H}_2\text{O}$ , in v is apparently insol. Sol. in ether with quent decomp. Sol. in  $\text{CS}_2$ . (Thén ch. 48. 79.)

$\text{H}_2\text{S}_2$ . Quickly decomp. by ether, ether, ethyl, or amyl alcohol.  $\text{H}_2\text{S}$  action.

Conc.  $\text{HCl}$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  have tion. Sol. in a solution of S in  $\text{CS}_2$ , liquid hydrocarbons.

Chloroform dissolves without decomp (Sabatier, C. R. 100. 1346, 1585.)

Alkalies, and  $\text{K}_2\text{S} + \text{Aq}$  decomp. in Decomp. by  $\text{H}_2\text{O}$ , dil. and conc.  $\text{HC H}_2\text{SO}_4$ , alkali and alcohol. Sol. in containing  $\text{HCl}$  but soon decomp. solution. Miscible in all proportion without decomp. with benzene, ether a (Bloch, B. 1908, 41. 1977.)

Formula is  $\text{H}_2\text{S}_4$ . (Rebs, A. 244 + 7 $\text{H}_2\text{O}$ . Easily decomp. by heat Forcrand and Villard, C. R. 106. 140

Hydrogen trisulphide,  $\text{H}_2\text{S}_3$ .

Decomp. by  $\text{H}_2\text{O}$ , dil. and conc.  $\text{HC H}_2\text{SO}_4$ , alkali and alcohol. Somewhat alcohol containing  $\text{HCl}$ , but slowly d in this solution. Miscible with ether and  $\text{CS}_2$ , and these solutions are re stable. (Bloch, B. 1908, 41. 1974.)

telluride,  $\text{H}_2\text{Te}$ .  
in  $\text{H}_2\text{O}$ . Decomp. in the air.  
. anorg. 1900, 25. 313.)

phuric acid,  $\text{H}_2\text{S}$ .  
rogen sulphide.

phurous acid,  $\text{H}_2\text{SO}_3$ .  
osulphurous acid.

amic acid.

ydroxylamate,  $\text{Ca}(\text{ONH}_2)_2$ .  
plosive; decomp. by  $\text{H}_2\text{O}$ . (Ebler  
, J. pr. 1908, (2) 78. 323.)

ylamate  $\text{Zn}(\text{ONH}_2)_2$ .  
. by  $\text{H}_2\text{O}$ . (Ebler and Schott.)

ylamate, hydroxylamine,  
 $(\text{NO})_2$ ,  $3\text{NH}_2\text{O}$ .  
stable.  
abs. alcohol. (Ebler and Schott.)

amine,  $\text{NH}_2\text{O} = \text{NH}_2(\text{OH})$ .  
only in solution.  
lcohol. (Lossen, J. pr. 96. 462.)  
l in free state by de Bruyn.  
liquescent, and sol. in  $\text{H}_2\text{O}$  and  
sl. sol. or insol. in  $\text{CHCl}_3$ ,  $\text{C}_6\text{H}_6$ ,  
thyl acetate.  
alcohol at  $5^\circ$  dissolves 35%; ethyl  
 $15^\circ$ , 15%; boiling dry ether, 1.2%;  
yl acetate, 1.6%. (de Bruyn, R.  
.)

mine arsenate,  $\text{AsO}_4\text{H}_2(\text{NH}_2\text{O})_2$ .  
n cold  $\text{H}_2\text{O}$ ; sol. in hot  $\text{H}_2\text{O}$  from  
an be cryst. (Hofmann, A. 1899,

mine azoimide.  
mide, hydroxylamine.

mine bromide,  $\text{NH}_2\text{OH}$ ,  $\text{HBr}$ .  
. in  $\text{H}_2\text{O}$ ; insol. in ether by which  
from solution in alcohol. (Adams,  
. 1902, 28. 205.)  
I,  $\text{HBr}$ . Easily sol. in  $\text{H}_2\text{O}$ ; insol.  
and ligroin. Sl. sol. in alcohol.

mine mercuric bromide hydroxyla-  
 $2\text{NH}_2\text{OH}$ ,  $2\text{HBr}$ ,  $\text{HgBr}_2$ ,  $2\text{NH}_2\text{OH}$ .  
, by  $\text{H}_2\text{O}$  and methyl alcohol.  
decomp. by alkalis. (Adams.)

mine calcium,  $\text{HO.Ca.ONH}_2$ .  
decomp. by  $\text{H}_2\text{O}$  at ordinary  
fmann, Z. anorg. 1898, 16. 464.)

Hydroxylamine chloride, basic,  $\text{NH}_2(\text{OH})\text{Cl}$ ,  
 $\text{NH}_2\text{OH}$ .

Sol. in  $\text{H}_2\text{O}$ . Alcohol precipitates from  
aqueous solution. Insol. in ether. (Lossen.)  
 $2\text{NH}_2(\text{OH})\text{Cl}$ ,  $\text{NH}_2\text{OH}$ . Deliquescent;  
very sol. in  $\text{H}_2\text{O}$ , less in alcohol, and insol. in  
ether. (Lossen.)

Hydroxylamine chloride,  $\text{NH}_2(\text{OH})\text{Cl}$ .

Not deliquescent. Very sol. in  $\text{H}_2\text{O}$  and  
hot ordinary alcohol. Sl. sol. in absolute al-  
cohol. Insol. in ether. (Lossen.)

Sol. in 1.2 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ . (Schiff, Z. phys.  
Ch. 1896, 21. 290.)

Sp. gr. of aqueous solution at  $17^\circ$ .

% salt	sp. gr.
40	1.1852
28	1.1260
20	1.0688
14	1.0616
10	1.0437
7	1.0303
5	1.0214
3.5	1.0147

(Schiff, Z. phys. Ch. 1896, 21. 290.)

100 pts. absolute methyl alcohol dissolve  
16.4 pts. at  $19.75^\circ$ ; 100 pts. absolute ethyl  
alcohol dissolve 4.43 pts. at  $19.75^\circ$ . (de  
Bruyn, Z. phys. Ch. 10. 783.)

Somewhat sol. in alcohol. (Adams, Am.  
Ch. J. 1902, 28. 204.)

Hydroxylamine mercuric chloride,  $\text{NH}_2\text{OH}$ ,  
 $\text{HCl}$ ,  $\text{HgCl}_2$ .

Very sol. in  $\text{H}_2\text{O}$  and alcohol. Less sol. in  
ether. (Adams, Am. Ch. J. 1902, 28. 213.)

$5(\text{NH}_2\text{OH})_2$ ,  $\text{HCl}$ ,  $2\text{HgCl}_2$ . Sol. in cold  
 $\text{H}_2\text{O}$ , alcohol and ether. More easily sol. in  
methyl alcohol. Sol. in  $\text{HCl}$ . The slightest  
trace of alkali causes decomp. (Adams.)

Hexahydroxylamine cobaltic bromide,

$[\text{Co}(\text{NH}_2\text{OH})_6]\text{Br}_3$ .

(Werner, B. 1905, 38. 897.)

Hexahydroxylamine cobaltic chloride,

$[\text{Co}(\text{NH}_2\text{OH})_6]\text{Cl}_3$ .

Very stable toward  $\text{HCl}$ . (Werner, B.  
1905, 38. 895.)

Hexahydroxylamine cobaltic nitrate,

$[\text{Co}(\text{NH}_2\text{OH})_6](\text{NO}_3)_3$ .

(Werner.)

Hexahydroxylamine cobaltic sulphate,

$[\text{Co}(\text{NH}_2\text{OH})_6](\text{SO}_4)_3 \cdot 2\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Werner.)

Hydroxylamine columbate,  $\text{CbO}_2\text{N}_2\text{H}_2$ .

Explosive. Sl. sol. in  $\text{H}_2\text{O}$ . (Hofmann, Z.  
anorg. 1898, 16. 473.)

**Hydroxylamine dithionate,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{S}_2\text{O}_6$ .**

Sol. in  $\text{H}_2\text{O}$ ; decomp. on heating the aq. solution. (Sabanejeff, Z. anorg. 1898, 17. 485.)

**Hydroxylamine fluosilicate,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{SiF}_6 + 2\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Nearly insol. in methyl and abs. ethyl alcohol. (Ebler, J. pr. 1908, (2), 78. 338.)

**Hydroxylamine fluotitanate,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{TiF}_6$ .**

Sol. in  $\text{H}_2\text{O}$ . Sl. sol. in methyl alcohol. (Ebler, J. pr. 1908, (2) 78. 340.)

**Hydroxylamine hypophosphite,  $(\text{NH}_2\text{OH})\text{H}_2\text{PO}_2$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Sabanejeff, Z. anorg. 1898, 17. 483.)

Sol. in  $\text{H}_2\text{O}$  and absolute alcohol. Insol. in ether. (Hofmann and Kohlschütter, Z. anorg. 1898, 18. 469.)

**Hydroxylamine potassium hypophosphite,  $(\text{H}_2\text{PO}_2)_2(\text{NH}_2\text{OH})_2\text{K}_2$ .**

Easily sol. in  $\text{H}_2\text{O}$ , decomp. on heating; sol. in hot abs. alcohol. (Hofmann and Kohlschütter, Z. anorg. 1898, 18. 468.)

**Hydroxylamine hypophosphate,  $(\text{NH}_2\text{OH})_2\text{H}_2\text{P}_2\text{O}_4$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Sabanejeff, Z. anorg. 1898, 17. 489.)

**Hydroxylamine iodide,  $\text{NH}_2\text{OH} \cdot \text{HI}$ .**

Hydrosopic; sol. in methyl alcohol. Very explosive. (Wolffenstein and Groll, B. 1901, 34. 2419.)

**Dihydroxylamine iodide,  $(\text{NH}_2\text{OH})_2 \cdot \text{HI}$ .**

Deliquescent. More sol. in  $\text{H}_2\text{O}$ , methyl and ethyl alcohol than the tri compound. Is decomp. when recryst. from these solvents. Insol. in ether. (Dunstan, Chem. Soc. 1896, 69. 841.)

**Trihydroxylamine iodide,  $(\text{NH}_2\text{OH})_3 \cdot \text{HI}$ .**

Deliquescent in moist air. Sol. in  $\text{H}_2\text{O}$ , methyl and ethyl alcohol. Insol. in ether. (Dunstan.)

**Hydroxylamine nitrate,  $\text{NH}_2(\text{OH})\text{NO}_3$ .**

Very sol. in  $\text{H}_2\text{O}$  and absolute alcohol. (Lossen.)

**Hydroxylamine orthophosphate,  $(\text{NH}_2\text{OH})_3\text{PO}_4$ .**

Sl. sol. in cold  $\text{H}_2\text{O}$ . (Lossen.)

Only sl. sol. in  $\text{H}_2\text{O}$ . (Hofmann, A. 1899, 307. 330.)

Moderately sol. in  $\text{H}_2\text{O}$ . (Ross, Chem. Soc. 1906, 90, (2) 19.)

**Solubility in  $\text{H}_2\text{O}$ .**

1 g. of aqueous solution contain	
0°	10°
0.012	0.015 g. hydroxylamine
20°	30°
0.019	0.027 g. hydroxylamine
40°	50°
0.040	0.055 g. hydroxylamine
60°	70°
0.077	0.102 g. hydroxylamine
80°	90°
0.133	0.168 g. hydroxylamine
(Adams, Am. Ch. J. 1902, 28.	

$(\text{NH}_2\text{OH})\text{H}_2\text{PO}_4$ . Hydrosopic. tion is decomp. on heating. (Sal 1897, 30. 287.)

**Hydroxylamine phosphite,  $(\text{NH}_2\text{OH})\text{H}_2\text{PO}_2$ .**

Sol. in  $\text{H}_2\text{O}$  and absolute alcohol and Kohlschütter, Z. anorg 467.)

$(\text{NH}_2\text{OH})\text{H}_2\text{PO}_2$ . Sol. in  $\text{H}_2\text{O}$ . alcohol. (Sabanejeff, Chem. Soc. (2), 14.)

**Hydroxylamine phosphite ammoni,  $(\text{NH}_2\text{OH})\text{H}_2\text{PO}_2 \cdot \text{NH}_3$ .**

Sol. in  $\text{H}_2\text{O}$ . (Sabanejeff, Chem 78, (2) 14.)

**Hydroxylamine sodium,  $\text{NaONH}_2$ .**

Very hydrosopic. (de Bruyn 1892, 11. 18.)

**Hydroxylamine sulphate,  $(\text{NH}_2\text{OH})_2\text{SO}_4$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Precipitates concentrated aqueous solution by alcohol.

Sol. in conc.  $\text{NH}_2\text{OH} + \text{Aq}$ . In alcohol and ether. (Preibisch, J. pr. 7. 480.)

Not deliquescent. Sol. in  $\frac{3}{4}$  o  $\text{H}_2\text{O}$  at 20°. (Divers and Haga, 1896, 69. 1665.)

1 g. of aqueous solution contain	
—8°	0° +10°
0.307	0.329 0.366 g. hydroxylamin
20°	30° 40°
0.413	0.441 0.482 g. hydroxylamin
50°	60° 90°
0.522	0.560 0.685 g. hydroxylamin
(Adams, Am. Ch. J. 1902, 28.	

Dry hydroxylamine sulphate is abs. and almost insol. in 95% (Adams.)

For double salts, see under sulp  $\text{NH}_2\text{OH}$ ,  $\text{H}_2\text{SO}_4$ . Deliquescent  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1895.)

**Hydroxylamine tungstate,  $4\text{NH}_2\text{OH} \cdot \text{H}_2\text{WO}_4$ .**

Moderately sol. in  $\text{H}_2\text{O}$ . (Allenschalk, Am. Ch. J. 1902, 27. 338.)

ine uranate,  $\text{UO}_4(\text{NH}_3\text{O})_2 + \text{H}_2\text{O}$ .  
by heat. (Hofmann, Z. anorg.  
.)

ine uranate ammonia,  
 $\text{H}_2\text{O}$ ,  $2\text{NH}_3$ .  
by  $\text{H}_2\text{O}$ . (Hofmann, Z. anorg.  
.)

ine metavanadate,  $\text{VO}_3\text{N}_3\text{H}_{12}$ .  
by moisture. (Hofmann, Z.  
., 16. 472.)

ine metavanadate ammonia,  
 $(\text{NH}_3\text{O})_2, 2\text{NH}_3$ .  
decomp. by  $\text{H}_2\text{O}$  and  $\text{HCl}$ . (Hof-  
norg. 1898, 16. 471.)

amine monosulphonic acid,  
 $\text{I}(\text{SO}_3\text{H})$ .  
"acidic acid" of Fremy.  
"hydroxylamic acid" of Claus.  
 $\text{I}_2\text{O}$ . Slowly decomp. on boiling.  
A. 241. 161.)

1 hydroxylamine monosulphonate,  
 $\text{IN}, \text{SO}_3\text{NH}_4$ .  
eff, Z. anorg. 1898, 17. 491.)

m — — —,  $(\text{HONHSO}_3)_2\text{Ba} +$   
ol. in  $\text{H}_2\text{O}$ . (Divers and Haga,  
., 55. 760.)

— — —,  $\text{Ba}(\text{HONSO}_3)_2\text{Ba} +$   
insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ .  
d Haga, Chem. Soc. 55. 760.)

— — —,  $\text{HONH}(\text{SO}_3\text{K})$ .  
um sulphhydroxylamate" of Claus.  
n sulphazide" of Fremy.  
old  $\text{H}_2\text{O}$ . Easily sol. in hot  $\text{H}_2\text{O}$   
comp. Insol. in alcohol. (Raschig.  
(Divers and Haga, Chem. Soc. 55.

amine disulphonic acid,  
 $\text{SO}_3\text{H})_2$ .  
hydroazotic acid" of Claus.  
zotic acid" of Fremy.  
wn in free state. (Raschig, A. 241.

droxylamine disulphonate,  
 $\text{S}_2\text{O}_7)_2 + 4\text{H}_2\text{O}$  and  $+8\text{H}_2\text{O}$ .  
lly insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{Cl} +$   
ars, Chem. Soc. 1894, 65. 559.)

tassium — — —.  
 $(\text{NS}_2\text{O}_7)_2 + 9\text{H}_2\text{O}$ .  
 $\text{O}_7 + \text{H}_2\text{O}$ .  
 $\text{K}_2\text{H}(\text{NS}_2\text{O}_7)_2 + \text{H}_2\text{O}$ .

$\text{Ba}_2\text{K}_2(\text{NS}_2\text{O}_7)_7 + 14\text{H}_2\text{O}$ .  
 $3\text{Ba}(\text{OH})_2, \text{Ba}_2\text{K}_2(\text{NS}_2\text{O}_7)_7$ .  
Above salts are all ppts. (Divers, Chem.  
Soc. 1894, 65. 561.)

Barium sodium hydroxylamine disulphonate,  
 $\text{Ba}_2\text{Na}_2(\text{NS}_2\text{O}_7)_2 + 7\text{H}_2\text{O}$ .  
 $\text{Ba}_2\text{Na}_2(\text{NS}_2\text{O}_7)_7 + 7\text{H}_2\text{O}$ .  
 $\text{Ba}_{12}\text{Na}_{12}(\text{NS}_2\text{O}_7)_{17} + 24\text{H}_2\text{O}$ .  
Above salts are ppts. (Divers.)

Potassium — — —,  $\text{HON}(\text{SO}_3\text{K})_2 + 2\text{H}_2\text{O}$ .  
"Potassium disulphhydroxyazotate" of  
Claus (A. 158. 75). Insol. in cold  $\text{H}_2\text{O}$ .  
Very unstable. Very difficultly sol. in  $\text{H}_2\text{O}$ ,  
more easily in dil.  $\text{KOH} + \text{Aq}$ . (Raschig, A.  
241. 161.)  
 $\text{HON}(\text{SO}_3\text{K})_2, \text{KON}(\text{SO}_3\text{K})_2 + \text{H}_2\text{O}$ . True  
composition of potassium sulphazotate of  
Fremy. (Divers and Haga, Chem. Soc. 1900,  
77. 432.)

Potassium sodium — — —.  
 $3\text{K}_2\text{NS}_2\text{O}_7, 2\text{Na}_2\text{NS}_2\text{O}_7 + 2\text{H}_2\text{O}$ . Sol. in  
 $\text{H}_2\text{O}$ .  
 $6\text{K}_2\text{NS}_2\text{O}_7, \text{Na}_2\text{NS}_2\text{O}_7, \text{H}_2\text{NS}_2\text{O}_7 + 20\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ .  
 $\text{K}_2\text{Na}_{12}\text{H}_2(\text{NS}_2\text{O}_7)_7 + 5\text{H}_2\text{O}$ . Less sol. in  
 $\text{H}_2\text{O}$  than the others.  
 $\text{K}_{12}\text{Na}_4\text{H}_4(\text{NS}_2\text{O}_7)_8 + 9\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .  
 $\text{KNa}_4\text{H}(\text{NS}_2\text{O}_7)_2 + \text{H}_2\text{O}$ . Readily sol. in  
 $\text{H}_2\text{O}$ .  
 $\text{K}_2\text{NaH}_2(\text{NS}_2\text{O}_7)_2 + 2\text{H}_2\text{O}$ . Moderately sol.  
in  $\text{H}_2\text{O}$ .  
 $\text{KNaHNS}_2\text{O}_7 + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .  
(Divers, Chem. Soc. 1894, 65. 552.)

Potassium strontium — — —,  
 $(\text{HO}, \text{Sr})_2\text{NS}_2\text{O}_7, 8(\text{SrKNS}_2\text{O}_7, 2\text{H}_2\text{O})$ .  
Ppt. (Divers.)

Potassium hydroxylamine disulphonate ni-  
trite,  $\text{HON}(\text{SO}_3\text{K})_2, \text{KNO}_2$ .  
Very sl. in  $\text{H}_2\text{O}$ . (Divers and Haga,  
Chem. Soc. 1900, 77. 433.)  
 $\text{K}_2\text{H}(\text{NS}_2\text{O}_7)_2, 3\text{KNO}_2 + \text{H}_2\text{O}$ . Decomp. by  
 $\text{H}_2\text{O}$ . (Divers and Haga.)  
 $2\text{KON}(\text{SO}_3\text{K})_2, \text{KNO}_2 + 4.4\text{H}_2\text{O}$ . Very sol.  
in  $\text{H}_2\text{O}$  which decomp. it into its constituent  
salts. (Divers and Haga.)  
 $+6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  which decomp.  
it into its constituent salts. (Divers and  
Haga.)  
 $2\text{K}_2\text{H}(\text{NS}_2\text{O}_7)_2, 7\text{KNO}_2 + 3\text{H}_2\text{O}$ . Decomp.  
by  $\text{H}_2\text{O}$ . (Divers and Haga.)  
 $3\text{K}_2\text{H}(\text{NS}_2\text{O}_7)_2, 7\text{KNO}_2$ . Decomp. by  $\text{H}_2\text{O}$ .  
(Divers and Haga.)

Potassium hydroxylamine disulphonate so-  
dium chloride,  $5\text{K}_2\text{HNS}_2\text{O}_7, 8\text{NaCl} +$   
 $3\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ . (Divers, Chem. Soc.  
1894, 65. 551.)

**Sodium hydroxylamine disulphonate,**  
 $\text{HON}(\text{SO}_2\text{Na})_2$ .

Sol. in somewhat more than its own wt. of  $\text{H}_2\text{O}$  at  $14^\circ$ . (Divers, Chem. Soc. 1894, 65. 546.)

$\text{Na}_2\text{HNS}_2\text{O}_7$ ,  $2\text{Na}_2\text{NS}_2\text{O}_7 + 3\text{H}_2\text{O}$ . Sol. in less than 1.5 pts.  $\text{H}_2\text{O}$  at  $14^\circ$ . (Divers.)

**Hydroxylamine isomonosulphonic acid,**  
 $\text{NH}_2\text{O}, \text{SO}_2, \text{OH}$ .

Very hygroscopic. Sol. in water; sol. in alcohol. (Sommer, B. 1914, 47. 1226.)  
[Compare Raschig, A. 1887, 241. 161.]

**Hydroxylamine isodisulphonic acid.****Ammonium hydroxylamine isodisulphonate,**  
 $(\text{SO}_2\text{NH}_4)\text{ONH}(\text{SO}_2\text{NH}_4)$ .

3 pts. are sol. in 2 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . Apt to form supersat. solutions. (Haga, Chem. Soc. 1906, 39. 246.)

**Dipotassium** — — —,  $\text{K}_2\text{HS}_2\text{O}_7\text{N}$ .

Only sl. sol. in cold  $\text{H}_2\text{O}$ . Easily sol. in boiling  $\text{H}_2\text{O}$ . Decomp. by hot dil.  $\text{HCl}$ . (Raschig, B. 1906, 39. 246.)

6.44 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $16.4^\circ$ .

7.18 " " " " 100 "  $\text{H}_2\text{O}$  "  $17.8^\circ$ .

8.05 " " " " 100 "  $\text{H}_2\text{O}$  "  $20^\circ$ .

(Haga, Chem. Soc. 1906, 39. 243.)

**Tripotassium** — — —,  $(\text{SO}_2\text{K})\text{ONK}(\text{SO}_2\text{K}) + 2\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; ppt. by alcohol. (Haga.)

**Disodium** — — —,  $(\text{SO}_2\text{Na})\text{ONH}(\text{SO}_2\text{Na})$ .

Very sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol by which it is ppt. from aqueous solution. (Haga.)

**Trisodium** — — —,  $(\text{SO}_2\text{Na})\text{ONNa}(\text{SO}_2\text{Na}) + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; ppt. by alcohol. (Haga.)  
+  $3\text{H}_2\text{O}$ . Sol. in 1.3 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . Less sol. in  $\text{NaOH} + \text{Aq}$ . (Divers, Chem. Soc. 1894, 65. 546.)

**Hydroxylamine trisulphonic acid.****Ammonium hydroxylamine trisulphonate,**  
 $2(\text{SO}_2\text{NH}_4)\text{ON}(\text{SO}_2\text{NH}_4)_2 + 3\text{H}_2\text{O}$ .

Sol. in 0.61 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ . (Haga, Chem. Soc. 1904, 35. 84.)

**Potassium** — — —,  $2(\text{SO}_2\text{K})\text{ON}(\text{SO}_2\text{K})_2 + 3\text{H}_2\text{O}$ .

1 pt. is sol. in 25.37 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Haga.)

**Sodium** — — —,  $(\text{SO}_2\text{Na})\text{ON}(\text{SO}_2\text{Na})_2 + 2\text{H}_2\text{O}$ .

Sol. in 2.84 pts.  $\text{H}_2\text{O}$  at  $21.5^\circ$ .

**Dihydroxylamine sulphonie aci**  
 $(\text{HO})_2\text{N}(\text{SO}_2\text{H})$ .

"Sulphazinous acid" of Fremy.  
Known only in its salts. (Raschig 161.)

**Potassium dihydroxylamine su**  
 $(\text{HO})_2\text{NSO}_2\text{K}$ .

Not obtained in pure state; forms  $\text{KO}$   
 $\text{HO NSO}_2\text{K}$ , which is quite sol. in  
corresponds to "sulfasite de po  
Freymy (A. ch. (3) 15. 421).

Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol a  
(Freymy.)

**Hydroxylodoplatindiamine sulp**  
 $(\text{OH})\text{IPt}(\text{NH}_3)_2\text{SO}_4 + \text{H}_2\text{O}$ .

Very sl. sol., even in boiling  $\text{H}_2\text{O}$   
gren, Sv. V. A. F. 47. 312.)

**Hydroxylonitratoplatindiamine nit**  
 $\text{OH Pt N}_2\text{H}_4\text{NO}_3$   
 $\text{NO}_3 \text{Pt N}_2\text{H}_4\text{NO}_3$ .

Sl. sol. in cold, more easily in  
Very sl. sol. in  $\text{H}_2\text{O}$  containing  $\text{HNO}$

— *pyrophosphate,*

Very sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Hydroxyloplatinamine hydroxid**  
 $(\text{OH})_2\text{Pt}(\text{NH}_3)_2$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil.  
 $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . Not decomp. b  
 $\text{KOH} + \text{Aq}$ . (Gerhardt, Compt. C  
490.)

**Hydroxyloplatinamine nitrate,**  
 $(\text{OH})_2\text{Pt}(\text{NH}_3)_2 + 2\text{H}_2\text{O}$ .

Sl. sol. in cold, easily in hot  
attacked by cold  $\text{HCl} + \text{Aq}$ . (Clev

— *oxalate*,  $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{C}_2\text{O}_4$   
Sol. in hot  $\text{H}_2\text{O}$ .

— *sulphate*,  $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{SO}_4$   
Difficultly sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Hydroxyloplatinamine bromi**  
 $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{Br}_2$ .

Sl. sol., even in boiling  $\text{H}_2\text{O}$ .  
Sv. V. A. F. 47. 320.)

— *chloride*,  $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{Cl}_2$ .

Sol. in 206 pts. cold, and 49  
 $\text{H}_2\text{O}$ . (Carlgren, Sv. V. A. F. 47.

— *chromate*,  $(\text{OH})_2\text{Pt}(\text{NH}_3)_2\text{Cr}$ .

Very sl. sol. in cold or hot  $\text{H}_2\text{O}$ .  
Sv. V. A. F. 47. 319.)

**Calcium hypobromite bromide.**

Deliquescent, and sol. in  $H_2O$  with partial decomp. (Berzelius.)

**Potassium hypobromite,  $KBrO$ .**

Known only in solution.

**Sodium hypobromite.**

Known only in solution.

**Strontium hypobromite.**

Known only in solution.

**Hypochlorous acid,  $HClO$ .**

Miscible with  $H_2O$ . Decomposes at  $0^\circ$  in the dark, more rapidly at higher temp. or in light. The stronger the solution the more rapid the decomposition. Moderately strong acid may be distilled without any considerable decomp., a stronger acid distilling over at first, and afterwards an acid weaker than the original acid. Very conc. or very dil. acids decomp. by distillation.

**Ammonium hypochlorite.**

Known only in aqueous solution, which decomposes at once.

**Barium hypochlorite.**

Known only in solution.

**Calcium hypochlorite,  $Ca(OCl)_2 + 4H_2O$ .**

Deliquescent, and sol. in  $H_2O$ . (Kinsgett, Chem. Soc. (2) 13. 404.)

**Calcium hypochlorite chloride, etc. (bleaching powder),  $Ca(OCl)_2$ ,  $CaCl_2$ ,  $Ca(OH)_2 + H_2O$ .**

Not deliquescent. Sol. in  $H_2O$ . Alcohol does not dissolve out  $CaCl_2$ . Sol. in 20 pts.  $H_2O$  with a slight residue.

Correct formula is  $CaOCl_2$  (Lunge and Schäppi; Kraut, A. 214. 354),  $Ca \overset{OCl}{OH}$  (Stahlschmidt, B. 8. 869),  $CaOCl$ ,  $Cl$  (Odling).

$CaCl_2$  is dissolved out by alcohol. Formula =  $2Ca \overset{OH}{OCl} CaCl + 2H_2O$ . (Dreyfuss, Bull. Soc. (2) 41. 600.)

**Didymium hypochlorite,  $Di(OCl)_2$ .**

Difficultly sol. in  $H_2O$ . Easily sol. in acids. (Frerichs and Smith, A. 191. 348.)

**Lanthanum hypochlorite,  $La(OCl)_2$ .**

Easily sol. in  $H_2O$ . (Frerichs and Smith.)

**Lithium hypochlorite,  $LiClO$ .**

Known only in solution. (Kraut, A. 1882, 214. 356.)

**Magnesium hypochlorite.**

Known only in solution.

**Potassium hypochlorite,  $KClO$ .**

Known only in solution.

**Silver hypochlorite,  $AgClO$ .**

Very sol. in  $H_2O$ , and decomp. very (Stas, Acad. R. de Belg. 35. 103.)

**Sodium hypochlorite,  $NaClO$ .**

Known only in solution.

**Hypoiodic acid,  $I_2O_4$ .**

See Iodine tetroxide.

**Hypoiodous acid,  $HOI$ .**

Known only in solution which decomp. standing. (Taylor, C. N. 1897, 76.)

**Calcium hypoiodite iodide,  $Ca(OI)_2$ .**

Not very unstable. (Lunge and S. 15. 1883.)

**Hyponitric acid,  $N_2O_4$ .**

See Nitrogen tetroxide.

**Hyponitrous acid,  $HNO$ , or better**

Known only in aqueous solution. is quite stable. (van der Plaats, B. 1

Very deliquescent; sol. in  $H_2O$  and sol. in ether, chloroform, benzene; petroleum ether. (Hantzsch and K. A. 1896, 292. 323.)

**Ammonium hyponitrite,  $(NH_4)_2N_2O_2$ .**

Sol. in  $H_2O$  and in alcohol. (Jacks 1893, 68. 266.)

**Ammonium hydrogen hyponitrite,  $NH$** 

Easily sol. in  $H_2O$ . The solid as decomp. at ord. temp. into ammo and  $N_2O$ . (Hantzsch and Kaufm 1896, 292. 328.)

**Barium hyponitrite,  $BaN_2O_2$ .**

Nearly insol. in, but gradually de  $H_2O$ . Sol. in conc. acids with evolution of  $N_2O$ , but sol. in dil.  $HC_2H_3O_2 + Aq$  decomp. (Zorn, B. 15. 1007.) +  $4H_2O$ . Sl. sol. in  $H_2O$ ; insol. in ether. (Kirschner, Z. anorg. 424.)

+  $rH_2O$ . Efflorescent. (Maquenne 108. 1303.)

**Barium hydrogen hyponitrite,  $BaH_2N_2O_2$ .**

Easily sol. in  $H_2O$ . (Zorn, B. 1011.)

**Calcium hyponitrite,  $CaN_2O_2 + 4H_2O$ .**

Nearly insol. in  $H_2O$ ; easily sol. in acids. (Maquenne, C. R. 108. 1303. Sl. sol. in  $H_2O$ ; insol. in alcohol. Z. anorg. 1898, 16. 426.)

- nitrite, basic**,  $\text{CuN}_2\text{O}_2$ ,  $\text{Cu}(\text{OH})_2$ .  
 $\text{H}_2\text{O}$ ; not decomp. by hot  $\text{H}_2\text{O}$ .  
 acids and in ammonia. Decomp.  
 (Divers, Chem. Soc. 1899, 75. 121.)  
 $\text{H}_2\text{O}$ . Sol. in dil. acids and in  
 aq. (Kirschner, Z. anorg. 1898,
- ponitrite**,  $\text{Cu}_2\text{N}_2\text{O}_2 + 2\text{H}_2\text{O}$ .  
 otow, C. C. 1891, I. 1859.)  
 e formed. (Divers, Chem. Soc.  
 1.)
- itrite, basic**,  $\text{PbN}_2\text{O}_2$ ,  $\text{PbO}$ .  
 $\text{I}_2\text{O}$ . Sol. in dil. acids from which  
 ptd. by  $\text{NaOH} + \text{Aq}$  or  $\text{NH}_4\text{OH} +$   
 hner, Z. anorg. 1898, 16. 430.)
- itrite**,  $\text{PbN}_2\text{O}_2$ .  
 $\text{H}_2\text{O}$ ; sol. in dil. acids from which  
 ptd. by  $\text{NaOH} + \text{Aq}$  or  $\text{NH}_3 + \text{Aq}$ .  
 )
- ypionitrite, basic**,  $3\text{HgO}$ ,  $\text{HgN}_2\text{O}_2$ .  
 ).  
 sol. even in boiling dil.  $\text{HNO}_3$ .  
 l. in conc., very sol. in warm dil.  
 r, Chem. Soc. 1897, 71. 349.)
- hyponitrite**,  $\text{Hg}_2\text{N}_2\text{O}_2$ .  
 $\text{HNO}_3$  with slow decomp. (Ray,  
 1907, 91. 1404.)
- ypionitrite**,  $\text{HgN}_2\text{O}_2$ .  
 Cl, and in  $\text{NaCl} + \text{Aq}$ .  
 very dil. alkali. (Divers, Chem.  
 75. 119.)
- hyponitrite**,  $\text{K}_2\text{N}_2\text{O}_2$ .  
 $\text{O}$ . (van der Plaats.)  
 hen dry.  
 0% alcohol, and sl. sol. in abs.  
 Divers, Chem. Soc. 1899, 75. 103.)
- nitrite (nitrosyl silver)**,  
 $\text{O}_2$ .  
 $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{HNO}_3 +$   
 $\text{O}_2 + \text{Aq}$ .  
 by  $\text{H}_3\text{PO}_4$ ,  $\text{H}_2\text{S}$ , and boiling  
 Aq. (van der Plaats.)  
 $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ ; sol. in  $\text{NH}_4\text{OH}$   
 vers, C. N. 23. 206.)  
 il.  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$  and in conc.  
 aq; decomp. by  $\text{HCl}$ . (Kirsch-  
 rg. 1898, 16. 431.)
- ponitrite**,  $\text{Na}_2\text{N}_2\text{O}_2 + 6\text{H}_2\text{O}$ .  
 $\text{O}$ . (van der Plaats.)
- ypionitrite**,  $\text{SrN}_2\text{O}_2$ .  
 ol. in  $\text{H}_2\text{O}$ . (Roederer, Bull.  
 (3) 35. 715.)  
 Nearly insol. in  $\text{H}_2\text{O}$ ; easily sol.
- in dil. acids. (Maquenne, C. R. 106. 1303.)  
 Sl. sol. in  $\text{H}_2\text{O}$ , insol in alcohol. (Kirsch-  
 ner, Z. anorg. 1898, 16. 426.)
- Hypophosphomolybdc acid**,  $\text{Mo}_2\text{O}_7$ ,  
 $7\text{H}_3\text{PO}_3 + 3\text{H}_2\text{O}$ .  
 Very sl. sol. in cold  $\text{H}_2\text{O}$ . Scarcely sol.  
 in cold dil.  $\text{H}_2\text{SO}_4$ . Sol. in cold conc.  $\text{H}_2\text{SO}_4$ .  
 Sol. in warm conc.  $\text{HCl}$ . Warm  $\text{HNO}_3$   
 oxidizes forming clear solution. (Mawrow,  
 Z. anorg. 1901, 28. 164.)
- Ammonium hypophosphomolybdate**,  
 $2(\text{NH}_4)_2\text{O}$ ,  $2\text{H}_3\text{PO}_3$ ,  $8\text{MoO}_3 + 2\text{H}_2\text{O}$ .  
 Not very sol. in cold  $\text{H}_2\text{O}$ , readily in hot  
 $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 3. 402.)
- Hypophosphoric acid**,  $\text{H}_4\text{P}_2\text{O}_6$ .  
 Very deliquescent, and sol. in the least  
 amount of  $\text{H}_2\text{O}$ . (Joly, C. R. 101. 1058.)  
 100 cc.  $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$ , containing 4.1%  $\text{P}_2\text{O}_5$   
 has sp. gr. = 1.036.  
 100 cc.  $\text{H}_4\text{P}_2\text{O}_6 + \text{Aq}$ , containing 12.3%  
 $\text{P}_2\text{O}_5$ , has sp. gr. = 1.122.  
 (Salzer, A. 1878, 194. 28.)  
 $+ \text{H}_2\text{O}$ . (Sanger, A. 232. 14.)  
 Does not exist. (Joly.)  
 $+ 2\text{H}_2\text{O}$ . Appears to be the only stable  
 hydrate between  $0^\circ$  and  $60^\circ$ .  
 Sanger's hydrate,  $\text{H}_4\text{P}_2\text{O}_6 + \text{H}_2\text{O}$ , and  
 Joly's anhydride could not be obtained.  
 (Rosenheim, B. 1908, 41. 2711.)
- Aluminum hypophosphate**,  $\text{Al}_2(\text{P}_2\text{O}_6)_3 +$   
 $23\text{H}_2\text{O}$ .  
 Easily sol. in mineral acids. Sol. in  $\text{Na}_2\text{P}_2\text{O}_7$   
 $+ \text{Aq}$ . (Palm, Dissertation, Rostock, 1890.)
- Ammonium hypophosphate**,  $(\text{NH}_4)_2\text{P}_2\text{O}_6 +$   
 $\text{H}_2\text{O}$ .  
 Sol. in 30 pts.  $\text{H}_2\text{O}$ . (Salzer, A. 194. 32.)
- Ammonium hydrogen hypophosphate**,  
 $(\text{NH}_4)_2\text{H}_2\text{P}_2\text{O}_6$ .  
 Sol. in 14 pts. cold, and 4 pts. boiling  $\text{H}_2\text{O}$ .  
 (Salzer, A. 194. 32.)
- Ammonium trihydrogen hypophosphate**,  
 $\text{NH}_4\text{H}_3\text{P}_2\text{O}_6$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- Ammonium magnesium hypophosphate**,  
 $(\text{NH}_4)_2\text{MgP}_2\text{O}_6 + 6\text{H}_2\text{O}$ .  
 Precipitate. (Salzer, A. 232. 114.)
- Barium hypophosphate**,  $\text{Ba}_2\text{P}_2\text{O}_6$ .  
 Very slightly sol., but not wholly insol. in  
 $\text{H}_2\text{O}$ . Very slightly sol. in acetic acid, but  
 more soluble in hydrochloric, and hypophos-  
 phoric acids. (Salzer, A. 194. 34.)
- Barium hydrogen hypophosphate**,  $\text{BaH}_2\text{P}_2\text{O}_6$   
 $+ 2\text{H}_2\text{O}$ .  
 Soluble in about 1000 pts.  $\text{H}_2\text{O}$ . Solution  
 decomposes by heating. (Salzer, A. 194. 34.)

**Bismuth hypophosphate**,  $\text{Bi}_4(\text{P}_2\text{O}_5)_3 + 8\frac{1}{2}\text{H}_2\text{O}$ .

Completely sol. in  $\text{HCl} + \text{Aq}$ , also in warm  $\text{HNO}_3 + \text{Aq}$ . Insol. in boiling dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sl. sol. by long boiling with conc.  $\text{H}_2\text{SO}_4$ . (Palm, Rostock, 1890.)

**Cadmium hypophosphate**,  $\text{Cd}_3\text{P}_2\text{O}_8 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. acids. (Draue, B. 21. 3403.)

**Cadmium potassium hydrogen hypophosphate**,  $\text{CdK}_2(\text{H}_2\text{P}_2\text{O}_6)_3 + 2\frac{1}{2}\text{H}_2\text{O}$ .

(Bausa, Z. anorg. 1894, 6. 147.)

**Cadmium sodium hypophosphate**,  $\text{CdNa}_2\text{P}_2\text{O}_8 + 6\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. thereby. Sol. in dil. acids. (Draue.)

**Calcium hypophosphate**,  $\text{Ca}_2\text{P}_2\text{O}_8 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in  $\text{HCl} + \text{Aq}$ ; easily sol. in  $\text{H}_2\text{P}_2\text{O}_8$ , or  $\text{HCl} + \text{Aq}$ . (Salzer, A. 194. 36.)

**Calcium hydrogen hypophosphate**,

$\text{CaH}_2\text{P}_2\text{O}_8 + 6\text{H}_2\text{O}$ .

Sol. in 60 pts.  $\text{H}_2\text{O}$ . (Salzer, A. 232. 114.)

**Chromic hypophosphate**,  $\text{Cr}_4(\text{P}_2\text{O}_5)_3 + 34\text{H}_2\text{O}$ .

Sol. in  $\text{HCl} + \text{Aq}$  on sl. warming, also in  $\text{HNO}_3 + \text{Aq}$ . Not completely sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , but completely sol. in conc.  $\text{H}_2\text{SO}_4$ . (Palm, Dissertation, Rostock, 1890.)

**Cobaltous hypophosphate**,  $\text{Co}_2\text{P}_2\text{O}_8 + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids. (Draue, B. 21. 3403.)

**Cobaltous potassium hypophosphate**,

$\text{CoK}_2\text{P}_2\text{O}_8 + 5\text{H}_2\text{O}$ .

Ppt. (Bausa, Z. anorg. 1894, 6. 156.)

**Cobaltous potassium hydrogen hypophosphate**,  $\text{CoH}_2\text{P}_2\text{O}_8, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_8 + 15\text{H}_2\text{O}$ .

**Cobaltous sodium hypophosphate**,  $\text{CoNa}_2\text{P}_2\text{O}_8 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. thereby. Sol. in dil. acids. (Draue, B. 21. 3403.)

**Cupric hypophosphate**,  $\text{Cu}_2\text{P}_2\text{O}_8 + 6\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. acids. (Draue, B. 21. 3403.)

Ppt. (Bausa, Z. anorg. 1894, 6. 145.)

**Cupric potassium hydrogen hypophosphate**,  $\text{CuH}_2\text{P}_2\text{O}_8, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_8 + 15\text{H}_2\text{O}$ .

Ppt. (Bausa, Z. anorg. 1894, 6. 152.)

**Glucinum hypophosphate**,  $\text{Gl}_2\text{P}_2\text{O}_8 + 7\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Moderately sol. in all mineral acids. (Palm, Rostock, 1890.)

$+ 3\text{H}_2\text{O}$ . (Rammelsberg.)

**Iron (ferrous) hypophosphate**,  $4\frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in cold  $\text{HNO}_3 + \text{Aq}$  into  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Somewhat sol. in  $\text{H}_2\text{O}$  but a ppt. separates out on heating. (Rostock, 1890.)

**Iron (ferric) hypophosphate**,  $\text{Fe}_2\text{P}_2\text{O}_8$ .

Easily sol. in  $\text{HCl} + \text{Aq}$ . Whol.  $\text{HNO}_3$ , and dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Con. in conc.  $\text{H}_2\text{SO}_4$  by warming a short ppt. separates out on boiling. (Pa

**Lead hypophosphate**,  $\text{Pb}_2\text{P}_2\text{O}_8$ .

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl} + \text{Aq}$ , or  $\text{HNO}_3 + \text{Aq}$ . (Salzer.)

**Lithium hypophosphate**,  $\text{Li}_2\text{P}_2\text{O}_8$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . (Salzer, Sol. in 120 pts.  $\text{H}_2\text{O}$  at ord. temselsberg, J. pr. (2) 45. 153.)

$\text{Li}_2\text{H}_2\text{P}_2\text{O}_8 + 2\text{H}_2\text{O}$ . Deliquesces melsberg.)

**Magnesium hypophosphate**,  $\text{Mg}_2\text{P}_2\text{O}_8$ .

Sol. in 15,000 pts.  $\text{H}_2\text{O}$ ; sl. so easily in hypophosphoric, or melsberg, A. 232. 114.)

$+ 24\text{H}_2\text{O}$ . (Rammelsberg.)

**Magnesium hydrogen hypophosphate**,  $\text{MgH}_2\text{P}_2\text{O}_8 + 4\text{H}_2\text{O}$ .

Sol. in 200 pts.  $\text{H}_2\text{O}$ . (Salzer, A

**Manganese hypophosphate**,  $\text{Mn}_2\text{P}_2\text{O}_8$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in mineral in acetic acid. (Palm, Dissertation, 1890.)

**Manganous potassium hydrogen phosphate**,  $\text{MnH}_2\text{P}_2\text{O}_8, \text{K}_2\text{H}_2\text{P}_2\text{O}_8$ .

Ppt. (Bausa, Z. anorg. 1894, 6

**Manganous sodium hypophosphate**,  $\text{Na}_2\text{P}_2\text{O}_8 + 11\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in mineral aci

**Nickel hypophosphate**,  $\text{Ni}_2\text{P}_2\text{O}_8 + 1$

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. acid B. 21. 3401.)

**Nickel potassium hypophosphate**,  $\text{NiK}_2\text{P}_2\text{O}_8 + 6\text{H}_2\text{O}$ .

Ppt. (Bausa, Z. anorg. 1894, 6

**Nickel potassium hydrogen hyp**,  $\text{NiH}_2\text{P}_2\text{O}_8, 3\text{K}_2\text{H}_2\text{P}_2\text{O}_8 + 15\text{H}_2\text{O}$ .

Ppt. (Bausa, Z. anorg. 1894, 6

- m hypophosphate**,  $\text{NiNa}_2\text{P}_2\text{O}_6 + \text{H}_2\text{O}$ , but decomp. thereby. Easily sol. (Drawe.)
- hypophosphate**,  $\text{K}_2\text{P}_2\text{O}_6 + 8\text{H}_2\text{O}$ . Ppt.  $\text{H}_2\text{O}$ ; insol. in alcohol. (Salzer, A. 211. 1.)
- hydrogen hypophosphate**,  $\text{H}_4\text{P}_2\text{O}_6 + 3\text{H}_2\text{O}$ . Ppt.  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- hydrogen hypophosphate**,  $\text{H}_4\text{P}_2\text{O}_6 + 3\text{H}_2\text{O}$ , and  $+2\text{H}_2\text{O}$ . Sol. cold, and 1 pt. boiling  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- hydrogen hypophosphate**,  $\text{H}_4\text{P}_2\text{O}_6$ . Pts. cold, and  $\frac{1}{2}$  pt. hot  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- orthohydrogen dihypophosphate**,  $\text{O}_6 + 2\text{H}_2\text{O}$ . Pts. cold, and  $\frac{1}{4}$  pt. boiling  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- dium hypophosphate**,  $\text{O}_6 + 9\text{H}_2\text{O}$ . Ppt. 25 pts. cold, and 3 pts. hot  $\text{H}_2\text{O}$ . (Z. anorg. 1894, 6. 158.)
- ne hydrogen hypophosphate**,  $\text{H}_4 + 3\text{K}_2\text{H}_2\text{P}_2\text{O}_6 + 15\text{H}_2\text{O}$ . Sol. cold, and 1 pt. boiling  $\text{H}_2\text{O}$ . (Z. anorg. 1894, 6. 148.)
- osphate**,  $\text{Ag}_4\text{P}_2\text{O}_6$ . Sol.  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HNO}_3$ , or in  $\text{H}_2\text{SO}_4$ . Very sl. sol. in  $\text{H}_2\text{P}_2\text{O}_6 + \text{Aq}$ . (Salzer, A. 211. 1.)
- phosphate**,  $\text{Na}_4\text{P}_2\text{O}_6 + 10\text{H}_2\text{O}$ . Ppt. 30 pts. cold, much more easily in hot  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- ogen hypophosphate**,  $\text{Na}_2\text{HP}_2\text{O}_6$ . Ppt.  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- rogen hypophosphate**,  $\text{O}_6 + 6\text{H}_2\text{O}$ . Ppt. cold, and 5 pts. boiling  $\text{H}_2\text{O}$ . Sol. dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Insol. in alcohol. (Salzer, A. 211. 1.)
- rogen hypophosphate**,  $\text{H}_4$ . Ppt.  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- rogen dihypophosphate**,  $\text{H}_4$ . Ppt.  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- cent**. Sol. in 15 pts. cold  $\text{H}_2\text{O}$ . (Salzer, A. 211. 1.)
- Thallium hypophosphate**,  $\text{Ti}_4\text{P}_2\text{O}_6$ . Sol. in  $\text{H}_2\text{O}$ . Decomp. in sunlight. (Joly, C. R. 1894, 118. 650.)
- Thallium hydrogen hypophosphate**,  $\text{Ti}_2\text{H}_2\text{P}_2\text{O}_6$ . Sol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 1894, 118. 650.)
- Zinc hypophosphate**,  $\text{Zn}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Drawe, B. 21. 3403.)
- Hypophosphorosomolybdic acid**. Sol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 1894, 118. 650.)
- Barium hypophosphorosomolybdate**,  $\text{BaO}, \text{Mo}_7\text{O}_{24}, 3\text{H}_2\text{PO}_4 + 12\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  and  $\text{BaCl}_2 + \text{Aq}$ . (Mawrow, Z. anorg. 1902, 29. 156.)
- Hypophosphorous acid**,  $\text{H}_3\text{PO}_3$ . Very sol. in  $\text{H}_2\text{O}$  and alcohol. (Rose, Pogg. 12. 86.)
- Aluminum hypophosphite**. Not deliquescent, but very sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 86.)
- Ammonium hypophosphite**,  $\text{NH}_4\text{H}_2\text{PO}_3$ . Sol. in  $\text{H}_2\text{O}$ , less deliquescent than the potassium salt. (Wurtz, A. ch. (3) 7. 193.) Very sol. in absolute alcohol. (Dulong, Ann. Ch. J. 1898, 20. 826.) Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 826.) Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)
- Barium hypophosphite**,  $\text{Ba}(\text{H}_2\text{PO}_3)_2 + \text{H}_2\text{O}$ . Sol. in 3.5 pts. cold, and 3 pts. boiling  $\text{H}_2\text{O}$ . Insol. in alcohol. (Wurtz, A. 43. 323.)
- Bismuth hypophosphite**,  $\text{Bi}(\text{H}_2\text{PO}_3)_3$ . Ppt. (Vanino, J. pr. 1906, (2) 74. 150.) +  $\text{H}_2\text{O}$ . Sol. in acid  $\text{Bi}(\text{NO}_3)_3 + \text{Aq}$ . (Haga, Chem. Soc. 1895, 67. 229.)
- Cadmium hypophosphite**. Sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 91.)
- Calcium hypophosphite**,  $\text{Ca}(\text{PH}_2\text{O}_2)_2$ . Sol. in 6 pts. cold, and not much more sol. in hot  $\text{H}_2\text{O}$ . Insol. in strong, very sol. in weak alcohol. (Rosa, Pogg. 9. 361.)
- Calcium cobaltous hypophosphite**.  $2\text{Ca}(\text{PH}_2\text{O}_2)_2, \text{Co}(\text{PH}_2\text{O}_2)_2 + 2\text{H}_2\text{O}$ . Efflorescent. (Rose, Pogg. 12. 295.)
- Calcium ferrous hypophosphite**. Sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 294.)
- Cerous hypophosphite**,  $\text{Ce}(\text{PH}_2\text{O}_2)_3 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. A. B. 1872. 437.)

**Chromium hypophosphite**,  $\text{Cr}_2(\text{OH})_2(\text{H}_2\text{PO}_2)_4$ .  
*Anhydrous*. Insol. in  $\text{H}_2\text{O}$  or dil. acids.  
 +  $3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Wurtz, A. ch. (3) 16. 196.)

**Cobaltous hypophosphite**,  $\text{Co}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$ .  
 Efflorescent. Easily sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 87.)

**Cupric hypophosphite**,  $\text{Cu}(\text{PH}_2\text{O}_2)_2$ .  
 Very sol. in  $\text{H}_2\text{O}$ , but very easily decomp. on heating. (Wurtz, A. ch. (3) 16. 199.)

**Glucinum hypophosphite**.  
 Sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 86.)

**Iron (ferrous) hypophosphite**,  $\text{Fe}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 12. 294.)

**Iron (ferric) hypophosphite**.  
 Difficultly sol. in  $\text{H}_2\text{O}$  or acids. Decomp. on boiling. Sl. sol. in  $\text{H}_3\text{PO}_3 + \text{Aq}$ . (Rose.)

**Lead hypophosphite**,  $\text{Pb}(\text{PH}_2\text{O}_2)_2$ .  
 Difficultly sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Insol. in alcohol. (Rose, Pogg. 12. 288.)

**Lithium hypophosphite**,  $\text{LiH}_2\text{PO}_2 + \text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. A. B. 1872. 416.)

**Magnesium hypophosphite**,  $\text{Mg}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$ .  
 Efflorescent in dry air. Sol. in  $\text{H}_2\text{O}$ . (Rose.)

**Manganous hypophosphite**,  $\text{Mn}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$ .  
 Permanent. Very sol. in  $\text{H}_2\text{O}$ . (Wurtz, A. ch. (3) 16. 195.)

**Mercurous hypophosphite nitrate**,  
 $\text{HgH}_2\text{PO}_2, \text{HgNO}_3 + \text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$  with rapid decomp.  
 Sol. in hot conc.  $\text{HNO}_3$ . (Haga, Chem. Soc. 1895, 67. 227.)

**Nickel hypophosphite**,  $\text{Ni}(\text{PH}_2\text{O}_2)_2 + 6\text{H}_2\text{O}$ .  
 Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. 5. 494.)

**Nickel hypophosphite ammonia**,  
 $\text{Ni}(\text{H}_2\text{PO}_2)_2, 6\text{NH}_3$ .  
 (Ephraim, B. 1913, 46. 3111.)

**Platinous hypophosphite**  $\text{Pt}(\text{PH}_2\text{O}_2)_2$ .  
 Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4 + \text{Aq}$ , etc. Sol. in  $\text{HNO}_3 + \text{Aq}$ . Insol. in alcohol. (Engel, C. R. 91. 1068.)

**Potassium hypophosphite**,  $\text{KH}_2\text{PO}_2$ .  
 Very deliquescent. Very sol. in  $\text{H}_2\text{O}$ , sol. in weak, less in absolute alcohol. Insol. in ether. (Wurtz, A. ch. (3) 7. 192.)  
 Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Chem. J. 1898, 20. 828.)

**Sodium hypophosphite**,  $\text{NaH}_2\text{PO}_2 + \text{H}_2\text{O}$ .  
 Very deliquescent. Somewhat less sol. than the K salt. Very sol. in absolute alcohol. (Dulong.)  
 Very sol. in  $\text{H}_2\text{O}$ , and somewhat less sol. in alcohol. (Rammelsberg, B. A. B. 1872. 412.)  
 Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Chem. J. 1898, 20. 829.)

**Strontium hypophosphite**,  $\text{Sr}(\text{PH}_2\text{O}_2)_2$ .  
 Very easily sol. in  $\text{H}_2\text{O}$ . (Dulong.)  
 Insol. in alcohol. (Wurtz.)

**Thallous hypophosphite**,  $\text{TlH}_2\text{PO}_2$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. A. B. 1872. 492.)

**Uranyl hypophosphite**,  $\text{UO}_2(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . (Rammelsberg, Chem. Soc. (2) 11. 1.)

**Vanadyl hypophosphite**,  $\text{V}_2\text{O}_5(\text{H}_2\text{PO}_2)_4 + 2\text{H}_2\text{O}$ .  
 Insol. in cold, sl. sol. in hot  $\text{H}_2\text{O}$ .  
 Sol. in hot dil.  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , and  $\text{HNO}_3$ , and in warm conc.  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$ .  
 Insol. in oxalic acid. (Mawrow, Z. anorg. 1907, 55. 147.)

**Zinc hypophosphite**,  $\text{Zn}(\text{H}_2\text{PO}_2)_2 + \text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ .  
 +  $6\text{H}_2\text{O}$ . Efflorescent. (Wurtz, A. ch. (3) 16. 195.)

**Zirconium hypophosphite**,  $\text{Zr}(\text{OPH}_2\text{O})_4 + \text{H}_2\text{O}$ .  
 Sensitive to light. Insol. in alcohol, by which it is pptd. from aqueous solution. (Hauser, Z. anorg. 1913, 84. 93.)

#### Hypophosphotungstic acid.

**Potassium hypophosphotungstate**,  $4\text{K}_2\text{O}, 6\text{H}_2\text{PO}_3, 18\text{WO}_3 + 7\text{H}_2\text{O}$ .  
 Precipitate. Sol. in hot, very sl. sol. in cold  $\text{H}_2\text{O}$ . (Gibbs, Am. Chem. J. 5. 361.)

#### Hyposulpharsenious acid.

**Hyposulpharsenites**,  $\text{As}_2\text{S}_3, \text{M}_2\text{S}$ .  
 Difficultly sol. in  $\text{H}_2\text{O}$ . (Berselius.)  
 Do not exist. (Nilson, B. 4. 989.)

**Hyposulphuric acid**,  $\text{H}_2\text{S}_2\text{O}_4$ .  
*See Dithionic acid.*

**urous acid,  $\text{H}_2\text{S}_2\text{O}_3$ .**  
**ulphuric acid.**

**urous (Hydrosulphurous) acid,**

only in dil. aqueous solution, decomposes rapidly. Formula is  $\text{H}_2\text{S}_2\text{O}_3$ , according to A. 211. 285.) in alcohol than in  $\text{H}_2\text{O}$ . (Rossler, n. (3) 25. 845.)

**hyposulphite,  $(\text{NH}_4)_2\text{S}_2\text{O}_4$ .**  
only in solution. (Prudhomme, 399, (3) 21. 326.)

**hydrogen hyposulphite,  $\text{H}_2\text{S}_2\text{O}_4$ .**  
only in solution. (Prudhomme, 399, (3) 21. 326.)

**osulphite,  $\text{CaS}_2\text{O}_4 + 1.5\text{H}_2\text{O}$ .**  
sol. in  $\text{H}_2\text{O}$ . (Bazlen, B. 1905,

**hyposulphite,  $\text{MgS}_2\text{O}_4$ .**  
R. 1905, 140. 936.)

**yposulphite,  $\text{K}_2\text{S}_2\text{O}_4 + 3\text{H}_2\text{O}$ .**  
comp.  
alcohol. (Bazlen, B. 1905, 38.

**osulphite,  $\text{Na}_2\text{S}_2\text{O}_4$ .**  
1. Stable in dry air. (Bazlen, 1061.)  
2) dissolve 24.1 g. of the anhydrous (Jellinek, Z. anorg. 1911, 70. 130.)  
Solubility in  $\text{H}_2\text{O}$ .  
3. of the solution contain at:  
1.91 g.  $\text{Na}_2\text{S}_2\text{O}_4$   
1.67 g. "  
1.49 g. "  
k, Z. anorg. 1911, 70. 128.)  
alcohol. (Bazlen, B. 1905, 38.

**hyposulphite,  $\text{Na}_2\text{S}_2\text{O}_4$ ,  $\text{ZnS}_2\text{O}_4$ .**  
in  $\text{H}_2\text{O}$  than  $\text{ZnS}_2\text{O}_4$ . (Bazlen, 1060.)

**yposulphite,  $\text{SrS}_2\text{O}_4$ .**  
O. (Moissan, C. R. 1902, 135.

**phite,  $\text{ZnS}_2\text{O}_4$ .**  
in  $\text{H}_2\text{O}$ ; about 1 pt. in 7 pts. as supersat. solutions readily. 1905, 38. 1060.)

**ic acid,  $\text{V}_2\text{O}_5(\text{OH})_4$ .**  
**ium tetrhydroxide:**

**Hypovanadic acid,  $\text{H}_2\text{V}_2\text{O}_7$ .**  
*See Vanadous acid.*

**Hypovanadic acid with vanadic acid.**  
*See Vanadicovanadic acid.*

**Imidodimetaarsenic acid.**

**Ammonium imidodimetaarsenate,**  
 $(\text{NH}_4\text{O}_2\text{As}_2\text{O}_5\text{NH})$ .  
(Rosenheim and Jacobsohn, Z. anorg. 1906, 50. 307.)

**Imidochromic acid.**

**Ammonium imidochromate,**  
 $\text{NHCrO}(\text{ONH}_4)_2$ .  
Very sol. in  $\text{H}_2\text{O}$  with decomp. (Rosenheim and Jacobsohn, Z. anorg. 1906, 50. 299.)

**Ammonium potassium imidochromate,**  
 $\text{NH}_4\text{KCrO}_2\text{NH}$ .  
Decomp. on solution in  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1906, 50. 302.)

**Imidodiimidochromic acid.**

**Ammonium imidodiimido chromate,**  
 $\text{NH}[\text{CrO}(\text{NH})\text{ONH}_4]_2$ .  
(Rosenheim and Jacobsohn, Z. anorg. 1906, 50. 303.)

**Imidomolybdic acid.**

**Potassium imidomolybdate,  $\text{NKMdO}(\text{OK})_2$ .**  
Unstable in air.  
Very hygroscopic. Very sol. in  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1906, 50. 305.)

**Diimidodiphosphoromonamic acid,**

$\text{HO}-\text{PO} < \begin{smallmatrix} \text{NH} \\ \text{NH} \end{smallmatrix} > \text{PO}-\text{NH}_2$ .  
Correct formula for *pyrophosphotriamic acid* of Gladstone. (Mente, A. 248. 241.)

**Imidodiphosphoric acid,**

$\text{HO}-\text{PO} < \begin{smallmatrix} \text{O} \\ \text{NH} \end{smallmatrix} > \text{PO}-\text{OH}$ .  
Correct name for *pyrophosphamic acid*. (Mente, A. 248. 251.)

**Barium imidodiphosphate,  $\text{Ba} \begin{smallmatrix} \text{O} \\ \text{O} \end{smallmatrix} \begin{smallmatrix} \text{PO} \\ \text{PO} \end{smallmatrix} > \text{NH}$ .**  
Sl. sol. in  $\text{H}_2\text{O}$ . (Mente, A. 248. 243.)

**Barium imidodiphosphate, basic,**

$\text{Ba} \begin{smallmatrix} \text{O} \\ \text{O} \end{smallmatrix} \begin{smallmatrix} \text{PO} \\ \text{PO} \end{smallmatrix} > \text{N}-\text{Ba}-\text{N} \begin{smallmatrix} \text{PO} \\ \text{PO} \end{smallmatrix} \begin{smallmatrix} \text{O} \\ \text{O} \end{smallmatrix} \text{Ba} + 2\text{H}_2\text{O}$ .  
Ppt. (Mente.)

**Ferric imidodiphosphate.**

Sl. sol. in conc. acids. (Mente, A. 248. 241.)

**Silver imidodiphosphate,  $\text{Ag}_3\text{H}_2\text{P}_2\text{NO}_4$ .**Insol. in  $\text{H}_2\text{O}$ . (Stokes, Am. Ch. J. 1896, 18. 660.) $\text{Ag}_3\text{HP}_2\text{NO}_4$ . Ppt. (Stokes.)**Diimidodiphosphoric acid,**Correct name for *pyrophosphodiamic acid*. (Mente, A. 248. 241.)**Barium diimidodiphosphate,**

Sl. sol. in dil. acids. (Mente, A. 248. 244.)

**Sodium diimidodiphosphate, basic,**Sl. sol. in  $\text{H}_2\text{O}$ . (Mente, A. 248. 245.)**Diimidotriphosphoric acid.****Silver diimidotriphosphate,  $\text{Ag}_3\text{H}_4\text{P}_3\text{N}_2\text{O}_8$ .**Insol. in  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Rather sl. sol. in dil.  $\text{HNO}_3$ . (Stokes, Am. Ch. J. 1896, 18. 657.) $\text{Ag}_3\text{H}_2\text{P}_3\text{N}_2\text{O}_8$ . Insol. in  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .Decomp. by  $\text{HNO}_3$ . (Stokes.)**Trisodium diimidotriphosphate,**Sol. in  $\text{H}_2\text{O}$ .

Insol. in alcohol. (Stokes.)

**Triimidotetraphosphoric acid.****Silver triimidotetraphosphate.**

Ppt. (Stokes, Am. Ch. J. 1898, 20. 755.)

**Sodium triimidotetraphosphate,**Easily sol. in  $\text{H}_2\text{O}$ ; insol. in sodium acetate solution and dil. alcohol. (Stokes, Am. Ch. J. 1898, 20. 754.)**Imidosulphamide,  $\text{NH}_2\text{SO}_2\text{NH}\cdot\text{SO}_2\text{NH}_2$ .**

"Sulphamide" of Traube.

Very sol. in  $\text{H}_2\text{O}$  with decomp. appreciably sol. in cold, easily sol. in hot methyl and ethyl alcohol. Insol. in  $\text{C}_6\text{H}_6$  and  $\text{CHCl}_3$ . Sl. sol. in ether, cold and hot acetic ether and glacial acetic acid. Moderately stable toward alkalis. (Hantzsch and Stuer, B. 1905, 38. 1022.)**Ammonium imidosulphamide,**

(Hantsch and Stuer.)

**Imidosulphonic acid,**

Ammondisulphonic acid of Claus. Known only in aqueous solution. (Divers and Haga, Chem. Soc. 61. 943.)

Very unstable. (Berglund, B. 9. 252.)

**Ammonium imidosulphonate, basic,**Sol. in 9 pts. of  $\text{H}_2\text{O}$ . Solution is stable. Insol. in alcohol.Sl. sol. in warm conc.  $\text{H}_2\text{SO}_4$  without decomp. (Rose, Pogg. 1834, 32. 81.)

Much less sol. than the neutral salt. (Berglund, B. 9. 255.)

= "*Pyrosulphatammon*."+  $\text{H}_2\text{O}$ . Gradually efflorescent. Sol. in  $\text{H}_2\text{O}$  with subsequent decomp. (Divers and Haga.)**Ammonium imidosulphonate,  $\text{HN}(\text{SO}_2\text{NH}_4)_2$ .**Sol. in  $\text{H}_2\text{O}$ . (Raschig, A. 241. 161.)**Ammonium barium imidosulphonate,**Very sl. sol. in  $\text{H}_2\text{O}$ . (Divers and Haga.) $(\text{NH}_4)_2\text{Ba}_2\text{N}_4(\text{SO}_2)_4 + 8\text{H}_2\text{O}$ . (D. and H.)**Ammonium calcium imidosulphonate.**

(Divers, Chem. Soc. 1892, 61. 968.)

**Ammonium sodium imidosulphonate,**Very sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Divers and Haga.)**Ammonium sodium imidosulphonate nitrate,**Very sol. in  $\text{H}_2\text{O}$ . (Divers and Haga.)**Barium imidosulphonate,  $\text{Ba}\{\text{N}(\text{SO}_2)_2\text{Ba}\}_2 + 5\text{H}_2\text{O}$ .**Sl. sol. in  $\text{H}_2\text{O}$ . (Berglund, B. 9. 255.)Sol. in dil.  $\text{HNO}_3 + \text{Aq}$  without decomp. (Divers and Haga.) $\text{HN}(\text{SO}_2)_2\text{Ba} + \text{H}_2\text{O}$ . Moderately sol. in  $\text{H}_2\text{O}$ . (D. and H.)**Barium mercury imidosulphonate,**Almost insol. in cold  $\text{H}_2\text{O}$ . (Divers and Haga, Chem. Soc. 1892, 61. 977.)**Barium sodium imidosulphonate,**Sparingly sol. in  $\text{H}_2\text{O}$ . Readily sol. in  $\text{HNO}_3$  or  $\text{HCl}$ . (Divers, Chem. Soc. 1892, 61. 967.)

**midosulphonate**,  $\text{Ca}[\text{N}(\text{SO}_3)_2\text{Ca}]_2 + n \text{H}_2\text{O}$ . (Berglund.)

**mercury imidosulphonate**,  $[(\text{SO}_3)_2\text{Ca}]_2$ , sol. in  $\text{H}_2\text{O}$ . (Divers and Haga, 1896, 69. 1629.)

**mercury imidosulphonate chloride**,  $(\text{Ca})_2\text{Hg}_2\text{Cl} + 12\text{H}_2\text{O}$ , sol. by  $\text{H}_2\text{O}$ . (Divers and Haga, 1896, 69. 1629.)

**odium imidosulphonate**,  $(\text{SO}_3)_2\text{Ca} + 3\text{H}_2\text{O}$ , in cold  $\text{H}_2\text{O}$ . (Divers and Haga, c. 61. 968.)

**osulphonate**,  $(\text{PbOHSO}_3)_2\text{NPbOH}$ . (Berglund.)  
sol. in  $\text{H}_2\text{O}$ . (Divers and Haga.)  
 $\text{N}(\text{SO}_3)_2$ ,  $\text{PbO}$ . Insol. in  $\text{H}_2\text{O}$ ; in dil.  $\text{HNO}_3 + \text{Aq}$ . (D. and H.)

**s imidosulphonate**, basic,  $\text{N}(\text{SO}_3)_2\text{Hg}_2\text{O} + 6\text{H}_2\text{O}$ , more sol. in dil.  $\text{HNO}_3$  than mercuric. Sol. in cold conc.  $\text{KI} + \text{Aq}$ , if Hg as metal. (Divers and Haga, 1896, 69. 1631.)

**imidosulphonate**, basic,  $(\text{O}_3)_2\text{HgO}$ , Hg. (Divers and Haga.)

**mercuric imidosulphonate**,  $\text{N}(\text{SO}_3)_2\text{Hg}_2\text{O} + 3\text{H}_2\text{O}$ , (Divers and Haga.)  
 $(\text{SO}_3)_2\text{Hg}_2\text{O}$ ,  $[\text{Hg}_2\text{N}(\text{SO}_3)_2\text{Hg}_2]_2\text{O} + 6\text{H}_2\text{O}$ . (Divers and Haga.)

**sodium imidosulphonate**, basic,  $\text{N}(\text{SO}_3)_2\text{Na} + 2\text{H}_2\text{O}$ , efflorescent. Decomp. by long with  $\text{H}_2\text{O}$ . Much more readily sol. in  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$  and is wholly hereby. (Divers and Haga, Chem. Soc. 61. 983.)

**sodium imidosulphonate**,  $(\text{SO}_3)_2\text{Na}_4 + 6\text{H}_2\text{O}$ , sol. in cold  $\text{H}_2\text{O}$ , sol. in  $\text{HNO}_3$  and in  $\text{HCl}$ , sol. by  $\text{HCl}$  immediately, but not in  $\text{H}_2\text{O}$ . (Divers and Haga, Chem. Soc. 61. 981.)

**imidosulphonate**, basic,  $(\text{O}_3)_2\text{K}_2 + \text{H}_2\text{O}$ , sol. in  $\text{H}_2\text{O}$ . (Raschig, A. 241. 161.)  
than neutral salt. (Berglund.)

**Potassium imidosulphonate**,  $\text{HN}(\text{SO}_3\text{K})_2$ , sol. in  $\text{H}_2\text{O}$ . (Raschig, A. 241. 161.)  
= Potassium ammondisulphonate of Claus. Difficultly sol. in cold  $\text{H}_2\text{O}$ , sol. in 64 pts.  $\text{H}_2\text{O}$  at  $23^\circ$ . (Fremy.) Gradually decomp. by boiling. (Claus.)  
Sl. sol. in  $\text{H}_2\text{O}$ . (Berglund, B. 9. 255.)

**Potassium mercury imidosulphonate**,  $\text{N}_2\text{Hg}(\text{SO}_3\text{K})_4 + 4\text{H}_2\text{O}$ .  
See Mercurimidosulphonic acid.

**Silver imidosulphonate**,  $\text{AgN}(\text{SO}_3\text{Ag})_2$ , sol. in  $\text{H}_2\text{O}$ . (Berglund.)

**Silver sodium imidosulphonate**,  $\text{NaN}(\text{SO}_3\text{Ag})_2$ , sol. in  $\text{H}_2\text{O}$ . (Divers and Haga.)  
 $\text{AgNa}_2\text{N}(\text{SO}_3)_2$ . Sl. sol. in  $\text{H}_2\text{O}$ , but more sol. than the two preceding salts. (D. and H.)

**Sodium imidosulphonate**,  $\text{HN}(\text{SO}_3\text{Na})_2 + 2\text{H}_2\text{O}$ , Not efflorescent. Very sol. in  $\text{H}_2\text{O}$ . (Diver and Haga.)  
 $\text{NaN}(\text{SO}_3\text{Na})_2 + 12\text{H}_2\text{O}$ . Efflorescent. Sl. sol. in cold  $\text{H}_2\text{O}$ , but very sol. in hot  $\text{H}_2\text{O}$ . Sol. in 5.4 pts.  $\text{H}_2\text{O}$  at  $27.5^\circ$ . (Divers and Haga.)

**Sodium strontium imidosulphonate**,  $\text{SrNaN}_2\text{SO}_6 + 3\text{H}_2\text{O}$ , sol. in  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1896, 69. 1625.)

**Strontium imidosulphonate**,  $\text{Sr}[\text{N}(\text{SO}_3)_2\text{Sr}]_2 + 6\text{H}_2\text{O}$ , sol. in  $\text{H}_2\text{O}$ . (Berglund.)  
 $+ 12\text{H}_2\text{O}$ . Somewhat sol. in hot  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1896, 69. 1623.)

**Imidotrisulphoorthophosphoric acid**,  $\text{NH}_2\text{P}(\text{SH})_3$ , Insol. in  $\text{CS}_2$  and readily decomp. by  $\text{H}_2\text{O}$ . (Stock, B. 1906, 39. 1991.)

**Ammonium imidotrisulphoorthophosphate**,  $\text{NHP}(\text{SNH}_2)_3$ , Very hygroscopic. Loses  $\text{NH}_3$  in the air. Somewhat sol. in liquid  $\text{NH}_3$ . Decomp. by any other solvent in which it is sol. (Stock, B. 1906, 39. 1983.)

**Diammonium hydrogen imidotrisulphoorthophosphate**,  $\text{SHP}(\text{SNH}_2)_3\text{NH}_2$ , (Stock, B. 1906, 39. 1983.)

**Ammonium dihydrogen** ———,  $\text{SNH}_4\text{P}(\text{SH})_2\text{NH}_2$ , (Stock.)

**Disodium hydrogen imidotrisulphoorthophosphate,  $\text{SHP}(\text{SNa})_2\text{NH}$ .**

Very easily sol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Somewhat sol. in methyl and ethyl alcohol. (Stock.)

**Diimidopentasulphopyrophosphoric acid,  $\text{P}_2\text{S}_5\text{N}_2\text{H}_4$ .**

Not known in pure state. (Stock, B. 1906, 39. 1967.)

**Ammonium diimidopentasulphopyrophosphate,  $8[\text{P}(\text{SNH}_2)_2\text{NH}]_2$ .**

Very hygroscopic. Sol. in cold  $\text{H}_2\text{O}$  with decomp. (Stock, B. 1906, 39. 1978.)

**Imidosulphurous acid.****Ammonium imidosulphite,  $\text{HN}(\text{SO}_2\text{NH}_2)_2$ .**

Somewhat deliquescent. Very unstable. Easily sol. in  $\text{H}_2\text{O}$  with decomp. into thiosulphate and amidosulphate. Insol. in alcohol. (Divers and Ogawa, Chem. Soc. 1901, 79. 1100.)

**Ammonium barium imidosulphite,  $\text{Ba}(\text{SO}_2\text{NHSO}_2\text{NH}_2)_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1901, 79. 1102.)

**Potassium imidosulphite,  $\text{NH}(\text{SO}_2\text{K})_2$ .**

(Divers and Owaga, Proc. Chem. Soc. 1900, 16. 113.)

Very sol. in  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1901, 79. 1101.)

**Imidosulphuryl amide,  $\text{S}_2\text{O}_4\text{N}_2\text{H}_2 =$** 

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by conc.  $\text{HCl}$ . Insol. in alcohol sat. with  $\text{NH}_3$ . (Mente, A. 248. 265.)

**Indic acid.****Magnesium indate,  $\text{MgIn}_2\text{O}_4 + 3\text{H}_2\text{O}$ .**

Ppt. Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . (Renz, B. 1901, 34. 2764.)

**Indium, In.**

Does not decomp. hot  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl}$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Decomp. by conc.  $\text{H}_2\text{SO}_4$ . Easily sol. in  $\text{HNO}_3 + \text{Aq}$ . Insol. in acetic acid. Insol. in  $\text{KOH} + \text{Aq}$ . (Winkler, J. pr. 102. 273.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

$\frac{1}{2}$  ccm. oleic acid dissolves 0.0039 g. In in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

**Indium monobromide,  $\text{InBr}$ .**

Decomp. by hot  $\text{H}_2\text{O}$ . Easily sol. in acid. Easily sol. in cold conc.  $\text{HCl}$ . (Thiel, Z. anorg. 1904, 40. 328.)

**Indium dibromide,  $\text{InBr}_2$ .**

Decomp. by hot  $\text{H}_2\text{O}$ . Easily sol. in acid. (Thiel, Z. anorg. 1904, 40. 329.)

**Indium tribromide,  $\text{InBr}_3$ .**

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ .

**Indium monochloride,  $\text{InCl}$ .**

Deliquescent. Decomp. by  $\text{H}_2\text{O}$  into  $\text{InCl}_2$  and In. (Nilson and Pettersson, Chem. Soc. 43. 820.)

**Indium dichloride,  $\text{InCl}_2$ .**

Deliquescent in moist air; decomp. by  $\text{H}_2\text{O}$  into  $\text{InCl}$  and In. (Nilson and Pettersson, Chem. Soc. 43. 818.)

**Indium trichloride,  $\text{InCl}_3$ .**

Very deliquescent; sol. in  $\text{H}_2\text{O}$  with hissing and great evolution of heat.

**Indium lithium chloride.**

Extremely deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Meyer, A. 150. 144.)

**Indium potassium chloride,  $3\text{KCl}, \text{InCl}_2 + 1\frac{1}{2}\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Meyer.)

**Indium trifluoride,  $\text{InF}_3 + 3\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ ; readily decomp. (Thiel, B. 1904, 37. 175.)

1 l.  $\text{H}_2\text{O}$  dissolves 86.4 g. at  $25^\circ$ . Decomp. on boiling. (Thiel, Z. anorg. 1904, 40. 331.)

$+9\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ .

Sol. in  $\text{HCl}$  and in  $\text{HNO}_3$ .

Insol. in alcohol and ether. (Chabrie, C. R. 1905, 140. 90.)

**Indium hydrosulphide.**

Decomp. by acids. (Meyer.)

**Indium hydroxide,  $\text{In}_2\text{O}_3\text{H}_2$ .**

Sol. in acids; also in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  but the solution clouds up on standing or boiling, with separation of  $\text{In}_2\text{O}_3\text{H}_2$ . Insol. in  $\text{NH}_4\text{OH}$ , or  $\text{NH}_4\text{Cl} + \text{Aq}$ .

Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Renz, B. 1904, 37. 2110.)

Sl. sol. in alkylamines but completely ppt. by addition of the hydrochloride of the base. (Renz, B. 1903, 36. 2754.)

**Indium moniodide,  $\text{InI}$ .**

Slowly decomp. in moist air. Not attacked by boiling  $\text{H}_2\text{O}$ .

Sol. in dil.  $\text{HNO}_3$  in presence of  $\text{AgNO}_3$ . Very slowly sol. in cold, more rapidly sol. in

ith evolution of  $H_2$ . Very sol. in acid.  
alcohol. ether and chloroform.  
norg. 1910, **66**. 302.)

ide,  $InI_3$ .  
anorg. 1910, **66**. 302.)

ide,  $InI_3$ .  
ent. (Meyer.)  
 $ICl_3$ . Decomp. by xylene. (Thiel, 1904, **40**. 330.)

ide,  $InN$ .  
by heat. (Frans Fischer, B. 189.)

noxide,  $InO$ .  
y sol. in  $HCl + Aq$ . (Winkler, J.

ruioxide,  $In_2O_3$ .  
l. in cold, easily in hot acids.  
fications:  
w. Amorphous. Sol. in acids.  
le is insol. in ammonia and  $NH_4Cl$ .  
e. Amorphous. Insol. in acids.  
e. Amorphous. Sol. in acids.  
de is sol. in ammonia, but pptd. by

tallized. Crystalline modification  
acids. (Renz, B. 1904, **37**. 2112.)  
liquid  $NH_3$ . (Gore, Am. Ch. J. 30.)

de,  $In_2O_3 = 3InO, 2In_2O_3$  (?).  
)  
 $InO, In_2O_3$  (?). (Winkler.)

bromide (?).  
omp. by hot acids or alkalies.  
150. 137.)

chloride,  $InOCl$ .  
sol. in  $H_2O$ . (Thiel, B. 1904, **37**.

sol. in cold or hot dil. acids.  
l. in hot conc. acids. (Thiel, Z. 1, **40**. 327.)

elenide,  $In_2Se_3$ .  
rong acids with evolution of  $H_2Se$ .  
norg. 1910, **66**. 315.)

ulphide,  $In_2S$ .  
acids. (Thiel, Z. anorg. 1904, **40**.

osulphide,  $InS$ .  
l. in  $HCl$  with evolution of  $H_2S$ .  
 $INO$ , with evolution of oxides of  
(Thiel, Z. anorg. 1910, **66**. 314.)

Indium sesquisulphide,  $In_2S_3$ .  
Partially sol. in  $(NH_4)_2S + Aq$ .

Indium potassium sulphide,  $In_2S_3, K_2S$ .  
Insol. in  $H_2O$ ; decomp. by weak acids with  
separation of  $In_2S_3$ ; sol. in conc. acids.  
(Schneider, J. pr. (2) **9**. 209.)

Indium silver sulphide,  $In_2S_3, Ag_2S$ .  
Insol. in  $H_2O$ . (Schneider, l. c.)

Indium sodium sulphide,  $In_2S_3, Na_2S + 2H_2O$ .  
Insol. in  $H_2O$ . (Schneider, l. c.)

Indium monotelluride,  $InTe$ .  
Sol. in  $HNO_3$ ; insol. in  $HCl + Aq$ . (Thiel,  
Z. anorg. 1910, **66**. 318.)

Infusible white precipitate.

Diiodamine,  $NHI_2$ .  
Decomp. by  $H_2O$ .

Iodammonium iodide,  $NIH_2I$ .  
Decomp. by  $H_2O$ , caustic alkalies, and  
acids. Sol. in  $KI + Aq$ , alcohol, ether,  $CS_2$ ,  
 $CHCl_3$ . (Guthrie, Chem. Soc. (2) **1**. 239.)

Iodauric acid,  $HAuI_4$  (?).  
Not known with certainty.

Ammonium iodaureate.  
Deliquescent. Decomp. by  $H_2O$ . (John-  
ston, Phil. Mag. (3) **9**. 266.)

Barium iodaureate.  
Sol. in  $BaI_2 + Aq$ .

Cæsium iodaureate,  $CsAuI_4$ .  
(Gupta, J. Am. Chem. Soc. 1914, **36**. 748.)

Ferrous iodaureate.  
Sol. in  $H_2O$ . (Johnston.)

Potassium iodaureate,  $KAuI_4$ .  
Decomp. by  $H_2O$ . Sol. in  $KI$ , and  $HI + A$ .  
(Johnston.)

Sodium iodaureate.  
Very deliquescent. (Johnston.)

Iodauricyanhydric acid,  $HAu(CN)_2I_3$ .  
Known only in its salts.

Barium iodauricyanide,  $Ba[Au(CN)_2I_3]_2 + 10H_2O$ .  
Sl. sol. in cold, easily in hot  $H_2O$ . Easily  
sol. in alcohol. (Lindbom, Lund. Univ. Arsk.  
**12**. No. 6.)

**Calcium iodaurycyanide**,  $\text{Ca}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$ .

Not stable. (L.)

**Cobalt iodaurycyanide**,  $\text{Co}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$ .

Most insol. of all iodaurycyanides, and only sl. sol. in warm  $\text{H}_2\text{O}$ . Easily sol. in alcohol.

**Potassium iodaurycyanide**,  $\text{KAu}(\text{CN})_2\text{I}_2 + \text{H}_2\text{O}$ .

Sl. sol. in cold, easily sol. in warm  $\text{H}_2\text{O}$  and alcohol. (L.)

**Strontium iodaurycyanide**,  $\text{Sr}[\text{Au}(\text{CN})_2\text{I}_2]_2 + 10\text{H}_2\text{O}$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .

### Iodhydric Acid, HI.

Very easily and quickly absorbed by  $\text{H}_2\text{O}$ , with evolution of much heat.

Solution is decomp. on exposure to the air.

1 vol.  $\text{H}_2\text{O}$  absorbs 450 vols. HI at  $10^\circ$ . (Thomson.)

1 vol.  $\text{H}_2\text{O}$  absorbs 425 vols. HI at  $10^\circ$ . (Berthelot, C. R. 76. 679.)

Weak or strong solutions when boiled in an atmosphere of H leave a residue of constant composition, which distills unchanged at  $126^\circ$  (de Luynes), at  $127^\circ$  (Roscoe, Chem. Soc. 13. 146; Naumann; Topsøe), at  $128^\circ$  (Bineau, A. ch. (3) 7. 266); and has a sp. gr. of 1.67 (Naumann), of 1.70 (Bineau, de Luynes), of 1.708 (Topsøe); and contains 56.26 % HI (Bineau), 57.0% HI (Roscoe), 57.75% HI (Topsøe.)

By conducting dry H gas through the aqueous solution of HI, a constant residue is obtained, containing 60.3–60.7% HI if temp. is  $15\text{--}19^\circ$ , and 58.2–58.5% HI if temp. is  $100^\circ$ . (Roscoe.)

(Kammerer.)

According to Thomsen (B. 7. 71) solutions of HIO<sub>3</sub> have sp. gr.—

HIO<sub>3</sub> + 10H<sub>2</sub>O = 1.6609.

HIO<sub>3</sub> + 20H<sub>2</sub>O = 1.3660.

HIO<sub>3</sub> + 40H<sub>2</sub>O = 1.1945.

HIO<sub>3</sub> + 80H<sub>2</sub>O = 1.1004.

HIO<sub>3</sub> + 160H<sub>2</sub>O = 1.0512.

HIO<sub>3</sub> + 320H<sub>2</sub>O = 1.0258.

H<sub>2</sub>SO<sub>4</sub> at nearly boiling temp. dissolves 1/3 its weight of iodic acid. (Millon.)

Solubility in HNO<sub>3</sub> containing 27.73% HNO<sub>3</sub>.

100 g. of the sat. solution contain at:

0° 20° 40° 60°  
18 21 27 38 g. HIO<sub>3</sub>.

Solubility in HNO<sub>3</sub> containing 40.88% HNO<sub>3</sub>.

100 g. of the sat. solution contain at:

0° 20° 40° 60°  
9 10 14 18 g. HIO<sub>3</sub>.

(Groschuff, Z. anorg. 1905, 47. 344.)

Less sol. in HNO<sub>3</sub> than H<sub>2</sub>O; nearly insol. in anhydrous HNO<sub>3</sub>. (Groschuff, Z. anorg. 1905, 47. 347.)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 830.)

Unattacked and undissolved by liquid NO<sub>2</sub>. (Frankland, Chem. Soc. 1901, 79. 1362.)

Insol. in absolute alcohol. Alcohol of 35° B. dissolves half its weight in HIO<sub>3</sub>. (Kammerer.)

+4 1/2 H<sub>2</sub>O.

HIO<sub>3</sub>, I<sub>2</sub>O<sub>5</sub>. (Groschuff, Z. anorg. 1905, 47. 343.)

Iodates.

The alkali iodates are sol. in H<sub>2</sub>O, the others are sl. sol. or insol. therein.

Aluminum iodate, Al(IO<sub>3</sub>)<sub>3</sub> (?).

Deliquescent. (Berzelius.)

Ammonium iodate, NH<sub>4</sub>IO<sub>3</sub>.

Sl. sol. in H<sub>2</sub>O. Sol. in 38.5 pts. H<sub>2</sub>O at 15°, 6.9 pts. at 100°. (Rammelsberg, Pogg. 44. 555.)

Solubility of  $\text{NH}_4\text{IO}_3$  in  $\text{HIO}_3$  + Aq at  $30^\circ$ .

(Meusser, B. 1901, 34. 2435.)

+  $\text{H}_2\text{O}$ . Sol. in 148 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  and  
 90 pts. at  $100^\circ$ . Sol. in  $\text{NH}_4\text{OH}$  + Aq. (Ram-  
 melsberg, Pogg. 44. 561.)

Does not exist. (Meusser, B. 1901, 34.  
 2434.)

+  $2\text{H}_2\text{O}$ . (Meusser.)

+  $4\text{H}_2\text{O}$ . (Meusser.)

**Cupric iodate, basic,  $6\text{CuO}, 3\text{I}_2\text{O}_5 + 2\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . (Millon, A. ch. (3) 9. 400.)  
Mixture of  $\text{CuO}$  and  $\text{Cu}(\text{IO}_3)_2$ . (Ditte, A. ch. (6) 21. 175.)

$2\text{CuO}, \text{I}_2\text{O}_5 + \text{H}_2\text{O}$ . Slowly sol. in dil.  $\text{H}_2\text{SO}_4$ . (Granger and de Schulten, Bull. Soc. 1904, (3) 31. 1027.)

**Cupric iodate,  $\text{Cu}(\text{IO}_3)_2$ .**

1 l.  $\text{H}_2\text{O}$  dissolves  $3.32 \times 10^{-3}$  mol.  $\text{Cu}(\text{IO}_3)_2$  at  $25^\circ$ . (Spencer, Z. phys. Ch. 1913, 83. 295.)

Solubility in  $\text{CuSO}_4 + \text{Aq} = 3.28 \times 10^{-3}$  mol. per l. at  $25^\circ$ .

Solubility in  $\text{KIO}_3 + \text{Aq} = 3.29 \times 10^{-3}$  mol. per l. at  $25^\circ$ . (Spencer.)

+  $\text{H}_2\text{O}$ . (Ditte.)  
+  $2\text{H}_2\text{O}$ . Sol. in 302 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 154 pts. at  $100^\circ$ . Sol. in  $\text{HCl} + \text{Aq}$  or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Millon.)

**Cupric iodate ammonia,  $\text{Cu}(\text{IO}_3)_2, 2\text{NH}_3 + \text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . (Ditte, A. ch. (6) 21. 145.)  
 $\text{Cu}(\text{IO}_3)_2, 4\text{NH}_3 + 2\text{H}_2\text{O}$ . Ppt. (Ephraim, B. 1915, 48. 52.)

+  $3\text{H}_2\text{O}$ . Partially sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in alcohol. (Rammelsberg.)

$\text{Cu}(\text{IO}_3)_2, 5\text{NH}_3$ . (Ephraim.)

$\text{Cu}(\text{IO}_3)_2, 8\text{NH}_3 + 4\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in alcohol. (Ditte, A. ch. (6) 21. 145.)

**Decipium iodate,  $\text{Dp}(\text{IO}_3)_2 + 3\text{H}_2\text{O} (?)$ .**

Precipitate; scarcely sol. in  $\text{H}_2\text{O}$ . (Delafontaine.)

**Didymium iodate,  $\text{Di}(\text{IO}_3)_2 + 2\text{H}_2\text{O}$ .**

Ppt. (Cleve.)

**Erbium iodate,  $\text{Er}(\text{IO}_3)_2 + 3\text{H}_2\text{O}$ .**

Very sl. sol. in  $\text{H}_2\text{O}$ . (Hoglund.)

**Glucinum iodate.**

Deliquescent.

**Indium iodate,  $\text{In}(\text{IO}_3)_3$ .**

1 pt. is sol. in 1500 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ .

1 pt. is sol. in 150 pts.  $\text{HNO}_3$  (1:5) at  $80^\circ$ .

Sol. in  $\text{HCl}$  with decomp. Sol. in dil.  $\text{H}_2\text{SO}_4$ . (Mathers, J. Am. Chem. Soc. 1908, 30. 213.)

**Iodine iodate,  $\text{I}(\text{IO}_3)_2$ .**

Decomp. by  $\text{H}_2\text{O}$  or by alcohol. (Fichter, Z. anorg. 1915, 91. 142.)

**Iron (ferrous) iodate.**

Ppt. Sl. sol. in  $\text{H}_2\text{O}$ ; more sol. in  $\text{FeSO}_4 + \text{Aq}$ . (Geiger, Mag. Pharm. 29. 252.)

**Iron (ferric) iodate,  $\text{Fe}_2\text{O}_3, \text{I}_2\text{O}_5$ .**

Insol. in acids. (Ditte, A. ch. (6) 21. 175.)  
 $\text{Fe}_2\text{O}_3, 2\text{I}_2\text{O}_5 + 8\text{H}_2\text{O}$ . Sol. in 50

pts.  $\text{HNO}_3 + \text{Aq}$ . Sol. in 50 pts.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Geiger.)

$3\text{Fe}_2\text{O}_3, 5\text{I}_2\text{O}_5 + 15\text{H}_2\text{O}$ . Sol. in 50 pts.  $\text{HNO}_3 + \text{Aq}$ . (Rammelsberg.)

**Lanthanum iodate,  $\text{La}(\text{IO}_3)_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .**

Sl. sol. in cold, easily sol. in  $\text{H}_2\text{O}$ . Very sol. in warm  $\text{HCl} + \text{Aq}$ . (Harkins, Z. phys. Ch. 1903, 46. 349.)

100 cc. of the sat. solution in  $\text{H}_2\text{O}$  at  $25^\circ$  contains 0.1681 g. (Rimbach, Z. phys. Ch. 1909, 67. 199.)

Calc. from electrical conductivity. 100 cc. of the sat. solution at  $25^\circ$  contain 0.1871 g.  $\text{La}(\text{IO}_3)_3$  at 25° (Rimbach.)

**Lead iodate, basic,  $3\text{PbO}, \text{Pb}(\text{IO}_3)_2$ .**

Ppt. (Strömholm, Z. anorg. 1904, 1. 169.)

**Lead iodate,  $\text{Pb}(\text{IO}_3)_2$ .**

Very sl. sol. in  $\text{H}_2\text{O}$  (Pleischl, Z. phys. Ch. 1903, 46. 603.)

Insol. in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ , and wholly in  $\text{HNO}_3$  after being heated to  $100^\circ$ . (Ditte, A. ch. (6) 21. 169.)

Sl. sol. in  $\text{H}_2\text{O}$ .  $1.83 \times 10^{-3}$  are dissolved in 1 liter of sat. solution at  $20^\circ$ . (Harkins, Z. phys. Ch. 1903, 46. 603.)

1 l.  $\text{H}_2\text{O}$  dissolves 19 mg.  $\text{Pb}(\text{IO}_3)_2$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 1. 168.)

17.8 mg. are dissolved in 1 l. of  $\text{H}_2\text{O}$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 1. 168.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.0307 g.  $\text{Pb}(\text{IO}_3)_2$  at  $25^\circ$ . (Harkins, J. Am. Chem. Soc. 1911, 33. 1830.)

Solubility of  $\text{Pb}(\text{IO}_3)_2$  in salts +

C = concentration of salt in g. per l. expressed in equivalents per l.

S = solubility of  $\text{Pb}(\text{IO}_3)_2$  in g. per l. expressed in equivalents per l.

(Meerburg, Z. anorg. 1905, 45. 330.)

More sol. in  $\text{KI}$ +Aq than in  $\text{H}_2\text{O}$ . Sol. in warm  $\text{H}_2\text{SO}_4$ +Aq.

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 820.)

Insol. in alcohol.

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

+ $\frac{1}{2}\text{H}_2\text{O}$ . (Ditte, C. R. 70. 621.)

Potassium hydrogen iodate,  $\text{KH}(\text{IO}_3)_2$ .

Sol. in 18.65 pts.  $\text{H}_2\text{O}$  at 17°. (Meineke, A. 261. 360.)

Sol. in 75 pts.  $\text{H}_2\text{O}$  at 15°. 1 alcohol. (Serullas, A. ch. 22. 181.)  
See also Meerburg under  $\text{KIO}_3$ .

Potassium dihydrogen iodate,  $\text{KI}$

Sol. in 25 pts.  $\text{H}_2\text{O}$  at 15°. (Serulla 43. 117.)

See also Meerburg under  $\text{KIO}_3$ .

Potassium tellurium iodate.

See Iodotellurate, potassium.

Potassium uranyl iodate,

$\text{KUO}_2(\text{IO}_3)_2+3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ , dil. salt soluti  $\text{UO}_2(\text{NO}_3)_2$ +Aq. (Artmann, Z. anorg. 79. 340.)

Potassium iodate chloride,  $\text{KH}(\text{IO}_3)$

Sol. in 19 pts.  $\text{H}_2\text{O}$  at 15° with Cold alcohol dissolves out  $\text{KCl}$ .

Potassium iodate molybdate,  $\text{KIO}_3$ , 2 $\text{H}_2\text{O}$ .

See Molybdatoidate, potassium.

Potassium iodate selenate.

See Iodoselenate, potassium.

Potassium iodate sulphate,  $\text{KIO}_3$ ,  $\text{H}$

Decomp. by  $\text{H}_2\text{O}$ . (Marignac, J. 299.)

$\text{KHIO}_3$ ,  $\text{KHSO}_4$ . More sol. in 1  $\text{KHIO}_3$ . (Serullas.)

Potassium iodate tungstate.

See Tungstoiodate, potassium.

Rubidium iodate,  $\text{RbIO}_3$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 2.1 pts. 23°. Easily sol. in cold  $\text{HCl}$ +Aq. Sill. Am. J. 144. 123.)

Rubidium hydrogen iodate,  $\text{RbH}(\text{IO}_3)_2$

Sl. sol. in cold, more readily in  $\text{RbIO}_3$ , separating on cooling. Insol. hol. (Wheeler.)

$\text{RbH}_2(\text{IO}_3)_3$ . As above. (Whe

Rubidium iodate chloride,  $\text{RbIO}_3$ ,  $\text{HIO}_3$ ,  $\text{RbCl}$ .

Decomp. by cold  $\text{H}_2\text{O}$ . (Wheeler 3 $\text{RbCl}$ , 2 $\text{HIO}_3$ . Sol. in  $\text{H}_2\text{O}$ , fr  $\text{RbIO}_3$  separates. (Wheeler.)

Rubidium iodate selenate.

See Iodoselenate, rubidium.

Samarium iodate,  $8\text{m}(\text{IO}_3)_3+6\text{H}_2\text{O}$

Precipitate. (Cleve.)

**Sodium iodate**,  $\text{NaIO}_3$ , +10, 13, 15, and 18H<sub>2</sub>O.

Nearly insol. in H<sub>2</sub>O. (Crookes, Phil. Mag. 1910, 210, A, 361.)

**Silver iodate**,  $\text{AgIO}_3$ .

$.89 \times 10^{-4}$  moles or  $5.36 \times 10^{-1}$  g.  $\text{AgIO}_3$ , sol. in 1 liter H<sub>2</sub>O at 25°. (Noyes and Br. Z. phys. Ch. 1903, 42, 338.)

Sl. sol. in H<sub>2</sub>O.  $4.35 \times 10^{-1}$  g. are dissolved in 1 liter of sat. solution at 20°. (Böttger, Z. phys. Ch. 1903, 46, 603.)

1 l. H<sub>2</sub>O dissolves 40 mg.  $\text{AgIO}_3$  at 18°. (Kohlrausch, Z. phys. Ch. 1904, 50, 356.)

1 l. H<sub>2</sub>O dissolves 0.0275 g.  $\text{AgIO}_3$  at 9.43°; 139 g. at 184°; 0.0539 g. at 26.6°. Solubility increases rapidly with temp. (Kohlrausch, Z. phys. Ch. 1908, 64, 168.)

1 l. H<sub>2</sub>O dissolves 0.039 g.  $\text{AgIO}_3$  at 20°. (Hibb, Z. anorg. 1910, 67, 108.)

Not completely insol. in H<sub>2</sub>O. (Rose.) Sol.  $\text{NH}_4\text{OH} + \text{Aq}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ . (Naumann, J. B. 1860, 201.) Sol. in conc.  $\text{KI} + \text{Aq}$ .

(Meerburg, A. 135, 1.)

sol. in 27,700 pts. H<sub>2</sub>O at 25°; in 42.4 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  at 25°; in 2.1 pts. 10%  $\text{NH}_4\text{OH} + \text{Aq}$  at 25°; in 1044.3 pts. 35%  $\text{NH}_4\text{OH} + \text{Aq}$  (sp. gr. 1.21) at 25°. (Longi, Z. ch. it. 13, 87.)

Solubility in  $\text{HNO}_3 + \text{Aq}$  at 25°.

Normality $\text{HNO}_3$	G. $\text{AgIO}_3$ dissolved per l.
0.000	0.0503
0.125	0.0664
0.250	0.1075
0.500	0.1414

and Simmons, Z. phys. Ch. 1909, 67, 602.)

sol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 20, 829.)

sol. in methyl acetate. (Bezold, Dissert. 1906; Naumann, B. 1909, 42, 3790); acetate. (Hamers, Dissert. 1906; Naumann, B. 1910, 43, 314.)

**Silver iodate ammonia**,  $2\text{AgIO}_3 \cdot 3\text{NH}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

sl. sol. in cold H<sub>2</sub>O. (Ditte, A. ch. (6) 15.)

$\text{IO}_3$ ,  $2\text{NH}_3$ .

sol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rosen-A. 1899, 308, 52.)

**Sodium iodate**,  $\text{NaIO}_3$ .

100 pts. H<sub>2</sub>O dissolve 7.25 pts.  $\text{NaIO}_3$  at 0°; 9.07 pts. at 20°; 14.39 pts. at 80°; 33.9 pts. at 100°. (Krem-

ers, Pogg. 97, 5.) Sat. solution boils at 102° (Kremers), 105° (Ditte).

Sol. in warm  $\text{H}_2\text{SO}_4 + \text{Aq}$  diluted with  $\frac{1}{2}$  vol. H<sub>2</sub>O. Crystallizes out on standing over  $\text{H}_2\text{SO}_4$ . (Ditte.)

Solubility of  $\text{NaIO}_3$  in  $\text{HIO}_3 + \text{Aq}$  at 30°.

% $\text{HIO}_3$ in the solution	% $\text{NaIO}_3$ in the solution	Solid phase

(Meerburg, Z. anorg. 1905, 45, 334.)

Insol. in alcohol. Sol. in dil.  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ .

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . See Meerburg above.

**Sodium diiodate**,  $\text{Na}_2\text{O}, 2\text{I}_2\text{O}_5$ .

See Meerburg under  $\text{NaIO}_3$ .

**Sodium triiodate**,  $\text{NaIO}_3, 2\text{HIO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Very sol. in H<sub>2</sub>O. (Blomstrand, J. pr. (2) 42, 337.)

See also Meerburg under  $\text{NaIO}_3$ .

**Sodium iodate bromide**,  $\text{NaIO}_3, 2\text{NaBr} + 9\text{H}_2\text{O}$ .

Sol. in H<sub>2</sub>O. (Rammelsberg.)

**Sodium iodate chloride**,  $\text{NaIO}_3, \text{NaCl} + 4\text{H}_2\text{O}$ , and  $2\text{NaIO}_3, 3\text{NaCl} + 18\text{H}_2\text{O}$ .

Cold H<sub>2</sub>O dissolves out  $\text{NaCl}$ .

**Sodium iodate iodide**,  $\text{NaIO}_3, \text{NaI}$ .

Hot H<sub>2</sub>O or alcohol dissolves out  $\text{NaI}$ .

+  $8\text{H}_2\text{O}$ .

+  $10\text{H}_2\text{O}$ .

$2\text{NaIO}_3, 3\text{NaI} + 20\text{H}_2\text{O}$ . (Penny, A. 37, 202.)

Stable in a solution of  $\text{NaI} + \text{NaOH} + \text{Aq.}$  (Eakle, C. C. 1896, II. 650.)

### Strontium iodate, $\text{Sr}(\text{IO}_3)_2$ .

*Anhydrous.* Insol. in  $\text{H}_2\text{SO}_4$  (Ditte); easily sol. in cold  $\text{HCl} + \text{Aq.}$  (Rammelsberg, Pogg. 44. 575.)

+  $\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$ .  
+  $6\text{H}_2\text{O}$ . Sol. in 416 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 138 pts. at  $100^\circ$  (Gay-Lussac); 342 pts. at  $15^\circ$ , and 110 pts. at  $100^\circ$ . Difficultly sol. in warm  $\text{HNO}_3 + \text{Aq.}$  (Rammelsberg, Pogg. 44. 575.)

### Thallous iodate, $\text{TlIO}_3$ .

Difficultly sol. in warm  $\text{H}_2\text{O}$ . (Oettinger.) Insol. in  $\text{H}_2\text{O}$ ; difficultly sol. in  $\text{HNO}_3 + \text{Aq.}$  (Rammelsberg.)

Sl. sol. in  $\text{H}_2\text{O}$ .

$0.58 \times 10^{-1}$  g. are dissolved in 1 liter of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46. 603.)

$2.12 \times 10^{-3}$  mols. = 0.667 g. are sol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ . (Spencer, Z. phys. Ch. 1912, 80. 707.)

Sol. in a little  $\text{NH}_4\text{OH} + \text{Aq.}$  also in boiling  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HCl} + \text{Aq.}$  Insol. in alcohol. (Oettinger.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . Very al. sol. in  $\text{H}_2\text{O}$  or dil. boiling acids. (Ditte, A. ch. (6) 21. 145.)

### Thallic iodate, basic, $\text{Tl}(\text{OH})(\text{IO}_3)_2 + \text{H}_2\text{O} = \text{Tl}_2\text{O}_3, 2\text{I}_2\text{O}_5 + 3\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in cold  $\text{HCl} + \text{Aq.}$  and warm dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Ditte, A. ch. (6) 21. 145.)

### Thallic iodate, $\text{Tl}(\text{IO}_3)_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in  $\text{HNO}_3 + \text{Aq.}$  Decomp. by alkalis. (Rammelsberg.)

+  $12\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Gewecke, Z. anorg. 1912, 75, 275.)

### Thorium iodate, $\text{Th}(\text{IO}_3)_4$ .

Precipitate. (Cleve.)

### Tin (stannous) iodate.

Ppt. Sol. in  $\text{SnCl}_2 + \text{Aq.}$ ; insol. in  $\text{NaIO}_3 + \text{Aq.}$

### Tin (stannic) iodate.

Ppt.

### Uranous iodate.

Precipitate. Very unstable. (Rammelsberg.)

### Uranyl iodate, $\text{UO}_2(\text{IO}_3)_2$ .

Sol. or insol. in  $\text{HNO}_3$  and  $\text{H}_3\text{PO}_4 + \text{Aq.}$  according to method of preparation. (Ditte.) +  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{HNO}_3 + \text{Aq.}$  (Rammelsberg.)

### Ytterbium iodate, $\text{Yb}(\text{IO}_3)_3 + 6\text{H}_2\text{O}$ .

Ppt. (Cleve, Z. anorg. 1902, 32. 136.)

### Yttrium iodate, $\text{Y}(\text{IO}_3)_3 + 3\text{H}_2\text{O}$ .

Sol. in 190 pts.  $\text{H}_2\text{O}$ . (Berlin.)

### Zinc iodate, $\text{Zn}(\text{IO}_3)_2$ .

*Anhydrous.* (Ditte, A. ch. (6) 21. 14.) +  $2\text{H}_2\text{O}$ . Sol. in 114 pts. cold, and 76 hot  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 43. 665) Sol. in  $\text{HNO}_3$ , and  $\text{NH}_4\text{OH} + \text{Aq.}$

Exists also in a very sol. modification (Mylius and Funk, B. 1897, 30. 1723.)

### Zinc iodate ammonia, $3\text{Zn}(\text{IO}_3)_2, 8\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} +$  from which it is pptd. by alcohol. (Rammelsberg, Pogg. 44. 563.)

$\text{Zn}(\text{IO}_3)_2, 2\text{NH}_3$ . Insol. in  $\text{H}_2\text{O}$ . (Ditte, ch. (6) 21. 145.)

$\text{Zn}(\text{IO}_3)_2, 3\text{NH}_3 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Ditte.)

$\text{Zn}(\text{IO}_3)_2, 4\text{NH}_3$ . (Ditte, A. ch. 1890, 21. 164.) (Ephraim, B. 1915, 48. 53.)

### Periodic acid.

See Periodic acid.

### Iodides.

The iodides are in general easily sol.  $\text{H}_2\text{O}$ ; exceptions are  $\text{HgI}_2$ ,  $\text{PbI}_2$ ,  $\text{AgI}$ ,  $\text{CuI}$  and  $\text{BiI}_3$ , also the iodides of the Pt metals all of which are insol.  $\text{SnI}_4$ ,  $\text{SbI}_3$ , and  $\text{TI}_3$  decomp. by  $\text{H}_2\text{O}$ . Many iodides are more in solutions of salts than in  $\text{H}_2\text{O}$ , and several are sol. in alcohol or ether.

See under each element.

### Iodine, $\text{I}_2$ .

Sol. in 5524 pts.  $\text{H}_2\text{O}$  at  $0-12^\circ$ . (Wittstein, 1887. 123.)

Sol. in 7000 pts.  $\text{H}_2\text{O}$ . (Gay-Lussac.)

Sol. in 3800 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Bassac.)

Sol. in 500 pts.  $\text{H}_2\text{O}$ . (Jacquelin.)

Sol. in 7196.4 pts.  $\text{B}_2\text{O}_3$  at  $18.75^\circ$ . (Abl.)

Pure  $\text{H}_2\text{O}$  dissolves 0.01519173 g. I litre, or I is sol. in 6582 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Dossius and Weith, Zeit. Ch. 12. 378.)

Sol. in about 4500 pts.  $\text{H}_2\text{O}$ . (H. Comm. 1883.)

Sol. in 7000 pts.  $\text{H}_2\text{O}$ . (Cap and Gerst Pharm. (3) 26. 80.)

1 l.  $\text{H}_2\text{O}$  at  $25^\circ$  dissolves 0.3387 g. (Jakowkin, Z. phys. Ch. 1895, 18. 590.)

1 l.  $\text{H}_2\text{O}$  dissolves 1.342 millimole of I at  $25^\circ$ . (Noyes, Z. phys. Ch. 1898, 27.)

When iodine is shaken with  $\text{H}_2\text{O}$  at 1 pt. dissolves in 3750 pts.  $\text{H}_2\text{O}$ ; when I and  $\text{H}_2\text{O}$  are heated together and then cooled to  $15^\circ$ , 1 pt. iodine dissolves in 3500 pts.  $\text{H}_2\text{O}$ .

At  $30^\circ$ , 1 pt. is sol. in 2200 pts. (Dietz, Chem. Soc. 1899, 76, (2) 150.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.279 grams  $\text{I}_2$  at  $15^\circ$ . (McLauchlan, Z. phys. Ch. 1903, 44.)

Solubility of  $I_2$  in  $H_2O$  at  $t^\circ$ .

	g. $I_2$ per l. $H_2O$
	0.2765
	0.3395
	0.4661
	0.6474
	0.9222

(Meyer, Chem. Soc. 1908, 83. 744.)

Solubility of  $I_2$  in  $H_2O$  at  $t^\circ$ .

g. per l.	milliat. per l.
0.1649	1.30
0.2941	2.30
0.5684	4.56

(Tessier, Z. anorg. 1910, 69. 30.)

mol  $I_2$  are sol. in 1 l.  $H_2O$ . (Bray, m. Soc., 1910, 32. 938.)

deduced from electrical conductivity of 1 l.  $H_2O$  dissolves 0.0006383 mols. of  $I_2$ . (Bray, J. Am. Chem. Soc. 1915, 37.)

$H_2SO_4$ ,  $HCl$ ,  $HNO_3$ ,  $H_3PO_4$ , tartaric, or citric acids + Aq dist give it up to  $CS_2$  on shaking (Tessier, Z. anal. 11. 313.)

50 pts.  $H_2SO_4$  on warming, but out in part on cooling. (Kraus.)  $I_2$  is more sol. in  $HBr$  + Aq than in pure  $H_2O$  + Aq of sp. gr. 1.486 dissolves 1.0 g.  $I_2$  (Kraus, Z. anorg. 1905, 53.)

1.  $HCl$  + Aq. Easily sol. in even 1. (Kraus, Z. anorg. 1905, 53.)

2.  $N-HCl$  + Aq sat. with  $I_2$  contains 1.0 g.  $I_2$  (Bray and Mackay, J. Am. Chem. Soc. 1919.)

3.  $HNO_3$  + Aq sat. with  $I_2$  contains 1.0 g.  $I_2$  (Sammet, Z. phys. Ch. 1905, 53.)

4.  $H_2SO_4$  + Aq sat. with  $I_2$  contains 1.0 g.  $I_2$  (Sammet.)

5.  $H_2O$  + Aq with decomp. of  $H_2BO_3$  dissolves 0.300 g.  $I_2$  at 13.5° (Meyer, Z. phys. Ch. 1903, 44.)

6. In a 10% solution of  $BaBr_2$  dissolves 1.0 g.  $I_2$  at 13.5°. (Meyer, Z. anorg. 1904, 4.)

7. In a 10% solution of  $BaCl_2$  dissolves 1.0 g.  $I_2$  at 13.5°. (Meyer.)

8. In a 10% solution of  $BaI_2$  dissolves 1.0 g.  $I_2$  at 13.5°. (Meyer.)

9. In a 10% solution of  $CaBr_2$  dissolves 1.0 g.  $I_2$  at 13.5°. (Meyer.)

10. In a 10% solution of  $CaCl_2$  dissolves 1.0 g.  $I_2$  at 13.5°. (Meyer.)

11. In a 10% solution of  $CaI_2$  dissolves 1.0 g.  $I_2$  at 13.5°. (Meyer.)

12.  $I_2$  is sol. in boiling dil.  $HgCl_2$  + Aq.

Solubility in  $HgCl_2$  + Aq at 25°.

10 ccm. of the solution contain:

millimols $I_2$	millimols $Hg$
0.0134	0
0.1294	0.9444
0.1460	1.2442
0.1806	1.9542
0.2543	3.3460

(Hers and Paul, Z. anorg. 1914, 85. 214.)

Sol. in solutions of soluble iodides.

100 pts.  $KI$  + 200 pts.  $H_2O$  dissolve 153 pts.  $I_2$ ; from this solution  $H_2O$  precipitates  $\frac{1}{2}$  the dissolved  $I_2$ . 100 pts.  $KI$  + 400 pts.  $H_2O$  dissolve quickly 76.5 pts.  $I_2$ . If more water is present, the solution takes place more slowly. (Baup.)

$CS_2$  extracts the  $I_2$  from the above solutions.

Solubility of  $I_2$  in  $KI$  + Aq at 7-7.3°.

% $KI$ in $KI$ + Aq	Pts $I_2$ dissolved	Sp. gr. of solution
1.802	1.173	1.0234
3.159	2.303	1.0433
4.628	3.643	1.0668

N. $\text{NH}_4\text{NO}_3$	0.375	N. $\text{NH}_4\text{Br}$	4.003

(McLauchlan, Z. phys. Ch. 1903, 44. 617.)

1.14 g. are sol. in 100 ccm. liquid  $\text{H}_2\text{S}$ . (Antony, Gazz. ch. it. 1905, 35, (1) 206.)

Sol. in liquid  $\text{NH}_3$ . (Franklin, Am. ch. J. 1898, 20. 822.)

Sl. sol. in liquid  $\text{CO}_2$ . (Büchner, Z. phys. Ch. 1906, 54. 674.)

Sol. in liquid  $\text{SO}_2$ . (Sestini), and  $\text{SO}_3$  (Weber).

100 pts.  $\text{AsCl}_3$  dissolve 8.42 pts.  $\text{I}$  at 0°; 11.88 pts.  $\text{I}$  at 15°; 36.89 pts.  $\text{I}$  at 96°. (Sloan, C. N. 46. 194.)

Sol. in liquid  $\text{SO}_2$ ,  $\text{AsCl}_3$ ,  $\text{SO}_2\text{Cl}_2$ , and acetaldehyde. (Walden, Z. phys. Ch. 1903, 43. 407.)

Very sol. in liquid  $\text{NO}_2$ . (Frankland, Chem. Soc. 1901, 79. 1361.)

Sol. in 10-12 pts. alcohol. (Wittstein.)

Sol. in wood-spirit. (Playfair.)

Abundantly sol. in amyl (Pelletan), and hexyl alcohol (Bouis).

Iodine is sol. in 20 pts. alcohol, 110 pts. oil, 7000 pts.  $\text{H}_2\text{O}$ , 100 pts. glycerine. (Cap and Garot, J. Pharm. (3) 26. 80.)

#### Solubility of $\text{I}_2$ in $\text{C}_2\text{H}_5\text{OH} + \text{Aq}$ at room temperature (14.5°—15.1°).

Volumes of $\text{C}_2\text{H}_5\text{OH}$ in 100 volumes of $\text{C}_2\text{H}_5\text{OH} + \text{H}_2\text{O}$	Ccm. of 1/10-normal iodine in 5 cc. of the solution

(Landau, Z. phys. Ch. 1910, 73, 206.)

Iodine monobromide,  $IBr$ .

Slowly sol. in  $H_2O$  with slight decol. Sol. in  $CHCl_3$ ,  $CS_2$ , ether, and alcohol.

+  $5H_2O$ . (Löwig, Pogg. 14, 485.)  $I$  not exist. (Bornemann, A. 189, 183.)

**pentabromide**,  $\text{IBr}_5(?)$ .  
in  $\text{H}_2\text{O}$  with separation of iodine.  
, Pogg. 14. 485.)

**monochloride**,  $\text{ICl}$ .

mp. by  $\text{H}_2\text{O}$ ; sol. without decomp. in  
ether, and  $\text{HCl} + \text{Aq.}$   
in  $\text{CS}_2$ .

**hydrogen chloride**,  $\text{ICl}$ ,  $\text{HCl}$ .

able. Sol. in ether. (Schützenberger,  
14. 389.)

**trichloride**,  $\text{ICl}_3$ .

rescent. With  $\text{H}_2\text{O}$ , a part is dissolved  
t decomp., and the rest is decomp.  
queous solution contains more und  
 $\text{ICl}_3$ , the more conc. it is. (Serullas.)  
tated from aqueous solution by  $\text{H}_2\text{SO}_4$ .  
 $\text{HCl} + \text{Aq.}$  Sol. in warm conc.  $\text{H}_2\text{SO}_4$   
t decomp. Sol. in alcohol, and ben-  
Decomp. by small amount of  $\text{CS}_2$ .  
omanos, B. 10. 434.) Ether does not  
it from aqueous solution. (Serullas.)

**lithium chloride**,  $\text{ICl}_3$ ,  $\text{LiCl} + 4\text{H}_2\text{O}$ .

**lithium chloroiodide**.

**trichloride magnesium chloride**,  $2\text{ICl}_3$ ,  
 $\text{gCl}_2 + 5\text{H}_2\text{O}$ .

deliquescent and easily decomposed.  
, J. Pharm. 25. 442.)  
 $\text{I}_2\text{O}$ . Hydrosopic. (Weinland, Z.  
1902, 30. 141.)

**trichloride manganous chloride**,  $2\text{ICl}_3$ ,  
 $\text{nCl}_2 + 8\text{H}_2\text{O}$ .

rosopic. (Weinland, Z. anorg. 1902,  
1.)

**trichloride nickel chloride**,  $2\text{ICl}_3$ ,  
 $\text{iCl}_2 + 8\text{H}_2\text{O}$ .

rosopic.  $\text{CCl}_4$  dissolves out  $\text{ICl}_3$ .  
and, Z. anorg. 1902, 30. 138.)

**monochloride phosphorus pentachlor-**  
**e**,  $\text{ICl}$ ,  $\text{PCl}_5$ .

deliquescent; decomp. by  $\text{H}_2\text{O}$ .

**potassium chloride**,  $\text{ICl}_3$ ,  $\text{KCl}$ .

in  $\text{H}_2\text{O}$  with decomp.

$\pi$  dissolves out  $\text{ICl}_3$ . (Filhol, J. Pharm.  
1, 506.)

**Potassium chloroiodide**.

**sodium chloride**,  $\text{ICl}_3$ ,  $\text{NaCl} + 2\text{H}_2\text{O}$ .

**Sodium chloroiodide**.

**trichloride strontium chloride**,  $2\text{ICl}_3$ ,  
 $\text{Cl}_2 + 8\text{H}_2\text{O}$ .

rosopic. (Weinland, Z. anorg. 1902,  
2.)

**Iodine trichloride sulphur tetrachloride**,  $\text{ICl}_3$ ,  
 $\text{SCl}_4$ .

Very deliquescent in air; decomp. by  $\text{H}_2\text{O}$ .  
Decomp. with formation of clear solution by  
dil.  $\text{HNO}_3 + \text{Aq.}$  (Weber, Pogg. 128. 459.)

$\text{SCl}_2$ ,  $2\text{ICl}_3$ . (Jaillard, J. B. 1860. 95.)

Correct formula is as above. (Weber, l. c.)  
 $2\text{ICl}_3$ ,  $\text{SCl}_4$ . Sol. in  $\text{SO}_2\text{Cl}_2$ ,  $\text{SOCl}_2$ ,  $\text{POCl}_3$ ,  
warm  $\text{SCl}_2$ , petroleum ether, ligroin,  $\text{CHCl}_3$ ,  
 $\text{CCl}_4$ ,  $\text{CS}_2$  and abs. ether. (Ruff, B. 1904, 37.  
4519.)

**Iodine trichloride zinc chloride**,  $2\text{ICl}_3$ ,  $\text{ZnCl}_2 +$   
 $8\text{H}_2\text{O}$ .

Unstable. Hydrosopic. (Weinland, Z.  
anorg. 1902, 30. 140.)

**Iodine pentafluoride**,  $\text{IF}_5$ .

Fumes in air; decomp. with  $\text{H}_2\text{O}$ . (Gore,  
C. N. 24. 291.)

Decomp. by  $\text{H}_2\text{O}$  into iodic acid and  $\text{HF}$ .  
Decomp. by solutions of the alkalis. (Mois-  
san, C. R. 1902, 135. 564.)

**Iodine trioxide**,  $\text{I}_2\text{O}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Ogier, C. R. 85. 957;  
86. 722.)

Probably a mixture.

**Iodine tetroxide**,  $\text{I}_2\text{O}_4(?)$ .

Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ ; insol.  
in alcohol. Decomp. by  $\text{HNO}_3 + \text{Aq.}$  Sol. in  
 $\text{H}_2\text{SO}_4$ . (Millon, J. pr. 34. 319, 337.)

**Iodine pentoxide**,  $\text{I}_2\text{O}_5$ .

Very sol. in  $\text{H}_2\text{O}$ , and in dil. alcohol.  
Insol. in absolute alcohol, ether,  $\text{CS}_2$ , chloro-  
form, and hydrocarbons.

Forms hydrates, iodic acid  $\text{HIO}_3$ , and  
 $3\text{I}_2\text{O}_5$ ,  $\text{H}_2\text{O}$ ; insol. in ordinary alcohol.

For sp. gr. of aqueous solution, see *iodic*  
*acid*.

**Iodine oxides**,  $\text{I}_{10}\text{O}_{19}$ ,  $\text{I}_2\text{O}_{13}$ .

The compounds,  $\text{I}_{10}\text{O}_{19}$  (Millon, J. pr. 34.  
336), and  $\text{I}_2\text{O}_{13}$  (Kämmerer, J. pr. 83. 81),  
are probably mixtures.

Millon's oxides are impure  $\text{I}_2\text{O}_4$ . (Kap-  
peler, B. 1911, 44. 3496.)

**Iodine sulphur oxide**,  $5\text{I}_2\text{O}_5$ ,  $\text{SO}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Kämmerer.)

$\text{I}_2\text{O}_5$ ,  $3\text{SO}_2$ . Decomp. by  $\text{H}_2\text{O}$ ; sl. sol. in  
hot  $\text{SO}_4$ . (Weber, B. 20. 86.)

$= (\text{IO})_2(\text{SO}_4)_3$ . Iodyl sulphate (?).

**Iodine oxyfluoride**,  $\text{IOF}_3 + 5\text{H}_2\text{O}$ .

Fumes in the air. (Weinland, Z. anorg.  
1908, 60. 163.)

**Iodine sulphide**,  $\text{S}_7\text{I}_2$ .

Sol. in  $\text{CS}_2$ . (Linebarger, Am. Ch. J. 1895,  
17. 57.)

**Iodine sulphoxide,  $I_2SO_2$ (?).**

Decomp. by  $H_2O$ . (Schultz-Sellack.)  
 $I_2(SO_2)_2$ (?). Decomp. by  $H_2O$ . (Weber, J. pr. (2) 25. 224.)  
 $I_2(SO_2)_2$ (?). As above. (Weber.)  
*See also* Iodosulphuric anhydride.

**Iodiridic acid.****Ammonium iodiridate,  $(NH_4)_2IrI_4$ .**

Very easily sol. in cold  $H_2O$ , decomp. on warming. Insol. in alcohol. (Oppler, J. B. 1857. 263.)

**Potassium iodiridate,  $K_2IrI_4$ .**

Very easily sol. in  $H_2O$ . Insol. in alcohol.

**Sodium iodiridate,  $Na_2IrI_4$ .**

Insol. in cold, sl. sol. in hot  $H_2O$ . Easily sol. in acids. (Oppler.)

**Iodiridous acid.****Ammonium iodiridite,  $(NH_4)_2Ir_2I_{11} + H_2O$ .**

Very sol. in  $H_2O$ , but decomp. on warming. (Oppler.)

**Potassium iodiridite,  $K_2Ir_2I_{11}$ .**

Insol. in  $H_2O$ , or alcohol. Slowly sol. in acids; easily in warm alkalies + Aq.

**Silver iodiridite,  $Ag_2Ir_2I_{11}$ .**

Ppt.

**Iodochloroplatindiamine chloride,**

Sl. sol. in  $H_2O$ .

**Iodochromic acid.****Potassium iodochromate,  $KCrO_5I$ .**

Decomp. by boiling  $H_2O$ . (Guyot, C. R. 73. 46.)

*See also* Chromoiodic acid.

**Iodomolybdic acid.**

*See* Molybdoiodic acid.

**Iodonitratoplatinmonodiamine bromide,**

Very sl. sol. in  $H_2O$ . (Cleve.)

**Iodonitritoplatin diamine nitrate,**

Quite easily sol. in hot  $H_2O$ . (Cleve.)

**Iodopalladous acid.****Potassium iodopalladite.**

Deliquescent. (Lassaigne.)

**Iodophosphoric acid.**

*See* Phosphoiodic acid.

**Iodoplatinamine iodide,  $I_2Pt(NH_2I)_2$ .**

Sol. in  $H_2O$ , especially easily if boil (Cleve.)

**Iodoplatin diamine iodide,  $I_2Pt(N_2H_4I)_2$ .**

Sol. in  $H_2O$ , especially when hot. (Cleve.)

— mercuric iodide,  $I_2Pt(N_2H_4I)_2, 2HgI$

Extremely difficultly sol. in cold  $H_2O$ , partly decomp. by boiling. (Jørgensen, K. 3. 1214.)

— nitrate,  $I_2Pt(N_2H_4NO_2)_2$ .

More sol. in hot than cold  $H_2O$ .

— sulphate,  $I_2Pt(N_2H_4)_2SO_4$ .

Very sl. sol. in  $H_2O$ . (Jørgensen, J. pr. 15. 429.)

**Iodoplatin semidiamine iodide,**

Sl. sol. in  $H_2O$ . (Jørgensen, J. pr. (2) 345.)

— periodide,  $I_2Pt(NH_2)_2I, I_2$ .

Moderately sl. sol. in  $H_2O$ . (Cleve.)

**Iododiplatinamine iodide,  $I_2Pt_2(N_2H_4)_2$ .**

Insol. in  $H_2O$ .

**Iododiplatin diamine anhydriodide,**

Insol. in  $NH_4OH$  + Aq.

— anhydronitrate,  $I_2Pt_2(N_2H_4)_2O(NO_2)_2$

Easily sol. in warm  $H_2SO_4$  + Aq. (Cleve.)

— iodide,  $I_2Pt_2(N_2H_4)_2I_4$ .

Ppt.

— nitrate,  $I_2Pt_2(N_2H_4)_2(NO_2)_4 + 4H_2O$ .

Sl. sol. in cold, moderately sol. in hot  $H_2O$  (Cleve.)

— phosphate,  $I_2Pt_2(N_2H_4)_2[O_2P(OH)]_2$ .

Nearly insol. in  $H_2O$ .

— sulphate,  $I_2Pt_2(N_2H_4)_2(SO_4)_2$ .

Nearly insol. in  $H_2O$ .

— platodiamine sulphate,  $I_2Pt_2(N_2H_4)_2$

Very sl. sol. in  $H_2O$ . (Carlgren Sv. V. A 47. 306.)

**Iodoplatinic acid,  $H_2PtI_6 + 9H_2O$ .**

Deliquescent. Easily sol. in  $H_2O$ , with comp. into  $PtI_4$  and  $HI$  on standing or warming. (Topsoë.)

**iodoplatinate**,  $(\text{NH}_4)_2\text{PtI}_4$ .  
sl. in  $\text{H}_2\text{O}$ . (Topsoë.)  
 $\text{PtI}_4$ . Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in Lassaigne, A. ch. (2) 51. 128.)

**oplatinate**,  $\text{BaPtI}_4$ .  
cent, but less so than  $\text{Na}_2\text{PtI}_4$  herwise resembles. (Lassaigne.)

**doplatinate**,  $\text{CaPtI}_4 \cdot 12\text{H}_2\text{O}$ .  
eliquescent as Na salt.

**platinate**,  $\text{CoPtI}_4 \cdot 9\text{H}_2\text{O}$ .  
iquescent.

**odoplatinate**,  $[\text{PtI}_4(\text{OH})_2]\text{PbI}_2$ .  
elluci, C. C. 1902, I. 625.)

**iodoplatinate**,  $\text{MgPtI}_4 \cdot 9\text{H}_2\text{O}$ .  
O.

**iodoplatinate**,  $\text{MnPtI}_4 \cdot 9\text{H}_2\text{O}$ .  
iquescent.

**triiodoplatinate**,  $[\text{PtI}_4(\text{OH})_2]\text{HgI}_2$ .  
elluci, C. C. 1902, I. 625.)

**platinate**,  $\text{NiPtI}_4 \cdot 9\text{H}_2\text{O}$ .  
iquescent.

**iodoplatinate**,  $\text{K}_2\text{PtI}_4$ .  
sl. in  $\text{H}_2\text{O}$ . Insol. in alcohol. Not y cold conc.  $\text{H}_2\text{SO}_4$ .

**iodoplatinate**,  $\text{Pt}[\text{I}_4(\text{OH})_2]\text{Ag}_3$ .  
elluci, C. C. 1902, I. 625.)

**loplatinate**,  $\text{Na}_2\text{PtI}_4 \cdot 6\text{H}_2\text{O}$ .  
quescent, but easily sol. in  $\text{H}_2\text{O}$  ol. (Vauquelin.) Deliquescent.)

**triiodoplatinate**,  $[\text{PtI}_4(\text{OH})_2]\text{TiI}_2$ .  
elluci, C. C. 1902, I. 625.)

**atinate**,  $\text{ZnPtI}_4 \cdot 9\text{H}_2\text{O}$ .  
sl. in  $\text{H}_2\text{O}$ .

**ocyanhydric acid**,  $\text{H}_2\text{Pt}(\text{CN})_4\text{I}_2$ .  
**iodoplatinocyanhydric acid**.

**platinocyanide**,  $\text{Ag}_2(\text{PtI}_2(\text{CN})_4)_2$ .  
liolati, Gazz. ch. it. 1900, 30. 588.)

**iodoplatinocyanide platinocyanide**,  $(\text{N})_2\text{I}_2$ ,  $10\text{SrPt}(\text{CN})_4 \cdot x\text{H}_2\text{O}$ .

**Iodopurpleochromium chloride**,  
 $\text{ICr}(\text{NH}_3)_3\text{Cl}_2$ .  
Quite sol. in  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 25. 83.)

— **chloroplatinate**,  $\text{ICr}(\text{NH}_3)_3\text{PtCl}_4$ .  
Precipitate. (Jørgensen, l. c.)

— **iodide**,  $\text{ICr}(\text{NH}_3)_3\text{I}_2$ .  
Difficultly sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{HI}$ , or  $\text{KI} + \text{Aq}$ ; insol. in alcohol. (Jørgensen, l. c.)

— **nitrate**,  $\text{ICr}(\text{NH}_3)_3(\text{NO}_3)_2$ .  
Much less sol. in  $\text{H}_2\text{O}$  than the chloride. (Jørgensen, l. c.)

**Iodopurpleocobaltic iodide**,  $\text{CoI}(\text{NH}_3)_3\text{I}_2$ .  
(Claudet.)  
Does not exist. (Jørgensen, J. pr. (2) 25. 94.)

**Iodopurpleorhodium chloride**,  
 $\text{IRh}(\text{NH}_3)_3\text{Cl}_2$ .  
Relatively easily sol. in  $\text{H}_2\text{O}$ ; insol. in  $\text{HCl} + \text{Aq}$  and alcohol. Insol. in  $\text{KI} + \text{Aq}$ . (Jørgensen, J. pr. (2) 27. 433.)

— **fluosilicate**,  $\text{IRh}(\text{NH}_3)_3\text{SiF}_6$ .  
Nearly insol. in cold  $\text{H}_2\text{O}$ .

— **iodoplatinate**,  $\text{IRh}(\text{NH}_3)_3\text{PtI}_4$ .  
Ppt.

— **iodide**,  $\text{IRh}(\text{NH}_3)_3\text{I}_2$ .  
Very sl. sol. in cold  $\text{H}_2\text{O}$ ; more sol. in hot  $\text{H}_2\text{O}$ ; insol. in dil.  $\text{HI} + \text{Aq}$ , and alcohol. (Jørgensen, J. pr. (2) 27. 433.)

— **nitrate**,  $\text{IRh}(\text{NH}_3)_3(\text{NO}_3)_2$ .  
Sl. sol. in  $\text{H}_2\text{O}$ , more easily sol. in hot  $\text{H}_2\text{O}$ ; insol. in dil.  $\text{HNO}_3 + \text{Aq}$ , and alcohol.

— **sulphate**,  $\text{IRh}(\text{NH}_3)_3\text{SO}_4$ , and  $+3\text{H}_2\text{O}$ .  
Sl. sol. in even hot  $\text{H}_2\text{O}$ . (Jørgensen.)

**Iodoselenic acid**.

**Ammonium iodoselenate**,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{SeO}_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Weinland, B. 1903, 36. 1400.)  
 $2(\text{NH}_4)_2\text{O}$ ,  $3\text{I}_2\text{O}_5$ ,  $2\text{SeO}_3 + 5\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp.(?). (Weinland.)

**Potassium iodoselenate**,  $2\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{SeO}_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Weinland.)  
 $2\text{K}_2\text{O}$ ,  $3\text{I}_2\text{O}_5$ ,  $2\text{SeO}_3 + 5\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp.(?) (Weinland.)

**Rubidium iodoselenate**,  $2\text{Rb}_2\text{O}$ ,  $3\text{I}_2\text{O}_5$ ,  $2\text{SeO}_2$ ,  $+5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Weinland.)

**Iodostannous acid.**

Data concerning solubility of  $\text{SnI}_2$  in  $\text{HI} + \text{Aq}$  indicate formation of this compound. (Young, J. Am. Chem. Soc. 1897, 19, 853.)

**Iodosulphobismuthous acid.**

**Cuprous iodosulphobismuthite**,  $2\text{Cu}_2\text{S}$ ,  $\text{Bi}_2\text{S}_3$ ,  $2\text{BiSI}$ .

Decomp. by  $\text{H}_2\text{O}$  at ord. temp. Decomp. by mineral acids with evolution of  $\text{H}_2\text{S}$ . (Ducatte, C. R. 1902, 134, 1213.)

**Lead iodosulphobismuthite**,  $\text{PbS}$ ,  $\text{Bi}_2\text{S}_3$ ,  $2\text{BiSI}$ .

Insol. in  $\text{H}_2\text{O}$ . Partially decomp. by boiling  $\text{H}_2\text{O}$ . Decomp. by dil. mineral acids with evolution of  $\text{H}_2\text{S}$ . (Ducatte.)

**Iodosulphuric acid.**

**Ammonium iodosulphate**,  $(\text{NH}_4)_2\text{SO}_4\text{I}_2(?)$ .

Very sol. in  $\text{H}_2\text{O}$ . (Zinno, N. Rep. Pharm. 20, 449.)

**Mercuric iodosulphate**,  $\text{Hg}_2(\text{SO}_4)\text{I}_2$ .

See Mercuric sulphate iodide.

**Potassium iodosulphate**,  $\text{K}_2\text{SO}_4\text{I}_2(?)$ .

Sol. in 7.14 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Zinno, N. Rep. Pharm. 20, 449.)

**Sodium iodosulphate**,  $\text{Na}_2\text{SO}_4\text{I}_2 + 10\text{H}_2\text{O}$ .

Sol. in 3.64 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  and in dil. alcohol. (Zinno, N. Rep. Pharm. 20, 449.)

Does not exist. (Michaelis and Koethe, B. 6, 999.)

**Iodosulphuric anhydride**,  $\text{ISO}_2$ .

Decomp. very violently by  $\text{H}_2\text{O}$ . (Weber, J. pr. (2) 25, 224.)

**Diiodosulphuric anhydride**,  $\text{I}_2\text{SO}_2$ .

Decomp. with  $\text{H}_2\text{O}$ , but not so violently as  $\text{ISO}_2$ . (Weber, J. pr. (2) 25, 224.)

**Iodo-trisulphuric anhydride**,  $\text{I}(\text{SO}_2)_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Weber, J. pr. (2) 25, 224.)

**Iodotelluric acid.**

**Ammonium iodotellurate**,  $(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_2 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1901, 28, 52.)

$(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_2 + 8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Weinland, B. 1900, 33, 1017.)

**Cæsium iodotellurate**,  $\text{Cs}_2\text{TeI}_4$ .

Insol. in  $\text{CsI}$ , or  $\text{HI} + \text{Aq}$ . Decon. by cold, rapidly by hot  $\text{H}_2\text{O}$ . (Wh. Am. J. 145, 267.)

**Potassium iodotellurate**,  $\text{K}_2\text{TeI}_4 + 2$

Sl. efflorescent. Somewhat sol. in and dil.  $\text{HI} + \text{Aq}$ . (Wheeler.)

$\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $\text{TeO}_2 + 3\text{H}_2\text{O}$ . Sol. Partially decomp. on recryst. fr. (Weinland, Z. anorg. 1901, 28, 53.)

$\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_2 + 6\text{H}_2\text{O}$ . Sol. without decomp. (Weinland.)

**Rubidium iodotellurate**,  $\text{Rb}_2\text{TeI}_4$ .

Sl. sol. in  $\text{HI}$ , or  $\text{RbI} + \text{Aq}$ . D.  $\text{H}_2\text{O}$ . Somewhat sol. in alcohol.

$\text{Rb}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{TeO}_2 + 6\text{H}_2\text{O}$ . So (Weinland.)

**Iodotetramine chromium iodide**

$\text{ICr}(\text{NH}_3)_4\text{I}_2 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Pptd. by alcohol.

**Iodotetramine cobaltic sulphate**

$\text{ICo}(\text{NH}_3)_4\text{SO}_4$ .

(Vortmann and Blasberg, B. 22,

**Iodotungstic acid.**

See Tungstolodic acid.

**Iodous acid**,  $\text{I}_2\text{O}_3$ .

See Iodine trioxide.

**Iodovanadic acid**,  $\text{I}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5 + 5\text{I}$

Very easily sol. in  $\text{H}_2\text{O}$ .

$2\text{V}_2\text{O}_5$ ,  $3\text{I}_2\text{O}_5 + 18\text{H}_2\text{O}$ . (Ditte, 757.)

**Ammonium iodovanadate**,  $3(\text{NH}_4)$

$5\text{I}_2\text{O}_5 + 20\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 102.

**Irididiamine compounds**,  $\text{Cl}_2\text{Ir}(\text{NH}_3)_4$

See Chlorirididiamine compounds.

**Iridic acid.**

**Potassium iridate** (?).

Sol. in  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq}$ .

**Iridicyanhydric acid**,  $\text{H}_2\text{Ir}(\text{CN})_6$

Easily sol. in  $\text{H}_2\text{O}$ , still more e. in alcohol, less in ether. (Martius, A.

**Barium iridicyanide**,  $\text{Ba}_2[\text{Ir}(\text{CN})_6]$

Efflorescent. Easily sol. in hot c. Nearly insol. in alcohol. Not d. acids.

**Iridicyanide ammonia**,  $\text{Cu}_3\text{Ir}_2(\text{CN})_{12}$ ,  
 $+4\text{H}_2\text{O}$ .  
 Decomp. in air. (Rimbach, Z. anorg.  
 13.)

**Iridicyanide**,  $\text{K}_2\text{Ir}(\text{CN})_6$ .  
 Sol. in  $\text{H}_2\text{O}$ .

**Iridicyanide ammonia**,  $\text{Ag}_3\text{Ir}(\text{CN})_6$ ,  
 $+3\text{H}_2\text{O}$ .  
 Decomp. in the light. (Rimbach, Z.  
 7, 52. 414.)

r.

In all acids, including aqua regia,  
 when in finely divided state, as  
 lack," when it is sol. in aqua regia.  
 pr. 42. 251.)

**Ammonia compounds.**

**Iridamine comp.**,  $\text{CHIr}(\text{NH}_3)_2\text{X}$ .  
 Iridamine "  $\text{Ir}(\text{NH}_3)_3\text{X}_3$ .  
 Iridamine "  $\text{Ir}(\text{NH}_3)_4\text{X}_2$ .  
 Iridamine "  $\text{Ir}(\text{NH}_3)_5\text{X}$ .  
 Iridamine "  $\text{Ir}(\text{NH}_3)_6$ .  
 Iridamine "  $\text{Ir}(\text{NH}_3)_3(\text{OH})_2\text{X}_2$ .  
 Iridamine "  $\text{Ir}(\text{NH}_3)_4\text{X}_2$ .  
 Iridamine "  $\text{Ir}(\text{NH}_3)_5\text{X}$ .

**Iridium bromide**,  $\text{IrBr}_3 + 4\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol (or  
 rnbbaum.)

**Iridium bromide**,  $\text{IrBr}_3$ , or  $\text{H}_2\text{IrBr}_4$ .  
 Cent. Sol. in  $\text{H}_2\text{O}$  and alcohol.  
 .)

**Iridic acid.**

**Iridium sesquibromide**,  $3\text{HBr}$ ,  
 $+ \text{H}_2\text{O} = \text{H}_2\text{IrBr}_4 + 3\text{H}_2\text{O}$ .  
**Iridous acid.**

**Iridium sesquibromide with MBr.**  
**Iridite, M.**

**Iridium sesquibromide with MBr.**  
**Iridate, M.**

**Iridium phosphorous bromide**,  $\text{IrBr}_3, 3\text{PBr}_3$ .  
 Decomp. by  $\text{H}_2\text{O}$  into a sol., and  
 ification. Sol. in  $\text{PBr}_3$ . (Geisen-

**Iridium phosphorous bromide**,  $\text{IrBr}_3$ .  
 Not easily attacked by  $\text{H}_2\text{O}$ .  
 $\text{PBr}_3$ .  
**Iridium phosphorous chlorobromide.**

**Iridium phosphorous chloride**,  $\text{IrCl}_3$ .(?)

**Iridium phosphorous chloride**,  $\text{IrCl}_3$ .  
 Sol. in  $\text{H}_2\text{O}$ , acids, and alcohol.  
 B. 1906, 42. 1773.)

**Iridium monochloride**,  $\text{IrCl}$ .

Insol. in acids and bases. (Wöhler, B.  
 1913, 46. 1584.)

**Iridium dichloride**,  $\text{IrCl}_2$ .

Insol. in acids and bases. (Wöhler, B.  
 1913, 46. 1585.)

**Iridium trichloride**,  $\text{IrCl}_3$ .

Insol. in acids or alkalies. (Claus, C. C.  
 1861. 690.)

Insol. in  $\text{H}_2\text{O}$ , acids and alkalies, (Leidié,  
 C. R. 1899, 129. 1251.)  
 $+4\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Claus.)

**Iridium tetrachloride**,  $\text{IrCl}_4$ , or  $\text{H}_2\text{IrCl}_6$ (?).

Deliquescent, and easily sol. in  $\text{H}_2\text{O}$ .

**Iridium trichloride with MCl.**

See Chloriridite, M.

**Iridium tetrachloride with MCl.**

See Chloriridate, M.

**Iridium chloride with potassium chloride and  
 sulphite.**

See Chloriridosulphite, potassium.

**Iridium phosphorus chloride**,  $\text{IrP}_2\text{Cl}_5$ .

Insol. in cold  $\text{H}_2\text{O}$ . Sl. decomp. by hot  
 $\text{H}_2\text{O}$ . (Geisenheimer, A. ch. (6) 23. 254.)

$\text{IrP}_2\text{Cl}_{10}$ . Very sol. in chloroform. (G.)  
 $\text{IrP}_2\text{Cl}_{12}$ . Easily sol. in  $\text{PCl}_5$ , or  $\text{CHCl}_3$ ,  
 also in  $\text{CS}_2$  with gradual decomp. Sl. sol. in  
 cold  $\text{H}_2\text{O}$ . Decomp. by boiling into  $\text{IrCl}_3$ ,  
 $3\text{H}_2\text{PO}_4$ . Sl. sol. in benzene, ligroin and  $\text{CCl}_4$ .  
 (Strecker, B. 1909, 42. 1772.)

$+ \text{H}_2\text{O}$ . Insol. in  $\text{PCl}_5$  at  $100^\circ$ . Very  
 slowly sol. in boiling  $\text{H}_2\text{O}$ . (Geisenheimer, A.  
 ch. (6) 23. 266.)

$\text{IrP}_2\text{Cl}_{15}$ . Decomp. by  $\text{H}_2\text{O}$  into  $2\text{IrCl}_3$ ,  
 $3\text{H}_2\text{PO}_4$ ,  $3\text{H}_2\text{PO}_4$ . Violently decomp. by  
 alcohol. Sl. sol. in cold, more in hot  $\text{POCl}_3$ ,  
 without decomp. Very sol. in  $\text{PCl}_5$  with  
 decomp. into  $\text{IrP}_2\text{Cl}_{12}$ ; similarly in  $\text{PBr}_3$ . Sol.  
 in  $\text{AsCl}_3$  with combination. Sol. in  $\text{CS}_2$  with  
 decomp. Sol. in  $\text{SCl}_2$  with combination.  
 Easily sol. in cold  $\text{C}_6\text{H}_6$  with decomp. Insol.  
 in  $\text{CCl}_4$ . Sol. in  $\text{CHCl}_3$  with decomp. (Gei-  
 senheimer, A. ch. (6) 23. 254.)

**Iridium phosphorus arsenic chloride**,

$2\text{IrP}_2\text{Cl}_{15}, 5\text{AsCl}_3$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. into correspond-  
 ing acid. (Geisenheimer, C. R. 110. 1336.)

$\text{IrCl}_3, 2\text{PCl}_5, 2\text{AsCl}_3$ . Very sol. in  $\text{H}_2\text{O}$   
 with decomp. Sol. in  $\text{AsCl}_3$ ; insol. in  $\text{CCl}_4$ .  
 (Geisenheimer.)

**Iridium phosphorus sulphur chloride**,  $\text{IrCl}_3$ ,  
 $2\text{PCl}_5, 2\text{SCl}_2$ .

Very sol. in sl. amt.  $\text{H}_2\text{O}$ , with decomp. into  
 an acid analogous to chlorophosphoiridic acid.  
 Sol. in  $\text{SCl}_2$ . (Geisenheimer.)

**Iridium phosphorus chlorobromide**,  $\text{IrBr}_4 \cdot 2\text{PCl}_5$ .

(Geisenheimer, C. R. 111. 40.)

**Iridium dihydroxide**,  $\text{IrO}_2 \cdot 2\text{H}_2\text{O} = \text{IrO}_4\text{H}_4$ .

Insol. in dil.  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq.}$  Slowly but completely sol. in  $\text{HCl} + \text{Aq.}$  Sol. in  $\text{KOH}$ , and  $\text{NaOH} + \text{Aq.}$  (Claus, J. pr. 39. 104.)

**Iridium sesquihydroxide**,  $\text{Ir}_2\text{O}_3\text{H}_4$ .

Not attacked by acids, except slightly by conc.  $\text{HCl} + \text{Aq.}$  (Claus, C. C. 1861. 690.)

**Iridium triiodide**,  $\text{IrI}_3$ .

Very sl. sol. in cold, somewhat more in hot  $\text{H}_2\text{O}$ . Insol. in alcohol. (Oppler, J. B. 1857. 263.)

**Iridium tetraiodide**,  $\text{IrI}_4$ .

Insol. in  $\text{H}_2\text{O}$  or acids. (Lassaigne.)  
Sol. in solutions of iodides. (Oppler.)

**Iridium triiodide with MI.**

See Iodiridite, M.

**Iridium tetraiodide with MI.**

See Iodiridate, M.

**Iridium dioxide**,  $\text{IrO}_2$ .

Very sl. sol. in acids.

*Freshly pptd.* Sol. in conc.  $\text{H}_2\text{SO}_4$ , hot 2-N  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ ,  $\text{HCl}$ . Insol. in 2-N  $\text{KOH}$  and sl. sol. in hot 1-N  $\text{KOH}$ .

*Dried in a dessicator.* Sol. in  $\text{HCl}$ . Insol. in  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , and  $\text{KOH}$ .

*Dried at 100°.* Sol. in hot conc.  $\text{HCl}$ . Insol. in  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , and  $\text{KOH}$ . (Wöhler, Z. anorg. 1908, 57. 334.)

See also Iridium dihydroxide.

**Iridium trioxide**,  $\text{IrO}_3$ .

Unstable. (Wöhler, Z. anorg. 1908, 57. 340.)

**Iridium sesquioxide**,  $\text{Ir}_2\text{O}_3$ .

Insol. in acids.

Sol. in conc.  $\text{H}_2\text{SO}_4$ , and hot conc.  $\text{HCl}$ . Forms colloidal solution with dil.  $\text{HCl}$ . Conc.  $\text{HNO}_3$  converts it into the dioxide.

Insol. in  $\text{KOH} + \text{Aq.}$  (Wöhler, Z. anorg. 1908, 57. 339.)

**Iridium oxybromide**,  $\text{Ir}_2\text{Br}_3\text{O}_2 = 2\text{IrBr}_4 \cdot \text{IrO}_2$ .

Not decomp. by  $\text{H}_2\text{O}$ . (Geisenheimer, A. ch. (6) 23. 286.)

**Iridium phosphide**,  $\text{Ir}_3\text{P}$ .

(Clarke and Joslin, Am. Ch. J. 5. 231.)

**Iridium sesquiselenide**,  $\text{Ir}_2\text{Se}_3$ .

Insol. in  $\text{HNO}_3$ ; slowly sol. in hot aqua regia. (Chabrie and Bouchonnet, C. R. 1903, 137. 1060.)

**Iridium monosulphide**,  $\text{IrS}$ .

Insol. in  $\text{HNO}_3 + \text{Aq.}$  and very at all in aqua regia. (Berselius.)

Sol. in  $\text{K}_2\text{S}$ , and  $\text{KSH} + \text{Aq.} + x\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; sol.  $\text{HNO}_3 + \text{Aq.}$  Insol. in  $\text{NH}_4\text{Cl} + \text{acids}$ . More sol. in  $\text{K}_2\text{S} + \text{Aq.}$  t (Berselius.)

**Iridium disulphide**,  $\text{IrS}_2$ .

Not attacked by  $\text{H}_2\text{O}$ , but dec exposed moist in air. Not attack  $\text{HCl} + \text{Aq}$  or by conc.  $\text{HNO}_3 + \text{oxidised}$  by fuming  $\text{HNO}_3 + \text{Aq.}$  regia. Insol. in  $\text{NH}_4$  sulphides, phides +  $\text{Aq.}$  Slowly sol. in alk phides +  $\text{Aq.}$  (Antony, Gass. ch. 190.)

**Iridium sesquisulphide**,  $\text{Ir}_2\text{S}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ , or

**Iridotriamine chloride**,  $\text{Ir}(\text{NH}_3)_3$

Sl. sol. in  $\text{H}_2\text{O}$ . Not attacked  $\text{H}_2\text{SO}_4$ . (Palmaer, B. 22. 15.)

**Iridotetraamine chloride**,  $\text{Ir}(\text{NH}_3)_4$

Very sol. in  $\text{H}_2\text{O}$ . (Palmaer, B.

— chlorosulphate,  $[\text{Ir}(\text{NH}_3)_4\text{Cl}_2]\text{S} \cdot 4\text{H}_2\text{O}$ .

(Palmaer.)

**Iridopentamine bromide**,  $\text{Ir}(\text{NH}_3)_5\text{Br}$

Sol. in 352 pts.  $\text{H}_2\text{O}$  at 12.5°. (I 23. 3817.)

— bromochloride,  $[\text{Ir}(\text{NH}_3)_4\text{ClBr}]$

Sol. in  $\text{H}_2\text{O}$ . (Palmaer, B. 24. 21)

— bromonitrite,  $[\text{Ir}(\text{NH}_3)_4\text{Br}(\text{NO})]$

Sol. in 17.9 pts.  $\text{H}_2\text{O}$  at 18°. (I

— bromosulphate,  $[\text{Ir}(\text{NH}_3)_4\text{BrS}]$

Sol. in  $\text{H}_2\text{O}$ . (Palmaer.)

— carbonate,  $[\text{Ir}(\text{NH}_3)_4]_2(\text{CO}_3)_2$

Sol. in  $\text{H}_2\text{O}$ . (Claus, J. pr. 63.)

— trichloride,  $[\text{Ir}(\text{NH}_3)_3\text{Cl}_3]$

Sol. in 153.1 pts.  $\text{H}_2\text{O}$  at 15.1°. B. 23. 3810.)

Sol. in hot  $\text{H}_2\text{O}$  containing  $\text{HCl}$ . pr. 69. 30.)

— chlorobromide,  $[\text{Ir}(\text{NH}_3)_4\text{ClBr}]$

Sol. in 213.6 pts.  $\text{H}_2\text{O}$  at 15°. (I

— chloriodide,  $[\text{Ir}(\text{NH}_3)_4\text{ClI}]$

Sol. in 104.5 pts.  $\text{H}_2\text{O}$  at 15°. (I

— chlorooxalate,  $[\text{Ir}(\text{NH}_3)_4\text{ClC}_2\text{O}_4]$

Sl. sol. in  $\text{H}_2\text{O}$ . (Palmaer.)

**amine chloronitrate**,  
 $\text{H}_2\text{I}_2\text{Cl}_2(\text{NO}_2)_2$ .  
 51.54 pts.  $\text{H}_2\text{O}$  at  $15.4^\circ$ . (Palmaer.)

**ronitrite**,  
 $\text{H}_2\text{I}_2\text{Cl}(\text{NO}_2)_2$ .  
 sol. in  $\text{H}_2\text{O}$ . (Palmera.)

**roplatinate**,  $\text{Ir}(\text{NH}_3)_4\text{Cl}_2$ ,  $\text{PtCl}_4$ .  
 . sol. in  $\text{H}_2\text{O}$ . (Palmear.)

**rosulphate**,  $\text{Ir}(\text{NH}_3)_4\text{ClSO}_4 + 2\text{H}_2\text{O}$ .  
 134.5 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Palmaer.)

**oxide**,  $\text{Ir}(\text{NH}_3)_4(\text{OH})_2$ .  
 only in solution, which decomp. on  
 on. (Claus.)

**te**,  $\text{Ir}(\text{NH}_3)_4(\text{NO}_2)_2$ .  
 tely sol. in  $\text{H}_2\text{O}$ . (Claus.)  
 349 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ . (Palmaer.)

**ate**,  $[\text{Ir}(\text{NH}_3)_4]_2(\text{SO}_4)_3$ .  
 $\text{H}_2\text{O}$ . (Claus.)

**pentamine bromide**,  
 $\text{I}_2(\text{OH}_2)_5\text{Br}_2$ .  
 4 pts.  $\text{H}_2\text{O}$ . Pptd. from aqueous  
 by  $\text{HBr} + \text{Aq}$ . (Palmaer, B. 24.

**ide**,  $\text{Ir}(\text{NH}_3)_4(\text{OH}_2)\text{Cl}_2$ .  
 1.2 to 1.5 pts.  $\text{H}_2\text{O}$  at ord. temp.  
 $\text{HCl} + \text{Aq}$  from aqueous solution.  
 B. 24. 2090.)

**te**,  $\text{Ir}(\text{NH}_3)_4(\text{OH}_2)(\text{NO}_2)_2$ .  
 about 10 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ . Pptd.  
 ous solution by  $\text{HNO}_3 + \text{Aq}$ . (Pal-

**us acid**,  $\text{H}_2\text{Ir}_2(\text{NO}_2)_{12}$ .  
 ol. in  $\text{H}_2\text{O}$ . (Gibbs, B. 4. 281.)

**n iridonitrite**,  $(\text{NH}_4)_4\text{Ir}_2(\text{NO}_2)_{12}$ .  
 insol. in cold  $\text{H}_2\text{O}$ ; decomp. by hot  
 evolution of  $\text{N}_2$ . Decomp. by hot  
 $\text{O}_2$  or  $\text{HCl}$ . Insol. in sat.  $\text{NH}_4\text{Cl} +$   
 lié, C. R. 1902, 134. 1583.)

**donitrite iridochloride**,  
 $(\text{NO}_2)_{12}$ ,  $\text{Ba}_2\text{Ir}_2\text{Cl}_{12}$ .  
 $\text{I}_2\text{O}$ . (Lang.)

**ridonitrite**,  $\text{Hg}_2\text{Ir}_2(\text{NO}_2)_{12}$ .  
 $\text{H}_2\text{O}$ . (Gibbs, B. 4. 280.)

**iridonitrite**,  $\text{K}_4\text{Ir}_2(\text{NO}_2)_{12}$ .  
 n cold, more sol. in boiling  $\text{H}_2\text{O}$ .  
 y hot  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . Insol. in  
 (Leidié, Bull. Soc. 1902, (3) 27.

Moderately sol. in  $\text{H}_2\text{O}$ .

**Potassium iridonitrite iridochloride**,  
 $\text{K}_4\text{Ir}_2(\text{NO}_2)_{12}$ ,  $\text{K}_4\text{Ir}_2\text{Cl}_{12}$ .  
 Sol. in  $\text{H}_2\text{O}$ .

**Silver iridonitrite**,  $\text{Ag}_2\text{Ir}_2(\text{NO}_2)_{12}$ .  
 Difficultly sol. in cold, more easily in hot  
 $\text{H}_2\text{O}$ .

**Sodium iridonitrite**,  $\text{Na}_4\text{Ir}_2(\text{NO}_2)_{12} + 2\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in cold  $\text{H}_2\text{O}$ . Decomp.  
 by hot conc.  $\text{H}_2\text{SO}_4$  or  $\text{HCl}$ . (Leidié, C. R.  
 1902, 134. 1583.)

**Sodium iridonitrite iridochloride**,  
 $\text{Na}_4\text{Ir}_2\text{Cl}_2(\text{NO}_2)_2 + 2\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)  
 $\text{Na}_4\text{Ir}_2(\text{NO}_2)_{12}$ ,  $\text{Na}_4\text{Ir}_2\text{Cl}_4$ . Insol. in cold, sl.  
 sol. in hot  $\text{H}_2\text{O}$ . (Lang.)

**Iridosamine chloride**,  $\text{Ir}(\text{NH}_3)_4\text{Cl}_2$ .  
 Nearly insol. in  $\text{H}_2\text{O}$ . (Skoblikoff, A. 34.  
 275.)

— **sulphate**,  $\text{Ir}(\text{NH}_3)_4\text{SO}_4$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Skoblikoff.)

**Iridosodiamine chloride**,  $\text{Ir}(\text{N}_2\text{H}_5)_2\text{Cl}_2$ .  
 Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . (Skob-  
 likoff.)

— **nitrate**,  $\text{Ir}(\text{N}_2\text{H}_5\text{NO}_2)_2$ .  
 Easily sol. in  $\text{H}_2\text{O}$ .

— **sulphate**,  $\text{Ir}(\text{N}_2\text{H}_5)_2\text{SO}_4$ .  
 Sl. sol. in cold, easily in boiling  $\text{H}_2\text{O}$ . Sl.  
 sol. in alcohol.

**Iridosulphuric acid**.

**Potassium iridosulphate**,  $\text{K}_4\text{Ir}_2(\text{SO}_4)_4$ .  
 Sol. in  $\text{H}_2\text{O}$ . (de Boisbaudran, C. R. 96.  
 1406.)

**Iridosulphurous acid**.

**Ammonium iridosulphite**,  $(\text{NH}_4)_4\text{Ir}_2(\text{SO}_3)_2 +$   
 $6\text{H}_2\text{O}$ .  
 Slightly sol. in  $\text{H}_2\text{O}$ . (Birnbbaum, A. 136.  
 179.)

**Potassium iridosulphite**,  $\text{K}_4\text{Ir}_2(\text{SO}_3)_2 + 6\text{H}_2\text{O}$ .  
 Slightly sol. in  $\text{H}_2\text{O}$ .

**Sodium iridosulphite**,  $\text{Na}_4\text{Ir}_2(\text{SO}_3)_2 + 8\text{H}_2\text{O}$ .  
 Scarcely sol. in  $\text{H}_2\text{O}$ .

**Iron, Fe.**

Permanent in dry air; oxidises only slowly  
 in moist air, but rapidly when in contact  
 with air and  $\text{H}_2\text{O}$  simultaneously.

Fe does not rust in contact with air and

H<sub>2</sub>O containing alkalies even in very small amounts. (Payen, A. ch. 50. 305.)

Not attacked at ord. temp. by H<sub>2</sub>O free from air. More easily oxidised by NH<sub>4</sub> salts + Aq than by H<sub>2</sub>O when exposed to air simultaneously. (Persoz, A. ch. (3) 24. 506.)

Iron is slowly attacked by distilled H<sub>2</sub>O in presence of air. 100 ccm. distilled water removed 29 mg. from 11.8 sq. cm. iron in one week, while air free from CO<sub>2</sub> was passed through the solution. In presence of CO<sub>2</sub>, 54 mg. were removed. (Wagner, Dingl. 221. 260.)

CO<sub>2</sub> acts as a catalyst for the solution of Fe by H<sub>2</sub>O. (Whitney, J. Am. Chem. Soc. 1903, 25. 394.)

Iron is most easily oxidised when it is exposed to air, and H<sub>2</sub>O is deposited on it at the same time in liquid form.

100 l. sea water dissolve 27.37 g. from 1 sq. metre Fe; 29.16 g. from 1 sq. metre steel; 1.12 g. from 1 sq. metre galvanised Fe. (Calvert and Johnson, C. N. 11). 171.)

Readily sol. in HCl, dil. H<sub>2</sub>SO<sub>4</sub> + Aq, and most other acids.

Action of H<sub>2</sub>SO<sub>4</sub> + Aq (1:12) is very much accelerated by a few drops of PtCl<sub>4</sub> + Aq; the addition of As<sub>2</sub>O<sub>3</sub> arrests the action completely. Tartar emetic and HgCl<sub>2</sub> diminish the action, but do not arrest it. CuSO<sub>4</sub> + Aq strongly accelerates the action, and Ag<sub>2</sub>SO<sub>4</sub> + Aq also to a less extent.

In the case of HCl + Aq, the addition of small amts. of metallic salts also influences the action. Weak HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq has but little action, and the addition of PtCl<sub>4</sub> increases it; As<sub>2</sub>O<sub>3</sub> stops it; other solutions have no effect. With racemic and tartaric acids the phenomena are the same.

With oxalic acid, PtCl<sub>4</sub> prevents the action. Saline solutions and even distilled H<sub>2</sub>O, when mixed with PtCl<sub>4</sub>, have slight solvent action. (Millon, C. R. 21. 45.)

Above phenomena are due to galvanic action from metal deposited on the iron. (Barreswill, C. R. 21. 292.)

H<sub>2</sub>SO<sub>4</sub> has only sl. action on cast-iron at ord. temp. with exclusion of air.

Weak acids have a strong action at higher temperatures.

Charcoal pig-iron, and case-hardened cast-iron are much less attacked by weak acids at h.-pt. than other sorts of Fe. Scotch pig-iron is most strongly attacked.

99.8% H<sub>2</sub>SO<sub>4</sub> has very sl. action on iron at ord. temp. when air is excluded. (Lunge, Dingl. 261. 131.)

Resistance against dil. H<sub>2</sub>SO<sub>4</sub> + Aq is greatly increased by increase in amt. of C if chemically combined, less so by P or Si. (Lodebur, Dingl. 223. 326.)

*Passive Iron.*—When Fe is treated with pure conc. HNO<sub>3</sub> + Aq of 1.512–1.419 sp. gr., it soon becomes coated with a bluish or black coating, apparently FeO, and when thus

covered Fe is not attacked by HNO<sub>3</sub> + Aq of any strength at ord. temp. or at the temp. of a freezing mixture; but action occurs on heating. Nor is Fe attacked at ord. temp. by acid of 1.401 sp. gr. or even somewhat weaker acid, though action begins at once on heating. Very dil. HNO<sub>3</sub> + Aq attacks Fe at ord. temp. with formation of NH<sub>4</sub>NO<sub>3</sub> and Fe(NO<sub>3</sub>)<sub>3</sub>. The action of HNO<sub>3</sub> + Aq is influenced by PtCl<sub>4</sub>. If acid containing 45 equivalents of H<sub>2</sub>O is diluted with 2–3 vol. H<sub>2</sub>O, and then poured on Fe turnings, they dissolve at once with evolution of nitrous fumes and formation of ferric salt, but if to the acid one drop of PtCl<sub>4</sub> be added, only H gas is evolved, and NH<sub>4</sub>NO<sub>3</sub> and Fe(NO<sub>3</sub>)<sub>3</sub> are formed. (Millon, C. R. 21. 47.)

The more H<sub>2</sub>O the acid contains the lower will be the temp. at which the Fe remains passive. Shaking the wire hastens the passivity. Contact with Pt, Au, or C does not prevent it. Fe wire becomes passive by remaining 10 min. in HNO<sub>3</sub> vapour. (Renard, C. R. 79. 159.)

Iron may be made passive by HClO<sub>4</sub>, HBrO<sub>3</sub>, HIO<sub>3</sub>, H<sub>2</sub>CrO<sub>4</sub>, in the same way as by HNO<sub>3</sub>.

Iron may also be made passive by moderate ignition.

Passivity occurs with HNO<sub>3</sub> + Aq of 1.38 sp. gr. after a short time at 31°; but if temp. is 32°, passivity does not occur.

Colourless HNO<sub>3</sub> + Aq of 1.42 sp. gr. produces passivity at 55° but not at 56°. Red fuming HNO<sub>3</sub> + Aq of 1.42 sp. gr. produces passivity at 82° but not at 83°. (Ordway, Sill. Am. J. (2) 40. 316.)

The passivity of Fe is destroyed when it is placed in a magnetic field at a much lower temperature than when in normal condition. (Nichols and Franklin, Sill. Am. J. (3) 34. 419.)

Passivity depends on a coating of NO which hinders the action of the acid. All operations which remove this layer terminate the passivity, as shaking, rubbing, placing in a vacuum, etc. (Varenne, C. R. 89. 783.)

When Fe is plunged in HNO<sub>3</sub> + Aq of 1.42 sp. gr. there is a sudden evolution of gas which ceases after 3 to 20 seconds, and the surface becomes bright. The same phenomena take place with a more dilute acid, if of not less than 1.32 sp. gr. In the latter case, there is an immediate evolution of gas, which suddenly ceases and the metal becomes bright, but soon the acid begins to act again at a single point, and the action gradually spreads over the whole surface; this, however, soon ceases again, and we have an "intermittent passivity."

If a part of a piece of iron is immersed in strong acid, the whole of it is made passive. This is explained by the NO spreading over the whole surface by capillarity.

The passivity ceases when the Fe is placed in dil. acid, after a longer or shorter time,

According to the dilution of the acid,—when acid has sp. gr. = 1.30, after 11 days  
 " " " 1.28 " 5 "  
 " " " 1.26 " 32 hours  
 " " " 1.16 " 12 "

Iron may also be made passive by long standing in NO gas under pressure. (Varenne, R. 90. 998.)

Fe is made passive by a coating of  $\text{Fe}_3\text{O}_4$  by NO. (Schonbein, Pogg. 39. 342.)  
 etc., Pogg. 67. 286.) (Ramann, B. 14. 0.)

Passivity may also be caused by  $\text{NH}_4\text{NO}_3$ ,  $\text{aq}$ , ammoniacal  $\text{AgNO}_3$ + $\text{Aq}$ ,  $\text{Fe}(\text{NO}_3)_3$ ,  $\text{NO}_3$ ,  $\text{Al}(\text{NO}_3)_3$ ,  $\text{Co}(\text{NO}_3)_2$ ,  $\text{Ni}(\text{NO}_3)_2$ , + $\text{Aq}$  instead of  $\text{HNO}_3$ + $\text{Aq}$ . (Ramann, A. 1933.)

Fe is hardly attacked by either dil. or conc. acids when they are under high pressure. (Cailletet Z. 68. 395.)

Fe is dissolved by  $\text{HNO}_3$ + $\text{Aq}$ , even when conc., but no gas is evolved and the process is very slow.

$\text{NO}_3$ + $\text{Aq}$  of the following sp. gr. dissolves given amts. from strips of pure Fe.

Sp. gr. of acid	Diminution of weight in 24 hours
1.28	0.82%
1.34	0.75
1.38	0.29
1.48	0.34
1.53	5.80

Gautier and Charpy, C. R. 113. 1451.)

sol. in liquid chlorine below  $90^\circ$ . (Lange, Z. angew. Ch. 1900, 13. 686.)

sol. in liquid  $\text{NH}_3$ . (Gore, Am. ch. J. 3. 20. 828.)

not attacked by alkalis.

sol. in  $\text{NaOH}$ + $\text{Aq}$  (34%) when air is blown through the liquid. (Zirnitze, Ch. Ztg. 12. 1.)

$\text{NaOH}$ + $\text{Aq}$  attacks iron and steel. (Vena-Dingl. 261. 133.)

$\text{NaOH}$ + $\text{Aq}$  has slight action on Fe between  $100^\circ$ . (Lunge, Dingl. 261. 131.)

presence of alkalis prevent rusting entirely, and fats and oils greatly hinder it. (Lunge.)

sol. in alkali hydrogen carbonates+ $\text{Aq}$ . (Zschelius.)

sat.  $\text{NaCl}$ + $\text{Aq}$  has sl. but perceptible action on Fe.  $\text{NH}_4\text{Cl}$ + $\text{Aq}$  has stronger action on  $\text{NaCl}$ + $\text{Aq}$ . (Lunge.)

10 ccm.  $\text{H}_2\text{O}$  containing 0.5 g.  $\text{NaCl}$  or removed 42 mg. from 11.8 sq. cm. iron in one week, while air free from  $\text{CO}_2$  was used through the solution, and 72 mg. in presence of  $\text{CO}_2$ .

10 ccm.  $\text{H}_2\text{O}$  containing 1 g.  $\text{NH}_4\text{Cl}$  removed 45 mg., and 76 mg. respectively under above conditions.

10 ccm.  $\text{H}_2\text{O}$  containing 0.8 g.  $\text{MgCl}_2$  re-

moved 49 mg., and 65 mg. respectively under the above conditions.

Not attacked by 100 ccm.  $\text{H}_2\text{O}$  containing 1 g.  $\text{Na}_2\text{CO}_3$ , or by  $\text{CaO}_2\text{H}_2$ + $\text{Aq}$ . (Wagner, Dingl. 221. 260.)

Action of  $\text{KClO}_3$ + $\text{Aq}$ .  $\text{KClO}_3$ + $\text{Aq}$  (6.3%  $\text{KClO}_3$ ) oxidised 11.21 g. cast iron and 20.1 g. pure iron from a surface of 1 sq. metre in 7 hours;  $\text{KClO}_3$ + $\text{Aq}$  (25%  $\text{KClO}_3$ ) oxidised 24.59 g. cast, and 44.90 g. pure Fe under above conditions;  $\text{Ca}(\text{ClO}_3)_2$ ,  $\text{CaCl}_2$ + $\text{Aq}$  (20° Baume) obtained by passing Cl through  $\text{CaO}_2\text{H}_2$ + $\text{Aq}$  oxidised 85 g. cast, and 95 g. pure Fe under the above conditions. (Lunge and Deggele, J. Soc. Chem. Ind. 4. 32.)

Easily sol. in organic acids.

#### Comparative action of oils on Fe.

	Amount Fe dissolved
Neatsfoot oil	0.0875 grains
Colza "	0.0800 "
Sperm "	0.0460 "
Lard "	0.0250 "
Olive "	0.0062 "
Linseed "	0.0050 "
Seal "	0.0050 "
Castor "	0.0048 "
Paraffine "	0.0045 "
Almond "	0.0040 "
"Lubricating" oil	0.0018 "

(Watson, C. N. 42. 190.)

$\frac{1}{2}$  ccm. oleic acid dissolves 0.0097 g. Fe in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Fe dissolves in albumen solution to the extent of 1 to 2 per cent. (Buchner, Arch. Pharm. (3) 20. 417.)

Attacked by sugar+ $\text{Aq}$  at  $115$ – $120^\circ$ , also by inverted sugar or malt extract, not by glycerine or mannite+ $\text{Aq}$ . (Klein and Berg, C. R. 102. 1170.)

#### Iron arsenide, $\text{FeAs}_2$ .

Min. *Löllingite*. Sol. in  $\text{HNO}_3$ + $\text{Aq}$  with separation of  $\text{As}_2\text{O}_3$ .

$\text{Fe}_2\text{As}_4$ . Min. *Leucopyrite*.

#### Iron arsenide sulphide, $\text{FeAs}_2$ , $\text{FeS}_2$ .

Min. *Arsenopyrite*. Sol. in  $\text{HNO}_3$ + $\text{Aq}$  with separation of S and  $\text{As}_2\text{O}_3$ ; wholly sol. in aqua regia; not attacked by  $\text{HCl}$ + $\text{Aq}$ .

#### Iron boride, $\text{Fe}_2\text{B}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in hot dil.  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ , and in hot conc.  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . Sol. in hot dil., or cold conc.  $\text{HNO}_3$ . (Jassonneix, C. R. 1907, 145. 122.)

$\text{FeB}$ . Sol. in molten alkali carbonates; not sol. in dil. or conc.  $\text{H}_2\text{SO}_4$  in the cold; sol. in boiling  $\text{H}_2\text{SO}_4$ , and in  $\text{HNO}_3$ . (Moissan, Bull. Soc. 1895, (3) 13. 958.)

Stable in dry air. Decomp. by aqua regia,

but not readily sol. in conc.  $\text{H}_2\text{SO}_4$  and  $\text{HCl}$ . (Moissan, C. R. 1895, 120. 176.)

$\text{FeBr}_2$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  and in hot conc.  $\text{HCl}$ . (Jassonneix, C. R. 1907, 145. 122.)

#### Iron (ferrous) bromide, $\text{FeBr}_2$ .

Sol. in  $\text{H}_2\text{O}$ . Decomp. by heating on air. Sat.  $\text{FeBr}_2 + \text{Aq}$  contains at:

$-21^\circ$	$-7^\circ$	$+10^\circ$	$21^\circ$
47.0	48.3	52.3	53.7% $\text{FeBr}_2$ ,
$37^\circ$	$50^\circ$	$65^\circ$	$95^\circ$
56.0	58.0	59.4	63.3% $\text{FeBr}_2$ .

(Étard, A. ch. 1894, (7) 2. 541.)

+4 $\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ ; pptd. from cooled aq. solution. (Volkman, C. C. 1894, II. 611.)

+6 $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Löwig.)

+9 $\text{H}_2\text{O}$ . (Volkman.)

#### Ferric bromide, $\text{FeBr}_3$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohol, and ether. (Löwig.)

Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

+6 $\text{H}_2\text{O}$ . Sol. in alcohol and ether. (Bolschakoff, C. C. 1898, II. 660.)

#### Ferrous mercuric bromide.

Deliquescent. (v. Bonsdorff.)

#### Ferric rubidium bromide, $\text{Rb}_2\text{FeBr}_4 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 7. 332.)

#### Ferrous stannic bromide.

See Bromostannate, ferrous.

#### Ferrous bromide nitric oxide, $3\text{FeBr}_2, 2\text{NO}$ .

Sol. in  $\text{H}_2\text{O}$ . Not isolated. (Thomas, C. R. 1896, 123. 944.)

#### Ferric bromochloride, $\text{FeCl}_2\text{Br}$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ , alcohol, and ether. Notably sol. in chloroform, benzene, and toluene. Insol. in  $\text{CS}_2$ . (Lenormand, C. R. 116. 820.)

#### Iron carbide, $\text{Fe}_3\text{C}$ .

(Gurlt, J. B. 1856, 781.)

Mixture of Fe and  $\text{FeC}_4$ . (Tunner, Polyt. Centralbl. 1861. 1227.)

$\text{Fe}_3\text{C}$ . (Karsten, J. pr. 40. 229.)

$\text{Fe}_3\text{C}$ . Sol. in hot conc.  $\text{HCl}$ ; oxidised slowly by moist air. (Campbell, Am. Ch. J. 1896, 18. 840-841.)

$\text{Fe}_3\text{C}_2$ . (Rammelsberg, C. C. 1847. 60.)

#### Iron molybdenum carbide, $\text{Fe}_3\text{C}, \text{Mo}_3\text{C}$ .

Sol. in hydracids; insol. in  $\text{HNO}_3$ . (Williams, C. R. 1898, 127. 484.)

#### Iron tungsten carbide, $2\text{Fe}_3\text{C}, 3\text{W}_3\text{C}$ .

Insol. in  $\text{H}_2\text{O}$  and hydracids; sol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . (Williams, C. R. 1898, 127. 411.)

#### Iron carbonyl, $\text{Fe}(\text{CO})_5$ .

Slowly decomp. on air. Not attacked by dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ . Conc.  $\text{HNO}_3$ ,  $\text{Cl}_2 + \text{Aq}$ , or  $\text{Br}_2 + \text{Aq}$  decomp. easily. Sol. in alcoholic solution of  $\text{KOH}$  or  $\text{NaOH}$  with subsequent decomp. Sol. in alcohol, ether, benzene, mineral oils, etc. (Mond and Langer, Chem. Soc. 59. 1090.)

$\text{Fe}_2(\text{CO})_7$ . Decomp. on air. Not attacked by  $\text{H}_2\text{SO}_4$  or  $\text{HCl} + \text{Aq}$ . Sol. in alcohol, potash. Very much less sol. in organic solvents than  $\text{Fe}(\text{CO})_5$ . (Mond and Langer.)

#### Ferrous chloride, $\text{FeCl}_2$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$  with evolution of heat, or in alcohol. Insol. in ether. (Jahn.)

Sol. in 2 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$ . (Abl.)

Sol. in 1 pt. strong alcohol. (Wenzel.)

Sp. gr. of  $\text{FeCl}_2 + \text{Aq}$  at  $15.5^\circ$ .

Sp. gr.	% $\text{FeCl}_2$	% $\text{FeCl}_2$ at $48.0$

(Dunn, J. Soc. Chem. Ind. 1902, 21. 390.)

Insol. in liquid HF. (Franklin, Z. anorg. 1905, 46. 2.)

Sol. in acetone; insol. in methylal. (Eidmann, C. C. 1899, II. 1014.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Sl. sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Yellow modification is sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Mol. weight determined in pyridine. (Wermer, Z. anorg. 1897, 15. 21.)

+2H<sub>2</sub>O. (Jonas.)

+4H<sub>2</sub>O. Deliquescent. Easily sol. in alcohol. Sol. in 0.68 pt. cold H<sub>2</sub>O. (Reimann, Mag. Pharm. 17. 215.)

Sat. aq. solution contains at:

16° 18° 25° 28° 43°  
10.5 40.9 41.0 42.5 44.4% FeCl<sub>3</sub>,  
50° 53° 72° 89° 96° 118°  
15.0 45.9 49.2 51.3 51.0 51.7% FeCl<sub>3</sub>.  
(Étard, A. ch. 1894, (7) 2. 537.)

100 g. FeCl<sub>3</sub>, 4H<sub>2</sub>O + Aq contain 17.54 g. Fe at 22.8°; 18.59 g. at 43.2°. (Boecke, N. Jahrb. Min. 1911, I, 61.)

More sol. in water containing NO than in pure H<sub>2</sub>O. (Gay, Bull. Soc. (2) 44. 175.)

Sol. in hot HCl + Aq. (Sabatier, Bull. Soc. 1895, (3) 13. 599.)

[Sabatier could not obtain FeCl<sub>3</sub> + 6H<sub>2</sub>O of Lescaur.]

**Ferroferric chloride, Fe<sub>2</sub>Cl<sub>3</sub> + 18H<sub>2</sub>O.**

Deliquescent. (Lefort, J. Pharm. (4) 10. 85.)

**Ferric chloride, Fe<sub>2</sub>Cl<sub>3</sub> or FeCl<sub>3</sub>.**

Very deliquescent, and sol. in H<sub>2</sub>O with evolution of great heat.

100 mols. H<sub>2</sub>O dissolve mols. anhydrous Fe<sub>2</sub>Cl<sub>3</sub> at t°.

t°	Mols. Fe <sub>2</sub> Cl <sub>3</sub>	t°	Mols. Fe <sub>2</sub> Cl <sub>3</sub>
66	29.20	80	29.20
70	29.42	100	29.75
75	28.92	..	...

(Rooseboom, Z. phys. Ch. 10. 477.)

See also hydrated salts below.

Solution in H<sub>2</sub>O is decomp. into colloidal Fe<sub>2</sub>O<sub>3</sub>, xH<sub>2</sub>O and HCl, upon heating if conc., and on simple standing if dil.

Krecke (J. pr. (2) 3. 286) gives the following table.

% Fe <sub>2</sub> Cl <sub>3</sub> in solution	Temp. at which Graham's colloidal hydrate is formed	Temp. at which Saint Gilles' colloidal hydrate is formed	Temp. at which oxychlorides are formed	Temp. at which Fe <sub>2</sub> O <sub>3</sub> is formed

(Hinrichsen and Sachsel, Z. phys. Ch. 1904, 50. 95.)

Difficultly sol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 374.)

Attacked by liquid  $\text{NO}_2$  in the presence of traces of moisture. (Frankland, Chem. Soc. Trans. 1899, 1361.)

Sol. in liquid  $\text{SO}_2$ . (Walden, B. 1899, 82. 84.)

Sol. in alcohol ether, acetic ether (Cann. R. 102. 363), and acetone (Krug and Eroy, J. anal. Ch. 6. 184).

Sol. in ethylamine. (Shinn, J. phys. chem. 1907, 11. 538.)

sol. in benzonitrile. (Naumann, B. 1914, 1369.)

sol. in methyl acetate. (Naumann, B. 0, 42. 3790.)

sol. in ethyl acetate. (Naumann, B. 0, 42. 314.)

g.  $\text{FeCl}_3$  is sol. in 1.59 g. acetone at  $18^\circ$ . gr. of sat. solution  $18^\circ/4^\circ = 1.160$ . (Naumann, B. 1904, 37. 4333.)

ol. in acetone and in methylal. (Eidmann, C. 1899, II. 1014.)

ol. in quinoline. (Beckmann and Gabel, unorg. 1906, 51. 236.)

l. sol. in  $\text{CS}_2$ . (Arctowski, Z. anorg. 1894, 57.)

sol. weight determined in pyridine. (Arctowski, Z. anorg. 1897, 15. 22.)

sublimed.

sol. in  $\text{AsCl}_3$ ,  $\text{POCl}_3$ ,  $\text{SO}_2\text{Cl}_2$  and  $\text{PBr}_3$ ; sl. in  $\text{PCl}_5$ . (Walden, Z. anorg. 1900, 25. 1.)

The salts with different amts. of crystal have different solubilities. (Rooseboom.  $+4\text{H}_2\text{O}$ . Melts in crystal  $\text{H}_2\text{O}$  at  $73.5^\circ$ .)

100 mols.  $\text{H}_2\text{O}$  dissolve mols.  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 4\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$
0	19.96	69	21.53	72.5	26.15
5	20.32	72.5	23.35	70	27.90
10	20.70	73.5	25.00	66	29.20

(Rooseboom, Z. phys. Ch. 10. 477.)

$+5\text{H}_2\text{O}$ . Correct formula for  $+6\text{H}_2\text{O}$  salt.

100 mols.  $\text{H}_2\text{O}$  dissolve mols.  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 5\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$
2	12.87	30	15.12	55	19.15
7	13.95	35	15.64	56	20.00
10	14.85	50	17.50	55	20.32

(Rooseboom.)

sol. in crystal  $\text{H}_2\text{O}$  at  $31^\circ$  (Engel, C. R. 1708); at  $56^\circ$  (Rooseboom).

$+6\text{H}_2\text{O}$ . Very deliquescent. Sol. in alcohol. Ether dissolves out  $\text{Fe}_2\text{Cl}_6$ .

M.-pt. is  $31^\circ$ . (Ordway.) Contains only  $5\text{H}_2\text{O}$ . (Rooseboom.)

$+7\text{H}_2\text{O}$ . Melts in crystal  $\text{H}_2\text{O}$  at  $32.5^\circ$ .

100 mols.  $\text{H}_2\text{O}$  dissolve mols.  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 7\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$
20	11.35	32	13.55	30	15.12
27.4	12.15	32.5	14.99	25	15.54

(Rooseboom.)

$+12\text{H}_2\text{O}$ . Less deliquescent than  $\text{Fe}_2\text{Cl}_6$  or  $\text{Fe}_2\text{Cl}_6 + 5\text{H}_2\text{O}$ .

100 mols.  $\text{H}_2\text{O}$  dissolve mols.  $\text{Fe}_2\text{Cl}_6$  from  $\text{Fe}_2\text{Cl}_6 + 12\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$	$t^\circ$	Mols. $\text{Fe}_2\text{Cl}_6$
-55	2.75	30	5.93	27.4	11.20
-41	2.81	35	6.78	20	12.15
-27	2.98	36.5	7.93	10	12.83
0	4.13	37	8.33	8	13.70
10	4.54	36	9.29	....	....
20	5.10	30	10.45	....	....

(Rooseboom.)

Sol. in alcohol. Ether dissolves out  $\text{Fe}_2\text{Cl}_6$ . Melts in crystal  $\text{H}_2\text{O}$  at  $37^\circ$  (Rooseboom); at  $35.5^\circ$  (Ordway).

Ferric hydrogen chloride,  $\text{FeCl}_3 \cdot \text{HCl} + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Sabatier, Bull. Soc. (2) 197.)

More sol. in  $\text{H}_2\text{O}$  than  $\text{FeCl}_3$ . (Engel, C. R. 104. 1708.)

For solubility, see  $\text{FeCl}_3 + \text{HCl}$ , under ferric chloride.

$+6\text{H}_2\text{O}$ . (Rooseboom and Schreinemaker.)

For solubility, see  $\text{FeCl}_3 + \text{HCl}$ , under ferric chloride.

Ferrous lithium chloride,  $\text{FeCl}_2 \cdot \text{LiCl} + 3\text{H}_2\text{O}$ .

(Chassevant, A. ch. (6) 30. 17.)

Ferric magnesium chloride,  $\text{FeCl}_3 \cdot \text{MgCl}_2 + \text{H}_2\text{O}$ .

Deliquescent. (Neumann, B. 18. 2390.)

Ferrous mercuric chloride,  $\text{FeCl}_2 \cdot \text{HgCl}_2 + 4\text{H}_2\text{O}$ .

Deliquescent. (v. Bonsdorff.)

Ferric nitrosyl chloride,  $\text{FeCl}_3 \cdot \text{NOCl}$ .

Very deliquescent. (Weber, Pogg. 118. 477.)

Ferric phosphoric chloride,  $\text{FeCl}_3 \cdot \text{PCl}_5$ .

Decomp. by  $\text{H}_2\text{O}$ . (Baudrimont, A. ch. (4) 2. 15.)

- Iron (ferrous) potassium chloride,  $\text{FeCl}_2$ ,  $2\text{KCl} + 2\text{H}_2\text{O}$ .**  
Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)
- Ferric potassium chloride,  $\text{FeCl}_3$ ,  $2\text{KCl} + \text{H}_2\text{O}$ .**  
A little  $\text{H}_2\text{O}$  dissolves out  $\text{FeCl}_3$ . (Fritzsche J. pr. 18. 483.)  
Sol. in  $\text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 71. 332.)
- Ferric rubidium chloride,  $\text{FeCl}_3$ ,  $3\text{RbCl}$ .**  
Easily sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{HCl} + \text{Aq}$ . (Godeffroy, Arch. Pharm. (3) 9. 343.)  
 $\text{FeCl}_3$ ,  $2\text{RbCl} + \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Neumann, A. 244. 329.)  
Sol. in  $\text{H}_2\text{O}$ . (Walden, Z. anorg. 1894, 7. 332.)
- Ferric sulphur chloride,  $\text{FeCl}_3$ ,  $\text{SCl}_2$ .**  
Very sensitive toward heat and moisture. (Ruff, B. 1904, 37. 4518.)
- Ferric thallium chloride,  $\text{FeCl}_3$ ,  $3\text{TlCl}$ .**  
Decomp. by  $\text{H}_2\text{O}$ . Can be crystallised from  $\text{HCl} + \text{Aq}$ . (Wöhler, A. 144. 250.)
- Ferrous chloride ammonia,  $3\text{FeCl}_2$ ,  $2\text{NH}_3$ .**  
Decomp. by  $\text{H}_2\text{O}$ . (Rogstadius, J. pr. 86. 310.)  
 $\text{FeCl}_2$ ,  $6\text{NH}_3$ . Loses  $4\text{NH}_3$  at  $100^\circ$ . (Miller, Am. Ch. J. 1895, 17. 577.)  
 $\text{FeCl}_2$ ,  $2\text{NH}_3$ . Decomp. in the air (Miller).
- Ferric chloride ammonia,  $\text{FeCl}_3$ ,  $\text{NH}_3$ .**  
Slowly deliquescent. Sol. in  $\text{H}_2\text{O}$  with evolution of heat. (Rose, Pogg, 24. 302.)  
 $\text{FeCl}_3$ ,  $6\text{NH}_3$ . Not deliquescent; not sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl}$  with decomp. (Miller, Am. Ch. J. 1895, 17. 577.)  
Loses  $\text{NH}_3$  to give  $\text{FeCl}_2$ ,  $5\text{NH}_3$ , and  $\text{FeCl}_3$ ,  $4\text{NH}_3$ .
- Ferric chloride cyanhydric acid,  $\text{FeCl}_3$ ,  $2\text{HCN}$ .**  
Deliquescent. (Klein, A. 74. 85.)
- Ferrous chloride nitric oxide,  $\text{FeCl}_2$ ,  $\text{NO}$ .**  
Sol. in  $\text{H}_2\text{O}$  without evolution of gas. (Thomas, C. R. 1895, 121. 204.)  
 $+2\text{H}_2\text{O}$ . Sol. in cold  $\text{H}_2\text{O}$  without decomp. (Thomas, C. R. 1895, 120. 448.)  
 $2\text{FeCl}_2$ ,  $\text{NO}$ . Very hygroscopic. (Thomas, C. R. 1895, 121. 129.)  
 $10\text{FeCl}_2$ ,  $\text{NO}$ . Very hygroscopic. (Thomas C. R. 1895, 121. 128.)
- Ferric chloride nitric oxide,  $\text{Fe}_2\text{Cl}_6$ ,  $\text{NO}$ .**  
Very hygroscopic. Loses  $\text{NO}$  when exposed to the air.  
 $2\text{Fe}_2\text{Cl}_6$ ,  $\text{NO}$ . Very hygroscopic. In contact with  $\text{H}_2\text{O}$  gives off  $\text{NO}$ . (Thomas, C. R. 1895, 120. 447.)
- Iron (ferrous) fluoride,  $\text{FeF}_2$ .**  
Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol and Partly sol. in hot  $\text{HCl} + \text{Aq}$ ; slowly cold, easily in hot  $\text{HNO}_3$ ; decomp. by (Poulenc, C. R. 115. 941.)  
 $+8\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$  easily if it contains  $\text{HF}$ . (Berzelius.)
- Ferroferric fluoride,  $\text{FeF}_3$ ,  $\text{FeF}_2 + 7\text{H}_2\text{O}$ .**  
Sol. in dil.  $\text{HF} + \text{Aq}$ . (Weinland, Z. 1899, 22. 268.)
- Ferric fluoride,  $\text{FeF}_3$ .**  
Sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol (Sl. attacked by  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{S}$  (Poulenc, C. R. 115. 941.)  
 $+4\frac{1}{2}\text{H}_2\text{O}$ . More sol. in hot than c Insol. in alcohol. (Scheurer-Kestner (3) 68. 472.)
- Ferric nickel fluoride,  $\text{FeF}_3$ ,  $\text{NiF}_2 + 7\text{H}_2\text{O}$ .**  
Sl. sol. in dil.  $\text{HF} + \text{Aq}$ . (Weinland, Z. 1899, 22. 268.)
- Ferrous potassium fluoride,  $\text{FeF}_2$ ,  $\text{KF}$**   
(Wagner, B. 19. 896.)  
 $\text{FeF}_2$ ,  $2\text{KF}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)
- Ferric potassium fluoride,  $\text{FeF}_3$ ,  $2\text{KF}$**   
Somewhat sol. in  $\text{H}_2\text{O}$ , especially (Berzelius.)  
 $+ \text{H}_2\text{O}$ . (Christensen, J. pr. (2) 35.  
 $\text{FeF}_3$ ,  $3\text{KF}$ . Properties as above. (Berzelius.)
- Ferric sodium fluoride,  $\text{FeF}_3$ ,  $2\text{NaF} + \text{H}_2\text{O}$ .**  
Rather easily sol. in  $\text{H}_2\text{O}$ . Solut comp. on heating. Very sol. in  $\text{FeCl}_3$  (Nicklès, J. Pharm. (4) 10. 14.)  
 $\text{FeF}_3$ ,  $3\text{NaF}$ . (Wagner, B. 19. 896.)
- Ferric thallous fluoride,  $2\text{FeF}_3$ ,  $3\text{TlF}$ .**  
Sol. in hot  $\text{H}_2\text{O}$ , less sol. in cold sol. in  $\text{HF}$ . (Ephraim, Z. anorg. 19. 239.)
- Ferrous titanium fluoride.**  
See Fluotitanate, ferrous.
- Ferric zinc fluoride,  $\text{FeF}_3$ ,  $\text{ZnF}_2 + 7\text{H}_2\text{O}$ .**  
Sl. sol. in dil.  $\text{HF} + \text{Aq}$ . (Weinland, Z. 1899, 22. 269.)
- Ferrous hydroxide,  $\text{FeO} \cdot \text{H}_2\text{O}$ .**  
Sol. in 150,000 pts.  $\text{H}_2\text{O}$ . (Bineau 41. 509.)  
Insol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ .  
 $\text{NH}_4$  salts +  $\text{Aq}$ . Sl. sol. in  $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2$  (Mercer.)  
Not pptd. in presence of  $\text{Na citrate}$ .  
In boiling cane sugar +  $\text{Aq}$ , but al. sol. in  $\text{KOH}$  has been added. Not pptd. in p of much  $\text{H}_2\text{C}_2\text{H}_3\text{O}_4$ . (Rose.)

solubility in glycerine + Aq containing but 60% by vol. of glycerine. 100 ccm. of the solution contain 1.0 g.  $\text{FeO}$ . (Müller, Z. anorg. 1905, 43. 322.)

(ferric) hydroxides,  $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O}$ .

Many indefinite compounds of  $\text{Fe}_2\text{O}_3$  and  $\text{H}_2\text{O}$  are known, and uncertainty exists as to their composition.

According to van Bemmelen (R. t. c. 7. 106) there are probably no true definite compounds  $\text{Fe}_2\text{O}_3$  and  $\text{H}_2\text{O}$ .

According to Tommasi (B. 12. 1924, 2334), there are two series of Fe hydroxides,  $\alpha$ , red hydroxides, and  $\beta$ , yellow hydroxides.

**Hydroxides.**  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (unstable),  $\text{Fe}_2\text{O}_3$ ,  $\text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $50^\circ$ ), and  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $92^\circ$ ).

sol. in dil. acids and in  $\text{Fe}_2\text{Cl}_6 + \text{Aq}$ , and d. from the latter solution by  $\text{Na}_2\text{SO}_4$  or  $\text{K}_2\text{SO}_4 + \text{Aq}$ .

**Hydroxides.**  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (stable below  $70^\circ$ ),  $\text{O}_2$ ,  $2\text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $105^\circ$ ),  $\text{Fe}_2\text{O}_3$ ,  $\text{H}_2\text{O}$  (loses  $\text{H}_2\text{O}$  at  $150^\circ$ ).

l. sol. in acids, and insol. in  $\text{Fe}_2\text{Cl}_6 + \text{Aq}$ . (Tommasi.)

The following more or less uncertain data given.

$\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . Very sl. in  $\text{HNO}_3 + \text{Aq}$ . (Davies, Chem. Soc. 4. 69.)

Min. *Turgite*.

$\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . Insol. in cold acids; difficultly in warm  $\text{HCl}$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$ , and especially in warm  $\text{HNO}_3 + \text{Aq}$ . (Schiff, A. 114. 199.)

Min. *Göthite*.

$\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$ . Sl. sol. in tartaric, citric, acetic acids, but easily sol. in  $\text{HCl} + \text{Aq}$ . (Wittstein.)

Scarcely attacked by conc.  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ . Sol. in acetic acid or dil.  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ , from which solution it is pptd. by trace of alkali salts. (St. Gilles.)

Min. *Lamonte*.

$3\text{Fe}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ . (Muck.)

$\text{Fe}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ .

Min. *Xanthosiderite*.

$\text{Fe}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$ . Sl. sol. in acetic acid of 1.03 gr., but easily sol. if of 1.076 sp. gr. Sol. in mineral acids. (Limberger, J. B. 1853. 70.)

Pptd.  $\text{Fe}_2\text{O}_3 \cdot x\text{H}_2\text{O} = \text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  (?). Insol. in  $\text{H}_2\text{O}$ , or in solutions of the alkalis or  $\text{NH}_4\text{OH}$ . When recently pptd. is easily sol. in acids. (Fresenius.)

Sl. sol. in  $\text{NH}_4\text{OH}$ , and  $\text{NH}_4$  salts + Aq. (Gladstone.)

Apparently insol. in  $\text{NH}_4\text{Cl}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Brett, 1837.)

Sl. sol. in conc., but insol. in dil.  $\text{KOH} + \text{Aq}$ . (Bodnew, J. pr. 23. 221.)

Sl. sol. in very conc.  $\text{KOH} + \text{Aq}$  free from  $\text{Na}_2\text{CO}_3$ . (Völcker, A. 59. 34.)

Not at all sol. in pure conc.  $\text{KOH} + \text{Aq}$ , solubility noticed by previous observers being masked by the presence of silicic acid. (Sandvik.)

Sl. sol. in conc. alkali carbonates + Aq.

When freshly pptd., it is not acted upon by conc.  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Grotthaus.)

Readily sol. in conc.  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , but pptd. by addition of  $\text{H}_2\text{O}$ .

Sol. in excess of  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  when pptd. by that reagent. (Wöhler.)

Sol. in solutions of the alkali bicarbonates. (Berzelius.)

Sol. in aqueous solutions of water-glass. (Ordway.)

Immediately dissolved by  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

Sol. in  $\text{NH}_4\text{F} + \text{Aq}$ . (Helmholtz, Z. anorg. 3. 124.)

Sol. in conc.  $\text{Al}_2(\text{SO}_4)_3 + \text{Aq}$ . (Schneider, B. 23. 1352.)

Sl. sol. in a solution of  $\text{MgCO}_3$  (?). (Bischof.)

Insol. in ethylamine, or amylamine + Aq. (Wurts, A. ch. (3) 30. 472.)

Sol. in boiling solution of  $\text{Bi}(\text{NO}_3)_3$ , with pptn. of  $\text{Bi}_2\text{O}_3$ . (Persoz.)

Sol. in  $\text{Cr}_2\text{Cl}_6 + \text{Aq}$ ; after 3 months 15 mols.  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  were dissolved by 1 mol.  $\text{Cr}_2\text{Cl}_6$ . (Béchamp, A. ch. (3) 57. 296.)

Insol. in fumaric acid, even when freshly pptd.

When recently pptd., it is easily sol. in  $\text{KHC}_4\text{H}_4\text{O}_6 + \text{Aq}$ , but after drying it is difficultly sol. therein.

When moist easily sol. in  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ , but after drying is scarcely sol. therein when cold, and only sl. sol. when hot. (Werther.)

Easily sol. in acetic, citric, and other acids. (Wittstein.)

Solubility in glycerine + Aq containing about 60% by vol. of glycerine.

100 ccm. of the solution contain 0.8 g.  $\text{Fe}_2\text{O}_3$ . (Müller, Z. anorg. 1905, 43. 322.)

Easily sol. in aqueous solution of sucrales of Ca, Ba, Sr, K, Na. (Hunton, 1837.)

Unacted upon by cane sugar + Aq. (Gladstone.)

Sl. sol. in cane sugar + Aq, from which it is pptd. by  $(\text{NH}_4)_2\text{S} + \text{Aq}$ , but not by  $\text{NH}_4\text{OH}$ , or  $\text{K}_4\text{FeC}_6\text{N}_6 + \text{Aq}$ . (Peschier.)

Solubility of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  in sugar solutions. 1 l. of sugar solution of given strength dissolves mg. of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ .

% Sugar	Mg. $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$		
	at $17.4^\circ$	at $45^\circ$	at $75^\circ$
10	3.4	3.4	6.1
30	2.3	2.7	3.8
50	2.3	1.9	3.4

(Stolle, Z. Ver. Zuckerind. 1900, 50. 340.)

Not pptd. from solutions by alkalis or alkali carbonates in presence of many organic substances, as tartaric acid, sugar, etc.

Not pptd. by  $\text{NH}_4\text{OH}$  from solutions containing  $\text{Na}_2\text{P}_2\text{O}_7$ . (Rose, Pogg. 76. 19.)

Not pptd. by  $\text{NH}_4\text{OH}$  in presence of Na citrate. (Spiller.)

**Soluble.** (a) *By dialysis.* Solutions containing 1% can be concentrated somewhat, whereupon they gelatinise. They also gelatinise by cold, or addition of traces of  $H_2SO_4$ , alkalis, alkali carbonates or sulphates, or neutral salts, not, however, by  $HCl$ ,  $HNO_3$ , alcohol, or sugar. (Graham, A. 121. 46.)

When a dil. solution of a solid organic acid, or an alkali, or salt is added to a dialysed solution of  $Fe_2O_3 \cdot H_2O$ , a coagulum sol. in  $H_2O$  is formed, but if the solutions are conc. the separating coagulum is no longer sol. in  $H_2O$ . (Athenstädt, C. C. 1871. 822.)

(b) *Peau St. Gilles' hydroxide, or meta-iron hydroxide.* Sol. in  $H_2O$ . Pptd. from solution by traces of  $H_2SO_4$ ,  $HCl$ ,  $HNO_3$ , +Aq. and alkalis; the ppt. is insol. in cold acids, but sol. in pure  $H_2O$ . (Peau St. Gilles, A. ch. (3) 46. 47.)

See also table by Krecke in the article on ferric chloride.

**Iron (Ferroferric) hydroxide,  $Fe_2O_3 \cdot H_2O$  (?).**

Sol. in acids.

$Fe_2O_3 \cdot 4H_2O$ . (Lefort.)

**Ferrous iodide,  $FeI_2$ .**

Very deliquescent. Sol. in  $H_2O$ . Solution decomp. on evaporating.

+ $4H_2O$ . Very deliquescent; al. sol. in  $H_2O$ ; sol. in ether. (Jackson, Am. Ch. J. 1900, 24. 19.)

+ $5H_2O$ . Deliquescent. Sol. in alcohol. Sol. in sugar +Aq. and solution is much more stable than aqueous solution. Easily sol. in glycerine.

Insol. in methylene iodide. (Retgers, Z. anorg. 3. 343.)

+ $6H_2O$ , and + $9H_2O$ . Very sol.; pptd. from cooled aq. solution. (Volkman, C. C. 1894, II. 611.)

**Ferric iodide,  $FeI_3$ .**

Has not been isolated. Solution of I in  $FeI_2$  +Aq in the molecular ratio of I :  $FeI_2$  probably contains  $FeI_3$ .

Very sol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

**Ferrous mercuric iodide,  $FeI_2 \cdot 2HgI_2 + 6H_2O$ .**

As the corresponding Mg salt. (Duboin, C. R. 1907, 145. 714.)

**Ferrous iodide ammonia,  $FeI_2 \cdot 6NH_3$ .**

Decomp. by  $H_2O$ . (Jackson, Am. Ch. J. 1900, 24. 27.)

**Ferrous mercuric iodide.**

Very deliquescent. Decomp. by  $H_2O$ ; sol. in  $HC_2H_3O_2$ , or alcohol.

**Iron molybdenide,  $FeMo_2$ .**

Attacked by  $HCl$  +Aq with difficulty. Sol. in hot conc.  $H_2SO_4$ . (Steinacker.)

**Iron nitride.**

Easily decomp. by  $H_2O$  when finely divided. (Rossel, C. R. 1895, 121. 942.)

$Fe_3N_4$ . Easily sol. in  $HNO_3$ ,  $HCl$ , +Aq. Very slowly decomp. by  $H_2O$ . (Schmidt, Pogg. 125. 37.)

Sol. in  $HCl$  with decomp.; dec. steam and by  $H_2S$  at  $200^\circ$ . (Fowle 1894, 68. 152.)

$Fe_3N_2$ . Probably the same as the compound. (Rogstadius, J. pr. 86. 3)

**Iron nitrososulphantimonate,  $Fe_3S(NO)_3$**   
(Low, C. C. 1865. 948.)

Does not exist, but was impure so-called *rosetranitrososulphide*. (Pawel, B. 1)

**Iron nitrososulphides.**

See *Ferroferrotrinitrososulphidic* and *Ferroheptanitrososulphide*, ammoniacal  $Fe_3S_2H_2(NO)_4$ . (Roussin, C. R. 4)

$Fe_3S_2(NO)_4 + 2H_2O$ . (Porcinsky 302.)

$Fe_3S_2(NO)_{11} + 4H_2O$ . (Rosenberg 312.)

The compound to which the above were given was impure, according to 12. 1407 and 1949; 15. 2600), and more or less  $Na$  or  $NH_4$ . Pawel considered substance as  $NH_4$  salt of *ferroheptasulphidic acid*, which see.

$Fe_3S_2N_2O_4 + 1\frac{1}{2}H_2O$ . Sol. in  $H_2C$  ether,  $CHCl_3$ , acetone and ethyl. Insol. in benzene and light petroleum. C. R. 1896, 122. 138.)

**Iron sodium nitrososulphide,  $3Na_2 \cdot 2NO$ .**

(Roussin.)

$Na_2Fe_2S_2(NO)_{11}$ . (Rosenberg.)

Correct formula is  $Na_2S_2(NO)_6Fe$  *ferroferrotrinitrososulphide*.

**Iron nitrososulphocarbonate,  $Fe_3S(NO)_3 \cdot 3H_2O$ .**

(Low, C. C. 1865. 948.)

Correct formula is  $Na_2S_2(NO)_6Fe$  *sodium ferroheptanitrososulphide*. B. 15. 2600.)

**Ferrous oxide,  $FeO$ .**

Insol. in  $H_2O$ . Sol. in acids.

Easily sol. in  $HCl$ , and  $HNO_3$  +Aq insol. in  $H_2SO_4$ , even when heated. (Dier, C. R. 74. 531.)

**Ferric oxide,  $Fe_2O_3$ .**

Attacked by acids with difficulty, so the higher it has been heated.  $H_2O$  is the best solvent, in which it is most sol. by long digestion at a gentle heat by boiling. (Fresenius.)

Most easily sol. in 16 pts. of a 8 pts.  $H_2SO_4$  and 3 pts.  $H_2O$ . (Mitt J. pr. 81. 110.)

bility of  $\text{Fe}_2\text{O}_3$  in  $\text{HF} + \text{Aq}$  at  $25^\circ$ .

10	10.3	10.3	12.4
30	12.4	10.3	12.4
50	14.5	10.3	14.5

(Stolle, Z. Ver. Zuckerind. 1900, 50. 340.)

Min. *Magnetite*. Insol. in  $\text{HNO}_3$ , but sol. in hot  $\text{HCl} + \text{Aq}$ .

Iron sesquioxide zinc oxide,  $\text{Fe}_2\text{O}_3$ ,  $\text{ZnO}$ .

See Ferrite, zinc.

#### Ferric oxybromide.

Basic ferric bromides containing three equivalents, or less, of base to one of acid may be obtained dissolved in  $\text{H}_2\text{O}$ . (Ordway, Am. J. Sci. (2) 26. 202.)

The most basic soluble compound obtained by three months' digestion of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  with  $\text{Fe}_2\text{Br}_6 + \text{Aq}$ , is  $\text{Fe}_2\text{Br}_6$ ,  $14\text{Fe}_2\text{O}_3$ . (Béchamp.)

#### Ferric oxychlorides.

(a) *Soluble*.  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  dissolves in  $\text{Fe}_2\text{Cl}_6 + \text{Aq}$ . By digesting until the acid reaction of the chloride has disappeared a solution of  $\text{Fe}_2\text{Cl}_6$ ,  $2\text{Fe}_2\text{O}_3$  is obtained. (Pettenkofer, Repert. (2) 41. 289.)

By digesting for several days in the cold,  $\text{Fe}_2\text{Cl}_6$ ,  $5\text{Fe}_2\text{O}_3$  is obtained, and still more basic compounds by further addition of  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . When the solution contains  $\text{Fe}_2\text{Cl}_6$ ,  $12\text{Fe}_2\text{O}_3$ , it gelatinizes, but still dissolves completely in  $\text{H}_2\text{O}$ . The most basic soluble compound is  $\text{Fe}_2\text{Cl}_6$ ,  $20\text{Fe}_2\text{O}_3$ . (Béchamp, A. ch. (3) 57. 296.)

If the digestion is carried on several weeks, a solution containing  $\text{Fe}_2\text{Cl}_6$ ,  $23\text{Fe}_2\text{O}_3$  is obtained; this can be boiled and diluted without pptn., but  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$  is precipitated by the addition of very many salts. (Ordway, Sill. Am. J. (2) 26. 197.)

Solutions containing 10 or less molecules  $\text{Fe}_2\text{O}_3$  to 1 mol.  $\text{Fe}_2\text{Cl}_6$  can be dried without the oxychloride becoming insoluble. (Ordway.)

The above solutions do not become cloudy by boiling or diluting. (Phillips.)

A very dil. solution of  $\text{Fe}_2\text{Cl}_6$ ,  $10\text{Fe}_2\text{O}_3$  remains clear after protracted boiling, and may be boiled without decomp. even when  $\text{Fe}_2\text{Cl}_6$ ,  $20\text{Fe}_2\text{O}_3$  is present. (Béchamp.)

$\text{HNO}_3$  and  $\text{HCl} + \text{Aq}$  form precipitates in the above solutions, which are sol. on addition of more  $\text{H}_2\text{O}$ .  $\text{H}_2\text{SO}_4 + \text{Aq}$  forms a precipitate insol. in  $\text{H}_2\text{O}$ . (Béchamp.)

$\text{Fe}_2\text{Cl}_6$ ,  $9\text{Fe}_2\text{O}_3$  is easily sol. in  $\text{H}_2\text{O}$ , weak alcohol, and glycerine; but solutions are pptd. by small amts. of  $\text{H}_2\text{SO}_4$ ,  $\text{M}_2\text{SO}_4$ , citric or

tartaric acids, or a few drops of  $\text{HCl}$ ,  $\text{HNO}_3 + \text{Aq}$ . (Jeannel, C. R. 43. 799.)

Solutions containing 5 mols.  $\text{Fe}_2\text{O}_3$  to  $\text{Fe}_2\text{Cl}_6$  are completely precipitated by  $\text{Na}_2\text{SO}_4$ ,  $\text{MgSO}_4$ ,  $\text{KNO}_3$ ,  $\text{NaNO}_3$ ,  $\text{ZnCl}_2$ ,  $\text{KCl}$ ,  $\text{NaCl}$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{CaCl}_2$ ,  $\text{MgCl}_2$ ,  $\text{KBr}$ , or  $\text{KSCN}$ . (Béchamp.)

$\text{Ba}(\text{NO}_3)_2$  does not precipitate solution less than 18–20  $\text{Fe}_2\text{O}_3$  to 1  $\text{Fe}_2\text{Cl}_6$ .

$\text{Pb}(\text{NO}_3)_2$  or  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2$  do not precipitate solutions containing the cor.  $\text{Fe}_2\text{Cl}_6$ ,  $12\text{Fe}_2\text{O}_3$ , but a mixture of the salts causes complete precipitation.

Solution has been obtained containing  $\text{Fe}_2\text{O}_3$  to 1  $\text{FeCl}_3$ , probably owing to a solution of soluble colloidal  $\text{Fe}_2\text{O}_3$ . (Majla Source, C. R. 90. 1352.)

Solubility determinations in the  $\text{Fe}_2\text{O}_3$ ,  $\text{HCl}$  and  $\text{H}_2\text{O}$ , show that at definite basic chloride is formed, but a stable solid phase is one of a series of solutions containing  $\text{Fe}_2\text{O}_3$ ,  $\text{HCl}$  and  $\text{H}_2\text{O}$ . (Cameron, J. phys. Chem. 1907, 11. 6.)

(β) *Insoluble*.  $\text{Fe}_2\text{Cl}_6$ ,  $6\text{Fe}_2\text{O}_3 + 9\text{H}_2\text{O}$ .

(1) By exposing  $\text{FeCl}_3 + \text{Aq}$  to air in  $\text{H}_2\text{O}$ ; sl. sol. in  $\text{HCl} + \text{Aq}$ . (Wittate.)

(2) From  $\text{FeCl}_3 + \text{Aq}$  and  $\text{HNO}_3$  in  $\text{H}_2\text{O}$ , and sl. sol. in  $\text{HCl} + \text{Aq}$ . (Béchamp.)

$\text{Fe}_2\text{Cl}_6$ ,  $2\text{Fe}_2\text{O}_3 + 3\text{H}_2\text{O}$ . Decomp. with residue of  $\text{Fe}_2\text{O}_3$ ; sl. sol. in dil. (Rousseau, C. R. 110. 1032.)

$\text{Fe}_2\text{Cl}_6$ ,  $3\text{Fe}_2\text{O}_3$ . As above. (Rousseau, C. R. 113. 542.)

Ferric oxyfluoride,  $3\text{Fe}_2\text{O}_3$ ,  $2\text{FeF}_3 + 4\text{H}_2\text{O}$ . Ppt. (Scheurer-Kestner.)

Ferric oxysulphide,  $\text{Fe}_2\text{O}_3$ ,  $3\text{Fe}_2\text{S}_3$ .

(Rammelsberg.)

#### Iron phosphide, $\text{FeP}$ .

Very slowly (Freese), not (Hvoalef, 99) sol. in hot  $\text{HCl} + \text{Aq}$ . Still more in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Freese.)

Slowly sol. in  $\text{HNO}_3 + \text{Aq}$ , and easily in aqua regia. (Struve.)

Insol. in ammonium citrate +  $\text{Aq}$ ; in  $\text{HCl}$ . (Dennis, J. Am. Chem. Soc. 16. 483.)

$\text{Fe}_3\text{P}$ . Slowly but completely sol. or dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sol. in hot conc. in  $\text{HNO}_3$ , and in aqua regia. (Freese, 132. 225.)

Insol. in all acids except in a mixture of  $\text{HNO}_3$  and  $\text{HF}$ . (Maronneau, C. R. 130. 657.)

$\text{Fe}_3\text{P}_4$ . Very slowly sol. in hot conc.  $\text{Aq}$ . 0.1 g. dissolves by 4 days' heating in  $\text{HCl} + \text{Aq}$ ; 0.3 g. dissolves in hot conc. in  $1\frac{1}{2}$  hours; 0.4 g. in 2 hours in  $\text{HNO}_3$ . Quite easily sol. in aqua regia on warming. (Freese.)

$\text{Fe}_2\text{P}_3$ . Insol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , in aqua regia. Sol. in potassium hypobromite

r, Bull. Soc. 1896, (3) 15.

slowly sol. in boiling HCl + ol. in HNO<sub>3</sub> or aqua regia. (1860. 77.)

reese, Pogg. 132. 225.)

in aqua regia. Sol. in fused (er.)

ly insol. in dil. acids; rapidly

in aqua regia; decomp. by conc. + Aq. (Schneider, J. B. 1886.

iron phosphides described the as been established for only Fe<sub>3</sub>P.

in conc. HCl.

### Fe<sub>2</sub>Se.

l by HNO<sub>3</sub> or acetic acid. Sl. conc. HCl. Readily attacked

in Sol. in HF. (Vigouroux, l. 829.)

Sol. in HCl, HNO<sub>3</sub>, or Insol. in alkalies, or (NH<sub>4</sub>)<sub>2</sub>S J. Pharm. (4) 9. 173.)

in dil. HCl, or HNO<sub>3</sub> + Aq with Se. Sol. in conc. HNO<sub>3</sub> + Aq. 211.)

decomp. by fuming HNO<sub>3</sub>. 1, C. R. 1900, 130. 1711.)

decomp. by fuming HNO<sub>3</sub>. 1, C. R. 1900, 130. 1711.)

l. in conc. HCl; decomp. by (Fonze-Diacon, C. R. 1900,

### Fe<sub>2</sub>Si.

l. in HCl + Aq; easily sol. even (Hahn, A. 129. 57.)

easily sol. in conc. HCl and dily sol. in HF. (Moissan, l. 623.)

in hot HCl + Aq only when vdered. (Hahn.)

ttacked by conc. HF or H<sub>2</sub>SO<sub>4</sub>.

IF. (de Chalmot, Am. Ch. J.

entioned by Jouve, (Bull. Soc. 193.)

in HF and in fused KNO<sub>3</sub>, and Chalmot, J. Am. Chem. Soc.

### ide, Fe<sub>2</sub>S.

ids with decomposition. (Arf- l. 72.)

### le, FeS.

dil. acids, with evolution of at separation of S, except with

+xH<sub>2</sub>O. Sl. sol. in H<sub>2</sub>O, especially if hot. (Berzelius.)

1 l. H<sub>2</sub>O dissolves 70.1 x 10<sup>-4</sup> moles FeS at 18°. (Weigel, Z. phys. Ch. 1907, 58. 294.)

Very violently decomp., even by dil. acids.

Sol. in H<sub>2</sub>SO<sub>4</sub> + Aq. Insol. in H<sub>2</sub>S, or (NH<sub>4</sub>)<sub>2</sub>S + Aq. Sl. sol. in Na<sub>2</sub>S, or K<sub>2</sub>S + Aq. Sol. in Na<sub>2</sub>S or K<sub>2</sub>S + Aq. (de Koninck, Z. angew. Ch. 1891. 204.)

Insol. in NH<sub>4</sub>NO<sub>3</sub>, or NH<sub>4</sub>Cl + Aq. (Brett.)

Not completely pptd. in presence of Na citrate. (Spiller.)

Contrary to assertion of Persoz, it can be nearly completely pptd. in presence of Na<sub>2</sub>P<sub>2</sub>O<sub>7</sub> by (NH<sub>4</sub>)<sub>2</sub>S + Aq. (Rose, Pogg. 76. 18.)

Sol. in alkali sulpho-molybdates, -tungstates, -vanadates, -arsenates, -antimonates, and -stannates. (Storch, B. 16. 2015.)

Sol. in KCN + Aq.

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Solubility of FeS in sugar solutions. 1 l. sugar of given strength dissolves mg. FeS.

% Sugar	mg. FeS		
	at 17.5°	at 45°	at 75°
10	3.8	3.8	5.3
30	7.1	9.1	7.2
50	9.9	19.8	9.1

(Stolle, Z. Ver. Zuckerind. 1900, 50. 300.)

*Colloidal*.—A very dilute solution has been obtained which coagulated very readily. (Winssinger, Bull. Soc. (2) 49. 452.)

### Ferric sulphide, Fe<sub>2</sub>S<sub>3</sub>.

Decomp. by dil. HCl, or H<sub>2</sub>SO<sub>4</sub> + Aq with evolution of H<sub>2</sub>S, leaving a residue of FeS<sub>2</sub>.

+1½H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH + Aq, also in alcoholic ammonia. Sl. sol. in (NH<sub>4</sub>)<sub>2</sub>S + very dil. Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub> + Aq. (Phipson, C. N. 30. 139.)

### Iron disulphide, FeS<sub>2</sub>.

Insol. in dil. HCl, or H<sub>2</sub>SO<sub>4</sub> + Aq. Decomp. by HNO<sub>3</sub> or aqua regia with separation of S. Insol. in a 10% solution of alkali sulphide.

Min. *Pyrite*, *Marcasite*. Sol. in a mixture of Na<sub>2</sub>S and NaOH + Aq, Na<sub>2</sub>S + Aq, or mixture of Na<sub>2</sub>S and NaSH + Aq; insol. in cold NaSH + Aq. Marcasite is more easily sol. in above than pyrite. (Becker, Sill. Am. J. (3) 33. 199.)

### Ferroferric sulphide, Fe<sub>3</sub>S<sub>2</sub>, or Fe<sub>7</sub>S<sub>3</sub>.

Min. *Pyrrhotite*. Sol. in dil. acids with a residue of S. Extremely slowly sol. in a 10% solution of alkali sulphides. (Terrell, C. R. 69. 1360.)

**Iron (ferrous) nickel sulphide,  $2\text{FeS}$ ,  $\text{NiS}$ .**Min. *Penlandite*.**Ferrous phosphorus sulphide,  $\text{FeS}$ ,  $\text{P}_2\text{S}_5$ .**

(Berzelius.)

 $2\text{FeS}$ ,  $\text{P}_2\text{S}_5$ . Slowly decomp. by  $\text{H}_2\text{O}$ . Insol. in boiling  $\text{HCl} + \text{Aq}$ ; decomp. by aqua regia. (Berzelius, A. 46. 256.)**Iron potassium sulphide (potassium sulphoferrite),  $\text{K}_2\text{Fe}_2\text{S}_4 = \text{K}_2\text{S}$ ,  $\text{Fe}_2\text{S}_3$ .**Insol. in cold or hot  $\text{H}_2\text{O}$ . Violently attacked by dil. acids. Not decomp. by boiling with alkalis, alkali carbonates, or sulphides +  $\text{Aq}$ . Decomp. by  $\text{KCN}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ . (Preis, J. pr. 107. 16.) $\text{K}_2\text{S}$ ,  $2\text{FeS}$ . (Schneider, Pogg. 136. 460.)**Iron silver sulphide (silver sulphoferrite),  $\text{Ag}_2\text{S}$ ,  $\text{Fe}_2\text{S}_3$ .**Not attacked by dil.  $\text{HCl} + \text{Aq}$ ; decomp. by conc.  $\text{HCl} + \text{Aq}$ . (Schneider.) $2\text{Ag}_2\text{S}$ ,  $\text{FeS}_2$ . (Schneider, Pogg. 136. 305.) $\text{Ag}_2\text{S}$ ,  $3\text{FeS}$ ,  $\text{FeS}_2$ . Min. *Sternbergite*. Decomp. by aqua regia.**Iron sodium sulphide (sodium sulphoferrite),  $\text{Na}_2\text{Fe}_2\text{S}_4 + 4\text{H}_2\text{O}$ .**Insol. in  $\text{H}_2\text{O}$ . Decomp. by very dil. acids. (Schneider, Pogg. 138. 302.)**Iron sulphophosphide,  $\text{Fe}_3\text{PS}_4$ .**Attacked by acids at  $100^\circ$ . Decomp. by boiling  $\text{NaOH} + \text{Aq}$ . (Ferrand, A. ch. 1899, (7) 17. 410.)**Ferrous telluride,  $\text{FeTe}$ .**Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Fabre, C. R. 105. 277.)**Kermes.**

See Antimony trisulphide.

**"Knallplatin" compounds.**

See Fulminoplatinum compounds.

Ppt. (Frerichs and Smith.)

Lanthanum oxychloride,  $3\text{La}_2\text{O}_3, 2\text{LaCl}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Difficultly and slowly sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ . (Hermann.)

$\text{LaOCl}$ . Boiling  $\text{H}_2\text{O}$  dissolves only traces. (Frerichs and Smith.)

Lanthanum sulphide,  $\text{La}_2\text{S}_3$ .

Decomp. by  $\text{H}_2\text{O}$  and acids. (Didier.)

Lanthanum disulphide,  $\text{LaS}_2$ .

Decomp. by heat. (Biltz, Z. anorg. 1911, 71. 435.)

Lead, Pb.

Lead, in contact with  $\text{H}_2\text{O}$  and air free from  $\text{CO}_2$ , gives a solution of  $\text{PbO}$  which turns litmus blue and turmeric red, and is turned brown with  $\text{H}_2\text{S}$ .

$\text{H}_2\text{O}$  which has been boiled does not dissolve Pb if there is no access of air. When shaken up with air it dissolves 0.01 to 0.008%  $\text{PbO}$  in 2 hours. Pure spring water, containing  $1\frac{1}{2}$  grains salts in 2 pounds  $\text{H}_2\text{O}$  and no  $\text{CO}_2$ , when conducted through a lead pipe 150 feet long, dissolves so much lead that it turns brown with  $\text{H}_2\text{S}$ . (Yorke, Phil. Mag. J. 5. 82.)

$\text{CO}_2$  or small amts. of salts prevent the solution of Pb. 1 vol.  $\text{H}_2\text{O}$  with  $\frac{1}{4}$  vol.  $\text{CO}_2$  dissolves only a trace of Pb. Spring  $\text{H}_2\text{O}$ , containing in 10 pounds 1.21 grains  $\text{NaCl}$  and  $\text{CaCl}_2$ , and 6.4 grains  $\text{CaCO}_3$  dissolved in  $\text{CO}_2$ , does not dissolve lead. (Yorke.)

If the amt. of salts in solution equals  $\frac{1}{100}$  the amt. of  $\text{H}_2\text{O}$ , and especially if they are carbonates, very slight amts. of Pb are dissolved. (Christison, Phil. Mag. J. 21. 158.)

$\text{CaCO}_3$  dissolved in  $\text{CO}_2$  water decreases the solubility of Pb more than any other salt.

Distilled  $\text{H}_2\text{O}$ , quietly standing in a closed flask with lead and air free from  $\text{CO}_2$ , deposits white flocks of  $\text{PbO}_2\text{H}_2$ , and dissolves  $\frac{1}{100}$  pt.  $\text{PbO}$ . The solution has an alkaline reaction. (v. Bonsdorff, Pogg. 41. 305.)

Water of 3° hardness does not take up enough Pb to become injurious. (Clarke, J. B. 1886. 608.)

Soluble carbonates increase the solubility of Pb in  $\text{H}_2\text{O}$  (Nevins, C. C. 1851. 608); especially  $(\text{NH}_4)_2\text{CO}_3$ . (Böttger.)

Presence of  $\text{H}_2\text{SO}_4$  decreases the solubility of Pb. (Horsford, Chem. Gaz. 1849. 247.)

$\text{H}_2\text{O}$  containing  $\text{K}_2\text{SO}_4$  takes up only a trace of Pb. (Wetzlar, Schw. J. 84. 324.)

Presence of sulphates diminishes (Christison), does not diminish (Graham, Miller, and Hoffmann), the action of  $\text{H}_2\text{O}$  on Pb.

$\text{CaSO}_4$  protects Pb, but it is attacked by much  $\text{MgSO}_4$ . (Nevins.)

$\text{NaCl} + \text{Aq}$  dissolves only a trace of Pb.

$\frac{1}{100}$  pt. of a chloride in  $\text{H}_2\text{O}$  is not sufficient to prevent the solubility of Pb in  $\text{H}_2\text{O}$ . (Christison.)

Presence of chlorides increases the solubility. (Graham, Miller, and Hoffmann; Nevins.)

$\text{H}_2\text{O}$  containing  $\text{KNO}_3$  does not corrode Pb.

Nitrates hinder the action of  $\text{H}_2\text{O}$ . (v. Bonsdorff.) Nitrates increase the action of  $\text{H}_2\text{O}$ . (Graham, Miller, and Hoffman.) Nitrates have no influence. (Kersting.)

10 lbs. of  $\text{H}_2\text{O}$  dissolved the following amts. from Pb pipes in 24 hours: if distilled  $\text{H}_2\text{O} + 1\%$   $\text{Na}_2\text{CO}_3$ , 0.38 grain Pb; if Duna water, 0.19 grain Pb; if canal water, 0.15 grain Pb; if distilled  $\text{H}_2\text{O} + 1\%$   $\text{NH}_4\text{NO}_3$ , 0.15 grain Pb; if hard well water, 0.04 grain Pb; if distilled  $\text{H}_2\text{O} + 1\%$   $\text{KNO}_3$ , 0.01 grain Pb. (Kersting, Dingl. 169. 183.)

200 l. Manchester drinking water dissolved 2.094 g. from 1 sq. metre Pb in 8 weeks; 9 l. well water dissolved 1.477 g. from 1 sq. metre Pb in 8 weeks; 11 l. distilled  $\text{H}_2\text{O}$  containing

are dissolved 110.003 g. from 1 sq. metre Pb in 8 weeks; distilled  $H_2O$  free from air dissolved 1.829 g. from 1 sq. metre Pb in 8 weeks; sea water dissolved 0.038 g. from 1 sq. metre Pb in 8 weeks. (Calvert and Johnson, C. N. 16. 171.)

A lead pipe taken up in Paris, which had been exposed to action of ordinary  $H_2O$  for 200 years, was found perfectly smooth and uncorroded. (Belgrand, C. R. 77. 1055.)

Pb is attacked by all waters, hard or soft; even highly calcareous water dissolves some lead. (Mayençon and Bergeret, C. R. 78. 484.)

Pure distilled  $H_2O$  does not act on Pb, but extremely small quantities of  $NH_3$ ,  $HNO_3$ , etc. cause an action; but for this action on Pb the presence of air and  $CO_2$  is also required. (Stallman, Dingl. 180. 366.)

100 ccm. distilled  $H_2O$  dissolved 3 mg. from 11.8 sq. cm. lead in one week when air without  $CO_2$  was passed through the solution. 8 mg. were dissolved when the air contained  $CO_2$ . (Wagner, Dingl. 221. 260.)

Action of dil. salt solutions on lead. In 500 ccm. of the solutions containing salt, bright sheets of lead of 5600 sq. metres' surface were so suspended that the liquid reached all parts of the metal without hindrance, and the amts. dissolved determined after 24, 48, and 72 hours of action.

$CaO \cdot H_2O$	Saturated	137	...

(Wagner, Dingl. 221. 260.)

Solubility of Pb in salt solutions.

25 sq. cm. were acted upon by a solution containing 0.2 g. salt in a litre for 21 days.

Three series of experiments were carried on. I. In corked flasks. II. In beakers covered with porous paper; diameter of mouth of beaker = 11.5 cm. III. In basins covered with porous paper; diameter of mouth of basin = 14.5 cm. IV. In corked flasks with constant current of air. V. In beakers half filled and covered with porous paper, the lead being suspended so that equal amts. of surface were above and beneath the liquid.

The amts. in mgs. of Pb dissolved were as follows:—

Salt used	I.	II.	III.	IV.	V.
$NH_4NO_3$	1.8	4.0	16.0	...	...
$KNO_3$	1.6	0.5	6.0	1.5	...
$CaCl_2$	3.0	2.8	5.5	3.5	3.5
$(NH_4)_2SO_4$	0.7	1.3	16.0	5.0	2.5
$K_2CO_3$	0.3	0.3	0.7	0.6	0.3
Dist. $H_2O$	1.5	0.8	4.2	2.0	...

(Muir, Chem. Soc. 36. 660.)

$H_2O$  sat. with  $CO_2$  dissolves 0.012 g. Pb to a litre in 3 days. (Marais, C. R. 77. 1529.)

Action of  $H_2O$  charged with  $CO_2$  under 760 mm. pressure on Pb. 3 mg. of Pb were dissolved per litre in 24 hours, and the amt. was not increased by further action. The addition of 100 mg.  $K_2CO_3$  + 20 mg.  $NH_4NO_3$  to a litre prevented all action.

Action of  $H_2O$  charged with  $CO_2$  under 6 atmos. pressure on Pb.

14.8 mg. were dissolved per l. in 24 hours, and 24 mg. per l. in 48 hours.

Action of various salt solutions added to above solution of  $CO_2$  were as follows:—

	mg. salt per l.	mg. Pb dissolved	
		after 24 hrs.	after 48 hrs.
. . . . .	80	13.2	32.0
. . . . .	160	....	6.0
. . . . .	160	32.0	44.0
O <sub>2</sub> . . . .	16	5.0	....
O <sub>2</sub> . . . .	40	10.0	35.0
and H <sub>2</sub> O . .	...	14.8	24.0

(Muir, C. N. 33. 125.)

corrosion of Pb by ordinary distilled depends upon the presence of CO<sub>2</sub> and O. dissolved CO<sub>2</sub> is double the amt. of the dissolved O, the action is most energetic. CO<sub>2</sub> is wholly absent and O present, action is very slight, and when the H<sub>2</sub>O is 1½ or more vol. % CO<sub>2</sub> with normal f oxygen, there is no visible corrosion. distilled H<sub>2</sub>O containing neither O nor CO<sub>2</sub> has no action on Pb. In the above cases the greater part of the Pb remains in the form of a white ppt. or crust on the Pb, but in cases where O and CO<sub>2</sub> are both present in a ratio of 1 : 2, very small amts. of Pb go into solution in a few days; the amt., however, diminishes on standing. As the amt. of CO<sub>2</sub> increases, the amt. of Pb dissolved in the H<sub>2</sub>O increases.

NaOH alone does not protect Pb from corrosion, but when in combination with CO<sub>2</sub>, the corrosion is much diminished.

CaH<sub>2</sub>, and NaOH + Aq attack Pb much more actively in absence of CO<sub>2</sub> and presence of it.

In absence of dissolved O neither H<sub>2</sub> nor NaOH attacks Pb.

CO<sub>2</sub> + Aq in absence of CO<sub>2</sub> attacks Pb very little, but NaHCO<sub>3</sub> + Aq has not the slightest action.

Ca(CO<sub>3</sub>)<sub>2</sub> + Aq also has not the slightest action on Pb, and the presence of CaCO<sub>3</sub> and CaH<sub>2</sub> prevents H<sub>2</sub>O attacking Pb.

O<sub>2</sub> + Aq in presence of air forms a crust on Pb, but no Pb is found in solution, but if excluded there is no visible action. Presence of CO<sub>2</sub> causes a strong corrosive action. Solutions containing CaSO<sub>4</sub> and CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub> do not attack Pb.

In the above reactions are not in the least affected by the presence of moderate amts. of NaCl, KCl, chlorides, or ammonium, or organic acids; but ammonium salts in excess have a strong solvent action on Pb. (Muller, Jour. Soc. Chem. Ind. (2) 36. 317.)

also an extended report of the action of Pb made to the Water Committee of the Institution of Civil Engineers, London, in 1886, by Messrs. J. H. Parnell, Odling, and Tidy.

For extended researches are published by J. H. Parnell and Frew (Jour. Soc. Chem. Ind. 7. 1888), which only the general conclusions can be given here.

The action of slaked lime, limestone, sand and calcium silicate, mortar, etc., was tested. The results were as follows:—

1. In nearly all cases the corrosion is greater with free exposure to the air than when air is excluded. The difference is especially great in those cases where the greatest action on the lead takes place. Aluminum hydroxide and blue clay form exceptions, and exert a greater corrosive action when air is excluded. In the case of CaCO<sub>3</sub>, old mortar, CaSiO<sub>3</sub>, or a mixture of CaCO<sub>3</sub> and CaO<sub>2</sub>H<sub>2</sub>, the exclusion or presence of air makes no appreciable difference.

KNO<sub>3</sub> + Aq shows a peculiar behaviour. In the presence of air it acts nearly as much on the Pb as pure H<sub>2</sub>O, but when air is excluded it exerts nearly as much retarding action as CaSiO<sub>3</sub>.

2. In the presence of air the action of H<sub>2</sub>O on Pb is considerably increased by the presence of NH<sub>4</sub>NO<sub>3</sub> or CaO<sub>2</sub>H<sub>2</sub>; with exclusion of air, by CaSO<sub>4</sub>, also by a mixture of CaO<sub>2</sub>H<sub>2</sub> and sand. All the other investigated substances, even KNO<sub>3</sub>, hinder the action of H<sub>2</sub>O on Pb either with or without exclusion of air.

3. CaO<sub>2</sub>H<sub>2</sub> + Aq exerts in all cases a much greater corrosive action than pure H<sub>2</sub>O, and although this action is diminished by sand yet fresh mortar very quickly destroys lead pipes when in contact therewith. Old mortar, on the other hand, and also CaSiO<sub>3</sub> and CaCO<sub>3</sub>, have a protective action.

4. The fact is very important that sand, CaCO<sub>3</sub>, old mortar, CaSiO<sub>3</sub>, and a mixture of sand and CaCO<sub>3</sub> afford considerable protection to lead against H<sub>2</sub>O. A mixture of limestone and sandstone has more effect than the two substances separately.

5. CaSiO<sub>3</sub> totally prevents the corrosive action of KNO<sub>3</sub> and NH<sub>4</sub>NO<sub>3</sub>, so that the lead is not attacked by solutions of those salts any more than by H<sub>2</sub>O containing CaSiO<sub>3</sub> alone. Sand, and a mixture of sand and CaCO<sub>3</sub>, have a similar effect, but not to such a degree.

6. The protective influence of CaCO<sub>3</sub> does not appear to depend on the presence of CO<sub>2</sub> and the formation of CaH<sub>2</sub>(CO<sub>3</sub>)<sub>2</sub>.

7. MgCO<sub>3</sub> prevents the corrosion of Pb as much as CaSiO<sub>3</sub>. (Carnelley and Frew, Jour. Soc. Chem. Ind. 7. 15.)

Pb in contact with Zn or Fe is protected thereby from the solvent action of H<sub>2</sub>O, and in fact the action is nearly null. Sn, on the other hand, increases the action. This is of importance in regard to the use of tin-coated lead pipes.

The presence of Ca salts does not influence the action of the H<sub>2</sub>O on Pb, hard or soft H<sub>2</sub>O provided it contains CO<sub>2</sub>, having a strong corrosive action. Removal of air from H<sub>2</sub>O diminishes the solvent action. Simple filtration will remove all Pb from H<sub>2</sub>O if suitable filters are used. (Flögel, J. B. 1888. 2645.)

Pure distilled  $H_2O$  has strong corrosive action on Pb, which is very much weakened by addition of a solution of  $CaCO_3$  in carbonic acid water, but the presence of sulphates increase the action. Pb is not appreciably attacked by  $H_2O$  in presence of chlorides alone,

but very strongly when  $CaSO_4$  is also present.  $H_2O$  containing  $CO_2$  also corrodes Pb. conclusion was drawn that the absence of action of  $H_2O$  on Pb in lead pipes is due to presence of traces of  $CaH_2(CO_3)_2$ . (Barb and Gucci, C. C. 1888. 934.)

Solubility in  $H_2O$  containing various solids in solution.

$CaHCO_3$ + Aq with $Na_2SO_4$	2.18	3.32	2.05
$CaSO_4$ + Aq containing 0.095 g. CaO as sulphate per l.	6.83	6.83	3.41
$CaSO_4$ + Aq with NaCl	5.46	6.57	3.51
$CaSO_4$ + Aq with $Na_2SO_4$	4.78	5.87	3.69

Column 1 gives the numbers for distilled water free from air; column 2 for distilled water aerated by agitation with air; column 3 for water continuously aerated by passing 1 of air through it per hour; column 4 for distilled water through which 1 litre of air as cc. of  $CO_2$  were passed per hour throughout the experiment. (Antony and Benelli, ch. it. 1896, 26, (2) 97 and 352.)

Almost insol. in cold  $HCl$  + Aq, and only sl. attacked when boiling. Completely sol. in  $HNO_3$  + Aq if not too conc., but presence of  $H_2SO_4$  or  $HCl$  diminishes the solvent power to a great extent. (Rose.)

Granulated Pb is sl. sol. in conc.  $HCl$  + Aq; addition of  $PtCl_4$  makes the action very energetic. Dil.  $HCl$  + Aq may also be used with  $PtCl_4$ . (Millon, C. R. 21. 49.)

$HCl$  + Aq of 1.2 sp. gr., with Pb, gives off H at ord. temp., more abundantly when heated. Evolution of H is hastened by placing Cu in contact with the Pb. (Stolba, J. pr. 94. 113.)

Quickly decomp. by hot  $HCl$  + Aq, slowly by cold. (Sharples, C. N. 50. 126.)

Scarcely acted upon by boiling conc.  $HCl$  + Aq.

Sol. in aqua regia.

$HNO_3$  + Aq is the best solvent, but Pb is as good as insol. in a mixture of  $HNO_3$  and  $H_2SO_4$ . (Berzelius.)

Not acted upon by very conc.  $HNO_3$  + Aq. Pb is only sl. attacked by  $HNO_3$  + Aq of any strength below  $15^\circ$ . Above  $15^\circ$  it is most rapidly attacked by a rather weak acid. (Montemartini, Gazz. ch. it. 22. 397.)

Action of  $H_2SO_4$  on Pb.

$H_2SO_4$  of 1.842 sp. gr. dissolves 201 g. from 1 sq. metre pure lead at ordinary temp. (time?), and  $H_2SO_4$  of 1.705 sp. gr. dissolves only 59 g.

Slight impurities in the lead lessen this

solubility. (Calvert and Johnson, Chem (2) 1. 66.)

Strongly attacked by 99.8%  $H_2SO_4$  at temp. with exclusion of air. (Lunge, I 261. 131.)

When 0.2 g. pure Pb was heated with ccm.  $H_2SO_4$  of  $66^\circ B$ . there was no appreciable action below  $175^\circ$ . At  $230$ – $250^\circ$  all the Pb was suddenly converted into  $PbSO_4$ , and dissolved. (Bauer, B. 8. 210.)

Lead is slowly attacked by pure cold  $H_2SO_4$  + Aq (99.78%  $H_2SO_4$ ). Lead vessels which held the  $H_2SO_4$  were gradually destroyed by long standing. (Napier and Lock, C. N. 42. 314.)

$H_2SO_4$  + Aq (20%) does not evolve H under the same circumstances. (Stolba.)

Sol. in  $HC_2H_3O_2$  + Aq when in contact with the air.

Strong  $NH_4OH$  + Aq does not dissolve litharge; but lead immersed in  $NH_4OH$  3 days gives an ammonia solution containing 0.0139% lead. (Endemann, Am. Ch. 1897, 19. 892.)

Somewhat sol. in  $NaCl$  + Aq. (Reich, Dingl. 172. 155.)

$NaCl$  + Aq attacks Pb at high temp. (Lunge, l. c.)

Action of  $KClO_3$ .  $KClO_3$  + Aq (10%) oxidised 64.31 g. Pb from 1 sq. m surface by boiling 7 hours;  $KClO_3$  + Aq (10%) oxidised 151.12 g. under same conditions; and  $Ca(ClO_3)_2$ ,  $CaCl_2$  + Aq ( $20^\circ B$ )

; and  $\text{Ca}(\text{ClO}_3)_2$ ,  $\text{CaCl}_2 + \text{Aq}$  ( $20^\circ$  ne), obtained by passing  $\text{Cl}_2$  through  $\text{H}_2 + \text{Aq}$ , oxidised 437.70 g. (Lunge and Jöcher, Jour. Soc. Chem. Ind. 4. 31.)  
sol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 20. 828.)

l. in a solution of K in liquid  $\text{NH}_3$ . (Lunge, J. Am. Chem. Soc. 1907, 29. 1562.)  
ccm. oleic acid dissolves 0.0592 g. Pb in 100 ccm. (Gates, J. phys. Chem. 1911, 15. 100.)

solubility of Pb in petroleum.

b.-pt. is under  $230^\circ$ , only slightest trace dissolved in 4 months; if  $230-300^\circ$ , 0.0026% dissolved in 4 months; if over  $300^\circ$ , 0.0244% in 4 months; if over  $300^\circ$ , 0.0244% in 4 months.

solubility of Pb in commercial oil of turpentine and resin oil.

	Temp.	% Pb dissolved	
		in 8 days	in 14 days
h oil of turpentine	15-20°	sl. trace	0.0722
oil of turpentine	15-20	0.0522	0.1435
h oil of turpentine	100	0.265	0.715
oil of turpentine	100	0.982	1.851
h oil of turpentine	130-150	0.938	2.045
oil of turpentine	130-150	1.738	4.083
h resin oil	15-20	trace	0.024
"	15-20	0.073	0.185
h "	100	0.380	0.880
"	100	1.190	2.711
h "	130-150	1.050	2.065
"	130-150	2.208	4.740

(Engler and Kneis, Dingl. 263. 193.)

b is strongly attacked by oil of turpentine. (Lunge, Chem. 4. 289.)

the fatty oils dissolve Pb in considerable amount. (Macadam, J. B. 1878. 1169.)

not attacked by sugar + Aq. (Klein and Jöcher, C. R. 102. 1176.)

d potassium amide.

see Potassium ammonoplumbite.

d azoimide, basic,  $\text{PbO}$ ,  $\text{PbN}_2$ .

sol. in  $\text{H}_2\text{O}$ . (Wöhler, B. 1913, 46. 2054.)

d azoimide,  $\text{PbN}_2$ .

sol. in cold  $\text{H}_2\text{O}$ ; much less sol. in boiling  $\text{H}_2\text{O}$  than  $\text{PbCl}_2$ . 1 l.  $\text{H}_2\text{O}$  dissolves about  $\frac{1}{2}$  g.  $\text{PbN}_2$ .

sol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Curtius, B. 24. 1.)

Lead bromide,  $\text{PbBr}_2$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ , or in  $\text{H}_2\text{O}$  containing  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{C}_2\text{O}_4$ . (Löwig.)

1 l.  $\text{H}_2\text{O}$  dissolves 6 g.  $\text{PbBr}_2$  at  $10^\circ$ ; addition of  $\text{HBr}$  causes a ppt. which redissolves on further addition of  $\text{HBr}$ . 1000 pts. of a liquid containing 720 pts.  $\text{HBr}$  dissolve 550 g.  $\text{PbBr}_2$ . This solubility increases by heating. (Ditte, C. R. 92. 718.)

1 l.  $\text{H}_2\text{O}$  dissolves 26.28 millimols.  $\text{PbBr}_2$  at  $25.2^\circ$ . (von Ende, Z. anorg. 1901, 26. 159.)

Solubility in 100 g.  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	G. $\text{PbBr}_2$
0	0.4554
15	0.7305
25	0.9744

45	1.7457
55	2.1376
65	2.5736
80	3.3430
95	4.3613
* 100	4.7510

\* By extrapolation.

(Lichty, J. Am. Chem. Soc. 1903, 25. 474.)

Sl. sol. in  $\text{H}_2\text{O}$ .

$8.34 \times 10^{-4}$  gram. are dissolved in 1 liter of sat. solution at  $20^\circ$ . (Böttger, Z. phys. ch. 1903, 46. 603.)

Solubility of  $\text{PbBr}_2$  in  $\text{HNO}_3 + \text{Aq}$  at  $25.2^\circ$ .  
S = solubility in millimols per litre.

$\text{HNO}_3$ normal	S
0.001	39.11
0.01	39.87
0.051	42.56
0.04 $\text{KNO}_3 +$	
0.01 $\text{HNO}_3$	42.77

(von Ende, Z. anorg. 1901, 26. 162.)

Slowly sol. in cold, easily in warm  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Wittstein.)

Not pptd. in presence of Na citrate. (Spiller.)

Insol. in  $\text{H}_2\text{O}$  containing  $\text{Pb}(\text{NO}_3)_2$ . (von Ende, Z. anorg. 1901, 26. 159.)

Insol. in benzene. (Franchimont, B. 16. 387.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

+  $3\text{H}_2\text{O}$ . (Ditte, l. c.)

**Lead hydrogen bromide**,  $5\text{PbBr}_2, 2\text{HBr} + 10\text{H}_2\text{O}$ .

Sol. in  $\text{HBr} + \text{Aq.}$  (Ditte, C. R. **92**. 718.)

**Lead magnesium bromide**,  $\text{PbBr}_2, 2\text{MgBr}_2 + 16\text{H}_2\text{O}$ .

Very deliquescent. Decomp. immediately by  $\text{H}_2\text{O}$  or alcohol. (Otto and Drewes, Arch. Pharm. **229**. 585.)

**Lead potassium bromide (potassium bromoplumbite)**,  $\text{PbBr}_2, \text{KBr} + \text{H}_2\text{O}$ .

(Remsen and Herty, Am. Ch. J. **14**. 124.)

$+ \text{H}_2\text{O}$ . (Wells, Sill. Am. J. **145**. 129.)

$\text{PbBr}_2, 2\text{KBr}$ . Sol. in a little  $\text{H}_2\text{O}$  without decomp., but decomp. by an excess with separation of  $\text{PbBr}_2$ . (Lowig.)

$+ \text{H}_2\text{O}$ . (Wells, Sill. Am. J. **145**. 129.)

$2\text{PbBr}_2, \text{KBr}$ . (Wells.)

**Lead potassium perbromide**,  $\text{K}_2\text{Pb}_2\text{Br}_8 + 4\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol. (Wells, Z. anorg. **4**. 340.)

**Lead rubidium bromide**,  $\text{PbBr}_2, 2\text{RbBr} + \frac{1}{2}\text{H}_2\text{O}$ .

(Wells, Sill. Am. J. **146**. 34.)

$2\text{PbBr}_2, \text{RbBr}$ . (Wells.)

**Lead sodium bromide.**

Decomp. by  $\text{H}_2\text{O}$ . (Lowig.)

**Lead bromochloride**,  $\text{PbBrCl} = \text{PbBr}_2, \text{PbCl}_2$ .

Can be recrystallised from  $\text{H}_2\text{O}$  without decomp. (Iles, C. N. **43**. 216.)

$3\text{PbCl}_2, \text{PbBr}_2$ . Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in  $\text{HCl}$  and in  $\text{HBr}$ . Insol. in cold alcohol; sl. sol. in boiling alcohol. (Thomas, C. R. **1899**, **128**. 1235.)

**Lead bromiodide**,  $\text{PbBrI} = \text{PbBr}_2, \text{PbI}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Cryst. from a solution of  $\text{PbI}_2$  in  $\text{HBr}$ . (Grissom and Thorp, Am. Ch. J. **10**. 229.)

$3\text{PbBr}_2, \text{PbI}_2$ . Decomp. by  $\text{H}_2\text{O}$ . (Thomas, C. R. **1899**, **128**. 1236.)

$6\text{PbBr}_2, \text{PbI}_2$ . (G. and T.)

**Lead bromosulphide**,  $\text{PbBr}_2, \text{PbS}$ .

Properties as chlorosulphide. (Parmentier.)

**Lead chloride**,  $\text{PbCl}_2$ .

Slowly sol. in 135 pts.  $\text{H}_2\text{O}$  at  $12.5^\circ$ , and in a much smaller quantity of hot  $\text{H}_2\text{O}$ . (Bischof.)

Sol. in 30 pts. cold, and 22 pts. hot  $\text{H}_2\text{O}$ . (Wittstein.)

Sol. in 30 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$ . (Abl.)

100 pts.  $\text{H}_2\text{O}$  dissolve 4.59 pts.  $\text{PbCl}_2$  at  $15.5^\circ$ . (Ure's Diet.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.9712 pt.  $\text{PbCl}_2$  at  $20^\circ$ . (Formánek, C. C. **1887**. 270.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.946 pt.  $\text{PbCl}_2$  at  $17.7^\circ$ . (Bell, Chem. Soc. (2) **6**. 355.)

Sol. in 105.2 pts.  $\text{H}_2\text{O}$  at  $16.5^\circ$ . (Bell, C. N. **16**. 69.)

100 pts.  $\text{H}_2\text{O}$  dissolve 0.8 pt.  $\text{PbCl}_2$  at  $1.18$  pts. at  $20^\circ$ ; 1.7 pts. at  $40^\circ$ ; 2.1 pt. at  $55^\circ$ ; 3.1 pts. at  $80^\circ$ . (Ditte, C. R. **92**. 718.)

1 l.  $\text{H}_2\text{O}$  dissolves 38.80 millimols.  $\text{PbCl}_2$  at  $25.2^\circ$ . (von Ende, Z. anorg. **1901**, **28**. 14)

9.61 x  $10^{-1}$  gram are dissolved in 1 lit sat. solution at  $20^\circ$ . (Böttger, Z. phys. **1903**, **46**. 603.)

Solubility in  $\text{H}_2\text{O}$ .

100 g.  $\text{H}_2\text{O}$  dissolve g.  $\text{PbCl}_2$  at  $t^\circ$ .

$t^\circ$	G. $\text{PbCl}_2$

Sol. in  $\text{KOH} + \text{Aq}$ . (Rose.)

Less sol. in dil. salt solutions than in  $\text{H}_2\text{O}$ ,  
especially  $\text{CaCl}_2 + \text{Aq}$ ; sol. in 534 pts.  $\text{H}_2\text{O}$   
containing  $\text{CaCl}_2$ . (Bischof.)

More sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  than in  $\text{H}_2\text{O}$ , but  
not as sol. as  $\text{AgCl}$ . (Herschell, 1819.)

More sol. in  $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$  than in  $\text{H}_2\text{O}$ .  
(Anthon.)

Easily sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ .

Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch.  
J. 1898, 20. 828.)

Insol. in conc. alcohol. (Wittstein.) In-  
sol. in 94% alcohol; very sl. sol. in cold or hot  
76% alcohol.

Solubility in alcohol at  $25^\circ$ .

Alcohol = g. mol. alcohol in 1 l. of solvent.

$\text{PbCl}_2$  = g. mol.  $\text{PbCl}_2$  in 1 l. of solution.

Alcohol	4	2	1	$\frac{1}{2}$	$\frac{1}{4}$
$\text{PbCl}_2$	0.0172	0.0257	0.0298	0.0330	0.0338

Alcohol	$\frac{1}{4}$	0
$\text{PbCl}_2$	0.0367	0.0388

(Kernot and Pomilio, Soc. R. Napoli, (3) 17.  
353.)

Insol. in benzene. (Franchimont, B. 16.  
387.)

Insol. in  $\text{CS}_2$ . (Arcetowski, Z. anorg. 1894,  
6. 257.)

Insol. in benzonitrile. (Naumann, B. 1914,  
47. 1370.)

Insol. in methyl acetate (Naumann, B.

1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in methylal. (Eidmann, C. C. 1899, II, 1014.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Glycerine dissolves 1.995%  $\text{PbCl}_2$ .

1 pt. glycerine + 1 pt.  $\text{H}_2\text{O}$  dissolves 1.32%  $\text{PbCl}_2$ .

1 pt. glycerine + 3 pts.  $\text{H}_2\text{O}$  dissolves 1.0365%  $\text{PbCl}_2$ .

Glycerine containing 87.5%  $\text{H}_2\text{O}$  dissolves 0.91%  $\text{PbCl}_2$ . (Piesse, B. 7. 599.)

Solubility of  $\text{PbCl}_2$  in mannite + Aq at 25°.

Mannite = g. mol. mannite in 1 l. of solvent.

$\text{PbCl}_2$  = g. mol.  $\text{PbCl}_2$  in 1 l. of solution.

Mannite	$\frac{1}{2}$	$\frac{1}{4}$	$\frac{1}{8}$	$\frac{1}{16}$	$\frac{1}{32}$

1.519	0.101	"

(Wood, Chem. Soc. 1910, 97. 884.)

Insol. in acetone. (Naumann, B. 1904,  
37. 4329.)

$2\text{PbO}$ ,  $\text{PbO}_2\text{H}_2 = 3\text{PbO}$ ,  $\text{H}_2\text{O}$ . Sol. in  
10,000 to 12,000 pts.  $\text{H}_2\text{O}$ . (Yorke.) Sol. in  
7000 pts.  $\text{H}_2\text{O}$ . (v. Bonsdorff, Pogg. 41. 307.)

0.45 millimol. Pb are sol. in 1 liter  $\text{H}_2\text{O}$  at  
18°. (Pleissner, C. C. 1907, II. 1056.)

Sol. in acids. Insol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  Sol.  
in  $\text{NaOH}$ , or  $\text{KOH} + \text{Aq.}$  Sol. in hot  $\text{NH}_4\text{Cl} +$   
 $\text{Aq.}$  and repptd. by  $\text{NH}_4\text{OH} + \text{Aq.}$

Solubility in  $\text{KOH} + \text{Aq.}$  according to Ditte  
(C. R. 94. 130). When  $\text{KOH} + \text{Aq}$  is gradu-

ally added to lead hydroxide suspended in  $H_2O$ , the lead hydroxide is at first dissolved proportional to the amount of  $KOH$ , until the strength reaches 200 g.  $KOH$  to 1 litre  $H_2O$ . The solubility then diminishes and increases again until 400 g.  $KOH$  are dissolved in 1 litre  $H_2O$ . The amorphous lead hydroxide is then converted into crystalline  $2PbO(PbO_2H_2)$ . By further addition of  $KOH$  the solubility is suddenly decreased, and then increases again. (Ditte.)

Sol. in triethyl toluenyl ammonium hydrate + Aq.

Sol. in sorbine + Aq. (Pelouze.)

Sol. in acetates + Aq. (Mercer.)

Sol. in Ca, Ba, Sr, K, or Na succate + Aq.

Not pptd. in presence of Na citrate + Aq. (Spiller.)

See also under Lead, and Lead oxide.

**Lead perhydroxide,  $PbO_2, H_2O$ .**

See Lead peroxide.

**Lead imide,  $PbNH$ .**

Decomp. by  $H_2O$  and dilute acids. (Franklin, Z. anorg. 1905, 46. 27.)

**Lead iodide,  $PbI_2$ .**

Sol. in 187 pts. boiling  $H_2O$ . (Berthmot.)

Sol. in 1235 pts.  $H_2O$  at ord. temp., and 194 pts. at  $100^\circ$ . (Denot, J. pr. 1. 425.)

Sol. in 2400 pts.  $H_2O$  at  $18.75^\circ$ . (Abl.)

Sat.  $PbI_2$  + Aq at  $20^\circ$  contains 0.0017 pt.; at  $27^\circ$ , 0.002 pt.; at  $100^\circ$ , 0.0039 pt.  $PbI_2$ . (Lassaigne, J. chim. med. 7. 364.)

1 l.  $H_2O$  dissolves 0.6 g.  $PbI_2$  at  $10^\circ$ . (Ditte, C. R. 92. 718.)

1 l.  $H_2O$  dissolves 1.58 millimols  $PbI_2$  at  $25.2^\circ$ . (Von Ende, Z. anorg. 1901, 26. 159.)

$0.47 \times 10^{-1}$  gram are dissolved in 1 litre of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46. 603.)

Solubility in 100 g.  $H_2O$  at  $t^\circ$ .

$t^\circ$	G. $PbI_2$ .

rise, J. phys. Ch. 1912, 16, 273.)

**Iodine iodide,  $\text{PbH}_2\text{I}_4 = \text{PbI}_2, 2\text{HI}$ .**  
 $\text{H}_2\text{O}$  dissolves out  $\text{HI}$ . Sol. in hot  $\text{m}$  which crystallizes  $\text{PbI}_2$ . (Guyot, med. 12, 247.)  
 $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Berthelot, 1024.)

**Lithium iodide,  $\text{PbI}_2, \text{LiI} + 5\text{H}_2\text{O}$ .**  
 1 mol.  $\text{H}_2\text{O}$  at  $95^\circ$  and loses another  $\text{H}_2\text{O}$  at  $100^\circ$ . (Bogorodski, C. C. 1894, 2LiI +  $6\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Mos- R. 1895, 120, 446.)

**Magnesium iodide,  $\text{PbI}_2, 2\text{MgI}_2$ .**  
 ap. by  $\text{H}_2\text{O}$  and by alcohol. (Mos- ch. 1897, (7) 12, 402.)  
 $\text{H}_2\text{O}$ . Very hygroscopic. Decomp. tely by  $\text{H}_2\text{O}$ . (Otto and Drewes, arm. 229, 180.)

**Nickel iodide,  $\text{PbNi}_2\text{I}_4 + 3\text{H}_2\text{O}$ .**  
 ap. by  $\text{H}_2\text{O}$ . (Moisnier, A. ch. 1897, 11.)

**Potassium iodide (Potassium iodoplumb-),  $\text{PbI}_2, \text{KI}$ .**

ment. Completely decomp. by  $\text{H}_2\text{O}$ . upon by cold, but completely de- by hot alcohol. (Boullay, A. ch. 366.)

O. The only salt that could be by Remsen and Herty (Am. Ch. J.

2KI. Sl. sol. in boiling chloroform; l. in strong KI + Aq. insol. in alcohol. C. N. 1898, 77, 191.)

O. Decomp. by  $\text{H}_2\text{O}$ . (Berthelot, 5) 29, 289.)

not exist. (R. and H.)  
 O. (Ditte, C. R. 92, 134.) Does not R. and H.)

$\text{PbI}_2, 4\text{KI}$ . Decomp. by  $\text{H}_2\text{O}$ ; insol. in alcohol. (Boullay.) Does not exist. (R. and H.)

$3\text{PbI}_2, 4\text{KI} + 6\text{H}_2\text{O}$ . (Berthelot, l. c.) Does not exist. (R. and H.)

**Lead potassium periodide,  $\text{K}_2\text{Pb}_2\text{I}_8 + 4\text{H}_2\text{O}$ .**  
 Decomp. by  $\text{H}_2\text{O}$  or alcohol. (Wells, Z. anorg. 4, 346.)

**Lead rubidium iodide,  $\text{PbI}_2, \text{RbI} + 2\text{H}_2\text{O}$ .**  
 (Wells, Sill. Am. J. 146, 34.)

**Lead silver iodide,  $\text{PbI}_2, 2\text{AgI}$ .**  
 (Ruff and Geisel, B. 1905, 38, 2663.)

**Lead silver iodide ammonia,  $\text{PbI}_2, 2\text{AgI}, 5\text{NH}_3$ .**  
 (Ruff and Geisel, B. 1905, 38, 2663.)

**Lead sodium iodide,  $\text{PbI}_2, \text{NaI}$ .**  
 Decomp. by  $\text{H}_2\text{O}$ . (Poggiale, C. R. 20, 1180.)  
 +  $z\text{H}_2\text{O}$ . (Remsen and Herty, Am. Ch. J. 14, 124.)  
 $\text{PbI}_2, 2\text{NaI} + 6\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Moisnier, C. R. 1895, 120, 445.)

**Lead iodide ammonia,  $\text{PbI}_2, 2\text{NH}_3$ .**  
 Decomp. by  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 48, 166.)

**Lead iodide carbonate.**  
 See Carbonate iodide, lead.

**Lead iodosulphide,  $\text{PbS}, 4\text{PbI}_2$ .**  
 Decomp. by light, heat, acids and alkalis. (Lenher, J. Am. Chem. Soc. 1895, 17, 512.)  
 Sol. in conc.  $\text{HI}$ ; insol. in dil.  $\text{HI} + \text{Aq}$ . (Lenher, J. Am. Chem. Soc. 1901, 23, 681.)  
 $\text{IPbS}, \text{PbS}, \text{PbI}_2$ . Ppt. (Hofmann, B. 1904, 37, 251.)

**Lead suboxide,  $\text{Pb}_2\text{O}$ .**  
 Decomp. by  $\text{H}_2\text{O}$  into  $\text{PbO}, \text{H}_2$ .  
 Decomp. by dil.  $\text{H}_2\text{SO}_4, \text{HCl}, \text{HNO}_3, \text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ , or alkalis, into  $\text{PbO}$ , which dissolves, and  $\text{Pb}$ , which dissolves or not, according to the reagent. Sol. in dil.  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ .

**Lead monoxide (Litharge),  $\text{PbO}$ .**  
 Sol. in 7000 pts.  $\text{H}_2\text{O}$ . (Horsford.)  
 Pure  $\text{PbO}$  is insol. in  $\text{H}_2\text{O}$ . (Brandecke, Repert. 53, 155; Siebold, Repert, 53, 174; Herbergen, Repert. 55, 55.) Sl. sol. in  $\text{H}_2\text{O}$ . (Yorke, Phil. Mag. (3) 5, 82.)  
 0.31 millimoles  $\text{Pb}$  are dissolved in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$ . (Pleissner, C. C. 1907, II, 1056.)  
 $1.71 \times 10^{-2}$  g. are dissolved in 1 litre of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46, 603.)

Easily sol. in acids.

Sol. in KOH, or NaOH+Aq; also in  $\text{CaO}_2\text{H}_2$ +Aq.

Sol. in boiling  $\text{Cu}(\text{NO}_3)_2$ +Aq with pptn. of Aq.

Sol. in  $\text{CaCl}_2$ , and  $\text{SrCl}_2$ +Aq. (André, C. R. 104. 359.)

Sol. in  $\text{MgCl}_2$ +Aq. (Voigt, Ch. Ztg. 13. 695.)

Sol. in boiling  $\text{Cu}(\text{NO}_3)_2$ +Aq with pptn. of  $\text{CuO}$ .

Partially sol. in  $\text{Cd}(\text{NO}_3)_2$ , and  $\text{Mn}(\text{NO}_3)_2$ +Aq with pptn. of  $\text{CdO}$  and  $\text{MnO}$  respectively.

Not acted upon by Mg, Ag, Co, Ni, or Ce nitrates + Aq. (Persoz.)

Very sol. in  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2$ +Aq. (Rochleder.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014.)

When finely pulverised, sol. in cane sugar +Aq, but less than  $\text{Pb}_2\text{O}_3$ . (Peschier.)

Sl. sol. in glycerine. Readily sol. in glucose +Aq. (Persoz.)

Sol. in volatile oils. (Schweitzer.)

Yellow modification.

#### Solubility in $\text{H}_2\text{O}$ at 22°.

	Solubility in g.-equiv. per litre
1. Yellow $\text{PbO}$ , obtained by boiling lead hydroxide with 10% NaOH	$1.03 \times 10^{-4}$
2. Yellow $\text{PbO}$ , obtained by heating 1 at 630°	$1.05 \times 10^{-4}$
3. Yellow $\text{PbO}$ , obtained by heating at 740° red $\text{PbO}$ , formed by boiling lead hydroxide with conc. NaOH	$1.00 \times 10^{-4}$
4. Yellow $\text{PbO}$ obtained by heating pure, commercial, yellow-brown $\text{PbO}$ at 620°.	$1.09 \times 10^{-4}$

(Ruer, Z. anorg. 1906, 50. 273.)

*Red modification.* Obtained by boiling lead hydroxide with conc. NaOH+Aq.

Solubility in  $\text{H}_2\text{O}$  at 22°= $0.56 \times 10^{-4}$  g. equiv. per l. (Ruer, Z. anorg. 1906, 50. 273.)

*Yellow-brown modification.* Solubility in  $\text{H}_2\text{O}$  at 22°= $1.10 \times 10^{-4}$  g. equiv. per litre. (Ruer, Z. anorg. 1906, 50. 273.)

See also Lead.

Min. *Massicot*.

#### Lead oxide (Red lead), $\text{Pb}_3\text{O}_4$ .

Insol. in  $\text{H}_2\text{O}$ .

Converted by acids into  $\text{PbO}_2$  and salts of monoxide.

Sol. in a large amt. of glacial acetic acid. (Berzelius.) Insol. in acetic acid. (Schonbein, J. pr. 74. 325.)

Solution in  $\text{HC}_2\text{H}_3\text{O}_2$ +Aq may de or not according to concentration. When treated with an excess of HC Aq of 8° B,  $\text{Pb}_2\text{O}_3$  is quickly dissol the solution soon deposits  $\text{PbO}_2$ ; composition is facilitated by dilutio if  $\text{Pb}_2\text{O}_3$  is treated with a large e glacial  $\text{HC}_2\text{H}_3\text{O}_2$ , it dissolves, and t tion is permanent if atmospheric ai cluded, and temp. does not rise ab (Jacquelin, J. pr. 53. 152.)

Insol in acetone. (Eidmann, C. ( II, 1014; Naumann, B. 1904, 37. 43

Easily sol. in cane sugar +Aq. (P Min. *Minium*.

#### Lead sesquioxide, $\text{Pb}_2\text{O}_3$ .

Insol. in  $\text{H}_2\text{O}$  or in KOH+Aq.

Decomp. by strong acids into Pb corresponding salt of monoxide.

#### Lead peroxide, $\text{PbO}_2$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids, also i alkali hydroxides+Aq. The soluti acids are very unstable, except wh centrated and kept at a low temperatu

Decomp. by cold HCl, HCN, HI HI+Aq. Not attacked by other aci cold, but decomp. thereby when hot. in moderately conc.  $\text{HNO}_3$ ,  $\text{H}_2\text{S}$   $\text{HC}_2\text{H}_3\text{O}_2$ +Aq.

There are two forms of  $\text{PbO}_2$ , th phous and the crystalline.

1 l. of very conc.  $\text{H}_2\text{SO}_4$  dissolves 1 mols. crystalline  $\text{PbO}_2$ .

#### Solubility of amorphous $\text{PbO}_2$ in $\text{H}_2\text{S}$ at 22°.

99.5 millimols.  $\text{PbO}_2$  are dissolved i acid containing 1720 g.  $\text{H}_2\text{SO}_4$ .

4 millimols.  $\text{PbO}_2$  are dissolved in acid containing 1097 g.  $\text{H}_2\text{SO}_4$ .

v = moles  $\text{H}_2\text{SO}_4$  per mole of  $\text{H}_2\text{O}$ .

c = millimols.  $\text{PbO}_2$  dissolved in 1 li

v	c	v
0.32	0.82	0.20

odide,  $\text{PbI}_2$ ,  $\text{PbO}$ .

boiling  $\text{H}_2\text{O}$  or  $\text{KI} + \text{Aq}$ . (Brandes, 9.)

$\text{O}$ . (Ditte, C. R. 92. 145.)

$\text{PbO}$ . Insol. in  $\text{H}_2\text{O}$ . (Denot, J. O. 1.)

$\text{PbO} + 2\text{H}_2\text{O}$ . Ppt. (Kühn, C. C. )

$\text{PbO}$ . Insol. in  $\text{H}_2\text{O}$ . (Denot.)

(Ditte, C. R. 92. 145.)

$\text{PbI}_2 + 2\text{H}_2\text{O}$ . Ppt. (Strömholm, 1904, 38. 437.)

$\text{PbI}_2 + 2\text{H}_2\text{O}$ . (Strömholm, Z. anorg. 437.)

iodide,  $\text{PbO}$ ,  $\text{PbI}_2$ .

p. by boiling  $\text{H}_2\text{O}$ . Sol. in dil. +  $\text{Aq}$ . (Gröger, W. A. B. 100, 2b.

Lead phosphide,  $\text{PbP}_2$ .

Decomp. by  $\text{H}_2\text{O}$  and dil. acids. (Bossuet, C. R. 1913, 167. 721.)

Lead phosphoselenide,  $\text{PbSe}$ ,  $\text{P}_2\text{Se}$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ .

Insol. in cold, slowly decomp. by hot alkalies +  $\text{Aq}$ . (Hahn, J. pr. (2) 93. 436.)

$2\text{PbSe}$ ,  $\text{P}_2\text{Se}_2$ . Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . Slowly sol. in red fuming  $\text{HNO}_3$ . (Hahn.)

$2\text{PbSe}$ ,  $\text{P}_2\text{Se}_2$ . Decomp. by fuming  $\text{HNO}_3$ . (Hahn.)

Lead selenide,  $\text{PbSe}$ .

Cold  $\text{HNO}_3 + \text{Aq}$  dissolves  $\text{Pb}$  with separation of  $\text{Se}$ , which dissolves on warming. (Little, A. 112. 212.)

Min. *Clausthalite*. Sol. in  $\text{HNO}_3 + \text{Aq}$  with separation of  $\text{Se}$ , when warmed.

Lead mercury selenide,  $(\text{Pb}, \text{Hg})\text{Se}$ .

Min. *Lehrbachite*.

Lead sulphide,  $\text{PbS}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ .

1 l.  $\text{H}_2\text{O}$  dissolves  $3.6 \times 10^{-3}$  moles.  $\text{PbS}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294.)

1 l.  $\text{H}_2\text{O}$  dissolves  $3 \times 10^{-4}$  g.  $\text{PbS}$  at  $25^\circ$ . (Hevesy, Z. anorg. 1913, 82. 328.)

Insol. in dilute acids; alkalies, and alkali sulphides +  $\text{Aq}$ . Decomp. with solution in moderately dil.  $\text{HNO}_3 + \text{Aq}$ . With conc.  $\text{HNO}_3$  or aqua regia,  $\text{PbSO}_4$  is formed. Sol. in hot conc.  $\text{HCl} + \text{Aq}$ .

1 l.  $\text{H}_2\text{O}$  sat. with  $\text{H}_2\text{S}$  dissolves  $1.5 \times 10^{-4}$  g.  $\text{PbS}$  at  $25^\circ$ . (Hevesy, Z. anorg. 1913, 82. 328.)

Insol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Brett.)  
Somewhat sol. in  $\text{H}_2\text{S} + \text{Aq}$  when heated therewith in a sealed tube. (Senarmont, A. ch. (3) 32. 168.)

Insol. in potassium thiocarbonate +  $\text{Aq}$ . (Rosenblatt, Z. anal. 26. 15.)

Sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ . (Waller, J. Anal. Ch. 5. 646.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Min. *Galena*, *Galenite*.

Lead polysulphide,  $\text{PbS}_x$ .

Ppt.; insol. in alkali sulphides; decomp. by conc.  $\text{HNO}_3$ . (Bodroux, C. R. 1900, 130. 1398.)

Lead platinum sulphide.

See Sulphoplatinate, lead.

Lead sulphide mercuric chloride,  $3\text{PbS}$ ,  $4\text{HgCl}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Levallois, C. R. 96. 1666.)

**Lead sulphobromide, chloride, or iodide.**

See Lead bromosulphide, etc.

**Lead disulphodithiide,  $\text{PbN}_2\text{S}_2$ ,  $\text{NH}_3$ .**

Ppt.

Very stable in the air or in a vacuum.

Sol. in no solvent without decomp.

When rapidly heated it explodes very violently at  $140^\circ$ . (Ruff, B. 1904, 37. 1581.)

**Lead telluride,  $\text{PbTe}$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in cold  $\text{HNO}_3 + \text{Aq}$ . (Rose, Pogg. 18. 68.)

Min. *Alaite*. Easily sol. in  $\text{HNO}_3 + \text{Aq}$ .

**"Leucone."**

Wöhler (A. 127. 268) gives this substance the formula  $\text{H}_2\text{Si}_2\text{O}_3$ , but it is identical with silicoformic anhydride,  $\text{Si}_2\text{H}_2\text{O}_3$ , which see.

**Lime.**

Quicklime,  $\text{CaO}$ . See Calcium oxide.

Slaked lime,  $\text{CaO} \cdot \text{H}_2\text{O}$ . See Calcium hydroxide.

**Lithium, Li.**

Decomposes  $\text{H}_2\text{O}$ .

Easily sol. in dil. acids. Slowly attacked by conc.  $\text{H}_2\text{SO}_4$ , rapidly by conc.  $\text{HNO}_3 + \text{Aq}$ . Insol. in hydrocarbons. Sol. in liquid  $\text{NH}_3$ , but not so easily as K.

Sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 820.)

1 gram atom dissolves:

at	$0^\circ$	in	3.93	mol.	liquid	$\text{NH}_3$ .
"	$-25^\circ$	"	3.93	"	"	"
"	$-50^\circ$	"	3.93	"	"	"
"	$-80^\circ$	"	3.93	"	"	"

(Ruff, B. 1906, 39. 840.)

Sol. in ethylamine. Insol. in propylamine and in secondary and tertiary amines. (Kraus, J. Am. Chem. Soc. 1907, 29. 1561.)

**Lithium amalgam,  $\text{LiHg}$ .**

$\text{LiHg}$  is obtained at all temp. up to  $100^\circ$ . Can be cryst. from Hg without decomp. at any temp. below  $100^\circ$ . (Kerp, Z. anorg. 1900, 25. 68.)

**Lithium amide,  $\text{LiNH}_2$ .**

(Ruff, B. 1911, 44. 505.)

Decomp. slowly in the air.

Slowly decomp. by cold, rapidly by hot  $\text{H}_2\text{O}$ .

Slowly decomp. by  $\text{HCl}$ .

Slowly decomp. by cold, rapidly by hot abs. alcohol. (Titherley, Chem. Soc. 1894, 65. 518.)

**Trilithium amide,  $\text{Li}_3\text{NH}_2$ .**

Hydroscopic; decomp. by  $\text{H}_2\text{O}$ . (Dafert, M. 1910, 31. 994.)

**Lithium ammonia,  $\text{Li}, \text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$  at ordinary temp. in liquid  $\text{NH}_3$ . (Moissan, C. R. 18689.)

$\text{Li}, 3\text{NH}_3$ . (Moissan, C. R. 1901, 1

**Trilithium ammonium,  $\text{Li}_3\text{NH}_4$ .**

Very hygroscopic, decomp. by  $\text{H}_2\text{O}$ , fert, M. 1910, 31. 992.)

**Lithium antimonide,  $\text{Li}_3\text{Sb}$ .**

Decomp. by  $\text{H}_2\text{O}$  with evolution of  $\text{H}_2$ . Sol. in liquid  $\text{NH}_3$ . (Lebeau, C. R. 1885.)

**Lithium arsenide,  $\text{Li}_3\text{As}$ .**

Decomp. by  $\text{H}_2\text{O}$ ; decomp. violent, fuming  $\text{HNO}_3$ . (Lebeau, C. R. 1899,

**Lithium azoimide,  $\text{LiN}_3$ .**

Deliquescent. Stable in aq. solution. 36.12 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$   
 62.07 " " " " 100 "  $\text{H}_2\text{O}$

## Lithium gold chloride.

See Chloraurate, lithium.

Lithium manganous chloride, LiCl, MnCl<sub>2</sub>+  
 3H<sub>2</sub>O.

Decomp. by H<sub>2</sub>O; stable only in excess of  
 LiCl. (Chassevant, A. ch. (6) **30**, 10.)

Lithium mercuric chloride, 2LiCl, HgCl<sub>2</sub>.

Very deliquescent and sol. in H<sub>2</sub>O. (Harth,  
 Z. anorg. 1897, **14**, 323.)

Lithium nickel chloride, LiCl, NiCl<sub>2</sub>+3H<sub>2</sub>O.

Deliquescent. Sol. in H<sub>2</sub>O and alcohol.  
 (Chassevant.)

Lithium thallic chloride, 3LiCl, TlCl<sub>3</sub>+  
 8H<sub>2</sub>O.

Very deliquescent. Sol. in H<sub>2</sub>O. (Pratt,  
 Am. J. Sci. 1895, (3) **49**, 404.)

Lithium stannic chloride.

See Chlorostannate, lithium.

Lithium uranous chloride, Li<sub>2</sub>UCl<sub>4</sub>.

As K salt. (Aloy, Bull. Soc. 1899, (3) **21**.  
 264.)

Lithium uranium chloride, UCl<sub>4</sub>, 2LiCl.

Very hygroscopic; sol. in H<sub>2</sub>O with decomp.  
 Sol. in acetic acid. Decomp. by alcohol.  
 (Aloy, Bull. Soc. 1899, (3) **21**, 264.)

**Lithium zinc chloride,  $\text{LiCl}, \text{ZnCl}_2 + 3\text{H}_2\text{O}$ .**

Extremely deliquescent. (Ephraim, Z. anorg. 1908, 59. 68.)

$3\text{LiCl}, \text{ZnCl}_2 + 10\text{H}_2\text{O}$  (?). Not obtained in solid state. (Ephraim, Z. anorg. 1908, 59. 69.)

**Lithium chloride ammonia.**

$\text{LiCl}, \text{NH}_3$ .

$\text{LiCl}, 2\text{NH}_3$ .

$\text{LiCl}, 3\text{NH}_3$ .

$\text{LiCl}, 4\text{NH}_3$ .

Above salts are all decomp. by  $\text{H}_2\text{O}$ . (Bonnefoi, C. R. 1898, 127. 367-369.)

**Lithium chloriodide,  $\text{LiCl}_2\text{I} + 4\text{H}_2\text{O}$ .**

Deliquescent. (Wells and Wheeler, Sill. Am. J. 144. 42.)

**Lithium fluoride,  $\text{LiF}$ .**

Very difficultly sol. in  $\text{H}_2\text{O}$ . (Berzelius, Pogg. 1. 17.)

Two crystalline forms. Only very sl. sol. in  $\text{H}_2\text{O}$ . Very sl. decomp. by  $\text{H}_2\text{O}$  at red heat. (Poulenc, Bull. Soc. 1894, (3) 11. 17.)

Sp. gr. of solution sat. at  $18^\circ = 1.003$  and contains 0.27%  $\text{LiF}$ . (Mylius, B. 1897, 30. 1718.)

Sol. in 800 pts.  $\text{H}_2\text{O}$ , and the presence of  $\text{NH}_4\text{F}$  and  $\text{NH}_3$  decreases solubility to 1:3500. (Carnot, Bull. Soc. 1889, (3) 1. 250.)

Two crystalline forms are very sl. sol. in  $\text{HCl}$ ; easily sol. in  $\text{HNO}_3$ . (Poulenc, Bull. Soc. 1894, (3) 11. 17.)

Two crystalline forms are insol. in 95% alcohol. (Poulenc.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II. 1014.)

**Lithium hydrogen fluoride,  $\text{LiHF}_2$ .**

Difficultly sol. in  $\text{H}_2\text{O}$ , but more easily than  $\text{LiF}$ . (Berzelius.)

**Lithium silicon fluoride.**

See Fluosilicate, lithium.

**Lithium stannic fluoride.**

See Fluostannate, lithium.

**Lithium tantalum fluoride.**

See Fluotantalate, lithium.

**Lithium uranyl fluoride,  $\text{UO}_2\text{F}_2, 4\text{LiF}$ .**

(Ditte.)

**Lithium zirconium fluoride.**

See Fluozirconate, lithium.

**Lithium hydride,  $\text{LiH}$ .**

Not deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Guntz, C. R. 1896, 123. 997.)

**Lithium hydrosulphide,  $\text{LiSH}$  (?).**

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (Berzelius, Pogg. 6. 439.)

**Lithium hydroxide,  $\text{LiOH}$ .**

Not so deliquescent as  $\text{NaOH}$ , and apparently not more sol. in hot than cold  $\text{H}_2\text{O}$ . (Gmelin, Gibb. 62. 399.)

Not deliquescent. (Arfvedson, A. ch. 22. 82.)

The solubility of  $\text{LiOH}$  in  $\text{H}_2\text{O}$  can be expressed by  $y = 6.6750 + 0.00346t + 0.00004t^2$ , where  $y$  = the percentage of  $\text{Li}_2\text{O}$  in a saturated solution. (Dittmar, Jour. Soc. Chem. Ind. 7. 730.)

Solubility of  $\text{LiOH}$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	G. per 100 g. Solution		G. $\text{LiOH}$ per 100 g. $\text{H}_2\text{O}$
	$\text{Li}_2\text{O}$	$\text{LiOH}$	
0	6.67	10.64	12.7
10	6.74	10.80	12.7

2.1	48.3	"
2.1	52.1	$\text{LiOH}, \text{H}_2\text{O} + \text{Li}_2\text{SbS}_4, 10\text{H}_2\text{O}$
1.4	51.8	$\text{Li}_2\text{SbS}_4, 10\text{H}_2\text{O}$
0	51.3	"

(Donk, Chem. Weekbl. 1908, 5. 529, 629, 767.)

Sl. sol. in alcohol; insol. in alcohol-ether. (Mayer.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

acetone. (Naumann, B. 1904, 37. nann, C. C. 1899, II. 1014.)  
iso with  $H_2O$ , and  $\frac{1}{2}H_2O$ . (Göttig, 2.)

nide,  $Li_2NH$ .

. at high temp. Insol. in toluene, ether and ethyl acetate. Decomp. Ruff, B. 1911, 44. 506.)

dide,  $LiI$ .

scent.

len, Z. phys. Ch. 1906, 55. 718.)

ty in glycol at 15.3° = 28%. (de  
Belg. Acad. Bull. 1906, 359.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

+ $H_2O$ . Mpt. below 200°. (Bogorodsky, C. C. 1897, II. 175.)

+2 $H_2O$ . Mpt. 86–88°. (Bogorodsky.)

+3 $H_2O$ . Mpt. 75°. (Bogorodsky.)

Sol. in absolute alcohol without decomp. (Thirsoff, Chem. Soc. 1894, 66. (2) 234.)

The composition of the hydrates formed by  $LiI$  at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by  $LiI$  and of the conductivity and sp. gr. of  $LiI + Aq$ . (Jones, Am. Ch. J. 1905, 34. 301.)

Lithium mercuric iodide,  $2LiI, HgI_2 + 6H_2O$ .

Very deliquescent. Decomp. by  $H_2O$ . Very sol. without decomp. in alcohols, glycerine, acetone, fuming formic acid, acetic acid, ethyl acetate, ethyl oxalate, etc. Less sol. in nitrobenzene. Insol. in benzene and methyl iodide. (Duboin, C. R. 1905, 141. 1017.)

+8 $H_2O$ . Decomp. by  $H_2O$ . Very sol. in alcohols, glycerine, acetone, fuming formic acid, acetic acid, ethyl acetate, etc. without decomp. Sl. sol. in nitrobenzene. Insol. in benzene and methyl iodide. (Duboin, l. c.)  
+9 $H_2O$ . Hygroscopic. Sol. in alcohol and acetone without decomp. (Dobroserdoff, C. C. 1901, I. 664.)

Lithium nitride,  $Li_3N$ .

Sol. in  $H_2O$  with decomp. (Ouvrard, C. R. 114. 120.)

Very hygroscopic. (Dafert, M. 1910, 31. 987.)

Lithium oxide,  $Li_2O$ .

Slowly sol. in  $H_2O$  to form  $LiOH$ .

See Lithium hydroxide.

Lithium peroxide,  $Li_2O_2$ .

(de Forcrand, C. R. 1900, 130. 1467.)

Lithium hydrogen peroxide,  $Li_2O_2, H_2O_2 + 3H_2O$ .

Sol. in  $H_2O$ . Insol. in alcohol. (de Forcrand, C. R. 1900, 130. 1466.)

Lithium selenide,  $Li_2Se$ .

Sol. in  $H_2O$ . (Fabre, C. R. 103. 269.)

+9 $H_2O$ . Sol. in  $H_2O$ . (Fabre.)

Lithium silicide,  $Li_2Si_2$ .

Decomp. by  $H_2O$  and by dil. acids. Decomp. by aqueous solutions of alkalis with evolution of  $H_2$ . (Moissan, C. R. 1902, 134. 1083.)

**Lithium monosulphide,  $\text{Li}_2\text{S}$ .**

More sol. in  $\text{H}_2\text{O}$  or alcohol than  $\text{LiOH}$ .

**Luteochromium bromide,  $\text{Cr}(\text{NH}_3)_6\text{Br}_3$ .**

Less sol. in  $\text{H}_2\text{O}$  than the chloride. (Jörgensen, J. pr. (2) 30. 1.)

— **bromoplatinate**,  $[\text{Cr}(\text{NH}_3)_6]_2(\text{PtBr}_6)_3 + 4\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Jörgensen.)

— **chloride**,  $\text{Cr}(\text{NH}_3)_6\text{Cl}_3 + \text{H}_2\text{O}$ .

Efflorescent, and very sol. in  $\text{H}_2\text{O}$ . (Jörgensen.)

— **chloroplatinate**.

(a)  $[\text{Cr}(\text{NH}_3)_6]_2(\text{PtCl}_6)_3 + 6\text{H}_2\text{O}$ . Nearly completely insol. in  $\text{H}_2\text{O}$ . (Jörgensen.)

(b)  $\text{Cr}(\text{NH}_3)_6\text{Cl}(\text{PtCl}_6) + 2\frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  into above; insol. in alcohol. (Jörgensen.)

(c)  $[\text{Cr}(\text{NH}_3)_6]_2\text{Cl}_2(\text{PtCl}_6) + 2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  into (a). (Jörgensen.)

— **mercuric chloride**,  $\text{Cr}(\text{NH}_3)_6\text{Cl}_3, \text{HgCl}_2$ .

Decomp. by  $\text{H}_2\text{O}$ ; sl. sol. in dil.  $\text{HCl} + \text{Aq}$ ; insol. in alcohol.

$\text{Cr}(\text{NH}_3)_6\text{Cl}_3, 3\text{HgCl}_2 + 2\text{H}_2\text{O}$ . Decomp. by dil.  $\text{HCl} + \text{Aq}$  into above salt. (Jörgensen.)

— **chromicyanide**,  $\text{Cr}(\text{NH}_3)_6\text{Cr}(\text{CN})_6$ .

Precipitate.

— **cobalticyanide**,  $\text{Cr}(\text{NH}_3)_6\text{Co}(\text{CN})_6$ .

Nearly insol. in  $\text{H}_2\text{O}$  or in conc.  $\text{HCl} + \text{Aq}$ . (Jörgensen.)

— **ferrocyanide**,  $\text{Cr}(\text{NH}_3)_6\text{Fe}(\text{CN})_6$ .

Very sl. sol. in cold  $\text{H}_2\text{O}$  or dil. acids. (Jörgensen.)

— **iodide**,  $\text{Cr}(\text{NH}_3)_6\text{I}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Jörgensen, l. c.)

— **iodosulphate**,  $\text{Cr}(\text{NH}_3)_6\text{SO}_4\text{I}$ .

Sol. in  $\text{H}_2\text{O}$ ; nearly insol. in dil.  $\text{NH}_4\text{OH} + \text{Aq}$  or alcohol. (Jörgensen.)

— **nitrate**,  $\text{Cr}(\text{NH}_3)_6(\text{NO}_3)_3$ .

Sol. in 35–40 pts.  $\text{H}_2\text{O}$ . Insol. in cold dil.  $\text{HNO}_3 + \text{Aq}$  or alcohol. Can be crystallised out of  $\text{H}_2\text{O}$  containing a little  $\text{HNO}_3$ . (Jörgensen, J. pr. (2) 30. 1.)

— **nitrate chloroplatinate**,

$\text{Cr}(\text{NH}_3)_6(\text{NO}_3)_3\text{PtCl}_6 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Jörgensen.)

— **nitratosulphate**,  $\text{Cr}(\text{NH}_3)_6(\text{NO}_3)\text{SO}_4$ .

Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Jörgensen.)

**Luteochromium oxalate**,  $[\text{Cr}(\text{NH}_3)_6]_2(\text{C}_2\text{O}_4)_3 + 4\text{H}_2\text{O}$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ . (Jörgensen.)

— **orthophosphate**,  $\text{Cr}(\text{NH}_3)_6\text{PO}_4 + \text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in dil. (Jörgensen.)

— **sodium pyrophosphate**,  $\text{Cr}(\text{NH}_3)_6(\text{NaP}_2\text{O}_7) + 11\frac{1}{2}\text{H}_2\text{O}$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ ; wholly dil.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Jörgensen.)

— **sulphate**,  $[\text{Cr}(\text{NH}_3)_6]_2(\text{SO}_4)_3 + 5\text{H}_2\text{O}$ . Quite sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Jörgensen.)

— **sulphate chloroplatinate**,

$[\text{Cr}(\text{NH}_3)_6(\text{SO}_4)]_2\text{PtCl}_6$ .

Nearly insol. in  $\text{H}_2\text{O}$ . (Jörgensen.)

**Luteocobalt diamine chromium cyanide.**

See Diamine chromium luteocobalt cyanide.

**Luteocobaltic bromide,  $\text{Co}(\text{NH}_3)_6\text{Br}_3$ .**

Sol. in  $\text{H}_2\text{O}$ . Precipitated from  $\text{H}_2\text{O}$  solution by dil.  $\text{HBr} + \text{Aq}$ . (J. pr. (2) 35. 417.)

— **bromopermanganate**,

$\text{Co}(\text{NH}_3)_6\text{Br}_3(\text{MnO}_4)_2$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Klobb, A. c. 5.)

— **bromoplatinate**,  $\text{Co}(\text{NH}_3)_6\text{Br}_3\text{PtCl}_6$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; can be recrystallised from hot  $\text{H}_2\text{O}$  containing  $\text{HBr}$ . (Jörgensen.)

— **bromosulphate**,  $\text{Co}(\text{NH}_3)_6\text{Br}(\text{SO}_4)$ .

Nearly insol. in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Jörgensen.)

— **carbonate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{CO}_3)_3$ .

Efflorescent; easily sol. in  $\text{H}_2\text{O}$ .  $[\text{Co}(\text{NH}_3)_6]_2(\text{CO}_3)_3, \text{H}_2\text{CO}_3 + 5\text{H}_2\text{O}$ . sol. in  $\text{H}_2\text{O}$  than the neutral salt and Genth.)

— **chloride**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_3$ .

Sol. in 17.09 pts.  $\text{H}_2\text{O}$  at  $10.5^\circ$ ; at  $11.4^\circ$ ; 16.48 pts. at  $12^\circ$ ; and more hot  $\text{H}_2\text{O}$ . (F. Rose.)

100 pts.  $\text{H}_2\text{O}$  dissolve 4.26 pts. at  $12.74^\circ$  at  $46.6^\circ$ . (Kurnakoff, J. 24. 629.)

Not appreciably sol. in conc. l. (Jörgensen.)

Insol. in alcohol or solutions of chlorides. (Gibbs and Genth.)

Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

solution is pptd. by alcohol, min-  
alkali chlorides.

**mercuric chloride**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  
 $1\frac{1}{2}\text{H}_2\text{O}$ .

$\text{H}_2\text{O}$ . (Krok, 1870.)

allizing from hot  $\text{H}_2\text{O}$  containing  
rted into—

$\text{Cl}_2$ ,  $3\text{HgCl}_2 + \text{H}_2\text{O}$ . Very sl. sol.  
(Jørgensen.)

$\text{Cl}_2$ ,  $2\text{HgCl}_2 + \frac{1}{2}\text{H}_2\text{O}$ . Sol. in hot  
which it crystallizes on cooling.  
d conc.  $\text{HCl} + \text{Aq}$ , and is pptd.  
lution by  $\text{HCl}$  or alcohol. (Car-

xist. (Jørgensen.)

More easily sol. in cold  $\text{H}_2\text{O}$  and  
ts than the preceding comp.  
Berlin, 1861.)

xist. (Jørgensen.)

**s chloride**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  
 $\cdot 10\text{H}_2\text{O}$ .

**ate**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $\text{AuCl}_3$ .

. in cold, more easily in hot  $\text{H}_2\text{O}$   
 $\text{Cl}$ . (Gibbs and Genth, Sill. Am.  
.)

**late**,  $[\text{Co}(\text{NH}_3)_6\text{Cl}_2]_2\text{I}_2\text{O}_{11} + \text{H}_2\text{O}$ .

**lite**,  $\text{Co}(\text{NH}_3)_6$ ,  $\text{IrCl}_6$ .

oiling  $\text{H}_2\text{O}$  or dil.  $\text{HCl} + \text{Aq}$ .

**late**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $3\text{IrCl}_6$ .  
 $\cdot 2\text{O}$ . (Gibbs.)

**hromate**,  $\text{Co}(\text{NH}_3)_6\text{CrO}_4\text{Cl} +$

). (Klobb, Bull. Soc. 1901, (3)

**ioride**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2\text{F}$ .

anorg. 1905, 43. 339.)

**lladite**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $3\text{PdCl}_2$ .

in dil.  $\text{HCl} + \text{Aq}$ . (Gibbs, Sill.  
. 58.)

**rchlorate**,  $\text{Co}(\text{NH}_3)_6\text{Cl}(\text{ClO}_4)_2$ .

h, Gazz. ch. it. 1901, 31. (2)

**rmanganate**,

$\cdot 6\text{Cl}_2(\text{MnO}_4)_2$ .

crystallized from  $\text{H}_2\text{O}$ . (Klobb,  
t.)

**rmanganate ammonium chlor-**  
 $\cdot 7\text{H}_2\text{O}$ ,  $\text{Cl}_2(\text{MnO}_4)_2$ ,  $\text{NH}_4\text{Cl}$ .

n  $\text{H}_2\text{O}$ . (Klobb.)

**Luteocobaltic chloropermanganate potassium**  
**chloride**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4)_2$ ,  $\text{KCl}$ .

Very easily sol. in  $\text{H}_2\text{O}$ , with decomp. into  
constituents; sol. in  $\text{KCl} + \text{Aq}$ . (Klobb.)

— **chloropermanganate sodium chloride**,  
 $\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4)_2$ ,  $\text{NaCl}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Klobb.)

— **chloroplatinate**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $3\text{PtCl}_4 +$   
 $6\text{H}_2\text{O}$ .

Can be recrystallized from much hot  $\text{H}_2\text{O}$ .  
(Gibbs and Genth.)

$+ 21\text{H}_2\text{O}$ . (Gibbs and Genth.)

$\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $\text{PtCl}_4 + \frac{1}{2}\text{H}_2\text{O}$ . Very sl. sol.

in cold, decomp. by hot  $\text{H}_2\text{O}$  into—

$2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $\text{PtCl}_4 + 2\text{H}_2\text{O}$ . By recrystallizing from hot  $\text{H}_2\text{O}$  containing  $\text{HCl}$  this salt is converted into the above salt. (Jørgensen.)

— **chlororhodite**.

Nearly insol. in boiling  $\text{H}_2\text{O}$  or dil. acids.

Sol. in conc.  $\text{HCl} + \text{Aq}$ . (Gibbs, Sill. Am. J.  
(2) 37. 57.)

— **chlororuthenate**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $3\text{RuCl}_4$ .

Sol. in dil. acids. (Gibbs.)

— **chloroselenate**,  $\text{Co}(\text{NH}_3)_6\text{ClSeO}_4 + 3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Klobb, Bull. Soc.  
1901, (3) 25. 1029.)

— **chlorosulphate**,  $\text{Co}(\text{NH}_3)_6\text{Cl}(\text{SO}_4)_2$ .

Sol. in  $\text{H}_2\text{O}$ .

$+ 3\text{H}_2\text{O}$ . Only sl. sol. in cold  $\text{H}_2\text{O}$ . (Klobb,  
Bull. Soc. 1901, (3) 25. 1025.)

— **ammonium chlorosulphate**,  
 $[\text{Co}(\text{NH}_3)_6]_2\text{Cl}_2(\text{SO}_4)_3$ ,  $3(\text{NH}_4)_2\text{SO}_4 +$   
 $6\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Klobb, Bull. Soc.  
1901, (3) 25. 1027.)

— **chlorosulphate chloroplatinate**,

$2\text{Co}(\text{NH}_3)_6\text{Cl}(\text{SO}_4)_2$ ,  $\text{PtCl}_4$ .

Very sl. sol. in cold pure  $\text{H}_2\text{O}$ . Can be recrystallized out of  $\text{H}_2\text{O}$  containing  $\text{HCl}$ . (Krok.)

— **chlorosulphate mercuric chloride**,

$\text{Co}(\text{NH}_3)_6\text{Cl}(\text{SO}_4)_2$ ,  $\text{HgCl}_2$ .

Scarcely sol. in pure  $\text{H}_2\text{O}$ , but can be crystallized from warm acidified  $\text{H}_2\text{O}$ . (Krok.)

— **chlorosulphite**,  $\text{Co}(\text{NH}_3)_6(\text{SO}_3)\text{Cl} +$   
 $3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vortmann and Magdeburg,  
B. 22. 2637.)

— **chromate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{CrO}_4)_3 + 5\text{H}_2\text{O}$ .

Ppt. Sol. in hot  $\text{H}_2\text{O}$ .

$[\text{Co}(\text{NH}_3)_6]_2(\text{Cr}_2\text{O}_7)_3 + 5\text{H}_2\text{O}$ . Moderately  
sol. in hot  $\text{H}_2\text{O}$ .

**Luteocobaltic chromicyanide,**

Ppt. (Braun.)

— **cobalticyanide,  $\text{Co}(\text{NH}_3)_6\text{Co}(\text{CN})_6$ .**

Ppt.

— **dithionate, basic,**Sol. in  $\text{H}_2\text{O}$  and dil. alcohol.— **ferricyanide,  $\text{Co}(\text{NH}_3)_6\text{Fe}(\text{CN})_6 + \frac{1}{2}\text{H}_2\text{O}$ .**Insol. in  $\text{H}_2\text{O}$ . (Braun.)— **fluoride,  $\text{Co}(\text{NH}_3)_6\text{F}_3$ .**Sl. sol. in cold  $\text{H}_2\text{O}$ . Nearly insol. in acids. (Böhm, Z. anorg. 1905, 43. 340.)— **hydrogen fluoride,  $\text{Co}(\text{NH}_3)_6\text{H}_2\text{F}_6$ .**Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . (Miolati and Rossi, Real. Ac. Linc. 1896, (5) 5. II, 185.)— **hydrogen boron fluoride,  $\text{Co}(\text{NH}_3)_6\text{F}_3, 3\text{BF}_3, \text{HF}$ .**Cryst. from  $\text{H}_2\text{O}$  acidified with HF. (Miolati and Rossi.)— **molybdenyl fluoride,  $\text{Co}(\text{NH}_3)_6\text{F}_3, 2\text{MoO}_3\text{F}_2$ .**Cryst. from  $\text{H}_2\text{O}$  containing HF. (Miolati and Rossi.)— **silicon fluoride,  $\text{Co}(\text{NH}_3)_6\text{F}_3, 2\text{SiF}_4$ .**

(Miolati and Rossi.)

— **titanium hydrogen fluoride,  $2\text{Co}(\text{NH}_3)_6\text{F}_3, 3\text{TiF}_4, 2\text{HF}$ .**

(Miolati and Rossi.)

— **tungstyl fluoride,  $\text{Co}(\text{NH}_3)_6\text{F}_3, 2\text{WO}_3\text{F}_2$ .**

(Miolati and Rossi.)

— **uranyl fluoride,  $\text{Co}(\text{NH}_3)_6\text{F}_3, \text{UO}_2\text{F}_2$ .**Can be cryst. from  $\text{H}_2\text{O}$  containing HF. (Miolati and Rossi.)— **vanadyl fluoride,  $2\text{Co}(\text{NH}_3)_6\text{F}_3, 5\text{VO}_2\text{F}_3, 7\text{HF}$ .**

Ppt. (Miolati and Rossi.)

— **fluoride nitrate,  $\text{Co}(\text{NH}_3)_6\text{F}(\text{NO}_3)_2$ .**

(Böhm, Z. anorg. 1905, 43. 336.)

— **hydroxide,  $\text{Co}(\text{NH}_3)_6(\text{OH})_3$ .**

Known only in aqueous solution.

**Luteocobaltic mercuric hydroxychlorid**

Ppt. Easily decomp. (Vortman Morgulis, B. 23. 2644.)

— **iodide,  $\text{Co}(\text{NH}_3)_6\text{I}_3$ .**Insol. in cold, but moderately sol.  $\text{H}_2\text{O}$ .According to Jörgensen, contains HN has the formula  $\text{Co}_2(\text{NH}_3)_{12}\text{I}_6(\text{NO}_3)_2$ .— **iodosulphate,  $\text{Co}(\text{NH}_3)_6\text{I}(\text{SO}_4)$ .**Can be recrystallized from hot  $\text{H}_2\text{O}$  sol. in warm, nearly insol. in cold (Krok, B. 4. 711.)— **mercuriodide,  $\text{Co}_2\text{N}_{12}\text{H}_{32}(\text{HgI})_2\text{I}_2$ .**

Ppt. (Vortmann and Borsbach.)

— **mercuriodide, basic,**Insol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Vortmann and Borsbach, B. 23. 2804.)— **nitrate,  $\text{Co}(\text{NH}_3)_6(\text{NO}_3)_3$ .**Sol. in  $\text{H}_2\text{O}$ . Can be recrystallized boiling  $\text{H}_2\text{O}$ . Sol. in about 60 pts Insol. in conc.  $\text{HNO}_3 + \text{Aq}$ . (Jörgensen pr. (2), 35. 417.)

Almost insol. in acids. (Rogojski, (3), 41. 454.)

Insol. in  $\text{NH}_4\text{OH}$ ,  $\text{HCl}$ , and  $\text{HNO}_3$  decomp. by  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Gibbs and (  $\text{Co}(\text{NH}_3)_6(\text{NO}_3)_3$ ,  $\text{HNO}_3$ . Decom.  $\text{H}_2\text{O}$  or dil. alcohol. (Jörgensen, J. pr. 63.)— **nitrate chloroplatinate,**Not decomp. by  $\text{H}_2\text{O}$ . (Jörgensen— **nitratosulphate,  $\text{Co}(\text{NH}_3)_6(\text{NO}_3)$ .**Sol. in  $\text{H}_2\text{O}$ . (Jörgensen.)— **nitrite cobaltic nitrite,**Nearly insol. in  $\text{H}_2\text{O}$ . (Jörgensen.) Much less sol. in  $\text{H}_2\text{O}$  than the corresponding roseo salt. (Gibbs.)— **diamine cobaltic nitrite,**

Ppt. (Gibbs.)

 $= \text{Co}(\text{NH}_3)_6[(\text{NO}_2)_2(\text{NH}_3)_2\text{Co}(\text{NO}_2)_2]$  Nearly insol. in cold, al. sol. in boiling (Jörgensen, Z. anorg. 5. 179.)— **oxalate,  $[\text{Co}(\text{NH}_3)_6]_2(\text{C}_2\text{O}_4)_3 + 4\text{H}$** Insol. in hot or cold  $\text{H}_2\text{O}$ . Easily  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ .

**obaltic oxalate chloraurate**,  
 $[\text{Co}(\text{NH}_3)_6](\text{C}_2\text{O}_4)_2\text{Cl}$ ,  $\text{AuCl}_3 + 4\text{H}_2\text{O}$ .  
 ly sol. in hot  $\text{H}_2\text{O}$ . (Gibbs.)

**perchlorate**,  $\text{Co}(\text{NH}_3)_6(\text{ClO}_4)_2$ .  
 Losevich, *Gazz. ch. it.* 1901, 31, (2)

**permanganate**,  $[\text{Co}(\text{NH}_3)_6](\text{MnO}_4)_2$ .  
 ly insol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  at  $0^\circ$   
 e only 0.072 pt. salt. Moderately  
 hot  $\text{H}_2\text{O}$ . (Klobb, *A. ch.* (6) 12. 5.)

**pyrosulphate sulphate**,  
 $[\text{Co}(\text{NH}_3)_6]_2\text{S}_2\text{O}_8(\text{SO}_4)_2$ .  
 h less sol. in  $\text{H}_2\text{O}$  than the sulphate.  
 in 641 pts.  $\text{H}_2\text{O}$  at  $18.8^\circ$  and in 632  
 $20^\circ$ . Not easily sol. even in boiling  
 (Jørgensen, *Z. anorg.* 1898, 17. 459.)

**orthophosphate**,  $\text{Co}(\text{NH}_3)_6(\text{PO}_4)_2 +$   
 $\frac{1}{2}\text{H}_2\text{O}$ .  
 l. in cold  $\text{H}_2\text{O}$ . Easily sol. in dil. acids.  
 (Jørgensen.)  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{PO}_4)_3(\text{PO}_4\text{H})_2 + 5\frac{1}{2}\text{H}_2\text{O}$  (?).  
 Braun.)  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{PO}_4\text{H})_3 + 4\text{H}_2\text{O}$ . Ppt. Easily  
 very dil.  $\text{HCl} + \text{Aq.}$  (Jørgensen.)

**metaphosphate.**

**pyrophosphate**,  $[\text{Co}(\text{NH}_3)_6]_2\text{P}_2\text{O}_7 +$   
 $\frac{1}{2}\text{H}_2\text{O}$ .  
 bs, *Am. Acad. Proc.* 11. 29); or  
 $\text{I}_2$ ),  $\text{P}_2\text{O}_7(\text{ONa})_2$  (Vortmann, *B.* 11.  
 or  $\text{Co}(\text{NH}_3)_6(\text{P}_2\text{O}_7\text{Na}) + 11\frac{1}{2}\text{H}_2\text{O}$ .  
 sen, *J. pr.* (2) 35. 438.)  
 nearly insol. in  $\text{H}_2\text{O}$ . With  $\text{H}_2\text{O}$  at  
 s decomp. into—  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{P}_2\text{O}_7)_2 + 20\text{H}_2\text{O}$ . Less easily  
 n the preceding salt.

**orthophosphate, acid**,  $\text{Co}(\text{NH}_3)_6(\text{P}_2\text{O}_7\text{H})$ .  
 lly insol. in  $\text{H}_2\text{O}$ . Somewhat sol. in  
 $\frac{1}{2}\text{H}_2\text{O} + \text{Aq.}$  Easily sol. in  $\text{HCl} + \text{Aq}$   
 sen.)

**dium pyrophosphate**,  
 $(\text{NH}_4)_6(\text{P}_2\text{O}_7\text{Na}) + 11\frac{1}{2}\text{H}_2\text{O}$ .

Not wholly insol. in cold  $\text{H}_2\text{O}$ .  
 s. by hot  $\text{H}_2\text{O}$ . Less sol. in  $\text{NH}_4\text{OH} +$   
 n in  $\text{H}_2\text{O}$ . (Jørgensen.)  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{P}_2\text{O}_7)_2$ ,  $2\text{Co}(\text{NH}_3)_6(\text{NaP}_2\text{O}_7)$   
 $\text{H}_2\text{O}$ . As above. (Jørgensen.)

**selenate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SeO}_4)_2 + 5\text{H}_2\text{O}$ .  
 sol. in  $\text{H}_2\text{O}$ . (Klobb, *Bull. Soc.*  
 1) 25. 1028.)

**hydrogen selenate**,  
 $[\text{Co}(\text{NH}_3)_6]\text{H}(\text{SeO}_4)_2 + 2\frac{1}{2}\text{H}_2\text{O}$ .  
 lecomp. by  $\text{H}_2\text{O}$ . (Klobb.)

**Luteocobaltic ammonium selenate**,  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{SeO}_4)_2$ ,  $(\text{NH}_4)_2\text{SeO}_4 +$   
 $4\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ .  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{SeO}_4)_2$ ,  $(\text{NH}_4)_2\text{SeO}_4 + 8\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . (Klobb.)

— **sulphocyanide**,  $\text{Co}(\text{NH}_3)_6(\text{SCN})_2$ .  
 Decomp. by hot  $\text{H}_2\text{O}$ . (Miolati, *Z. anorg.*  
 1900, 23. 241.)

— **mercuric sulphocyanide**,  
 $\text{Co}(\text{NH}_3)_6(\text{SCN})_2$ ,  $2\text{Hg}(\text{SCN})_2$ .  
 Decomp. by  $\text{H}_2\text{O}$ .  
 Cryst. from dil.  $\text{NH}_4\text{SCN} + \text{Aq.}$  (Miolati.)

— **platinum sulphocyanide**,  
 $[\text{Pt}(\text{SCN})_4]_2[\text{Co}(\text{NH}_3)_6(\text{SCN})_2]$ .  
 Decomp. by hot  $\text{H}_2\text{O}$ . (Miolati.)

— **silver sulphocyanide**,  
 $\text{Co}(\text{NH}_3)_6(\text{SCN})_2$ ,  $2\text{AgSCN}$ .  
 Decomp. by hot  $\text{H}_2\text{O}$ . (Miolati.)

— **sulphate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2 + 5\text{H}_2\text{O}$ .  
 Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .  
 $+ 6\text{H}_2\text{O}$ . (Krok, *B.* 4. 711.)

— **hydrogen sulphate**,  
 $\text{Co}(\text{NH}_3)_6\text{H}(\text{SO}_4)_2$ .  
 Decomp. by alcohol to sulphate. (Jør-  
 gensen, *Z. anorg.* 1898, 17. 458.)

$4[(\text{Co}6\text{NH}_3)_2(\text{SO}_4)_2]$ ,  $5\text{H}_2\text{SO}_4 + 10\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$  with decomp. into the normal  
 sulphate.

When pulverized it seems to dissociate  
 slowly in contact with abs. alcohol. (Klobb,  
*Bull. Soc.* 1901, (3) 25. 1025.)

— **ammonium sulphate**,  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2$ ,  $(\text{NH}_4)_2\text{SO}_4 + 8\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$  with decomp. (Klobb.)

— **cerium sulphate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2$ ,  
 $\text{Ce}_2(\text{SO}_4)_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Very sl. sol. in cold, and practically insol.  
 in boiling  $\text{H}_2\text{O}$ . Sol. in acids. (Gibbs, *Am.*  
*Ch. J.* 15. 560.)

$[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2$ ,  $3\text{Ce}(\text{SO}_4)_2 + \text{H}_2\text{O}$ . As  
 above. (Wing, *Sill. Am. J.* (2) 49. 363.)

— **lanthanum sulphate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2$ ,  
 $\text{La}_2(\text{SO}_4)_3 + \text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Wing.)

— **thallic sulphate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2$ ,  
 $\text{Tl}_2\text{O}(\text{SO}_4)_2 + 5\text{H}_2\text{O}$ .

Decomp. by cold  $\text{H}_2\text{O}$ . (Gibbs.)

— **sulphate bromaurate**,  
 $\text{Co}(\text{NH}_3)_6(\text{SO}_4)(\text{AuBr}_4)$ .

Very sl. sol. in  $\text{H}_2\text{O}$  with apparent decomp.  
 Insol. in alcohol. (Jørgensen.)

**Luteocobaltic sulphate chloraurate,**  
 $\text{Co}(\text{NH}_3)_4(\text{SO}_4)\text{AuCl}_4$ .Sl. sol. in  $\text{H}_2\text{O}$ . (Jørgensen.)— **cobaltic sulphite**,  $[\text{Co}(\text{NH}_3)_4]_2(\text{SO}_3)_2$ ,  
 $\text{Co}_2(\text{SO}_3)_2 + \text{H}_2\text{O} = \text{dichrocobaltic sul-}$   
**phite**,  $[\text{Co}(\text{NH}_3)_4]_2(\text{SO}_3)_2 + 2\text{H}_2\text{O}$ , which  
see. $[\text{Co}(\text{NH}_3)_4]_2(\text{SO}_3)_2$ ,  $2\text{Co}_2(\text{SO}_3)_2 + 15\text{H}_2\text{O} =$   
**diamine cobaltic sulphite**,  $[\text{Co}(\text{NH}_3)_4]_2(\text{SO}_3)_2$   
 $+ 5\text{H}_2\text{O}$ , which see.**Luteorhodium bromide**,  $\text{Rh}(\text{NH}_3)_4\text{Br}_3$ .Less sol. in  $\text{H}_2\text{O}$  than the chloride. (Jor-  
gensen, J. pr. (2) 44. 51.)— **chloride**,  $\text{Rh}(\text{NH}_3)_4\text{Cl}_3$ .Sol. in 7 to 8 pts.  $\text{H}_2\text{O}$  at  $8^\circ$ . (J.)+  $\text{H}_2\text{O}$ . Extremely efflorescent. (J.)— **rhodium chloride**,  $\text{Rh}(\text{NH}_3)_4\text{Cl}_3$ ,  $\text{RhCl}_3$ .Sol. in  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 5.  
174.)— **chloroplatinate**,  $2\text{Rh}(\text{NH}_3)_4\text{Cl}_3$ ,  $3\text{PtCl}_4 +$   
 $6\text{H}_2\text{O}$ .Insol. in  $\text{H}_2\text{O}$ . Sol. in warm  $\text{HCl} + \text{Aq}$ . (J.)  
 $\text{Rh}(\text{NH}_3)_4\text{Cl}_3$ ,  $\text{PtCl}_4 + \frac{1}{2}\text{H}_2\text{O}$ . Decomp.  
by  $\text{H}_2\text{O}$  into chloride and above salt. (J.)— **nitrate**,  $\text{Rh}(\text{NH}_3)_4(\text{NO}_3)_3$ .Sol. in 48 to 49 pts.  $\text{H}_2\text{O}$  at ord. temp.  
 $\text{HNO}_3 + \text{Aq}$  diluted with 5 vols.  $\text{H}_2\text{O}$  ppts.  
the salt completely from aqueous solution.  
(Jørgensen, J. pr. (2) 44. 51.) $\text{Rh}(\text{NH}_3)_4(\text{NO}_3)_3$ ,  $\text{HNO}_3$ . Decomp. by  
 $\text{H}_2\text{O}$  or dil. alcohol. (Jørgensen, J. pr. (2),  
44. 63.)— **orthophosphate**,  $\text{Rh}(\text{NH}_3)_4\text{PO}_4 + 4\text{H}_2\text{O}$ .Sl. sol. in cold  $\text{H}_2\text{O}$ . (J.)— **sodium pyrophosphate**, $[\text{Rh}(\text{NH}_3)_4]_2(\text{P}_2\text{O}_7)_2\text{Na}_2 + 23\text{H}_2\text{O}$ .Nearly wholly insol. in  $\text{H}_2\text{O}$ . Wholly insol.  
in  $\text{NH}_4\text{OH} + \text{Aq}$ . (J.)— **sulphate**,  $[\text{Rh}(\text{NH}_3)_4]_2(\text{SO}_4)_3 + 5\text{H}_2\text{O}$ .Sol. in 43 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . (J.)**Magnesium, Mg.**Does not decomp.  $\text{H}_2\text{O}$  at ord. temp., but  
decomp. slowly at  $100^\circ$ .  $\text{H}_2\text{O}$  containing  
acids dissolves Mg easily. Sol. in cold dil.  
 $\text{HCl} + \text{H}_2\text{O}_2 + \text{Aq}$ . Difficultly sol. in cold  
 $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Bunsen.) Cold nitrosulphuric  
acid does not attack. (Bunsen.) Cold  
 $\text{NH}_4\text{OH} + \text{Aq}$ ,  $\text{KOH} + \text{Aq}$ , or  $\text{NaOH} + \text{Aq}$  do  
not attack. (Maak, Phipps.) Sol. in  $\text{NH}_4\text{Cl}$   
or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Wöhler.)Very rapidly sol. in  $\text{K}_2\text{S}_2\text{O}_8 + \text{A}$   
 $(\text{NH}_4)_2\text{S}_2\text{O}_8 + \text{Aq}$  with violent evolu-  
gas. (Levi, Gazz. ch. it. 1908, 38. (1)Attacked by aqueous solution of  
 $\text{NH}_4\text{Cl}$ ,  $\text{NaCl}$ ,  $\text{LiCl}$ ,  $\text{CuCl}_2$ ,  $\text{CdCl}_2$ ,  
 $\text{PbCl}_2$ ,  $\text{HgCl}_2$ ,  $\text{FeCl}_3$ ,  $\text{CrCl}_3$ ,  $\text{PtCl}_4$ ,  
 $\text{CuSO}_4$ ,  $\text{ZnSO}_4$ ,  $\text{FeSO}_4$  and  $\text{MnSO}_4$ .Sl. attacked by hot 30%  $\text{CaCl}_2 +$   
by 30%  $\text{MgCl}_2 + \text{Aq}$ ,  $\text{BaCl}_2 + \text{Aq}$  and  
 $\text{Aq}$ . (Tommasi, Bull. Soc. 1899, (3), 1Not attacked by  $\text{NH}_4\text{F} + \text{Aq}$ , very  
by solutions of  $\text{BaCl}_2$ ,  $\text{CaCl}_2$ ,  $\text{KCl}$ ,  $\text{K}_2\text{F}$ ,  
 $\text{NaNO}_3$ ,  $\text{Na}_2\text{S}_2\text{O}_3$  and  $\text{Na}_2\text{HPO}_4$ . S  
of  $\text{NaC}_2\text{H}_3\text{O}_2$ ,  $\text{Na}_2\text{B}_4\text{O}_7$ , alum and  
alum attack vigorously. Soluti  
 $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{NH}_4\text{Cl}$ ,  $(\text{NH}_4)_2\text{C}_2\text{O}_4$ ,  
and  $\text{Na}_2\text{CO}_3$  attack even more vig  
(Mouraur, C. R. 1900, 130. 140.)Insol. in liquid  $\text{NH}_3$ . (Gore, Am  
1898, 20. 828.)Insol. in liquid  $\text{HF}$ . (Franklin, Z  
1905, 46. 2.)Somewhat sol. in liquid  $\text{NH}_3$ , if  
metallic surface is in contact with t  
solvent. (Kraus, J. Am. Chem. So  
29. 1561.) $\frac{1}{2}\text{ccm.}$  oleic acid dissolves 0.1  
Mg in 6 days. (Gates, J. phys. Chem  
15. 143.)**Magnesium arsenide**,  $\text{Mg}_3\text{As}_2$ .Decomp. on air. (Parkinson, Che  
5. 127.)**Magnesium azoimide**,  $\text{Mg}(\text{N}_3)_2$ .Decomp. by hot  $\text{H}_2\text{O}$ . (Curtius,  
1898, (2) 58. 292.)**Magnesium boride**,  $\text{Mg}_2\text{B}_3$ .Sol. in  $\text{HCl} + \text{Aq}$ . (Winkler, B. 23**Magnesium bromide**,  $\text{MgBr}_2$ .Deliquescent. Very sol. in  $\text{H}_2\text{O}$  with  
tion of heat.Sat.  $\text{MgBr}_2 + \text{Aq}$  contains at:

(Weinland and Knoll, Z. anorg. 112.)

**Magnesium potassium bromide,**  $2\text{KBr} + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ , from which tallies at  $75$  to  $87^\circ$ . Alcohol dissolves  $\text{MgBr}_2$ . (Löwig, Repert. 28. 261.)

sula is  $\text{MgBr}_2$ ,  $\text{KBr} + 6\text{H}_2\text{O}$ . De-  
sant. (Lerch, J. pr. (2) 23. 338.)

sium stannic bromide.

bromostannate, magnesium.

sium chloride,  $\text{MgCl}_2$ .

quecent. Very sol. in  $\text{H}_2\text{O}$  with  
on of heat. The solution decomposes  
poration losing  $\text{HCl}$ , when less than 6  
 $\text{H}_2\text{O}$  are present to 1 mol.  $\text{MgCl}_2$ .  
eca, C. R. 37. 350.)

ydrous. Sol. in 1.857 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ .  
ch.)

1 pt. cold  $\text{H}_2\text{O}$ . (Foureroy.)

$\text{MgCl}_2 + \text{Aq}$  at  $12.5^\circ$  contains 64.8%  $\text{MgCl}_2$ .  
(fratz.)

ta.  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 200 pts.  $\text{MgCl}_2$ . (Ure's)

pts.  $\text{H}_2\text{O}$  dissolve 52.2 pts.  $\text{MgCl}_2$  at  $0^\circ$   
p. gr. of sat. solution = 1.3619 at  $15^\circ$ .  
l, Bull. Soc. (2) 47. 318.)

0 mols.  $\text{H}_2\text{O}$  dissolve 108 mols.  $\text{MgCl}_2$ .  
C. (Löwenherz, Z. phys. Ch. 1894, 13.)

00 mols.  $\text{MgCl}_2 + \text{Aq}$  contain at  $t^\circ$ :

Solubility data of  $\text{MgCl}_2 + \text{KCl} + \text{MgKCl}_2$  are given by van't Hoff and Meyerhoffer. (Z. phys. Ch. 1899, 30. 64.)

+  $8\text{H}_2\text{O}$ . Pptd. from an aqueous solution which contains about 10 mols.  $\text{H}_2\text{O}$  to 1 mol.  $\text{MgCl}_2$ .

+  $12\text{H}_2\text{O}$ . Pptd. from an aq. solution which contains 1 mol.  $\text{MgCl}_2$  in about 12.06 mols. of  $\text{H}_2\text{O}$ . (Bogorodsky, C. C. 1899, I. 246.)

Magnesium manganous chloride,  $\text{MgCl}_2, 2\text{MnCl}_2 + 12\text{H}_2\text{O}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$  and alcohol. (Saunders, Am. Ch. J. 14. 148.)

$2\text{MgCl}_2, \text{MnCl}_2 + 12\text{H}_2\text{O}$ . Ppt. Deliquesces in the air. (Gossner, C. C. 1904, I. 707.)

Magnesium mercuric chloride,  $\text{MgCl}_2, \text{HgCl}_2 + 6\text{H}_2\text{O}$ .

Very deliquescent. More sol. than the following salt. (v. Bonsdorff, Pogg. 17. 133.)

$\text{MgCl}_2, 3\text{HgCl}_2 + 5\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with-

out decomp. Easily sol. in alcohol. (v. Bonadorff.)

**Magnesium phosphoryl chloride,  $\text{MgCl}_2, \text{POCl}_3$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$  with evolution of heat and decomposition. Very al. sol. in warm  $\text{POCl}_3$ . (Casselmann, A. 98. 223.)

**Magnesium potassium chloride,  $\text{MgCl}_2, 2\text{KCl}+6\text{H}_2\text{O}$ .**

Deliquescent, forming a solution of  $\text{MgCl}_2$ , while  $\text{KCl}$  remains undissolved. 100 pts.  $\text{H}_2\text{O}$  dissolve 64.5 pts. at  $18.75^\circ$ . 20 pts. salt dissolved in 80 pts.  $\text{H}_2\text{O}$  lower the temp.  $1.75^\circ$ . (Bischof.) Alcohol dissolves out  $\text{MgCl}_2$ . Decomp. into the two salts by solution in  $\text{H}_2\text{O}$ . (Marcet.)

A sat. solution in contact with solid  $\text{KCl}$  and  $\text{KCl}$ ,  $\text{MgCl}_2$ ,  $\text{H}_2\text{O}$  at  $50^\circ$  contains 79.5 mol.  $\text{MgCl}_2$  and 14.9 mol.  $\text{KCl}$  per 1000 mol.  $\text{H}_2\text{O}$ . A sat. solution in contact with solid  $\text{MgCl}_2$ ,  $6\text{H}_2\text{O}$  and  $\text{KCl}$ ,  $\text{MgCl}_2$ ,  $\text{H}_2\text{O}$  at  $50^\circ$  contains 111.9 mol.  $\text{MgCl}_2$  and 1.2 mol.  $\text{KCl}$  per 1000 mol.  $\text{H}_2\text{O}$ . (Uhlig, Chem. Soc. 1913, 104. (2) 775; C. B. Miner. 1913, 417.)

Min. *Carnallite*.

**Magnesium rubidium chloride,  $\text{MgCl}_2, \text{RbCl}+6\text{H}_2\text{O}$ .**

Not decomp. by a small quantity of  $\text{H}_2\text{O}$ . (Feit and Kubierscky, Ch. Ztg. 16. 335.)

**Magnesium sodium chloride,  $\text{MgCl}_2, \text{NaCl}+2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Poggiale.)

**Magnesium thallic chloride,  $2\text{TlCl}_3, \text{MgCl}_2+6\text{H}_2\text{O}$ .**

Hygroscopic. Can be cryst. from  $\text{H}_2\text{O}$ . (Gewecke, A. 1909, 366. 224.)

**Magnesium stannic chloride.**

See Chlorostannate, magnesium.

**Magnesium vanadium chloride,  $\text{MgCl}_2, \text{VCl}_3+3\text{H}_2\text{O}$ .**

Difficultly sol. in  $\text{H}_2\text{O}$  and alcohol. (Stähler, B. 1904, 37. 4412.)

**Magnesium zinc chloride,  $\text{MgCl}_2, \text{ZnCl}_2+6\text{H}_2\text{O}$ .**

Deliquescent; sol. in  $\text{H}_2\text{O}$ . (Warner, C. N. 27. 271.)

**Magnesium chloride ammonia,  $\text{MgCl}_2, 4\text{NH}_3$ .**  
Easily decomp. (Clark, A. 78. 369.)

**Magnesium chloride hydroxylamine,  $\text{MgCl}_2, 2\text{NH}_2\text{OH}+2\text{H}_2\text{O}$ .**

100 g. of solution in  $\text{H}_2\text{O}$  contain 44.4% at  $20^\circ$ . (Antonow, J. Russ. Phys. Chem. Soc. 1905, 37. 478.)

**Magnesium fluoride,  $\text{MgF}_2$ .**

1 l.  $\text{H}_2\text{O}$  dissolves 76 mg.  $\text{MgF}_2$ . (Kohlrausch, Z. phys. Ch. 1904, 66. 3) 87 mg. are dissolved in 1 l. of sat. at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 11. 168.)

Scarcely sol. in acids. (Gay-Lussac, Thénard.) Insol. in excess of  $\text{HF}$ , precipitated, is sol. in aqueous sol. ammonium and magnesium salts. S.  $\text{HNO}_3+\text{Aq}$ , from which it is precip. alcohol.

Insol. in methyl acetate. (Naur 1909, 42. 3790.)

Min. *Sellaite*.

**Magnesium potassium fluoride,  $\text{MgF}_2$ .**

Decomp. by  $\text{H}_2\text{SO}_4$ . (Duboin, C. 120. 679.)

$\text{MgF}_2, 2\text{KF}$ . Decomp. by  $\text{H}_2\text{SO}_4$ . (Duboin.)

**Magnesium sodium fluoride,  $\text{MgF}_2$ .**

Insol. in  $\text{H}_2\text{O}$ . (Geuther, J. B. 11)

**Magnesium stannic fluoride.**

See Fluostannate, magnesium.

**Magnesium titanium fluoride.**

See Fluotitanate, magnesium.

**Magnesium zirconium fluoride.**

See Fluozirconate, magnesium.

**Magnesium hydrosulphide,  $\text{MgS}_2\text{H}_2$ .**

Known only in aqueous solution decomposes on warming. Sol. in 16%  $\text{MgS}_2\text{H}_2$  has sp. gr. 1.11 (Divers and Shimidzu, Chem. Soc.)

**Magnesium hydroxide,  $\text{MgO}_2\text{H}_2$ .**

$\text{MgO}$  is sol. in 55,368 pts.  $\text{H}_2\text{O}$  at ordinary also at  $100^\circ$ . (Fresenius, A. 59. 117.)

$\text{MgO}$  is sol. in 5142 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$  (F) pts. at  $15.8^\circ$  (Henry, J. Pharm. 13. 2); in 79 (wan); in 16,000 pts. (Dalton); in 100,000 cold  $\text{H}_2\text{O}$  (Bineau); in 36,000 pts. boiling Ed. Phil. J. 5. 305.)

Calculated from electrical cond.  $\text{MgO}_2\text{H}_2+\text{Aq}$ , 1 l.  $\text{H}_2\text{O}$  dissolv.  $\text{MgO}_2\text{H}_2$  at  $18^\circ$ . (Kohlrausch and phys. Ch. 12. 241.)

Calculated from electrical cond. 1 l.  $\text{H}_2\text{O}$  dissolves 00.076 g.  $\text{MgO}_2\text{H}_2$  (Dupré and Brutus, Z. angew. Ch. 55.)

Presence of  $\text{CaO}_2\text{H}_2$  or  $\text{CaSO}_4$  decrease the solubility. (Henry.) For the salts of the alkali metals, ammonium salts, increase the solubility in conc.  $\text{Na}_2\text{SO}_4$ ,  $\text{NaNO}_3$ ,  $\text{NaCl}$ , or  $\text{Aq}$ . (Karsten.) Sol. in  $\text{NH}_4\text{OH}$  insol. in  $\text{KOH}+\text{Aq}$ . (Odling.)

Easily sol. in acids. Sol. in a solution of sugar. Boiling alcohol traces.

y of  $\text{MgO}_2\text{H}_2$  in  $\text{NH}_4\text{Cl} + \text{Aq}$  at  $29^\circ$ .

(Normal)	Normality of		G. per l.	
	$\text{MgO}_2\text{H}_2$	$\text{NH}_4\text{Cl}$	$\text{MgO}_2\text{H}_2$	$\text{NH}_4\text{Cl}$
